I, Andrew Lippman, hereby declare the following:

I. INTRODUCTION

1. I have been retained by counsel for Apple Inc. (“Petitioner”) as a technical expert in connection with the proceeding identified above. I submit this declaration in support of Apple Inc.’s Petition for *Inter Partes* Review of United States Patent No. 5,850,482 (“the ’482 patent”).

2. I am being paid at an hourly rate for my work on this matter. I have no personal or financial stake or interest in the outcome of the present proceeding.

II. QUALIFICATIONS

3. I am currently a Senior Research Scientist at the Massachusetts Institute of Technology (“MIT”) and Associate Director of the MIT Media Laboratory, an approximately \$50 Million per year research and teaching facility at MIT, which I helped establish in the early 1980s. I direct a special interest group called Ultimate Media, and am co-principal investigator of the Communications Futures Program, which unifies diverse research projects across MIT related to the technology, policy, and economics of communications over the Internet.

4. At MIT, I have supervised over 50 Master’s and Ph.D theses in the Media Arts and Sciences program and have taught courses such as Digital Video and MIT’s freshman physics seminars. Through the course of my career, I have directed and served as principal investigator of research projects supported by the

defense department (DARPA), the Office of Naval Research (ONR), The National Science Foundation (NSF), and over 50 industrial companies. I have never precisely calculated my net research volume, but it is in excess of \$50 Million.

5. I received my undergraduate degree in Electrical Engineering from MIT in 1971. I received a Master of Science degree from MIT in 1978 and a Ph.D in Electrical Engineering from the École Polytechnique Fédérale de Lausanne in 1995. My thesis was on scalable video, a technique for representing visual data in a fluid and variable networking and processing environment, similar to what we call streaming today.

6. I also designed data storage schemes to embed digital data in analogue video using optical videodiscs, which were analogue video storage devices used to distribute entertainment and interactive programming in the 1980s and 1990s. My Master's student and I developed the channel coding parameters that allowed for reliable data storage on this optical medium. The results were published in Steve Yelick's thesis "Authoring of Optical Videodiscs with Digital Data" in June 1982.

7. In the early 1980s, I established a research program called "Movies of the Future," a multi-sponsor program addressing image distribution, analysis, and interaction. In 1986, I established the "Television of Tomorrow" program to research digital and scalable video processing technology. The Television of Tomorrow program initially had nine sponsors, representing the television

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
