UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

APPLE INC.,
Petitioner,

v.

UNILOC USA, INC. and UNILOC LUXEMBOURG S.A.,¹

Case IPR2017-00223
Patent 8,724,622 B2

Before MIRIAM L. QUINN, KERRY BEGLEY, and
CHARLES J. BOUDREAU, *Administrative Patent Judges*.

BOUDREAU, *Administrative Patent Judge*.

DECISION
Denying Institution of *Inter Partes* Review
37 C.F.R. § 42.108

¹ Patent Owner's Mandatory Notice filed pursuant to 37 C.F.R. § 42.8 identifies Uniloc USA, Inc. and Uniloc Luxembourg S.A. as Patent Owner and as real parties in interest. Paper 4 at caption, 1. Therefore, we adjust the case caption to include Uniloc USA, Inc.

I. INTRODUCTION

Apple Inc. (“Petitioner”) filed a Petition (Paper 2, “Pet.”) requesting an *inter partes* review of claims 3, 4, 6–8, 10–19, 21–23, and 38 (“the challenged claims”) of U.S. Patent No. 8,724,622 B2 (Ex. 1001, “the ’622 patent”). Pet. 2. Uniloc USA, Inc. and Uniloc Luxembourg S.A. (“Patent Owner”) filed a Preliminary Response. Paper 6 (“Prelim. Resp.”).

We review the Petition under 35 U.S.C. § 314, which provides that an *inter partes* review may not be instituted “unless . . . there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition.” 35 U.S.C. § 314(a). For the reasons that follow and on this record, we are not persuaded that Petitioner demonstrates a reasonable likelihood of prevailing in showing the unpatentability of any of the challenged claims on the asserted grounds. Accordingly, we *deny* Petitioner’s request to institute an *inter partes* review.

II. BACKGROUND

A. Related Matters

Petitioner indicates that the ’622 patent is involved in *Uniloc USA, Inc. v. Apple Inc.*, No. 2:16-cv-00638 (E.D. Tex.) and twenty-six other actions in the U.S. District Court for the Eastern District of Texas. Pet. 71–73. The ’622 patent also is the subject of Case IPR2017-00224, which Petitioner filed concurrently with the instant proceeding. *See* Pet. 2–3; Prelim. Resp. 1 & n.1.

B. Overview of the ’622 Patent

The ’622 patent explains that “[v]oice messaging” and “instant text messaging” in both the Voice over Internet Protocol (“VoIP”) and public switched telephone network environments are known. Ex. 1001, 2:22–46.

In prior art instant text messaging systems, a server presents a user of a client terminal with a “list of persons who are currently ‘online’ and ready to receive text messages,” the user “select[s] one or more” recipients and types the message, and the server immediately sends the message to the respective client terminals. *Id.* at 2:34–46. According to the ’622 patent, however, “there is still a need in the art for . . . a system and method for providing instant VoIP messaging over an IP network,” such as the Internet. *Id.* at 1:18–22, 2:47–59, 6:47–49.

In one embodiment, the ’622 patent discloses local instant voice messaging (“IVM”) system 200, depicted in Figure 2 below. *Id.* at 6:22–24.

FIG. 2

As illustrated in Figure 2, local packet-switched IP network 204, which may be a local area network (“LAN”), “interconnects” IVM clients 206, 208 and legacy telephone 110 to local IVM server 202. *Id.* at 6:50–7:2; *see id.* at 7:23–24, 7:61–65. Local IVM server 202 enables instant voice messaging functionality over network 204. *Id.* at 7:61–65.

In “record mode,” IVM client 208, exemplified as a VoIP softphone in Figure 2, “displays a list of one or more IVM recipients,” provided and stored by local IVM server 202, and the user selects recipients from the list. *Id.* at 7:57–59, 7:65–8:4. IVM client 208 then transmits the selections to IVM server 202 and “records the user’s speech into . . . digitized audio file 210 (i.e., an instant voice message).” *Id.* at 8:4–11.

When the recording is complete, IVM client 208 transmits audio file 210 to local IVM server 202, which delivers the message to the selected recipients via local IP network 204. *Id.* at 8:15–29. “[O]nly the available IVM recipients, currently connected to . . . IVM server 202, will receive the instant voice message.” *Id.* at 8:33–34. IVM server 202 “temporarily saves the instant voice message” for any IVM client that is “not currently connected to . . . local IVM server 202 (i.e., is unavailable)” and “delivers it . . . when the IVM client connects to . . . local IVM server 202 (i.e., is available).” *Id.* at 8:34–39; *see id.* at 9:17–21. Upon receiving the instant voice message, the recipients can audibly play the message. *Id.* at 8:29–32.

C. Illustrative Claims

Of the challenged claims, claims 3 and 38 are independent. Those two independent claims, which are reproduced below, are illustrative of the recited subject matter:

3. A system comprising:
 - a network interface connected to a packet-switched network;
 - a messaging system communicating with a plurality of instant voice message client systems via the network interface; and
 - a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems,

wherein the messaging system receives an instant voice message from one of the plurality of instant voice message client systems, and
wherein the instant voice message includes an object field including a digitized audio file.

38. A system comprising:
a client device;
a network interface coupled to the client device and connecting the client device to a packet-switched network; and
an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface,
a display displaying a list of one or more potential recipients for an instant voice message.

Ex. 1001, 24:12–27, 27:11–23.

D. References Relied Upon

Petitioner relies on the following references:

Vuori	US 2002/0146097 A1	Oct. 10, 2002 (Ex. 1005)
Holtzberg	US 6,625,261 B2	Sept. 23, 2003 (Ex. 1007)
Väänänen	US 7,218,919 B2	May 15, 2007 (Ex. 1008)

European Telecommunications Standards Institute (ETSI), *Technical Specification (TS) 123 040 v3.5.0 (2000-07): Universal Mobile Telecommunications System (UMTS); Technical realization of the Short Message Service (SMS)* (“SMSS”; Ex. 1006)

Pet. 2. Petitioner also relies on a declaration of Leonard J. Forys, Ph.D. (Ex. 1003).

E. Asserted Grounds of Unpatentability

Petitioner challenges the patentability of claims 3, 4, 6–8, 10–19, 21–23, and 38 under 35 U.S.C. § 103 on the following grounds:

Reference(s)	Claim(s) Challenged
Vuori and SMSS	3, 4, 6–8, 11–13, 18, and 21–23
Vuori, SMSS, and Holtzberg	10 and 14–17
Vuori, SMSS, and Väänänen	19
Vuori	38

Pet. 2.

