FOREWORD

THIS IS THE FIFTH IN A SERIES OF TECHNICAL REPORTS.¹⁻⁴ This Technical Report was prepared by Dr. Y. John Wang and Dr. Yie W. Chien under the auspices of the PDA Research Committee. It provides a comprehensive review of sterile pharmaceutical packaging systems with regard to product-package interactions, stability and compatibility.

In the selection of pharmaceutical packaging systems one must be aware of the potential physicochemical interactions with the product. These interactions are discussed in detail from both a practical application and a theoretical point of view.

R. M. Enzinger, Ph.D.
Chairman
Research Committee

¹ "Validation of Steam Sterilization Cycles," Parenteral Drug Association Inc., Technical Monograph No. 1.

² "Validation of Aseptic Filling for Solution Drug Products," Parenteral Drug Association Inc., Technical Monograph No. 2.

³ "Validation of dry Heat Processes Used for Sterilization & Depyrogenation," Parenteral Drug Association Inc., Technical Report No. 3.

⁴ "Design Concepts for the Validation of a Water for Injection System," Parenteral Drug Association Inc., Technical Report No. 4.

PREFACE AND ACKNOWLEDGEMENT

The aim of this book is to provide for persons working with sterile pharmaceutical products a detailed account of the compatibility and stability of sterile formulations and packaging components. The intention is to present what is known in concise form, and to indicate how to avoid or resolve problems.

For hospital pharmacists, it is hoped that this book will serve as a valuable handy reference to assist them in identifying and solving the problems of sterile packaging. The tremendous increase in popularity of intravenous admixture programs makes it imperative that greater attention be paid to recognizing such problems. For manufacturing chemists involved in developing sterile pharmaceutical products, it is hoped that their awareness of the current knowledge of relevant physicochemical principles will enable them to design products that will have only minimal problems of compatibility and stability, both for the shelf life of the product and during its preparation and administration in hospital.

The book is arranged by type of interaction between formulation and packaging component, i.e., sorption, leaching, and permeation, thus permitting an efficient presentation and analysis of common factors. Some important concepts are presented more than once, to ensure that they are not overlooked.

Ortho Pharmaceutical Corporation provided extensive assistance in the preparation of this book. We thank the Ortho librarians for their efficient help, the operators in the Ortho Word Processing Center, Mrs. Katie McAllister and Miss Karen Daniels for their patience and skill, and Miss Carol Neuwiesinger for her skillful drawing of the figures. Dr. Glenn Van Buskirk's thorough review of the manuscript lessened markedly the number of errors that may appear in the book.

Dr. Joseph Robinson and Dr. Michael Enzinger, as well as other members of the Research Committee of the Parenteral Drug Association, provided valuable comments and criticisms of the manuscript. Mr. Robert L. Buchanan of Tompkins Rubber Co. and Mr. Joseph Wong of Endo Laboratories Inc. provided helpful assistance in the initial literature search. Dr. David Frost, consultant editor, improved the readability of the text considerably.

Yu-chang John Wang
Yie W. Chien

TABLE OF CONTENTS

I. Introduction	1
II. Primary Packaging Systems	3
A. Containers	3
1. Glass containers	3
a. Nature and composition of glass	3
1) Soda-lime glasses	4
2) Borosilicate glasses	5
3) Amber glass	7
b. Classification of glass containers by USP	7
1) Type I	7
2) Type II	7
3) Type III	7
4) Type NP	8
2. Plastic containers	8
a. Polymerization	8
1) Polymerization by addition	8
2) Polymerization by condensation	11
b. Additives (Adjuvants)	13
1) Lubricants	13
2) Stabilizers	14
3) Plasticizers	14
4) Antioxidants	14
5) Antistatic agents	15
6) Slip agents	15
7) Dyes and pigments	15
c. Potential problems with plastic containers	15
B. Closure Systems	18
1. General	18
2. Composition of rubber closures	18
a. Primary ingredients	18
b. Adjuvants	18
3. Natural rubber	19
4. Synthetic elastomers	19
a. Polyisoprene rubber	19
b. Butyl rubber	19
c. Halogenated butyl rubber	20
d. Chloroprene rubber	20
e. Silicone rubber	20
f. Nitrile butadiene rubber	20

III. Potential Physicochemical Interactions	21
A. Sorption	22
1. Introduction	22
2. Mathematical Models	23
a. Freundlich equation	25
b. Simple linear equation	25
c. Langmuir equation	26
d. Diffusion equation—general	27
e. Diffusion equation—constant drug concentration ..	29
f. Diffusion equation—varying drug concentration ...	31
g. Diffusion equation—half-saturation time	33
h. First-order equation	34
i. Reversible first-order equation	35
j. Bi-exponential equation	37
3. Factors Influencing Sorption	38
a. Effect of concentration	38
b. Partition coefficient	40
c. pH of the solution	40
d. Effect of excipients	43
e. Effect of temperature	44
f. Structure of the polymeric sorbent	46
g. Structure of the sorbate	47
4. Drug-Plastic Interactions	49
a. General	49
b. Insulin	59
c. Nitroglycerin	60
d. Diazepam	62
5. Drug-Rubber Closure Interactions	63
6. Sorption of Antimicrobial Agents by Plastics	63
a. General	63
b. Benzalkonium chloride	71
c. Phenylmercuric compounds	73
7. Sorption of Antimicrobial Agents by Rubber Closures .	74
a. General	74
b. Benzyl alcohol	77
c. Phenol	79
d. Chlorobutanol	79
e. Parabens	80
f. Mercuric compounds	80
8. Adsorption onto Glass Surfaces	80
a. General	80

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
