Pocket Atlas of Pharmacology

Pocket Atlas of Pharmacology

Heinz Lüllmann, Klaus Mohr,
Albrecht Ziegler, and Detlef Bieger

149 color plates by Jürgen Wirth

1993

Georg Thieme Verlag Stuttgart · New York
Thieme Medical Publishers, Inc. New York

Heinz Lüllmann, M. D.
 Professor, Dept. of Pharmacology
 University of Kiel
 Hospitalstrasse 4, 24105 Kiel, Germany

Albrecht Ziegler, Ph. D.
 Professor, Dept. of Pharmacology
 University of Kiel
 Hospitalstrasse 4, 24105 Kiel, Germany

Klaus Mohr, M. D.
 Professor, Dept. of Pharmacology
 and Toxicology, Institute of Pharmacy,
 University of Bonn
 An der Immenburg 4, 53121 Bonn, Germany

Detlef Bieger, M. D.
 Professor, Division of Basic Medical Sciences
 Faculty of Medicine
 Memorial University of Newfoundland
 St. John's, Newfoundland Canada A1B 3V6

Library of Congress Cataloging-in-Publication Data

Pocket atlas of pharmacology / Heinz Lüllmann . . . [et al.] ; 149 color plates by Jürgen Wirth.
 Rev. and expanded translation of: Taschenatlas der Pharmakologie /
 Heinz Lüllmann, Klaus Mohr, Albrecht Ziegler, 1990.
 Includes bibliographical references and indexes.
 1. Pharmacology-Atlases. 2. Pharmacology-Handbooks, manuals.
 etc. I. Lüllmann, Heinz. II. Title.
 [DNLM: 1. Pharmacology-atlases. 2. Pharmacology-handbooks. QV
 17 T197p 1993]
 RM301.12.T3813 1993

Important Note: Medicine is an ever-changing science undergoing continual development. Research and clinical experience are continually expanding our knowledge, in particular our knowledge of proper treatment and drug therapy. Insofar as this book mentions any dosage or application, readers may rest assured that the authors, editors and publishers have made every effort to ensure that such references are in accordance with the state of knowledge at the time of production of the book. Nevertheless this does not involve, imply, or express any guarantee or responsibility on the part of the publishers in respect of any dosage instructions and forms of application stated in the book. Every user is requested to examine carefully the manufacturers' leaflets accompanying each drug and to check, if necessary in consultation with a physician or specialist, whether the dosage schedules mentioned therein or the contraindications stated by the manufacturers differ from the statements made in the present book. Such examination is particularly important with drugs that are either rarely used or have been newly released on the market. Every dosage schedule or every form of application used is entirely at the user's own risk and responsibility. The authors and publishers request every user to report to the publishers any discrepancies or inaccuracies noticed.

This book is an authorized, revised and expanded translation of the 1st German edition published and copyrighted 1990 by Georg Thieme Verlag, Stuttgart, Germany. Title of the German edition: Taschenatlas der Pharmakologie

1st German edition, 1990
 1st French edition, 1991

1st Japanese edition, 1992
 1st Spanish edition, 1992

Some of the product names, patents and registered designs referred to in this book are in fact registered trademarks or proprietary names even though specific reference to this fact is not always made in the text. Therefore, the appearance of a name without designation as proprietary is not to be construed as a representation by the publisher that it is in the public domain.

This book, including all parts thereof, is legally protected by copyright. Any use, exploitation or commercialization outside the narrow limits set by copyright legislation, without the publisher's consent, is illegal and liable to prosecution. This applies in particular to photostat reproduction, copying, mimeographing or duplication of any kind, translating, preparation of microfilms, and electronic data processing and storage.

Drug Concentration in the Body as a Function of Time. First-Order (Exponential) Rate Processes

Processes such as drug absorption and elimination display exponential characteristics. As regards the former, this follows from the simple fact that the amount of drug being moved per unit of time depends on the concentration difference (gradient) between two body compartments (Fick's Law). In drug absorption from the alimentary tract, the intestinal contents and the blood would represent the compartments containing an initially high and low concentration, respectively. In drug elimination via the kidney, excretion often depends on glomerular filtration, i.e., the filtered amount of drug present in primary urine. As the blood concentration falls, the amount of drug filtered per unit of time diminishes. The resulting exponential decline is illustrated in (A). The exponential time course implies constancy of the interval during which the concentration decreases by one-half. This interval represents the half-life ($t^{1/2}$) and is related to the elimination rate constant k by the equation $t^{1/2} = \ln 2/k$. The two parameters, together with the initial concentration c_0 , describe a first-order (exponential) rate process.

The constancy of the process permits calculation of the plasma volume that would be cleared of drug, if the remaining drug were not to assume a homogeneous distribution in the total volume (a condition not met in reality). The **notional plasma volume freed of drug per unit of time** is termed the **clearance**. Depending on whether plasma concentration falls as a result of urinary excretion or of metabolic alteration, clearance is considered to be renal or hepatic. Renal and hepatic clearances add up to total clearance (Cl_{tot}) in the case of drugs

that are eliminated unchanged via the kidney and biotransformed in the liver. Cl_{tot} represents the sum of all processes contributing to elimination; it is related to the half-life ($t^{1/2}$) and the apparent volume of distribution V_{app} (p. 28) by the equation:

$$t^{1/2} = \ln 2 \cdot \frac{V_{app}}{Cl_{tot}}$$

The smaller the volume of distribution or the larger the total clearance, the shorter is the half-life.

In the case of drugs renally eliminated in unchanged form, the half-life of elimination can be calculated from the cumulative excretion in urine; the final total amount eliminated corresponds to the amount absorbed.

Hepatic elimination obeys exponential kinetics because metabolizing enzymes operate in the quasilinear region of their concentration-activity curve, and hence the amount of drug metabolized per unit of time diminishes with decreasing blood concentration.

The best-known exception to exponential kinetics is the elimination of alcohol (ethanol), which obeys a linear time course (zero-order kinetics), at least at blood concentrations $> 0.02\%$. It does so because the rate-limiting enzyme, alcohol dehydrogenase, achieves half saturation at very low substrate concentrations, i.e., at about 80 mg/L (0.008%). Thus, reaction velocity reaches a plateau at blood ethanol concentrations of about 0.02%, and the amount of drug eliminated per unit of time remains constant at concentrations above this level.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
