

554. (Cancelled) ~~The system of claim 503, wherein at least one of the communications includes a human communication of sound.~~

555. (Previously presented) The system of claim 504, wherein at least one of the communications includes a human communication of sound.

556. (Previously presented) The system of claim 505, wherein at least one of the communications includes a human communication of sound.

557. (Previously presented) The system of claim 506, wherein at least one of the communications includes a human communication of sound.

558. (Previously presented) The system of claim 507, wherein at least one of the communications includes a human communication of sound.

559. (Previously presented) The system of claim 508, wherein at least one of the communications includes a human communication of sound.

560. (Previously presented) The system of claim 604, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

561. (Previously presented) The system of claim 493, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

562. (Previously presented) The system of claim 494, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

563. (Previously presented) The system of claim 495, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

564. (Previously presented) The system of claim 496, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

565. (Previously presented) The system of claim 497, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

566. (Previously presented) The system of claim 498, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

567. (Previously presented) The system of claim 499, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

568. (Previously presented) The system of claim 500, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

569. (Previously presented) The system of claim 501, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

570. (Previously presented) The system of claim 502, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

571. (Cancelled) ~~The system of claim 503, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.~~

572. (Previously presented) The system of claim 504, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

573. (Previously presented) The system of claim 505, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

574. (Previously presented) The system of claim 506, wherein the computer

system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

575. (Previously presented) The system of claim 507, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

576. (Previously presented) The system of claim 508, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

577. (Previously presented) The system of claim 604, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

578. (Previously presented) The system of claim 604, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, allow the graphical data to be presented at the output device corresponding to the second user identity.

579. (Previously presented) The system of claim 604, wherein the computer system is further programmed to:

provide the first user identity with access to a member-associated image

corresponding to the second user identity.

580. (Previously presented) The system of claim 604, wherein the computer system is further programmed to:

determine whether the first user identity is censored from access to a member-associated image corresponding to the second user identity,

if the first user identity is censored, not allow access to the member-associated image, and

if the first user identity is not censored, allow access to the member-associated image.

581. (Previously presented) The system of claim 604, wherein the data represents a pointer that produces a pointer-triggered message on demand.

582. (Previously presented) The system of claim 493, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

583. (Previously presented) The system of claim 498, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

584. (Previously presented) The system of claim 499, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

585. (Previously presented) The system of claim 500, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

586. (Previously presented) The system of claim 504, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

587. (Previously presented) The system of claim 505, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

588. (Previously presented) The system of claim 506, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

589. (Previously presented) The system of claim 508, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

590. (Previously presented) The system of claim 509, wherein the data represents a pointer that produces a pointer-triggered message on demand.

591. (Previously presented) The system of claim 510, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

591. (Cancelled) ~~The system of claim 515, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

592. (Previously presented) The system of claim 516, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

593. (Previously presented) The system of claim 517, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

594. (Previously presented) The system of claim 521, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

595. (Previously presented) The system of claim 522, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

596. (Previously presented) The system of claim 523, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

597. (Previously presented) The system of claim 525, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

598. (Previously presented) The system of claim 526, wherein the data represents a pointer that produces a pointer-triggered message on demand.

599. (Withdrawn) A system to receive a communication via an Internet network, the system including:

a plurality of computers connected, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system;

a first of the plurality of computers being programmed to communicate to the computer system a message including a pointer pointing to a communication that includes data

representing a video, a graphic, sound, or multimedia;

the computer system being programmed to communicate the message to a second of the plurality of computers; and

the second computer being programmed to receive the communication originating from the first computer, the communication being sent in real time and via the Internet network.

600. (Previously presented) The system of claim 527, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

601. (Previously presented) The system of claim 532, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

602. (Previously presented) The system of claim 533, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

603. (Previously presented) The system of claim 534, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

604. (Previously presented) An Internet network communications system, the system including:

a plurality of computers connected storing a set of privileges corresponding to said user identity, the set including a privilege to receive non-textual communication; and

responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system programmed

to:

form a group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time, and

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending data within the communications, the data representing at least one of a pointer, video, audio, a graphic, or multimedia,

wherein the plurality of computers receive in real time and via the Internet network the communications that are not censored based on the individual user identity and do not send the data that is censored based on the individual user identity.

605. (Previously presented) The system of claim 538, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

606. (Previously presented) The system of claim 539, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

607. (Previously presented) The system of claim 540, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

608. (Previously presented) The system of claim 542, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

609. (Previously presented) The system of claim 543, wherein the data represents a pointer that produces a pointer-triggered message on demand.

610. (Previously presented) The system of claim 544, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

611. (Previously presented) The system of claim 549, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

612. (Previously presented) The system of claim 550, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

613. (Previously presented) The system of claim 551, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

614. (Previously presented) The system of claim 555, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

615. (Previously presented) The system of claim 556, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

616. (Previously presented) The system of claim 557, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

617. (Previously presented) The system of claim 559, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

618. (Previously presented) The system of claim 560, wherein the data represents a pointer that produces a pointer-triggered message on demand.

619. (Previously presented) The system of claim 561, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

620. (Previously presented) The system of claim 566, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

621. (Previously presented) The system of claim 567, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

622. (Previously presented) The system of claim 568, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

623. (Previously presented) The system of claim 572, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

624. (Previously presented) The system of claim 573, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

625. (Previously presented) The system of claim 574, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

626. (Previously presented) The system of claim 576, wherein the pointer is a

pointer that produces a pointer-triggered message on demand.

627. (Previously presented) The system of claim 577, wherein the data represents a pointer that produces a pointer-triggered message on demand.

628. (Previously presented) The system of claim 578, wherein the data represents a pointer that produces a pointer-triggered message on demand.

629. (Previously presented) The system of claim 579, wherein the data represents a pointer that produces a pointer-triggered message on demand.

630. (Previously presented) The system of claim 580, wherein the data represents a pointer that produces a pointer-triggered message on demand.

631. (Currently amended) ~~The method of claim 165, further including: determining that the pointer is not censored~~ The system of claim 515, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

632. (Withdrawn) The method of claim 165, further including: determining that the message is not censored.

633. (Withdrawn) The method of claim 165, wherein the pointer is a pointer that causes the communication to be produced on demand.

634. (Withdrawn) The method of claim 165, wherein the communication

includes data representing video.

635. (Withdrawn) The method of claim 165, wherein the communication includes data representing sound.

636. (Withdrawn) The method of claim 165, wherein the communication includes data representing sound and video.

637. (Withdrawn) The method of claim 165, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

638. (Withdrawn) The method of claim 165, wherein the message includes data representing at least one of text or ascii.

639. (Withdrawn) The method of claim 165, wherein the communication includes data representing a member-associated image.

640. (Withdrawn) The method of claim 165, further including forming a chat channel via the Internet network, between at least two of the plurality of computers.

641. (Withdrawn) The method of claim 165, wherein at least one of the communicating steps includes communicating a message as an out-of-band communication.

642. (Withdrawn) The method of claim 165, further including:
determining a user age corresponding to each of the user identities.

643. (Withdrawn) The method of claim 642, wherein the communication includes data representing sound.

644. (Withdrawn) The method of claim 642, wherein the communication includes data representing video.

645. (Withdrawn) The method of claim 642, wherein the communication includes data representing sound and video.

646. (Withdrawn) The method system of claim 642, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

647. (Withdrawn) The method of claim 642, wherein the message includes data representing at least one of text or ascii.

648. (Withdrawn) The system of claim 599, wherein the computer system is further programmed to determine that the pointer is not censored.

649. (Withdrawn) The system of claim 599, wherein the computer system is further programmed to determine that the message is not censored.

650. (Withdrawn) The system of claim 599, wherein the pointer produces the communication on demand.

651. (Withdrawn) The system of claim 599, wherein the communication includes data representing video.

652. (Withdrawn) The system of claim 599, wherein the communication includes data representing sound.

653. (Withdrawn) The system of claim 599, wherein the communication includes data representing sound and video.

654. (Withdrawn) The system of claim 599, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

655. (Withdrawn) The system of claim 599, wherein the message includes data representing at least one of text or ascii..

656. (Withdrawn) The system of claim 599, wherein the communication includes data representing a member-associated image.

657. (Withdrawn) The system of claim 599, wherein the computer system is further programmed to form a chat channel via the Internet network, between at least two of the plurality of computers.

658. (Withdrawn) The system of claim 599, wherein the computer system is further programmed to communicate the message as an out-of-band communication message.

659. (Withdrawn) The system of claim 599, wherein the computer system is further programmed to determine a user age corresponding to each of the user identities.

660. (Withdrawn) The system of claim 659, wherein the communication includes data representing sound.

661. (Withdrawn) The system of claim 659, wherein the communication includes data representing video.

662. (Withdrawn) The system of claim 659, wherein the communication includes data representing sound and video.

663. (Withdrawn) The system of claim 659, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

664. (Withdrawn) The system of claim 659, wherein the message includes data representing at least one of text or ascii.

665. (Withdrawn) The authorizing, with said controller computer, invisible viewing of some of the communications method of claim 917, further including:
determining whether the pointer is not censored.

666. (Withdrawn) The method of claim 917, further including determining a user age corresponding to each of the user identities.

667. (Withdrawn) The authorizing, with said controller computer, invisible viewing of some of the communications method of claim 666, further including:
determining whether the data is not censored.

668. (Withdrawn) The method of claim 917, wherein the pointer produces the communication on demand.

669. (Withdrawn) The method of claim 917, wherein the communication includes data representing video.

670. (Withdrawn) The method of claim 917, wherein the communication includes data representing sound.

671. (Withdrawn) The method of claim 917, wherein the communication includes data representing sound and video.

672. (Withdrawn) The method of claim 917, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

673. (Withdrawn) The method of claim 917, wherein the communication includes data representing a member-associated image.

674. (Withdrawn) The method of claim 917, further including allowing chat communication in real time via the Internet network.

675. (Withdrawn) The method of claim 917, further including communicating an out-of-band communication from the computer system to at least one of the plurality of computers.

676. (Withdrawn) The method of claim 917, further including communicating an asynchronous communication from the computer system to at least one of the plurality of computers.

677. (Withdrawn) The method of claim 917, wherein the step of receiving the communication includes receiving a synchronous communication.

678. (Withdrawn) The method of claim 677, wherein the communication includes data representing sound.

679. (Withdrawn) The method of claim 677, wherein the communication includes data representing video.

680. (Withdrawn) The method of claim 677, wherein the communication includes data representing sound and video.

681. (Withdrawn) The method of claim 677, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

682. (Withdrawn) The method of claim 677, wherein the communication

further includes data representing a member-associated image.

683. (Withdrawn) The method of claim 677, further including communicating an out-of-band communication from the computer system to at least one of the plurality of computers.

684. (Withdrawn) The method of claim 677, further including communicating an asynchronous communication from the computer system to at least one of the plurality of computers.

685. (Withdrawn) The system of claim 918, wherein the computer system is further programmed to determine whether the pointer is censored.

686. (Withdrawn) The system of claim 918, wherein the computer system is further programmed to determine whether the data is censored.

687. (Withdrawn) The system of claim 918, wherein the pointer produces the communication on demand.

688. (Withdrawn) The system of claim 918, wherein the communication includes data representing video.

689. (Withdrawn) The system of claim 918, wherein the communication includes data representing sound.

690. (Withdrawn) The system of claim 918, wherein the communication includes data representing sound and video.

691. (Withdrawn) The system of claim 918, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

692. (Withdrawn) The system of claim 918, wherein the first computer is further programmed to communicate with the pointer data representing at least one of text or ascii.

693. (Withdrawn) The system of claim 918, wherein the data includes data representing a member-associated image.

694. (Withdrawn) The system of claim 918, wherein the computer system is further programmed to allow chat communication for sending user messages, and receiving the user messages in real time via the Internet network.

695. (Withdrawn) The system of claim 918, wherein the computer system is further programmed to communicate out-of-band communication.

696. (Withdrawn) The system of claim 918, wherein the communication comprises an asynchronous communication.

697. (Withdrawn) The system of claim 696, wherein the communication includes data representing sound.

698. (Withdrawn) The system of claim 696, wherein the communication includes data representing video.

699. (Withdrawn) The system of claim 696, wherein the communication includes data representing sound and video.

700. (Withdrawn) The system of claim 696, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

701. (Withdrawn) The system of claim 696, wherein the communication comprises an asynchronous communication.

702. (Withdrawn) The method of claim 409, further including determining a user's age corresponding to at least one of user identities.

703. (Withdrawn) The method of claim 702, further including censoring an unwanted communication from at least one of the user identities.

704. (Withdrawn) The method of claim 703, further including determining whether a first of the user identities is censored from access to the member-associated image corresponding to a second user identity,

if the first identity is censored, not allowing access to the member-associated,

and

if the first user identity is not censored, allowing access to the member

associated image.

705. (Withdrawn) The method of claim 702, further including:
communicating, under control of said computer system, an asynchronous
message from one of the plurality of computers to another of the plurality of computers.

706. (Withdrawn) The method of claim 702, wherein the receiving includes
receiving chat communications within a chat group.

707. (Withdrawn) The method of claim 702, further including providing a
private communications channel to at least some of the plurality of computers.

708. (Withdrawn) The method of claim 702, further including communicating
data representing human communication of sound to at least some of the plurality of
computers.

709. (Withdrawn) The method of claim 702, further including providing data
representing video to at least some of the plurality of computers.

710. (Withdrawn) The method of claim 702, further including providing data
representing sound to at least some of the plurality of computers.

711. (Withdrawn) The method of claim 702, wherein at least some of the
communications include data representing text or ascii.

712. (Withdrawn) The method of claim 702, wherein at least some of the communications are communicated out-of-band.

713. (Withdrawn) The method of claim 702, wherein at least some of the communications include data representing multimedia.

714. (Withdrawn) The system of claim 843, wherein the computer system is further programmed to determine a user age corresponding to each said user identity.

715. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to censor an unwanted communication from a member.

716. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to determine whether a first of the user identities is censored from access to a member-associated image corresponding to a second of the user identities,

if the first user identity is censored, not allowing access to the member-associated, and

if the first user identity is not censored, allowing access to the member associated image.

717. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to communicate an asynchronous message from one of the plurality of computers to another of the plurality of computers.

718. (Withdrawn) The system of claim 714, wherein the computer system is

further programmed to distribute the at least some of the communications among a chat group.

719. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to provide a private communication channel to at least some of the plurality of computers.

720. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to communicate data representing human communication of sound to at least some of the plurality of computers.

721. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to provide data representing video to at least some of the plurality of computers.

722. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to provide data representing video and sound to at least some of the plurality of computers.

723. (Withdrawn) The system of claim 714, wherein at least some of the communications include data representing text or ascii.

724. (Withdrawn) The system of claim 714, wherein the computer system is further programmed to communicate out-of-band communication.

725. (Withdrawn) The system of claim 714, wherein at least some of the

communications include multimedia.

726. (Previously presented) The method of claim 884, wherein at least one of the communications includes data representing sound.

727. (Previously presented) The method of claim 884, wherein at least one of the communications includes data representing video.

728. (Previously presented) The method of claim 884, wherein at least one of the communications includes data representing sound and video.

729. (Previously presented) The method of claim 884, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

730. (Previously presented) The method of claim 726, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

731. (Previously presented) The method of claim 727, further including:
storing, for the first user identity, an authorization associated with presentation of

graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

732. (Previously presented) The method of claim 884 based on the authorization, presenting the graphical multimedia data at the output device corresponding to the second user identity wherein one of the determining steps includes determining whether a parameter corresponding to the first user identity has been determined by a user corresponding to another of the user identities.

733. (Previously presented) The method of claim 729, wherein the graphical data includes graphical multimedia data.

734. (Previously presented) The method of claim 885, wherein at least one of the communications includes data representing sound.

735. (Previously presented) The method of claim 885, wherein at least one of the communications includes data representing video.

736. (Previously presented) The method of claim 885, wherein at least one of the communications includes data representing sound and video.

737. (Previously presented) The method of claim 885, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

738. (Previously presented) The method of claim 734, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

739. (Previously presented) The method of claim 735, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

740. (Previously presented) The method of claim 736, further including:

storing, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, presenting the graphical data at one of the plurality of computers corresponding to the second user identity.

741. (Previously presented) The system of claim 891, wherein at least one of the communications includes data representing sound.

742. (Previously presented) The system of claim 891, wherein at least one of

the communications includes data representing video.

743. (Previously presented) The system of claim 891, wherein at least one of the communications includes data representing sound and video.

744. (Previously presented) The system of claim 891, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

745. (Previously presented) The system of claim 741, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

746. (Previously presented) The system of claim 742, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

747. (Previously presented) The system of claim 743, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

748. (Previously presented) The system of claim 892, wherein at least one of the communications includes data representing sound.

749. (Previously presented) The system of claim 892, wherein at least one of

the communications includes data representing video.

750. (Previously presented) The system of claim 892, wherein at least one of the communications includes data representing sound and video.

751. (Previously presented) The system of claim 892, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

752. (Previously presented) The system of claim 748, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

753. (Previously presented) The system of claim 749, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

754. (Previously presented) The system of claim 750, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

755. (Withdrawn) The method of claim 893, wherein at least one of the multimedia messages includes data representing sound.

756. (Withdrawn) The method of claim 893, wherein at least one of the

multimedia messages includes data representing video.

757. (Withdrawn) The method of claim 893, wherein at least one of the multimedia messages includes data representing sound and video.

758. (Withdrawn) The method of claim 893, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

759. (Withdrawn) The method of claim 755, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

760. (Withdrawn) The method of claim 756, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

761. (Withdrawn) The method of claim 757, further including:
storing, for the first user identity, an authorization associated with presentation of

graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

762. (Withdrawn) The method of claim 894, wherein the data includes data representing sound.

763. (Withdrawn) The method of claim 894, wherein the data includes data representing video.

764. (Withdrawn) The method of claim 894, the data includes data representing sound and video.

765. (Withdrawn) The method of claim 894, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

766. (Withdrawn) The method of claim 762, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

767. (Withdrawn) The method of claim 763, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

768. (Withdrawn) The method of claim 764, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

769. (Withdrawn) The system of claim 895, wherein at least one of the communications includes data representing sound.

770. (Withdrawn) The system of claim 895, wherein at least one of the communications includes data representing video.

771. (Withdrawn) The system of claim 895, wherein at least one of the communications includes data representing sound and video.

772. (Withdrawn) The system of claim 895, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

773. (Withdrawn) The system of claim 769, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

774. (Withdrawn) The system of claim 770, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

775. (Withdrawn) The system of claim 771, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

776. (Withdrawn) The system of claim 896, wherein at least one of the communications includes data representing sound.

777. (Withdrawn) The system of claim 896, wherein at least one of the communications includes data representing video.

778. (Withdrawn) The system of claim 896, wherein at least one of the communications includes data representing sound and video.

779. (Withdrawn) The system of claim 896, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

780. (Withdrawn) The system of claim 776, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

781. (Withdrawn) The system of claim 777, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

782. (Withdrawn) The system of claim 778, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

783. (Withdrawn) The system of claim 871, wherein the computer system is

programmed to allow the plurality of computers to communicate a type of data representing at least one of a pointer, video, audio, a graphic, or multimedia, the pointer being a pointer that produces a pointer-triggered message on demand.

784. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer.

785. (Withdrawn) The system of claim 783, wherein the type of data represents audio.

786. (Withdrawn) The system of claim 783, wherein the type of data represents video.

787. (Withdrawn) The system of claim 783, wherein the type of data represents a graphic.

788. (Withdrawn) The system of claim 783, wherein the type of data represents multimedia.

789. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer and audio.

790. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer and video.

791. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer and a graphic.

792. (Withdrawn) The system of claim 783, wherein the type of data represents audio and video.

793. (Withdrawn) The system of claim 783, wherein the type of data represents audio and a graphic.

794. (Withdrawn) The system of claim 783, wherein the type of data represents video and a graphic.

795. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer and audio and video.

796. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer and audio and a graphic.

797. (Withdrawn) The system of claim 783, wherein the type of data represents a pointer and video and a graphic.

798. (Withdrawn) The system of claim 783, wherein the type of data represents audio and video and a graphic.

799. (Withdrawn) The system of claim 783, wherein the type of data

represents a pointer and audio and video and a graphic.

800. (Withdrawn) The system of claim 871, wherein the computer system is further programmed to provide access to a member-associated image.

801. (Withdrawn) The system of claim 783, wherein the computer system is further programmed to provide access to a member-associated image.

802. (Withdrawn) The system of claim 784, wherein the computer system is further programmed to provide access to a member-associated image.

803. (Withdrawn) The system of claim 785, wherein the computer system is further programmed to provide access to a member-associated image.

804. (Withdrawn) The system of claim 786, wherein the computer system is further programmed to provide access to a member-associated image.

805. (Withdrawn) The system of claim 787, wherein the computer system is further programmed to provide access to a member-associated image.

806. (Withdrawn) The system of claim 788, wherein the computer system is further programmed to provide access to a member-associated image.

807. (Withdrawn) The system of claim 789, wherein the computer system is further programmed to provide access to a member-associated image.

808. (Withdrawn) The system of claim 790, wherein the computer system is further programmed to provide access to a member-associated image.

809. (Withdrawn) The system of claim 791, wherein the computer system is further programmed to provide access to a member-associated image.

810. (Withdrawn) The system of claim 792, wherein the computer system is further programmed to provide access to a member-associated image.

811. (Withdrawn) The system of claim 793, wherein the computer system is further programmed to provide access to a member-associated image.

812. (Withdrawn) The system of claim 794, wherein the computer system is further programmed to provide access to a member-associated image.

813. (Withdrawn) The system of claim 795, wherein the computer system is further programmed to provide access to a member-associated image..

814. (Withdrawn) The system of claim 796, wherein the computer system is further programmed to provide access to a member-associated image.

815. (Withdrawn) The system of claim 797, wherein the computer system is further programmed to provide access to a member-associated image.

816. (Withdrawn) The system of claim 798, wherein the computer system is further programmed to provide access to a member-associated image.

817. (Withdrawn) The system of claim 799, wherein the computer system is further programmed to provide access to a member-associated image.

818. (Previously presented) The method of claim 876, further including:
responsive to the allowing the plurality of computers to communicate, receiving communications, at least one of the plurality of computers, the communications including data representing at least one of a pointer, video, audio, a graphic, or multimedia.

819. (Previously presented) The method of claim 818, wherein the data represents a pointer.

820. (Previously presented) The method of claim 818, wherein the data represents audio.

821. (Previously presented) The method of claim 818, wherein the data represents video.

822. (Previously presented) The method of claim 818, wherein the data represents a graphic.

823. (Previously presented) The method of claim 818, wherein the data represents multimedia.

824. (Previously presented) The method of claim 818, wherein the data represents a pointer and audio.

825. (Previously presented) The method of claim 818, wherein the data represents a pointer and video.

826. (Previously presented) The method of claim 818, wherein the data represents a pointer and a graphic.

827. (Previously presented) The method of claim 818, wherein the data represents audio and video.

828. (Previously presented) The method of claim 818, wherein the data represents audio and a graphic.

829. (Previously presented) The method of claim 818, wherein the data represents video and a graphic.

830. (Previously presented) The method of claim 818, wherein the data represents a pointer and audio and video.

831. (Previously presented) The method of claim 818, wherein the data represents a pointer and audio and a graphic.

832. (Previously presented) The method of claim 818, wherein the data represents a pointer and video and a graphic.

833. (Previously presented) The method of claim 818, wherein the data represents audio and video and a graphic.

834. (Previously presented) The method of claim 818, wherein the data represents a pointer and audio and video and a graphic.

835. (Previously presented) The method of claim 818, wherein the data represents a pointer that produces a pointer-triggered message on demand.

836. (Previously presented) The method of claim 819, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

837. (Previously presented) The method of claim 824, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

838. (Previously presented) The method of claim 825, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

839. (Previously presented) The method of claim 826, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

840. (Previously presented) The method of claim 830, wherein the pointer is a

pointer that produces a pointer-triggered message on demand.

841. (Previously presented) The method of claim 831, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

842. (Previously presented) The method of claim 832, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

843. (Withdrawn) A communications system to distribute communication over an Internet network, the system including:

a plurality of participant computers connected, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system programmed to:

determine which of the plurality of computers can communicate communications with an other of the plurality of computers, wherein at least some of the communications are in real time via the Internet network, and

provide a member-associated image and member identity information respectively corresponding to one of the user identities to at least some of the plurality of computers.

844. (Previously presented) The method of claim 834, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

845. (Previously presented) The system of claim 877, wherein the computer system is further programmed to:

send and receive communications between members in a group, the communications including data representing at least one of video, sound, a graphic, or multimedia, and receive the communications in real time via the Internet network.

846. (Previously presented) The system of claim 845, wherein the data includes data representing sound.

847. (Previously presented) The system of claim 845, wherein the data includes data representing video.

848. (Previously presented) The system of claim 845, wherein the data includes data representing sound and video.

849. (Previously presented) The system of claim 845, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

850. (Previously presented) The system of claim 846, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

851. (Previously presented) The system of claim 847, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

852. (Previously presented) The system of claim 848, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

853. (Previously presented) The method of claim 878, further including sending and receiving communications between members in a group, the communications including data representing at least one of video, sound, a graphic, or multimedia, the receiving in real time via the Internet network.

854. (Previously presented) The method of claim 853, wherein the data represents sound.

855. (Previously presented) The method of claim 853, wherein the data represents video.

856. (Previously presented) The method of claim 853, wherein the data represents sound and video.

857. (Previously presented) The method of claim 878, further including sending and receiving communications between members in a group, the communications including data representing a member-associated image, sound, and video.

858. (Previously presented) The method of claim 878, further including: store, for the first user identity, an authorization associated with presentation of

graphical multimedia; and

based on the authorization, present the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

859. (Previously presented) The method of claim 853, further including:

store, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, present the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

860. (Previously presented) The method of claim 854, further including:

store, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, present the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

861. (Previously presented) The method of claim 855, further including:

store, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, present the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

862. (Withdrawn) The method of claim 901, wherein at least one of the

multimedia messages includes data representing sound.

863. (Withdrawn) The method of claim 901, wherein at least one of the multimedia messages includes data representing video.

864. (Withdrawn) The method of claim 901, wherein at least one of the multimedia messages includes data representing sound and video.

865. (Withdrawn) The method of claim 901, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

866. (Withdrawn) The method of claim 862, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

867. (Withdrawn) The method of claim 863, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

868. (Withdrawn) The method of claim 864, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

869. (Withdrawn) The system of claim 902, wherein at least one of the multimedia messages includes data representing sound.

870. (Withdrawn) The system of claim 902, wherein at least one of the multimedia messages includes data representing video.

871. (Withdrawn) An Internet network system, the system including:
a plurality of computers connected, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system programmed to:

store, for a first of the user identities, a respective authorization associated with graphical data, and

allow the plurality of computers to communicate in real time via the Internet network, and based on the authorization, cause the graphical data to be presented at one of the plurality of computers corresponding to a second of the user identities.

872. (Withdrawn) The system of claim 902, wherein at least one of the multimedia messages includes data representing sound and video.

873. (Withdrawn) The system of claim 902, wherein the computer system is

further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

874. (Withdrawn) The system of claim 869, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

875. (Withdrawn) The system of claim 870, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

876. (Previously presented) A method of communicating over an Internet network, the method including:

connecting a plurality of computers, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system;

storing, for a first of the user identities, a respective authorization allowing or disallowing presentment of graphical multimedia; and

allowing the plurality of computers to communicate in real time via the Internet network, and based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to a second of the user identities.

877. (Previously presented) An Internet network communication system, the system including:

a plurality of computers, each of the plurality of computers being connected to a

respective input device and to a respective output device, the plurality of computers being connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

respond to one of the plurality of the computers communicating a pointer in real time and via the Internet, wherein the pointer is a pointer that produces a pointer-triggered message on demand, by determining whether a first of the user identities is censored from content in the pointer-triggered message,

if the content is censored, disallow the pointer-triggered message from being presented at the output device of the computer corresponding to the first of the user identity, and

if the content is not censored, allow the pointer-triggered message to be presented at the output device of the computer corresponding to the first of the user identities.

878. (Previously presented) A method of communicating via an Internet network, the method including:

sending a respective login name and password corresponding to a respective user identity;

after the sending, connecting a plurality of computers to a computer system, each of the plurality of computers being connected to a respective input device and to a respective output device;

responsive to at least one of the plurality of computers communicating a pointer in real time and via the Internet, the pointer producing a pointer-triggered message on demand, determining whether a first of the user identities is censored from content in the pointer-triggered message;

if the content is censored, disallowing the pointer-triggered message to be presented at the output device of the computer corresponding to the first of the user identities;
and

if the content is not censored, allowing the pointer-triggered message to be presented at the output device of the computer corresponding to the first of the user identities.

879. (Withdrawn) The system of claim 872, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

880. (Previously presented) The system of claim 909, wherein the at least one type includes at least one of text or ascii.

881. (Previously presented) The system of claim 909, wherein the at least one type includes audio.

882. (Previously presented) The system of claim 909, wherein the at least one type includes video.

883. (Previously presented) The system of claim 909, wherein the at least one type includes a graphic.

884. (Previously presented) A method of communicating via an Internet network, the method including:

sending a respective login name and password corresponding to a respective

user identity;

after the sending, connecting a plurality of computers to a computer system, each of the plurality of computers being connected to a respective input device and to a respective output device;

determining whether at least one of a first user identity and a second user identity, individually, is censored from receiving data comprising a pointer in communications that include at least one of text or ascii, the pointer being a pointer that produces a pointer-triggered message on demand;

determining whether the first and the second of the user identities are able to form a group; and

if the first and the second user identities are able to form the group, then forming the group for sending the communications, receiving and presenting the communications that are not censored based on the individual user identity, the receiving being in real time and over the Internet network, and not allowing the data that is censored to be presented at the output device corresponding to the user identity that is censored from receiving the data.

885. (Previously presented) A method of communicating via an Internet network, the method including:

connecting a computer system to a plurality of computers;

sending a respective login name and password corresponding to a respective user identity from each of the plurality of computers;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending a pointer in the communications including at

least one of text or ascii, the pointer being a pointer that produces producing a pointer-triggered message on demand; and

if the first and the second user identities are able to form the group, then forming the group and sending and receiving the communications that are not censored based on the individual user identity, the receiving being in real time over the Internet network.

886. (Previously presented) The system of claim 909, wherein the type further includes multimedia.

887. (Previously presented) The system of claim 909, wherein the type further includes graphical multimedia.

888. (Previously presented) The system of claim 909, wherein the type further includes a member-associated image.

889. (Previously presented) The system of claim 909, wherein the type further includes a member-associated image and at least one of text or ascii.

890. (Previously presented) The system of claim 909, wherein the type further includes audio and at least one of text or ascii.

891. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of participator computers, each of the plurality of computers being connected to a respective input device and to a respective output device, the plurality of

computers being connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

form a group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time,

determine whether at least one of the first user identity and the second user identity, individually, is censored from receiving, in the communications, data comprising a pointer, the pointer producing a pointer-triggered message on demand, and

thereafter cause the computers to receive, in real time via the Internet network, and present the communications that are not censored based on the individual user identity, and to not present the data that is censored at the output device corresponding to the user identity that is censored from receiving the data, wherein at least some of the communications include data representing at least text or ascii.

892. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers, each of the plurality of computers being connected to a respective input device and to a respective output device, the plurality of computers being connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

form a group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time,

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending, in the communications, a pointer that produces a pointer-triggered message on demand, and

thereafter cause the computers to receive, in real time via the Internet network, and present the communications that are not censored based on the individual user identity, and to not present the communications that are censored at the output device corresponding to the user identity that is censored from receiving the data, at least some of the communications including data representing at least text or ascii.

893. (Withdrawn) A method of communicating via an Internet network, the method including:

connecting a plurality of computers to a system;

sending, from each of the plurality of computers, a respective login name and password corresponding to a respective user identity;

providing a first of the user identities access to a member-associated image and to member identity information respectively corresponding to a second of the user identities;

determining whether the first of the user identities and the second of the user identities are able to form a group for sending and for receiving communications in real time; and

if the first and the second user identities are able to form the group, forming the group, sending the communications, and receiving the communications in real time and via the Internet network, wherein at least some of the communications include data representing multimedia messages, and at least some of the multimedia messages include a pointer that produces a pointer-triggered message on demand.

894. (Withdrawn) A method of communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system;

sending a respective login name and password corresponding to a respective user identity from each of the plurality of computers;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether the first user identity is censored from access to a member-associated image and member identity information respectively corresponding to the second user identity;

if the first user identity is censored, not allowing access to the member-associated image;

if the first user identity is not censored, allowing access to the member-associated image; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time and via the Internet network, wherein at least some of the communications include data representing at least one of a pointer, video, audio, graphic, or multimedia.

