Hi Judith,

Athabasca University is currently looking at new ways to connect our
students to our institution. We would like the 'new way' to be via
the Web but we have certain requirements. The most important one being
that students must continue to participate in conferences. I found
your pages on The Sociable Web and feel it may fit the bill. Could you
please send me some more information about it or possibly a beta copy
that I can take a look at. The platform would be Windows clients
talking to a Web server running on DEC Alpha OSF/1 version 3. For testing
purposes, the client and server could both be under Windows.

Take a look at us ... http://www.athabascau.ca

Please respond ASAP since our timelines are tight. Thanks for your time.

Terry

Judith,

I'm excited about both your postcard server and the
collaboration-at-at-glance work. I can envision applications of
both these ideas and I'd like to talk to you about them and see a
demonstration of collab-at-a-glance.

For the postcard server I see a commercial application using the First
Virtual Holdings Internet Payment System. Of course one would have to
use images that could be resold instead of those from the WebLouvre.

Collaboration-at-a-glance could be used for review and editing of
documents or drawings. Some of the questions I have are about the
current functionality. I also want to see it work. I will be at the
IETF meeting in Davers at the beginning of April. Seems like an
appropriate time to stop by. Tues (4/4) am, Thur (4/6) late afternoon,
or Sun (4/3) afternoon would suit my current schedule but I will
accomodate your schedule as best I can.

Looking forward to hearing from you.

Best.../Ed

Hello,

I am sure you're probably really full-up on beta testers.. but I would
be really, REALLY interested in learing more about The Sociable Web
and/or obtaining a copy for use on our internal web servers...

regards,
   David

PS: I 'dunno if this helps but we're really very expert in all things
related to the Web (cf InformationWeek, 1/9/95, pg 38, for starters,
or "http://www.jpmorgan.com" or "http://careers.jpmorgan.com") and
wouldn't bug you with silly questions, we write really good bug
reports (if/when needed)... and we're also members of the MIT ILP...

I just ran across your page on the social web and was blown away.
It's exactly the sort of thing I've been trying to encourage people
to build at LCS.

Is there some way I can get a real demo of this?

Is there some way that I can get hold of the server code and put one
up and experiment with it?  What I'm intereted in is figuring out
whether there needs to be a change to the http protocol that we ought
to put into the Web tandard to better support this kind of
application.

Congratualtions on pulling off a great idea.

Truly cool! I'm jazzed! I don't think we've ever met. Paul Dourish told me
that you and I ought to get together some time. I'm still exploring your
pages. Just wanted to let you know I think it's truly cool! I'm jazzed!

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.

fastcase
Smarter legal research.