III. DISCUSSION

A. Claim Construction

In an *inter partes* review, claim terms in an unexpired patent are given their broadest reasonable construction in light of the specification of the patent in which they appear. *See* 37 C.F.R. § 42.100(b); *Cuozzo Speed Techs., LLC v. Lee*, 136 S. Ct. 2131, 2144–46 (2016) (upholding the use of the broadest reasonable interpretation standard as the claim construction standard to be applied in an *inter partes* review proceeding). Under the broadest reasonable interpretation standard, claim terms generally are given their ordinary and customary meaning as would be understood by one of ordinary skill in the art in the context of the entire disclosure. *See In re Translogic Tech., Inc.*, 504 F.3d 1249, 1257 (Fed. Cir. 2007).

Petitioner proposes constructions for “object field,” as recited in independent claim 3; “action field,” as recited in dependent claim 4; “identifier field,” as recited in dependent claim 6; “source field,” as recited in dependent claim 7; “destination field,” as recited in dependent claim 8;

and “display[ing] at least one of the plurality of instant voice messages,” as recited in dependent claim 16. Pet. 6–8.² Patent Owner does not proffer any terms for construction, but contends that Petitioner’s construction of “object field” “risks rendering other claim language superfluous” and “should also be rejected as seeking to eviscerate the expressly recited ‘object’ qualifier.” Prelim. Resp. 20–23. Patent Owner contends, however, that regardless whether we adopt Petitioner’s proposed construction of “object field,” Petitioner fails to meet its burden with respect to the asserted grounds. *Id.* at 23–24.

Based on our review of the record before us, we determine that no claim terms require an express construction to resolve the issues presented by the patentability challenges in this case. *See Vivid Techs., Inc. v. Am. Sci. & Eng’g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999) (holding that only claim terms that “are in controversy” need to be construed and “only to the extent necessary to resolve the controversy”). Our determination *infra* that Petitioner has not demonstrated a reasonable likelihood of prevailing with respect to any challenged claim does not turn on the construction of any disputed claim term.

B. Analysis of Asserted Grounds of Unpatentability

1. Principles of Law

A patent claim is unpatentable under 35 U.S.C. § 103(a) if the differences between the claimed subject matter and the prior art are “such

² In the Petition, Petitioner identifies each of “object field,” “action field,” “identifier field,” “source field,” and “destination field” as being recited in claim 1. Pet. 6–7. As Patent Owner points out, however, claim 1 is not challenged in the Petition, and in any event, none of those terms is recited in claim 1. Prelim. Resp. 20.

that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.” *KSR Int’l Co. v. Teleflex Inc.*, 550 U.S. 398, 406 (2007). The question of obviousness is resolved on the basis of underlying factual determinations, including: (1) the scope and content of the prior art; (2) any differences between the claimed subject matter and the prior art; (3) the level of skill in the art;³ and (4) objective evidence of nonobviousness, i.e., secondary considerations.⁴ *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966). “To satisfy its burden of proving obviousness, a petitioner cannot employ mere conclusory statements. The petitioner must instead articulate specific reasoning, based on evidence of record, to support the legal conclusion of obviousness.” *In re Magnum Oil Tools Int’l, Ltd.*, 829 F.3d 1364, 1380 (Fed. Cir. 2016). We analyze the asserted grounds with the principles stated above in mind.

2. *Obviousness over Vuori and SMSS (Claims 3, 4, 6–8, 11–13, 18, and 21–23) or Vuori alone (Claim 38)*

Petitioner contends that Vuori teaches or suggests all limitations of claims 3, 4, 6–8, 11–13, 18, 21–23, and 38 of the ’622 patent. Pet. 12–19, 21–22, 24–25, 27, 29, 31, 33–34, 36–47, 65–71. Petitioner further contends, however, that, “[t]o the extent Patent Owner argues” Vuori does not explicitly teach or suggest “wherein the instant voice message includes an

³ Petitioner proposes an assessment of the level of skill in the art with respect to the ’622 patent. Pet. 5. Patent Owner does not challenge this assessment or propose an alternative assessment. For purposes of this Decision and to the extent necessary, we adopt Petitioner’s assessment.

⁴ Patent Owner does not contend in its Preliminary Response that such secondary considerations are present.

object field including a digitized audio file,” as recited in independent claim 3, and certain limitations recited in claims 4 and 6–8, those limitations are taught or suggested by SMSS. *Id.* at 19–20, 22–23, 25, 27–30, 32, 34–35.

Patent Owner raises several arguments in its Preliminary Response, including that the Petition does not identify anything in Vuori that satisfies the “network interface” limitations of independent claims 3 and 38. Prelim. Resp. 25–26, 35–37.

We begin with a brief overview of Vuori and relevant legal principles and then address the parties’ arguments.

a. Overview of Vuori

Vuori is titled “Short Voice Message (SVM) Service Method, Apparatus and System.” Ex. 1005, [54]. Vuori discloses a method for sending voice-type short messages using an SVM service. Ex. 1005, [57], ¶ 31. Vuori teaches that SVMs “are recorded in the sending terminal and sent to an SVM service center (SVMSC),” and a “second terminal may then commence a bidirectional communication so that an instant voice message session can be established.” *Id.* ¶ 31.

In one embodiment, a user initiates a short voice message by pressing a menu key on a user equipment, which prepares to receive the message and may emit a sound to alert the user to commence speaking. *Id.* ¶ 32, Figs. 1–2. The user equipment then receives and stores the short voice message. *Id.* Next, the user “select[s] one or more intended recipients” and initiates the transfer. *Id.* ¶ 33. The short voice message is then sent to the SVMSC, which “check[s]” and “determines the availability of the one or more intended recipients.” *Id.* ¶¶ 34, 50; *see id.* ¶ 37. The SVMSC sends the

short voice message “immediately to the intended recipients who are available.” *Id.* ¶ 34; *see id.* ¶ 50. For recipients who are not available, however, the SVMSC “temporarily stor[es]” the message and “continue[s] attempting to send [the message] . . . until the[recipients] become available or until a time out occurs.” *Id.* ¶¶ 34, 50. Upon delivery of the short voice message, the recipient may play back the message. *Id.* ¶ 35, Figs. 1–2.

Vuori teaches that the SVM service may be carried out in a Global System for Mobile communications (“GSM”) network as shown in Figure 3, reproduced below. *Id.* ¶ 37.

Figure 3 of Vuori.

