Table of Contents

Part 1 Orientation			44	Cholinomimetic Drugs	889
1	Scope	3	45	Adrenergic and Adrenergic Neuron Blocking Drugs	898
2	Evolution of Pharmacy	8	46	Antimuscarinic and Antispasmodic Drugs	907
3	Ethics	20	47	Skeletal Muscle Relaxants	916
4	The Practice of Community Pharmacy	28	48	Diuretic Drugs	929
5	Opportunities for Pharmacists in the Pharmaceutical Industry	33	49	Uterine and Antimigraine Drugs	943
6	Pharmacists in Government	38	50	Hormones	948
7	Drug Information	49	51	Vitamins and Other Nutrients	1002
8	Research	60	52	Enzymes	1035
Part 2 Pharmaceutics			53	General Anesthetics	1039
9	Metrology and Calculation	69	54	Local Anesthetics	1048
10	Statistics	104	55	Sedatives and Hypnotics	1057
11	Computer Science	138	56	Antiepileptics	1072
12	Calculus	145	57	Psychopharmacologic Agents	1082
13	Molecular Structure, Properties and States of Matter	158	58	Analgesics and Antipyretics	1097
14	Complex Formation	182	59	Histamine and Antihistamines	1123
15	Thermodynamics	197	60	Central Nervous System Stimulants	1132
16	Solutions and Phase Equilibria	207	61	Antineoplastic and Immunosuppressive Drugs	1138
17	Ionic Solutions and Electrolytic Equilibria	228	62	Antimicrobial Drugs	1163
18	Reaction Kinetics	247	63	Parasitocides	1242
19	Disperse Systems	257	64	Pesticides	1249
20	Rheology	310	65	Diagnostic Drugs	1272
Part 3 Pharmaceutical Chemistry			66	Pharmaceutical Necessities	1286
21	Inorganic Pharmaceutical Chemistry	329	67	Adverse Drug Reactions	1330
22	Organic Pharmaceutical Chemistry	356	68	Pharmacogenetics	1344
23	Natural Products	380	69	Pharmacological Aspects of Drug Abuse	1349
24	Drug Nomenclature—United States Adopted Names	412	70	Introduction of New Drugs	1365
25	Structure-Activity Relationship and Drug Design	422	Part 7 Biological Products		
Part 4 Testing and Analysis			71	Principles of Immunology	1379
26	Analysis of Medicinals	435	72	Immunizing Agents and Diagnostic Skin Antigen	1389
27	Biological Testing	484	73	Allergenic Extracts	1405
28	Clinical Analysis	495	74	Biotechnology and Drugs	1416
29	Chromatography	529	Part 8 Pharmaceutical Preparations and Their Manufacture		
30	Instrumental Methods of Analysis	555	75	Preformulation	1435
31	Dissolution	589	76	Bioavailability and Bioequivalency Testing	1451
Part 5 Radioisotopes in Pharmacy and Medicine			77	Separation	1459
32	Fundamentals of Radioisotopes	605	78	Sterilization	1470
33	Medical Applications of Radioisotopes	624	79	Tonicity, Osmoticity, Osmolality and Osmolarity	1481
Part 6 Pharmaceutical and Medicinal Agents			80	Plastic Packaging Materials	1499
34	Diseases: Manifestations and Pathophysiology	655	81	Stability of Pharmaceutical Products	1504
35	Drug Absorption, Action and Disposition	697	82	Quality Assurance and Control	1513
36	Basic Pharmacokinetics	725	83	Solutions, Emulsions, Suspensions and Extractives	1519
37	Clinical Pharmacokinetics	746	84	Parenteral Preparations	1545
38	Topical Drugs	757	85	Intravenous Admixtures	1570
39	Gastrointestinal Drugs	774	86	Ophthalmic Preparations	1581
40	Blood, Fluids, Electrolytes and Hematologic Drugs	800	87	Medicated Applications	1596
41	Cardiovascular Drugs	831	88	Powders	1615
42	Respiratory Drugs	860	89	Oral Solid Dosage Forms	1633
43	Sympathomimetic Drugs	870	90	Coating of Pharmaceutical Dosage Forms	1666
			91	Sustained-Release Drug Delivery Systems	1676
			92	Aerosols	1694
			Part 9 Pharmaceutical Practice		
			93	Ambulatory Patient Care	1715

