SYSTEM AND METHOD

FIRST PRELIMINARY AMENDMENT

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

INTRODUCTORY COMMENTS

Prior to examination on the merits, please amend the above-identified U.S. patent application as follows:

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks/Arguments begin on page 9 of this paper.

LISTING OF THE CLAIMS

1-26. (Canceled)

27. (New) A method for transmitting and receiving still or video images by an Internet direct device associated with a user over a communications network, comprising the steps of:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device;

transmitting the captured still or video images to an account associated with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device;

receiving still or video images from said WSARC over the communications network by the Internet direct device; and

automatically switching to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 28. (New) The method of claim 27, wherein the step of automatically switching comprises the step of switching to one of the following available modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-Max.
- 29. (New) The method of claim 27, further comprising the steps of locally storing the captured still or video images in a storage device of the Internet direct device by the microprocessor when the connection to said communications network is unavailable, and transmitting the stored still or video images to said WSARC by the microprocessor when the connection to said communications network is re-established.
- 30. (New) The method of claim 27, further comprising the step of selecting another available mode of connection as the primary mode of connection.

31. (New) The method of claim 27, further comprising the step of communicating with other Internet direct devices by the Internet direct device associated with the user over said communications network.

- 32. (New) The method of claim 31, further comprising the step of communicating with other Internet direct devices via voice over IP by the Internet direct device associated with the user.
- 33. (New) The method of claim 31, further comprising the step transmitting and receiving still or video images to and from said other Internet direct devices by the microprocessor of the Internet direct device associated with the user over said communications network.
- 34. (New) The method of claim 31, further comprising the step of transmitting and receiving audio to and from said other Internet direct devices by the microprocessor of the Internet direct device associated with the user over said communications network.
- 35. (New) The method of claim 27, further comprising the steps of displaying the still or video images on a display of the Internet direct device, and receiving texts from the user by the Internet direct device.
- 36. (New) The method of claim 27, further comprising the step of accessing the Internet using a web browser of the Internet direct device over said communications network.
- 37. (New) The method of claim 36, further comprising the step of downloading live or recorded audio or video images from a website by the microprocessor of the Internet direct device over said communications network.
- 38. (New) The method of claim 27, further comprising the step of compressing the captured still or video images.
- 39. (New) A non-transitory storage medium comprising a program for transmitting and receiving still or video images over a communications network when executed by an Internet direct device associated with a user to cause the Internet direct device to:

automatically connect to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capture still or video images by an image capture system of the Internet direct device;

transmit said captured still or video images to an account associated with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device;

receive still or video images from said WSARC over the communications network; and

automatically switch to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 40. (New) The storage medium of claim 39, the program when executed causes the Internet direct device to locally store the captured still or video images in a storage device when the connection to said communications network is unavailable, and transmits the stored still or video images to said WSARC when the connection to said communications network is re-established.
- 41. (New) The storage medium of claim 39, the program when executed causes the Internet direct device to communicate with other Internet direct devices over said communications network.
- 42. (New) The storage medium of claim 41, the program when executed causes the Internet direct device to communicate with other Internet direct devices via voice over IP.
- 43. (New) The storage medium of claim 41, the program when executed causes the Internet direct device to transmit and receive still or video images to and from said other Internet direct devices over said communications network.

44. (New) The storage medium of claim 41, the program when executed causes the Internet direct device to transmit and receive audio to and from said other Internet direct devices over said communications network.

- 45. (New) The storage medium of claim 39, the program when executed causes the Internet direct device to access the Internet using a web browser over said communications network.
- 46. (New) The storage medium of claim 45, the program when executed causes the Internet direct device to download live or recorded audio or video images from a website over said communications network.
- 47. (New) The storage medium of claim 39, the program when executed causes the Internet direct device to compress the captured still or video images.
- 48. (New) A method for transmitting and receiving still or video images by an Internet direct device associated with a user over a communications network, comprising the steps of:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device;

transmitting the captured still or video images to another Internet direct device over said communications network upon image capture by a microprocessor of the Internet direct device;

receiving still or video images from said other Internet direct device over said communications network by the Internet direct device; and

automatically switching to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

49. (New) The method of claim 48, wherein the step of automatically switching comprises the step of switching to one of the following available modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-Max.

- 50. (New) The method of claim 48, further comprising the steps of locally storing the captured still or video images in a storage device of the Internet direct device by the microprocessor when the connection to said communications network is unavailable.
- 51. (New) The method of claim 48, further comprising the step of transmitting and receiving audio to and from said other Internet direct devices by the microprocessor of the Internet direct device associated with the user over said communications network.
- 52. (New) The method of claim 48, further comprising the step of selecting another available mode of connection as the primary mode of connection.
- 53. (New) The method of claim 48, further comprising the step of communicating with other Internet direct devices by the Internet direct device associated with the user over said communications network.
- 54. (New) The method of claim 48, further comprising the step of communicate with other Internet direct devices via voice over IP by the Internet direct device associated with the user.
- 55. (New) The method of claim 48, further comprising the steps of displaying the still or video images on a display of the Internet direct device, and receiving texts from the user by the Internet direct device.
- 56. (New) The method of claim 48, further comprising the step of accessing the Internet using a web browser of the Internet direct device over said communications network.
- 57. (New) The method of claim 56, further comprising the step of downloading live or recorded audio or video images from a website by the microprocessor of the Internet direct device over said communications network.

58. (New) A non-transitory storage medium comprising a program for transmitting and receiving still or video images over a communications network when executed by an Internet direct device associated with a user to cause the Internet direct device to:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device;

transmitting the captured still or video images to another Internet direct device over said communications network upon image capture by a microprocessor of the Internet direct device;

receiving still or video images from said other Internet direct device over said communications network by the Internet direct device; and

automatically switching to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 59. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to automatically switch to one of the following available modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-Max.
- 60. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to locally store the captured still or video images in a storage device when the connection to said communications network is unavailable.
- 61. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to transmit and receive audio to and from said other Internet direct devices over said communications network.

62. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to communicate with other Internet direct devices over said communications network.

- 63. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to communicate with other Internet direct devices via voice over IP by the Internet direct device associated with the user.
- 64. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to display the still or video images on a display and receive texts from the user.
- 65. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to access the Internet using a web browser over said communications network.
- 66. (New) The storage medium of claim 58, the program when executed causes the Internet direct device to download live or recorded audio or video images from a website over said communications network.

REMARKS

Applicant has canceled claims 1-26 and added new claims 27-66 without adding new matter. Newly added method and non-transitory storage medium claims correspond to previously allowed system and apparatus claims of the parent application no. 13/415,346 and grand-parent application no. 13/037,303 (now U.S. Patent No. 8,134,600).

Applicant request that the amendment be entered prior to examination. An early and favorable response is earnestly solicited.

The Examiner is invited to contact the undersigned attorney to address any questions and/or to expedite the prosecution of this application.

Applicant believes no fee is due with this response. However, if a fee is due, please charge our Deposit Account No. 50-5354, under Order No. CLEM201.5US from which the undersigned is authorized to draw.

Dated: June 24, 2013 Respectfully submitted,

By /C. Andrew Im/ C. Andrew Im Registration No.: 40,657 IM IP LAW PLLC 29 Chase Road #355 Scarsdale, New York 10583 Attorneys for Applicant

INFORMATION DISCLOSURE STATEMENT (IDS)

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

Pursuant to 37 CFR 1.56, 1.97 and 1.98, the attention of the Patent and Trademark Office is hereby directed to the references listed on the attached PTO/SB/08. It is respectfully requested that the information be expressly considered during the prosecution of this application, and that the references be made of record therein and appear among the "References Cited" on any patent to issue therefrom.

This Information Disclosure Statement accompanies the new patent application submitted herewith and/or is filed before the mailing date of a first Office Action on the merits as far as is known to the undersigned (37 C.F.R. § 1.97(b)(3)).

Copies of the references on the PTO/SB/08 are not provided because they were previously cited by or submitted to the Office in prior Application Nos. 11/484,373 filed July 11, 2006, 12/637,227 filed December 14, 2009, 13/037,303 filed February 28, 2011 and 13/415,346 filed March 8, 2012, and relied upon in this application for an earlier filing date under 35 U.S.C. § 120.