In Figure 3, SVMSC 50 is shown along with interworking mobile switching center (“MSC”) 52 connected by line 54 to GSM Network Subsystem 56. *Id.* Gateway 58 is provided for interworking between

SVMSC 50 and “MSC 58”⁵ of another GSM network 59. *Id.* Vuori explains that GSM Network Subsystem 56 also includes MSC 66 connected to a base station subsystem (“BSS”) 68 as well as other base station subsystems 70 for communication with a plurality of mobile stations, but that only one mobile station 72 is shown in Figure 3. *Id.* According to Vuori, MSC 66 is also connected to public switched telephone network (“PSTN”)/Integrated Services Digital Network (“ISDN”) network 78 for allowing mobile stations to communicate with wired telephone sets in a circuit-switched manner, as well as to a plurality of databases that may in turn be connected directly to MSC 66 or via data network 80 and operation and maintenance center 82. *Id.*

b. Analysis

As reproduced above, independent claim 3 recites, in part, “a network interface connected to a packet-switched network” and “a messaging system communicating with a plurality of instant voice message client systems via the network interface.” Ex. 1001, 24:13–17. Independent claim 38 similarly recites “a network interface coupled to [a] client device and connecting the client device to a packet-switched network.” *Id.* at 27:13–14.

In support of its contention that the combination of Vuori and SMSS renders claim 3 unpatentable, Petitioner contends “Vuori teaches or suggests a network interface (i.e., interconnected interfaces) connected to a

⁵ It appears from Figure 3 that Vuori may have intended to refer instead to “MSC 60,” which is within the dotted line encompassing GSM Network Subsystem 59.

packet-switched network (i.e., a GPRS infrastructure).” Pet. 13 (citing Ex. 1003 ¶¶ 123–125). According to Petitioner:

For example, in FIG. 3, reproduced below, Vuori provides that:

At the subscriber side, *a user equipment 124 is connected by one or more radio links (Uu) to one or more corresponding Node Bs 126 which are in turn connected (Iub) to corresponding radio network controllers (RNCs) 128... The RNCs 128 are connected to the UMTS infrastructure 120 via Iu interfaces to a third generation-serving [General Packet Radio Service] GPRS support node (3G-SGSN) 140... It may also be connected to an SVM service 146 similar to the SVM service center 50 of FIG. 3, according to the present invention for connection to a GSM Network Subsystem, to another UMTS infrastructure, to a GPRS infrastructure, or similar.*

([Ex. 1005 ¶ 40].) A General Packet Radio Service (“GPRS”) infrastructure, as disclosed in Vuori, is a packet-switched network. ([Ex. 1003] ¶ 124.) Further, the interconnected interfaces that provide a connection between the radio network controllers and the data network act as a network interface. (*Id.*)

([Ex. 1005], FIG. 3.)

Thus, Vuori teaches or suggests a network interface connected to a packet-switched network ([Ex. 1003] ¶ 125.).

Pet. 13–14 (alterations in block quote in Petition).

In connection with the “messaging system” limitation of claim 3, Petitioner additionally points to Figure 11 of Vuori and contends that “FIG. 11 illustrates a plurality of instant voice message client systems connected to the messaging system via the network interface.” *Id.* at 15 (citing Ex. 1003 ¶ 127). According to Petitioner, “[i]n FIG. 11, . . . Vuori discloses that the ‘SVM [short voice message] is recorded in the sending terminal and sent to a SVM service center (SVMSC). The SVMSC may notify the intended recipient of the arrival of the SVM and await acceptance before sending it.’” *Id.* at 14 (third alteration in original) (quoting Ex. 1005, Abstract).

With respect to the “network interface” limitation of claim 38, Petitioner makes substantially the same arguments as for the corresponding limitation of claim 3, relying again on the same portion of paragraph 40 and Figure 3 of Vuori. Pet. 66–67 (quoting Ex. 1005 ¶ 40) (citing Ex. 1003 ¶¶ 317–319; Ex. 1005, Fig. 3).

In the Preliminary Response, Patent Owner argues that “[i]ndependent Claim 3 introduces the term ‘network interface’ in the recitation ‘a network interface connected to a packet-switched network,’” and “[t]hus, the ‘messaging system’ and ‘network interface’ limitations collectively require, on their face, ‘a messaging system communicating with a plurality of instant voice message client systems via the network interface [connected to the packet-switched network].” Prelim. Resp. 25–26 (third alteration in original). Patent Owner further argues that “[t]he Petition does not identify

anything in *Vuori* that satisfies the above claim language.” *Id.* at 26. According to Patent Owner, “[w]hile the Petition points to Figure 11 of *Vuori* . . . , *Vuori* discloses that the SVMSC (50) interfaces with the 1st and 2nd user terminals over dedicated circuits of respective *circuit-switched* GSM networks, neither of which is a *packet-switched network*.” *Id.* Patent Owner further points out that, contrary to Petitioner’s assertions, paragraph 40 of *Vuori* block-quoted by the Petition does not describe Figure 3 of *Vuori*. *Id.* at 28. Moreover, according to Patent Owner,

Even if Petitioner had, instead, relied on another figure of *Vuori*, the Petition nevertheless fails to articulate a theory that satisfies all limitations of the claimed “network interface” of a “messaging system.” While Petitioner alleges “the interconnected interfaces that provide a connection between the radio network controllers and the data network act as a network interface,” *Vuori* does not disclose “communicating with a plurality of instant voice message client systems via” that interface (and Petitioner does not argue otherwise). On the contrary, Figure 5 of *Vuori* clearly illustrates the identified “interface” as connecting RNCs (128) to UMTS infrastructure (120), whereas “[a]t the subscriber side, a user equipment 124 is connected by one or more radio links (Uu) to one or more corresponding Node Bs 126 which are in turn connected (Iub) to corresponding radio network controllers (RNCs) 128. Ex. 1005, [0040].

Prelim. Resp. 28–29. Patent Owner makes similar arguments with respect to the “network interface” limitation of claim 38. *Id.* at 35–37.