CHAPTER 89

Oral Solid Dosage Forms

Edward Rudnic, PhD

Director, Formulation Development
Schering-Plough Research

Joseph D Schwartz, PhD

Tice Professor of Pharmaceutics
Philadelphia College of Pharmacy and Science
Philadelphia, PA 19104

Drug substances most frequently are administered orally by means of solid dosage forms such as tablets and capsules. Large-scale production methods used for their preparation, as described later in the chapter, require the presence of other materials in addition to the active ingredients. Additives also may be included in the formulations to enhance the physical appearance, improve stability and aid in disintegration after administration. These supposedly inert ingredients, as well as the production methods employed, have been shown in some cases to influence the release of the drug substances.¹ Therefore care must be taken in the selection and evaluation of additives and preparation methods to ensure that the physiological availability and therapeutic efficacy of the active ingredient will not be diminished.

In a limited number of cases it has been shown that the drug substance's solubility and other physical characteristics have influenced its physiological availability from a solid dosage form. These characteristics include its particle size, whether it is amorphous or crystalline, whether it is solvated or nonsolvated and its polymorphic form. After clinically effective formulations are obtained, variations among dosage units of a given batch, as well as batch-to-batch differences, are reduced to a minimum through proper in-process controls and good manufacturing practices. The recognition of the importance of validation both for equipment and processes has greatly enhanced assurance in the reproducibility of formulations. It is in these areas that significant progress has been made with the realization that large-scale production of a satisfactory tablet or capsule depends not only on the availability of a clinically effective formulation

Fig 89-1. Tablet press operators checking batch record in conformance with Current Good Manufacturing Practices (courtesy, Lilly).

but also on the raw materials, facilities, personnel, validated processes and equipment, packaging and the controls used during and after preparation (Fig 89-1).

Tablets

Tablets may be defined as solid pharmaceutical dosage forms containing drug substances with or without suitable diluents and prepared either by compression or molding methods. They have been in widespread use since the latter part of the 19th century and their popularity continues. The term *compressed tablet* is believed to have been used first by John Wyeth and Brother of Philadelphia. During this same period, molded tablets were introduced to be used as "hypodermic" tablets for the extemporaneous preparation of solutions for injection. Tablets remain popular as a dosage form because of the advantages afforded both to the manufacturer (eg, simplicity and economy of preparation, stability and convenience in packaging, shipping and dispensing) and the patient (eg, accuracy of dosage, compactness, portability, blandness of taste and ease of administration).

Although the basic mechanical approach for their manufacture has remained the same, tablet technology has undergone great improvement. Efforts are being made continually to understand more clearly the physical characteristics of tablet compression and the factors affecting the availability

of the drug substance from the dosage form after oral administration. Compression equipment continues to improve both as to production speed and the uniformity of tablets compressed. Recent advances in tablet technology have been reviewed.⁸⁻¹³

Although tablets frequently are more discoid in shape, they also may be round, oval, oblong, cylindrical or triangular. They may differ greatly in size and weight depending on the amount of drug substance present and the intended method of administration. They are divided into two general classes, whether they are made by compression or molding. Compressed tablets usually are prepared by large-scale production methods while molded tablets generally involve small-scale operations. The various tablet types and abbreviations used in referring to them are listed below.

Compressed Tablets (CT)

These tablets are formed by compression and contain no special coating. They are made from powdered, crystalline or granular materials, alone or in combination with binders, disintegrants, lubricants, diluents and in many cases, colorants.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
