

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

APPLE INC.,
Petitioner,

v.

CALIFORNIA INSTITUTE OF TECHNOLOGY,
Patent Owner.

IPR2017-00700, -00701, and -00728
Patent No. 7,421,032

DECLARATION OF DR. MICHAEL MITZENMACHER

TABLE OF CONTENTS

I.	ENGAGEMENT.....	1
II.	QUALIFICATIONS	1
III.	COMPENSATION AND PRIOR TESTIMONY	6
IV.	LEGAL PRINCIPLES	7
V.	INTRODUCTION TO CHANNEL CODING AND TERMINOLOGY	10
VI.	OVERVIEW OF THE ART AND CITED REFERENCES	20
	A. Turbo Codes	22
	B. Gallager/LDPC codes	24
	C. Cited References	27
	1. MacKay	27
	2. Ping	28
	3. Divsalar	30
VII.	PERSON OF ORDINARY SKILL IN THE ART.....	31
VIII.	PROCEDURAL BACKGROUND	32
IX.	CLAIM CONSTRUCTION	33
	A. “irregular”.....	33
	B. “Tanner Graph”	34
X.	REBUTTAL TO -00700 CASE GROUND 1: CLAIMS 11, 12, AND 14-16 ARE NOT OBVIOUS OVER PING, MACKAY AND DIVSALAR.....	35
	A. The Petition fails to identify parity bits that are determined “as shown by the configuration of nodes and edges of the Tanner graph”	35
	B. The Petition fails to identify irregular repetition in either Ping or MacKay	38
	C. MacKay does not teach nonuniform row weights.....	44
	D. A Person of Ordinary Skill in the Art would not be motivated to combine Ping with MacKay.....	45

1.	Ping is already irregular as defined by MacKay	45
2.	The proposed modification would eliminate Ping’s stated improvement.....	54
3.	The Petition frequently mischaracterizes both Ping and MacKay	56
4.	The similarity in terms between MacKay and Ping do not establish a motivation to combine	61
5.	Dr. Davis’s testimony is inconsistent with the Petition’s motivation to combine	63
6.	The Petition fails to explain how their proposed modification would be accomplished	65
7.	Ping combined with MacKay would not have any reasonable expectation of success	70
E.	A Person of Ordinary Skill in the Art would not have been motivated to combine Ping with Divsalar	80
XI.	REBUTTAL TO -00700 GROUND 2: CLAIM 13 IS NOT OBVIOUS OVER PING, MACKAY, DIVSALAR, AND LUBY97	85
XII.	REBUTTAL TO -00701 GROUND 1: CLAIMS 1, 4-10 ARE NOT OBVIOUS OVER PING, MACKAY, DIVSALAR, AND LUBY97	86
XIII.	REBUTTAL TO -00728 GROUND 1: CLAIMS 18-23 ARE NOT OBVIOUS OVER PING, MACKAY, DIVSALAR, AND LUBY97	90
A.	The Petition does not provide any explanation for how Divsalar’s, MacKay’s, or Luby97’s decoding algorithms are to be used with the Petition’s proposed combination.....	91
XIV.	SECONDARY CONSIDERATIONS OF NON-OBVIOUSNESS.....	92
A.	Nexus between the objective evidence and the claims.....	94
B.	Long-felt need and failure of others	101
C.	Industry Praise	104
D.	Unexpected Results.....	107
E.	Commercial Success	108
XV.	CONCLUDING STATEMENTS.....	110

I, Michael Mitzenmacher, declare as follows:

I. ENGAGEMENT

1. I have been retained by counsel for the California Institute of Technology as an expert witness in the above-captioned proceeding. I have been asked to provide my opinion about the state of the art of the technology described in U.S. Patent No. 7,421,032 (the “’032 patent”) and on the patentability of the claims of this patent, specifically with regard to the grounds of institution in the cases IPR2017-00700, IPR2017-00701, and IPR2017-00728. The following is my written testimony on these topics.

II. QUALIFICATIONS

2. I am currently employed as a Professor of Computer Science at Harvard University. Specifically, I am the Thomas J. Watson, Sr. Professor of Computer Science in the School of Engineering and Applied Sciences. I joined the faculty of Harvard as an Assistant Professor in January 1999. I was promoted to Associate Professor in 2002 and to Professor in 2005. In 2010, I began a three-year term as Area Dean, which is essentially equivalent to what other schools call Department Chair, of Computer Science, and held that position through June 2013. My work address is 33 Oxford Street, Cambridge, MA 02138. My primary research interests include design and analysis of algorithms, networks and data transmission, and information theory.

3. I received my undergraduate degree in Mathematics and Computer Science from Harvard College in 1991. I received a Certificate of Advanced Study in Mathematics from Cambridge University in 1992. I received a Ph.D. in Computer Science from the University of California at Berkeley in 1996. From August 1996 to January 1999, I was employed as a Research Scientist at Digital Systems Research Center, where my work included projects on algorithms for the Internet and error-correcting codes.

4. I am listed as an inventor or co-inventor on 19 issued patents, and am the co-author of a textbook entitled “Probability and Computing” published by Cambridge University Press. I am a Fellow of the Association for Computing Machinery, and currently serve as the Chair of the ACM Special Interest Group on Algorithms and Computation Theory (SIGACT).

5. The fields of endeavor at issue in this case are error-correction coding methods, including repeat-accumulate codes, Turbo codes, and low-density parity-check codes. I have published over 200 research papers in computer science and engineering conferences and journals, many of which have explored algorithms and data structures for error-correction codes, including both mathematical analysis and applications.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
