**McGRAW-HILL
DICTIONARY OF
SCIENTIFIC AND
TECHNICAL
TERMS**

**Sixth
Edition**

McGraw-Hill

New York Chicago San Francisco

the cover: Representation of a fullerene molecule with a noble gas atom trapped inside. At the Permian-Triassic sedimentary boundary the noble gases helium and argon have been found trapped inside fullerenes. They exhibit isotope ratios quite similar to those found in meteorites, suggesting that a fireball meteorite or asteroid exploded when it hit the Earth, causing major changes in the environment. McGraw-Hill dictionary of scientific and technical terms--6th ed.

p. cm.

ISBN 0-07-042313-X (alk. paper)

1. Science--Dictionaries. 2. Technology--Dictionaries. I. Title: Dictionary of scientific and technical terms.

recognized by reaction with a specific antibody. { dē'ā-gō 'bləd ,grüp }

die holder [ENG] A plate or block on which the die block is mounted; it is fastened to the bolster or press. { 'dī ,hōld-ər }

dieing machine [MECH ENG] A vertical press with the slide activated by pull rods attached to the drive mechanism below the bed of the press. { 'dī-ij mə'shēn }

die insert [ENG] A removable part or the liner of a die body or punch. { 'dī ,in-sərt }

diel [SCI TECH] Occurring on a 24-hour cycle, as opposed to diurnal (day) or nocturnal (night) occurrences. { 'dī,el }

dieldrin [ORG CHEM] $C_{12}H_8Cl_6O$ A white, crystalline contact insecticide obtained by oxidation of aldrin; used in moth-proofing carpets and other furnishings. { 'dīl-drən }

dielectric See dielectric material. { ,dī-ə'lek-trik }

dielectric absorption [ELEC] The persistence of electric polarization in certain dielectrics after removal of the electric field. See dielectric loss. { ,dī-ə'lek-trik əb'sɔrp-shən }

dielectric amplifier [ELECTR] An amplifier using a ferroelectric capacitor whose capacitance varies with applied voltage so as to give signal amplification. { ,dī-ə'lek-trik 'am-plə-fī-ər }

dielectric antenna [ELECTROMAG] An antenna in which a dielectric is the major component used to produce a desired radiation pattern. { ,dī-ə'lek-trik an'ten-ə }

dielectric breakdown [ELECTR] Breakdown which occurs in an alkali halide crystal at field strengths on the order of 10^6 volts per centimeter. { ,dī-ə'lek-trik 'brāk,dəun }

dielectric circuit [ELEC] Any electric circuit which has capacitors. { ,dī-ə'lek-trik 'sər-kət }

dielectric constant [ELEC] 1. For an isotropic medium, the ratio of the capacitance of a capacitor filled with a given dielectric to that of the same capacitor having only a vacuum as dielectric. 2. More generally, $1 + \chi$, where χ is 4π in Gaussian and cgs electrostatic units or 1 in rationalized mks units, and χ is the electric susceptibility tensor. Also known as relative dielectric constant; relative permittivity; specific inductive capacity (SIC). { ,dī-ə'lek-trik 'kän-stənt }

dielectric crystal [ELEC] A crystal which is electrically non-conducting. { ,dī-ə'lek-trik 'krist-əl }

dielectric curing [ENG] A process for curing a thermosetting resin by subjecting it to a high-frequency electric charge. { ,dī-ə'lek-trik 'kyūr-ij }

dielectric current [ELEC] The current flowing at any instant through a surface of a dielectric that is located in a changing electric field. { ,dī-ə'lek-trik 'kər-ənt }

dielectric displacement See electric displacement. { ,dī-ə'lek-trik dī'splās-mənt }

dielectric ellipsoid [ELEC] For an anisotropic medium in which the dielectric constant is a tensor quantity \mathbf{K} , the locus of points \mathbf{r} satisfying $\mathbf{r} \cdot \mathbf{K} \cdot \mathbf{r} = 1$. { ,dī-ə'lek-trik ə'lip,sɔid }

dielectric fatigue [ELECTR] The property of some dielectrics in which resistance to breakdown decreases after a voltage has been applied for a considerable time. { ,dī-ə'lek-trik fə'tēg }

dielectric field [ELEC] The average total electric field acting upon a molecule or group of molecules inside a dielectric. Also known as internal dielectric field. { ,dī-ə'lek-trik 'fēld }

dielectric film [ELEC] A film possessing dielectric properties; used as the central layer of a capacitor. { ,dī-ə'lek-trik 'film }

dielectric flux density See electric displacement. { ,dī-ə'lek-trik 'fləks ,den-səd-ē }

dielectric gas [ELEC] A gas having a high dielectric constant, such as sulfur hexafluoride. { ,dī-ə'lek-trik 'gəs }

dielectric heating [ELEC] Heating of a nominally electrical insulating material due to its own electrical (dielectric) losses, when the material is placed in a varying electrostatic field. { ,dī-ə'lek-trik 'hēd-ij }

