Art Unit: 1765

Claim Objections

Claim 109 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 57. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 63 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "substantially" in claim 63 is a relative term which renders the metes and bounds of the claim indefinite. The term "high" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. It is unclear which values of temperatures are within the range of being "substantially" equal.

Allowable Subject Matter

Claims 56-62, 64-98, 100-104, 106-108, 110-117 are allowed.

Claim 63 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Response to Amendment

The objection to the specification, rejection of claim 109 under 35 USC 251, and rejection of claim 109 under 35 USC 112, 1st paragraph are withdrawn since the "in a controlled manner" and "before" have been deleted from the claims.

The rejection of claims 57, 68 and 103 under 35 USC 112, 2nd paragraph is withdrawn since "heat transfer means" has been deleted, proper basis for "plurality of heating elements" has been added and "high" has been deleted.

The prior art rejections over JP 59-076876 are withdrawn. Applicant's point is well taken that JP 59-076876 does not teach selecting a thermal mass based on a predetermined temperature change and specified interval of time for processing, as in the context of claim 56. Although such a thermal mass may be inherent, there is no teaching to predetermine a temperature change and interval of time, and based on that, to select the thermal mass of the substrate holder. As to claim 70, JP 59-076876 does not teach changing the substrate temperature by using a measured wafer temperature. Rather, JP 59-076876 changes temperature based on the thickness that has been processed (page 6, lines 1-2). As to claim 94, JP 59-076876 fails to disclose a substrate holder temperature sensor. There is no motivation to provide one since the substrate holder temperature is not used to control the process.

Application/Control Number: 10/439,245 Page 4

Art Unit: 1765

The prior art rejections over Tsubone are withdrawn. Applicant's point is well taken that Tsubone does not teach heating, as in the context of claim 70. Rather, Tsubone has cooling. As to claims 80, 94, 100 and 104, Tsubone fails to disclose a substrate holder temperature sensor. Rather, Tsubone has a substrate temperature sensor 28. There is no motivation to add an extra sensor that Tsubone does not use for process control since the substrate holder is maintained at the same temperature during processing.

Response to Arguments

Applicant's arguments filed 11/20/06 have been fully considered but they are not persuasive to the extent they still apply.

Claim 63 remains rejected under 35 USC 112 because of the term "substantially." Applicant argues that a specific embodiment defines the term to "within one degree Celsius." In response, an example of what comprises "substantially" is not the same as a clear and distinct definition, and therefore the metes and bounds of the claim are unclear. The definition provided in the specification may be added to the claim to overcome the rejection.

Examiner notes that new claim text (new with respect to the issued patent) should be underlined. The text of claims 99 and 105 should not be presented. In addition, a supplemental oath should be submitted stating that all errors (i.e., amendments) occurred without deceptive intent.

DOCKET

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