In accordance with 37 CFR 1.97(g), the filing of this Information Disclosure Statement shall not be construed to mean that a search has been made or that no other material information

Docket No.: CLEM201.5US

as defined in 37 CFR 1.56(a) exists. In accordance with 37 CFR 1.97(h), the filing of this

Information Disclosure Statement shall not be construed to be an admission that any patent,

publication or other information referred to therein is "prior art" for this invention unless

specifically designated as such.

It is submitted that the Information Disclosure Statement is in compliance with 37 CFR

1.98 and the Examiner is respectfully requested to consider the listed references.

The Director is hereby authorized to charge any deficiency in the fees filed, asserted to be

filed or which should have been filed herewith (or with any paper hereafter filed in this

application by this firm) to our Deposit Account No. 50-5354, Order No. CLEM201.5US from

which the undersigned is authorized to draw.

Dated: June 24, 2013

Respectfully submitted,

By /C. Andrew Im/

	The above-identified application was made or authorized to be made by me,
	I believe that I am the original inventor or an original joint inventor of a claimed invention in the application,
	I have reviewed and understand the contents of the above-identified application, including the claims.
	I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations § 1.56.
	WHEREAS, the undersigned has invented certain new and useful improvements described in the application identified.
Insert Name of Assignee	S WHEREAS, ALEX IS THE BEST, LLC
Insert Address of Assignee	" of 75-82ND STREET, BROOKLYN, NEW YORK 11209,
-	its heirs, successors, legal representatives and assigns (hereinafter designated as the Assignee) is desirous of acquiring the entire right, title and interest in and to said invention and in and to any Letters Patent(s) that may be granted therefor in the United States of America and
Check Box if Appropriate	in any foreign countries.
	NOW, THEREFORE, for good and valuable consideration, the receipt of which is hereby acknowledged, the undersigned has sold, assigned and transferred, and by these presents does (do) sell, assign and transfer unto said Assignee the full and exclusive right to the said invention in the United States of America, its territories, dependencies and possessions and the entire right, title and interest in and to any and all Letters Patent(s) which may be granted therefor in the United States of America, its territories, dependencies and possessions, and if the box above is designated, in any and all foreign countries; and to any and all divisions, reissues, continuations, conversions and extensions thereof for the full term or terms for which the same may be granted.

IMIPLAW-DECL-ASSIGN

The undersigned agrees to execute all papers necessary in connection with this application and any continuing, divisional, conversion or reissue applications thereof and also to execute separate assignments in connection with such applications as the Assignee may deem necessary or expedient.

The undersigned agrees to execute all papers necessary in connection with any interference which may be declared concerning this application or continuation, division, conversion or reissue thereof or Letters Patent(s) or reissue patent issued thereon and to cooperate with the Assignee in every way possible in obtaining and producing evidence and proceeding with such interference.

The undersigned agrees to execute all papers and documents and to perform any act which may be necessary in connection with claims or provisions of the International Convention for the Protection of Industrial Property or similar agreements.

The undersigned agrees to perform all affirmative acts which may be necessary to obtain a grant of (a) valid United States of America patent(s) or a grant of (a) valid United States of America and any foreign patent(s) to the Assignee and to vest all rights therein hereby conveyed to said Assignee as fully and entirely as the same would have been held by the undersigned if this Assignment and sale had not been made.

The undersigned hereby authorizes and requests the Patent and Trademark Office Officials in the United States of America and in any foreign countries to issue any and all Letters Patent(s) resulting from said application or any continuing, divisional conversion or reissue applications thereof to the said Assignee, as Assignee of the entire interest, and hereby covenants that he has the full right to convey the entire interest herein assigned, and that he has not executed, and will not execute, any agreement in conflict herewith.

The undersigned hereby grants the law firm of IM IP LAW PLLC the power to insert any further identification which may be necessary or desirable in order to comply with the rules of the U.S. Patent and Trademark Office.

The undersigned hereby covenants that no assignment, sale, agreement or encumbrance has been or will be made or entered into which would conflict with this assignment.

The undersigned hereby acknowledges that any willful false statement made in this declaration is punishable under 18 U.S.C. § 1001 by fine or imprisonment of not more than five (5) years, or both.

In witness whereof, executed by the undersigned on the date opposite the undersigned name.

Registration Number

This collection of information is required by 37 CFR 1.31, 1.32 and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

ABSTRACT

An integrated Internet camera system method comprises a website archive and review center (WSARC) for storing and managing images and an Internet direct device for capturing an image, automatically transmitting the image to an account associated with the Internet direct device on the WSARC upon image capture and receiving stored image from the WSARC. The Internet direct device comprises an imaging system, a microprocessor and a display for displaying the captured image and the received image. The Internet direct device automatically connects to the communication network on power-up. The Internet direct device automatically switches to another available mode of connection when the Internet direct device detects that the primary mode of connection to the communications network is unavailable

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

Authorization to Permit Access:

Authorization to Permit Access to the Instant Application by the Participating Offices
If checked, the undersigned hereby grants the USPTO authority to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the World Intellectual Property Office (WIPO), and any other intellectual property offices in which a foreign application claiming priority to the instant patent application is filed access to the instant patent application. See 37 CFR 1.14(c) and (h). This box should not be checked if the applicant does not wish the EPO, JPO, KIPO, WIPO, or other intellectual property office in which a foreign application claiming priority to the instant patent application is filed to have access to the instant patent application.
In accordance with 37 CFR 1.14(h)(3), access will be provided to a copy of the instant patent application with respect to: 1) the instant patent application-as-filed; 2) any foreign application to which the instant patent application claims priority under 35 U.S.C. 119(a)-(d) if a copy of the foreign application that satisfies the certified copy requirement of 37 CFR 1.55 has been filed in the instant patent application; and 3) any U.S. application-as-filed from which benefit is sought in the instant patent application.
In accordance with 37 CFR 1.14(c), access may be provided to information concerning the date of filing this Authorization.

Applicant Information:

Providing assignment information in this section does not substitute for compliance with any requirement of part 3 of Title 37 of CFR to have an assignment recorded by the Office.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
- A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

IPR2017-02058, Petitioner Google Inc.

What is claimed is:

1. An integrated Internet camera system, comprising

a website archive and review center (WSARC) for storing and managing images; and

an Internet direct camera (IDC) for capturing an image, automatically transmitting said image to an account associated with said IDC on said WSARC upon image capture and receiving stored image from said WSARC, and comprising a display for displaying said captured image and said received image; and

wherein said IDC automatically connects to said WSARC over an Internet connection on power-up.

- The system of claim 1, wherein said IDC automatically connects to said WSARC using a secondary mode of communication when a primary mode of communication to said WSARC is unavailable.
- 3. The system of claim 1, wherein said IDC comprises a storage device for locally storing said captured image and said received image; and wherein said storage device stores said captured image only when said IDC loses said connection with said WSARC.
- 4. The system of claim 3, wherein said stored image is transmitted to said WSARC when said IDC re-establishes said connection with said WSARC.
- 5. The system of claim 1, wherein said IDC comprises an internal battery to power said IDC.
- 6. The system of claim 5, wherein said internal battery is a rechargeable battery.
- 7. The system of claim 5, wherein said IDC alerts said WSARC when the power of said internal battery is below a predetermined threshold.
- 8. The system of claim 5, wherein said WSARC is operable to monitor the power of said internal battery and alerts a registered user associated with said IDC if the power of said internal battery is below a predetermined threshold.

- 9. The system of claim 1, wherein said IDC comprises a motion sensor and is operable to record only when a motion is detected by said motion sensor.
- 10. The system of claim 1, wherein said display of said IDC comprises a touch pad for entering a command, a text or labeling images.
- 11. The system of claim 1, wherein said WSARC sends an email message to a predetermined email address associated with said IDC when said connection to said IDC is lost.
- 12. The system of claim 1, further comprising a plurality of IDCs for monitoring a building, each IDC monitoring different parts of said building.
- 13. The system of claim 1, further comprising a plurality of IDCs for connecting users located in different locations.
- 14. The system of claim 1, wherein said WSARC is operable to organize the images by event, date or name.
- 15. The system of claim 1, wherein said each of said IDC comprises a SIM card associated with a registered user of said WSARC.
- 16. The system of claim 1, wherein said WSARC is operable to send images received from said IDC to one or more IDCs selected by a register user associated with said IDC.
- 17. The system of claim 1, wherein said IDC comprises a web browser.
- 18. The system of claim 1, wherein said IDC is operable to support voice over IP over said connection.
- 19. The system of claim 1, wherein said account is associated with a registered user of said WSARC and said images in said account can be viewed by any user given privilege to view by said registered user.
- 20. The system of claim 1, wherein said IDC comprises an infrared or UV sensor to record infrared or UV images.