895. (Withdrawn) A system to communicate via an Internet network, the system including:

a plurality of computers communicatively connected, responsive to each of the computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

determine whether a first of the user identities and a second of the user identities

are able to form a group for sending and for receiving communications in real time,

determine whether the first user identity is censored from access to a member-associated image and member identity information respectively corresponding to the second user identity,

if the first user identity is censored, not allow access to the member-associated image,

if the first user identity is not censored, allow access to the member-associated image, and

if the first and the second user identities are able to form the group, then form the group for sending the communications,

wherein the computers corresponding to the user identities of the formed group are programmed to receive the communications in real time and via the Internet network wherein at least some of the communications include data representing multimedia and at least some of the communications include a pointer that produces a pointer-triggered message on demand.

896. (Withdrawn) An Internet network communication system, the system including:

a plurality of computers connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

provide a first of the user identities access to a member-associated image corresponding to a second of the user identities,

determine whether the first user identity is censored from access to a member-associated image corresponding to the second user identity,

if the first user identity is censored, not allow access to the member-associated image,

if the first user identity is not censored, allow access to the member-associated image,

determine whether the first of the user identities and the second of the user identities are able to form a group for sending and for receiving communications in real time, and

if the first and the second user identities are able to form the group, form the group, wherein those of the plurality of computers corresponding to the first and the second user identities are programmed to send the communications and to receive the communications in real time and via the Internet network.

897. (Previously presented) The system of claim 909, wherein the at least one type includes video and at least one of text or ascii.

898. (Previously presented) The system of claim 909, wherein the at least one type includes graphic and at least one of text or ascii.

899. (Previously presented) The system of claim 909, wherein the at least one type includes audio and video and at least one of text or ascii.

900. (Previously presented) The system of claim 909, wherein the at least one type includes audio and a member-associated image.

901. (Withdrawn) A method of communicating via an Internet network, the

method including:

- connecting a computer system with a plurality of computers;
- sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;
- permitting at least a first of the user identities and a second of the user identities to form a group; and
- communicating the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing multimedia messages comprised of more than one data type, and at least some other of the communications include a pointer that produces a pointer-triggered message on demand.

902. (Withdrawn) A system to communicate via an Internet network, the system including:

- a plurality of computers, responsive to each of the computers sending information indicative of a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

- permit at least a first of the plurality of computers and a second of the plurality of computers to form a group for communicating communications in real time via the Internet network, wherein those of the plurality of computers in the group are programmed to receive the communications, at least some of the communications including data representing multimedia messages comprised of more than one data type, and at least some other of the communications including a pointer that produces a pointer-triggered message on demand.

903. (Withdrawn) A human communication system for controlling

communication via an Internet network, the system including:

a plurality of computers connected, responsive to each of the plurality of computers sending a user identity associated with a login name and a password, to a computer system programmed to allow a first of the user identities and a second of the user identities to form a group to send and receive communications in real time and via the Internet network, wherein those of the plurality of computers in the group are programmed to receive communications, wherein at least some of the communications include a pointer that produces a pointer-triggered message on demand, at least some of the communications include data representing human communication of sound, and at least some of the communications include data representing at least one of text or ascii.

904. (Previously presented) The system of claim 909, wherein the at least one type includes video and a member-associated image.

905. (Previously presented) The system of claim 909, wherein the at least one type includes audio and a member-associated image and at least one of text or ascii.

906. (Previously presented) The system of claim 909, wherein the at least one type includes multimedia and at least one of text or ascii.

907. (Previously presented) The system of claim 909, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

908. (Previously presented) The system of claim 880, wherein the at least one

type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

909. (Previously presented) A system of controlling communications via an Internet network, the system including:

a computer system programmed to:

connect a plurality of computers including a first computer in response to each of the plurality of computers sending information indicative of a respective login name and a respective password, which together correspond to a user identity,

store a set of privileges corresponding to each user identity,

determine whether the set of privileges corresponding to each user identity includes a privilege to communicate at least one type of message in real time via the Internet network, the type including a pointer, and if the set of privileges includes the privilege, communicate the at least one type of message,

the computer system being further programmed to allow the first computer to communicate data representing the at least one type of message to another of the plurality of computers, and

if the set of privileges does not include the privilege to communicate the at least one type of message, disallow the first computer from communicating the at least one type of message to another of the plurality of computers.

910. (Withdrawn) A method of controlling communications via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending information indicative of a respective login name and password

corresponding to a first user identity from a first of the plurality of computers;

receiving information indicative of a login name and a password corresponding to a second user identity from a second of the plurality of computers;

allowing the first user identity and the second user identity to form a group; and

sending and receiving communications in real time and via the Internet network between those of the plurality of computers in the group, wherein at least some of the communications include a pointer that produces a pointer-triggered message on demand, at least some of the communications include data representing sound indicative of a human communication of sound, and at least some of the communications include data representing at least one of text or ascii.

911. (Previously presented) The system of claim 881, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

912. (Previously presented) The system of claim 882, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

913. (Previously presented) The system of claim 883, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

914. (Previously presented) The system of claim 886, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-

triggered message on demand.

915. (Previously presented) The system of claim 887, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

916. (Previously presented) A method of controlling communications via an Internet network, the method including:

storing a set of privileges corresponding to a user identity;

connecting a plurality of computers via the Internet network;

receiving information indicative of a login name and a password corresponding respectively to the user identity from a first computer of the plurality of computers;

determining whether the set of privileges includes a privilege to communicate at least one type of message, the type of message including at least one of a pointer, audio, video, a graphic, or multimedia, the privilege to communicate corresponding to at least one parameter changeable by a user corresponding to another user identity;

if the set of privileges includes the privilege to communicate the at least one type of message, allowing the first of the plurality of computer to communicate, in real time via the internet network, the type of message to an other of the plurality of computers; and

if the set of privileges does not include the privilege to communicate the at least one type of message, disallowing the first computer from communicating the at least one type of message to the other of the plurality of computers.

917. (Withdrawn) A method of receiving a communication via an Internet network, the method including:

sending, from a first computer, information indicative of a login name and a password corresponding to a user identity;

responsive to the sending, connecting the first computer to a computer system;

forming a communication link between the first computer and a second computer for communicating a communication, the communication including data representing at least one of a member-associated image, video, a graphic, sound, or multimedia;

communicating a pointer, from the first computer to the computer system to obtain the communication at the first computer, the communication being sent in real time and via the Internet network; and

receiving the communication from the first computer at the second computer over the communication link.

918. (Withdrawn) A system to distribute a communication via an Internet network, the system including:

a first computer connected to a computer system, the first computer being connected responsive to its sending information indicative of a login name and a password corresponding to a user identity;

a communication link between the first computer and a second computer; and

respective software stored in the first and second computers, the software stored in the first computer being programmed to communicate a pointer, from the first computer to the computer system, for receiving the communication at the first computer, the communication being sent in real time and via the Internet network, and the software stored in the second computer being programmed to receive the communication for the first computer at the second computer via the communication link, wherein the communication includes data representing at least one of video, a graphic, sound, or multimedia.

919. (Previously presented) The system of claim 888, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

920. (Previously presented) The system of claim 889, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

921. (Previously presented) The system of claim 890, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

922. (Previously presented) The system of claim 897, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

923. (Previously presented) The system of claim 898, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

924. (Previously presented) The system of claim 899, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

925. (Previously presented) The system of claim 900, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

926. (Previously presented) The system of claim 904, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

927. (Previously presented) The system of claim 905, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

928. (Previously presented) The system of claim 906, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

929. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer.

930. (Previously presented) The method of claim 916, wherein the at least one type includes audio.

931. (Previously presented) The method of claim 916, wherein the at least one type includes video.

932. (Previously presented) The method of claim 916, wherein the at least one type includes a graphic.

933. (Previously presented) The method of claim 916, wherein the at least one type includes multimedia.

934. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer and audio.

935. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer and video.

936. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer and a graphic.

937. (Previously presented) The method of claim 916, wherein the at least one type includes audio and a graphic.

938. (Previously presented) The method of claim 916, wherein the at least one type includes audio and video.

939. (Previously presented) The method of claim 916, wherein the at least one type includes video and a graphic.

940. (Previously presented) The method of claim 916, wherein the at least one

type includes a pointer and audio and video.

941. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer and audio and a graphic.

942. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer and video and a graphic.

943. (Previously presented) The method of claim 916, wherein the at least one type includes audio and video and a graphic.

944. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer and audio and video and a graphic.

945. (Previously presented) The method of claim 916, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.

946. (Previously presented) The method of claim 930, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.

947. (Previously presented) The method of claim 931, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.

948. (Previously presented) The method of claim 933, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.

949. (Withdrawn) An Internet communication system, the system including:
a computer system including a server computer;
a plurality of computers, each of the plurality of computers connected to an input device and an output device, and
a communication link between the computer system including a server computer and each of the plurality of computers, each of the plurality of computers being connected responsive to its sending information indicative of a login name and password, each respective login name and password corresponding to a respective user identity,
wherein the server computer is programmed to:
allow one of the plurality of computers to be a member in one of a plurality of communication channels, each said communication channel allowing communication between at least some of the plurality of computers by way of the communication link,
cause graphical multimedia associated with a first of the login names to be presented at one of the output devices corresponding to a second of the user identities,
the server computer being further programmed to cause the user messages to be delivered over or by way of the Internet network, in at least one of the communication channels, and in real time between receipt and delivery of the user messages so as to allow access to the user messages,
wherein at least some of the user messages individually include at least two of text, a sound, a graphic, an image, and a video.

950. (Withdrawn) The system of claim 949, wherein at least one of said user messages includes a uniform resource locator, whereby the uniform resource locator produces a message upon demand.

951. (Withdrawn) The system of claim 949, wherein at least one of said user messages includes the uniform resource locator, whereby the uniform resource locator commands at least one of the plurality of computers corresponding to the receipt to locate an additional message and present the additional message at the respective output device.

952. (Withdrawn) The system of claim 949, wherein the computer system is further programmed to determine whether the receipt is censored, and to cause the receipt if the receipt is not censored.

953. (Previously presented) A method of communicating via an Internet network, the method including:

establishing a communication path between a computer system and each of a plurality of computers, each of the plurality of computers respectively connected to an input device and to an output device, each of the plurality of computers being connected responsive to its sending information indicative of a login name and password, each respective login name and password corresponding to a respective user identity,

allowing a first one of the plurality of computers to be a member of one of a plurality of communication channels, and

storing, for a first of the user identities, an authorization for allowing or disallowing presentment of graphical multimedia,

based on the authorization, presenting the graphical multimedia at the output device corresponding to a second of the user identities,

sending and receiving, in real time, user messages between two or more of the plurality of computers, over or by way of the Internet network, in at least one of the

communication channels, thereby allowing access to the user messages,

wherein at least some of the user messages individually include a uniform resource locator that points to data other than text or ascii.

954. (Previously presented) The method of claim 953, further including instructing at least one of the plurality of computers to locate an additional user message on demand via the uniform resource locator.

955. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications that are not censored based on the individual user identity, wherein the receiving is in real time via the Internet network, and not receiving the communications that are censored.

956. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

957. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group, sending the communications that are not censored based on the individual user identity, and receiving the communications in real time via the Internet network.

958. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

959. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer,

video, audio, graphic, or multimedia, and

if the first and the second user identities are able to form the group, form the group for sending the communications, and

cause the plurality of computers in the group to receive, in real time via the Internet network, the communications that are not censored based on the individual user identity, and

cause the plurality of computers in the group to not receive the communications that are censored based on the individual user identity.

960. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send the communications, and cause the plurality of computers in the group receive, in real time via the Internet network, the communications that are not censored based on the individual user identity.

961. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed and the communications that are not censored based on the individual user identity to be sent, and cause the communications to be received in real time via the Internet network.

962. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity,

individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send and receive the communications between members of the group, wherein the communications are received in real time via the Internet network.

963. (Previously presented) The method of claim 939, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

964. (Previously presented) The method of claim 940, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

965. (Previously presented) The method of claim 941, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

966. (Previously presented) The method of claim 942, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

967. (Previously presented) The method of claim 943, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

968. (Previously presented) The method of claim 944, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

969. (Previously presented) The method of claim 945, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

970. (Previously presented) The method of claim 916, further including presenting an option to the plurality of computers to access the computer system with at least two client software alternatives.

971. (Previously presented) The method of claim 916, further including determining whether receipt of a communication is censored based on content.

972. (Previously presented) The method of claim 916, further including determining whether receipt of a communication is censored based on age.

973. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user

identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications that are not censored based on the individual user identity, wherein the receiving is in real time via the Internet network, and not receiving the communications that are censored

974. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

975. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time; determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group, sending the communications that are not censored based on the individual user identity, and receiving the communications in real time via the Internet network

976. (Previously presented) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

977. (Withdrawn) A method of communicating via an Internet network, the method including:

presenting an option to a plurality of computers to access a computer system with at least one of two client software alternatives, wherein the option is exercised by providing a respective user name and password respectively corresponding to a user identity to at least one of the client software alternatives, wherein both of the two client software alternatives cause the respective user identities to be recognized by the computer system and allows at least some of the plurality of computers to form at least one group for sending communications, wherein at least some of the communications are received in real time via the Internet network, and wherein the at least one of client software alternatives allows the computer system to determine whether at least one of the user identities, individually, is censored from data representing at least one of a pointer, video, audio, graphic, or multimedia such that the data that is censored is not presented by the corresponding computer.

978. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer,

video, audio, graphic, or multimedia, and

if the first and the second user identities are able to form the group, form the group for sending the communications, and

cause the plurality of computers in the group to receive, in real time via the Internet network, the communications that are not censored based on the individual user identity, and

cause the plurality of computers in the group to not receive the communications that are censored based on the individual user identity.

979. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send the communications, and cause the plurality of computers in the group receive, in real time via the Internet network, the communications that are not censored based on the individual user identity.

980. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed and the communications that are not censored based on the individual user identity to be sent, and cause the communications to be received in real time via the Internet network.

981. (Previously presented) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity,

individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send and receive the communications between members of the group, wherein the communications are received in real time via the Internet network.

982. (Previously presented) A method of communication over an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending information indicative of a respective login name and password corresponding to a first user identity from a first of the plurality of computers;

receiving information indicative of a login name and a password corresponding to a second user identity from a second of the plurality of computers; and

allowing the first user identity and the second user identity to send and receive communications on at least one of a plurality of channels, wherein at least some of the communications are received in real time via the Internet network, the computer system being programmed to determine whether at least one of the user identities, individually, is censored from data in one of the channels, the data representing at least one of a pointer, video, audio, graphic, or multimedia, such that the data that is censored is not presented by the corresponding computer.

983. (Previously presented) The method of claim 980, wherein the data includes a pointer that produces a pointer-triggered message on demand.

984. (Previously presented) The method of claim 980, further including:

determining whether the first user identity is censored from the data by determining whether a parameter corresponding to the first user identity has been determined by a user corresponding to an other of the user identities.

985. (Previously presented) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from graphical multimedia; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the graphical multimedia that is censored to be presented at one of the computers corresponding to the one of the user identities.

986. (Previously presented) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from

graphical data; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the graphical data that is censored to be presented at one of the computers corresponding to the one of the user identities.

987. (Previously presented) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from data representing graphical multimedia; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the data representing graphical multimedia that is censored to be presented at one of the computers corresponding to the one of the user identities.

988. (Previously presented) A method of communicating via an Internet network,

the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from graphical data; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the graphical data that is censored to be presented at one of the computers corresponding to the one of the user identities.

989. (Previously presented) A method of communicating via an Internet network, the method including:

connecting, responsive to sending information indicative of a respective login name and password corresponding to a respective user identity, a plurality of computers with computer system;

storing at least one permission corresponding to a first of the user identities, the permission allowing or disallowing communication of a type of media;

changing, responsive to a second of the users, the stored permission; and

if the first user identity has permission to allow the communication, the sending the communications and receiving and presenting the communications, wherein the receiving is in real time and via the Internet network, and not presenting the data that is censored to the

corresponding output device.

990. (Previously presented) The method of claim 989, wherein the data represents a pointer.

991. (Previously presented) The method of claim 989, wherein the data represents a pointer that produces a pointer-triggered message on demand.

992. (Previously presented) The method of claim 989, wherein the data represents video.

993. (Previously presented) The method of claim 989, wherein the data represents audio.

994. (Previously presented) The method of claim 989, wherein the data represents a graphic.

995. (Previously presented) The method of claim 989, wherein the data represents multimedia.

II. Remarks

The Examiner is requested to reconsider the application.

Applicant appreciates the Examiner's interview on August 9, 2007.

Applicant requests that the Examiner consider the art listed on the enclosed 1449 forms of record. The art and corresponding IDS have previously been submitted. Applicant would particularly note those documents listed on the enclosed 1449 forms as pertaining to the *Windy City Innovations, LLC v. America Online, Inc.* litigation (which has been settled).

Claim charts, for the pending claims, are provided.

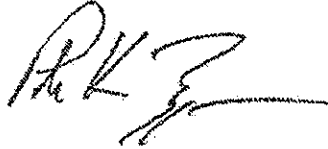

In response to the restriction requirement, Applicant elects Group 3 with traverse and maintains the traversal set forth in Applicant's filing dated February 27, 2007, and additionally notes that the Examiner has not shown, pursuant to MPEP Sec. 802, that claims are independent and distinct and have separate utility for each of the Groups. More so, even if they are separate and distinct, there is "a serious burden on the Examiner if restriction is required (see MPEP Section 803.02, Section 806.04(a) - Section 806.04(i), Section 808.01(a), and Section 808.02)." And pursuant to GUIDELINES found there, "examiners must provide reasons and/or examples to support conclusions." The Examiner has not provided sufficient "reasons and/or examples to support conclusions" as required by the MPEP. In sum, the Examiner has not established that these Groups are separate and distinct and has not made out a prima facie showing as to why a search and consideration of the prior art for the elected Group would not inherently include a search and consideration of the prior art of the other Groups.

The application is believed to be in condition for allowance, and favorable action is requested. If the prosecution of this case can be in any way advanced by a telephone discussion, the Examiner is requested to call the undersigned at (312) 240-0824.

The Commissioner is hereby authorized to charge any fees associated with the above-

identified patent application or credit any overcharges to Deposit Account No. 50-0235, and if any extension of time is needed, this shall be deemed a petition therefor. Please direct all communication to the undersigned at the address given below.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Peter K. Trzyna', written over a horizontal line.

NOTICE OF APPEAL

S I R:

Applicant hereby submits this Notice of Appeal to appeal to the Board of Patent Appeals from the decision of the Examiner mailed June 15, 2007, which has claims twice rejected.

Applicant claims LARGE entity status. The Commissioner is hereby authorized to charge any fees associated with the above-identified patent application or credit any overcharges to Deposit Account No. 50-0235.

	Examiner	Art Unit	
	Patrice Winder	2145	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 27 February 2007.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-995 is/are pending in the application.

4a) Of the above claim(s) 1-995 is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) _____ is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) 1-995 are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.

2. Certified copies of the priority documents have been received in Application No. _____.

3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.

4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.

5) Notice of Informal Patent Application

6) Other: _____.

Election/Restrictions

1. Newly submitted claims of group 1 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: the censoring feature of the claims of group 1 are not within the scope of the originally filed claims

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims of group 1 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

2. Applicant's election with traverse of group 1 in the reply filed on February 27, 2007 is acknowledged. The traversal is on the ground(s) that the inventions are not independent or distinct. This is not found persuasive because applicant ignores the rationale behind the restriction requirement. Specifically, Applicant ignores what the distinguishing features that resulted in the restriction requirement. Applicant does not argue they are not different, which is significant, and the Examiner will assume it is because Applicant also knows that the features are distinguishing. Also, the applicant ignores that the groups of claims have been separately classified. Applicant also ignores that the classification are distinct as well, i.e. 709 and 715. By being separately classified the search for each group of claims is tailored distinctly without the considerations of the features of the other claims.

The requirement is still deemed proper and is therefore made FINAL.

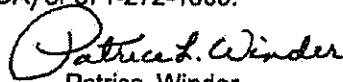

3. The claims of group 2 are closer to the originally presented claims. To pursue examination. Applicant should reconsider the election of group 1.
4. Please provide a claim tree of the associated claims in reply to this office action. This information would help the Examiner determine the present status of the claims. The Examiner thanks Applicant in advance for the effort.
5. Since the above-mentioned reply appears to be *bona fide*, applicant is given **ONE (1) MONTH or THIRTY (30) DAYS** from the mailing date of this notice, whichever is longer, within which to supply the omission or correction in order to avoid abandonment. **EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136(a).**
6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrice Winder whose telephone number is 571-272-3935. The examiner can normally be reached on Monday-Friday, 10:30 am-7:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Cardone can be reached on 571-272-3933. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

RESPONSE TO RESTRICTION REQUIREMENT

SIR:

Please enter the following Response in response to the Office Action mailed February 6, 2007, and reconsider the application in view of the amendment and the remarks set forth below. It is believed that no new matter has been added.

RECEIVED
CENTRAL FAX CENTER

Ser. No. 09/399,578
Atty. Ref. AIS-P1-99
Art Unit 2145

I. REMARKS

In response to the Restriction Requirement, Applicant provisionally elects Group I with traverse, and respectfully requests reconsideration.

First, it is respectfully submitted that a proper showing has not been made that these are related as combination / sub-combination. Claim 435 is the apparatus analog to its method claim 1, and claim 435 must be searched in order to carry out the examination of claim 1. Normally apparatus and method claims are not restricted as separate and distinct.

Second, graphic and user identities mentioned in the Office Action as distinguishing Group II are in claim 1 of Group I. Further, dependent claims of Group I pertain to an image as in Group II. Thus, the claims of Group II must be searched when examining Group I.

The PTO has not shown, pursuant to MPEP Sec. 802, that claims are independent and distinct and have separate utility. More so, even if they are separate and distinct, there is "a serious burden on the Examiner if restriction is required (see MPEP Section 803.02, Section 806.04(a) - Section 806.04(i), Section 808.01(a), and Section 808.02)." And pursuant to GUIDELINES found there, "examiners must provide reasons and/or examples to support conclusions." The Examiner has not provided sufficient "reasons and/or examples to support conclusions" as required by the MPEP.

In sum, the Examiner has not established that these Groups are separate and distinct and has not established that a search of one would not require a search of the other.

APPLICANT CLAIMS LARGE ENTITY STATUS. The Commissioner is hereby authorized to charge any fees associated with the above-identified patent application or credit any overcharges to Deposit Account No. 50-0235, and if any extension of time is needed, this shall be deemed a petition therefore.

	Examiner Patrice Winder	Art Unit 2145	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 17 November 2006.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-995 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) _____ is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) 1-995 are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.

2. Certified copies of the priority documents have been received in Application No. _____.

3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-995 (excluding the claims in invention II), drawn to conferencing between multiple participant computers including censoring communications, classified in class 709, subclass 206.
 - II. Claims 409, 435, 843, 917 (and associated dependent claims) drawn to associating graphical images with user identities, classified in class 715, subclass 758.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details of an associated user interface or conference window representation are not within the scope of the invention. The subcombination has separate utility such as a technique for associating graphical images with user identities in a network.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in

accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

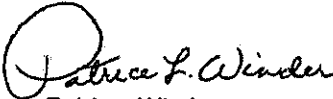

Information Disclosure Statement

6. The information disclosure statement filed September 8, 2005 fails to comply with 37 CFR 1.97(c) because it lacks a statement as specified in 37 CFR 1.97(e). It has been placed in the application file, but the information referred to therein has not been considered.
7. The information disclosure statement filed October 24, 2005 fails to comply with 37 CFR 1.97(c) because it lacks a statement as specified in 37 CFR 1.97(e). It has been placed in the application file, but the information referred to therein has not been considered.
8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrice Winder whose telephone number is 571-272-3935. The examiner can normally be reached on Monday-Friday, 10:30 am-7:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Cardone can be reached on 571-272-3933. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

 The "Highest Number Previously Paid For" (Total or Independent) is the highest number found in the appropriate box in column 1.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-6189 and select option 2.

SUPPLEMENTAL AMENDMENT AND RESPONSE

S I R :

In response to the Notice of Non-Complaint Amendment mailed the above-
referenced patent application on October 17, 2006, please enter the following amendment and
reconsider the application. This filing is to supplement the filing on June 9, 2005. Applicant
understands that the Amendments filed September 8, 2005, and October 24, 2005, have not been
entered. It is believed that no new matter has been added.

I. AMENDMENT

A. In the specification:

Please amend the specification as set forth below. Pages 2, 6, 7, 15, and 22 of the specification are enclosed herewith showing the amendments below.

Please delete paragraph 4, lines 18-22, on page 2 and replace it with Even more complex is linking computers to communicate in what has become known as a "chat room." Chat room communications can be text, as exemplified by such Internet service providers as America On Line. Multiplexing multimedia is more complex for this electronic environment.

Please delete paragraph 5, lines 23-24, on page 2 and replace it with The Internet was structured for one-way

Please delete paragraph 12, page 6, line 23 through page 7, line 1.

Please delete paragraph 3 on page 7, line 6, and replace it with Fig. 28 is an illustration of a text based interface login/password screen of the present invention.

Please delete lines 3-6 of paragraph 1 on page 15, and insert With regard to the arbitrating of the controller computer 3 is directed by the controller computer program 2 to use "identity tokens", which are pieces of information associated with user identity. The pieces of information are stored in memory in a control computer base, along with personal information about the user, such as the user's age.

Please delete paragraph 1 on page 22, and replace it with DMARKS now wishes to send a graphical multimedia message. This implementation sends graphical multimedia images by allowing a channel member to specify an Internet URL of a graphical multimedia resource to be presented to the group members. In this example, DMARKS wishes to the URL corresponding to the World Wide Web home page of American Information Systems, Inc. to the channel members. DMARKS enters the URL into the response window, and selects "Send URL" from the Moderator pull-down menu (at Fig. 24).

B. In the Abstract:

An Amended Abstract is enclosed.

Please delete the Abstract and there insert

A system and method communicating via an Internet network, the system including:
a plurality of computers connected to a computer system such that one of the plurality of
computers, corresponding to a first of the user identities, and an other of the plurality of computers,
corresponding to a second of the user identities, can send communications, and some of the
communications are received in real time via the Internet. There can be a determination as to
whether some of the communications are allowed.

C. In the claims

Please amend the claims as follows:

1. (Currently amended) A method of ~~communicating via using computers to communicate over~~ an Internet network, the method including the steps of:
 - connecting a plurality of participator computers to a computer system, each of the plurality of computers connected to a respective input device and to a respective output device with a controller computer through the Internet network;
 - ~~receiving a log in name and a password corresponding to a user identity, respectively from each of said participator computers;~~
 - ~~respectively storing a set of privileges corresponding to each of said user identities, the set including a privilege to receive non-textual communication;~~
 - determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;
 - ~~determining which ones of the participator computers can form a group to send and receive communications, said communications respectively are in accordance with the corresponding privilege~~ whether at least one of the first user identity and the second user identity, individually, is censored from data representing at least one of a pointer, video, audio, a graphic, or multimedia; and
 - if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving said the communications that are not censored based on the individual user identity, wherein the receiving is in real time and via the Internet network, and not presenting the data that is censored to the corresponding output device in real time over the Internet network between said participator computers in said group, some of said communications of members of the group including a respective video, graphic, graphical multimedia, or pointer-triggered message that is receivable on demand.

2. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer ~~steps of sending and receiving are carried out with one of said communications comprising said pointer triggered message.~~

3. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing video ~~steps of sending and receiving are carried out with one of said communications comprising said pointer triggered message and said graphic and further comprising a human communication sound.~~

4. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing audio ~~steps of sending and receiving are carried out with one of said communications comprising said pointer triggered message and said video and said graphic.~~

5. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a graphic ~~steps of sending and receiving are carried out with one of said communications further comprising a human communication~~

sound.

6. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing multimedia steps of sending and receiving are carried out with one of said communications comprising said video and further comprising a human communication sound.

7. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and video steps of sending and receiving are carried out with one of said communications comprising said graphic and further comprising a human communication sound.

8. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and audio steps of sending and receiving are carried out with one of said communications comprising said pointer-triggered message and further comprising a human communication sound.

9. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from

~~data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and a graphic steps of sending and receiving are carried out with one of said communications further comprising a human communication sound and text or ascii.~~

10. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing video and audio steps of sending and receiving are carried out with one of said communications comprising said video.

11. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing video and a graphic steps of sending and receiving are carried out with one of said communications comprising said video and said graphic.

12. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing audio and a graphic steps of sending and receiving are carried out with one of said communications comprising said video and said pointer-triggered message.

13. (Currently amended) The method of claim 1, wherein the determining whether

at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and video and audio steps of sending and receiving are carried out with one of said communications comprising said video and further comprising text or ascii.

14. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and video and a graphic steps of sending and receiving are carried out with one of said communications comprising said graphic.

15. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and audio and a graphic steps of sending and receiving are carried out with one of said communications comprising said graphic and said pointer triggered message.

16. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing video and audio and a graphic steps of sending and receiving are carried out with one of said communications comprising said graphic and further comprising text or ascii.

17. (Currently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer and video and audio and a graphic steps of sending and receiving are carried out with one of said communications comprising said video and said graphic and further comprising a human communication sound.

18. (Currently amended) The method of claim 1, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said video and said pointer triggered message and further comprising a human communication sound.~~

19. (Currently amended) The method of claim 2 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising and further comprising a human communication sound and text or ascii.~~

20. (Currently amended) The method of claim 3 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said video and said graphic and said pointer-triggered message and further comprising a human communication sound.~~

21. (Currently amended) The method of claim 4 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried~~

~~out with one of said communications comprising said video and said pointer triggered message and further comprising a human communication sound and text or ascii.~~

22. (Currently amended) The method of claim 5 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said video and said graphic and said pointer triggered message and further comprising a human communication sound and text or ascii.~~

23. (Currently amended) The method of claim 6 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications further comprising text or ascii.~~

24. (Currently amended) The method of claim 7 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said graphic and further comprising a human communication sound and text or ascii.~~

25. (Currently amended) The method of claim 8 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said graphic and said video and further comprising text or ascii.~~

26. (Currently amended) The method of claim 9 4, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said pointer triggered message and further~~

~~comprising text or ascii.~~

27. (Currently amended) The method of claim 10, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said pointer triggered message and said video and further comprising text or ascii.~~

28. (Currently amended) The method of claim 11, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said video and said graphic and further comprising a human communication sound and text or ascii.~~

29. (Currently amended) The method of claim 12, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said pointer triggered message and further comprising a human communication sound and text or ascii.~~

30. (Currently amended) The method of claim 13, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising and said pointer triggered message and said graphic and further comprising a human communication sound and text or ascii.~~

31. (Currently amended) The method of claim 14, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said video and said graphic and said pointer-~~

~~triggered message and further comprising text or ascii.~~

32. (Currently amended) The method of claim 15, wherein at least some of the communications include at least one of text or ascii ~~the steps of sending and receiving are carried out with one of said communications comprising said graphic and said pointer triggered message and further comprising text or ascii.~~

33. (Currently amended) The method of claim 16 ~~470~~, wherein at least some of the communications include at least one of text or ascii ~~said step of arbitrating is carried out with said pointer triggered message, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound and text or ascii to the other of the participator computers.~~

34. (Currently amended) The method of claim 17 ~~470~~, wherein at least some of the communications include at least one of text or ascii ~~said step of arbitrating is carried out with said pointer triggered message and said graphic, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate text or ascii to the other of the participator computers.~~

35. (Currently amended) The method of claim 1 ~~470~~, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and
sending the data that is not censored from sending ~~wherein said step of arbitrating is carried out with said video and said graphic, and further including the step of arbitrating with the~~

~~controller computer to determine which of the participator computers can communicate a human communication sound and text or ascii to the other of the participator computers.~~

36. (Currently amended) The method of claim ~~2~~ 470, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and
sending the data that is not censored from sending wherein said step of arbitrating
is carried out with said graphic and said pointer triggered message, and further including the step
of arbitrating with the controller computer to determine which of the participator computers can
communicate a human communication sound and text or ascii to the other of the participator
computers.

37. (Currently amended) The method of claim ~~3~~ 470, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and
sending the data that is not censored from sending wherein said step of arbitrating
is carried out with said graphic and said video, and further including the step of arbitrating with the
controller computer to determine which of the participator computers can communicate text or ascii
to the other of the participator computers.

38. (Currently amended) The method of claim ~~4~~ 470, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a

pointer, video, a graphic, or multimedia; and

~~sending the data that is not censored from sending wherein said step of arbitrating is carried out with said video and said graphic and said pointer triggered message, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate text or ascii to the other of the participator computers.~~

39. (Currently amended) The method of claim 5 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

~~sending the data that is not censored from sending wherein said step of arbitrating is carried out with said video and said pointer triggered message, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate text or ascii to the other of the participator computers.~~

40. (Currently amended) The method of claim 6 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

~~sending the data that is not censored from sending wherein said step of arbitrating is carried out with said video and said graphic and said pointer triggered message.~~

41. (Currently amended) The method of claim 7 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a

pointer, video, a graphic, or multimedia; and

~~sending the data that is not censored from sending the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound.~~

42. (Currently amended) The method of claim 8 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

~~sending the data that is not censored from sending wherein said step of arbitrating is carried out with said video, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound.~~

43. (Currently amended) The method of claim 9 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

~~sending the data that is not censored from sending wherein said step of arbitrating is carried out with said graphic, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound.~~

44. (Currently amended) The method of claim 10 470, further including:

determining whether at least one of the first and the second user identities,

individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending wherein said step of arbitrating is carried out with said pointer-triggered message and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound.