dielectric hysteresis See ferroelectric hysteresis. { ,dī-ə'lek-trik hi-stə'rē-səs }

dielectric imperfection levels [SOLID STATE] Energy levels that occur in the forbidden zone between the valence and conduction bands of a dielectric crystal, because of imperfections in the crystal. { ,dī-ə'lek-trik ,im-pər'fek-shən ,lev-əlz }

dielectric leakage [ELEC] A very small steady current that flows through a dielectric subject to a steady electric field. { ,dī-ə'lek-trik 'lek-ij }

dielectric lens [ELECTROMAG] A lens made of dielectric material so that it refracts radio waves in the same manner that an optical lens refracts light waves; used with microwave antennas. { ,dī-ə'lek-trik 'lenz }

dielectric-lens antenna [ELECTROMAG] An aperture antenna in which the beam width is determined by the dimensions of a dielectric lens through which the beam passes. { ,dī-ə'lek-trik 'lenz an'ten-ə }

dielectric loss [ELECTROMAG] The electric energy that is converted into heat in a dielectric subjected to a varying electric field. Also known as dielectric absorption. { ,dī-ə'lek-trik 'lɔs }

dielectric loss angle [ELEC] Difference between 90° and the dielectric phase angle. { ,dī-ə'lek-trik 'lɔs ,aŋ-gəl }

dielectric loss factor [ELEC] Product of the dielectric constant of a material and the tangent of its dielectric loss angle. { ,dī-ə'lek-trik 'lɔs ,fak-tər }

dielectric matching plate [ELECTROMAG] In waveguide technique, a dielectric plate used as an impedance transformer for matching purposes. { ,dī-ə'lek-trik 'mach-ij ,plāt }

dielectric material [MATER] 1. Also known as dielectric. 2. A material which is an electrical insulator or in which an electric field can be sustained with a minimum dissipation of power. 3. In a more general sense, any material other than a condensed state of a metal. { ,dī-ə'lek-trik mə'tir-ē-əl }

dielectric phase angle [ELEC] Angular difference in phase between the sinusoidal alternating potential difference applied to a dielectric and the component of the resulting alternating current having the same period as the potential difference. { ,dī-ə'lek-trik 'fāz ,aŋ-gəl }

dielectric polarization See polarization. { ,dī-ə'lek-trik ,pɔ-lə-rə'zā-shən }

dielectric power factor [ELEC] Cosine of the dielectric phase angle (or sine of the dielectric loss angle). { ,dī-ə'lek-trik 'paʊr ,fak-tər }

dielectric-rod antenna [ELECTROMAG] A surface-wave antenna in which an end-fire radiation pattern is produced by propagation of a surface wave on a tapered dielectric rod. { ,dī-ə'lek-trik 'rəd an'ten-ə }

dielectric shielding [ELEC] The reduction of an electric field in some region by interposing a dielectric substance, such as polystyrene, glass, or mica. { ,dī-ə'lek-trik 'shēld-ij }

dielectric soak See absorption. { ,dī-ə'lek-trik 'sɔk }

dielectric strength [ELEC] The maximum electrical potential gradient that a material can withstand without rupture; usually specified in volts per millimeter of thickness. Also known as electric strength. { ,dī-ə'lek-trik 'streŋkθ }

dielectric susceptibility See electric susceptibility. { ,dī-ə'lek-trik sə'sep-tə'bīl-əd-ē }

dielectric test [ELEC] A test involving application of a voltage higher than the rated value for a specified time, to determine the margin of safety against later failure of insulating materials. { ,dī-ə'lek-trik 'test }

dielectric vapor detector [ANALY CHEM] Apparatus to measure the change in the dielectric constant of gases or gas mixtures; used as a detector in gas chromatographs to sense changes in carrier gas. { 'dī-ə'lek-trik 'vā-pər dī'tek-tər }

dielectric waveguide [ELEC] A waveguide consisting of a dielectric cylinder surrounded by air. { ,dī-ə'lek-trik 'wāv,gīd }

dielectric wedge [ELECTROMAG] A wedge-shaped piece of dielectric used in a waveguide to match its impedance to that of another waveguide. { ,dī-ə'lek-trik 'wej }

dielectric wire [ELECTROMAG] A dielectric waveguide used to transmit ultra-high-frequency radio waves short distances between parts of a circuit. { ,dī-ə'lek-trik 'wīr }

dielectronic recombination [ATOMPHYS] The combination of an electron with a positive-ion in a gas, so that the energy released is taken up by two electrons of the resulting atom. { dī-ə'lek'trən-ik ,rē,kām-bə'nā-shən }

dielectrophoresis [PHYS CHEM] The ability of an uncharged material to move when subjected to an electric field. { ,dī-ə'lek-trō-fə'rē-səs }

die lines [ENG] Lines or markings on the surface of a drawn, formed, or extruded product due to imperfections in the surface of the die. { 'dī ,līnz }

Basic assembly for dielectric heating.