- 21. The system of claim 1, further comprising a scope-shaped attachment to said IDC, which provides specialized lighting to record fine cracks and crevices in a machine or a building.
- 22. The system of claim 1, wherein said IDC comprises an image pickup, an optical module for forming an image on the image pickup, and an image capturing module for capturing digital images from said image pickup.
- 23. The system of claim 22, wherein said optical module comprises an auto-focus optical system.
- 24. The system of claim 1, wherein said IDC is a portable camera.
- 25. The system of claim 1, wherein said IDC is a stationary camera under the control of said WSARC.
- 26. The system of claim 1, further comprising a mounting device for mounting said IDC and operable to rotate or pivot said IDC, thereby enabling an operator to remotely control said IDC.

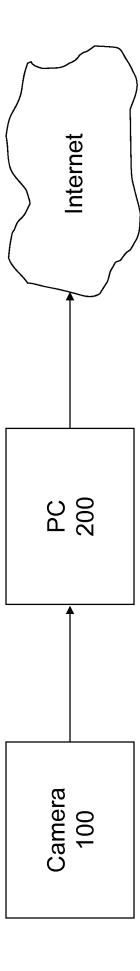

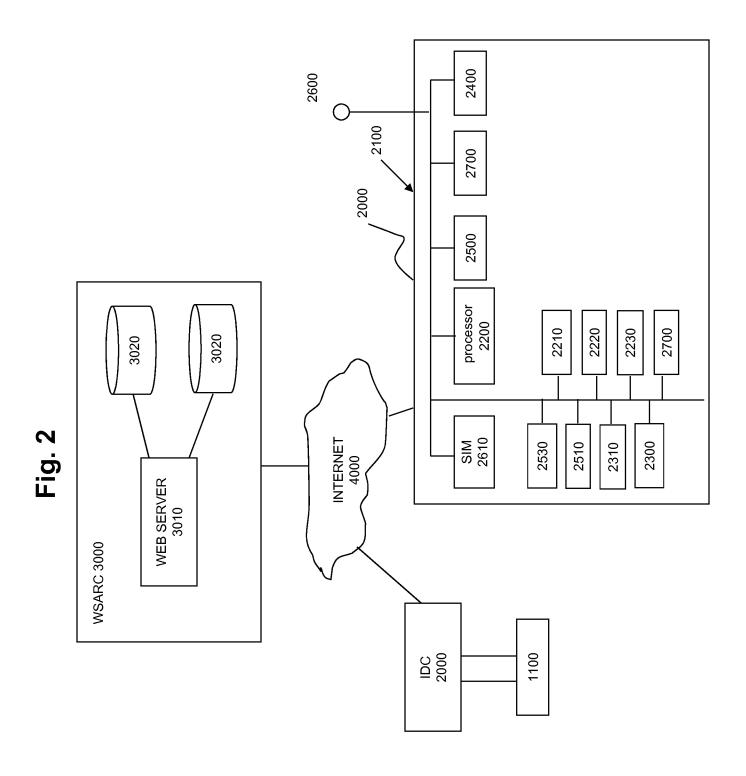

Fig. 1

INTEGRATED INTERNET CAMERA SYSTEM AND METHOD

RELATED APPLICATION

[0001] The present application is a continuation of Application Serial No. 13/415,346 filed March 8, 2012, which is a continuation of Application Serial No. 13/037,303 filed February 28, 2011, now U.S. Patent No. 8,134,600, which is a continuation of Application Serial No. 12/637,277 filed December 14, 2009, now U.S. Patent No. 7,907,172, which is a continuation of Application Serial No. 11/484,373 filed July 11, 2006, now U.S. Patent No. 7,633,524, which claims a priority to U.S. Provisional Patent Application Serial no. 60/702,470, each of which is incorporated herein by reference in its entirety.

FIELD OF THE INVENTION

[0002] The present invention relates to an integrated Internet camera and/or system that is simple to install, operate and maintain, more particularly to an integrated Internet camera and/or video system that seamlessly and automatically transmits, receives, stores and/or archives still images, video and/or audio to and from a web site service/monitor center over the Internet using one or more integrated Internet cameras.

BACKGROUND OF THE INVENTION

[0003] The increasing use and awareness of the utility afforded by the Internet has transformed this simple image recording or capture process into a more complicated process requiring permanent storage and providing a secure centralized access to such storage from any remote location.

[0004] The currently available camera systems available are rigid and expensive. These systems are complex and require a host of peripheral devices to place an image on the Internet or Web. Additionally, these systems are bulky and not very portable. Moreover, the user must install one or more software to operate such camera systems. In a security monitoring application, these camera systems require a qualified operator to operate and maintain such system.

[0005] An example of such prior camera system is shown in FIG. 1. In order for an operator to transfer the still image, video and/or audio file from a video camera 100 to an account on the Internet or Web, the operator must connect the video camera 100 to a

personal computer PC 200. The still image, video and/or audio file is transferred and stored in the PC 200 before it is transferred or uploaded onto the Internet. That is, the camera 100 must be connected to a network device (e.g., PC 200) before it can transmit or receive still image, video or audio files.

[0006] Some have attempted to resolve this problem by purchasing a network card (wired or wireless) to enable their camera 100 to connect to the Internet without a separate network device (i.e., PC 200). However, such solution is only available if the camera 100 can accept such network card and does not provide two-way access to the image file, i.e., transmitting to storage and receiving from storage. Additionally, such solution generally requires the operator to install the network card and accompanying software to "network" enabled camera 100.

[0007] Therefore, it is desirable to have an integrated Internet camera system that can seamlessly upload and download video and/or audio files to and from the Internet, transmits these files to another web-enabled portable device (e.g., another camera, a personal digital assistant (PDA), a cell phone and the like), receive/download video and/or audio files from another portable device and/or store/archive these files in a secure website without the necessity of connecting to another device, such as a PC 200.

OBJECTS AND SUMMARY OF THE INVENTION

[0008] There are many commercial and general consumer needs for this integrated Internet camera system. Some examples are in the fields of security, engineering, entertainment, advertising, child care monitoring and personal use, such as for family social occasions.

[0009] Accordingly, it is an object of the present invention to provide an integrated Internet camera system ("IICS") that allows even the novice users to seamlessly link their Internet direct cameras ("IDC") to a dedicated website of the IICS operator (such as a website archive and review center ("WSARC") to begin recording/storing/archiving of the images on the WSARC by simply powering their IDC. The present invention's ease of use, less working parts, lower maintenances, lower expenses, and easily accessible support enables the novice users to quickly employ and enjoy the IICS of the present invention. Additionally, the IICS is very flexible, it can be easily expanded and customized to provide a host of services and meet various needs of both personal and commercial users.

[0010] It is another object of the present invention to provide the IICS as aforesaid, which comprises IDC that can automatically and seamlessly connect to the WSARC by simply powering on the IDC. That is, when an operator takes a picture, the IDC automatically transmits the image to the WSARC.

[0011] Accordingly, it is an object of the present invention to provide an inexpensive and efficient camera having all necessary functionality for transmission and reception of real-time, stored and archived digital images to and from the Internet in a single, portable standalone apparatus (i.e., an embedded system), without requiring the use of an external controlling apparatus such as a personal computer.

[0012] Another object of the present invention is to provide a WSARC that enables an authorized user to schedule transmission of digital images to one or more IDC(s) upon receipt of an image from an IDC associated with that authorized user.

[0013] A further of the present invention is to provide a portable, standalone camera that initiates transmission of digital images to the Internet, i.e., WSARC, upon an image capture.

[0014] In accordance with an embodiment of the present invention, an integrated Internet camera system for transmitting digital images to an Internet address comprises an image pickup, an optical module for forming an image on the image pickup, and an image capturing module for capturing digital images from the image pickup. A wireless device or SIMMS card connects and maintains the IDC's connection to the Internet for transmission of the digital image files to a user account associated with the IDC at a predetermined Internet address (i.e., WSARC) and transfers the digital image files to the user account. The digital image files in the user account are then available to authorized users of the account. Depending on the access privilege such authorized user may access the entire or a portion of the stored/archived digital image files.