45. (Currently amended) The method of claim 11 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound and text or ascii to the other of the participator computers.

46. (Currently amended) The method of claim 12 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending wherein said step of arbitrating is carried out with said video.

47. (Currently amended) The method of claim 13 470, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a

pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending wherein said step of arbitrating
is carried out with said video and said graphic.

48. (Currently amended) The method of claim 14 470, further including:

determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending wherein said step of arbitrating
is carried out with said video and said pointer-triggered message.

49. (Currently amended) The method of claim 15 470, further including:

determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending wherein said step of arbitrating
is carried out with said video, and further including the step of arbitrating with the controller
computer to determine which of the participant computers can communicate text or audio to the
other of the participant computers.

50. (Currently amended) The method of claim 16 470, further including:

determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and

sending the data that is not censored from sending wherein said step of arbitrating

~~is carried out with said graphic.~~

51. (Currently amended) The method of claim 17 470, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, a graphic, or multimedia; and
sending the data that is not censored from sending wherein said step of arbitrating
~~is carried out with said graphic and said pointer triggered message.~~

52. (Currently amended) The method of claim 1 470, further including determining
whether at least one of the communications is censored based on content wherein said step of
arbitrating is carried out with said graphic, and further including the step of arbitrating with the
controller computer to determine which of the participator computers can communicate text or ascii
to the other of the participator computers.

53. (Currently amended) The method of claim 2 470, further including determining
whether at least one of the communications is censored based on content wherein said step of
arbitrating is carried out with said video and said graphic, and further including the step of
arbitrating with the controller computer to determine which of the participator computers can
communicate a human communication sound.

54. (Currently amended) The method of claim 3 470, further including
determining whether at least one of the communications is censored based on content wherein
said step of arbitrating is carried out with said video and said pointer triggered message, and
further including the step of arbitrating with the controller computer to determine which of the

~~participator computers can communicate a human communication sound.~~

55. (Currently amended) The method of claim 4 470, further including determining whether at least one of the communications is censored based on content wherein said step of arbitrating is carried out with said video, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound and text or ascii to the other of the participator computers.

56. (Currently amended) The method of claim 5 470, further including determining whether at least one of the communications is censored based on content wherein said step of arbitrating is carried out with said video and said graphic and said pointer triggered message, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound.

57. (Currently amended) The method of claim 6 470, further including determining whether at least one of the communications is censored based on content wherein said step of arbitrating is carried out with said video and said pointer triggered message, and further including the step of arbitrating with the controller computer to determine which of the participator computers can communicate a human communication sound and text or ascii to the other of the participator computers.

58. (Currently amended) The method of claim 7 470, further including determining whether at least one of the communications is censored based on content wherein said step of arbitrating is carried out with said video and said graphic and said pointer triggered message, and further including the step of arbitrating with the controller computer to determine

~~which of the participator computers can communicate a human communication sound and text or
ascii to the other of the participator computers.~~

59. (Currently amended) The method of claim 8 470, further including determining whether at least one of the communications is censored based on content ~~wherein said step of arbitrating is carried out with said graphic and said pointer triggered message and further comprising a human communication sound.~~

60. (Currently amended) The method of claim 9 470, further including determining whether at least one of the communications is censored based on content ~~wherein said step of arbitrating is carried out with said pointer triggered message, and wherein said step of arbitrating includes arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers.~~

61. (Currently amended) The method of claim 10 470, further including determining whether at least one of the communications is censored based on content ~~wherein said step of arbitrating includes arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers.~~

62. (Currently amended) The method of claim 11 470, further including determining whether at least one of the communications is censored based on content ~~wherein said step of arbitrating is carried out with said pointer triggered message.~~

63. (Currently amended) The method of claim 12 470, further including determining whether at least one of the communications is censored based on content ~~wherein~~

~~said step of arbitrating is carried out with said graphic, and wherein said step of arbitrating includes arbitrating to determine which of the participator computers can communicate a human communication sound and text or ascii to the other of the participator computers.~~

64. (Currently amended) The method of claim 13, further including determining whether at least one of the communications is censored based on content the step of: ~~_____~~
~~_____ determining a user's age corresponding to said user identity.~~

65. (Currently amended) The method of claim 14 2, further including determining whether at least one of the communications is censored based on content the step of:
~~determining a user's age corresponding to said user identity.~~

66. (Currently amended) The method of claim 15 3, further including determining whether at least one of the communications is censored based on content the step of:
~~determining a user's age corresponding to said user identity.~~

67. (Currently amended) The method of claim 16 [4], further including determining whether at least one of the communications is censored based on content the step of:
~~determining a user's age corresponding to said user identity.~~

68. (Currently amended) The method of claim 17 5, further including determining whether at least one of the communications is censored based on content the step of:
~~determining a user's age corresponding to said user identity.~~

69. (Currently amended) The method of claim 52 6, further including determining

~~a user age corresponding to each of the user identities the step of:~~

~~determining a user's age corresponding to said user identity.~~

70. (Currently amended) The method of claim 53 7, further including determining a user age corresponding to each of the user identities the step of:

~~determining a user's age corresponding to said user identity.~~

71. (Currently amended) The method of claim 54 8, further including determining a user age corresponding to each of the user identities the step of:

~~determining a user's age corresponding to said user identity.~~

72. (Currently amended) The method of claim 55 9, further including determining a user age corresponding to each of the user identities the step of:

~~determining a user's age corresponding to said user identity.~~

73. (Currently amended) The method of claim 56 40, further including determining a user age corresponding to each of the user identities the step of:

~~determining a user's age corresponding to said user identity.~~

74. (Currently amended) The method of claim 57 44, further including determining a user age corresponding to each of the user identities the step of:

~~determining a user's age corresponding to said user identity.~~

75. (Currently amended) The method of claim 1 42, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored

~~from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities further including the step of:
determining a user's age corresponding to said user identity.~~

76. (Currently amended) The method of claim 2 43, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities further including the step of:
~~determining a user's age corresponding to said user identity.~~

77. (Currently amended) The method of claim 3 44, ~~further including the step of:~~
~~determining a user's age corresponding to said user identity.~~

78. (Currently amended) The method of claim 4 45, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities further including the step of:
~~determining a user's age corresponding to said user identity.~~

79. (Currently amended) The method of claim 46, ~~further including the step of:~~
~~determining a user's age corresponding to said user identity~~ 5, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

80. (Currently amended) The method of claim 17, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 6, wherein the~~
determining whether at least one of the first user identity and the second user identity, individually,
is censored from data includes determining whether a parameter corresponding to the first user
identity has been determined by an other of the user identities.

81. (Currently amended) The method of claim 18, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 7, wherein the~~
determining whether at least one of the first user identity and the second user identity, individually,
is censored from data includes determining whether a parameter corresponding to the first user
identity has been determined by an other of the user identities.

82. (Currently amended) The method of claim 19, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 8, wherein the~~
determining whether at least one of the first user identity and the second user identity, individually,
is censored from data includes determining whether a parameter corresponding to the first user
identity has been determined by an other of the user identities.

83. (Currently amended) The method of claim 20, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 9, wherein the~~
determining whether at least one of the first user identity and the second user identity, individually,
is censored from data includes determining whether a parameter corresponding to the first user
identity has been determined by an other of the user identities.

84. (Currently amended) The method of claim 24, ~~further including the step of:~~

~~_____ determining a user's age corresponding to said user identity 10, wherein the~~
determining whether at least one of the first user identity and the second user identity, individually,
is censored from data includes determining whether a parameter corresponding to the first user
identity has been determined by an other of the user identities.

85. (Currently amended) The method of claim 22, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 11, wherein the~~
determining whether at least one of the first user identity and the second user identity, individually,
is censored from data includes determining whether a parameter corresponding to the first user
identity has been determined by an other of the user identities.

86. (Currently amended) The method of claim 23, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 1, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

87. (Currently amended) The method of claim 24, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 2, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

88. (Currently amended) The method of claim 25, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 3, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

89. (Currently amended) The method of claim 26, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 4, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

90. (Currently amended) The method of claim 27, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 5, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

91. (Currently amended) The method of claim 28, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 6, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

92. (Currently amended) The method of claim 29, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 7, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

93. (Currently amended) The method of claim 30, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 8, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

94. (Currently amended) The method of claim 31, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 9, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

95. (Currently amended) The method of claim 32, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 10, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

96. (Currently amended) The method of claim 33, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 11, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

97. (Currently amended) The method of claim 34, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 12, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

98. (Currently amended) The method of claim 35, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 13, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

99. (Currently amended) The method of claim 36, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 14, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

100. (Currently amended) The method of claim 37, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 15, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

101. (Currently amended) The method of claim 38, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 16, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

102. (Currently amended) The method of claim 39, ~~further including the step of:~~
~~_____ determining a user's age corresponding to said user identity 17, wherein the~~
determining whether the first of the user identities and the second of the user identities are able to
form a group includes determining whether the first of the user identities is censored.

103. (Currently amended) The method of claim 1 40, further including determining a
user age corresponding to each of the user identities. ~~the step of:~~
~~_____ determining a user's age corresponding to said user identity.~~

104. (Currently amended) The method of claim 2 44, further including determining a user age corresponding to each of the user identities, the step of:
~~_____ determining a user's age corresponding to said user identity.~~

105. (Currently amended) The method of claim 3 42, further including determining a user age corresponding to each of the user identities, the step of:
~~_____ determining a user's age corresponding to said user identity.~~

106. (Currently amended) The method of claim 4 43, further including determining a user age corresponding to each of the user identities, the step of:
~~_____ determining a user's age corresponding to said user identity.~~

107. (Currently amended) The method of claim 5 [44], further including determining a user age corresponding to each of the user identities, the step of:
~~_____ determining a user's age corresponding to said user identity.~~

108. (Currently amended) The method of claim 6 45, further including determining a user age corresponding to each of the user identities, the step of:
~~_____ determining a user's age corresponding to said user identity.~~

109. (Currently amended) The method of claim 7 46, further including determining a user age corresponding to each of the user identities, the step of:
~~_____ determining a user's age corresponding to said user identity.~~

110. (Currently amended) The method of claim 8 47, further including determining a

user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

111. (Currently amended) The method of claim 9 48, further including determining a user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

112. (Currently amended) The method of claim 10 49, further including determining a user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

113. (Currently amended) The method of claim 11 50, further including determining a user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

114. (Currently amended) The method of claim 12 51, further including determining a user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

115. (Currently amended) The method of claim 13 52, further including determining a user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

116. (Currently amended) The method of claim 14 53, further including determining a user age corresponding to each of the user identities. the step of:

~~_____determining a user's age corresponding to said user identity.~~

117. (Currently amended) The method of claim 15 54, further including determining a user age corresponding to each of the user identities, the step of:

~~_____determining a user's age corresponding to said user identity.~~

118. (Currently amended) The method of claim 16 55, further including determining a user age corresponding to each of the user identities, the step of:

~~_____determining a user's age corresponding to said user identity.~~

119. (Currently amended) The method of claim 17 56, further including determining a user age corresponding to each of the user identities, the step of:

~~_____determining a user's age corresponding to said user identity.~~

120. (Currently amended) The method of claim 57, further including the step of:

~~_____determining a user's age corresponding to said user identity 1, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

121. (Currently amended) The method of claim 58, further including the step of:

~~_____determining a user's age corresponding to said user identity 2, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

122. (Currently amended) The method of claim 59, further including the step of:

~~_____determining a user's age corresponding to said user identity 7, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

123. (Currently amended) The method of claim 60, ~~further including the step of:~~
~~determining a user's age corresponding to said user identity 8, wherein the pointer~~
~~is a pointer that produces a pointer-triggered message on demand.~~

124. (Currently amended) The method of claim 61, ~~further including the step of:~~
~~determining a user's age corresponding to said user identity 9, wherein the pointer~~
~~is a pointer that produces a pointer-triggered message on demand.~~

125. (Currently amended) The method of claim 62, ~~further including the step of:~~
~~determining a user's age corresponding to said user identity 13, wherein the pointer~~
~~is a pointer that produces a pointer-triggered message on demand.~~

126. (Currently amended) The method of claim 63, ~~further including the step of:~~
~~determining a user's age corresponding to said user identity 14, wherein the pointer~~
~~is a pointer that produces a pointer-triggered message on demand.~~

127. (Currently amended) The method of claim 4, ~~wherein the step of arbitrating~~
~~includes authorizing a moderator for said communications 15, wherein the pointer is a pointer that~~
~~produces a pointer-triggered message on demand.~~

128. (Currently amended) The method of claim 2, ~~wherein the step of arbitrating~~
~~includes authorizing a moderator for said communications 17, wherein the pointer is a pointer that~~
~~produces a pointer-triggered message on demand.~~

129. (Currently amended) The method of claim ~~3~~, wherein the step of arbitrating includes authorizing a moderator for said communications 18, wherein the data represents a pointer that produces a pointer-triggered message on demand.

130. (Currently amended) The method of claim ~~[4]~~, wherein the step of arbitrating includes authorizing a moderator for said communications 19, wherein the data represents a pointer that produces a pointer-triggered message on demand.

131. (Currently amended) The method of claim ~~5~~, wherein the step of arbitrating includes authorizing a moderator for said communications 24, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

132. (Currently amended) The method of claim ~~6~~, wherein the step of arbitrating includes authorizing a moderator for said communications 25, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

133. (Currently amended) The method of claim ~~7~~, wherein the step of arbitrating includes authorizing a moderator for said communications 26, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

134. (Currently amended) The method of claim ~~8~~, wherein the step of arbitrating includes authorizing a moderator for said communications 30, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

135. (Currently amended) The method of claim ~~9~~, wherein the step of arbitrating

~~includes authorizing a moderator for said communications 31, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

136. (Currently amended) The method of claim 40, ~~wherein the step of arbitrating includes authorizing a moderator for said communications 32, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

137. (previously presented) The method of claim 41, ~~wherein the step of arbitrating includes authorizing a moderator for said communications 34, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

138. (Currently amended) The method of claim 42, ~~wherein the step of arbitrating includes authorizing a moderator for said communications 35, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.~~

139. (Currently amended) The method of claim 43, ~~wherein the step of arbitrating includes authorizing a moderator for said communications 36, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.~~

140. (Currently amended) The method of claim 44, ~~wherein the step of arbitrating includes authorizing a moderator for said communications 41, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.~~

141. (Currently amended) The method of claim 45, ~~wherein the step of arbitrating includes authorizing a moderator for said communications 42, wherein the data that is censored~~

from sending represents a pointer that produces a pointer-triggered message on demand.

142. (Currently amended) The method of claim 16, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 43, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

143. (Currently amended) The method of claim 17, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 47, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

144. (Currently amended) The method of claim 18, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 48, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

145. (Currently amended) The method of claim 19, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 49, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

146. (Currently amended) The method of claim 20, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 51, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

147. (Currently amended) The method of claim 21, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 52, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

148. (Currently amended) The method of claim 22, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 53, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

149. (Currently amended) The method of claim 23, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 58, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

150. (Currently amended) The method of claim 24, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 59, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

151. (Currently amended) The method of claim 25, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 60, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

152. (Currently amended) The method of claim 26, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 64, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

153. (Currently amended) The method of claim 27, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 65, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

154. (Currently amended) The method of claim 28, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 66, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

155. (Currently amended) The method of claim 28, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 68, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

156. (Currently amended) The method of claim 30, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 69, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

157. (Currently amended) The method of claim 31, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 70, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

158. (Currently amended) The method of claim 32, ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 75, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

159. (Currently amended) The method of claim 170, ~~further including the step of communicating a user image from said one of the plurality of the participator computers to the other of the participator computers~~ 76, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.

160. (Currently amended) The method of claim 41, ~~further including the step of communicating a user image from said one of the plurality of the participator computers to the other of the participator computers 77, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.~~

161. (Currently amended) The method of claim 42, ~~further including the step of communicating a user image from said one of the plurality of the participator computers to the other of the participator computers 81, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

162. (Currently amended) The method of claim 46, ~~further including the step of communicating a user image from said one of the plurality of the participator computers to the other of the participator computers 82, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

163. (Currently amended) The method of claim 64, ~~further including the step of communicating a user image from said one of the plurality of the participator computers to the other of the participator computers 83, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

164. (Currently amended) The method of claim 4, ~~further including the step of communicating a user image from one member in the group to another member in the group 85, wherein the data that is censored from sending represents a pointer that produces a pointer-triggered message on demand.~~

165. (Currently amended) A method of ~~using a computer system to distribute communication over~~ operating a system to receive a communication via an Internet network, the method including the steps of:

~~connecting a plurality of participator computers with a controller computer through the Internet to a computer system;~~

~~receiving an authenticated user identity from a first of the participator computers;~~

~~receiving an authenticated user identity from a second of the participator computers;~~

~~using participator software respectively on the participator computers to enable the communication, including at least one of a video, graphic, sound, or multimedia;~~

~~communicating a message including text or ascii, and a pointer, from the first participator computer to said controller computer and from said controller computer to the second participator computer; and~~

~~using said pointer to receive the communication from the first of the participator computers at the second of the participator computers in real time over the Internet network~~

~~sending, from each of the plurality of computers, a respective login name and a password corresponding to a respective user identity;~~

~~communicating a message comprised of a pointer, from a first of the plurality of computers to the computer system;~~

~~communicating the message from the computer system to a second of the plurality of computers; and~~

~~receiving via the pointer a communication from the first of the plurality of computers at the second of the plurality of computers, the communication being sent in real time and via the Internet network, the communication including data representing at least one of video, a graphic, sound, or multimedia.~~

166. (Currently amended) The method of claim 86, wherein the data represents a pointer that produces a pointer-triggered message on demand 165, further including the step of: determining a user's age corresponding to said user identity.

167. (Currently amended) The method of claim 165, wherein the step of using is carried out with said communication including said video 87, wherein the data represents a pointer that produces a pointer-triggered message on demand.

168. (Currently amended) The method of claim 166, wherein the step of using is carried out with said communication including said video 92, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

169. (Currently amended) The method of claim 165, further including the step of forming a chat channel over the Internet network, and arbitrating channel communications between said participator computers at said controller computer 93, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

170. (Currently amended) A method of using computers to communicate over an communicating via an Internet network, the method including the steps of:
connecting a plurality of computers to a computer system controller computer with a plurality of participator computers, said connecting including connecting at least one of the plurality of participator computers with the controller computer through the Internet network;
receiving a log in name and a password, respectively from each of said participator computers;
respectively storing a set of privileges corresponding to each of said user identities,

~~the set including a privilege to receive non-textual communication; and~~

~~determining which of the participator computers can communicate to another of the participator computers over the Internet network in real time, in accordance with the corresponding privilege, at least one of a video, a graphic, or a pointer triggered message that is receivable on demand~~

~~sending, from each of the plurality of computers, a respective login name and password corresponding to a respective user identity;~~

~~determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;~~

~~determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data in the communications, the data representing at least one of a pointer, video, audio, a graphic or multimedia; and~~

~~if the first and the second user identities are able to form the group, then forming the group, sending the communications that are not censored based on the individual user identity, and receiving the communications, wherein the receiving is in real time and via the Internet network.~~

171. (Currently amended) ~~The method of claim 465, wherein said step of using is carried out with said communication including said sound 94, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

172. (Currently amended) ~~The method of claim 465, wherein said step of using is carried out with said communication including said sound and said video 98, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

173. (Currently amended) The method of claim 466, ~~wherein said step of using is carried out with said communication including said sound~~ 99, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

174. (Currently amended) The method of claim 466, ~~wherein said step of using is carried out with said communication including said sound and said video~~ 100, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

175. (Currently amended) The method of claim 465, ~~further including the step of sending the communication as an out-of-band communication~~ 102, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

176. (Currently amended) The method of claim 466, ~~further including the step of: communicating an asynchronous communication from said controller computer to one of said participator computers~~ 103, wherein the data represents a pointer that produces a pointer-triggered message on demand.

177. (Currently amended) The method of claim 465, ~~further including the step of: communicating an asynchronous communication from said controller computer to one of said participator computers~~ 104, wherein the data represents a pointer that produces a pointer-triggered message on demand.

178. (Currently amended) The method of claim 470, ~~further including the step of: communicating an asynchronous communication from said controller computer to one of said participator computers~~ 109, wherein the pointer is a pointer that produces a pointer-triggered

message on demand.

179. (Currently amended) The method of claim 5, further including the step of:
~~communicating a user image from one member in the group to another member in the~~
group 110, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

180. (Currently amended) The method of claim 6, further including the step of:
~~communicating a user image from one member in the group to another member in the~~
group 111, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

181. (Currently amended) The method of claim 10, further including the step of:
~~communicating a user image from one member in the group to another member in the~~
group 115, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

182. (Currently amended) The method of claim 23, further including the step of:
~~communicating a user image from one member in the group to another member in the~~
group 116, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

183. (Currently amended) The method of claim 4, further including the step of:
~~communicating an asynchronous communication from said controller computer to one~~
~~of said participant computers 117, wherein the pointer is a pointer that produces a pointer-triggered~~
message on demand.

184. (Currently amended) The method of claim 4, wherein the step of arbitrating
~~includes censoring responsive to at least one of said user identity, group, and content 119, wherein~~

the pointer is a pointer that produces a pointer-triggered message on demand.

185. (Currently amended) The method of claim 2, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 1, wherein receiving the communications includes causing presentation of some of the communications by one of the plurality of computers in the group.~~

186. (Currently amended) The method of claim 3, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 1, further including, when the data is censored, not receiving the communications that are censored based on the individual user identity, and not presenting the data that is censored to the corresponding output device.~~

187. (Currently amended) The method of claim [4], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 1, wherein the computer system is comprised of an Internet service provider computer system.~~

188. (Currently amended) The method of claim 5, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 1, further including:~~

~~_____ storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and~~

~~_____ based on the authorization, presenting the graphical multimedia at the output device corresponding to the second user identity.~~

189. (Currently amended) The method of claim 6, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 1, further~~ including:

providing the first user identity with access to a member-associated image corresponding to the second user identity.

190. (Currently amended) The method of claim 7, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 1, further~~ including:

determining whether the first user identity is censored from access to a member-associated image corresponding to the second user identity;

if the first user identity is censored, not allowing access to the member-associated image; and

if the first user identity is not censored, allowing access to the member-associated image.

191. (Currently amended) The method of claim 8, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer.

192. (Currently amended) The method of claim 9, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~

the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing video.

193. (Currently amended) The method of claim 40, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing audio.

194. (Currently amended) The method of claim 41, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a graphic.

195. (Currently amended) The method of claim 42, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing multimedia.

196. (Currently amended) The method of claim 13, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and video.~~

197. (Currently amended) The method of claim 14, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and audio.~~

198. (Currently amended) The method of claim 15, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and a graphic.~~

199. (Currently amended) The method of claim 16, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity,~~

individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing video and audio.

200. (Currently amended) The method of claim 47, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing video and a graphic.

201. (Currently amended) The method of claim 48, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing audio and a graphic.

202. (Currently amended) The method of claim 49, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein~~ the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and video and audio.

203. (Currently amended) The method of claim 20, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and video and a graphic.~~

204. (Currently amended) The method of claim 21, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and audio and a graphic.~~

205. (Currently amended) The method of claim 22, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing video and audio and a graphic.~~

206. (Currently amended) The method of claim 23, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one~~

of the first user identity and the second user identity, individually, is censored from sending data representing a pointer and video and audio and a graphic.

207. (Currently amended) The method of claim 24, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 170, wherein at least some of the communications include at least one of text or ascii.

208. (Currently amended) The method of claim 25, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 191, wherein at least some of the communications include at least one of text or ascii.

209. (Currently amended) The method of claim 26, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 192, wherein at least some of the communications include at least one of text or ascii.

210. (Currently amended) The method of claim 27, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 193, wherein at least some of the communications include at least one of text or ascii.

211. (Currently amended) The method of claim 28, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 194, wherein at least some of the communications include at least one of text or ascii.

212. (Currently amended) The method of claim 29, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 195, wherein

at least some of the communications include at least one of text or ascii.

213. (Currently amended) The method of claim 30, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 196, wherein at least some of the communications include at least one of text or ascii.

214. (Currently amended) The method of claim 31, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 197, wherein at least some of the communications include at least one of text or ascii.

215. (Currently amended) The method of claim 32, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 198, wherein at least some of the communications include at least one of text or ascii.

216. (Currently amended) The method of claim 4, ~~wherein the step of arbitrating includes:~~
~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications~~ 199, wherein at least some of the communications include at least one of text or
ascii.

217. (Currently amended) The method of claim 2, ~~wherein the step of arbitrating includes:~~
~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications~~ 200, wherein at least some of the communications include at least one of text or
ascii.

218. (Currently amended) The method of claim 3, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 201, wherein at least some of the communications include at least one of text or
ascii.

219. (Currently amended) The method of claim [4], ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 202, wherein at least some of the communications include at least one of text or
ascii.

220. (Currently amended) The method of claim 5, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 203, wherein at least some of the communications include at least one of text or
ascii.

221. (Currently amended) The method of claim 6, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 204, wherein at least some of the communications include at least one of text or
ascii.

222. (Currently amended) The method of claim 7, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 205, wherein at least some of the communications include at least one of text or~~
~~ascii.~~

223. (Currently amended) The method of claim 8, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 206, wherein at least some of the communications include at least one of text or~~
~~ascii.~~

224. (Currently amended) The method of claim 9, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 170, further including determining whether at least one of the communications is~~
~~censored based on content.~~

225. (Currently amended) The method of claim 10, ~~wherein the step of arbitrating~~
includes:
~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 191, further including determining whether at least one of the communications is~~
~~censored based on content.~~

226. (Currently amended) The method of claim 11, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 192, further including determining whether at least one of the communications is
censored based on content.

227. (Currently amended) The method of claim 12, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 193, further including determining whether at least one of the communications is
censored based on content.

228. (Currently amended) The method of claim 13, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 194, further including determining whether at least one of the communications is
censored based on content.

229. (Currently amended) The method of claim 14, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 195, further including determining whether at least one of the communications is
censored based on content.

230. (Currently amended) The method of claim 15, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 196, further including determining whether at least one of the communications is~~
~~censored based on content.~~

231. (Currently amended) The method of claim 46, wherein the step of arbitrating
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 197, further including determining whether at least one of the communications is~~
~~censored based on content.~~

232. (Currently amended) The method of claim 47, wherein the step of arbitrating
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 198, further including determining whether at least one of the communications is~~
~~censored based on content.~~

233. (Currently amended) The method of claim 48, wherein the step of arbitrating
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 199, further including determining whether at least one of the communications is~~
~~censored based on content.~~

234. (Currently amended) The method of claim 49, wherein the step of arbitrating
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~

communications 200, further including determining whether at least one of the communications is censored based on content.

235. (Currently amended) The method of claim 20, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 201, further including determining whether at least one of the communications is censored based on content.

236. (Currently amended) The method of claim 21, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 202, further including determining whether at least one of the communications is censored based on content.

237. (Currently amended) The method of claim 22, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 203, further including determining whether at least one of the communications is censored based on content.

238. (Currently amended) The method of claim 23, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 204, further including determining whether at least one of the communications is

censored based on content.

239. (Currently amended) The method of claim 24, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 205, further including determining whether at least one of the communications is censored based on content.

240. (Currently amended) The method of claim 25, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 206, further including determining whether at least one of the communications is censored based on content

241. (Currently amended) The method of claim 26, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 170, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

242. (Currently amended) The method of claim 27, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 191, wherein the determining whether the first user identity and the second user

identity are able to form a group includes determining whether the first of the user identities is censored.

243. (Currently amended) The method of claim 28, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 192, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

244. (Currently amended) The method of claim 29, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 193, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

245. (Currently amended) The method of claim 30, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 194, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

246. (Currently amended) The method of claim 34, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 195, wherein the determining whether the first user identity and the second user
identity are able to form a group includes determining whether the first of the user identities is
censored.

247. (Currently amended) The method of claim 32, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 196, wherein the determining whether the first user identity and the second user
identity are able to form a group includes determining whether the first of the user identities is
censored.

248. (Currently amended) The method of claim 1, ~~wherein the step of arbitrating~~
includes:

~~providing private, real-time communication over the Internet network, with said~~
controller computer, between some of the group 197, wherein the determining whether the first
user identity and the second user identity are able to form a group includes determining whether
the first of the user identities is censored.

249. (Currently amended) The method of claim 2, ~~wherein the step of arbitrating~~
includes:

~~providing private, real-time communication over the Internet network, with said~~
controller computer, between some of the group 198, wherein the determining whether the first
user identity and the second user identity are able to form a group includes determining whether

the first of the user identities is censored.

250. (Currently amended) The method of claim 3, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group 199, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

251. (Currently amended) The method of claim 4, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group 200, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

252. (Currently amended) The method of claim 5, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group 201, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

253. (Currently amended) The method of claim 6, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 202, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

254. (Currently amended) The method of claim 7, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 203, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

255. (Currently amended) The method of claim 8, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 204, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

256. (Currently amended) The method of claim 9, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 205, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

257. (Currently amended) The method of claim 40, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 206, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.~~

258. (Currently amended) The method of claim 41, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 170, further including determining a user age corresponding to each of the user identities.~~

259. (Currently amended) The method of claim 42, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 191, further including determining a user age corresponding to each of the user identities.~~

260. (Currently amended) The method of claim 43, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 192, further including determining a user age corresponding to each of the user identities.~~

261. (Currently amended) The method of claim 44, ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 193, further including determining a user age corresponding to each of the user identities.~~

262. (Currently amended) The method of claim 45, ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 194, further including determining a user age corresponding to each of the user identities.~~

263. (Currently amended) The method of claim 46, ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 195, further including determining a user age corresponding to each of the user identities.~~

264. (Currently amended) The method of claim 47, ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 196, further including determining a user age corresponding to each of the user identities.~~

265. (Currently amended) The method of claim 48, ~~wherein the step of arbitrating~~
includes:

~~providing private, real time communication over the Internet network, with said
controller computer, between some of the group 197, further including determining a user age
corresponding to each of the user identities.~~

266. (Currently amended) The method of claim 49, ~~wherein the step of arbitrating~~
includes:

~~providing private, real time communication over the Internet network, with said
controller computer, between some of the group 198, further including determining a user age
corresponding to each of the user identities.~~

267. (Currently amended) The method of claim 20, ~~wherein the step of arbitrating~~
includes:

~~providing private, real time communication over the Internet network, with said
controller computer, between some of the group 199, further including determining a user age
corresponding to each of the user identities.~~

268. (Currently amended) The method of claim 24, ~~wherein the step of arbitrating~~
includes:

~~providing private, real time communication over the Internet network, with said
controller computer, between some of the group 200, further including determining a user age
corresponding to each of the user identities.~~

269. (Currently amended) The method of claim 22, ~~wherein the step of arbitrating~~

includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 201, further including determining a user age corresponding to each of the user identities.~~

270. (Currently amended) The method of claim 23, ~~wherein the step of arbitrating~~

includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 202, further including determining a user age corresponding to each of the user identities.~~

271. (Currently amended) The method of claim 24, ~~wherein the step of arbitrating~~

includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 203, further including determining a user age corresponding to each of the user identities.~~

272. (Currently amended) The method of claim 25, ~~wherein the step of arbitrating~~

includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 204, further including determining a user age corresponding to each of the user identities.~~

273. (Currently amended) The method of claim 26, ~~wherein the step of arbitrating~~

includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 205, further including determining a user age corresponding to each of the user identities.~~

274. (Currently amended) The method of claim 27, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 206, further including determining a user age corresponding to each of the user identities.~~

275. (Currently amended) The method of claim 28, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 170, wherein at least one of the communications includes data representing a human communication of sound.~~

276. (Currently amended) The method of claim 29, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 191, wherein at least one of the communications includes data representing a human communication of sound.~~

277. (Currently amended) The method of claim 30, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said~~

~~controller-computer, between some of the group 192, wherein at least one of the communications includes data representing a human communication of sound.~~

278. (Currently amended) The method of claim 31, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group 193, wherein at least one of the communications includes data representing a human communication of sound.~~

279. (Currently amended) The method of claim 32, ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group 194, wherein at least one of the communications includes data representing a human communication of sound.~~

280. (Currently amended) The method of claim 470, ~~further including the step of: determining a user's age corresponding to said user identity 195, wherein at least one of the communications includes data representing a human communication of sound.~~

281. (Currently amended) The method of claim 470, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 196, wherein at least one of the communications includes data representing a human communication of sound.~~

282. (Currently amended) The method of claim 170, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 197, wherein at least one of the communications includes data representing a human communication of sound.

