Art Unit: 1656

This Office action is in response to Applicants' remarks received January 12, 2009.

Applicants' arguments filed have been fully considered and are deemed to be persuasive to overcome some of the rejections previously applied. Rejections and/or objections not reiterated from previous Office actions are hereby withdrawn.

Claim 1 is canceled. Claims 7-9, 14-23 are withdrawn. Claims 2-6, 10-13, to the species anticancer agents, the (sub)species taxanes, and the (sub)species paclitaxel, are currently under examination.

Priority: The request for priority to provisional application 60/432317, filed December 9, 2002, is acknowledged.

### **Objections and Rejections**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-6, 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Damascelli et al. (2001 Cancer 92(10): 2592-2602) as evidenced by Ibrahim et al. (2000 Proc Am Soc Clin Oncol 19: abstract 609F). Damascelli et al. disclose ABI-007, a paclitaxel-human albumin nanoparticle having a dimension of 150-200 nm (p. 2593 col. 2, Fig. 1). It is known that ABI-007 is cremophor-free (evidenced by Ibrahim et al.). Damascelli et al. do not disclose a weight ratio of albumin to paclitaxel is about 1:1 to about 5:1.

Art Unit: 1656

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Damascelli et al. by determining the optimum concentration and/or weight ratio of albumin to paclitaxel that will result in a composition that will deliver paclitaxel most effectively in an albumin delivery system (claims 2-6, 10-13). Generally, differences in concentration or temperature will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration or temperature is critical. "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955) ("The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages."); *In re Hoeschele*, 406 F.2d 1403, 160 USPQ 809 (CCPA 1969) (Claimed elastomeric polyurethanes which fell within the broad scope of the references were held to be unpatentable thereover because, among other reasons, there was no evidence of the criticality of the claimed ranges of molecular weight or molar proportions.). For more recent cases applying this principle, see *Merck & Co. Inc. v. Biocraft Laboratories Inc.*, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), *cert. denied*, 493 U.S. 975 (1989); *In re Kulling*, 897 F.2d 1147, 14 USPQ2d 1056 (Fed. Cir. 1990); and *In re Geisler*, 116 F.3d 1465, 43 USPQ2d 1362 (Fed. Cir. 1997).

Art Unit: 1656

The previous 103(a) has been withdrawn in view of Applicants' remarks. However, the Damascelli et al. and Ibrahim et al. references are believed to be relevant art under 103(a) as noted above.

No claim is allowed.
