Empowering Customers at the Edge

[Rob Salvagno](#) - May 1, 2017 - 21 Comments

Over the past several years, an immense transition has taken place as networks have become more diverse and complex. Companies large and small have many branch sites – users at the edge that need to connect securely and quickly to the network and the cloud. Software-defined wide area networking (SD-WAN) technologies are enabling customers to tackle this transition efficiently and effectively. Today, Cisco [announced](#) the intent to acquire Viptela Inc., to help customers connect and manage multiple branches, while lowering WAN costs and improving security.

Cisco has been providing SD-WAN technology and services to customers for several years; the Cisco IWAN solution delivers an on-premises SD-WAN solution for customers needing advanced routing features and other advanced network services, and Cisco Meraki provides a cloud-based solution for customers needing maximum simplicity and unified threat management functionality in their SD-WAN solution. Acquiring Viptela will enable us to expand our portfolio, with increased functionality delivered through the cloud.

Since 2012, Viptela has been developing solutions to help customers anticipate and manage branch connectivity across their networks. Their cloud-first approach to SD-WAN includes cloud orchestration and management of branch networks, as well as overlay technologies. Customers can centrally manage the WAN with a real-time dashboard view to monitor the health of their network and improve connectivity.

With Viptela, Cisco can offer customers more choice in their enterprise branch offices and WAN deployments, with a compelling SD-WAN solution that is easy to deploy and simple to manage. Together, Cisco and Viptela will be able to deliver next generation SD-WAN solutions to best serve all size and scale of customer needs, while accelerating Cisco’s transition to a recurring,

software-based business model. Viptela will join the Enterprise Routing team within Cisco's Networking and Security Group led by Senior Vice President and General Manager [David Goeckeler](#).

Hi Rob
My customer asked me today to get a full product introduction of Viptela at their office in London City next week. Please, can you provide me with a name within Viptela I can contact?
My customer is going to place an order at JNPR for the Northstar solution for SD-WAN. They would like to give us the chance to present Viptela, because Northstar is a proprietary solution, and this is not ideal.

I was curious if you ever considered changing the layout of your blog? Its very well written; I love what youve got to say. But maybe you could a little more in the way of content so people could connect with it better. Youve got an awful lot of text for only having one or two pictures. Maybe you could space it out better?

Thank God !! Finally a native SD-WAN application as an alternative to IWAN(Frankenstein - built as a collection of different technologies and pieced together as a solution). Why would I use IWAN with all its complexity if Viptela is available?

naturally like your web site but you have to check the spelling on quite a few of your posts. Many of them are rife with spelling problems and I find it very troublesome to tell the truth nevertheless I will definitely come back again.

Excellent move by Cisco to acquire Viptela. This will allow us to expand our service offerings and continue to gain market share in the cloud management space.

Reading this article made my day!!!

Thanks

Moe

How does this set up against a company deciding to move it's global WAN to Azure?

Hi JF, thanks for the question. Currently IWAN with the CSR 1000V virtual router is available in Azure for customers looking to securely connect to the public cloud.

Subscribe to Executive Platform:

So, there would not be any more Cisco vs Viptela SDWAN competitive situation which is good for the Cisco Partners! What will be the GTM strategy for Cisco and the Partners ?

Now, Cisco has got 3 solutions, IWAN, Viptela SDWAN, Meraki SDWAN. Hopefully there will be a comparison and positioning analysis for the Field Sales community and partners for Cisco/Meraki/Viptela SDWAN solutions!

Hi Lakshman, thanks for the comment. The two companies already share some common partners and managed service providers. This acquisition is well aligned to Cisco's goal of continuing to develop innovative branch and WAN offerings and accelerating sales for partners and service providers. We will continue to jointly support them in this transition. Between now and when the acquisition closes, Cisco and Viptela will continue to operate as separate companies, and we will share more information about GTM strategy after close.

What will happen to IWAN then?

Phase-out?

Does this mean to hold off on iwan and apic-em and just wait it out?

Hi David - Cisco is committed to both IWAN and APIC-EM as part of its broader DNA strategy.

Nicely done Cisco. It will be great to integrate Viptela with Cisco's existing VMS and/or Meraki's Cloud Offerings.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