283. (Currently amended) The method of claim 170, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 198, wherein at least one of the communications includes data representing a human communication of sound.

284. (Currently amended) The method of claim 170, ~~further including the step of: providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability~~ 199, wherein at least one of the communications includes data representing a human communication of sound.

285. (Currently amended) The method of claim 33, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 200, wherein at least one of the communications includes data representing a human communication of sound.

286. (Currently amended) The method of claim 34, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 201, wherein at least

one of the communications includes data representing a human communication of sound.

287. (Currently amended) The method of claim 35, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 202, wherein at least one of the communications includes data representing a human communication of sound.

288. (Currently amended) The method of claim 36, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 203, wherein at least one of the communications includes data representing a human communication of sound.

289. (Currently amended) The method of claim 37, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 204, wherein at least one of the communications includes data representing a human communication of sound.

290. (Currently amended) The method of claim 38, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 205, wherein at least one of the communications includes data representing a human communication of sound.

291. (Currently amended) The method of claim 39, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 206, wherein at least

one of the communications includes data representing a human communication of sound.

292. (Currently amended) The method of claim [40], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 170, wherein at least one of the communications includes at least one of text or ascii.

293. (Currently amended) The method of claim [41], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 191, wherein at least one of the communications includes at least one of text or ascii.

294. (Currently amended) The method of claim [42], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 192, wherein at least one of the communications includes at least one of text or ascii.

295. (Currently amended) The method of claim [43], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 193, wherein at least one of the communications includes at least one of text or ascii.

296. (Currently amended) The method of claim [44], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 194,

wherein at least one of the communications includes at least one of text or ascii.

297. (Currently amended) The method of claim [45], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 195,
wherein at least one of the communications includes at least one of text or ascii.

298. (Currently amended) The method of claim [46], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 196,
wherein at least one of the communications includes at least one of text or ascii.

299. (Currently amended) The method of claim [47], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 197,
wherein at least one of the communications includes at least one of text or ascii.

300. (Currently amended) The method of claim [48], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 198,
wherein at least one of the communications includes at least one of text or ascii.

301. (Currently amended) The method of claim [49], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 199,

wherein at least one of the communications includes at least one of text or ascii.

302. (Currently amended) The method of claim 50, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 200, wherein at least one of the communications includes at least one of text or ascii.

303. (Currently amended) The method of claim 51, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 201, wherein at least one of the communications includes at least one of text or ascii.

304. (Currently amended) The method of claim 52, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 202, wherein at least one of the communications includes at least one of text or ascii.

305. (Currently amended) The method of claim 53, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 203, wherein at least one of the communications includes at least one of text or ascii.

306. (Currently amended) The method of claim 54, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 204, wherein at least

one of the communications includes at least one of text or ascii.

307. (Currently amended) The method of claim 55, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 205, wherein at least one of the communications includes at least one of text or ascii.

308. (Currently amended) The method of claim 56, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 206, wherein at least one of the communications includes at least one of text or ascii.

309. (Currently amended) The method of claim 57, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 170, wherein the computer system is comprised of an Internet service provider computer system.

310. (Currently amended) The method of claim 58, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 170, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and
based on the authorization, presenting the graphical multimedia at the output device corresponding to the second user identity.

311. (Currently amended) The method of claim 59, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 170, further including:~~
providing the first user identity with access to a member-associated image corresponding to the second user identity.

312. (Currently amended) The method of claim 60, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 170, further including:~~
determining whether the first user identity is censored from access to a member-associated image corresponding to the second user identity;
if the first user identity is censored, not allowing access to the member-associated image; and
if the first user identity is not censored, allowing access to the member-associated image.

313. (Currently amended) The method of claim 61, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 170, wherein the data represents a pointer that a pointer-triggered message on demand.~~

314. (Currently amended) The method of claim 62, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 191, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

315. (Currently amended) ~~The method of claim 63, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 196, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

316. (Currently amended) ~~The method of claim 33, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 197, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

317. (Currently amended) ~~The method of claim 34, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 198, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

318. (Currently amended) ~~The method of claim 35, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 202, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

319. (Currently amended) ~~The method of claim 36, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 203, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

320. (Currently amended) ~~The method of claim 37, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 204, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

321. (Currently amended) The method of claim ~~38~~, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 206, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

322. (Currently amended) The method of claim ~~39~~, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 207, wherein the data represents a pointer that a pointer-triggered message on demand.

323. (Currently amended) The method of claim [40], wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 208, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

324. (Currently amended) The method of claim [41], wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 213, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

325. (Currently amended) The method of claim [42], wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 214, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

326. (Currently amended) The method of claim [43], wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 215, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

327. (Currently amended) The method of claim [44], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 219, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

328. (Currently amended) The method of claim [45], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 220, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

329. (Currently amended) The method of claim [46], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 221, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

330. (Currently amended) The method of claim [47], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 223, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

331. (Currently amended) The method of claim [48], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 224, wherein the data represents a pointer that a pointer-triggered message on demand.~~

332. (Currently amended) The method of claim [49], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 225, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

333. (Currently amended) The method of claim 50, ~~wherein the step of arbitrating~~

~~includes censoring responsive to at least one of said user identity, group, and content 230, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

334. (Currently amended) The method of claim 51, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 231, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

335. (Currently amended) The method of claim 52, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 232, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

336. (Currently amended) The method of claim 53, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 236, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

337. (Currently amended) The method of claim 54, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 237, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

338. (Currently amended) The method of claim 55, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 238, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

339. (Currently amended) The method of claim 56, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 240, wherein~~

the pointer is a pointer that produces a pointer-triggered message on demand.

340. (Currently amended) The method of claim 57, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 241, wherein~~ the pointer is a pointer that produces a pointer-triggered message on demand.

341. (Currently amended) The method of claim 58, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 242, wherein~~ the pointer is a pointer that produces a pointer-triggered message on demand.

342. (Currently amended) The method of claim 59, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 247, wherein~~ the pointer is a pointer that produces a pointer-triggered message on demand.

343. (Currently amended) The method of claim 60, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 248, wherein~~ the pointer is a pointer that produces a pointer-triggered message on demand.

344. (Currently amended) The method of claim 61, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 249, wherein~~ the pointer is a pointer that produces a pointer-triggered message on demand.

345. (Currently amended) The method of claim 62, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 253, wherein~~ the pointer is a pointer that produces a pointer-triggered message on demand.

346. (Currently amended) The method of claim 63, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 254, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

347. (Currently amended) The method of claim 33, ~~wherein the step of arbitrating includes:~~

~~—authorizing, with said controller computer, invisible viewing of some of the communications~~ 255, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

348. (Currently amended) The method of claim 34, ~~wherein the step of arbitrating includes:~~

~~—authorizing, with said controller computer, invisible viewing of some of the communications~~ 257, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

349. (Currently amended) The method of claim 35, ~~wherein the step of arbitrating includes:~~

~~—authorizing, with said controller computer, invisible viewing of some of the communications~~ 258, wherein the data represents a pointer that produces a pointer-triggered message on demand.

350. (Currently amended) The method of claim 36, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 259, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

351. (Currently amended) The method of claim 37, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 264, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

352. (Currently amended) The method of claim 38, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 265, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

353. (Currently amended) The method of claim 39, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 266, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

354. (Currently amended) The method of claim [40], ~~wherein the step of~~
arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~

communications 270, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

355. (Currently amended) The method of claim [41], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 271, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

356. (Currently amended) The method of claim [42], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 272, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

357. (Currently amended) The method of claim [43], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 274, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

358. (Currently amended) The method of claim [44], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 275, wherein the data represents a pointer that produces a pointer-triggered

message on demand.

359. (Currently amended) The method of claim [45], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 276, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

360. (Currently amended) The method of claim [46], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 281, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

361. (Currently amended) The method of claim [47], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 282, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

362. (Currently amended) The method of claim [48], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 283, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

363. (Currently amended) The method of claim [49], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 287, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

364. (Currently amended) The method of claim 50, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 288, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

365. (Currently amended) The method of claim 51, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 289, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

366. (Currently amended) The method of claim 52, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 291, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

367. (Currently amended) The method of claim 53, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 292, wherein the data represents a pointer that produces a pointer-triggered
message on demand.

368. (Currently amended) The method of claim 54, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 293, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

369. (Currently amended) The method of claim 55, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 298, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

370. (Currently amended) The method of claim 56, ~~wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 299, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

371. (Currently amended) The method of claim 57, ~~wherein the step of arbitrating~~

includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 300, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

372. (Currently amended) The method of claim ~~58, wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 304, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

373. (Currently amended) The method of claim ~~59, wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 305, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

374. (Currently amended) The method of claim ~~60, wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 306, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

375. (Currently amended) The method of claim ~~61, wherein the step of arbitrating~~
includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 308, wherein the pointer is a pointer that produces a pointer-triggered message
on demand.

376. (Currently amended) The method of claim 62, ~~wherein the step of arbitrating~~
~~includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 309, wherein the data represents a pointer that produces a pointer-triggered
message on demand.

377. (Currently amended) The method of claim 63, ~~wherein the step of arbitrating~~
~~includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 310, wherein the data represents a pointer that produces a pointer-triggered
message on demand.

378. (Currently amended) The method of claim 33, ~~further including the step of:~~
~~providing group communications capability, with said controller computer, to handle~~
~~communications between the one of the plurality of computers and the other of the plurality of~~
~~computers, said group communications capability including private communication window~~
capability 311, wherein the data represents a pointer that produces a pointer-triggered message on
demand.

379. (Currently amended) The method of claim 34, ~~further including the step of:~~
~~providing group communications capability, with said controller computer, to handle~~

~~communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 312, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

380. (Currently amended) The system method of claim 35, further including the step of:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 435, wherein the data represents a pointer.~~

381. (Currently amended) The system method of claim 36, further including the step of:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 435, wherein the data represents video.~~

382. (Currently amended) The system method of claim 37, further including the step of:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 435, wherein the data represents audio.~~

383. (Currently amended) ~~The method of claim 38, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents a graphic.~~

384. (Currently amended) ~~The method of claim 39, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents multimedia.~~

385. (Currently amended) ~~The method of claim 40, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents a pointer and video.~~

386. (Currently amended) ~~The method of claim 41, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents a pointer and audio.~~

387. (Currently amended) ~~The method of claim 42, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents a pointer and a graphic.~~

388. (Currently amended) ~~The method of claim 43, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents video and audio.~~

389. (Currently amended) ~~The method of claim 44, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents video and a graphic.~~

390. (Currently amended) ~~The method of claim 45, further including the step of:
providing group communications capability, with said controller computer, to handle
communications between the one of the plurality of computers and the other of the plurality of
computers, said group communications capability including private communication window
capability system of claim 435, wherein the data represents audio and a graphic.~~

391. (Currently amended) ~~The method of claim 46, further including the step of:~~

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 435, wherein the data represents a pointer and video and audio.~~

392. (Currently amended) The method of claim 47, further including the step of:
~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 435, wherein the data represents a pointer and video and a graphic.~~

393. (Currently amended) The method of claim 48, further including the step of:
~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 435, wherein the data represents a pointer and audio and a graphic.~~

394. (Currently amended) The method of claim 49, further including the step of:
~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 435, wherein the data represents video and audio and a graphic.~~

395. (Currently amended) The method of claim 50, further including the step of:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 435, wherein the data represents a pointer and video and audio and a graphic.~~

396. (Currently amended) The method of claim 51, further including the step of: ~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 435, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

397. (Currently amended) The method of claim 52, further including the step of: ~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 380, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

398. (Currently amended) The method of claim 53, further including the step of: ~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 381, wherein the computer system is further programmed to determine~~

whether at least one of the communications is censored based on content.

399. (Currently amended) ~~The method of claim 54, further including the step of: providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 382, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

400. (Currently amended) ~~The method of claim 55, further including the step of: providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 383, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

401. (Currently amended) ~~The method of claim 56, further including the step of: providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 384, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

402. (Currently amended) ~~The method of claim 57, further including the step of: providing group communications capability, with said controller computer, to handle~~

~~communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 385, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

403. (Currently amended) The method of claim 58, further including the step of: ~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 386, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

404. (Currently amended) The method of claim 59, further including the step of: ~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 387, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

405. (Currently amended) The method of claim 60, further including the step of: ~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 388, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

406. (Currently amended) ~~The method of claim 61, further including the step of providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 389, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

407. (Currently amended) ~~The method of claim 62, further including the step of providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 390, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

408. (Currently amended) ~~The method of claim 63, further including the step of providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability system of claim 391, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

409. (Currently amended) ~~A method of communicating via of using a computer system to communicate over an Internet network, the method including the steps of: connecting a plurality of participater computers with a controller computer through~~

~~the Internet network to a computer system via the Internet network;~~

~~respectively storing a log in name and a password corresponding to each of a plurality of user identities;~~

~~receiving one said log in name and one said password, respectively from each of said participator computers;~~

~~determining which of the participator computers can communicate with an other of the participator computers, wherein some communications are in real time over the Internet network; and~~

~~providing a member associated image and corresponding member identity information under control of said controller computer, respectively to some of the participator computers~~

~~sending, from each of said plurality of computers, a login name and a password corresponding to a respective user identity;~~

~~determining which of the plurality of computers can communicate communications with at least one other of the plurality of computers,~~

~~receiving at least some of the communications in real time via the Internet network;~~

~~and~~

~~providing, to at least one of the plurality of computers under control of the computer system, a member-associated image and member identity information corresponding to one of the user identities.~~

410. (Currently amended) The method of claim 400, further including the step of:
~~determining a user's age corresponding to said user identity system of claim 392,~~
~~wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

411. (Currently amended) The method of claim 410, further including the step of: communicating, with said controller computer, an asynchronous message from one of the participator computers to another of the participator computers system of claim 393, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.

412. (Currently amended) The method of claim 410, further including the step of censoring, with said controller computer, unwanted communication from a member system of claim 394, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.

413. (Currently amended) The method of claim 410, wherein the step of arbitrating includes distributing chat communications to a chat group real time over the Internet network system of claim 395, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.

414. (Currently amended) The method of claim 413, further including the step of providing, with said controller computer, private chat capability to the participator computers system of claim 435, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and

send the communications that are not censored from sending.

415. (Currently amended) ~~The method of claim 413, further including the step of providing, with said controller computer, private communication window capability to the participator computers~~ system of claim 380, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and
send the communications that are not censored from sending.

416. (Currently amended) ~~The method of claim 410, further including the step of communicating, with said controller computer, human communication sound to the participator computers~~ system of claim 381, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and
send the communications that are not censored from sending.

417. (Currently amended) ~~The method of claim 410, further including the step of providing, with said controller computer, video to the participator computers~~ system of claim 382, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and
send the communications that are not censored from sending.

418. (Currently amended) ~~The method of claim 416, further including the step of providing, with said controller computer, video to the participator computers~~ system of claim 383,

wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and send the communications that are not censored from sending.

419. (Currently amended) ~~The method of claim 410, wherein the step of arbitrating is carried out with some of said communications including text~~ system of claim 384, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and send the communications that are not censored from sending.

420. (Currently amended) ~~The method of claim 410, wherein the step of arbitrating is carried out with some of said communications communicated out of band~~ system of claim 385, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and send the communications that are not censored from sending.

421. (Currently amended) ~~The method of claim 410, wherein the step of arbitrating is carried out with some of said communications including multimedia media messages~~ system of claim 386, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and

send the communications that are not censored from sending.

422. (Currently amended) ~~The method of claim 409, further including the step of controlling, with said controller computer, invisible viewing of the communications~~ system of claim 387, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and
send the communications that are not censored from sending.

423. (Currently amended) ~~The method of claim 410, further including the step of controlling, with said controller computer, invisible viewing of the communications~~ system of claim 388, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and
send the communications that are not censored from sending.

424. (Currently amended) ~~The method of claim 411, further including the step of controlling, with said controller computer, invisible viewing of the communications~~ system of claim 389, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and
send the communications that are not censored from sending.

425. (Currently amended) ~~The method of claim 412, further including the step of controlling, with said controller computer, invisible viewing of the communications~~ system of claim

390, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and send the communications that are not censored from sending.

426. (Currently amended) ~~The method of claim 413, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 391, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and~~ send the communications that are not censored from sending.

427. (Currently amended) ~~The method of claim 414, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 392, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and~~ send the communications that are not censored from sending.

428. (Currently amended) ~~The method of claim 415, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 393, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and~~ send the communications that are not censored from sending.

429. (Currently amended) ~~The method of claim 416, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 394, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and~~
send the communications that are not censored from sending.

430. (Currently amended) ~~The method of claim 417, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 395, wherein the computer system is further programmed to determine whether at least one of the first user identity and the second user identity, individually, is censored from sending the communications data representing at least one of a pointer, video, a graphic, or multimedia, and~~
send the communications that are not censored from sending.

431. (Currently amended) ~~The method of claim 418, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 435, wherein at least one of the communications includes at least one of text or ascii.~~

432. (Currently amended) ~~The method of claim 419, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 380, wherein at least one of the communications includes at least one of text or ascii.~~

433. (Currently amended) ~~The method of claim 420, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim~~

381, wherein at least one of the communications includes at least one of text or ascii.

434. (Currently amended) ~~The method of claim 421, further including the step of controlling, with said controller computer, invisible viewing of the communications system of claim 382, wherein at least one of the communications includes at least one of text or ascii.~~

435. (Currently amended) A system using computers to communicate over an Internet network, the system including:

a plurality of participator computers connected to a computer system, each of the plurality of computers being connected to a respective input device and a respective output device, the computer system being programmed to: with a controller computer through the Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log-in name and a password corresponding to a user identity, the controller computer enabled to carry out the steps of:

~~respectively storing a set of privileges corresponding to each of said user identities, the set including a privilege to receive non-textual communication; and~~

~~determining which ones of the participator computers can form a group to communicate communications in real time over the Internet network, said communications respectively in accordance with the corresponding privilege, the participator computers respectively enabled to send and receive said communications including at least one of a video, a graphic, graphical multimedia, or a pointer-triggered message that is receivable on demand~~

form a group, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, the group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time,

determine whether at least one of the first user identity and the second user identity, individually, is censored from data representing a pointer, video, audio, a graphic, or multimedia, cause the plurality of computers in the group to receive, in real time via the Internet network, the communications that are not censored based on the individual user identity, and cause the plurality of computers in the group to not present the data that is censored based on the individual user identity to the corresponding output device.

436. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer triggered message~~ 383, wherein at least one of the communications includes at least one of text or ascii.

437. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer triggered message and said graphic and further comprises a human communication sound~~ 384, wherein at least one of the communications includes at least one of text or ascii.

438. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer triggered message and said video and said graphic~~ 385, wherein at least one of the communications includes at least one of text or ascii.

439. (Currently amended) The system of claim [435], ~~wherein one of said communications further comprises a human communication sound~~ 386, wherein at least one of the communications includes at least one of text or ascii.

440. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said video and further comprises a human communication sound~~ 387,

wherein at least one of the communications includes at least one of text or ascii.

441. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said graphic and further comprises a human communication sound~~ 388, wherein at least one of the communications includes at least one of text or ascii.

442. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer-triggered message and further comprises a human communication sound~~ 389, wherein at least one of the communications includes at least one of text or ascii.

443. (Currently amended) The system of claim [435], ~~wherein one of said communications further comprises a human communication sound, and wherein some of said communications include~~ 390, wherein at least one of the communications includes at least one of text or ascii.

444. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said video~~ 391, wherein at least one of the communications includes at least one of text or ascii.

445. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said video and said graphic~~ 392, wherein at least one of the communications includes at least one of text or ascii.

446. (Currently amended) The system of claim [435], ~~wherein one of said~~

~~communications comprises said video and said pointer triggered message 393, wherein at least one of the communications includes at least one of text or ascii.~~

447. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said video, and wherein some of said communications include text or ascii-~~ 394, wherein at least one of the communications includes at least one of text or ascii.

448. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said graphic 395, wherein at least one of the communications includes at least one of text or ascii.~~

449. (Currently amended) The system of claim 435, ~~wherein one of said communications comprises said graphic and said pointer triggered message~~ the computer system is comprised of an Internet service provider.

450. (Currently amended) The system of claim 435, ~~wherein one of said communications comprises said graphic, and wherein some of said communications include text or ascii~~ the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data, and

based on the authorization, allow the graphical data to be presented at the output device corresponding to the second user identity.

451. (Currently amended) The system of claim 435, ~~wherein one of said communications comprises said video and said graphic and further comprises a human~~

~~communication sound~~ the computer system is further programmed to:

provide the first user identity with access to a member-associated image
corresponding to the second user identity.

452. (Currently amended) The system of claim 435, wherein ~~one of said~~
~~communications comprises said video and said pointer-triggered message and further comprises a~~
~~human communication sound~~ the computer system is further programmed to:

determine whether the first user identity is censored from access to a member-
associated image corresponding to the second user identity,

If the first user identity is censored, not allowing access to member-associated
image, and

If the first user identity is not censored, allow access to the member-associated
image.

453. (Currently amended) The system of claim 435, wherein ~~one of said~~
~~communications comprises said video and further comprises a human communication sound, and~~
~~wherein some of said communications include text or ascii~~ the data represents a pointer that
produces a pointer-triggered message on demand.

454. (Currently amended) The system of claim [435], ~~wherein one of said~~
~~communications comprises said video and said graphic and said pointer-triggered message and~~
~~further comprises a human communication sound~~ 380, wherein the pointer is a pointer that
produces a pointer-triggered message on demand.

455. (Currently amended) The system of claim [435], ~~wherein one of said~~

~~communications comprises said video and said pointer-triggered message and further comprises a human communication sound, and wherein some of said communications include text or ascii 385, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

456. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said video and said graphic and said pointer-triggered message and further comprises a human communication sound, and wherein some of said communications include text or ascii 386, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

457. (Currently amended) The system of claim [435], ~~wherein some of said communications include text or ascii 387, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

458. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said graphic and further comprises a human communication sound, and wherein some of said communications include text or ascii 391, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

459. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said graphic and said video, and wherein some of said communications include text or ascii 392, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

460. (Currently amended) The system of claim [435], ~~wherein one of said~~

~~communications comprises said pointer triggered message, and wherein some of said communications include text or ascii 393, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

461. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer triggered message and said video, and wherein some of said communications include text or ascii 395, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

462. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises video and said graphic and further comprises a human communication sound, and wherein some of said communications include text or ascii 396, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

463. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer triggered message and further comprises a human communication sound, and wherein some of said communications include text or ascii 397, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

464. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said pointer triggered message and said graphic and further comprises a human communication sound, and wherein some of said communications include text or ascii 402, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

465. (Currently amended) The system of claim [435], ~~wherein one of said~~

~~communications comprises video and said graphic and said pointer-triggered message, and wherein some of said communications include text or ascii 403, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

466. (Currently amended) The system of claim [435], ~~wherein one of said communications comprises said graphic and said pointer-triggered message, and wherein some of said communications include text or ascii 404, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

467. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said pointer-triggered message, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound, and which of the participator computers can communicate text or ascii, to the other of the participator computers 408, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

468. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said pointer-triggered message and said graphic, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii, to the other of the participator computers 410, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

469. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video and said graphic, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate~~

~~a human communication sound, and which of the participator computers can communicate text or
ascii, to the other of the participator computers 411, wherein the pointer is a pointer that produces
a pointer-triggered message on demand.~~

470. (Currently amended) The system of claim 604, ~~wherein said step of
arbitrating is carried out with said graphic and said pointer-triggered message, and wherein said
controller computer is enabled to carry out the step of arbitrating to determine which of the
participator computers can communicate a human communication sound, and which of the
participator computers can communicate text or ascii, to the other of the participator computers
413, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

471. (Currently amended) The system of claim 604, ~~wherein said step of
arbitrating is carried out with said graphic and said video, and wherein said controller computer is
enabled to carry out the step of arbitrating to determine which of the participator computers can
communicate text or ascii to the other of the participator computers 414, wherein the data that is
censored from sending represents a pointer that produces a pointer-triggered message on
demand.~~

472. (Currently amended) The system of claim 604, ~~wherein said step of
arbitrating is carried out with said video and said graphic and said pointer-triggered message, and
wherein said controller computer is enabled to carry out the step of arbitrating to determine which
of the participator computers can communicate text or ascii to the other of the participator
computers 415, wherein the data that represents the pointer that produces a pointer-triggered
message on demand.~~

473. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video and said pointer triggered message, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers~~ 420, wherein the data that represents the pointer that produces a pointer-triggered message on demand.

474. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video and said graphic and said pointer triggered message~~ 421, wherein the data that represents the pointer that produces a pointer-triggered message on demand.

475. (Currently amended) The system of claim 604, ~~wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers~~ 422, wherein the data that represents the pointer that produces a pointer-triggered message on demand.

476. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video, and said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers~~ 426, wherein the data that represents the pointer that produces a pointer-triggered message on demand.

477. (Currently amended) The system of claim 604, ~~wherein said step of~~

~~arbitrating is carried out with said graphic, and said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers 427, wherein the data that represents the pointer that produces a pointer-triggered message on demand.~~

478. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said pointer-triggered message, and said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers 428, wherein the data that represents the pointer that produces a pointer-triggered message on demand.~~

479. (Currently amended) The system of claim 604, ~~wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound, and which of the participator computers can communicate text or ascii, to the other of the participator computers 430, wherein the data that represents the pointer that produces a pointer-triggered message on demand.~~

480. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video 431, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

481. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video and said graphic 432, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

482. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video and said pointer triggered message 438, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

483. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers 439, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

484. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said graphic 440, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

485. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said graphic and said pointer triggered message 444, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

486. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said graphic, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers 445, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

487. (Currently amended) The system of claim 604, ~~wherein said step of~~

~~arbitrating is carried out with said video and said graphic, and said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers 446, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

488. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video and said pointer-triggered message, and said and said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers 448, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

489. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said video, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound, and which of the participator computers can communicate text or ascii, to the other of the participator computers 449, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

490. (Currently amended) The system of claim 604, ~~wherein said step of arbitrating is carried out with said sound and said video and said graphic and said pointer-triggered message 450, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

491. (Currently amended) The system of claim 604, ~~wherein said step of~~

~~arbitrating is carried out with said sound and said video and said pointer-triggered message, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers~~ 451, wherein the data represents a pointer that produces a pointer-triggered message on demand.

492. (Currently amended) The system of claim 604, wherein said step of arbitrating is carried out with said video and said graphic and said pointer-triggered message, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound, and which of the participator computers can communicate text or ascii, to the other of the participator computers 452, wherein the data represents a pointer that produces a pointer-triggered message on demand.

493. (Currently amended) The system of claim 604, wherein said step of arbitrating is carried out with said graphic and said pointer-triggered message, and said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound to the other of the personal computers the data represents a pointer.

494. (Currently amended) The system of claim 604, wherein said step of arbitrating is carried out with said pointer-triggered message, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers data represents video.

495. (Currently amended) The system of claim 604, wherein said controller

~~computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate text or ascii to the other of the participator computers the data represents audio.~~

496. (Currently amended) The system of claim 604, wherein said step of arbitrating is carried out with said pointer triggered message the data represents a graphic.

497. (Currently amended) The system of claim 604, wherein said step of arbitrating is carried out with graphic, and wherein said controller computer is enabled to carry out the step of arbitrating to determine which of the participator computers can communicate a human communication sound, and which of the participator computers can communicate text or ascii, to the other of the participator computers the data represents multimedia.

498. (Currently amended) The system of claim [435], wherein said controller computer is enabled to carry out the step of:
determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and video.

499. (Currently amended) The system of claim [436], wherein said controller computer is enabled to carry out the step of:
determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and audio.

500. (Currently amended) The system of claim [437], wherein said controller computer is enabled to carry out the step of:

~~determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and a graphic.~~

501. (Currently amended) The system of claim [438], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents video and audio.~~

502. (Currently amended) The system of claim [439], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents video and a graphic.~~

503. (Currently amended) The system of claim [440], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents video and a graphic.~~

504. (Currently amended) The system of claim [441], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and video and a audio.~~

505. (Currently amended) The system of claim [442], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and video and a graphic.~~

506. (Currently amended) The system of claim [443], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and audio and a graphic.~~

507. (Currently amended) The system of claim [444], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents video and audio and a graphic.~~

508. (Currently amended) The system of claim [445], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein the data represents a pointer and video and audio and a graphic.~~

509. (Currently amended) The system of claim [446], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 604, wherein at least some of the communications include at least one of text or ascii.~~

510. (Currently amended) The system of claim [447], ~~wherein said controller computer is enabled to carry out the step of:~~

~~determining a user's age corresponding to said user identity 493, wherein at least some of the communications include at least one of text or ascii.~~

511. (Currently amended) The system of claim [448], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 494, wherein at least some of the communications include at least one of text or ascii.~~

512. (Currently amended) The system of claim [449], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 495, wherein at least some of the communications include at least one of text or ascii.~~

513. (Currently amended) The system of claim [450], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 496, wherein at least some of the communications include at least one of text or ascii.~~

514. (Currently amended) The system of claim [451], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 497, wherein at least some of the communications include at least one of text or ascii.~~

515. (Currently amended) The system of claim [452], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 498, wherein at least some of the communications include at least one of text or ascii.~~

516. (Currently amended) The system of claim [453], wherein said controller computer is enabled to carry out the step of:

~~_____ determining a user's age corresponding to said user identity 499, wherein at least some of the communications include at least one of text or ascii.~~

517. (Currently amended) The system of claim [454], wherein said controller computer is enabled to carry out the step of:

~~_____ determining a user's age corresponding to said user identity 500, wherein at least some of the communications include at least one of text or ascii.~~

518. (Currently amended) The system of claim [455], wherein said controller computer is enabled to carry out the step of:

~~_____ determining a user's age corresponding to said user identity 501, wherein at least some of the communications include at least one of text or ascii.~~

519. (Currently amended) The system of claim [456], wherein said controller computer is enabled to carry out the step of:

~~_____ determining a user's age corresponding to said user identity 502, wherein at least some of the communications include at least one of text or ascii.~~

520. (Currently amended) The system of claim [457], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 503, wherein at least some of the communications include at least one of text or ascii.~~

521. (Currently amended) The system of claim [458], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 504, wherein at least some of the communications include at least one of text or ascii.~~

522. (Currently amended) The system of claim [459], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 505, wherein at least some of the communications include at least one of text or ascii.~~

523. (Currently amended) The system of claim [460], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 506, wherein at least some of the communications include at least one of text or ascii.~~

524. (Currently amended) The system of claim [461], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 507, wherein at least some of the communications include at least one of text or ascii.~~

525. (Currently amended) The system of claim [462], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 508, wherein at least some of the communications include at least one of text or ascii.~~

526. (Currently amended) The system of claim [463], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 604, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

527. (Currently amended) The system of claim [464], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 493, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

528. (Currently amended) The system of claim [465], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 494, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

529. (Currently amended) The system of claim [466], wherein said controller computer is enabled to carry out the step of:

~~_____determining a user's age corresponding to said user identity 495, wherein the computer system is further programmed to determine whether at least one of the communications~~

is censored based on content.

530. (Currently amended) The system of claim [467], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 496, wherein the computer system is further programmed to determine whether at least one of the communications~~
is censored based on content.

531. (Currently amended) The system of claim [468], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 497, wherein the computer system is further programmed to determine whether at least one of the communications~~
is censored based on content.

532. (Currently amended) The system of claim [469], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 498, wherein the computer system is further programmed to determine whether at least one of the communications~~
is censored based on content.

533. (Currently amended) The system of claim [470], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 499, wherein the computer system is further programmed to determine whether at least one of the communications~~
is censored based on content.

534. (Currently amended) The system of claim [471], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 500, wherein the~~
~~computer system is further programmed to determine whether at least one of the communications~~
~~is censored based on content.~~

535. (Currently amended) The system of claim [472], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 501, wherein the~~
~~computer system is further programmed to determine whether at least one of the communications~~
~~is censored based on content.~~

536. (Currently amended) The system of claim [473], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 502, wherein the~~
~~computer system is further programmed to determine whether at least one of the communications~~
~~is censored based on content.~~

537. (Currently amended) The system of claim [474], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 503, wherein the~~
~~computer system is further programmed to determine whether at least one of the communications~~
~~is censored based on content.~~

538. (Currently amended) The system of claim [475], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 504, wherein the~~
computer system is further programmed to determine whether at least one of the communications is censored based on content.

539. (Currently amended) The system of claim [476], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 505, wherein the~~
computer system is further programmed to determine whether at least one of the communications is censored based on content.

540. (Currently amended) The system of claim [477], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 506, wherein the~~
computer system is further programmed to determine whether at least one of the communications is censored based on content.

