I. INTRODUCTION

Petitioner Unified Patents Inc. (“Petitioner”) respectfully requests an *inter partes* review (“IPR”) of claims 1, 2, 5-7, 9, and 13-18 (collectively, the “Challenged Claims”) of U.S. Patent 7,917,285 (“the ’285 Patent”).

II. SUMMARY OF THE ’285 PATENT

A. Description of the alleged invention of the ’285 Patent

The ’285 Patent purports to address problems associated with requiring users to manually program locations into conventional GPS devices. ’285 Patent (EX1001), at 1:15-2:13. To do so, the ’285 Patent proposes devices, systems, and methods for remotely entering location addresses into a user’s GPS device to automatically program it with destinations for route guidance. *Id.* at Abstract, 2:25-30, 3:53-67.

The system includes a GPS device 100, which may be “any type of navigation or positional information device including but not limited to a vehicle-mounted device, a GPS receiver coupled to a desktop computer or laptop, etc.” *Id.* at 4:1-8. The GPS device determines its location using a location information module, “employing conventional location information processing technology,” such as “GPS,” “Loran,” or “any other available locational technology.” *Id.* at 5:5-11. The GPS device also includes “a communication module 112 for transmitting stored data to another device, e.g., a personal computer, a personal digital assistant (PDA), a server residing on the Internet, etc.”

As shown in the figure below, the GPS device 100 communicates via a communications network 302 with a remote customer service center (CSC) having a live operator 303 that has access to a server 304 for looking up address information and for transmitting information to the GPS device:

Id. at Fig. 3, 9:13-20; *see also id.* at 8:13-16. The communications network may be a telematics network that, for example, enables data and voice communications using “any known communication means,” such as RF, satellite, CDMA, 3G, and

more. *Id.* at 8:13-16. The system can also include a local computer 310 coupled to the communications network 302. *Id.* at 9:64-10:33. The user may remotely request entry of an address into the GPS device 100 for purposes of the GPS device providing route guidance to the address.

When the user requests remote entry of an address into GPS device 100, the user is connected to the customer service center (CSC) via analog or digital communications or any other type of communication link. *Id.* at 8:62-9:3. The vehicle or device is identified using an identifier, such as a cellular phone number or IP address, which can be transmitted to the CSC or detected using conventional techniques, such as using caller ID and a database lookup. *Id.* at 9:3-12. The request for the address may be received by voice communications as the user communicates with a live operator 303 who inputs the request into the server 304 or the request may be directly received electronically by the server. *Id.* at 9:17-39. The live operator accesses the server 304 to look-up the requested location information. *Id.* For example, the user may provide the name and city of a desired location, which the operator uses to look-up the address and/or latitude/longitude coordinates of the location. *Id.* at 12:12-52. The determined address or coordinate information is then transmitted to the device 100, which uses it to generate route guidance to the location. *Id.*

In certain embodiments, the user can also request location information using

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
