Words of Welcome:

On behalf of the Conference Organizing Committee, we are pleased to welcome you to the Second International World Wide Web Conference: Mosaic and the Web. As was the case with the First International Conference held at CERN, this one has turned out to be far more popular than anticipated. We want to thank everyone who has contributed to the success of the Web and is continuing to build it.

There is plenty of hyperbole in hyperspace, but it is not an exaggeration to say that we are all taking part in an historic process. We are engaged in a collective global project that will affect everyone on the planet and that keeps growing at phenomenal rates. The purpose of this conference is to provide a place where users and developers, the experienced and the novice, can all come together, exchange their experiences, and share their excitement about these new technologies. The proceedings provided here are another way to share in that excitement, knowledge, and experience.

Participants from all over the world will present papers, posters and demonstrations at this conference, and that diversity reflects the richness of the community that is producing the new global information infrastructure and populating it with content. We have tried to provide as much connectivity and opportunity for people to get together and show each other their work as possible. The openness of this community and its commitment to truly global perspectives are some of its fundamental strengths, and this conference is dedicated to furthering that openness and global view. The Web has always been meant as an open space where people could come together, to work, play or converse. That is also the goal of this conference.

Joseph Hardin
Ira Goldstein
October 1994

The papers listed in the table of contents reflect the presentations given at the conference. The papers printed in this document are indicated by a page number in the right-hand margin; papers with a bullet (·) in the right-hand margin are not included in this document. All conference papers are available in the electronic proceedings, which can be accessed via the conference home page at the URL listed below. Plenary sessions and tutorials are not included in the proceedings.

The conference poster was adapted, with the permission of Science magazine and the AAAS, from the cover of the 12 August 1994 issue of Science magazine. The digital composite was created by I. Kallick and B. Schatz, both of NCSA/UIUC, using contributions from public domain sources on the Internet.

The printed and electronic versions of the Advance Proceedings were assembled by members of the NCSA Software Development Group staff, with the particular efforts of F. Baker, M. Burkee, J. File, and J. Wehmer.

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.

fastcase
Smarter legal research.
