Chapter 1 Pharmacokinetic-Pharmacodynamic Modeling of Reversible Drug Effects	1
Jürgen Venitz	
Chapter 2 Pharmacokinetic-Pharmacodynamic Modeling of Irreversible Drug Effects	35
Steven C. Ebert	
Chapter 3 Pharmacokinetic-Pharmacodynamic Modeling in Drug Development: Comments and Applications	57
Joseph C. Fleishaker and James J. Ferry	
Chapter 4 Dose Optimization Based on Pharmacokinetic-Pharmacodynamic Modeling	79
Günther Hochhaus and Hartmut Derendorf	
Chapter 5 Pharmacokinetic-Pharmacodynamic Correlations of Anesthetic Agents	121
Virginia D. Schmith and Keith T. Muir	
Chapter 6 Pharmacokinetic-Pharmacodynamic Correlations of Analgesics	141
Judith S. Walker	
Chapter 7 Pharmacokinetic-Pharmacodynamic Correlations of Benzodiazepines	171
Samir K. Gupta and Everett H. Ellinwood	
Chapter 8 Pharmacokinetic/Pharmacodynamic Correlations of Anticonvulsants	185
Meindert Danhof and Rob A. Voskuyl	
Chapter 9 Pharmacokinetic-Pharmacodynamic Relationships of Cardiovascular Drugs	197
Richard L. Lalonde	

Chapter 10	
Pharmacokinetic/Pharmacodynamic Correlations of Selected Vasodilators	227
Tsang-Bin Tzeng and Ho-Leung Fung	
Chapter 11	
Pharmacodynamics of Anticoagulants	241
Dennis Mungall and Richard H. White	
Chapter 12	
Pharmacokinetic-Pharmacodynamic Correlations of Antihistamines	275
Eric Snoeck, Achiel Van Peer, and Jos Heykants	
Chapter 13

Chapter 2

PHARMACOKINETIC-PHARMACODYNAMIC MODELING OF IRREVERSIBLE DRUG EFFECTS

Steven C. Ebert

INTRODUCTION

The mathematical relationship between drug concentration and response generally assumes drug binding to a given population of receptors. Greater occupation of these receptors will result in a greater effect, and vice versa. The variability in receptor affinity accounts for the nonlinear relationship between concentration and effect.

Most research involved in the characterization of pharmacodynamic variables has been done with drugs exhibiting reversible effects. With reversible drug effects, the number and drug affinity of receptors remain relatively constant, allowing reproducible effects with repeated drug exposures. In certain instances, sensitization or tolerance to the drug effect may occur.

In contrast, the goal of antimicrobial therapy is to eliminate the very target at which the drug is directed, i.e., the "receptors" are actually the pathogenic organisms. The desired effect of drug therapy, the death of pathogens, is therefore irreversible. The replication of organisms, with subsequent replenishment of the "receptor" number may occur, however, and result in an apparently reversible effect as measured by the total number of organisms. In this system, the development of tolerance or frank resistance of the remaining "receptors" is more likely to occur, since the most susceptible organisms are killed. Therefore, it would be expected that sustained exposure to an antimicrobial would result in a gradually diminishing effect over time, unless a sufficient drug-free period exists to enable the organism population to fully recover its susceptibility.

Figure 1 shows the relationship between pharmacokinetic variables, pharmacodynamic measures of antimicrobial activity, and drug effect. Intuitively, increasing the dose of an antimicrobial should increase its effect. By understanding the pharmacodynamic features of a given class of antimicrobials, one may, however, be able to further enhance outcome by modifying dosing parameters other than dose size, e.g., dosing frequency. The pharmacodynamic properties of antimicrobials may be estimated *ex vivo*, whereas for other drug classes, response must be estimated *in vivo*. This chapter will address the pharmacokinetic and pharmacodynamic properties of antimicrobials which influence drug response, will characterize drug effects, and will then examine techniques that have been used to link these phenomena.

PHARMACOKINETIC VARIABLES

The pharmacokinetic variables of a drug determine the time course of drug concentration in serum and, ultimately, at the site of infection. Two different categories of pharmacokinetic variables exist. Some pharmacokinetic variables may be altered by adjusting the dosing regimen, whereas others result from the chemical properties of a particular drug, and are minimally influenced by dosing regimen. In the clinical setting, modification of regimen-dependent variables is the goal of pharmacokinetic therapeutic drug monitoring, in order to achieve the desired concentration profile.²⁻⁴

REGIMEN-DEPENDENT VARIABLES

Most antimicrobials are administered intermittently, i.e., a given total daily dose is divided and the fractions given at fixed intervals. The three pharmacokinetic variables that may be used to

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