[0015] In accordance with an embodiment of the present invention, an integrated Internet camera system comprises a website archive and review center (WSARC) for storing, archiving and managing images and an Internet direct camera (IDC) for capturing an image, automatically transmitting the image to an account associated with said IDC on the WSARC upon image capture and receiving stored/archived image from the WSARC. The IDC comprises a display for displaying the captured image and the received image. The IDC automatically connects to the WSARC over an Internet connection on power-up.

BRIEF DESCRIPTION OF THE DRAWINGS

[0016] The present invention is further explained in the description which follows with reference to the drawings, illustrating, by way of non-limiting examples, various embodiments of the invention, with like reference numerals representing similar parts throughout the several views, and wherein:

[0017] Fig. 1 shows a conventional stationary camera which captures and transmits images to the Internet using a local PC; and

[0018] Fig. 2 illustrates an Integrated Internet camera system in accordance with an exemplary embodiment of the present invention.

DETAILED DESCRIPTION OF THE EMBODIMENTS

[0019] Turning now to Fig. 2, there is illustrated an integrated Internet camera system (IICS) 1000 in accordance with an embodiment of the present invention comprising a plurality Internet direct cameras (IDCs) 2000 connected to a website archive and storage center (WSARC) 3000 over the Internet 4000. The WSARC 3000 comprises a web server 3010 and one or more database 3020 to store and/or archive images received from the IDCs 2000. The IICS 1000 uses the IDC 2000 (preferably a multi-mode camera) to transmit a still image, video and audio (collectively referred to herein as the "data"), onto the Internet 4000 via a multi mode Internet Access Antenna (IAA) 2600 to a monitored WSARC 3000. The IDC 2000 can connect to the Internet via, but not limited to, land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, Wi-Max and the like. Preferably, the IDC 2000 connects to the Internet via a primary mode of communication and switches over the secondary mode of communication if the IDC 2000 detects a failure in the primary mode of communication. For example, if the IDC 2000 is programmed or setup to use Wi-Fi as a primary mode of communication, the IDC 2000 can switch to a cellular communication if the Wi-Fi communication is lost or unavailable.

[0020] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises an embedded address, a subscriber identification module (SIM) card 2610 or other comparable device or means to enable the IDC's connection to the WSARC 3000 to be embedded, preset, encrypted, proprietary and firewall protected. If the IDC 2000 is faulty or inoperable, the user can simply remove its SIM card 2610 and install it in the new IDC 2000. That is, the SIM card 2610 is interchangeable from one IDC 2000 to another IDC 2000.

[0021] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a microcontroller or microprocessor 2200 for controlling the various

components of the IDC 2000, a display 2300, preferably LCD display, to display captured images, an image-forming optical system 2500 for capturing images, a compression module 2210 for compressing captured images, a storage device 2400 for storing and/or archiving capture images, an image adjusting module 2220 for performing image processing on a stored/archived digital image and a text module 2230 for superimposing text information on a stored/archived digital image. In accordance with an embodiment of the present invention, the microcontroller 2200 controls the compression module 2210 to perform image compression, e.g., JPEG, Huffman, wavelet and the like and outputs images in JPEG, TIFF, GIFF and other known formats for storage in the storage device 2400 and/or transmission to the WSARC 3000. The microcontroller 2200 also can control the image adjusting module 2220 to adjust the resolution of image stored/archived in the storage device 2400 on a continuous scale with preferred preservation of aspect ratio either before or after storage therein or before or after transmission to the WSARC 3000.

[0022] All of the electronic, mechanical, optical and display components of the IDC 2000 are housed within a camera body 2100. A viewfinder 2530 allows the operator to view a scene corresponding to, or identical to, an image formed on an image pickup 2510 of the IDC 2000 via the image-forming optical system 2500. The image-forming optical system 2500 can comprises a zoom lens or an auto-focus system.

[0023] The display 2300 displays the results of user interaction, status reporting to the user and images/vides captured or received by the IDC 2000. The storage device 2400 can be a memory, a hard drive, a DRAM, a NAND, a flash memory, a memory stick, a storage disk and the like. It is appreciated that IDC 2000 without the storage device 2400 has the benefit of lowering the cost of the IDC 2000. The storage device 2400 advantageously enables the user to continue recording even if the Internet connection is temporarily lost or unavailable.

[0024] Instead of the viewfinder 2530, the IDC 2000 in accordance with an embodiment of the present invention utilizes a detachable or integrated full video (LCD) display 2300. Accordingly, the display 2300 is a color or grayscale (video) LCD, and the microcontroller 2200 drives the display 2300 to show images formed on the image pickup 2510.

[0025] In accordance with an exemplary embodiment of the present invention, the storage device 2400 records the data constantly, preferably with a chosen time frame override. In accordance with an aspect of the present invention, the IDC 2000 transmits

the data to the WSARC 3000 and simultaneously records the data on the storage device 2400.

[0026] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a meter that shows amount of time or data remaining to be transmitted to the WSARC 3000.

[0027] In accordance with an exemplary embodiment of the present invention, the storage device 1120 records the data when the Internet connection is lost. The IDC 2000 transmits the stored/archived data when the Internet connection to the WSARC 3000 is re-established. Preferably, the storage device 2400 records the data until all recorded data is sent to the WSARC 3000 over the Internet 4000 and then move seamlessly to transmitting live data without loss of data.

[0028] In accordance with an exemplary embodiment of the present invention, the storage device 1120 records the data where Internet access is unavailable, such as a factory or a remote site. Periodically, the IDC 2000 can be moved to a site where Internet access is available and the recordings can be transmitted to the WSARC 3000. In accordance with an embodiment of the present invention, the IDC 2000 can be replaced with another IDC 2000 so the recording is continuous. Preferably, the storage device 2400 is removable such that the storage device 2400 is periodically replaced with a new one so that the recording is continuous. The recordings on the removed IDC 2000 and/or the storage device 1120 are then transferred to the WSARC 3000.

[0029] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a light indicator, such as an LED 2310, indicating whether the IDC 2000 is connected to the Internet (i.e., the WSARC 3000). The LED 2310 is "green" to indicate that the IDC 2000 is connected to the WSARC 3000 and "red" to indicate that the IDC 2000 is not connected to the WSARC 3000. This will advantageously enable the user or operator of the IDC 2000 to know the status of the Internet connection immediately. In accordance with an aspect of the present invention, if the WSARC 3000 loses connection to an IDC 2000, the WSARC 3000 sends an email to a predetermined address or places a phone call to a predetermined number (or other comparable notification means) designated by the registered user of the IDC 2000.

[0030] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a motion sensor 2700 for activating the recording only when the motion sensor 2700 detects motion. For example, this can be useful for monitoring remote, unpopulated locations, such as a warehouse or a factory in off-hour or a summer

or winter home in off-season, for any unauthorized intrusion. Preferably, the IDC 2000 only records when the motion sensor 2700 detects an activity or motion within a monitoring area or site. In accordance with an aspect of the present invention, upon activation of the IDC 2000, the WSARC 3000 can be setup or program to send an email to a predetermined address or place a phone call to a predetermined number (or other comparable notification means), which can be designated by the registered user of the IDC 2000.

[0031] In accordance with an exemplary embodiment of the present invention, the IDC 2000 can be placed or mounted on a mounting device 1100 which can rotate or pivot the IDC 2000, thereby enabling the operator to remotely control the IDC 2000 via the WSARC 3000. As noted herein, for example, when the registered user receives an email or a phone call that the IDC 2000 has detected an activity within a warehouse, the registered user can log onto the WSARC 3000 and remotely operate one or more IDCs 2000 within the warehouse to determine the cause of this activity. Alternatively, an operator associated with the WSARC 3000 can remotely operate one or more IDCs 2000 within the warehouse to determine the cause of this activity. Such remote monitoring capability with the IICS 1000 enables the operator of the WSARC 3000 or the registered user to quickly determine if the activity is a false alarm or real intrusion that needs to be dealt with and reported to the local police authority.

[0032] In accordance with an exemplary embodiment of the present invention, the WSARC 3000 is staffed with operators, technicians, security personnel and the like to provide a full monitoring service, such as 24/7 (24 hours/7 days a week) monitoring service. If the operator of the WSARC 3000 determines if there is an incident or event warranting a investigation within a remote monitoring site, such as a home, office, warehouse, etc., the operator can dispatch a security personnel to investigate the incident.

