**DECLARATION OF PAUL H. SIEGEL**

Apple v. Caltech  
IPR2017-00700  
Replacement - Apple 1023

## Declaration of Paul H. Siegel

I, **Paul H. Siegel**, declare as follows:

1. I am over the age of 18 and am legally competent to make this declaration. I make this declaration based upon my own personal knowledge.
2. I am currently a Professor at the University of California, San Diego, in the Department of Electrical and Computer Engineering, the Jacobs School of Engineering, and the Center for Memory and Recording Research.
3. I have been asked to provide a statement of certain facts related to work I did together with Henry D. Pfister relating to the serial concatenation of rate-1 codes through uniform random interleavers.
4. Beginning in early 1999, I collaborated with Dr. Pfister, then a Ph.D student of mine, to show that improved error-correcting codes can be constructed from simple components, *e.g.*, by serially concatenating an arbitrary outer code of rate  $r < 1$  and  $m$  identical rate-1 inner codes.
5. The result of that collaboration was a presentation at the 1999 Allerton Conference on Communications, Control and Computing, in Allerton, Illinois ("1999 Allerton Conference") in September 1999. This conference was held September 22-24, 1999, and was open to the public for attendance. Any person who wanted to attend and was able to pay the attendance fee could

attend. The 1999 Allerton Conference was considered one of two primary conferences on the topic of iterative decoding during the time. The 1999 Allerton conference itself, as well as the proceedings that took place there, were publicized and generally known to those who were interested in topics relating to error-correcting codes and iterative decoding.

6. At the 1999 Allerton Conference, I presented a series of slides relating to my work with Dr. Pfister on a class of codes based on serial concatenation of a rate- $r$  code with  $m \geq 1$ , uniformly interleaved rate-1 codes. In these slides, I discussed an example of these codes, called a “Repeat-Accumulate-Accumulate” (or “RAA”) code. An RAA code is similar to an RA code (Divsalar, et al., Allerton '98) to which an additional accumulator has been added. I compared RAA codes to RA codes and concluded that the RAA codes were able to achieve a lower word-error-probability than the RA codes, demonstrating that the performance of RA codes could be improved by including an additional accumulator. This presentation was entitled “The Serial Concatenation of Rate-1 Codes Through Uniform Random Interleavers,” and I presented it in the IIA: Coding Theory: Iterative Decoding and Turbo Codes Session on September 22, 1999, the first day of the conference. A true and accurate copy of the slides that I presented at the 1999 Allerton Conference is attached as Exhibit 1.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information or belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code.

Dated: 11/9/16

Paul H. Siegel

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