541. (Currently amended) The system of claim [478], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 507, wherein the~~
computer system is further programmed to determine whether at least one of the communications is censored based on content.

542. (Currently amended) The system of claim [479], ~~wherein said controller~~

~~computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 508, wherein the computer system is further programmed to determine whether at least one of the communications is censored based on content.~~

543. (Currently amended) The system of claim [480], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 604, wherein at least one of the communications includes a human communication of sound.~~

544. (Currently amended) The system of claim [481], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 493, wherein at least one of the communications includes a human communication of sound.~~

545. (Currently amended) The system of claim [482], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 494, wherein at least one of the communications includes a human communication of sound.~~

546. (Currently amended) The system of claim [483], ~~wherein said controller computer is enabled to carry out the step of:~~

~~_____ determining a user's age corresponding to said user identity 495, wherein at least one of the communications includes a human communication of sound.~~

547. (Currently amended) The system of claim [484], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 496, wherein at least one of the communications includes a human communication of sound.~~

548. (Currently amended) The system of claim [485], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 497, wherein at least one of the communications includes a human communication of sound.~~

549. (Currently amended) The system of claim [486], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 498, wherein at least one of the communications includes a human communication of sound.~~

550. (Currently amended) The system of claim [487], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 499, wherein at least one of the communications includes a human communication of sound.~~

551. (Currently amended) The system of claim [488], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 500, wherein at least one of the communications includes a human communication of sound.~~

552. (Currently amended) The system of claim [489], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 501, wherein at least one of the communications includes a human communication of sound.~~

553. (Currently amended) The system of claim [490], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 502, wherein at least one of the communications includes a human communication of sound.~~

554. (Currently amended) The system of claim [491], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 503, wherein at least one of the communications includes a human communication of sound.~~

555. (Currently amended) The system of claim [492], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 504, wherein at least one of the communications includes a human communication of sound.~~

556. (Currently amended) The system of claim [493], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 505, wherein at least one of the communications includes a human communication of sound.~~

557. (Currently amended) The system of claim [494], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 506, wherein at least one of the communications includes a human communication of sound.~~

558. (Currently amended) The system of claim [495], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 507, wherein at least one of the communications includes a human communication of sound.~~

559. (Currently amended) The system of claim [496], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 508, wherein at least one of the communications includes a human communication of sound.~~

560. (Currently amended) The system of claim [497], ~~wherein said controller computer is enabled to carry out the step of:~~
~~_____ determining a user's age corresponding to said user identity 604, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.~~

561. (Currently amended) The system of claim [435], ~~wherein the step of arbitrating includes authorizing a moderator for said communications 493, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.~~

562. (Currently amended) The system of claim [436], ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 494, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

563. (Currently amended) The system of claim [437], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 495, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

564. (Currently amended) The system of claim [438], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 496, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

565. (Currently amended) The system of claim [439], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 497, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

566. (Currently amended) The system of claim [440], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 498, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

567. (Currently amended) The system of claim [441], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 499, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

568. (Currently amended) The system of claim [442], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 500, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

569. (Currently amended) The system of claim [443], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 501, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

570. (Currently amended) The system of claim [444], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 502, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

571. (Currently amended) The system of claim [445], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 503, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

572. (Currently amended) The system of claim [446], wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 504, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

573. (Currently amended) The system of claim [447], wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 505, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

574. (Currently amended) The system of claim [448], wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 506, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

575. (Currently amended) The system of claim [449], wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 507, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

576. (Currently amended) The system of claim [450], wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 508, wherein the computer system is further programmed to determine whether neither of the first user identity and the second user identity is censored from the group.

577. (Currently amended) The system of claim [451], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 604, wherein the computer system is further programmed to determine whether~~ neither of the first user identity and the second user identity is censored from the group.

578. (Currently amended) The system of claim [452], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 604, wherein the computer system is further programmed to:~~

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, allow the graphical data to be presented at the output device corresponding to the second user identity.

579. (Currently amended) The system of claim [453], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 604, wherein the computer system is further programmed to:~~

provide the first user identity with access to a member-associated image corresponding to the second user identity.

580. (Currently amended) The system of claim [454], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 604, wherein the computer system is further programmed to:~~

determine whether the first user identity is censored from access to a member-associated image corresponding to the second user identity.

if the first user identity is censored, not allow access to the member-associated image, and

if the first user identity is not censored, allow access to the member-associated image.

581. (Currently amended) The system of claim [455], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 604, wherein the data represents a pointer that produces a pointer-triggered message on demand.

582. (Currently amended) The system of claim [456], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 493, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

583. (Currently amended) The system of claim [457], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 498, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

584. (Currently amended) The system of claim [458], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 499, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

585. (Currently amended) The system of claim [459], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 500, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

586. (Currently amended) The system of claim [460], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 504, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

587. (Currently amended) The system of claim [461], ~~wherein the step of arbitrating includes authorizing a moderator for said communications~~ 505, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

588. (Currently amended) The system of claim [462], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 506, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

589. (Currently amended) The system of claim [463], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications~~ 508, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

590. (Currently amended) The system of claim [464], ~~wherein said controller~~

~~computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 509, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

591. (Currently amended) The system of claim [465], ~~wherein said controller computer is enabled to carry out the step of arbitrating includes authorizing a moderator for said communications 510, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

591. (Currently amended) The system of claim [466], ~~wherein the step of arbitrating includes authorizing a moderator for said communications 515, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

592. (Currently amended) The method of claim 155, ~~wherein said step of using is carried out with said sound being a human communication sound system of claim 516, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

593. (Currently amended) The system of claim 604, ~~wherein said controller computer is enabled to determine which of the participator computers can communicate a user image to the other of the participator computers 517, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

594. (Currently amended) The system of claim [475], ~~wherein said controller computer is enabled to determine which of the participator computers can communicate a user image to the other of the participator computers 521, wherein the pointer is a pointer that produces~~

a pointer-triggered message on demand.

595. (Currently amended) The system of claim [476], ~~wherein said controller computer is enabled to determine which of the participator computers can communicate a user image to the other of the participator computers~~ 522, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

596. (Currently amended) The system of claim [480], ~~wherein said controller computer is enabled to determine which of the participator computers can communicate a user image to the other of the participator computers~~ 523, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

597. (Currently amended) The system of claim [495], ~~wherein said controller computer is enabled to determine which of the participator computers can communicate a user image to the other of the participator computers~~ 525, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

598. (Currently amended) The system of claim [435], ~~wherein said controller computer is enabled to carry out the step of:~~
~~communicating a user image from one member in the group to another member in the group~~ 526, wherein the data represents a pointer that produces a pointer-triggered message on demand.

599. (Currently amended) A computer system ~~distributing to receive a~~ distributing to receive a communication ~~over~~ via an Internet network, the system including:

~~a controller computer, a first participator computer, and a second participator computer;~~

~~participator software respectively on the participator computers to enable the communication, including at least one of a video, graphic, sound, or multimedia; wherein said computers are enabled to cooperate in carrying out the steps of:~~

~~subsequent to said participator computers respectively sending an authenticated user identity, communicating a message comprising text or ascii, and a member public data reference, from the first participator computer to said controller computer and from said controller computer to the second participator computer; and~~

~~using said member public data reference to receive the communication from the first participator computer at the second participator computer in real time over the Internet network~~

~~a plurality of computers connected, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system;~~

~~a first of the plurality of computers being programmed to communicate to the computer system a message including a pointer pointing to a communication that includes data representing a video, a graphic, sound, or multimedia;~~

~~the computer system being programmed to communicate the message to a second of the plurality of computers; and~~

~~the second computer being programmed to receive the communication originating from the first computer, the communication being sent in real time and via the Internet network.~~

600. (Currently amended) The system of claim 599, wherein said controller computer is further enabled to carry out the step of:

~~determining a user's age corresponding to said user identity 527, wherein the~~

pointer is a pointer that produces a pointer-triggered message on demand.

601. (Currently amended) ~~The system of claim 599, wherein communication includes the video~~ 532, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

602. (Currently amended) ~~The system of claim 600, wherein communication includes the video~~ 533, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

603. (Currently amended) ~~The system of claim 599, wherein said controller computer is further enabled to carry out the step of forming a chat channel over the Internet network and arbitrating channel communications between said participator computers at said controller computer~~ 534, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

604. (Currently amended) An Internet network communications system using computers to communicate over an Internet network, the system including:

~~a plurality of participator computers connected with a controller computer, at least one of said participator computers connected through the Internet network subsequent to sending a log in name and a password corresponding to a user identity wherein the controller computer is enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to said user identity, the set including a privilege to receive non-textual communication; and~~

~~determining which of the participator computers can communicate to an other of the~~

~~participator computers over the Internet network in real time, at least one of a video, a graphic, or a pointer triggered message that is receivable on demand, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system programmed to:~~

~~_____ form a group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time, and~~

~~determine whether at least one of the first user identity and the second user identity, individually, is censored from sending data within the communications, the data representing at least one of a pointer, video, audio, a graphic, or multimedia,~~

~~wherein the plurality of computers receive in real time and via the Internet network the communications that are not censored based on the individual user identity and do not send the data that is censored based on the individual user identity.~~

605. (Currently amended) The system of claim 599, ~~wherein said communication including comprises said sound 538, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

606. (Currently amended) The system of claim 599, ~~wherein said communication comprises said sound and said video 539, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

607. (Currently amended) The system of claim 600, ~~wherein said communication comprises said sound 540, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

608. (Currently amended) The system of claim ~~600~~, wherein said communication comprises said and said video 542, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

609. (Currently amended) The system of claim ~~599~~, wherein said controller computer is further enabled to carry out the step of sending the communication as an out-of-band communication 543, wherein the data represents a pointer that produces a pointer-triggered message on demand.

610. (Currently amended) The system of claim ~~600~~, wherein said controller computer is further enabled to carry out the step of communicating an asynchronous communication from said controller computer to one of said participator computers 544, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

611. (Currently amended) The system of claim 599, wherein said controller computer is further enabled to carry out the step of communicating an asynchronous communication from said controller computer to one of said participator computers 549, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

612. (Currently amended) The system of claim ~~604~~, wherein said controller computer is further enabled to carry out the step of communicating an asynchronous communication from said controller computer to one of said participator computers 550, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

613. (Currently amended) The system of claim 439, ~~wherein said controller computer is further enabled to carry out the step of communicating a user image from one member in the group to another member in the group~~ 551, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

614. (Currently amended) The system of claim 440, ~~wherein said controller computer is further enabled to carry out the step of communicating a user image from one member in the group to another member in the group~~ 555, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

615. (Currently amended) The system of claim [444], ~~wherein said controller computer is further enabled to carry out the step of communicating a user image from one member in the group to another member in the group~~ 556, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

616. (Currently amended) The system of claim [457], ~~wherein said controller computer is further enabled to carry out the step of communicating a user image from one member in the group to another member in the group~~ 557, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

617. (Currently amended) The system of claim [435], ~~wherein said controller computer is further enabled to carry out the step of communicating an asynchronous communication from said controller computer to one of said participator computers~~ 559, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

618. (Currently amended) The system of claim [435], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
560, wherein the data represents a pointer that produces a pointer-triggered message on demand.

619. (Currently amended) The system of claim [436], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
561, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

620. (Currently amended) The system of claim [437], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
566, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

621. (Currently amended) The system of claim [438], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
567, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

622. (Currently amended) The system of claim [439], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
568, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

623. (Currently amended) The system of claim [440], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
572, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

624. (Currently amended) The system of claim [441], ~~wherein the step of~~

~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
573, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

625. (Currently amended) The system of claim [442], ~~wherein the step of~~
~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
574, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

626. (Currently amended) The system of claim [443], ~~wherein the step of~~
~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
576, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

627. (Currently amended) The system of claim [444], ~~wherein the step of~~
~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
577, wherein the data represents a pointer that produces a pointer-triggered message on demand.

628. (Currently amended) The system of claim [445], ~~wherein the step of~~
~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
578, wherein the data represents a pointer that produces a pointer-triggered message on demand.

629. (Currently amended) The system of claim [446], ~~wherein the step of~~
~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
579, wherein the data represents a pointer that produces a pointer-triggered message on demand.

630. (Currently amended) The system of claim [447], ~~wherein the step of~~
~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~

580, wherein the data represents a pointer that produces a pointer-triggered message on demand.

631. (Currently amended) ~~The system of claim 448, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content method of claim 165, further including:~~

determining that the pointer is not censored.

632. (Currently amended) ~~The system of claim 449, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content method of claim 165, further including:~~

determining that the message is not censored.

633. (Currently amended) ~~The system of claim 450, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content method of claim 165, wherein the pointer is a pointer that causes the communication to be produced on demand.~~

634. (Currently amended) ~~The system of claim 451, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content method of claim 165, wherein the communication includes data representing video.~~

635. (Currently amended) ~~The system of claim 452, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content method of claim 165, wherein the communication includes data representing sound.~~

636. (Currently amended) ~~The system of claim 453, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 165, wherein the communication includes data representing sound and video.

637. (Currently amended) ~~The system of claim 454, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 165, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

638. (Currently amended) ~~The system of claim 455, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 165, wherein the message includes data representing at least one of text or ascii.

639. (Currently amended) ~~The system of claim 456, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 165, wherein the communication includes data representing a member-associated image.

640. (Currently amended) ~~The system of claim 457, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 165, further including forming a chat channel via the Internet network, between at least two of the plurality of computers.

641. (Currently amended) ~~The system of claim 458, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~

method of claim 165, wherein at least one of the communicating steps includes communicating a message as an out-of-band communication.

642. (Currently amended) ~~The system of claim 450, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 165, further including:

determining a user age corresponding to each of the user identities.

643. (Currently amended) ~~The system of claim 460, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 642, wherein the communication includes data representing sound.

644. (Currently amended) ~~The system of claim 461, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 642, wherein the communication includes data representing video.

645. (Currently amended) ~~The system of claim 462, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method of claim 642, wherein the communication includes data representing sound and video.

646. (Currently amended) ~~The system of claim 463, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~
method system of claim 642, wherein the communication includes data representing sound, and the sound includes a human communication of sound.

647. (Currently amended) The system of claim ~~464~~, wherein the step of ~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 642, wherein the message includes data representing at least one of text or ascii.

648. (Currently amended) The system of claim ~~465~~, wherein the step of ~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 599, wherein the computer system is further programmed to determine that the pointer is not censored.

649. (Currently amended) The system of claim ~~466~~, wherein the step of ~~arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 599, wherein the computer system is further programmed to determine that the message is not censored.

650. (Currently amended) The system of claim ~~435~~, wherein the step of ~~arbitrating includes:~~
~~authorizing, with said controller computer, invisible viewing of some of the~~ communications 599, wherein the pointer produces the communication on demand.

651. (Currently amended) The system of claim ~~436~~, wherein the step of ~~arbitrating includes:~~
~~authorizing, with said controller computer, invisible viewing of some of the~~ communications 599, wherein the communication includes data representing video.

652. (Currently amended) The system of claim ~~437~~, wherein the step of

~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the communication includes data representing sound.~~

653. (Currently amended) The system of claim 438, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the communication includes data representing sound and video.~~

654. (Currently amended) The system of claim 439, ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the communication includes data representing sound, and the sound includes a human communication of sound.~~

655. (Currently amended) The system of claim [440], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the message includes data representing at least one of text or ascii.~~

656. (Currently amended) The system of claim [441], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the communication includes data representing a member-associated image.~~

657. (Currently amended) The system of claim [442], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the computer system is further programmed to form a chat channel via the Internet network, between at least two of the plurality of computers.~~

658. (Currently amended) The system of claim [443], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the computer system is further programmed to communicate the message as an out-of-band communication message.~~

659. (Currently amended) The system of claim [444], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 599, wherein the computer system is further programmed to determine a user age corresponding to each of the user identities.~~

660. (Currently amended) The system of claim [445], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 659, wherein the communication includes data representing sound.~~

661. (Currently amended) The system of claim [446], ~~wherein the step of~~

~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the
communications 659, wherein the communication includes data representing video.~~

662. (Currently amended) The system of claim [447], ~~wherein the step of
arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the
communications 659, wherein the communication includes data representing sound and video.~~

663. (Currently amended) The system of claim [448], ~~wherein the step of
arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the
communications 659, wherein the communication includes data representing sound, and the sound
includes a human communication of sound.~~

664. (Currently amended) The system of claim [449], ~~wherein the step of
arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the
communications 659, wherein the message includes data representing at least one of text or ascii.~~

665. (Currently amended) The system of claim 450, ~~wherein the step of
arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the
communications method of claim 917, further including:~~

~~determining whether the pointer is not censored.~~

666. (Currently amended) ~~The system of claim 451, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ method of claim 917, further including determining a user age corresponding to each of the user identities.

667. (Currently amended) ~~The system of claim 452, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ method of claim 666, further including:
determining whether the data is not censored.

668. (Currently amended) ~~The system of claim 453, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ method of claim 917, wherein the pointer produces the communication on demand.

669. (Currently amended) ~~The system of claim 454, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ method of claim 917, wherein the communication includes data representing video.

670. (Currently amended) ~~The system of claim 455, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications method of claim 917, wherein the communication includes data representing sound.~~

671. (Currently amended) The system of claim 456, wherein the step of arbitrating includes:

authorizing, with said controller computer, invisible viewing of some of the communications method of claim 917, wherein the communication includes data representing sound and video.

672. (Currently amended) ~~The system of claim 457, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications method of claim 917, wherein the communication includes data representing sound, and the sound includes a human communication of sound.~~

673. (Currently amended) ~~The system of claim 458, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications method of claim 917, wherein the communication includes data representing a member-associated image.~~

674. (Currently amended) The system of claim 459, wherein the step of

~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications method of claim 917, further including allowing chat communication in real time~~
~~via the Internet network.~~

675. (Currently amended) ~~The system of claim 460, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications method of claim 917, further including communicating an out-of-band~~
~~communication from the computer system to at least one of the plurality of computers.~~

676. (Currently amended) ~~The system of claim 461, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications method of claim 917, further including communicating an asynchronous~~
~~communication from the computer system to at least one of the plurality of computers.~~

677. (Currently amended) ~~The system of claim 462, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications method of claim 917, wherein the step of receiving the communication includes~~
~~receiving a synchronous communication.~~

678. (Currently amended) ~~The system of claim 463, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications~~ method of claim 677, wherein the communication includes data representing
sound.

679. (Currently amended) ~~The system of claim 464, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications~~ method of claim 677, wherein the communication includes data representing
video.

680. (Currently amended) ~~The system of claim 465, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications~~ method of claim 677, wherein the communication includes data representing
sound and video.

681. (Currently amended) ~~The system of claim 466, wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications~~ method of claim 677, wherein the communication includes data representing
sound, and the sound includes a human communication of sound.

682. (Currently amended) ~~The system of claim 435, wherein the step of~~
~~arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said~~

~~controller-computer, between some of the group~~ method of claim 677, wherein the communication further includes data representing a member-associated image.

683. (Currently amended) ~~The system of claim 436, wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group~~ method of claim 677, further including communicating an out-of-band communication from the computer system to at least one of the plurality of computers.

684. (Currently amended) ~~The system of claim 437, wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group~~ method of claim 677, further including communicating an asynchronous communication from the computer system to at least one of the plurality of computers.

685. (Currently amended) ~~The system of claim 438, wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller-computer, between some of the group~~ 918, wherein the computer system is further programmed to determine whether the pointer is censored.

686. (Currently amended) ~~The system of claim 439, wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 918, wherein the computer system is further programmed to determine whether the data is censored.~~

687. (Currently amended) The system of claim [440], ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 918, wherein the pointer produces the communication on demand.~~

688. (Currently amended) The system of claim [441], ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 918, wherein the communication includes data representing video.~~

689. (Currently amended) The system of claim [442], ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group 918, wherein the communication includes data representing sound.~~

690. (Currently amended) The system of claim [443], ~~wherein the step of arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said~~

~~controller computer, between some of the group 918, wherein the communication includes data representing sound and video.~~

691. (Currently amended) The system of claim [444], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 918, wherein the communication includes data representing sound, and the sound includes a human communication of sound.~~

692. (Currently amended) The system of claim [445], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 918, wherein the first computer is further programmed to communicate with the pointer data representing at least one of text or asci.~~

693. (Currently amended) The system of claim [446], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 918, wherein the data includes data representing a member-associated image.~~

694. (Currently amended) The system of claim [447], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 918, wherein the computer system is further~~

programmed to allow chat communication for sending user messages, and receiving the user messages in real time via the Internet network.

695. (Currently amended) The system of claim [448], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 918, wherein the computer system is further programmed to communicate out-of-band communication.~~

696. (Currently amended) The system of claim [449], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 918, wherein the communication comprises an asynchronous communication.~~

697. (Currently amended) The system of claim [450], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 696, wherein the communication includes data representing sound.~~

698. (Currently amended) The system of claim [451], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 696, wherein the communication includes data~~

representing video.

699. (Currently amended) The system of claim [452], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 696, wherein the communication includes data representing sound and video.~~

700. (Currently amended) The system of claim [453], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 696, wherein the communication includes data representing sound, and the sound includes a human communication of sound.~~

701. (Currently amended) The system of claim [454], ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group 696, wherein the communication comprises an asynchronous communication.~~

702. (Currently amended) The system of claim 455, ~~wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 409, further including determining a user's age corresponding to at least one of user identities.~~

703. (Currently amended) ~~The system of claim 456, wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 702, further including censoring an unwanted communication from at least one of the user identities.~~

704. (Currently amended) ~~The system of claim 457, wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 703, further including determining whether a first of the user identities is censored from access to the member-associated image corresponding to a second user identity,~~

~~if the first identity is censored, not allowing access to the member-associated, and if the first user identity is not censored, allowing access to the member associated image.~~

705. (Currently amended) ~~The system of claim 458, wherein the step of arbitrating includes:~~

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 702, further including: communicating, under control of said computer system, an asynchronous message from one of the plurality of computers to another of the plurality of computers.~~

706. (Currently amended) ~~The system of claim 459, wherein the step of~~

~~arbitrating includes:~~

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group method of claim 702, wherein the receiving includes receiving chat communications within a chat group.~~

707. (Currently amended) The system of claim 460, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group method of claim 702, further including providing a private communications channel to at least some of the plurality of computers.~~

708. (Currently amended) The system of claim 461, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group method of claim 702, further including communicating data representing human communication of sound to at least some of the plurality of computers.~~

709. (Currently amended) The system of claim 462, wherein the step of arbitrating includes:

~~providing private, real-time communication over the Internet network, with said controller computer, between some of the group method of claim 702, further including providing data representing video to at least some of the plurality of computers.~~

710. (Currently amended) The system of claim 463, wherein the step of

arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 702, further including providing data representing sound to at least some of the plurality of computers.~~

711. (Currently amended) The system of claim 464, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 702, wherein at least some of the communications include data representing text or ascii.~~

712. (Currently amended) The system of claim 465, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 702, wherein at least some of the communications are communicated out-of-band.~~

713. (Currently amended) The system of claim 466, wherein the step of arbitrating includes:

~~providing private, real time communication over the Internet network, with said controller computer, between some of the group method of claim 702, wherein at least some of the communications include data representing multimedia.~~

714. (Currently amended) The system of claim 604, wherein said controller computer is further enabled to carry out the step of:

~~determining a user's age corresponding to said user identity 843, wherein the computer system is further programmed to determine a user age corresponding to each said user identity.~~

715. (Currently amended) ~~The system of claim 604, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714, wherein the computer system is further programmed to censor an unwanted communication from a member.~~

716. (Currently amended) ~~The system of claim 604, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 714, wherein the computer system is further programmed to determine whether a first of the user identities is censored from access to a member-associated image corresponding to a second of the user identities,~~

~~if the first user identity is censored, not allowing access to the member-associated, and if the first user identity is not censored, allowing access to the member associated image.~~

717. (Currently amended) ~~The system of claim 604, wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 714, wherein the computer system is further programmed to communicate an asynchronous message from one of the plurality of computers to another of the plurality of~~

computers.

718. (Currently amended) The system of claim 694, ~~wherein the step of arbitrating includes:~~

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 714, wherein the computer system is further programmed to distribute the at least some of the communications among a chat group.~~

719. (Currently amended) The system of claim 467, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714, wherein the computer system is further programmed to provide a private communication channel to at least some of the plurality of computers.~~

720. (Currently amended) The system of claim 468, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714, wherein the computer system is further programmed to communicate data representing human communication of sound to at least some of the plurality of computers.~~

721. (Currently amended) The system of claim 469, ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714,~~

wherein the computer system is further programmed to provide data representing video to at least some of the plurality of computers.

722. (Currently amended) ~~The system of claim [470], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714,~~ wherein the computer system is further programmed to provide data representing video and sound to at least some of the plurality of computers.

723. (Currently amended) ~~The system of claim [471], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714,~~ wherein at least some of the communications include data representing text or ascii.

724. (Currently amended) ~~The system of claim [472], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714,~~ wherein the computer system is further programmed to communicate out-of-band communication.

725. (Currently amended) ~~The system of claim [473], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 714,~~ wherein at least some of the communications include multimedia.

726. (Currently amended) ~~The system of claim 474, wherein the step of~~

~~arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 884, wherein at least one of the communications includes data representing sound.

727. (Currently amended) ~~The system of claim 475, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 884, wherein at least one of the communications includes data representing video.

728. (Currently amended) ~~The system of claim 476, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 884, wherein at least one of the communications includes data representing sound and video.

729. (Currently amended) ~~The system of claim 477, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 884, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

730. (Currently amended) ~~The system of claim 478, wherein the step of~~

~~arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 726, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

731. (Currently amended) ~~The system of claim 479, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 727, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

732. (Currently amended) ~~The system of claim 480, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 884 based on the authorization, presenting the graphical multimedia data at the output device corresponding to the second user identity wherein one of the determining steps includes determining whether a parameter corresponding to the first user identity has been determined by a user corresponding to another of the user identities.

733. (Currently amended) ~~The system of claim 481, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 729, wherein the graphical data includes graphical multimedia data.

734. (Currently amended) ~~The system of claim 482, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 885, wherein at least one of the communications includes data representing sound.

735. (Currently amended) ~~The system of claim 483, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 885, wherein at least one of the communications includes data representing video.

736. (Currently amended) ~~The system of claim 484, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 885, wherein at least one of the communications includes data representing sound and video.

737. (Currently amended) ~~The system of claim 485, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 885, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

738. (Currently amended) ~~The system of claim 486, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers method of claim 734, further including:~~

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

739. (Currently amended) ~~The system of claim 487, wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers method of claim 735, further including:~~

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

740. (Currently amended) ~~The system of claim 488, wherein the step of arbitrating includes authorizing a moderator for group communications including communications~~

~~between the one of the plurality of computers and the other of the plurality of computers~~ method of claim 736, further including:

storing, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, presenting the graphical data at one of the plurality of computers corresponding to the second user identity.

741. (Currently amended) ~~The system of claim [489], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 891, wherein at least one of the communications includes data representing sound.

742. (Currently amended) ~~The system of claim [490], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 891, wherein at least one of the communications includes data representing video.

743. (Currently amended) ~~The system of claim [491], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 891, wherein at least one of the communications includes data representing sound and video.

744. (Currently amended) ~~The system of claim [492], wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 891,

wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

745. (Currently amended) The system of claim [493], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 741,~~ wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

746. (Currently amended) The system of claim [494], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 742,~~ wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

747. (Currently amended) The system of claim [495], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers 743,~~ wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

748. (Currently amended) The system of claim [496], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 892, wherein at least one of the communications includes data representing sound.

749. (Currently amended) The system of claim [497], ~~wherein the step of arbitrating includes authorizing a moderator for group communications including communications between the one of the plurality of computers and the other of the plurality of computers~~ 892, wherein at least one of the communications includes data representing video.

750. (Currently amended) The system of claim [467], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 892, wherein at least one of the communications includes data representing sound and video.

751. (Currently amended) The system of claim [468], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 892, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

752. (Currently amended) The system of claim [469], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 748, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

753. (Currently amended) The system of claim [470], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 749, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

754. (Currently amended) The system of claim [471], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 750, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

755. (Currently amended) The system of claim 472, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 893, wherein at least one of the multimedia messages includes data representing sound.

756. (Currently amended) The system of claim 473, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 893, wherein at least one of the multimedia messages includes data representing video.

757. (Currently amended) The system of claim 474, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 893, wherein at least one of the multimedia messages includes data representing sound and video.

758. (Currently amended) ~~The system of claim 475, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 893, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

759. (Currently amended) ~~The system of claim 476, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 755, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

760. (Currently amended) ~~The system of claim 477, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 756, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

761. (Currently amended) ~~The system of claim 478, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 757, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

762. (Currently amended) ~~The system of claim 470, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 894, wherein the data includes data representing sound.

763. (Currently amended) ~~The system of claim 480, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 894, wherein the data includes data representing video.

764. (Currently amended) ~~The system of claim 481, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 894, the data includes data representing sound and video.

765. (Currently amended) ~~The system of claim 482, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 894, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

766. (Currently amended) ~~The system of claim 483, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 762, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

767. (Currently amended) ~~The system of claim 484, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 763, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

768. (Currently amended) ~~The system of claim 485, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ method of claim 764, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the

plurality of computers corresponding to the second user identity.

769. (Currently amended) The system of claim [486], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 895, wherein at least one of the communications includes data representing sound.

770. (Currently amended) The system of claim [487], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 895, wherein at least one of the communications includes data representing video.

771. (Currently amended) The system of claim [[488]], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 895, wherein at least one of the communications includes data representing sound and video.

772. (Currently amended) The system of claim [[489]], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 895, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

773. (Currently amended) The system of claim [[490]], ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 769, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

774. (Currently amended) The system of claim ~~[[491]]~~, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 770, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

775. (Currently amended) The system of claim ~~[[492]]~~, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 771, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

776. (Currently amended) The system of claim ~~[[493]]~~, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 896, wherein at least one of the communications includes data representing sound.

777. (Currently amended) The system of claim ~~[[494]]~~, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 896, wherein at least one of the communications includes data representing video.

778. (Currently amended) The system of claim ~~[[495]]~~, ~~wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content~~ 896, wherein at least one of the communications includes data representing sound and video.

779. (Currently amended) The system of claim ~~[[496]]~~, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 896, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

780. (Currently amended) The system of claim ~~[[497]]~~, wherein the step of arbitrating includes censoring responsive to at least one of said user identity, group, and content 776, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

781. (Currently amended) The system of claim ~~[[467]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 777, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

782. (Currently amended) The system of claim ~~[[468]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 778, wherein the computer system is further programmed to:

store, for the first user identity, an authorization associated with presentation of graphical data; and

based on the authorization, present the graphical data at one of the plurality of computers corresponding to the second user identity.

783. (Currently amended) The system of claim ~~[[469]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 871, wherein the computer system is programmed to allow the plurality of computers to communicate a type of data representing at least one of a pointer, video, audio, a graphic, or multimedia, the pointer being a pointer that produces a pointer-triggered message on demand.

784. (Currently amended) The system of claim ~~[[470]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 783, wherein the type of data represents a pointer.

785. (Currently amended) The system of claim ~~[[471]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~

~~communications 783, wherein the type of data represents audio.~~

786. (Currently amended) The system of claim ~~[[472]], wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents video.~~

787. (Currently amended) The system of claim ~~[[473]], wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents a graphic.~~

788. (Currently amended) The system of claim ~~[[474]], wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents multimedia.~~

789. (Currently amended) The system of claim ~~[[475]], wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents a pointer and audio.~~

790. (Currently amended) The system of claim ~~[[476]], wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~

communications 783, wherein the type of data represents a pointer and video.

791. (Currently amended) The system of claim ~~[[477]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 783, wherein the type of data represents a pointer and a graphic.

792. (Currently amended) The system of claim ~~[[478]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 783, wherein the type of data represents audio and video.

793. (Currently amended) The system of claim ~~[[479]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 783, wherein the type of data represents audio and a graphic.

794. (Currently amended) The system of claim ~~[[480]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 783, wherein the type of data represents video and a graphic.

795. (Currently amended) The system of claim ~~[[481]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~

~~communications 783, wherein the type of data represents a pointer and audio and video.~~

796. (Currently amended) The system of claim ~~[[482]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents a pointer and audio and a graphic.~~

797. (Currently amended) The system of claim ~~[[483]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents a pointer and video and a graphic.~~

798. (Currently amended) The system of claim ~~[[484]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents audio and video and a graphic.~~

799. (Currently amended) The system of claim ~~[[485]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications 783, wherein the type of data represents a pointer and audio and video and a graphic.~~

800. (Currently amended) The system of claim ~~[[486]]~~, wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 871, wherein the computer system is further programmed to provide access to a~~
~~member-associated image.~~

801. (Currently amended) The system of claim [[487]], ~~wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 783, wherein the computer system is further programmed to provide access to a~~
~~member-associated image.~~

802. (Currently amended) The system of claim [[488]], ~~wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 784, wherein the computer system is further programmed to provide access to a~~
~~member-associated image.~~

803. (Currently amended) The system of claim [[489]], ~~wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
~~communications 785, wherein the computer system is further programmed to provide access to a~~
~~member-associated image.~~

804. (Currently amended) The system of claim [[490]], ~~wherein the step of~~
~~arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~

communications 786, wherein the computer system is further programmed to provide access to a member-associated image.