[0033] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a battery 2800, which provides power to all of the components of the IDC 2000. It is appreciated that IDC 2000 can be powered by any variety of power sources. The IDC 2000 can be powered exclusively by the internal battery 2800 or by other power sources, such as solar power or AC power with the internal battery 2800 serving as a backup power source. Preferably, the internal battery 2800 is a rechargeable battery that can be recharged by solar or electrical power. The rechargeable battery can incorporate an AC adapter, preferably provided outside the IDC 2000 in order to reduce the size of the camera. The AC adapter plugs into a conventional AC outlet, and can be a

"Universal" AC adapter connectible to various worldwide AC supplies. In accordance with an embodiment of the present invention, the IDC 2000 can be setup or programmed to alert the WSARC 3000 to send an email to a predetermined address or place a call to predetermined number (or other comparable notification means) when the IDC 2000 determines the power of the battery 2800 is below a predetermined threshold. Additionally, the WSARC 3000 automatically sends an email to a predetermined address or place a call to a predetermined number (or other comparable notification means) when the WSARC 3000 is unavailable to communicate with WSARC 3000 for any reason, such as loss of power, loss of Internet connection, etc. This advantageously alerts the registered user of the IDC 2000 to replace the IDC's battery 2800.

[0034] In accordance with an exemplary embodiment of the present invention, the IDC 2000 can be used as a cell phone employing voice over IP (VOIP) via the Internet connection or traditional cellular network for voice communication and/or data transmission, such as text messages. Additionally, the IDC 2000 can use the Internet connection to download live or recorded audio and/or video content from the Internet. The necessary hardware and software components can reside within the IDC 2000 or in a separate device removable attachable to the IDC 2000.

[0035] In accordance with an exemplary embodiment of the present invention, the IICS 1000 is deployed in a warehouse with 10 IDCs 2000. The registered user or an operator of the WSARC 3000 can view all ten IDCs 2000 individually, together or in a group. It is appreciated that more IDCs 2000 can be added or distributed over multiple warehouses or buildings.

[0036] In accordance with an exemplary embodiment of the present invention, the image pickup 2510 of the IDC 2000 can be infrared or UV light sensor suitable for recording or generating infrared or UV images. Preferably, the IDC 2000 comprises a scope-shaped attachment the can provide specialized lighting and/or scope-shaped magnified zoom lens to provide specialized viewing. For example, this enables the IDC 2000 to record fine cracks and crevices in machinery and/or building. The infrared light capability advantageously permits the IICS 1000 to operate in low light to monitor building or warehouse at night.

[0037] In accordance with an exemplary embodiment of the present invention, the WSARC 3000 is accessible by registered users and users authorized by registered users using their login name and password. The registered user can give other users access or viewing rights to certain files, folders, etc. on a permanent or temporary basis. That is,

the user's ability to view recordings or data stored/archived in the WSARC 3000 will be dictated by the rights assigned to the user. The grouping and granting of certain viewing rights can be pre-set by the registered user or owner of the account. In accordance with an exemplary embodiment of the present invention, the WSARC 3000 can provide temporary access based on certain preference or fee. For example, to help cover the cost of recording Little League baseball games, a registered user can establish an account so parents, grandparents and friends of the players can access and download the recordings of the games for a fee. The fee can be one-time fee (i.e., for the entire season), per game, per access, etc.

[0038] It is appreciated that WSARC 3000 comprises standard known tools to enable the registered user can organize their images. In accordance with an exemplary embodiment of the present invention, the registered user can organize the images by location, e.g., warehouse, home, country house, etc., using a file folder hierarchy structure. When a user clicks on one of the displayed location, the WSARC 3000 displays another menu listing the groups within that location. For example, when a user clicks the location labeled "warehouse," the WSARC 3000 can list the following groups: office, garage, interior warehouse, outside perimeter, parking lot, etc. When a user clicks the location labeled "home," the WSARC 3000 can list the following groups: 1st floor, 2nd floor, living room, dining room, kitchen, garage, bedroom 1, bedroom 2, basement, outside perimeter, etc.

[0039] In accordance with an exemplary embodiment of the present invention, the WSARC 3000 can archive the recordings by date (such as year), name, or by event titled by the registered user. That is, the registered user can name or rename the recordings. This advantageously enables the user to search the archive by date, name or event. The registered user can label the events such as weddings, birthdays, anniversaries, etc. When a user clicks on an event labeled "birthdays," the WSARC 3000 displays a list of all of titles named "birthday," for example:

Rita Marie's 1st Birthday Rita Marie's 16th Birthday Frankie's 1st Birthday Mommy's 30th Birthday Grandma's 70th Birthday

It is appreciated that these events is also searchable by date and name. These events would be available to search by date and by group name. Whichever method is easier for the user to find, this all depends on the detail of label a given user employs.

[0040] In accordance with an exemplary embodiment of the present invention, the text module 2230 enables the registered user to type over the images before the images are transmitted to the WSARC 3000. Preferably, the LCD display 2300 comprises a touch keypad for entering text and labeling the image before it is transmitted to the WSARC 3000.

[0041] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a plug-in, e.g., USB port, for a microphone or headphones, to enable to the user to record voice over the live or recorded images. Alternatively, the WSARC 3000 comprises tools to enable the registered user to edit the recorded images to record voice over the stored/archived images to clarify, comment or explain the recorded images.

[0042] In accordance with an exemplary embodiment of the embodiment of the present invention, each account at WSARC 3000 can be assigned to one or more registered users, thereby permitting each registered user of the account to seamlessly transmit and receive images from the other registered user. For example, the parents are vacationing in Europe, the grandparents live in Brazil, Rita Marie is skiing in New Zealand and Frankie is diving in Hawaii. The IICS 1000 of the present invention enables the parents to seamlessly receive images from and transmit images to their daughter in New Zealand, the grandparents in Brazil and their son in Hawaii.

[0043] In accordance with an exemplary embodiment of the present invention, the IDC 2000 comprises a web browser linked to the Internet 4000. The registered user can use the IDC 2000 to retrieve or view stored/archived images in its account on the WSARC 3000, manage its WSARC account, send/receive emails via an email account established on the WSARC 3000 or surf the Internet.

[0044] In accordance with an exemplary embodiment of the present invention, the registered user can access the WSARC 3000 using the IDC 2000 or a standard computer to retrieve, view stored/archived images, email stored/archived images or download stored/archived images onto a CD, DVD and the like.

[0045] The IDC 2000 of the present invention comprises all of the standard known components to capture digital images, make a connection to the Internet, and transmit images over the Internet. This advantageously enables the IDC 2000 to be used in many applications, such as in entertainment, advertising, education, security, traffic monitoring, weather monitoring, child care monitoring, surveillance, and general consumer applications.

[0046] Although the above description sets forth particular embodiments of the present invention, modifications of the invention will be readily apparent to those skilled in the art, and it is intended that the scope of the invention be determined solely by the appended claims.

DECLARATION AND ASSIGNMENT FOR PATENT AND DESIGN APPLICATIONS

United States Patent Rights, or United States Plus all Foreign Patent Rights

Title of Invention

→ INTEGRATED INTERNET CAMERA SYSTEM AND METHOD

As a below named inventor (hereinafter designated as the undersigned), I hereby declare that:

Application not Attached

This declaration is directed to the application attached hereto. If the application is not attached hereto, the application is as identified by the attorney docket number as set forth above and/or the following:

Enter Appln. No.

United States Application Number or PCT International Appln. No.

13/925,498

Enter Filing Date

⇒ filed on

June 24, 2013

The above-identified application was made or authorized to be made by me.

I believe that I am the original inventor or an original joint inventor of a claimed invention in the application,

I have reviewed and understand the contents of the above-identified application, including the claims.

I acknowledge the duty to disclose information which is material to patentability as defined in Title 37, Code of Federal Regulations § 1.56.

WHEREAS, the undersigned has invented certain new and useful improvements described in the application identified.

Insert Name of Assignee

S WHEREAS, ALEX IS THE BEST, LLC

Insert Address of Assignee

4 of 75-82ND STREET, BROOKLYN, NEW YORK 11209,

its heirs, successors, legal representatives and assigns (hereinafter designated as the Assignee) is desirous of acquiring the entire right, title and interest in and to said invention and in and to any Letters Patent(s) that may be granted therefor in the United States of America and

Check Box if Appropriate →
in any foreign countries.