On the record before us, we are not persuaded by Petitioner’s arguments and evidence that *Vuori* teaches or suggests “a network interface connected to a packet-switched network,” as recited in claim 3, or “a network interface . . . connecting [a] client device to a packet-switched network,” as recited in claim 38. We agree with Patent Owner that, although

the Petition cites paragraph 40 and Figure 3 of Vuori as teaching or suggesting those limitations, the Petition fails to identify precisely what, within that figure and cited text, constitutes the claimed “network interface.” See Prelim. Resp. 35.⁶ Accordingly, the Petition does not identify with particularity “the evidence that supports the grounds for the challenge to each claim,” 35 U.S.C. § 312(a)(3), or “specify where each element of the claim is found in the prior art patents or printed publications relied upon,” 37 C.F.R. § 42.104(b)(4). Petitioner asserts, without identifying any particular element or elements depicted in Figure 3 or described in paragraph 40, that “the interconnected interfaces that provide a connection between the radio network controllers and the data network act as a network interface.” Pet. 13 (citing Ex. 1003 ¶ 124); see also *id.* at 66 (similar argument regarding claim 38; citing Ex. 1003 ¶ 317). The only purported support Petitioner provides for that assertion, namely, paragraph 124 of Dr. Forsys’s declaration, simply repeats, word for word, the Petition’s arguments and quotation of paragraph 40 of Vuori, adding only the prefatory phrases “[t]his excerpt is significant” and “a POSITA would have understood” at the beginning of two sentences. Ex. 1003 ¶¶ 124, 318.⁷ That testimonial

⁶ Although Patent Owner makes this argument in connection with claim 38, it applies equally to claim 3.

⁷ Although Petitioner includes an “*Id.*” citation in support of its assertion with respect to claim 38 that ostensibly refers to paragraph 317 of Dr. Forsys’s declaration (Pet. 66), that paragraph merely states “Vuori teaches or suggests a network interface coupled to the client device and connecting the client device to a packet-switched network” (Ex. 1003 ¶ 317). We assume that Petitioner intended instead to cite paragraph 318 of Dr. Forsys’s declaration, which states, *inter alia*, “a POSITA would have understood that the interconnected interfaces that provide a connection

evidence provides no disclosure of the underlying facts on which the stated opinions are based, and accordingly, is entitled to little or no weight. *See* 37 C.F.R. § 42.65(a) (“Expert testimony that does not disclose the underlying facts or data on which the opinion is based is entitled to little or no weight.”).

Further, notwithstanding Petitioner’s assertions, we do not understand Figure 3 to show any connections with a “packet-switched network” at all, and accordingly, we discern in Figure 3 of Vuori nothing that could be termed a “network interface connected to a packet-switched network.” Vuori describes Figure 3 as showing an “SVM service method . . . applied to GSM network subsystems.” Ex. 1005 ¶ 21; *see also id.* ¶¶ 37, 39, Fig. 3 (describing and illustrating elements 56 and 59 labelled as “GSM Network Subsystem[s]”). Paragraph 37 of Vuori explains that mobile switching center (MSC) 58 is “connected to a public switched telephone network (PSTN) and/or ISDN network 78 for allowing mobile stations to communicate with wired telephone sets *in a circuit-switched manner.*” Ex. 1005 ¶ 37 (emphasis added). Moreover, we understand Vuori to distinguish the GSM-based embodiment shown in Figure 3 from packet-based systems, which Vuori characterizes as a *development* over GSM:

In addition to carrying out the present invention on the GSM network subsystems 56, 59 of FIG. 3, it should be realized that *other approaches are possible*, especially considering the *development of GSM networks into a packet-based infrastructure*

between the radio network controllers, user equipment, and the data network act as a network interface.” *Id.* ¶ 318.

via the General Packet Radio Service (GPRS) and subsequently the Universal Mobile Telecommunication System (UMTS).

Id. ¶ 39 (emphases added).

Paragraph 40 of Vuori, cited by Petitioner, describes a UMTS (packet-based) embodiment, but despite Petitioner’s assertions (Pet. 13), that paragraph relates to Figure 5 of Vuori, not to Figure 3. Ex. 1005 ¶ 40; *see also id.* ¶ 23 (“FIG. 5 shows the SVM service method of the present invention applied to a UMTS system.”). We agree with Patent Owner, moreover, that even if Petitioner had cited and relied upon Figure 5 instead of Figure 3, Figure 5 merely illustrates the identified “interface” as connecting radio network controllers (RNCs) 128 to UMTS infrastructure 120, whereas “at the subscriber side, [] user equipment 124 is connected by one or more radio links (Uu) to one or more corresponding Node Bs 126 which are in turn connected (Iub) to corresponding radio network controllers (RNCs) 128,” and that Vuori does not disclose “communicating with a plurality of instant voice message client systems via” that interface. Prelim. Resp. 28; Ex. 1005 ¶ 40.

For the reasons given, we are not persuaded by Petitioner’s evidence that Vuori teaches or suggests the “network interface” limitations of claims 3 and 38. Although Petitioner challenges claim 3 as obvious over the combination of Vuori and SMSS, Petitioner does not cite SMSS as teaching or suggesting this limitation of claim 3. *See* Pet. 13–15. Accordingly, we conclude that Petitioner has not established a reasonable likelihood that it would prevail in showing that independent claims 3 and 38—or claims 4, 6–8, 11–13, 18, and 21–23, which directly or indirectly depend from claim 3—are unpatentable on the proffered grounds.

3. *Obviousness over Vuori, SMSS, and Holtzberg (Claims 10 and 14–17) or Vuori, SMSS, and Väänänen (Claim 19)*

Each of claims 10, 14–17, and 19 depends directly or indirectly from claim 3. Petitioner contends that Holtzberg teaches certain limitations of claims 10 and 14–17 and that Väänänen teaches certain limitations of claim 19 not taught or suggested by Vuori and SMSS, and that a person of ordinary skill in the art would have had reason to combine Holtzberg or Väänänen with Vuori and SMSS. Pet. 47–64. Petitioner, however, does not allege in the Petition that either Holtzberg or Väänänen teaches or suggests the “network interface” limitation of claim 3. Accordingly, for the same reasons as set forth in Section III.B.2 with respect to claim 3, we conclude that Petitioner has not established a reasonable likelihood that it would prevail in showing that claims 10, 14–17, and 19 are unpatentable on the proffered grounds.

C. Conclusion

For the reasons discussed above, Petitioner has not established a reasonable likelihood that it would prevail with respect to any of the claims challenged in the Petition.

IV. ORDER

Accordingly, it is

ORDERED that the Petition is *denied*, and no trial or *inter partes* review is instituted on any asserted ground.

BEFORE THE PATENT TRIAL AND APPEAL BOARD

APPLE INC.,
Petitioner,

v.

UNILOC USA, INC. and UNILOC LUXEMBOURG S.A.,¹

Case IPR2017-00224
Patent 8,724,622 B2

Before MIRIAM L. QUINN, KERRY BEGLEY, and
CHARLES J. BOUDREAU, *Administrative Patent Judges*.

BOUDREAU, *Administrative Patent Judge*.

