

12

Book 18 (1/00 - 12/00)

1. Noise syndrome + entry, etc.
4. A comment on the WLEN
6. "Typical Pain" dealing on the SEC.
8. On S-random permutations
10. Continued from p. 7.
11. An Improved Decade for Binary Numbers.

3-6-00. On  $s$ -random permutations,

Consider the sample space  $\Omega_n$  consisting of all  $n!$  permutations  $(\pi(1), \pi(2), \dots, \pi(n))$ . Let  $s \geq 1$  be a fixed integer, and suppose  $n \gg s$ . For each ordered pair  $(i, j)$  with  $1 \leq i < j \leq n$  and  $j-i \leq s$ ,

define the random variable

$$X_{(i,j)}(\pi) = \begin{cases} 1 & \text{if } |\pi(i) - \pi(j)| \leq s-1 \\ 0 & \text{if } |\pi(i) - \pi(j)| \geq s. \end{cases}$$

Then define

$$(1) \quad X_s(\pi) = \sum_{i < j \leq s} X_{(i,j)}(\pi),$$

which represents the number of violations of the " $s$ -random" condition.

For any  $(i, j)$ ,

$$\Pr\{X_{(i,j)}(\pi) = 1\} \approx \frac{2(s-1)}{n}$$

overall (ignoring end effects), there are  $2(s-1)$  forbidden

values for  $\pi(1), \pi(2), \dots, \pi(s-1), \pi(s)$ . Furthermore,  
 there are  $\approx ns$  terms in the sum (1), so

$$E(X_s) \approx 2s(s-1).$$

Assuming then that  $X_s$  is Poisson,

$$P_1(X_s=0) = e^{-2s(s-1)},$$

which is the probability of finding an  $s$ -random  
 permutation. So we have

Conjecture. Let  $P_s(n)$  be the number of  $s$ -random  
 permutations on  $n$  letters. Then

$$\lim_{n \rightarrow \infty} \frac{P_s(n)}{n!} = e^{-2s(s-1)}.$$

3-7-00

A Note on RA Cods.

Let  $A_n$  be the  $n \times n$  "accumulator" matrix:

$$A_6 = \begin{pmatrix} 1 & 1 & 1 & 1 & 1 & 1 \\ 0 & 1 & 1 & 1 & 1 & 1 \\ 0 & 0 & 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 0 & 0 & 1 \end{pmatrix}$$

Then the "repeat-permute" portion of an RA encoder is simply multiplication by a (1,2) low-density generator matrix  $G$ :

$$G = \begin{pmatrix} 1 & 1 & & 1 & & \\ & 1 & & 1 & 1 & \\ & & & 1 & 1 & 1 \end{pmatrix}$$

Why not replace  $G$  with a different LDGM?

$$G = \begin{pmatrix} 1 & 1 & 0 & 0 & 1 & 0 \\ 0 & 1 & 1 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 & 1 & 1 \end{pmatrix}$$

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