805. (Currently amended) The system of claim [[491]], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 787, wherein the computer system is further programmed to provide access to a member-associated image.

806. (Currently amended) The system of claim [[492]], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 788, wherein the computer system is further programmed to provide access to a member-associated image.

807. (Currently amended) The system of claim [[493]], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 789, wherein the computer system is further programmed to provide access to a member-associated image.

808. (Currently amended) The system of claim [[494]], ~~wherein the step of arbitrating includes:~~

~~authorizing, with said controller computer, invisible viewing of some of the~~
communications 790, wherein the computer system is further programmed to provide access to a

member-associated image.

809. (Currently amended) The system of claim [[495]], wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 791, wherein the computer system is further programmed to provide access to a member-associated image.

810. (Currently amended) The system of claim [[496]], wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 792, wherein the computer system is further programmed to provide access to a member-associated image.

811. (Currently amended) The system of claim [[497]], wherein the step of arbitrating includes:

~~authorizing, with said controller computer, invisible viewing of some of the communications~~ 793, wherein the computer system is further programmed to provide access to a member-associated image.

812. (Currently amended) The system of claim [[467]], wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window~~

capability 794, wherein the computer system is further programmed to provide access to a member-associated image.

813. (Currently amended) The system of claim [[468]], ~~wherein the step of arbitrating includes:~~

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 795, wherein the computer system is further programmed to provide access to a member-associated image.~~

814. (Currently amended) The system of claim [[469]], ~~wherein the step of arbitrating includes:~~

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 796, wherein the computer system is further programmed to provide access to a member-associated image.~~

815. (Currently amended) The system of claim [[470]], ~~wherein the step of arbitrating includes:~~

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 797, wherein the computer system is further programmed to provide access to a~~

member-associated image.

816. (Currently amended) The system of claim [[471]], wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 798, wherein the computer system is further programmed to provide access to a member-associated image.~~

817. (Currently amended) The system of claim [[472]], wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability 799, wherein the computer system is further programmed to provide access to a member-associated image.~~

818. (Currently amended) The system of claim 473, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 876, further including:~~

responsive to the allowing the plurality of computers to communicate, receiving

communications, at least one of the plurality of computers, the communications including data representing at least one of a pointer, video, audio, a graphic, or multimedia.

819. (Currently amended) The system of claim 474, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability~~ method of claim 818, wherein the data represents a pointer.

820. (Currently amended) The system of claim 475, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability~~ method of claim 818, wherein the data represents audio.

821. (Currently amended) The system of claim 476, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability~~ method of claim 818, wherein the data represents video.

822. (Currently amended) The system of claim 477, wherein the step of

arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a graphic.~~

823. (Currently amended) The system of claim 478, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents multimedia.~~

824. (Currently amended) The system of claim 479, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a pointer and audio.~~

825. (Currently amended) The system of claim 480, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window~~

capability method of claim 818, wherein the data represents a pointer and video.

826. (Currently amended) The system of claim 481, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability~~ method of claim 818, wherein the data represents a pointer and a graphic.

827. (Currently amended) The system of claim 482, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window~~ capability method of claim 818, wherein the data represents audio and video.

828. (Currently amended) The system of claim 483, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window~~ capability method of claim 818, wherein the data represents audio and a graphic.

829. (Currently amended) The system of claim 484, wherein the step of arbitrating includes:

833. (Currently amended) The system of claim 488, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents audio and video and a graphic.~~

834. (Currently amended) The system of claim 489, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a pointer and audio and video and a graphic.~~

835. (Currently amended) The system of claim 490, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a pointer that produces a pointer-triggered message on demand.~~

836. (Currently amended) The system of claim 491, wherein the step of

arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 819, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

837. (Currently amended) The system of claim 492, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 824, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

838. (Currently amended) The system of claim 493, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 825, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

839. (Currently amended) The system of claim 494, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 826, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

840. (Currently amended) The system of claim 495, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 830, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

841. (Currently amended) The system of claim 496, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 831, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

842. (Currently amended) The system of claim 497, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle~~

~~communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 832, wherein the pointer is a pointer that produces a pointer-triggered message on demand.~~

843. (Currently amended) A communications system using a computer system to distribute communication over an Internet network, the system including:

~~a plurality of participator computers connected with a controller computer through the Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log in name and a password, wherein:~~

~~the controller computer is enabled to carry out the steps of:~~

~~respectively storing the log in name and the password corresponding to each of a plurality of user identities;~~

~~determining which of the participator computers can communicate with an other of the participator computers, wherein some of the communications are in real time over the Internet network; and~~

~~providing a member associated image and corresponding member identity information under control of said controller computer, respectively to some of the participator computers, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a computer system programmed to:~~

~~determine which of the plurality of computers can communicate communications with an other of the plurality of computers, wherein at least some of the communications are in real time via the Internet network, and~~

~~provide a member-associated image and member identity information respectively corresponding to one of the user identities to at least some of the plurality of computers.~~

844. (Currently amended) The system of claim 843, wherein the controller computer is further enabled to carry out the step of:

determining a user's age corresponding to said user identity method of claim 834, wherein the pointer is a pointer that produces a pointer-triggered message on demand.

845. (Currently amended) The system of claim 844, wherein the controller computer is further enabled to carry out the step of:

communicating an asynchronous message from one of the participator computers to another of the participator computers 877, wherein the computer system is further programmed to:

send and receive communications between members in a group, the communications including data representing at least one of video, sound, a graphic, or multimedia, and

receive the communications in real time via the Internet network.

846. (Currently amended) The system of claim 844, wherein the controller computer is further enabled to carry out the step of censoring unwanted communication from a member 845, wherein the data includes data representing sound.

847. (Currently amended) The system of claim 844, wherein the step of arbitrating includes distributing chat communications to a chat group real time over the Internet network 845, wherein the data includes data representing video.

848. (Currently amended) The system of claim 847, wherein the controller computer is further enabled to carry out the step of providing private chat capability to the participator

computers 845, wherein the data includes data representing sound and video.

849. (Currently amended) The system of claim ~~847~~, wherein the controller computer is further enabled to carry out the step of providing private communication window capability to the participator computers 845, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

850. (Currently amended) The system of claim ~~844~~, wherein the controller computer is further enabled to carry out the step of communicating human communication sound to the participator computers 846, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

851. (Currently amended) The system of claim ~~844~~, wherein the controller computer is further enabled to carry out the step of providing video to the participator computers 847, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

852. (Currently amended) The system of claim ~~850~~, wherein the controller computer is further enabled to carry out the step of providing video to the participator computers 848, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

853. (Currently amended) ~~The system of claim 844, wherein the step of arbitrating is carried out with some of said communications including text~~ method of claim 878, further including sending and receiving communications between members in a group, the communications including data representing at least one of video, sound, a graphic, or multimedia, the receiving in real time via the Internet network.

854. (Currently amended) ~~The system of claim 844, wherein the step of arbitrating is carried out with some of said communications communicated out of band~~ method of claim 853, wherein the data represents sound.

855. (Currently amended) ~~The system of claim 844, wherein the step of arbitrating is carried out with some of said communications are multimedia media messages~~ method of claim 853, wherein the data represents video.

856. (Currently amended) ~~The system of claim 843, wherein the controller computer is further enabled to carry out the step of controlling invisible viewing of the communications~~ method of claim 853, wherein the data represents sound and video.

857. (Currently amended) ~~The system of claim 844, wherein the controller computer is further enabled to carry out the step of controlling invisible viewing of the communications~~ method of claim 878, further including sending and receiving communications between members in a group, the communications including data representing a member-associated image, sound, and video.

858. (Currently amended) ~~The system of claim 845, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 878, further including:~~
store, for the first user identity, an authorization associated with presentation of
graphical multimedia; and
based on the authorization, present the graphical multimedia at one of the plurality
of computers corresponding to the second user identity.

859. (Currently amended) ~~The system of claim 846, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 853, further including:~~
store, for the first user identity, an authorization associated with presentation of
graphical multimedia; and
based on the authorization, present the graphical multimedia at one of the plurality
of computers corresponding to the second user identity.

860. (Currently amended) ~~The system of claim 847, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 854, further including:~~
store, for the first user identity, an authorization associated with presentation of
graphical multimedia; and
based on the authorization, present the graphical multimedia at one of the plurality
of computers corresponding to the second user identity.

861. (Currently amended) ~~The system of claim 848, wherein the controller~~

~~computer is further enabled to carry out the step of controlling invisible viewing of the communications method of claim 855, further including:~~

~~store, for the first user identity, an authorization associated with presentation of graphical multimedia; and~~

~~based on the authorization, present the graphical multimedia at one of the plurality of computers corresponding to the second user identity.~~

862. (Currently amended) ~~The system of claim 840, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 901, wherein at least one of the multimedia messages includes~~
~~data representing sound.~~

863. (Currently amended) ~~The system of claim 850, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 901, wherein at least one of the multimedia messages includes~~
~~data representing video.~~

864. (Currently amended) ~~The system of claim 861, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 901, wherein at least one of the multimedia messages includes~~
~~data representing sound and video.~~

865. (Currently amended) ~~The system of claim 852, wherein the controller~~
~~computer is further enabled to carry out the step of controlling invisible viewing of the~~
~~communications method of claim 901, further including:~~

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

866. (Currently amended) The system of claim 853, wherein the controller computer is further enabled to carry out the step of controlling invisible viewing of the communications method of claim 862, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

867. (Currently amended) The system of claim 854, wherein the controller computer is further enabled to carry out the step of controlling invisible viewing of the communications method of claim 863, further including:

storing, for the first user identity, an authorization associated with presentation of graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

868. (Currently amended) The system of claim 855, wherein the controller computer is further enabled to carry out the step of controlling invisible viewing of the communications method of claim 864, further including:

storing, for the first user identity, an authorization associated with presentation of

graphical multimedia; and

based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to the second user identity.

869. (Currently amended) ~~The method of claim 1, wherein receiving said communications includes causing presentation of some of said communications by one of said participator computers in said group~~ system of claim 902, wherein at least one of the multimedia messages includes data representing sound.

870. (Currently amended) ~~The system of claim [[435]], wherein one of said participator computers in said group is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications by one of said participator computers in said group~~ 902, wherein at least one of the multimedia messages includes data representing video.

871. (Currently amended) ~~A system to control communication over an Internet network, the system including:~~

~~a plurality of participator computers connected with a controller computer through the Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log in name and a password corresponding to a user identity, the controller computer enabled to control real time Internet communication by using a control database storing for each said user identity a respective authorization corresponding to communicating multimedia~~ An Internet network system, the system including:

a plurality of computers connected, responsive to each of the plurality of computers sending a respective login name and a password corresponding to a respective user identity, to a

computer system programmed to:

store, for a first of the user identities, a respective authorization associated with graphical data, and

allow the plurality of computers to communicate in real time via the Internet network, and based on the authorization, cause the graphical data to be presented at one of the plurality of computers corresponding to a second of the user identities.

872. (Currently amended) ~~The system of claim 874, wherein one of said participator computers is enabled to carry out the step of receiving, including causing presentation, of some of said communications~~ 902, wherein at least one of the multimedia messages includes data representing sound and video.

873. (Currently amended) ~~The system of claim 872, wherein one of said communications includes at least one of a video, a graphic, or a pointer triggered message~~ 902, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

874. (Currently amended) ~~The system of claim 874, wherein said authorization for communicating multimedia includes an authorization for communicating graphical multimedia~~ 869, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.

875. (Currently amended) ~~The system of claim 872, wherein said authorization~~

~~for communicating multimedia includes an authorization for communicating graphical multimedia 870, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.~~

876. (Currently amended) A method of using a computer to control communication communicating over an Internet network, the method including the steps of: connecting a plurality of participator computers with a controller computer through an Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log in name and a password corresponding to a user identity, the controller computer enabled to control real time communication between the participator computers by storing for each a respective authorization corresponding to communicating graphical multimedia used in the controlling connecting a plurality of computers responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system; storing, for a first of the user identities, a respective authorization allowing or disallowing presentment of graphical multimedia; and allowing the plurality of computers to communicate in real time via the Internet network, and based on the authorization, presenting the graphical multimedia at one of the plurality of computers corresponding to a second of the user identities.

877. (Currently amended) A system using a computer to control communication, the system including: a plurality of participator computers connected with a controller computer through an Internet network, each said participator computer respectively connected to the controller computer

~~subsequent to sending a respective log-in name and a password corresponding to a user identity,
the controller computer enabled to carry out the steps of:~~

~~controlling real-time communication between the participator computers, and storing
for each said user identity a respective authorization to communicate corresponding to
communicating graphical multimedia used in the controlling An Internet network communication
system, the system including:~~

~~a plurality of computers, each of the plurality of computers being connected to a
respective input device and to a respective output device, the plurality of computers being
connected, responsive to each of the plurality of computers sending a respective login name and
password corresponding to a respective user identity, to a computer system programmed to:~~

~~respond to one of the plurality of the computers communicating a pointer in real time
and via the Internet, wherein the pointer is a pointer that produces a pointer-triggered message on
demand, by determining whether a first of the user identities is censored from content in the
pointer-triggered message,~~

~~if the content is censored, disallow the pointer-triggered message from being
presented at the output device of the computer corresponding to the first of the user identity, and~~

~~if the content is not censored, allow the pointer-triggered message to be presented
at the output device of the computer corresponding to the first of the user identities.~~

878. (Currently amended) A method of ~~controlling real-time communications over
communicating via~~ an Internet network, the method including the steps of:

~~storing, with a controller computer, a set of privileges corresponding to a user
identity;~~

~~connecting a plurality of participator computers with the controller computer through
the Internet network;~~

~~receiving a login name and password corresponding to the user identity, from a first participator computer of the plurality of participator computers;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real time over the Internet network, the type including at least one of a video, graphic, graphical multimedia, or a pointer-triggered message that is receivable on demand;~~

~~if the set of privileges includes the privilege to communicate the type of message in real time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers sending a respective login name and password corresponding to a respective user identity;~~

~~after the sending, connecting a plurality of computers to a computer system, each of the plurality of computers being connected to a respective input device and to a respective output device;~~

~~responsive to at least one of the plurality of computers communicating a pointer in real time and via the Internet, the pointer producing a pointer-triggered message on demand, determining whether a first of the user identities is censored from content in the pointer-triggered message;~~

~~if the content is censored, disallowing the pointer-triggered message to be presented at the output device of the computer corresponding to the first of the user identities; and~~

~~if the content is not censored, allowing the pointer-triggered message to be presented at the output device of the computer corresponding to the first of the user identities.~~

879. (Currently amended) ~~The method of claim 878, further including a human communication sound as said type of message system of claim 872, wherein the computer system is further programmed to provide the computer corresponding to the first user identity with access to a member-associated image corresponding to the second user identity.~~

880. (Currently amended) ~~The method of claim 878, further including the step of sending a denial message to the first participant computer of said participant computers if the set of privileges does not include a privilege to communicate the type of message in real time over the Internet network system of claim 909, wherein the at least one type includes at least one of text or ascii.~~

881. (Currently amended) ~~The method of claim 878, wherein the type of message is graphical-multimedia system of claim 909, wherein the at least one type includes audio.~~

882. (Currently amended) ~~The method of claim 878, wherein the type of message is video system of claim 909, wherein the at least one type includes video.~~

883. (Currently amended) ~~The method of claim 878, wherein the type of message is graphic system of claim 909, wherein the at least one type includes a graphic.~~

884. (Currently amended) ~~A method of controlling real-time communications over communicating via an Internet network, the method including the steps of:
storing, with a controller computer, a set of privileges corresponding to a user identity;~~

~~connecting a plurality of participator computers with the controller computer through the Internet network;~~

~~receiving a login name and password corresponding to the user identity, from a first participator computer of the plurality of participator computers;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real time over the Internet network, the type including human communication sound;~~

~~if the set of privileges includes the privilege to communicate the type of message in real time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers sending a respective login name and password corresponding to a respective user identity;~~

~~after the sending, connecting a plurality of computers to a computer system, each of the plurality of computers being connected to a respective input device and to a respective output device;~~

~~determining whether at least one of a first user identity and a second user identity, individually, is censored from receiving data comprising a pointer in communications that include at least one of text or ascii, the pointer being a pointer that produces a pointer-triggered message on demand;~~

~~determining whether the first and the second of the user identities are able to form a group; and~~

~~if the first and the second user identities are able to form the group, then forming the group for sending the communications, receiving and presenting the communications that are not~~

censored based on the individual user identity, the receiving being in real time and over the Internet network, and not allowing the data that is censored to be presented at the output device corresponding to the user identity that is censored from receiving the data.

885. (Currently amended) ~~A system controlling real-time communications over an Internet network, the system including:~~

~~a plurality of participator computers connected with a controller computer through the Internet network, each at least one of said participator computers connected to the controller computer subsequent to sending a log-in name and a password corresponding to a user identity; and~~

~~wherein the controller computer is enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to the user identity;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real-time over the Internet network, the type including at least one of a video, graphic, graphical multimedia, or a pointer-triggered message that is receivable on demand;~~

~~if the set of privileges includes the privilege to communicate the type of message in real-time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real-time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers~~ A method of communicating via an Internet network, the method including:

connecting a computer system to a plurality of computers;

sending a respective login name and password corresponding to a respective user

identity from each of the plurality of computers;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending a pointer in the communications including at least one of text or ascii, the pointer being a pointer that produces producing a pointer-triggered message on demand; and

if the first and the second user identities are able to form the group, then forming the group and sending and receiving the communications that are not censored based on the individual user identity, the receiving being in real time over the Internet network.

886. (Currently amended) ~~The method of claim 885, further including a human communication sound as said type of message~~ system of claim 909, wherein the type further includes multimedia.

887. (Currently amended) ~~The method of claim 885, wherein said steps further include the step of sending a denial message to the first participator computer of said participator computers if the set of privileges does not include a privilege to communicate the type of message in real time over the Internet network~~ system of claim 909, wherein the type further includes graphical multimedia.

888. (Currently amended) ~~The method of claim 885, wherein the type of message is graphical multimedia~~ system of claim 909, wherein the type further includes a member-associated image.

889. (Currently amended) ~~The method of claim 885, wherein the type of message is video~~ system of claim 909, wherein the type further includes a member-associated image and at least one of text or ascii.

890. (Currently amended) ~~The method of claim 885, wherein the type of message is graphic~~ system of claim 909, wherein the type further includes audio and at least one of text or ascii.

891. (Currently amended) ~~A system controlling real-time communications over to communicate via an Internet network, the system including:~~

~~a plurality of participator computers connected with a controller computer through the Internet network, at least one of said participator computers connected to the controller computer subsequent to sending a log-in name and a password corresponding to a user identity; and~~

~~wherein the controller computer is enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to the user identity;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real-time over the Internet network, the type including a human communication sound;~~

~~if the set of privileges includes the privilege to communicate the type of message in real-time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real-time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers, each of the~~

plurality of computers being connected to a respective input device and to a respective output device, the plurality of computers being connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:

form a group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time,

determine whether at least one of the first user identity and the second user identity, individually, is censored from receiving, in the communications, data comprising a pointer, the pointer producing a pointer-triggered message on demand, and

thereafter cause the computers to receive, in real time via the Internet network, and present the communications that are not censored based on the individual user identity, and to not present the data that is censored at the output device corresponding to the user identity that is censored from receiving the data, wherein at least some of the communications include data representing at least text or ascii.

~~892. (Currently amended) A method of using computers to communicate over an Internet network, the method including the steps of:~~

~~connecting a plurality of participator computers with a controller computer through the Internet network;~~

~~receiving a log in name and a password corresponding to a user identity, respectively from each of said participator computers;~~

~~respectively storing a set of privileges corresponding to each of said user identities, the set including a privilege to receive non-textual communication;~~

~~determining which ones of the participator computers can form a group to send and~~

~~receive communications, said communications respectively in accordance with the corresponding privilege; and~~

~~sending and receiving said communications in real time over the Internet network between said participator computers in said group, one of said communications including a human communication and~~ A system to communicate via an Internet network, the system including:

a plurality of computers, each of the plurality of computers being connected to a respective input device and to a respective output device, the plurality of computers being connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:
_____ form a group corresponding to a first of the user identities and a second of the user identities, each member of the group being capable of sending and receiving communications in real time,

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending, in the communications, a pointer that produces a pointer-triggered message on demand, and

thereafter cause the computers to receive, in real time via the Internet network, and present the communications that are not censored based on the individual user identity, and to not present the communications that are censored at the output device corresponding to the user identity that is censored from receiving the data, at least some of the communications including data representing at least text or ascii.

893. (Currently amended) ~~A method of using computers to communicate over communicating via an Internet network, the method including the steps of:~~

~~connecting a controller computer with a plurality of participator computers, said connecting including connecting at least one of the plurality of participator computers with the~~

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents video and a graphic.~~

830. (Currently amended) The system of claim 485, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a pointer and audio and video.~~

831. (Currently amended) The system of claim 486, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a pointer and audio and a graphic.~~

832. (Currently amended) The system of claim 487, wherein the step of arbitrating includes:

~~providing group communications capability, with said controller computer, to handle communications between the one of the plurality of computers and the other of the plurality of computers, said group communications capability including private communication window capability method of claim 818, wherein the data represents a pointer and video and a graphic.~~

~~controller computer through the Internet network;~~
~~receiving a log in name and a password corresponding to a user identity,~~
~~respectively from each of said participator computers;~~
~~respectively storing a set of privileges corresponding to each of said user identities,~~
~~the set including a privilege to receive non-textual communication; and~~
~~determining, from said privilege, which of the participator computers can~~
~~communicate human communication sound in real time a plurality of computers to a system;~~
~~sending, from each of the plurality of computers, a respective login name and~~
~~password corresponding to a respective user identity;~~
~~providing a first of the user identities access to a member-associated image and to~~
~~member identity information respectively corresponding to a second of the user identities;~~
~~determining whether the first of the user identities and the second of the user~~
~~identities are able to form a group for sending and for receiving communications in real time; and~~
~~if the first and the second user identities are able to form the group, forming the~~
~~group, sending the communications, and receiving the communications in real time and via the~~
~~Internet network, wherein at least some of the communications include data representing~~
~~multimedia messages, and at least some of the multimedia messages include a pointer that~~
~~produces a pointer-triggered message on demand.~~

894. (Currently amended) ~~A system using computers to communicate over an~~
~~Internet network, the system including:~~
~~a plurality of participator computers connected with a controller computer through~~
~~the Internet network, at least one of said participator computers connected to the controller~~
~~computer subsequent to sending a log in name and a password corresponding to a user identity,~~
~~the controller computer enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to the user identity, the set including a privilege to receive non-textual communication; and~~

~~determining which ones of the participator computers can form a group to communicate communications in real time over the Internet network, said communications respectively in accordance with the corresponding privilege, wherein one of said communications includes human communication sound~~ A method of communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system;

sending a respective login name and password corresponding to a respective user identity from each of the plurality of computers;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether the first user identity is censored from access to a member-associated image and member identity information respectively corresponding to the second user identity;

if the first user identity is censored, not allowing access to the member-associated image;

if the first user identity is not censored, allowing access to the member-associated image; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time and via the Internet network, wherein at least some of the communications include data representing at least one of a pointer, video, audio, graphic, or multimedia.

895. (Currently amended) A system using ~~computers to communicate over to~~

communicate via an Internet network, the system including:

~~a plurality of participator computers connected with a controller computer, at least one of said participator computers connected to the controller computer through the Internet network, subsequent to sending a log-in name and a password corresponding to a user identity;~~

~~wherein:~~

~~the controller computer is enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to the user identity, the set including a privilege to receive non-textual communication; and~~

~~determining, from said privilege, which of the participator computers can communicate human communication sound to an other of the participator computers over the Internet network in real time communicatively connected, responsive to each of the computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:~~

~~determine whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time,~~

~~determine whether the first user identity is censored from access to a member-associated image and member identity information respectively corresponding to the second user identity,~~

~~if the first user identity is censored, not allow access to the member-associated image,~~

~~if the first user identity is not censored, allow access to the member-associated image, and~~

~~if the first and the second user identities are able to form the group, then form the group for sending the communications,~~

~~wherein the computers corresponding to the user identities of the formed group are~~

programmed to receive the communications in real time and via the Internet network wherein at least some of the communications include data representing multimedia and at least some of the communications include a pointer that produces a pointer-triggered message on demand.

896. (Currently amended) ~~A system to control communication over an Internet network, the system including:~~

~~a plurality of participator computers connected with a controller computer through the Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log in name and a password corresponding to a user identity, the controller computer enabled to control real time Internet communication between said users by using a control database storing for each said user identity a respective authorization for communicating human communication sound in some of said communications. An Internet network communication system, the system including:~~

~~a plurality of computers connected, responsive to each of the plurality of computers sending a respective login name and password corresponding to a respective user identity, to a computer system programmed to:~~

~~provide a first of the user identities access to a member-associated image corresponding to a second of the user identities,~~

~~determine whether the first user identity is censored from access to a member-associated image corresponding to the second user identity,~~

~~if the first user identity is censored, not allow access to the member-associated image,~~

~~if the first user identity is not censored, allow access to the member-associated image,~~

~~determine whether the first of the user identities and the second of the user~~

identities are able to form a group for sending and for receiving communications in real time, and
if the first and the second user identities are able to form the group, form the group,
wherein those of the plurality of computers corresponding to the first and the second user identities
are programmed to send the communications and to receive the communications in real time and
via the Internet network.

897. (Currently amended) The system of claim 896, ~~wherein one of said~~
~~participator computers is enabled to carry out the step of receiving, including causing presentation,~~
~~of some of said communications 909, wherein the at least one type includes video and at least one~~
~~of text or ascii.~~

898. (Currently amended) The system of claim 896, ~~wherein one of said~~
~~communications includes at least one of a video, a graphic, or a pointer triggered message 909,~~
~~wherein the at least one type includes graphic and at least one of text or ascii.~~

899. (Currently amended) The system of claim 897, ~~wherein one of said~~
~~communications includes at least one of a video, a graphic, or a pointer triggered message 909,~~
~~wherein the at least one type includes audio and video and at least one of text or ascii.~~

900. (Currently amended) The system of claim 897, ~~wherein some of said~~
~~communications include graphical multimedia 909, wherein the at least one type includes audio~~
~~and a member-associated image.~~

901. (Currently amended) A method of ~~using a computer to control~~

~~communication communicating via an Internet network, the method including the steps of:~~

~~connecting a plurality of participator computers with a controller computer through an Internet network;~~

~~receiving, respectively, a log in name and a password corresponding to a user identity from each of said participator computers;~~

~~enabling the controller computer to carry out the step of controlling real time communication between the participator computers by storing for each said user identity a respective authorization to communicate human communication sound, the authorization used in the controlling computer system with a plurality of computers;~~

~~_____ sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;~~

~~_____ permitting at least a first of the user identities and a second of the user identities to form a group; and~~

~~_____ communicating the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing multimedia messages comprised of more than one data type, and at least some other of the communications include a pointer that produces a pointer-triggered message on demand.~~

902. (Currently amended) A system using a computer to control communication to communicate via an Internet network, the system including:

a plurality of participator computers connected with a controller computer through an Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log in name and a password corresponding to a user identity, the controller computer enabled to carry out the steps of:

controlling real time communication between the participator computers, and storing

~~for each said user identity a respective authorization to communicate human communication sound, the authorization used in the controlling , responsive to each of the computers sending information indicative of a respective login name and password corresponding to a respective user identity, to a computer system programmed to:~~

~~permit at least a first of the plurality of computers and a second of the plurality of computers to form a group for communicating communications in real time via the Internet network, wherein those of the plurality of computers in the group are programmed to receive the communications, at least some of the communications including data representing multimedia messages comprised of more than one data type, and at least some other of the communications including a pointer that produces a pointer-triggered message on demand.~~

903. (Currently amended) ~~A system controlling real time communications over an Internet network, the system including:~~

~~a plurality of participator computers connected with a controller computer, at least one of said participator computers being connected to the controller computer through the Internet network, said participator computers including a first computer connected to the controller computer subsequent to sending a log in name and a password corresponding to a user identity; and—~~

~~a controller computer enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to the user identity;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real time over the Internet network, the type including at least one of a video, graphic, graphical multimedia, or a pointer triggered message;~~

~~if the set of privileges includes the privilege to communicate the type of message in real time over the Internet network, allowing the first participator computer to communicate the type~~

of message to another of the plurality of participator computers; and

~~if the set of privileges does not include the privilege to communicate the type of message in real time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers~~ A human communication system for controlling communication via an Internet network, the system including:

a plurality of computers connected, responsive to each of the plurality of computers sending a user identity associated with a login name and a password, to a computer system programmed to allow a first of the user identities and a second of the user identities to form a group to send and receive communications in real time and via the Internet network, wherein those of the plurality of computers in the group are programmed to receive communications, wherein at least some of the communications include a pointer that produces a pointer-triggered message on demand, at least some of the communications include data representing human communication of sound, and at least some of the communications include data representing at least one of text or ascii.

904. (Currently amended) ~~The system of claim 903, further including human communication sound as said type of message~~ 909, wherein the at least one type includes video and a member-associated image.

905. (Currently amended) ~~The system of claim 903, wherein said steps further include the step of sending a denial message to the first participator computer of said participator computers if the set of privileges does not include a privilege to communicate the type of message in real time over the Internet network~~ 909, wherein the at least one type includes audio and a member-associated image and at least one of text or ascii.

906. (Currently amended) The system of claim 903, wherein the type of message is graphical-multimedia 909, wherein the at least one type includes multimedia and at least one of text or ascii.

907. (Currently amended) The system of claim 903, wherein the type of message is video 909, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

908. (Currently amended) The system of claim 903, wherein the type of message is graphic 880, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

909. (Currently amended) A system of controlling real-time communications over via an Internet network, the system including:

~~plurality of participator computers connected with a controller computer, at least one of said participator computers being connected to the controller computer through the Internet network, said participator computers including a first computer connected to the controller computer subsequent to sending a log in name and a password corresponding to a user identity;~~
and

~~wherein the controller computer is enabled to carry out the steps of:~~

~~storing a set of privileges corresponding to the user identity;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real time over the Internet network, the type including a human communication sound;~~

~~if the set of privileges includes the privilege to communicate the type of message in~~

~~real time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers a computer system programmed to:~~

~~connect a plurality of computers including a first computer in response to each of the plurality of computers sending information indicative of a respective login name and a respective password, which together correspond to a user identity,~~

~~store a set of privileges corresponding to each user identity,~~

~~determine whether the set of privileges corresponding to each user identity includes a privilege to communicate at least one type of message in real time via the Internet network, the type including a pointer, and if the set of privileges includes the privilege, communicate the at least one type of message.~~

~~the computer system being further programmed to allow the first computer to communicate data representing the at least one type of message to another of the plurality of computers, and~~

~~if the set of privileges does not include the privilege to communicate the at least one type of message, disallow the first computer from communicating the at least one type of message to another of the plurality of computers.~~

910. (Currently amended) A method of controlling real-time communications over via an Internet network, the method including the steps of:

~~storing, with a controller computer, a set of privileges corresponding to a user identity;~~

~~connecting a plurality of participator computers with the controller computer, at least one of the participator computers being connected with the controller computer through the Internet;~~

~~receiving a login name and password corresponding to the user identity from a first participator computer of the plurality of participator computers;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real time over the Internet network, the type including at least one of a video, graphic, graphical multimedia, or a pointer-triggered message;~~

~~if the set of privileges includes the privilege to communicate the type of message in real time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers connecting a computer system with a plurality of computers;~~

~~sending information indicative of a respective login name and password corresponding to a first user identity from a first of the plurality of computers;~~

~~receiving information indicative of a login name and a password corresponding to a second user identity from a second of the plurality of computers;~~

~~allowing the first user identity and the second user identity to form a group; and~~

~~sending and receiving communications in real time and via the Internet network between those of the plurality of computers in the group, wherein at least some of the communications include a pointer that produces a pointer-triggered message on demand, at least some of the communications include data representing sound indicative of a human communication of sound, and at least some of the communications include data representing at~~

least one of text or ascii.