DECISION

Denying Institution of *Inter Partes* Review
35 U.S.C. § 325(d) and 37 C.F.R. § 42.108

¹ Patent Owner's Mandatory Notice filed pursuant to 37 C.F.R. § 42.8 identifies Uniloc USA, Inc. and Uniloc Luxembourg S.A. as Patent Owner and as real parties in interest. Paper 4 at caption, 1. Therefore, we adjust the case caption to include Uniloc USA, Inc.

I. INTRODUCTION

Apple Inc. (“Petitioner”) filed a Petition (Paper 2, “Pet.”) requesting an *inter partes* review of claims 3, 4, 6–8, 10–19, 21–23, and 38 (“the challenged claims”) of U.S. Patent No. 8,724,622 B2 (Ex. 1001, “the ’622 patent”). Pet. 2. Uniloc USA, Inc. and Uniloc Luxembourg S.A. (“Patent Owner”) filed a Preliminary Response. Paper 6 (“Prelim. Resp.”). Based on the particular circumstances of this case, we exercise our discretion under 35 U.S.C. § 325(d) and 37 C.F.R. § 42.108 and do not institute an *inter partes* review of the challenged claims.

II. BACKGROUND

A. *Related Matters*

Petitioner indicates that the ’622 patent is involved in *Uniloc USA, Inc. v. Apple Inc.*, No. 2:16-cv-00638 (E.D. Tex.) and twenty-six other actions in the U.S. District Court for the Eastern District of Texas. Pet. 51–52. The ’622 patent also is the subject of Case IPR2017-00223, which Petitioner filed concurrently with the instant proceeding. *See* Pet. 2–3; Prelim. Resp. 1 & n.1.

B. *Overview of the ’622 Patent*

The ’622 patent explains that “[v]oice messaging” and “instant text messaging” in both the Voice over Internet Protocol (“VoIP”) and public switched telephone network environments are known. Ex. 1001, 2:22–46. In prior art instant text messaging systems, a server presents a user of a client terminal with a “list of persons who are currently ‘online’ and ready to receive text messages,” the user “select[s] one or more” recipients and types the message, and the server immediately sends the message to the respective client terminals. *Id.* at 2:34–46. According to the ’622 patent, however,

“there is still a need in the art for . . . a system and method for providing instant VoIP messaging over an IP network,” such as the Internet.

Id. at 1:18–22, 2:47–59, 6:47–49.

In one embodiment, the '622 patent discloses local instant voice messaging (“IVM”) system 200, depicted in Figure 2 below. *Id.* at 6:22–24.

FIG. 2

As illustrated in Figure 2, local packet-switched IP network 204, which may be a local area network (“LAN”), “interconnects” IVM clients 206, 208 and legacy telephone 110 to local IVM server 202. *Id.* at 6:50–7:2; *see id.* at 7:23–24, 7:61–65. Local IVM server 202 enables instant voice messaging functionality over network 204. *Id.* at 7:61–65.

In “record mode,” IVM client 208, exemplified as a VoIP softphone in Figure 2, “displays a list of one or more IVM recipients,” provided and stored by local IVM server 202, and the user selects recipients from the list. *Id.* at 7:57–59, 7:65–8:4. IVM client 208 then transmits the selections to

IVM server 202 and “records the user’s speech into . . . digitized audio file 210 (i.e., an instant voice message).” *Id.* at 8:4–11.

When the recording is complete, IVM client 208 transmits audio file 210 to local IVM server 202, which delivers the message to the selected recipients via local IP network 204. *Id.* at 8:15–29. “[O]nly the available IVM recipients, currently connected to . . . IVM server 202, will receive the instant voice message.” *Id.* at 8:33–34. IVM server 202 “temporarily saves the instant voice message” for any IVM client that is “not currently connected to . . . local IVM server 202 (i.e., is unavailable)” and “delivers it . . . when the IVM client connects to . . . local IVM server 202 (i.e., is available).” *Id.* at 8:34–39; *see id.* at 9:17–21. Upon receiving the instant voice message, the recipients can audibly play the message. *Id.* at 8:29–32.

C. Illustrative Claims

Of the challenged claims, claims 3 and 38 are independent. Those two independent claims, which are reproduced below, are illustrative of the recited subject matter:

3. A system comprising:
 - a network interface connected to a packet-switched network;
 - a messaging system communicating with a plurality of instant voice message client systems via the network interface; and
 - a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems,wherein the messaging system receives an instant voice message from one of the plurality of instant voice message client systems, and
wherein the instant voice message includes an object field including a digitized audio file.

38. A system comprising:
a client device;
a network interface coupled to the client device and connecting the client device to a packet-switched network; and
an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface,
a display displaying a list of one or more potential recipients for an instant voice message.

Ex. 1001, 24:12–27, 27:11–23.

D. References Relied Upon

Petitioner relies on the following references:

Hogan US 5,619,554 Apr. 8, 1997 (Ex. 1010)
Logan US 5,732,216 Mar. 24, 1998 (Ex. 1011)
Dahod US 2004/0022208 A1 Feb. 5, 2004 (Ex. 1009)
("the Dahod application")

Pet. 2. Petitioner also relies on a declaration of Leonard J. Forys, Ph.D. (Ex. 1003).

E. Asserted Grounds of Unpatentability

Petitioner challenges the patentability of claims 3, 4, 6–8, 10–19, 21–23, and 38 under 35 U.S.C. § 103 on the following grounds:

Reference(s)	Claim(s) Challenged
the Dahod application	3, 4, 7, 8, 11–13, 18, 21–23, and 38
the Dahod application and Hogan	6, 10, and 14–17
the Dahod application and Logan	19

Pet. 2.

III. DISCUSSION

A. *Discretionary Non-Institution Under 35 U.S.C. § 325(d)*

Institution of *inter partes* review is discretionary. *See* 35 U.S.C. § 314(a); 37 C.F.R. § 42.108. Our discretion as to whether to institute an *inter partes* review is guided, in part, by 35 U.S.C. § 325(d), which provides that “[i]n determining whether to institute or order a proceeding . . . the Director may take into account whether, and reject the petition or request because, the same or substantially the same prior art or arguments previously were presented to the Office.” 35 U.S.C. § 325(d).

