Table of Contents

Part 1 Orientation		44	Cholinomimetic Drugs	889
1	Scope	3	45 Adrenergic and Adrenergic Neuron Blocking Drugs	898
2	Evolution of Pharmacy	8	46 Antimuscarinic and Antispasmodic Drugs	907
3	Ethics	20	47 Skeletal Muscle Relaxants	916
4	The Practice of Community Pharmacy	28	48 Diuretic Drugs	929
5	Opportunities for Pharmacists in the Pharmaceuti- cal Industry	33	49 Uterine and Antimigraine Drugs	943
6	Pharmacists in Government	38	50 Hormones	948
7	Drug Information	49	51 Vitamins and Other Nutrients	1002
8	Research	60	52 Enzymes	1035
Part 2 Pharmaceutics		53	General Anesthetics	1039
9	Metrology and Calculation	69	54 Local Anesthetics	1048
10	Statistics	104	55 Sedatives and Hypnotics	1057
11	Computer Science	138	56 Antiepileptics	1072
12	Calculus	145	57 Psychopharmacologic Agents	1082
13	Molecular Structure, Properties and States of Matter	158	58 Analgesics and Antipyretics	1097
14	Complex Formation	182	59 Histamine and Antihistamines	1123
15	Thermodynamics	197	60 Central Nervous System Stimulants	1132
16	Solutions and Phase Equilibria	207	61 Antineoplastic and Immunosuppressive Drugs ...	1138
17	Ionic Solutions and Electrolytic Equilibria	228	62 Antimicrobial Drugs	1163
18	Reaction Kinetics	247	63 Parasitocides	1242
19	Disperse Systems	257	64 Pesticides	1249
20	Rheology	310	65 Diagnostic Drugs	1272
Part 3 Pharmaceutical Chemistry		66	Pharmaceutical Necessities	1286
21	Inorganic Pharmaceutical Chemistry	329	67 Adverse Drug Reactions	1330
22	Organic Pharmaceutical Chemistry	356	68 Pharmacogenetics	1344
23	Natural Products	380	69 Pharmacological Aspects of Drug Abuse	1349
24	Drug Nomenclature—United States Adopted Names	412	70 Introduction of New Drugs	1365
25	Structure-Activity Relationship and Drug Design	422	Part 7 Biological Products	
Part 4 Testing and Analysis		71	Principles of Immunology	1379
26	Analysis of Medicinals	435	72 Immunizing Agents and Diagnostic Skin Antigens	1389
27	Biological Testing	484	73 Allergenic Extracts	1405
28	Clinical Analysis	495	74 Biotechnology and Drugs	1416
29	Chromatography	529	Part 8 Pharmaceutical Preparations and Their Manufacture	
30	Instrumental Methods of Analysis	555	75 Preformulation	1435
31	Dissolution	589	76 Bioavailability and Bioequivalency Testing	1451
Part 5 Radioisotopes in Pharmacy and Medicine		77	Separation	1459
32	Fundamentals of Radioisotopes	605	78 Sterilization	1470
33	Medical Applications of Radioisotopes	624	79 Tonicity, Osmoticity, Osmolality and Osmolarity .	1481
Part 6 Pharmaceutical and Medicinal Agents		80	Plastic Packaging Materials	1499
34	Diseases: Manifestations and Patho- physiology	655	81 Stability of Pharmaceutical Products	1504
35	Drug Absorption, Action and Disposition	697	82 Quality Assurance and Control	1513
36	Basic Pharmacokinetics	725	83 Solutions, Emulsions, Suspensions and Extractives	1519
37	Clinical Pharmacokinetics	746	84 Parenteral Preparations	1545
38	Topical Drugs	757	85 Intravenous Admixtures	1570
39	Gastrointestinal Drugs	774	86 Ophthalmic Preparations	1581
40	Blood, Fluids, Electrolytes and Hematologic Drugs	800	87 Medicated Applications	1596
41	Cardiovascular Drugs	831	88 Powders	1615
42	Respiratory Drugs	860	89 Oral Solid Dosage Forms	1633
43	Sympathomimetic Drugs	870	90 Coating of Pharmaceutical Dosage Forms	1666
			91 Sustained-Release Drug Delivery Systems	1676
			92 Aerosols	1694
			Part 9 Pharmaceutical Practice	
		93	Ambulatory Patient Care	1715
		94	Institutional Patient Care	1737
		95	Long-Term Care Facilities	1758
		96	The Pharmacist and Public Health	1773