911. (Currently amended) ~~The method of claim 910, further including a human communication sound as said type of message~~ system of claim 881, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

912. (Currently amended) ~~The method of claim 910, further including the step of sending a denial message to the first participator computer of said participator computers if the set of privileges does not include a privilege to communicate the type of message in real time over the Internet network~~ system of claim 882, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

913. (Currently amended) ~~The method of claim 910, wherein the type of message is graphical multimedia~~ system of claim 883, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

914. (Currently amended) ~~The method of claim 910, wherein the type of message is video~~ system of claim 886, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

915. (Currently amended) ~~The method of claim 910, wherein the type of message is graphic~~ system of claim 887, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

916. (Currently amended) A method of controlling real-time communications over via an Internet network, the method including the steps of:

~~storing, with a controller computer, a set of privileges corresponding to a user identity;~~

~~connecting a plurality of participator computers with the controller computer, at least one of said participator computers being connected with the controller computer through the Internet network;~~

~~receiving a login name and password corresponding to the user identity from a first participator computer of the plurality of participator computers;~~

~~determining whether the set of privileges corresponding to the user identity includes a privilege to communicate a type of message in real time over the Internet network, the type including a human communication sound;~~

~~if the set of privileges includes the privilege to communicate the type of message in real time over the Internet network, allowing the first participator computer to communicate the type of message to another of the plurality of participator computers; and~~

~~if the set of privileges does not include the privilege to communicate the type of message in real time over the Internet network, not allowing the first participator computer to communicate the type of message another of the plurality of participator computers a set of privileges corresponding to a user identity;~~

connecting a plurality of computers via the Internet network;

receiving information indicative of a login name and a password corresponding respectively to the user identity from a first computer of the plurality of computers;

determining whether the set of privileges includes a privilege to communicate at least one type of message, the type of message including at least one of a pointer, audio, video, a

graphic, or multimedia, the privilege to communicate corresponding to at least one parameter changeable by a user corresponding to another user identity;

if the set of privileges includes the privilege to communicate the at least one type of message, allowing the first of the plurality of computer to communicate, in real time via the internet network, the type of message to an other of the plurality of computers; and

if the set of privileges does not include the privilege to communicate the at least one type of message, disallowing the first computer from communicating the at least one type of message to the other of the plurality of computers.

917. (Currently amended) ~~A system to control communication over an Internet network, the system including:~~

~~a plurality of participator computers connected with a controller computer, wherein at least one of said participator computers is connected with said controller computer through the Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log in name and a password corresponding to a user identity, the controller computer enabled to control real time Internet communication between said users by using a control database storing each said user identity, the user identity having a respective authorization for communicating human communication sound in some of said communications~~ A method of receiving a communication via an Internet network, the method including:

sending, from a first computer, information indicative of a login name and a password corresponding to a user identity;

responsive to the sending, connecting the first computer to a computer system;

forming a communication link between the first computer and a second computer for communicating a communication, the communication including data representing at least one of a member-associated image, video, a graphic, sound, or multimedia;

communicating a pointer, from the first computer to the computer system to obtain the communication at the first computer, the communication being sent in real time and via the Internet network; and

receiving the communication from the first computer at the second computer over the communication link.

918. (Currently amended) A system to control communication over an Internet network, the system including:

~~a plurality of participator computers connected with a controller computer through the Internet network, each said participator computer respectively connected to the controller computer subsequent to sending a respective log-in name and a password corresponding to a user identity, the controller computer enabled to control real time Internet communication between said users by using a control database storing for each said user identity a respective authorization for communicating human communication sound in some of said communications~~ distribute a communication via an Internet network, the system including:

a first computer connected to a computer system, the first computer being connected responsive to its sending information indicative of a login name and a password corresponding to a user identity;

a communication link between the first computer and a second computer; and
respective software stored in the first and second computers, the software stored in the first computer being programmed to communicate a pointer, from the first computer to the computer system, for receiving the communication at the first computer, the communication being sent in real time and via the Internet network, and the software stored in the second computer being programmed to receive the communication for the first computer at the second computer via the communication link, wherein the communication includes data representing at least one of

video, a graphic, sound, or multimedia.

919. (Currently amended) ~~The system of claim 600, wherein said sound is comprised of a human communication sound 888, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.~~

920. (Currently amended) ~~The system of claim 470, wherein one of said participator computers in said group is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications by one of said participator computers in said group 889, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.~~

921. (Currently amended) ~~The system of claim [[409]], wherein one of said participator computers in said group is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications by one of said participator computers in said group 890, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.~~

922. (Currently amended) ~~The system of claim 604, wherein one of said participator computers in said group is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications by one of said participator computers in said group 897, wherein the at least one type includes the~~

type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

923. (Currently amended) The system of claim 843, ~~wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ 898, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

924. (Currently amended) The system of claim 600, ~~wherein the plurality of participator computers are from more than an audience of a particular internet service provider~~ 899, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

925. (Currently amended) The system of claim 876, ~~further including the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ 900, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

926. (Currently amended) The system of claim 877, ~~wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ 904, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

927. (Currently amended) The system of claim ~~878~~, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications 905, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

928. (Currently amended) The system of claim ~~884~~, further including the step of receiving some of said communications, said receiving including causing presentation of some of said communications 906, wherein the at least one type includes the type including a pointer, a the pointer is a pointer that produces a pointer-triggered message on demand.

929. (Currently amended) The system of claim ~~885~~, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications method of claim 916, wherein the at least one type includes a pointer.

930. (Currently amended) The system of claim ~~891~~, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications method of claim 916, wherein the at least one type includes audio.

931. (Currently amended) The system of claim ~~892~~, further including the step of receiving some of said communications, said receiving including causing presentation of some of said communications method of claim 916, wherein the at least one type includes video.

932. (Currently amended) ~~The system of claim 893, further including the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a graphic.

933. (Currently amended) ~~The system of claim 894, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes multimedia.

934. (Currently amended) ~~The system of claim 895, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a pointer and audio.

935. (Currently amended) ~~The method of claim 466, wherein said step of using is carried out with said sound comprising a human communication sound~~ 916, wherein the at least one type includes a pointer and video.

936. (Currently amended) ~~The system of claim 901, further including the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a pointer and a graphic.

937. (Currently amended) ~~The system of claim 902, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications,~~

~~said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes audio and a graphic.

938. (Currently amended) The system of claim 903, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, ~~said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes audio and video.

939. (Currently amended) The system of claim 599, wherein said sound is comprised of a human communication sound method of claim 916, wherein the at least one type includes video and a graphic.

940. (Currently amended) The system of claim 909, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, ~~said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a pointer and audio and video.

941. (Currently amended) The system of claim 910, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, ~~said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a pointer and audio and a graphic.

942. (Currently amended) The system of claim 916, further including the step of receiving some of said communications, ~~said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a pointer and

video and a graphic.

943. (Currently amended) ~~The system of claim 917, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes audio and video and a graphic.

944. (Currently amended) ~~The system of claim 918, wherein one of said participator computers is enabled to carry out the step of receiving some of said communications, said receiving including causing presentation of some of said communications~~ method of claim 916, wherein the at least one type includes a pointer and audio and video and a graphic.

945. (Currently amended) ~~The method of claim 470, wherein the step of connecting is carried out with the plurality of participator computers from more than an audience of a particular internet service provider~~ 916, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.

946. (Currently amended) ~~The system of claim 435, wherein the plurality of participator computers are from more than an audience of a particular internet service provider~~ method of claim 930, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.

947. (Currently amended) ~~The method of claim 893, wherein the step of connecting is carried out with the plurality of participator computers from more than an audience of a particular internet service provider~~ 931, wherein the at least one type includes a pointer that produces a

pointer-triggered message on demand.

948. (Currently amended) ~~The system of claim 805, wherein the plurality of participator computers are from more than an audience of a particular internet service provider method of claim 933, wherein the at least one type includes a pointer that produces a pointer-triggered message on demand.~~

949. (Currently amended) An Internet communication system, the system including:

~~at least one controller computer;~~

~~two or more participator computers, each said computer taking part in the communication system, each said participator computer connected to an input device and an output device, the input device receiving input information from a respective user, the output device presenting messages, each said user having a user identity identifying the user;~~

~~a communication path between said at least one controller computer and each said participator computer, a portion of the communication path passing through or by way of the Internet;~~

~~computer software running on said at least one controller computer regulating steps including:~~

~~storing a set of privileges corresponding to each said user identity, the set including a criteria to receive non-textual communication;~~

~~deciding whether a participator computer can be a member in one of a number of communication channels, each said communication channel allowing communication between two or more of the participator computers by way of said at least one controller computer, said deciding performed in accordance with previously defined criteria, said criteria including examining whether~~

~~a particular user identity is authorized to access the communication system;~~

~~delivering user messages according to the previously defined criteria in real time between receipt and delivery of the messages by said at least one controller computer so as to allow the user to access the user messages substantially instantaneously; and~~

~~wherein at least some of the user messages are comprised of two or more data types from a group including text, audio, graphics, images, and video or comprised of a URL text that points to at least one additional data type other than text, said URL being receivable on demand a computer system including a server computer;~~

~~a plurality of computers, each of the plurality of computers connected to an input device and an output device, and~~

~~a communication link between the computer system including a server computer and each of the plurality of computers, each of the plurality of computers being connected responsive to its sending information indicative of a login name and password, each respective login name and password corresponding to a respective user identity,~~

~~wherein the server computer is programmed to:~~

~~allow one of the plurality of computers to be a member in one of a plurality of communication channels, each said communication channel allowing communication between at least some of the plurality of computers by way of the communication link,~~

~~cause graphical multimedia associated with a first of the login names to be presented at one of the output devices corresponding to a second of the user identities,~~

~~the server computer being further programmed to cause the user messages to be delivered over or by way of the Internet network, in at least one of the communication channels, and in real time between receipt and delivery of the user messages so as to allow access to the user messages,~~

~~wherein at least some of the user messages individually include at least two of text,~~

a sound, a graphic, an image, and a video.

950. (Currently amended) The system of claim 949, wherein at least one of said user messages includes ~~an address that instructs any of the participator computers to locate another media type upon action by one of the users~~ a uniform resource locator, whereby the uniform resource locator produces a message upon demand.

951. (Currently amended) The system of claim 949, wherein at least one of said user messages includes ~~an address that commands any of the participator computers to locate an additional message and present the additional message at a respective output device~~ the uniform resource locator, whereby the uniform resource locator commands at least one of the plurality of computers corresponding to the receipt to locate an additional message and present the additional message at the respective output device.

952. (Currently amended) The system of claim 949, wherein said deciding ~~performed in accordance with previously defined criteria is carried out with said criteria including examining a password in connection with one of said user identities~~ the computer system is further programmed to determine whether the receipt is censored, and to cause the receipt if the receipt is not censored.

953. (Currently amended) A method ~~employing computer devices to make decisions and distribute communication~~ of communicating via an Internet network, the method including the steps of:

~~establishing a communication path between at least one controller~~ a computer system and each of a plurality of participator computers, ~~the communication path passing through~~

~~or by way of an Internet network, each of said computer taking part in a system, each of said communicator the plurality of computers respectively connected to an input device and to an output device, each of the plurality of computers being connected responsive to its sending information said input devices receiving input information from a respective user of the system, each of the respective output devices presenting user messages, each said user having a user identity identifying the user;~~

~~programming the at least one controller computer to direct communication of user messages from one or more of the participator computers to one or more other of the participator computers;~~

~~storing a set of privileges corresponding to each said user identity, the set including a criteria to receive non-textual communication;~~

~~deciding with the at least one controller computer whether a participator computer can be a member in one of a number of communication channels, each said communication channel allowing communication between two or more of the participator computers by way of the at least one controller computer, said deciding performed according to previously defined criteria, the criteria including an examination of whether a particular user identity is authorized to access the system;~~

~~delivering the user messages according to the previously defined criteria in real time between receipt and delivery of the messages by said at least one controller computer so as to allow the user to access the user messages substantially instantaneously; and~~

~~wherein at least some of the user messages are comprised of two or more data types from a group including text, audio, graphics, images, and video or comprised of a URL text that points to at least one additional data type other than text, said URL being receivable on demand indicative of a login name and password, each respective login name and password corresponding to a respective user identity.~~

allowing a first one of the plurality of computers to be a member of one of a plurality of communication channels, and

storing, for a first of the user identities, an authorization for allowing or disallowing presentment of graphical multimedia,

based on the authorization, presenting the graphical multimedia at the output device corresponding to a second of the user identities,

sending and receiving, in real time, user messages between two or more of the plurality of computers, over or by way of the Internet network, in at least one of the communication channels, thereby allowing access to the user messages,

wherein at least some of the user messages individually include a uniform resource locator that points to data other than text or ascii.

954. (Currently amended) ~~The method of claim 953, wherein said step of delivering includes delivering an address or URL of an additional user message and computer instructions that require at least one of the participator computers to locate the additional user message at the address or URL~~ further including instructing at least one of the plurality of computers to locate an additional user message on demand via the uniform resource locator.

955. (Currently amended) ~~The system of claim 500, wherein said member public data reference is a URL~~ A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

_____ if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications that are not censored based on the individual user identity, wherein the receiving is in real time via the Internet network, and not receiving the communications that are censored.

956. (Currently amended) ~~The system of claim 580, wherein said member public data reference is a pointer~~ A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

_____ if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

957. (Currently amended) ~~The method of claim 1, wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network;~~

~~and obtaining the respective user identity over the Internet network~~ A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group, sending the communications that are not censored based on the individual user identity, and receiving the communications in real time via the Internet network.

958. (Currently amended) ~~The method of claim 170, wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored

from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia;
and

_____ if the first and the second user identities are able to form the group, forming the
group for sending the communications, and receiving the communications in real time via the
Internet network.

959. (Currently amended) ~~The method of claim 400, wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ A system to communicate via an Internet network, the system including:

_____ a plurality of computers connected to a computer system, each of the plurality of
computers being connected responsive to receipt at the computer system of information indicative
of a respective login name and password corresponding to a respective user identity, the computer
system being programmed to:

_____ determine whether a first of the user identities and a second of the user identities
are able to form a group capable of sending and receiving communications in real time;

_____ determine whether at least one of the first user identity and the second user identity,
individually, is censored from receiving in the communications at least one of a pointer, video,
audio, graphic, or multimedia, and

_____ if the first and the second user identities are able to form the group, form the group
for sending the communications, and

_____ cause the plurality of computers in the group to receive, in real time via the Internet
network, the communications that are not censored based on the individual user identity, and

_____ cause the plurality of computers in the group to not receive the communications that

are censored based on the individual user identity.

960. (Currently amended) ~~The method of claim 876, wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send the communications, and cause the plurality of computers in the group receive, in real time via the Internet network, the communications that are not censored based on the individual user identity.

961. (Currently amended) ~~The method of claim 878, wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ A system to

communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed and the communications that are not censored based on the individual user identity to be sent, and cause the communications to be received in real time via the Internet network.

962. (Currently amended) ~~The method of claim 884, wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send and receive the communications between members of the group, wherein the communications are received in real time via the Internet network.

963. (Currently amended) The method of claim 892, ~~wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ 939, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

964. (Currently amended) The method of claim 893, ~~wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ 940, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

965. (Currently amended) The method of claim 910, ~~wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ 941, further

including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

966. (Currently amended) The method of claim 946, ~~wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ 942, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

967. (Currently amended) The method of claim 953, ~~wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ 943, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

968. (Currently amended) The method of claim 965, ~~wherein said step of connecting is carried out by at least one of the participator computers connecting to the Internet network without any version of the participator software, receiving the participator software over the Internet network, and obtaining the respective user identity over the Internet network~~ 944, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.

969. (Currently amended) The method of claim 4, ~~further including the step of~~

~~assigning a temporary moderator authorization corresponding one of the user identities being in the group 945, further including allowing the first computer to communicate a pointer that produces a pointer-triggered message on demand.~~

970. (Currently amended) ~~The method of claim 470, further including the step of assigning a temporary moderator authorization corresponding one of the user identities being in the group 916, further including presenting an option to the plurality of computers to access the computer system with at least two client software alternatives.~~

971. (Currently amended) ~~The system of claim 874, wherein the control database includes a content control used in the controlling method of claim 916, further including determining whether receipt of a communication is censored based on content.~~

972. (Currently amended) ~~The system of claim 599, wherein said member public data reference is a URL method of claim 916, further including determining whether receipt of a communication is censored based on age.~~

973. (Currently amended) ~~The system of claim 599, wherein said member public data reference is a pointer~~ A method communicating via an Internet network, the method including:
connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;
determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;
determining whether at least one of the first user identity and the second user

identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications that are not censored based on the individual user identity, wherein the receiving is in real time via the Internet network, and not receiving the communications that are censored

Please add new claims as follows:

974. (new) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

975. (new) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group, sending the communications that are not censored based on the individual user identity, and receiving the communications in real time via the Internet network

976. (new) A method communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system, each of the plurality of computers connected responsive to receiving at the computer system information indicative of a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications in real time via the Internet network.

977. (new) A method of communicating via an Internet network, the method including:

presenting an option to a plurality of computers to access a computer system with at least one of two client software alternatives, wherein the option is exercised by providing a respective user name and password respectively corresponding to a user identity to at least one of the client software alternatives, wherein both of the two client software alternatives cause the respective user identities to be recognized by the computer system and allows at least some of the plurality of computers to form at least one group for sending communications, wherein at least some of the communications are received in real time via the Internet network, and wherein the at least one of client software alternatives allows the computer system to determine whether at least one of the user identities, individually, is censored from data representing at least one of a pointer, video, audio, graphic, or multimedia such that the data that is censored is not presented by the corresponding computer.

978. (new) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia, and

if the first and the second user identities are able to form the group, form the group for sending the communications, and

cause the plurality of computers in the group to receive, in real time via the Internet network, the communications that are not censored based on the individual user identity, and cause the plurality of computers in the group to not receive the communications that are censored based on the individual user identity.

979. (new) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from receiving in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed to send the communications, and cause the plurality of computers in the group receive, in real time via the Internet network, the communications that are not censored based on the individual user identity.

980. (new) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determine whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group to be formed and the communications that are not censored based on the individual user identity to be sent, and cause the communications to be received in real time via the Internet network.

981. (new) A system to communicate via an Internet network, the system including:

a plurality of computers connected to a computer system, each of the plurality of computers being connected responsive to receipt at the computer system of information indicative of a respective login name and password corresponding to a respective user identity, the computer system being programmed to:

determine whether a first of the user identities and a second of the user identities are able to form a group capable of sending and receiving communications in real time by determining whether at least one of the first user identity and the second user identity, individually, is censored from sending in the communications at least one of a pointer, video, audio, graphic, or multimedia; and

if the first and the second user identities are able to form the group, cause the group

to be formed to send and receive the communications between members of the group, wherein the communications are received in real time via the Internet network.

982. (new) A method of communication over an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending information indicative of a respective login name and password corresponding to a first user identity from a first of the plurality of computers;

receiving information indicative of a login name and a password corresponding to a second user identity from a second of the plurality of computers; and

allowing the first user identity and the second user identity to send and receive communications on at least one of a plurality of channels, wherein at least some of the communications are received in real time via the Internet network, the computer system being programmed to determine whether at least one of the user identities, individually, is censored from data in one of the channels, the data representing at least one of a pointer, video, audio, graphic, or multimedia, such that the data that is censored is not presented by the corresponding computer.

983. (new) The method of claim 980, wherein the data includes a pointer that produces a pointer-triggered message on demand.

984. (new) The method of claim 980, further including:

determining whether the first user identity is censored from the data by determining whether a parameter corresponding to

the first user identity has been determined by a user corresponding to an other of the user identities.

985. (new) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from graphical multimedia; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the graphical multimedia that is censored to be presented at one of the computers corresponding to the one of the user identities.

986. (new) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from graphical data; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the graphical data that is censored to be presented at one of the computers corresponding to the one of the user identities.

987. (new) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;

sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;

determining whether at least one of a first of the user identities is censored from data representing graphical multimedia; and

allowing at least a first of the user identities and a second of the user identities to form a group; and

sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the data representing graphical multimedia that is censored to be presented at one of the computers corresponding to the one of the user identities.

988. (new) A method of communicating via an Internet network, the method including:

connecting a computer system with a plurality of computers;
sending, from each of the plurality of computers, a respective user identity associated with a login name and a password;
determining whether at least one of a first of the user identities is censored from graphical data; and
allowing at least a first of the user identities and a second of the user identities to form a group; and
sending and receiving the communications in real time, via the Internet network, between the computers in the group, wherein at least some of the communications include data representing at least one of a pointer, video, audio, a graphic, multimedia, or at least one of text or ascii, and not allowing the graphical data that is censored to be presented at one of the computers corresponding to the one of the user identities.

989. (new) A method of communicating via an Internet network, the method including:

connecting, responsive to sending information indicative of a respective login name and password corresponding to a respective user identity, a plurality of computers with computer system;

storing at least one permission corresponding to a first of the user identities, the permission allowing or disallowing communication of a type of media;

changing, responsive to a second of the users, the stored permission; and

if the first user identity has permission to allow the communication, the sending the communications and receiving and presenting the communications, wherein the receiving is in real time and via the Internet network, and not presenting the data that is censored to the corresponding output device.

990. (new) The method of claim 989, wherein the data represents a pointer.

991. (new) The method of claim 989, wherein the data represents a pointer that produces a pointer-triggered message on demand.

992. (new) The method of claim 989, wherein the data represents video.

993. (new) The method of claim 989, wherein the data represents audio.

994. (new) The method of claim 989, wherein the data represents a graphic.

995. (new) The method of claim 989, wherein the data represents multimedia.

II. Remarks

Applicant understands that the Amendments made on September 8, 2005, and October 24, 2005, were not entered. The Examiner is requested to enter the Information Disclosure Statement, PTO Form 1449, and Cited Art filed on those dates. For the convenience of the Examiner, the Remarks from the September 8, 2005, filing and October 24, 2005, filing are set out below.

---Remarks from September 8, 2005---

Formal Drawings were submitted on May 24, 2002, included Figures 1 and 3, corresponding to the Certificate of Correction issued in the parent application, U.S. Patent No. 5,956,491. The Examiner indicated that she would treat this filing of the Formal Drawings as an Amendment to the Drawings, and Applicant thanks the Examiner for that accommodation. It is believed that no new matter has been added.

Applicant filed two 1449 forms on June 10, 2005. Although it was believed that the cited art was previously filed, out of an abundance of caution, Applicant provided the Examiner with copies of the art cited in those 1449 forms.

In addition, as the Examiner is aware, the parent to the instant patent application has been asserted against America Online. Information from the litigation was provided to the Examiner on June 9, 2005, and a 1449 form listing that information is being filed herewith. Further or more up to date information concerning the litigation can be found by contacting the Clerk of Court for the Northern District of Illinois, with certain information believed to be available over the Internet.

Applicant also expresses gratitude for the Examiner's extensive efforts in handling the present application. The Examiner has shown distinguished comprehension of the application, claims, cited art and other filings, all of which is greatly appreciated. As discussed with the Examiner, for ease of examination, the order of the dependent claims has been changed into

blocks corresponding to the independent claims, and for the convenience of the Examiner, a clean copy of the amended claims is included herewith.

The preceding Office Action rejecting claims has been addressed with the previous Response, and the Remarks therein are applicable to the claims amended and added herein as well, but in truth, the instant amendment does not correspond to any rejection. Claims pending prior to this amendment are intended to be taken up in a subsequent continuing application, and it is respectfully requested that exigencies of litigation not be confused with prosecution estoppel.

Respectfully, the application is believed to be in condition for allowance, and favorable action is requested. If the prosecution of this case can be in any way advanced by a telephone discussion or by a personal interview, the Examiner is requested to call the undersigned at (312) 240-0824. The undersigned respectfully requests an opportunity to meet with the Examiner should it be helpful in furthering prosecution.

---Remarks from October 24, 2005---

The Examiner's attention is drawn to the remarks in the Amendment and Response filed March 21, 2005, and the remarks in the Supplemental Amendment filed September 8, 2005.

The present filing conveys an additional 1449 form and information from the litigation involving the parent patent and AOL. Applicant again sincerely apologizes for the extensive nature of the present application, and again requests that consideration be given to the circumstances of litigation, such that extensive 1449 form filings come from prudence in ensuring that no criticism can be made that anything material has been withheld from the PTO.

The present filing also corrects or changes claim language. The preceding Office Action has been addressed with the Amendment and Response, and the remarks therein, in view of the remarks set out in the and Supplemental Amendment and Response, carry forward hereto and are applicable to the herein new and amended claims as well. However, it is again noted that the instant amendment is not motivated by any rejection, and Applicant intends to pursue

Ser. No. 09/399,578
Atty. Ref. AIS-P1-99
Art Unit 2145

previously pending claims in subsequent continuing application(s). As mentioned in Applicant's Supplemental Amendment, as discussed with the Examiner, Applicant has carefully amended the claims into groups for the Examiner's renumbering convenience. And for the Examiner's further convenience, a clean copy of the claims is being filed herewith.

Respectfully, the application is believed to be in condition for allowance, and favorable action is requested. If the prosecution of this case can be in any way advanced by a telephone discussion or by a personal interview, the Examiner is requested to call the undersigned at (312) 240-0824. Also, the undersigned respectfully requests a personal interview with the Examiner if there be any issue that impedes allowance.

Ser. No. 09/399,578
Atty. Ref. AIS-P1-99
Art Unit 2145

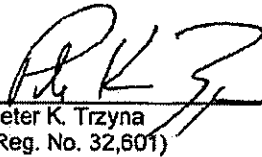

III. Conclusion

Respectfully, the application is believed to be in condition for allowance, and favorable action is requested. If the prosecution of this case can be in any way advanced by a telephone discussion or personal interview, the Examiner is requested to call the undersigned at (312) 240-0824.

The Commissioner is hereby authorized to charge any fees associated with the above-identified patent application or credit any overcharges to Deposit Account No. 50-0235, and if any extension of time is needed, this shall be deemed a petition therefore. Please direct all communication to the undersigned at the address given below.

Respectfully submitted,

Date: November 17, 2006

Peter K. Trzyna

I. FIELD OF INVENTION

This invention is directed to an apparatus, a manufacture, and methods for making and using the same, in a field of digital electrical computer systems. More particularly, the present invention is directed to a digital electrical computer system involving a plurality of participator computers linked by a network to at least one of a plurality of participator computers, the participator computers operating in conjunction with the controller computer to handle multiplexing operations for communications involving groups of some of the participator computers.

II. BACKGROUND OF THE INVENTION

Multiplexing group communications among computers ranges from very simple to very complex communications systems. At a simple level, group communications among computers involve electronic mail sent in a one way transmission to all those in a group or subgroup using, say, a local area network. Arbitrating which computers receive electronic mail is a rather well understood undertaking.

On a more complex level, corporations may link remote offices to have a conference by computer. A central computer can control the multiplexing of what appears as an electronic equivalent to a discussion involving many individuals.

Even more complex is linking of computers to communicate in what has become known as a "chat room." Chat room communications can be mere text, such as that offered locally on a file server, or can involve graphics and certain multimedia capability, as exemplified by such Internet service providers as America On Line. Multiplexing in multimedia is more complex for this electronic environment.

~~The On the Internet, "chat room" communications analogous to America On Line have not been developed, at least in part because Internet was structured for one-way~~

FIG. 16 is a further illustration of the private message on the private message window on new channel screen of the present invention.

5 FIG. 17 is an illustration of an attribute revocation on the new channel screen of the present invention.

FIG. 18 is a further illustration of the new channel screen of the present invention.

10 FIG. 19 is an illustration of the channel list window screen of the present invention.

FIG. 20 is an illustration of the toggle posting option on a screen of the present invention.

FIG. 21 is an illustration of a moderated version of the new channel screen of the present invention.

15 FIG. 22 is an illustration of a communication on a moderation window screen of the present invention.

FIG. 23 is an illustration of the communication passed on to the moderated version of the new channel screen of the present invention.

20 FIG. 24 is an illustration of a communication, for sending a graphical multimedia message, on to the moderated version of the new channel screen of the present invention

FIG. 25 is an illustration, showing the name of the URL, on a moderated version of the new channel screen of the present invention.

~~FIG. 25 is an illustration of a communication, for passing a URL (Uniform Resource Locator) to channel members on a moderator pull-down screen of the present~~

invention.

FIG. 26 is an illustration of data associated with the graphical multimedia message on a moderated version of the new channel screen of the present invention.

FIG. 27 is an illustration of a proprietary editor, suitable for a dialog to change tokens, on a screen of the present invention.

FIG. 28 is an illustration of a text-based interface login/password screen of the present proprietary invention.

FIG. 29 is an illustration of a text-based interface group screen of the present invention.

FIG. 30 is another illustration of a text-based interface group screen of the present invention.

FIG. 31 is another illustration of a text-based interface group screen of the present invention.

FIG. 32 is an illustration of a text-based interface private message screen of the present invention.

FIG. 33 is another illustration of a text-based interface private message screen of the present invention.

FIG. 34 is another illustration of a text-based interface group with moderator screen of the present invention.

V. DETAILED DESCRIPTION OF THE DRAWINGS

In providing a detailed description of a preferred embodiment of the present invention, reference is made to an appendix hereto, including the following items.

Appendix Contents

ALLUSER C
ALLUSER H

participator computers 5. For a synchronous notification, a participator computer 5 must interrogate the system 1 for a message.

With regard to the arbitrating of the controller computer 3 is directed by the controller computer program 2 to use "identity tokens", which are pieces of information associated with user identity. The pieces of information are stored in memory 44 in a control computer database, along with personal information about the user, such as the user's age. The control computer database serves as a repository of tokens for other programs to access, thereby affording information to otherwise independent computer systems. In the database, the storage of tokens can be by user, group, and content, and distribution controls can also be placed on the user's tokens as well as the database.

Each token is used to control the ability of a user to gain access to other tokens in a token hierarchy arbitration process. The arbitration also includes controlling a user's ability to moderate communications involving a group or subgroup of the participator computers 5. Once in a group, temporary tokens are assigned for priority to moderate/submoderate groups (a group is sometimes known as a channel in multiplexing terminology).

Accordingly, tokens are used by the controller computer 5 to control a user's group priority and moderation privileges, as well as controlling who joins the group, who leaves the group, and the visibility of members in the group. Visibility refers to whether a user is allowed to know another user is in the chat group.

Tokens are also used to permit a user's control of identity, and in priority contests between 2 users, for example, a challenge as to whether a first user can see a second user.

Censorship, which broadly encompasses control of what is said in a group, is also arbitrated by means of the tokens. Censorship can control of access to system 1 by

Channel window for all members to see (at FIG. 23).

DMARKS now wishes to send a graphical multimedia message. This implementation sends graphical multimedia images by allowing a channel member to specify an Internet URL of a graphical multimedia resource to be presented to the group members. In this example,

5 DMARKS wishes to send the URL ~~www.aie.net~~ (corresponding to the World Wide Web home page of American Information Systems, Inc.) to the channel members. DMARKS enters the URL into the response window, and selects "Send URL" from the Moderator pull-down menu (at FIG. 24).

The controller computer 5 now passes the URL to the channel members. This

10 participator software 4 performs two actions in response to the graphical multimedia display request. The first is to put the name of the URL onto the transcript of the group's channel, so that it can be read by group members. The second response is to have the participator software show the data associated with the graphical multimedia message in a human interpretable way (at FIG. 25). To do this, the participator software 6 either uses built in rules to

15 decide how the graphical multimedia data is to be presented, or locates another program suitable to present the data. In this case, the software 6 is utilizing Netscape Navigator[®], a program for displaying graphical multimedia documents specified by a URL (at FIG. 26). Inside the Navigator window, the graphical multimedia content, the home page of AIS, is shown.

Finally, DMARKS wishes to manually modify the attribute tokens associated with

20 the user (at FIG. 27). The user invokes the Property Editor dialog, which allows the user to view and change the tokens associated with a user. A property of a given user is determined by the Identifier and Property names. An old value of the property is shown, and a token value can be changed in the "New Value" field. With this property editor, a user with sufficient permissions (tokens) can change any of the tokens or security parameters of any user, or a

AMENDED ABSTRACT

A computerized human communication arbitrating and distributing system, including a controller digital computer and a plurality of participator digital computers, each of the participator computers including an input device for receiving human input information from a human user and an output device for presenting information to the user, each said user having a user identity. A connection, such as Internet, links the controller computer with each of the participator computers. Controller software runs on the controller computer to arbitrate in accordance with predefined rules including said user identity, which ones of the participator computers can interact in one of a plurality of groups through the controller computer and to distribute real time data to the respective ones of the groups. Participator software runs on each of the participator computers to handle a user interface permitting one said user to send a multimedia information message to the controller computer, which arbitrates which of the participator computers receive the multimedia information message and conveys the multimedia information message to the selected participator computers to present the multimedia information to the respective user.

A system and method communicating via an Internet network, the system including: a plurality of computers connected to a computer system such that one of the plurality of computers, corresponding to a first of the user identities, and an other of the plurality of computers, corresponding to a second of the user identities, can send communications, and some of the communications are received in real time via the Internet. There can be a determination as to whether some of the communications are allowed.

Notice of Non-Compliant Amendment (37 CFR 1.121)	Application No.	Applicant(s)	
	09/399,578	MARKS, DANIEL L.	
	Examiner	Art Unit	
	Patrice Winder	2145	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

The amendment document filed on _____ is considered non-compliant because it has failed to meet the requirements of 37 CFR 1.121 or 1.4. In order for the amendment document to be compliant, correction of the following item(s) is required.