NOW, THEREFORE, for good and valuable consideration, the receipt of which is hereby acknowledged, the undersigned has sold, assigned and transferred, and by these presents does (do) sell, assign and transfer unto said Assignee the full and exclusive right to the said invention in the United States of America, its territories, dependencies and possessions and the entire right, title and interest in and to any and all Letters Patent(s) which may be granted therefor in the United States of America, its territories, dependencies and possessions, and if the box above is designated, in any and all foreign countries; and to any and all divisions, reissues, continuations, conversions and extensions thereof for the full term or terms for which the same may be granted.

The undersigned agrees to execute all papers necessary in connection with this application and any continuing, divisional, conversion or reissue applications thereof and also to execute separate assignments in connection with such applications as the Assignee may deem necessary or expedient.

The undersigned agrees to execute all papers necessary in connection with any interference which may be declared concerning this application or continuation, division, conversion or reissue thereof or Letters Patent(s) or reissue patent issued thereon and to cooperate with the Assignee in every way possible in obtaining and producing evidence and proceeding with such interference.

The undersigned agrees to execute all papers and documents and to perform any act which may be necessary in connection with claims or provisions of the International Convention for the Protection of Industrial Property or similar agreements.

The undersigned agrees to perform all affirmative acts which may be necessary to obtain a grant of (a) valid United States of America patent(s) or a grant of (a) valid United States of America and any foreign patent(s) to the Assignee and to vest all rights therein hereby conveyed to said Assignee as fully and entirely as the same would have been held by the undersigned if this Assignment and sale had not been made.

The undersigned hereby authorizes and requests the Patent and Trademark Office Officials in the United States of America and in any foreign countries to issue any and all Letters Patent(s) resulting from said application or any continuing, divisional conversion or reissue applications thereof to the said Assignee, as Assignee of the entire interest, and hereby covenants that he has the full right to convey the entire interest herein assigned, and that he has not executed, and will not execute, any agreement in conflict herewith.

The undersigned hereby grants the law firm of IM IP LAW PLLC the power to insert any further identification which may be necessary or desirable in order to comply with the rules of the U.S. Patent and Trademark Office.

The undersigned hereby covenants that no assignment, sale, agreement or encumbrance has been or will be made or entered into which would conflict with this assignment.

The undersigned hereby acknowledges that any willful false statement made in this declaration is punishable under 18 U.S.C. § 1001 by fine or imprisonment of not more than five (5) years, or both.

In witness whereof, executed by the undersigned on the date opposite the undersigned name.

Statement under 37 CFR 1.55 or 1.78 for AIA (First Inventor to File) Transition Applications: No

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The U.S. offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to promote and facilitate business investment. SelectUSA provides information assistance to the international investor community; serves as an ombudsman for existing and potential investors; advocates on behalf of U.S. cities, states, and regions competing for global investment; and counsels U.S. economic development organizations on investment attraction best practices. To learn more about why the United States is the best country in the world to develop technology, manufacture products, deliver services, and grow your business, visit http://www.SelectUSA.gov or call +1-202-482-6800.

8134600							
8477197							

as the term of said prior patent is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the prior patent are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns. In making the above disclaimer, the owner does not disclaim the terminal part of the term of any patent granted on the instant application that would extend to the expiration date of the full statutory term of the prior patent, "as the term of said prior patent is presently shortened by any terminal disclaimer," in the event that said prior patent later: expires for failure to pay a maintenance fee; is held unenforceable; - is found invalid by a court of competent jurisdiction; is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321 - has all claims canceled by a reexamination certificate; - is reissued; or - is in any manner terminated prior to the expiration of its full statutory term as presently shortened by any terminal disclaimer. Terminal disclaimer fee under 37 CFR 1.20(d) is included with Electronic Terminal Disclaimer request. **(•**) I certify, in accordance with 37 CFR 1.4(d)(4), that the terminal disclaimer fee under 37 CFR 1.20(d) O required for this terminal disclaimer has already been paid in the above-identified application. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2). Applicant(s) status remains as SMALL ENTITY. Applicant(s) status remains as other than SMALL ENTITY. I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon. THIS PORTION MUST BE COMPLETED BY THE SIGNATORY OR SIGNATORIES I certify, in accordance with 37 CFR 1.4(d)(4) that I am: An attorney or agent registered to practice before the Patent and Trademark Office who is of record in ◉ this application Registration Number 40657 A sole inventor A joint inventor; I certify that I am authorized to sign this submission on behalf of all of the inventors A joint inventor; all of whom are signing this request The assignee of record of the entire interest that has properly made itself of record pursuant to 37 CFR 3.71 Signature /C. ANDREW IM/ Name C. ANDREW IM IPR2017-02058, Petitioner Google Inc.

*Statement under 37 CFR 3.73(b) is required if terminal disclaimer is signed by the assignee (owner). Form PTO/SB/96 may be used for making this certification. See MPEP \S 324.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

TITLE OF INVENTION: INTEGRATED INTERNET CAMERA SYSTEM AND METHOD

APPLN. TYPE	ENTITY STATUS	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	SMALL	\$890	\$300	\$0	\$1190	12/30/2013

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE

Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450

or <u>Fax</u> (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for

5. Change in Entity Status (from status indicated above)	
Applicant certifying micro entity status. See 37 CFR 1.29	NOTE: Absent a valid certification of Micro Entity Status (see form PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.
Applicant asserting small entity status. See 37 CFR 1.27	<u>NOTE:</u> If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.
Applicant changing to regular undiscounted fee status.	<u>NOTE</u> : Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.
NOTE: The Issue Fee and Publication Fee (if required) will not be accepted interest as shown by the records of the United States Patent and Trademark	f from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in Office.
Authorized Signature	Date

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Primary Examiner, Art Unit 2662			

U.S. Patent and Trademark Office PTOL-37 (Rev. 08-13)

Application/Control Number: 13/925,498 Page 2

Art Unit: 2663

DETAILED ACTION

1. The terminal disclaimers filed on 9/11/2013 disclaiming the terminal portion of

any patent granted on this application which would extend beyond the expiration date of

US 7633524, 7907172, 8134600 and 8477197 have been reviewed and approved. The

terminal disclaimers have been recorded.

Information Disclosure Statement

2. An initialed and dated copy of Applicant's IDS form 1449 is attached to the

instant office action.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The prior art teaches the method of transmitting and receiving still or video

images by an Internet direct device associated with a user over a communications

network. The prior art also teaches the method of automatically connecting the Internet

direct device to said communications network on power-up using one of a plurality of

available modes of connection, which is designated as a primary mode of connection,

capturing still or video images by an image capture system of the Internet direct

device. The prior art does not disclose or render obvious the method above that also

includes the transmitting of the captured still or video images to an account associated

Art Unit: 2663

with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device and receiving still or video images from said WSARC over the communications network by the Internet direct device and then automatically switching to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance".
- **5.** The prior arts made of record and not relied upon are considered pertinent to applicant's disclosure:

Creamer; Rob et al. (US 6930709 B1) discloses an integrated internet/intranet camera.

Suzuki; **Katsuyoshi** (US 6980232 B2) discloses an Image transmitting Internet camera.

Yamagishi; **Yoichi** (US 7272641 B2) discloses an image information managing system.

Petermann; Jerry (US 7395056 B2) discloses a time-shared full duplex protocol for use with a wireless communications system with artificial intelligence-based distributive call routing.

Art Unit: 2663

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to QUANG LE whose telephone number is (571)270-5014. The examiner can normally be reached on Monday through Friday 8:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Hannett can be reached on (571)272-7309. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

SYSTEM AND METHOD

AMENDMENT AFTER ALLOWANCE UNDER 37 CFR 1.312

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

INTRODUCTORY COMMENTS

Prior to issuance of the patent, applicant respectfully requests entry of this amendment under 37 C.F.R. 1.312 for the above-captioned patent application.

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks/Arguments begin on page 10 of this paper.

LISTING OF THE CLAIMS

1-26. (Canceled)

27. (Previously presented) A method for transmitting and receiving still or video images by an Internet direct device associated with a user over a communications network, comprising the steps of:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device:

transmitting the captured still or video images to an account associated with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device;

receiving still or video images from said WSARC over the communications network by the Internet direct device; and

automatically switching to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 28. (Previously presented) The method of claim 27, wherein the step of automatically switching comprises the step of switching to one of the following available modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-Max.
- 29. (Previously presented) The method of claim 27, further comprising the steps of locally storing the captured still or video images in a storage device of the Internet direct device by the microprocessor when the connection to said communications network is unavailable, and transmitting the stored still or video images to said WSARC by the microprocessor when the connection to said communications network is re-established.

