charge-coupled device

- noun an electronic device operated by charge, especially one which converts photons of [light](#) into a [digital signal](#), converting an optical [image](#) into a digital image.
- Electronic device used in [astronomy](#) because it can register in digital form the arrival of every [photon](#) striking it. CCDs can be used with [visible](#) and [ultraviolet light](#), whose photons cause charge to build up on the CCD according to the amounts of [radiation](#) falling upon each small area (pixel) of its surface.
