(57) **ABSTRACT**

A wireless network provides one or more local wireless service area where wireless clients are able to access web content from an IP network that includes the Internet. A wireless network that includes wireless gateways, secure link to a WAP gateway via an access server and location-based content offers an infrastructure for providing valued-added features to wireless clients. The valued-added features include providing web content in multiple application protocols and include automatically presenting location-based content when a wireless client attempts to access web content.