30. (Previously presented) The method of claim 27, further comprising the step of selecting another available mode of connection as the primary mode of connection.

31. (Previously presented) The method of claim 27, further comprising the step of communicating with other Internet direct devices by the Internet direct device associated with the user over said communications network.

- 32. (Previously presented) The method of claim 31, further comprising the step of communicating with other Internet direct devices via voice over IP by the Internet direct device associated with the user.
- 33. (Previously presented) The method of claim 31, further comprising the step transmitting and receiving still or video images to and from said other Internet direct devices by the microprocessor of the Internet direct device associated with the user over said communications network.
- 34. (Previously presented) The method of claim 31, further comprising the step of transmitting and receiving audio to and from said other Internet direct devices by the microprocessor of the Internet direct device associated with the user over said communications network.
- 35. (Previously presented) The method of claim 27, further comprising the steps of displaying the still or video images on a display of the Internet direct device, and receiving texts from the user by the Internet direct device.
- 36. (Previously presented) The method of claim 27, further comprising the step of accessing the Internet using a web browser of the Internet direct device over said communications network.
- 37. (Previously presented) The method of claim 36, further comprising the step of downloading live or recorded audio or video images from a website by the microprocessor of the Internet direct device over said communications network.

3

38. (Previously presented) The method of claim 27, further comprising the step of compressing the captured still or video images.

39. (Previously presented) A non-transitory storage medium comprising a program for transmitting and receiving still or video images over a communications network when executed by an Internet direct device associated with a user to cause the Internet direct device to:

automatically connect to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capture still or video images by an image capture system of the Internet direct device:

transmit said captured still or video images to an account associated with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device;

receive still or video images from said WSARC over the communications network; and

automatically switch to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 40. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to locally store the captured still or video images in a storage device when the connection to said communications network is unavailable, and transmits the stored still or video images to said WSARC when the connection to said communications network is re-established.
- 41. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to communicate with other Internet direct devices over said communications network.

42. (Previously presented) The storage medium of claim 41, the program when executed causes the Internet direct device to communicate with other Internet direct devices via voice over IP.

- 43. (Previously presented) The storage medium of claim 41, the program when executed causes the Internet direct device to transmit and receive still or video images to and from said other Internet direct devices over said communications network.
- 44. (Previously presented) The storage medium of claim 41, the program when executed causes the Internet direct device to transmit and receive audio to and from said other Internet direct devices over said communications network.
- 45. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to access the Internet using a web browser over said communications network.
- 46. (Previously presented) The storage medium of claim 45, the program when executed causes the Internet direct device to download live or recorded audio or video images from a website over said communications network.
- 47. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to compress the captured still or video images.
- 48. (Previously presented) A method for transmitting and receiving still or video images by an Internet direct device associated with a user over a communications network, comprising the steps of:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device;

transmitting the captured still or video images to another Internet direct device over said communications network upon image capture by a microprocessor of the

Internet direct device;

receiving still or video images from said other Internet direct device over said

communications network by the Internet direct device; and

automatically switching to another available mode of connection by the

microprocessor when the Internet direct device detects that said primary mode of

connection to the communications network is unavailable.

49. (Previously presented) The method of claim 48, wherein the step of automatically

switching comprises the step of switching to one of the following available modes of

connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-

Max.

50. (Previously presented) The method of claim 48, further comprising the steps of locally

storing the captured still or video images in a storage device of the Internet direct device

by the microprocessor when the connection to said communications network is

unavailable.

51. (Previously presented) The method of claim 48, further comprising the step of

transmitting and receiving audio to and from said other Internet direct devices by the

microprocessor of the Internet direct device associated with the user over said

communications network.

52. (Previously presented) The method of claim 48, further comprising the step of selecting

another available mode of connection as the primary mode of connection.

53. (Previously presented) The method of claim 48, further comprising the step of

communicating with other Internet direct devices by the Internet direct device associated

with the user over said communications network.

6

54. (Previously presented) The method of claim 48, further comprising the step of communicate with other Internet direct devices via voice over IP by the Internet direct device associated with the user.

- 55. (Previously presented) The method of claim 48, further comprising the steps of displaying the still or video images on a display of the Internet direct device, and receiving texts from the user by the Internet direct device.
- 56. (Previously presented) The method of claim 48, further comprising the step of accessing the Internet using a web browser of the Internet direct device over said communications network.
- 57. (Previously presented) The method of claim 56, further comprising the step of downloading live or recorded audio or video images from a website by the microprocessor of the Internet direct device over said communications network.
- 58. (Currently amended) A non-transitory storage medium comprising a program for transmitting and receiving still or video images over a communications network when executed by an Internet direct device associated with a user to cause the Internet direct device to:

automatically <u>connect</u> <u>connecting</u> the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

eapturing capture still or video images by an image capture system of the Internet direct device;

transmitting transmit the captured still or video images to another Internet direct device over said communications network upon image capture by a microprocessor of the Internet direct device;

receiving receive still or video images from said other Internet direct device over said communications network by the Internet direct device; and

automatically <u>switch</u> <u>switching</u> to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of

connection to the communications network is unavailable.

59. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to automatically switch to one of the following available

modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi,

and Wi-Max.

60. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to locally store the captured still or video images in a

storage device when the connection to said communications network is unavailable.

61. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to transmit and receive audio to and from said other

Internet direct devices over said communications network.

62. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to communicate with other Internet direct devices over

said communications network.

63. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to communicate with other Internet direct devices via

voice over IP by the Internet direct device associated with the user.

64. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to display the still or video images on a display and

receive texts from the user.

65. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to access the Internet using a web browser over said

communications network.

8

66. (Previously presented) The storage medium of claim 58, the program when executed causes the Internet direct device to download live or recorded audio or video images from a website over said communications network.

REMARKS

Applicant has amended claim 58 to correct inadvertent typographical errors without

adding new matter, e.g., "automatically connecting" was amended to "automatically connect".

Therefore, applicant respectfully requests entry of this amendment under 37 C.F.R.

1.312.

The Examiner is invited to contact the undersigned attorney to address any questions

and/or to expedite the prosecution of this application.

In the event the U.S. Patent and Trademark Office determines that an extension is

required, applicant petitions for any required relief including extensions of time and authorizes

the Commissioner to charge the cost of such petitions and/or other fees due in connection with

the filing of this document to Deposit Account No. 50-5354 referencing docket no.

PETITION TO ACCEPT AMENDMENT AFTER ISSUE FEE PAYMENT

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

Applicant has submitted attached Amendment After Allowance to correct inadvertent typographical errors in allowed claim 58. Applicant did not become aware of this typographical error until shortly after the payment of the Issue Fee. Applicant inadvertently converted the verbs into "gerunds" in claim 58, e.g., inadvertently recited "connecting" instead of "connect." In fact, as shown in the Attached Electronic Acknowledgment Receipt, applicant filed the Amendment After Allowance within approximately 16 hours of paying the Issue Fee.

Therefore, applicant respectfully requests entry of the amendment under 37 C.F.R. 1.312 to ensure that patent issues with claims that define applicant's invention in clear and definite term.

Applicant believes no fee is due other than the petition fee. In the event the U.S. Patent and Trademark Office determines that additional fee is due or an extension is required, applicant petitions for any required relief including extensions of time and authorizes the Commissioner to charge the cost of such petitions and/or other fees due in connection with the filing of this document to Deposit Account No. 50-5354 referencing docket no. CLEM201.5US.

SYSTEM AND METHOD

AMENDMENT AFTER ALLOWANCE UNDER 37 CFR 1.312

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

INTRODUCTORY COMMENTS

Prior to issuance of the patent, applicant respectfully requests entry of this amendment under 37 C.F.R. 1.312 for the above-captioned patent application.

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks/Arguments begin on page 10 of this paper.

