(57) **ABSTRACT**

A voicemail short messaging method (**10**, **20**, **30**) and unit and a subscriber terminal for instantaneous packet switched voicemail between Internet compatible computers, personal digital assistants, telephones and mobile stations. In particular the subscriber terminal (**500**) concerns a hardware and a software setup that allows the combined use of audio and/or video devices (**550**) with both the normal cellular or fixed telephony network (**520**) and with an Internet connection (**510**). The subscriber terminal (**500**) allows the flexible use of both the Internet and telephony network with numerous advantages, one of which is the inventive voicemail short messaging method under study. The voicemail messaging method (**10**), comprising at least one subscriber terminal is characterized by server independence.
