BEFORE THE PATENT TRIAL AND APPEAL BOARD

---

APPLE INC.,  
Petitioner,

v.

CALIFORNIA INSTITUTE OF TECHNOLOGY,  
Patent Owner.

---

Case IPR2017-00297  
Patent No. 7,916,781

---

**PATENT OWNER'S PRELIMINARY RESPONSE  
PURSUANT TO 37 C.F.R. § 42.107**

## TABLE OF CONTENTS

I.INTRODUCTION .....	1
II.THE PRESENT PETITION RECYCLES PREVIOUS CHALLENGES REJECTED BY THE OFFICE .....	2
A.    Ground 2 Recycles the Same Ping-Based Anticipation Previously Rejected .....	4
B.    Grounds 1, 3 and 4 are Substantially the Same.....	5
III.THREE OF FOUR GROUNDS IN THE PETITION CAN BE DENIED BECAUSE THEY RELY ON IMPROPER EVIDENCE AND UNSUBSTANTIATED ALLEGATIONS .....	10
IV.THE PROPOSED GROUNDS OF CHALLENGE FAIL .....	12
A.    Ground 1 Fails .....	12
1.    The single equation of Ping fails to teach the first and second encoding operations as recited in claim 1 .....	13
2.    The petition does not demonstrate motivation to combine .....	17
3.    The references fail to disclose limitations in claim 5 .....	24
4.    The references fail to disclose limitations in claim 8 .....	25
B.    Ground 2 Fails .....	26
1.    Ping fails to disclose the “receiving” steps of independent claims 19-21.....	27
2.    Ping fails to disclose “wherein at least two of the information bits appear in three subsets of the information bits,” as recited in independent claim 19.....	30
C.    Ground 3 Fails .....	30
1.    The references fail to disclose “wherein the information bits appear in a variable number of subsets” .....	31
2.    There is no reason to combine the teachings of Ping, MacKay, and Divsalar as proposed .....	37
D.    Ground 4 Fails .....	39
V.CONCLUSION.....	40

## I. INTRODUCTION

The Board should not institute *inter partes* review (IPR) on claims 3-12 and 19-21 of U.S. Patent No. 7,916,781 (“the ’781 patent”) because petitioner Apple Inc. (“Petitioner” or “Apple”) has not met its burden of showing that it has a reasonable likelihood of prevailing on any of its proposed grounds of unpatentability.

As an initial matter, review should be denied on the basis that the present petition rehashes substantially the same art and arguments that have already been presented to the Office and rejected by the Board in a previous IPR challenge. Petitioner acknowledges that the ’781 patent was already “challenged in one petition for *inter partes* review.” Pet. at 1; *see also* IPR2015-00059. The previous petition similarly relied on Ping alone or in view of the Luby ’909 Patent or the Patterson ’999 Patent. The Board denied institution as to all grounds that relied on Ping alone or in view of other references. *Hughes Network Systems, LLC v. California Institute of Tech.*, Case No. IPR2015-00059, Paper 18 at 14-16. In this instance, Petitioner essentially recycles the same Ping-based arguments. The current Ground 2 (anticipation based on Ping) has no substantive differences compared to what the Board previously considered and rejected. For the remaining grounds, the petition adds Divsalar as a contingency plan to the same Ping/anticipation argument, and substitutes MacKay for the Luby ’909 Patent and

Coombes for the Patterson '999 Patent to present substantially the same disclosures and arguments that the Board considered and rejected in the prior petition.

The proposed grounds of challenge should also be rejected on the merits. The petition materials fail to demonstrate that each feature of claims 3-12 and 19-21 of the '781 patent is found in the cited art. Multiple aspects of the claimed subject matter are missing from the asserted references.

Moreover, the Petitioner has failed to demonstrate that one of ordinary skill in the art would reasonably have combined the references as proposed. The arguments advanced in the petition essentially amount to little, if anything, beyond assertions that the cited references are analogous art. The Board has rejected such assertions as insufficient motivation to specifically combine teachings in particular ways. Any additional explanation provided in the petition is insufficient, lacks the requisite logical underpinnings, or both, and should be dismissed.

Accordingly, institution of *inter partes* review should be *denied*.

## **II. THE PRESENT PETITION RECYCLES PREVIOUS CHALLENGES REJECTED BY THE OFFICE**

The instant petition presents one in a series of challenges to the '781 patent, but rehashes substantially the same art and arguments already presented to the Office and rejected by the Board. Accordingly, the Board should exercise its discretion in denying institution on all grounds in the petition. 35 U.S.C. § 325(d)

“In determining whether to institute or order a proceeding under this chapter, chapter 30, or chapter 31, the Director may take into account whether, and reject the petition or request because, *the same or substantially the same prior art or arguments* previously were presented to the Office.”) (emphasis added).

The present petition fails to offer any art or arguments substantially different from what the Board has already rejected. Petitioner acknowledges that the ’781 patent was already “challenged in one petition for *inter partes* review.” Pet. at 1. In the prior petition, the Board rejected grounds substantially the same as the grounds Petitioner presents in this instance. *See Hughes Network Systems, LLC v. California Institute of Tech.*, Case No. IPR2015-00059, Paper 18 (Apr. 27, 2015).<sup>1</sup>

For example, the rejected grounds in the Hughes petition challenged claims 1-7, 13-16, and 19 as either anticipated by Ping or obvious over Ping in view of the ’999 patent (U.S. Patent No. 4,623,999) and/or the Luby ’909 patent (U.S. Patent No. 6,081,909). *Id.* at 8. Here, each of the grounds in the instant petition challenges claims 1-8, 10-12, and 19-21 as either anticipated by the same Ping reference or obvious over the Ping reference in view of Divsalar. *Compare* Pet. at 34-70 with

---

<sup>1</sup> Petitioner has also filed another pending petition challenging claims of the ’781 patent. *See Apple Inc. v. Cal. Inst. of Tech.*, Case No. IPR2017-00423, Paper 5 (PTAB Dec. 12, 2016).

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