LISTING OF THE CLAIMS

1-26. (Canceled)

27. (Previously presented) A method for transmitting and receiving still or video images by an Internet direct device associated with a user over a communications network, comprising the steps of:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device:

transmitting the captured still or video images to an account associated with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device;

receiving still or video images from said WSARC over the communications network by the Internet direct device; and

automatically switching to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 28. (Previously presented) The method of claim 27, wherein the step of automatically switching comprises the step of switching to one of the following available modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-Max.
- 29. (Previously presented) The method of claim 27, further comprising the steps of locally storing the captured still or video images in a storage device of the Internet direct device by the microprocessor when the connection to said communications network is unavailable, and transmitting the stored still or video images to said WSARC by the microprocessor when the connection to said communications network is re-established.

30. (Previously presented) The method of claim 27, further comprising the step of selecting

another available mode of connection as the primary mode of connection.

31. (Previously presented) The method of claim 27, further comprising the step of

communicating with other Internet direct devices by the Internet direct device associated

with the user over said communications network.

32. (Previously presented) The method of claim 31, further comprising the step of

communicating with other Internet direct devices via voice over IP by the Internet direct

device associated with the user.

33. (Previously presented) The method of claim 31, further comprising the step transmitting

and receiving still or video images to and from said other Internet direct devices by the

microprocessor of the Internet direct device associated with the user over said

communications network.

34. (Previously presented) The method of claim 31, further comprising the step of

transmitting and receiving audio to and from said other Internet direct devices by the

microprocessor of the Internet direct device associated with the user over said

communications network.

35. (Previously presented) The method of claim 27, further comprising the steps of

displaying the still or video images on a display of the Internet direct device, and

receiving texts from the user by the Internet direct device.

36. (Previously presented) The method of claim 27, further comprising the step of accessing

the Internet using a web browser of the Internet direct device over said communications

network.

37. (Previously presented) The method of claim 36, further comprising the step of

downloading live or recorded audio or video images from a website by the

microprocessor of the Internet direct device over said communications network.

3

38. (Previously presented) The method of claim 27, further comprising the step of compressing the captured still or video images.

39. (Previously presented) A non-transitory storage medium comprising a program for transmitting and receiving still or video images over a communications network when executed by an Internet direct device associated with a user to cause the Internet direct device to:

automatically connect to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capture still or video images by an image capture system of the Internet direct device;

transmit said captured still or video images to an account associated with the Internet direct device on a website archive and review (WSARC) upon image capture by a microprocessor of the Internet direct device;

receive still or video images from said WSARC over the communications network; and

automatically switch to another available mode of connection by the microprocessor when the Internet direct device detects that said primary mode of connection to the communications network is unavailable.

- 40. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to locally store the captured still or video images in a storage device when the connection to said communications network is unavailable, and transmits the stored still or video images to said WSARC when the connection to said communications network is re-established.
- 41. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to communicate with other Internet direct devices over said communications network.

42. (Previously presented) The storage medium of claim 41, the program when executed causes the Internet direct device to communicate with other Internet direct devices via voice over IP.

- 43. (Previously presented) The storage medium of claim 41, the program when executed causes the Internet direct device to transmit and receive still or video images to and from said other Internet direct devices over said communications network.
- 44. (Previously presented) The storage medium of claim 41, the program when executed causes the Internet direct device to transmit and receive audio to and from said other Internet direct devices over said communications network.
- 45. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to access the Internet using a web browser over said communications network.
- 46. (Previously presented) The storage medium of claim 45, the program when executed causes the Internet direct device to download live or recorded audio or video images from a website over said communications network.
- 47. (Previously presented) The storage medium of claim 39, the program when executed causes the Internet direct device to compress the captured still or video images.
- 48. (Previously presented) A method for transmitting and receiving still or video images by an Internet direct device associated with a user over a communications network, comprising the steps of:

automatically connecting the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

capturing still or video images by an image capture system of the Internet direct device;

transmitting the captured still or video images to another Internet direct device over said communications network upon image capture by a microprocessor of the

Internet direct device;

receiving still or video images from said other Internet direct device over said

communications network by the Internet direct device; and

automatically switching to another available mode of connection by the

microprocessor when the Internet direct device detects that said primary mode of

connection to the communications network is unavailable.

49. (Previously presented) The method of claim 48, wherein the step of automatically

switching comprises the step of switching to one of the following available modes of

connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi, and Wi-

Max.

50. (Previously presented) The method of claim 48, further comprising the steps of locally

storing the captured still or video images in a storage device of the Internet direct device

by the microprocessor when the connection to said communications network is

unavailable.

51. (Previously presented) The method of claim 48, further comprising the step of

transmitting and receiving audio to and from said other Internet direct devices by the

microprocessor of the Internet direct device associated with the user over said

communications network.

52. (Previously presented) The method of claim 48, further comprising the step of selecting

another available mode of connection as the primary mode of connection.

53. (Previously presented) The method of claim 48, further comprising the step of

communicating with other Internet direct devices by the Internet direct device associated

with the user over said communications network.

6

54. (Previously presented) The method of claim 48, further comprising the step of communicate with other Internet direct devices via voice over IP by the Internet direct device associated with the user.

- 55. (Previously presented) The method of claim 48, further comprising the steps of displaying the still or video images on a display of the Internet direct device, and receiving texts from the user by the Internet direct device.
- 56. (Previously presented) The method of claim 48, further comprising the step of accessing the Internet using a web browser of the Internet direct device over said communications network.
- 57. (Previously presented) The method of claim 56, further comprising the step of downloading live or recorded audio or video images from a website by the microprocessor of the Internet direct device over said communications network.
- 58. (Currently amended) A non-transitory storage medium comprising a program for transmitting and receiving still or video images over a communications network when executed by an Internet direct device associated with a user to cause the Internet direct device to:

automatically <u>connect</u> <u>connecting</u> the Internet direct device to said communications network on power-up using one of a plurality of available modes of connection, which is designated as a primary mode of connection;

eapturing capture still or video images by an image capture system of the Internet direct device;

transmitting transmit the captured still or video images to another Internet direct device over said communications network upon image capture by a microprocessor of the Internet direct device;

receiving receive still or video images from said other Internet direct device over said communications network by the Internet direct device; and

automatically switch switching to another available mode of connection by the

microprocessor when the Internet direct device detects that said primary mode of

connection to the communications network is unavailable.

59. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to automatically switch to one of the following available

modes of connection: a land line, DSL, cable, satellite, wireless network, cellular, Wi-Fi,

and Wi-Max.

60. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to locally store the captured still or video images in a

storage device when the connection to said communications network is unavailable.

61. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to transmit and receive audio to and from said other

Internet direct devices over said communications network.

62. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to communicate with other Internet direct devices over

said communications network.

63. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to communicate with other Internet direct devices via

voice over IP by the Internet direct device associated with the user.

64. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to display the still or video images on a display and

receive texts from the user.

65. (Previously presented) The storage medium of claim 58, the program when executed

causes the Internet direct device to access the Internet using a web browser over said

communications network.

8

66. (Previously presented) The storage medium of claim 58, the program when executed causes the Internet direct device to download live or recorded audio or video images from a website over said communications network.

Docket No.: CLEM 201.5US

REMARKS

Applicant has amended claim 58 to correct inadvertent typographical errors without adding new matter, e.g., "automatically connecting" was amended to "automatically connect".

Therefore, applicant respectfully requests entry of this amendment under 37 C.F.R. 1.312.

The Examiner is invited to contact the undersigned attorney to address any questions and/or to expedite the prosecution of this application.

In the event the U.S. Patent and Trademark Office determines that an extension is required, applicant petitions for any required relief including extensions of time and authorizes the Commissioner to charge the cost of such petitions and/or other fees due in connection with the filing of this document to Deposit Account No. 50-5354 referencing docket no. CLEM201.5US.

Dated: October 1, 2013 Respectfully submitted,

By /C. Andrew Im/ C. Andrew Im Registration No.: 40,657 IM IP LAW PLLC 29 Chase Road #355 Scarsdale, New York 10583 Attorneys for Applicant

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

AMENDMENT AFTER ALLOWANCE UNDER 37 CFR 1.312

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

INTRODUCTORY COMMENTS

Prior to issuance of the patent, applicant respectfully requests entry of this amendment under 37 C.F.R. 1.312 for the above-captioned patent application.

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks/Arguments begin on page 10 of this paper.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

ALEX IS THE BEST, LLC, Brooklyn, NY, Assignee (with 37 CFR 1.172 Interest); FRANK CLEMENTE, BROOKLYN, NY;

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage and facilitate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit SelectUSA.gov.

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently http://pair.uspto.gov/. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.