97	The Patient: Behavioral Determinants	1788	106	Poison Control	1905
98	Patient Communication	1796	107	Laws Governing Pharmacy	1914
99	Drug Education	1803	108	Community Pharmacy Economics and Management	1940
100	Patient Compliance	1813	109	Dental Services	1957
101	The Prescription	1828			
102	Drug Interactions	1842		Index	
103	Clinical Drug Literature	1859		Alphabetic Index	1967
104	Health Accessories	1864			
105	Surgical Supplies	1895			

CHAPTER 75

Preformulation

Louis J Ravin, PhD

Galen W Radebaugh, PhD

Director of Pharmaceutics
Parke-Davis Pharmaceutical Research Division
Warner-Lambert Co
Morris Plains, NJ 07950

The attention presently being given to multisource pharmaceutical products regarding their equivalency places much emphasis on the formulation of these products. In some instances, the bioavailability of a drug formulation represents a quality parameter of enormous proportion. It is a matter of record that with certain drugs, depending on the formulation, the rate at which the drug substance becomes available can vary significantly from very high to none at all. As a result, the effectiveness of these formulations will range dramatically from that expected to no effect. Unfortunately, most examples are less dramatic and fall somewhere in between. The difference in the bioavailability of these drug products is less readily discernible, but nonetheless real. This has led to a great deal of confusion and information which, though understood by the scientist, is unclear and jumbled to the practitioner. That information which is available also has been interpreted differently by different individuals or groups, depending very often on the motivation, viewpoint and attitude of the interpreter.

Drug products indeed do vary in their bioavailability characteristics and this variation, in most instances, is related directly to formulation considerations. To optimize the performance of drug products, it is necessary to have a complete understanding of the physical-chemical properties of drug substances prior to formulating them into drug products. The development of an optimum formulation is not an easy task, and many factors readily influence formulation properties. Drug substances rarely are administered as chemical entities, but almost always are given in some kind of formulation. These may vary from a simple solution to a very complex drug delivery system. The complexity usually is not intentional, but rather is determined by the properties that are expected from or built into the dosage form and by the resulting composition that is required to achieve these qualities.

The high degree of uniformity, physiological availability and therapeutic quality expected of modern medicinal products usually are the results of considerable effort and expertise on the part of the formulating pharmacist. These qualities are attained by careful selection and control of the quality of the various ingredients employed, appropriate manufacturing according to well-defined processes and, most importantly, adequate consideration of the many variables that may influence the composition, stability and utility of the product. In dealing with the formulation of new products it has become necessary to apply the best research methods and tools in order to develop, produce and control the potent, stable and effective dosage forms which make up our modern medical armamentarium.

The pharmaceutical formulator has need for specialized

areas of science in order to acquire scientific information about the drug substance which is necessary to develop an optimum dosage form. The pharmaceutical industry is in an era in which one can no longer rely on past experience to formulate. A thorough understanding of the physical and chemical properties as well as the pharmacokinetic and biopharmaceutical behavior of each drug substance being developed is necessary. In short, as much information as possible must be acquired about the drug substance very early in its development. This requires an interdisciplinary approach at the preformulation stage of development. Fig 75-1 schematically indicates that the development of any drug product requires a multidisciplinary approach, involving basic science, during the preformulation stage followed by applied science during the development stage.

This chapter will discuss the physical-chemical evaluation that takes place during the preformulation stage of development. In addition, consideration will be given to some specialized formulation ingredients that may require discretion in their selection.

Preformulation may be described as a stage of development during which the physical pharmacist characterizes the physical-chemical properties of the drug substance in question which are considered important in the formulation of a stable, effective and safe dosage form. Such parameters as crystal size and shape, pH-solubility profile, pH-stability profile, polymorphism, partitioning effect, drug permeability and dissolution behavior are evaluated. During this evaluation possible interactions with various inert ingredients intended for use in the final dosage form also are considered. The data obtained from this evaluation are integrated with data obtained from the preliminary pharmacologic and biochemical studies and provide the formulating pharmacist with information that permits selection of the optimum dosage form containing the most desirable inert ingredients for use in its development.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