Our discretion under § 325(d) involves a balance between several competing interests. *See Neil Ziegman, N.P.Z., Inc. v. Stephens*, Case IPR2015-01860, slip op. at 12–13 (PTAB Feb. 24, 2016) (Paper 11) (“While petitioners may have sound reasons for raising art or arguments similar to those previously considered by the Office, the Board weighs petitioners’ desires to be heard against the interests of patent owners, who seek to avoid harassment and enjoy quiet title to their rights.” (citing H.R. Rep. No. 112-98, pt. 1, at 48 (2011))). “On the one hand, there are the interests in conserving the resources of the Office and granting patent owners repose on issues and prior art that have been considered previously.” *Fox Factory, Inc. v. SRAM, LLC*, Case IPR2016-01876, slip op. 7 (PTAB Apr. 3, 2017) (Paper 8). “On the other hand, there are the interests of giving petitioners the opportunity to be heard and correcting any errors by the Office in allowing a patent—in the case of an *inter partes* review—over prior art patents and printed publications.” *Id.*

Patent Owner contends in the Preliminary Response that the facts in this case “present a textbook-worthy scenario for applying the discretion set

IPR2017-00224
Patent 8,724,622 B2

forth in § 325(d).” Prelim. Resp. 9. In particular, Patent Owner points out, the Examiner during prosecution of the application that issued as the ’622 patent twice rejected and then ultimately allowed the ’622 patent claims over U.S. Patent No. 7,372,826 to Dahod et al. (Ex. 3001, “the Dahod patent”)—i.e., *the patent that issued from the Dahod application relied upon by Petitioner in each asserted ground in the Petition. Id.* at 10 (citing Ex. 1002, 139 (setting forth non-final rejection under 35 U.S.C. § 102(e) over the Dahod patent), 97–100 (setting forth final rejections under 35 U.S.C. § 102(e) over the Dahod patent and under 35 U.S.C. § 103(a) over the Dahod patent in combination with other references), 36–42 (Notice of Allowance stating reasons for allowance of the issued claims of the ’622 patent over the Dahod patent)).

Given the evidence and arguments presented here, we exercise our discretion under § 325(d) and decline to institute an *inter partes* review based on any ground asserted in the Petition, all of which rely primarily on the teachings of the Dahod application. *See generally* Pet. 2, 9–50. We find that substantially the same arguments regarding the unpatentability of the claimed subject matter over the Dahod application were presented previously to the Office with respect to the Dahod patent.

As Patent Owner points out (Prelim. Resp. 9), Petitioner appears to recognize the applicability of § 325(d) to its Petition (*see* Pet. 1 (acknowledging that “[i]n the Notice of Allowance dated March 6, 2014, the Examiner stated the claims were allowable over the art cited in this Petition, Dahod”), 4 (Petitioner attempting to distinguish the Dahod application from the “Vuori” reference relied upon in concurrently filed IPR2017-00223 on the basis that the latter “is not susceptible to a potential §325(d) attack”)),

but makes no meaningful effort to explain why we should not exercise our discretion to deny the Petition on that basis. Petitioner contends that the Examiner “erroneously issued” the ’622 patent (*id.* at 1); that “the Examiner stated the claims were allowable over . . . Dahod, because the Examiner wrongly believed: ‘applicant’s instant voice message system that has an object field including a digitized audio file, nor does the instant voice messaging system include displaying a list of recipients for an instant voice message’” (*id.*); that “[t]he Examiner apparently did not understand that the ‘object field including a digitized audio file’ was rendered obvious in view of Dahod, where Dahod states that ‘the new [voice instant message] VIM may optionally include or attach the original VIM’” (*id.*); and that “the Examiner overlooked key elements of Dahod . . . [f]or example, the Examiner failed to understand that Dahod provides: . . . ‘the new VIM may optionally include or attach the original VIM . . .’” (*id.* at 16 (quoting Ex. 1009 ¶ 90) (emphasis omitted)). But those arguments, which essentially amount only to speculation that the Examiner failed to read the entirety of the Dahod patent despite his express reliance thereupon in twice rejecting the claims, do not persuade us that the Examiner misapprehended the reference and do not justify disturbing Patent Owner’s repose with respect to prior art substantively considered by the Office during prosecution.

Although Petitioner now relies upon the Dahod *application* (*e.g.*, Pet. 2) whereas the Examiner relied upon the Dahod *patent* (*e.g.*, Ex. 1002, 139) that distinction is inconsequential. Petitioner provides no explicit explanation for its reliance on the Dahod application rather than the Dahod patent. Regardless, the Dahod patent issued directly from the application published as the Dahod application, and apart from different formatting and

differences in claim language apparently resulting from amendments made after publication of the Dahod application,² we discern no substantive differences in their disclosures. *Compare* Ex. 1009, *with* Ex. 3001. And indeed, Petitioner itself equates the Dahod application and Dahod patent, stating that “the Examiner stated the claims were allowable over *the art cited in this Petition, Dahod.*” Pet. 1 (emphasis added).

We also ascribe little significance to the fact that the Examiner rejected certain claims *under 35 U.S.C. § 102(e) as anticipated* by the Dahod patent, whereas Petitioner asserts that claims 3, 4, 7, 8, 11–13, 18, 21–23, and 38 are *unpatentable under § 103* over the Dahod application. First, none of the claims rejected under § 102(e) during prosecution ultimately issued in the '622 patent, but were each amended prior to allowance. Second, in stating the reasons for allowance, the Examiner explicitly stated “[n]o obvious combination of references found would have taught one of ordinary skill in the art to make applicant’s system as claimed.” Ex. 1002, 41. We understand that statement to contemplate patentability under § 103. *See also Arctic Cat, Inc. v. Polaris Indus. Inc.*, Case IPR2017-00199, slip op. 8 (PTAB Apr. 17, 2017) (Paper 8) (finding unpersuasive petitioner’s assertion that § 325(d) did not apply where reference was previously set forth in an anticipation rejection whereas petition set forth obviousness ground of unpatentability).

Lastly, although Petitioner cites two additional references, Hogan and Logan, that appear not to have been before the Examiner, Petitioner cites

² In any event, Petitioner does not rely on any teachings set forth in the claims of the Dahod application in support of its arguments in the Petition. *See generally* Pet. 9–32, 36–37, 41–43, 45–46.

IPR2017-00224
Patent 8,724,622 B2

those only for certain dependent claims and does not allege that they teach the limitations that the Examiner expressly found are not taught by Dahod. *See* Pet. 32–50; Ex. 1002, 41. On this record, we are not persuaded that these references add to or alter the information regarding the teachings of the Dahod patent considered in detail by the Examiner during prosecution.

B. Conclusion

For the foregoing reasons, we exercise our discretion and decline to institute *inter partes* review of claims 3, 4, 6–8, 10–19, 21–23, and 38 of the '622 patent on the grounds presented in this proceeding. *See* 35 U.S.C. §§ 314(a), 325(d); 37 C.F.R. § 42.108.