THE FOLLOWING MARKED (X) ITEM(S) CAUSE THE AMENDMENT DOCUMENT TO BE NON-COMPLIANT:

1. Amendments to the specification:

A. Amended paragraph(s) do not include markings.

B. New paragraph(s) should not be underlined.

C. Other _____.

2. Abstract:

A. Not presented on a separate sheet. 37 CFR 1.72.

B. Other _____.

3. Amendments to the drawings:

A. The drawings are not properly identified in the top margin as "Replacement Sheet," "New Sheet," or "Annotated Sheet" as required by 37 CFR 1.121(d).

B. The practice of submitting proposed drawing correction has been eliminated. Replacement drawings showing amended figures, without markings, in compliance with 37 CFR 1.84 are required.

C. Other _____.

4. Amendments to the claims:

A. A complete listing of all of the claims is not present.

B. The listing of claims does not include the text of all pending claims (including withdrawn claims)

C. Each claim has not been provided with the proper status identifier, and as such, the individual status of each claim cannot be identified. Note: the status of every claim must be indicated after its claim number by using one of the following status identifiers: (Original), (Currently amended), (Canceled), (Previously presented), (New), (Not entered), (Withdrawn) and (Withdrawn-currently amended).

D. The claims of this amendment paper have not been presented in ascending numerical order.

E. Other: See Continuation Sheet.

5. Other (e.g., the amendment is unsigned or not signed in accordance with 37 CFR 1.4):

For further explanation of the amendment format required by 37 CFR 1.121, see MPEP § 714.

TIME PERIODS FOR FILING A REPLY TO THIS NOTICE:

1. Applicant is given **no new time period** if the non-compliant amendment is an after-final amendment or an amendment filed after allowance. If applicant wishes to resubmit the non-compliant after-final amendment with corrections, the **entire corrected amendment** must be resubmitted.

2. Applicant is given **one month, or thirty (30) days, whichever is longer**, from the mail date of this notice to supply the correction, if the non-compliant amendment is one of the following: a preliminary amendment, a non-final amendment (including a submission for a request for continued examination (RCE) under 37 CFR 1.114), a supplemental amendment filed within a suspension period under 37 CFR 1.103(a) or (c), and an amendment filed in response to a *Quayle* action. If any of above boxes 1. to 4. are checked, the correction required is only the **corrected section** of the non-compliant amendment in compliance with 37 CFR 1.121.

Extensions of time are available under 37 CFR 1.136(a) only if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action.

Failure to timely respond to this notice will result in:

Abandonment of the application if the non-compliant amendment is a non-final amendment or an amendment filed in response to a *Quayle* action; or

Non-entry of the amendment if the non-compliant amendment is a preliminary amendment or supplemental amendment.

Legal Instruments Examiner (LIE), if applicable

Telephone No.

Continuation of 4(e) Other: There are 2 supplemental submissions of claim indices. The status identifiers of some claims is not updated to reflect a later filed submission (some claims are new in all 3 submissions). The content of the claims reflects amendment but no amendments are provided in the claim index, see for example claim 973.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE ____ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 03 October 2003.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-949 is/are pending in the application.

4a) Of the above claim(s) ____ is/are withdrawn from consideration.

5) Claim(s) ____ is/are allowed.

6) Claim(s) 1-949 is/are rejected.

7) Claim(s) ____ is/are objected to.

8) Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on ____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.

2. Certified copies of the priority documents have been received in Application No. ____.

3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-949 are rejected under 35 U.S.C. 102(e) as being anticipated by Curtis et al., USPN 6,560,707 B2 (hereafter referred to as Curtis).

Regarding claim, Curtis taught a method of using computers to communicate over an Internet network, the method including the steps of:

connecting a plurality of participator computers with a controller computer through the Internet network (column 5, lines 35-37, column 6, lines 1-3), each of said participator computer connected to an input device and to an output device (column 5, lines 49-52); arbitrating with the controller computer, in accordance with predefined rules including a for an authenticated user identity, to determine which ones of the participator computers can form a group to send and receive communication (column 5, lines 53-60, column 8, lines 40-58); and sending and receiving communications in real time over the Internet network between said participator computers in said group, some of said communications including a respective video, a graphic or a point-triggered message (column 5, lines 33-34).

Copied from 11510463 on 02/07/2007

Regarding dependent claims:

Curtis taught a point triggered message, a human communication sound, a graphic, a video and text or ascii (column 5, lines 33-34, column 6, lines 40-42, column 6, line 55-57).

Curtis taught the step of arbitrating with the controller computer to determine which of the participator computer can communicate a human communication sound, a graphic, a video and text or ascii (column 8, lines 40-58).

Curtis taught the step of arbitrating including authorizing a moderator for said communications (column 8, lines 40-58).

Curtis taught the step of arbitrating including censoring responsive to at least one of said user identity, group and content (column 8, lines 40-58).

Claims 1-949 are rejected on the rationale set forth, above.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Copied from 11510463 on 02/07/2007

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrice Winder whose telephone number is 703-305-3938. The examiner can normally be reached on Monday-Friday, 10:30 am-7:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain Alam can be reached on 703-308-3662. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

FURTHER SUPPLEMENTAL AMENDMENT

S I R :

In the above-referenced patent application, please enter the following
 amendment and reconsider the application. It is believed that no new matter has been added.

I. Claims

Please amend the claims as follows:

1. (previously amended) A method of communicating via an Internet network, the method including:
 - connecting a plurality of computers to a computer system, each of the plurality of computers connected to a respective input device and to a respective output device;
 - sending, from each of the plurality of computers, a respective login name and a password corresponding to a respective user identity;
 - determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;
 - determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing at least one of a pointer, video, audio, a graphic, or multimedia; and
 - if the first and the second user identities are able to form the group, forming the group for sending the communications, and receiving the communications that are not censored based on the individual user identity, wherein the receiving is in real time and via the Internet network, and not presenting the data that is censored to the corresponding output device.

2. (presently amended) The method of claim 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing represents a pointer.

3. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user

identity, individually, is censored from data representing ~~represents a video.~~

4. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ audio.

5. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a graphic.

6. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ multimedia.

7. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and a video.

8. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and audio.

9. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and a graphic.

10. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a video and audio.

11. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a video and a graphic.

12. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ audio and a graphic.

13. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and a video and audio.

14. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and a video and a graphic.

15. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and audio and a graphic.

16. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a video and audio and a graphic.

17. (presently amended) The method of claim 1, determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether at least one of the first user identity and the second user identity, individually, is censored from data representing ~~represents~~ a pointer and a video and audio and a graphic.

18. (previously amended) The method of claim 1, wherein at least some of the communications include at least one of text or ascii.

19. (previously amended) The method of claim 2, wherein at least some of the communications include at least one of text or ascii.

20. (previously amended) The method of claim 3, wherein at least some of the communications include at least one of text or ascii.

21. (previously amended) The method of claim 4, wherein at least some of the communications include at least one of text or ascii.

22. (previously amended) The method of claim 5, wherein at least some of the communications include at least one of text or ascii.

23. (previously amended) The method of claim 6, wherein at least some of the communications include at least one of text or ascii.

24. (previously amended) The method of claim 7, wherein at least some of the communications include at least one of text or ascii.

25. (previously amended) The method of claim 8, wherein at least some of the communications include at least one of text or ascii.

26. (previously amended) The method of claim 9, wherein at least some of the communications include at least one of text or ascii.

27. (previously amended) The method of claim 10, wherein at least some of

the communications include at least one of text or ascii.

28. (previously amended) The method of claim 11, wherein at least some of the communications include at least one of text or ascii.

29. (previously amended) The method of claim 12, wherein at least some of the communications include at least one of text or ascii.

30. (previously amended) The method of claim 13, wherein at least some of the communications include at least one of text or ascii.

31. (previously amended) The method of claim 14, wherein at least some of the communications include at least one of text or ascii.

32. (previously amended) The method of claim 15, wherein at least some of the communications include at least one of text or ascii.

33. (previously amended) The method of claim 16, wherein at least some of the communications include at least one of text or ascii.

34. (previously amended) The method of claim 17, wherein at least some of the communications include at least one of text or ascii.

35. (presently amended) The method of claim 1, further including:
determining whether at least one of the first and the second user identities, individually,
is censored from sending in the communications data representing at least one of a pointer,

video, audio, a graphic, or multimedia; and

sending the data that is not censored from sending.

36. (presently amended) The method of claim 2, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and

sending the data that is not censored from sending.

37. (presently amended) The method of claim 3, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and

sending the data that is not censored from sending.

38. (presently amended) The method of claim 4, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and

sending the data that is not censored from sending.

39. (presently amended) The method of claim 5, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and

sending the data that is not censored from sending.

40. (presently amended) The method of claim 6, further including:
determining whether at least one of the first and the second user identities, individually,
is censored from sending in the communications data representing at least one of a pointer,
video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

41. (presently amended) The method of claim 7, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

42. (presently amended) The method of claim 8, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

43. (presently amended) The method of claim 9, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

44. (presently amended) The method of claim 10, further including:

determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

45. (presently amended) The method of claim 11, further including:
determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

46. (presently amended) The method of claim 12, further including:
determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

47. (presently amended) The method of claim 13, further including:
determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

48. (presently amended) The method of claim 14, further including:
determining whether at least one of the first and the second user identities, individually, is censored from sending in the communications data representing at least one of a

pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

49. (presently amended) The method of claim 15, further including:
determining whether at least one of the first and the second user identities,
individually, is censored from sending in the communications data representing at least one of a
pointer, video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

50. (presently amended) The method of claim 16, further including:
determining whether at least one of the first and the second user identities, individually,
is censored from sending in the communications data representing at least one of a pointer,
video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

51. (presently amended) The method of claim 17, further including:
determining whether at least one of the first and the second user identities, individually,
is censored from sending in the communications data representing at least one of a pointer,
video, audio, a graphic, or multimedia; and
sending the data that is not censored from sending.

52. (presently amended) The method of claim 1, further including
determining whether at least one of the communications ~~are~~ is censored based on content.

53. (previously amended) The method of claim 2, further including
determining whether at least one of the communications is censored based on content.

54. (previously amended) The method of claim 3, further including determining whether at least one of the communications is censored based on content.

55. (previously amended) The method of claim 4, further including determining whether at least one of the communications is censored based on content.

56. (previously amended) The method of claim 5, further including determining whether at least one of the communications is censored based on content.

57. (previously amended) The method of claim 6, further including determining whether at least one of the communications is censored based on content.

58. (previously amended) The method of claim 7, further including determining whether at least one of the communications is censored based on content.

59. (previously amended) The method of claim 8, further including determining whether at least one of the communications is censored based on content.

60. (previously amended) The method of claim 9, further including determining whether at least one of the communications is censored based on content.

61. (previously amended) The method of claim 10, further including determining whether at least one of the communications is censored based on content.

62. (previously amended) The method of claim 11, further including

determining whether at least one of the communications is censored based on content.

63. (previously amended) The method of claim 12, further including determining whether at least one of the communications is censored based on content.

64. (previously amended) The method of claim 13, further including determining whether at least one of the communications is censored based on content.

65. (previously amended) The method of claim 14, further including determining whether at least one of the communications is censored based on content.

66. (previously amended) The method of claim 15, further including determining whether at least one of the communications is censored based on content.

67. (previously amended) The method of claim 16, further including determining whether at least one of the communications is censored based on content.

68. (previously amended) The method of claim 17, further including determining whether at least one of the communications is censored based on content.

69. (previously amended) The method of claim 52, further including determining a user age corresponding to each of the user identities.

70. (previously amended) The method of claim 53, further including determining a user age corresponding to each of the user identities.

71. (previously amended) The method of claim 54, further including determining a user age corresponding to each of the user identities.

72. (previously amended) The method of claim 55, further including determining a user age corresponding to each of the user identities.

73. (previously amended) The method of claim 56, further including determining a user age corresponding to each of the user identities.

74. (previously amended) The method of claim 57, further including determining a user age corresponding to each of the user identities.

75. (presently amended) The method of claim 58, further including ~~determining a user age corresponding to each of the user identities~~ 1, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

76. (presently amended) The method of claim 59, further including ~~determining a user age corresponding to each of the user identities~~ 2, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

77. (presently amended) The method of claim 60, further including ~~determining a user age corresponding to each of the user identities~~ 3, wherein the determining

whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

78. (presently amended) The method of claim 61, ~~further including determining a user age corresponding to each of the user identities~~ 4, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

79. (presently amended) The method of claim 62, ~~further including determining a user age corresponding to each of the user identities~~ 5, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

80. (presently amended) The method of claim 63, ~~further including determining a user age corresponding to each of the user identities~~ 6, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user identity has been determined by an other of the user identities.

81. (presently amended) The method of claim 64, ~~further including determining a user age corresponding to each of the user identities~~ 7, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from data includes determining whether a parameter corresponding to the first user

identity has been determined by an other of the user identities.

82. (presently amended) The method of claim 65, ~~further including~~
~~determining a user age corresponding to each of the user identities 8, wherein the determining~~
~~whether at least one of the first user identity and the second user identity, individually, is~~
~~censored from data includes determining whether a parameter corresponding to the first user~~
~~identity has been determined by an other of the user identities.~~

83. (presently amended) The method of claim 66, ~~further including~~
~~determining a user age corresponding to each of the user identities 9, wherein the determining~~
~~whether at least one of the first user identity and the second user identity, individually, is~~
~~censored from data includes determining whether a parameter corresponding to the first user~~
~~identity has been determined by an other of the user identities.~~

84. (presently amended) The method of claim 67, ~~further including~~
~~determining a user age corresponding to each of the user identities 10, wherein the determining~~
~~whether at least one of the first user identity and the second user identity, individually, is~~
~~censored from data includes determining whether a parameter corresponding to the first user~~
~~identity has been determined by an other of the user identities.~~

85. (presently amended) The method of claim 68, ~~further including~~
~~determining a user age corresponding to each of the user identities 11, wherein the determining~~
~~whether at least one of the first user identity and the second user identity, individually, is~~
~~censored from data includes determining whether a parameter corresponding to the first user~~
~~identity has been determined by an other of the user identities.~~

86. (previously amended) The method of claim 1, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

87. (previously amended) The method of claim 2, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

88. (previously amended) The method of claim 3, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

89. (previously amended) The method of claim 4, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

90. (previously amended) The method of claim 5, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

91. (previously amended) The method of claim 6, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

92. (previously amended) The method of claim 7, wherein the determining whether the first of the user identities and the second of the user identities are able to form a

group includes determining whether the first of the user identities is censored.

93. (previously amended) The method of claim 8, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

94. (previously amended) The method of claim 9, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

95. (previously amended) The method of claim 10, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

96. (previously amended) The method of claim 11, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

97. (previously amended) The method of claim 12, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

98. (previously amended) The method of claim 13, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

99. (previously amended) The method of claim 14, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

100. (previously amended) The method of claim 15, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

101. (previously amended) The method of claim 16, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

102. (previously amended) The method of claim 17, wherein the determining whether the first of the user identities and the second of the user identities are able to form a group includes determining whether the first of the user identities is censored.

103. (previously amended) The method of claim 1, further including determining a user age corresponding to each of the user identities.

104. (previously amended) The method of claim 2, further including determining a user age corresponding to each of the user identities.

105. (previously amended) The method of claim 3, further including determining a user age corresponding to each of the user identities.

106. (previously amended) The method of claim 4, further including

determining a user age corresponding to each of the user identities.

107. (previously amended) The method of claim 5, further including determining a user age corresponding to each of the user identities.

108. (previously amended) The method of claim 6, further including determining a user age corresponding to each of the user identities.

109. (previously amended) The method of claim 7, further including determining a user age corresponding to each of the user identities.

110. (previously amended) The method of claim 8, further including determining a user age corresponding to each of the user identities.

111. (previously amended) The method of claim 9, further including determining a user age corresponding to each of the user identities.

112. (previously amended) The method of claim 10, further including determining a user age corresponding to each of the user identities.

113. (previously amended) The method of claim 11, further including determining a user age corresponding to each of the user identities.

114. (previously amended) The method of claim 12, further including determining a user age corresponding to each of the user identities.

115. (previously amended) The method of claim 13, further including determining a user age corresponding to each of the user identities.

116. (previously amended) The method of claim 14, further including determining a user age corresponding to each of the user identities.

117. (previously amended) The method of claim 15, further including determining a user age corresponding to each of the user identities.

118. (previously amended) The method of claim 16, further including determining a user age corresponding to each of the user identities.

119. (previously amended) The method of claim 17, further including determining a user age corresponding to each of the user identities.

120. (presently amended) The method of claim 1, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

121. (presently amended) The method of claim 2, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

122. (presently amended) The method of claim 7, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

123. (presently amended) The method of claim 8, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

124. (presently amended) The method of claim 9, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

125. (presently amended) The method of claim 13, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

126. (presently amended) The method of claim 14, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

127. (presently amended) The method of claim 15, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

128. (presently amended) The method of claim 17, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

129. (presently amended) The method of claim 18, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

130. (presently amended) The method of claim 19, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

131. (presently amended) The method of claim 24, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

132. (presently amended) The method of claim 25, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

133. (presently amended) The method of claim 26, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

134. (presently amended) The method of claim 30, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

135. (presently amended) The method of claim 31, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

136. (presently amended) The method of claim 32, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

137. (presently amended) The method of claim 34, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

138. (presently amended) The method of claim 35, wherein the data that is censored from sending represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

139. (presently amended) The method of claim 36, wherein the data that is censored from sending represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

140. (presently amended) The method of claim 41, whereby wherein the data that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

141. (presently amended) The method of claim 42, whereby wherein the data that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

142. (presently amended) The method of claim 43, whereby wherein the data that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

143. (presently amended) The method of claim 47, whereby wherein the data that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

144. (presently amended) The method of claim 48, whereby wherein the data that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

145. (presently amended) The method of claim 49, whereby wherein the data that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

146. (presently amended) The method of claim 51, whereby wherein the data

that is censored from sending represents a the pointer that produces a pointer-triggered message on demand.

147. (presently amended) The method of claim 52, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

148. (presently amended) The method of claim 53, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

149. (presently amended) The method of claim 58, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

150. (presently amended) The method of claim 59, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

151. (presently amended) The method of claim 60, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

152. (presently amended) The method of claim 64, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

153. (presently amended) The method of claim 65, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

154. (presently amended) The method of claim 66, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

155. (presently amended) The method of claim 68, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

156. (presently amended) The method of claim 69, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

157. (presently amended) The method of claim 70, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

158. (presently amended) The method of claim 75, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

159. (presently amended) The method of claim 76, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

160. (presently amended) The method of claim 77, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

161. (presently amended) The method of claim 81, ~~whereby~~ wherein the pointer

is a pointer that produces a pointer-triggered message on demand.

162. (presently amended) The method of claim 82, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

163. (presently amended) The method of claim 83, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

164. (presently amended) The method of claim 85, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

165. (presently amended) A method of operating a system to receive a communication via an Internet network, the method including:

- connecting a plurality of computers to a computer system;
- sending, from each of the plurality of computers, a respective login name and a password corresponding to a respective user identity;
- communicating a message comprised of a pointer, from a first of the plurality of computers to the computer system;
- communicating the message from the computer system to a second of the plurality of computers; and
- receiving via the pointer a communication from the first of the plurality of computers at the second of the plurality of computers, the communication being sent in real time and via the Internet network, the communication including data representing at least one of a video, a graphic, sound, or multimedia.

166. (presently amended) The method of claim 86, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

167. (presently amended) The method of claim 87, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

168. (presently amended) The method of claim 92, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

169. (presently amended) The method of claim 93, ~~whereby~~ wherein the pointer is a pointer that produces a pointer-triggered message on demand.

170. (presently amended) A method of communicating via an Internet network, the method including:

connecting a plurality of computers to a computer system;

sending, from each of the plurality of computers, a respective login name and password corresponding to a respective user identity;

determining whether a first of the user identities and a second of the user identities are able to form a group for sending and for receiving communications in real time;

determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data in the communications, the data representing at least one of a pointer, video, audio, a graphic, or multimedia; and

if the first and the second user identities are able to form the group, then forming the group, sending the communications that are not censored based on the individual user

identity, and receiving the communications, wherein the receiving is in real time and via the Internet network.

171. (presently amended) The method of claim 94, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

172. (presently amended) The method of claim 98, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

173. (presently amended d) The method of claim 99, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

174. (presently amended) The method of claim 100, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

175. (presently amended) The method of claim 102, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

176. (presently amended) The method of claim 103, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

177. (presently amended) The method of claim 104, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

178. (presently amended) The method of claim 109, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

179. (presently amended) The method of claim 110, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

180. (presently amended) The method of claim 111, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

181. (presently amended) The method of claim 115, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

182. (presently amended) The method of claim 116, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

183. (presently amended) The method of claim 117, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

184. (presently amended) The method of claim 119, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

185. (previously amended) The method of claim 1, wherein receiving the communications includes causing presentation of some of the communications by one of the plurality of computers in the group.

186. (previously amended) The method of claim 1, further including, when the data is censored, not receiving the communications that are censored based on the individual user identity, and not presenting the data that is censored to the corresponding output device.

187. (previously amended) The method of claim 1, wherein the computer system is comprised of an Internet service provider computer system.

188. (presently amended) The method of claim 1, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia data; and

based on the authorization, presenting the graphical multimedia data at the output device corresponding to the second user identity.

189. (previously amended) The method of claim 1, further including:
providing the first user identity with access to a member-associated image corresponding to the second user identity.

190. (previously amended) The method of claim 1, further including:
determining whether the first user identity is censored from access to a member-associated image corresponding to the second user identity;

if the first user identity is censored, not allowing access to the member-associated image; and

if the first user identity is not censored, allowing access to the member-associated image.

191. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data

representing represents a pointer.

192. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents a video.

193. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents audio.

194. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents a graphic.

195. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents multimedia.

196. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents a pointer and a video.

197. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents a the pointer and audio.

198. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents a pointer and a graphic.

199. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing represents a video and audio.

200. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is

censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing ~~represents~~ a video and a graphic.

201. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing ~~represents~~ audio and a graphic.

202. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing ~~represents~~ a pointer and a video and audio.

203. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing ~~represents~~ a pointer and a video and a graphic.

204. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data

representing ~~represents~~ a pointer and audio and a graphic.

205. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing ~~represents~~ a video and audio and a graphic.

206. (presently amended) The method of claim 170, wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data includes wherein the determining whether at least one of the first user identity and the second user identity, individually, is censored from sending data representing ~~represents~~ a pointer and a video and audio and a graphic.

207. (previously amended) The method of claim 170, wherein at least some of the communications include at least one of text or ascii.

208. (previously amended) The method of claim 191, wherein at least some of the communications include at least one of text or ascii.

209. (previously amended) The method of claim 192, wherein at least some of the communications include at least one of text or ascii.

210. (previously amended) The method of claim 193, wherein at least some of the communications include at least one of text or ascii.

211. (previously amended) The method of claim 194, wherein at least some of the communications include at least one of text or ascii.

212. (previously amended) The method of claim 195, wherein at least some of the communications include at least one of text or ascii.

213. (previously amended) The method of claim 196, wherein at least some of the communications include at least one of text or ascii.

214. (previously amended) The method of claim 197, wherein at least some of the communications include at least one of text or ascii.

215. (previously amended) The method of claim 198, wherein at least some of the communications include at least one of text or ascii.

216. (previously amended) The method of claim 199, wherein at least some of the communications include at least one of text or ascii.

217. (previously amended) The method of claim 200, wherein at least some of the communications include at least one of text or ascii.

218. (previously amended) The method of claim 201, wherein at least some of the communications include at least one of text or ascii.

219. (previously amended) The method of claim 202, wherein at least some of the communications include at least one of text or ascii.

220. (previously amended) The method of claim 203, wherein at least some of the communications include at least one of text or ascii.

221. (previously amended) The method of claim 204, wherein at least some of the communications include at least one of text or ascii.

222. (previously amended) The method of claim 205, wherein at least some of the communications include at least one of text or ascii.

223. (previously amended) The method of claim 206, wherein at least some of the communications include at least one of text or ascii.

224. (previously amended) The method of claim 170, further including determining whether at least one of the communications is censored based on content.

225. (previously amended) The method of claim 191, further including determining whether at least one of the communications is censored based on content.

226. (previously amended) The method of claim 192, further including determining whether at least one of the communications is censored based on content.

227. (previously amended) The method of claim 193, further including determining whether at least one of the communications is censored based on content.

228. (previously amended) The method of claim 194, further including

determining whether at least one of the communications is censored based on content.

229. (previously amended) The method of claim 195, further including determining whether at least one of the communications is censored based on content.

230. (previously amended) The method of claim 196, further including determining whether at least one of the communications is censored based on content.

231. (previously amended) The method of claim 197, further including determining whether at least one of the communications is censored based on content.

232. (previously amended) The method of claim 198, further including determining whether at least one of the communications is censored based on content.

233. (previously amended) The method of claim 199, further including determining whether at least one of the communications is censored based on content.

234. (previously amended) The method of claim 200, further including determining whether at least one of the communications is censored based on content.

235. (previously amended) The method of claim 201, further including determining whether at least one of the communications is censored based on content.

236. (previously amended) The method of claim 202, further including determining whether at least one of the communications is censored based on content.

237. (previously amended) The method of claim 203, further including determining whether at least one of the communications is censored based on content.

238. (previously amended) The method of claim 204, further including determining whether at least one of the communications is censored based on content.

239. (previously amended) The method of claim 205, further including determining whether at least one of the communications is censored based on content.

240. (previously amended) The method of claim 206, further including determining whether at least one of the communications is censored based on content.

241. (previously amended) The method of claim 170, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

242. (previously amended) The method of claim 191, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

243. (previously amended) The method of claim 192, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

244. (previously amended) The method of claim 193, wherein the determining whether the first user identity and the second user identity are able to form a group includes

determining whether the first of the user identities is censored.

245. (previously amended) The method of claim 194, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

246. (previously amended) The method of claim 195, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

247. (previously amended) The method of claim 196, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

248. (previously amended) The method of claim 197, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

249. (previously amended) The method of claim 198, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

250. (previously amended) The method of claim 199, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

251. (previously amended) The method of claim 200, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

252. (previously amended) The method of claim 201, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

253. (previously amended) The method of claim 202, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

254. (previously amended) The method of claim 203, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

255. (previously amended) The method of claim 204, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

256. (previously amended) The method of claim 205, wherein the determining whether the first user identity and the second user identity are able to form a group includes determining whether the first of the user identities is censored.

257. (previously amended) The method of claim 206, wherein the determining whether the first user identity and the second user identity are able to form a group includes

determining whether the first of the user identities is censored.

258. (previously amended) The method of claim 170, further including determining a user age corresponding to each of the user identities.

259. (previously amended) The method of claim 191, further including determining a user age corresponding to each of the user identities.

260. (previously amended) The method of claim 192, further including determining a user age corresponding to each of the user identities.

261. (previously amended) The method of claim 193, further including determining a user age corresponding to each of the user identities.

262. (previously amended) The method of claim 194, further including determining a user age corresponding to each of the user identities.

263. (previously amended) The method of claim 195, further including determining a user age corresponding to each of the user identities.

264. (previously amended) The method of claim 196, further including determining a user age corresponding to each of the user identities.

265. (previously amended) The method of claim 197, further including determining a user age corresponding to each of the user identities.

266. (previously amended) The method of claim 198, further including determining a user age corresponding to each of the user identities.

267. (previously amended) The method of claim 199, further including determining a user age corresponding to each of the user identities.

268. (previously amended) The method of claim 200, further including determining a user age corresponding to each of the user identities.

269. (previously amended) The method of claim 201, further including determining a user age corresponding to each of the user identities.

270. (previously amended) The method of claim 202, further including determining a user age corresponding to each of the user identities.

271. (previously amended) The method of claim 203, further including determining a user age corresponding to each of the user identities.

272. (previously amended) The method of claim 204, further including determining a user age corresponding to each of the user identities.

273. (previously amended) The method of claim 205, further including determining a user age corresponding to each of the user identities.

274. (previously amended) The method of claim 206, further including determining a user age corresponding to each of the user identities.

275. (previously amended) The method of claim 170, wherein at least one of the communications includes data representing a human communication of sound.

276. (previously amended) The method of claim 191, wherein at least one of the communications includes data representing a human communication of sound.

277. (previously amended) The method of claim 192, wherein at least one of the communications includes data representing a human communication of sound.

278. (previously amended) The method of claim 193, wherein at least one of the communications includes data representing a human communication of sound.

279. (previously amended) The method of claim 194, wherein at least one of the communications includes data representing a human communication of sound.

280. (previously amended) The method of claim 195, wherein at least one of the communications includes data representing a human communication of sound.

281. (previously amended) The method of claim 196, wherein at least one of the communications includes data representing a human communication of sound.

282. (previously amended) The method of claim 197, wherein at least one of the communications includes data representing a human communication of sound.

283. (previously amended) The method of claim 198, wherein at least one of

the communications includes data representing a human communication of sound.

284. (previously amended) The method of claim 199, wherein at least one of the communications includes data representing a human communication of sound.

285. (previously amended) The method of claim 200, wherein at least one of the communications includes data representing a human communication of sound.

286. (previously amended) The method of claim 201, wherein at least one of the communications includes data representing a human communication of sound.

287. (previously amended) The method of claim 202, wherein at least one of the communications includes data representing a human communication of sound.

288. (previously amended) The method of claim 203, wherein at least one of the communications includes data representing a human communication of sound.

289. (previously amended) The method of claim 204, wherein at least one of the communications includes data representing a human communication of sound.

290. (previously amended) The method of claim 205, wherein at least one of the communications includes data representing a human communication of sound.

291. (previously amended) The method of claim 206, wherein at least one of the communications includes data representing a human communication of sound.

292. (previously amended) The method of claim 170, wherein at least one of the communications includes data representing a human communication of sound.

293. (previously amended) The method of claim 191, wherein at least one of the communications includes at least one of text or ascii.

294. (previously amended) The method of claim 192, wherein at least one of the communications includes at least one of text or ascii.

295. (previously amended) The method of claim 193, wherein at least one of the communications includes at least one of text or ascii.

296. (previously amended) The method of claim 194, wherein at least one of the communications includes at least one of text or ascii.

297. (previously amended) The method of claim 195, wherein at least one of the communications includes at least one of text or ascii.

298. (previously amended) The method of claim 196, wherein at least one of the communications includes at least one of text or ascii.

299. (previously amended) The method of claim 197, wherein at least one of the communications includes at least one of text or ascii.

300. (previously amended) The method of claim 198, wherein at least one of the communications includes at least one of text or ascii.

301. (previously amended) The method of claim 199, wherein at least one of the communications includes at least one of text or ascii.

302. (previously amended) The method of claim 200, wherein at least one of the communications includes at least one of text or ascii.

303. (previously amended) The method of claim 201, wherein at least one of the communications includes at least one of text or ascii.

304. (previously amended) The method of claim 202, wherein at least one of the communications includes at least one of text or ascii.

305. (previously amended) The method of claim 203, wherein at least one of the communications includes at least one of text or ascii.

306. (previously amended) The method of claim 204, wherein at least one of the communications includes at least one of text or ascii.

307. (previously amended) The method of claim 205, wherein at least one of the communications includes at least one of text or ascii.

308. (previously amended) The method of claim 206, wherein at least one of the communications includes at least one of text or ascii.

309. (previously amended) The method of claim 170, wherein the computer

system is comprised of an Internet service provider computer system.

310. (presently amended) The method of claim 170, further including:
storing, for the first user identity, an authorization associated with presentation of graphical multimedia data; and
based on the authorization, presenting the graphical multimedia data at the output device corresponding to the second user identity.

311. (previously amended) The method of claim 170, further including:
providing the first user identity with access to a member-associated image corresponding to the second user identity.

312. (previously amended) The method of claim 170, further including:
determining whether the first user identity is censored from access to a member-associated image corresponding to the second user identity;
if the first user identity is censored, not allowing access to the member-associated image; and
if the first user identity is not censored, allowing access to the member-associated image.

313. (presently amended) The method of claim 170, wherein the data represents a pointer that whereby the pointer a pointer-triggered message on demand.

314. (presently amended) The method of claim 191, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

315. (presently amended) The method of claim 196, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

316. (presently amended) The method of claim 197, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

317. (presently amended) The method of claim 198, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

318. (presently amended) The method of claim 202, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

319. (presently amended) The method of claim 203, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

320. (presently amended) The method of claim 204, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

321. (presently amended) The method of claim 206, whereby wherein the pointer is a pointer that produces a pointer-triggered message on demand.

322. (presently amended) The method of claim 207, wherein the data represents a pointer that ~~whereby the pointer~~ produces a pointer-triggered message on demand.

323. (presently amended) The method of claim 208, whereby wherein the