IV. ORDER

Accordingly, it is

ORDERED that the Petition is *denied*, and no trial or *inter partes* review is instituted on any asserted ground.

SIGNATURE of Applicant or Patent Owner

Signature		Date	
Name	Craig S. Elchegoyen	Telephone	
Title and Company	CEO of Uniloc Luxembourg S.A.		

NOTE: Signatures of all the applicants or patent owners of the entire interest or their representative(s) are required. If more than one signature is required, submit multiple forms, check the box below, and identify the total number of forms submitted in the blank below.

A total of 1 forms are submitted.

This collection of information is required by 37 CFR 1.31, 1.32, and 1.33. The information is required to obtain or retain a benefit by the public, which is to update (and by the USPTO to process) the file of a patent or reexamination proceeding. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(b)Applicant/Patent Owner: Uniloc Luxembourg S.A.Application No./Patent No.: 8,724,622Filed/Issue Date: May 13, 2014Titled: SYSTEM AND METHOD FOR INSTANT VOIP MESSAGINGUniloc Luxembourg S.A., a corporation

(Name of Assignee)

(Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that it is:

1. the assignee of the entire right, title, and interest in;
2. an assignee of less than the entire right, title, and interest in
(The extent (by percentage) of its ownership interest is _____ %); or
3. the assignee of an undivided interest in the entirety of (a complete assignment from one of the joint inventors was made)

the patent application/patent identified above, by virtue of either:

- A. An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy therefore is attached.

OR

- B. A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: Michael J. ROJAS To: Ayalogic, Inc.

The document was recorded in the United States Patent and Trademark Office at
Reel 014827, Frame 0059, or for which a copy thereof is attached.

2. From: Ayalogic, Inc. To: Empire IP LLC

The document was recorded in the United States Patent and Trademark Office at
Reel 030922, Frame 0335, or for which a copy thereof is attached.

3. From: Empire IP LLC To: Uniloc Luxembourg S.A.

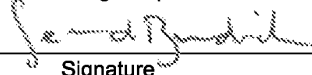

The document was recorded in the United States Patent and Trademark Office at
Reel 038963, Frame 0343, or for which a copy thereof is attached.

- Additional documents in the chain of title are listed on a supplemental sheet(s).

- As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

Michael J. Rojas, North Canton, OH;

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage and facilitate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit SelectUSA.gov.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 or **Fax** (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

67050 7590 03/06/2014
KASHA LAW LLC
14532 Dufief Mill Road
North Potomac, MD 20878

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

Table with 3 rows: (Depositor's name), (Signature), (Date)

Table with 5 columns: APPLICATION NO. (13/546,673), FILING DATE (07/11/2012), FIRST NAMED INVENTOR (Michael J. Rojas), ATTORNEY DOCKET NO. (EMP0024-US), CONFIRMATION NO. (9648)

TITLE OF INVENTION: SYSTEM AND METHOD FOR INSTANT VoIP MESSAGING

Table with 7 columns: APPLN. TYPE (nonprovisional), ENTITY STATUS (SMALL), ISSUE FEE DUE (\$480), PUBLICATION FEE DUE (\$0), PREV. PAID ISSUE FEE (\$0), TOTAL FEE(S) DUE (\$480), DATE DUE (06/06/2014)

Table with 3 columns: EXAMINER (SMITH, CREIGHTON H), ART UNIT (2656), CLASS-SUBCLASS (370-352000)

2. For printing on the patent front page, list
(1) The names of up to 3 registered patent attorneys or agents OR, alternatively, 1 John R. Kasha
(2) The name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed. 2 Kelly L. Kasha
3 Kasha Law LLC

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE: Empire IP LLC
(B) RESIDENCE: (CITY and STATE OR COUNTRY): Austin, TX

Please check the appropriate assignee category or categories (will not be printed on the patent): [] Individual [X] Corporation or other private group entity [] Government

4a. The following fee(s) are submitted: [X] Issue Fee
4b. Payment of Fee(s): [] A check is enclosed. [X] The Director is hereby authorized to charge the required fee(s), any deficiency, or credits any overpayment, to Deposit Account Number 504075 (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)
[] Applicant certifying micro entity status. See 37 CFR 1.29
[] Applicant asserting small entity status. See 37 CFR 1.27
[] Applicant changing to regular undiscounted fee status.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

DATE MAILED: 03/06/2014

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.

13/546,673 07/11/2012 Michael J. Rojas EMP0024-US 9648

TITLE OF INVENTION: SYSTEM AND METHOD FOR INSTANT VoIP MESSAGING

Table with 7 columns: APPLN. TYPE, ENTITY STATUS, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE

nonprovisional SMALL \$480 \$0 \$0 \$480 06/06/2014

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

**Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
 Commissioner for Patents
 P.O. Box 1450
 Alexandria, Virginia 22313-1450
 or Fax (571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

67050 7590 03/06/2014
KASHA LAW LLC
 14532 Dufief Mill Road
 North Potomac, MD 20878

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

5. **Change in Entity Status** (from status indicated above)

Applicant certifying micro entity status. See 37 CFR 1.29

Applicant asserting small entity status. See 37 CFR 1.27

Applicant changing to regular undiscounted fee status.

NOTE: Absent a valid certification of Micro Entity Status (see forms PTO/SB/15A and 15B), issue fee payment in the micro entity amount will not be accepted at the risk of application abandonment.

NOTE: If the application was previously under micro entity status, checking this box will be taken to be a notification of loss of entitlement to micro entity status.

NOTE: Checking this box will be taken to be a notification of loss of entitlement to small or micro entity status, as applicable.

NOTE: This form must be signed in accordance with 37 CFR 1.31 and 1.33. See 37 CFR 1.4 for signature requirements and certifications.

DATE MAILED: 03/06/2014

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

The Paperwork Reduction Act (PRA) of 1995 requires Federal agencies to obtain Office of Management and Budget approval before requesting most types of information from the public. When OMB approves an agency request to collect information from the public, OMB (i) provides a valid OMB Control Number and expiration date for the agency to display on the instrument that will be used to collect the information and (ii) requires the agency to inform the public about the OMB Control Number's legal significance in accordance with 5 CFR 1320.5(b).

The information collected by PTOL-85 Part B is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Notice of Allowability	Application No. 13/546,673	Applicant(s) ROJAS, MICHAEL J.	
	Examiner CREIGHTON SMITH	Art Unit 2656	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. This communication is responsive to AF amendment & Terminal Disclaimer filed on 28 FEB '14.
 A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.
2. An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
3. The allowed claim(s) is/are 2,5-11,13-20 and 22-44. As a result of the allowed claim(s), you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.
4. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

- a) All b) Some *c) None of the:
1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.
Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

--	--

The present application is being examined under the pre-AIA first to invent provisions.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose applicant's instant voice messaging system that has a database of user records where each record includes a user's name, password, and a list of other users selected by a user. Neither does the prior art teach applicant's instant voice messaging system that has an object field including a digitized audio file, nor does the instant voice messaging system include displaying a list of recipients for an instant voice message. No obvious combination of references found would have taught one of ordinary skill in the art to make applicant's system as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CREIGHTON SMITH whose telephone number is (571)272-7546. The examiner can normally be reached on 5-4-9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curt Kuntz can be reached on 27499. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

AMENDMENT AFTER FINAL REJECTION UNDER 37 C.F.R. § 1.116

MAIL STOP: AF
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In response to the Final Office Action of November 29, 2013, please amend the above-identified application as follows:

Any fee necessary for consideration of this response is hereby authorized to be charged to Deposit Account Number 50-4075.

Amendments to the Claims are reflected in the listing of claims that begins on page 2 of this paper.

Remarks begin on page 9 of this paper.

Please enter this AF amendment. CHS 03 MAR '14

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in this application.

Listing of the Claims:

1. (Cancelled).
2. (Currently amended): A system comprising:
 - a network interface connected to a packet-switched network;
 - a messaging system communicating with a plurality of instant voice message client systems via the network interface; ~~and~~
 - a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems; and
 - a user database storing user records identifying users of the plurality of instant voice message client systems, wherein each of the user records includes a user name, a password and a list of other users selected by a user.
3. (Cancelled).
4. (Cancelled).
5. (Currently amended): The system according to claim ~~[[4]]~~ 2, wherein at least part of each of the user records is encrypted.
6. (Currently amended): A system comprising:
 - a network interface connected to a packet-switched network;

a messaging system communicating with a plurality of instant voice message client systems via the network interface; and

a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems.

~~The system according to claim 2,~~ wherein the messaging system receives an instant voice message from one of the plurality of instant voice message client systems, and

wherein the instant voice message includes an object field including a digitized audio file.

7. (Previously presented): The system according to claim 6, wherein the instant voice message includes an action field identifying one of a predetermined set of permitted actions requested by the user.
8. (Currently amended): The system according to claim 7, wherein the predetermined set of permitted actions includes at least one of a connection request, a disconnection request, a subscription request, an unsubscription request, a message transmission request, and a set status request.
9. (Previously presented): The system according to claim 6, wherein the instant voice message includes an identifier field including a unique identifier associated with the instant voice message.
10. (Previously presented): The system according to claim 6, wherein the instant voice message includes a source field including a unique identifier associated with at least one of a given one of the plurality of instant voice message client systems that created the instant voice

message and a given one of the plurality of users using the given one of the plurality of instant voice message client systems.

11. (Previously presented): The system according to claim 6, wherein the instant voice message includes a destination field including a unique identifier associated with at least one of a given one of the plurality of instant voice message client systems identified as a recipient of the instant voice message and a given one of the plurality of users using the given one of the plurality of instant voice message client systems.

12. (Cancelled).

13. (Currently amended): A system comprising:

a network interface connected to a packet-switched network;

a messaging system communicating with a plurality of instant voice message client systems via the network interface; and

a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems.

~~The system according to claim 2,~~ wherein the messaging system receives connection object messages from the plurality of instant voice message client systems, wherein each of the connection object messages includes data representing a state of a logical connection with a given one of the plurality of instant voice message client systems.

14. (Previously presented): The system according to claim 13, wherein the connection object messages identifies at least one of a socket, a size of data to be transferred and a priority of the data.

15. (Previously presented): The system according to claim 13, wherein the communication platform system populates a connection list for the plurality of instant voice message client systems with the data in the connection object messages received from each of the plurality of instant voice message client systems.

16. (Currently amended): The system according to claim [[2]] 6, wherein the communication platform system assigns an IP address to each of the instant voice message client systems when the communication platform receives a connection request from each of the instant voice message client systems.

17. (Currently amended): The system according to claim [[2]] 6, further comprising: a message database storing the instant voice messages received from the instant voice message client systems.

18. (Currently amended): The system according to claim [[2]] 6, wherein, upon receipt of an instant voice message, the communication platform system determines if there is the current connection to one of the plurality of instant voice message client systems identified as a recipient of the instant voice message, and if there is no connection with the one of the plurality of instant voice message client system identified as the recipient, the instant voice message is stored and delivered when the one of the plurality of instant voice message client systems identified as the recipient re-established a connection.

19. (Currently amended): The system according to claim [[2]] 6, wherein the communication platform system updates the connection information for each of the instant voice message client systems by periodically transmitting a connection status request to the given one of the plurality of instant voice message client systems.

20. (Currently amended): A system comprising:

a client device;

a network interface coupled to the client device and connecting the client device to a packet-switched network; and

an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface,

wherein the instant voice messaging application includes a document handler system for attaching one or more files to the instant voice message.

21. (Cancelled).

22. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes a message database storing the instant voice message, wherein the instant voice messages is represented by a database record including a unique identifier.

23. (Previously presented): The system according to claim 22, wherein the instant voice message stored in the message database include a plurality of instant voice messages recorded by a user of the client device and instant voice messages received over the packet-switched network.

24. (Previously presented): The system according to claim 23, further comprising: a display displaying at least one of the plurality of instant voice messages stored in the message database.

25. (Previously presented): The system according to claim 22, wherein the instant voice messaging application includes a file manager system storing, deleting and retrieving the instant voice messages from the message database in response to a user request.

26. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes an audio file creation system creating an audio file for the instant voice message based on input received via an audio input device coupled to the client device.

27. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes an encryption/decryption system for encrypting the instant voice messages to be transmitted over the packet-switched network and decrypting the instant voices messages received over the packet-switched network.

28. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes a compression/decompression system for compressing the instant voice messages to be transmitted over the packet-switched network and decompressing the instant voice messages received over the packet-switched network.

29. (Currently amended): A system comprising:

a client device;

a network interface coupled to the client device and connecting the client device to a

packet-switched network; and

an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface.

~~The system according to claim 20, further comprising:~~ a display displaying a list of one or more potential recipients for an instant voice message.

30. (Previously presented): The system according to claim 29, wherein the display includes an indicia for each of the one or more potential recipients indicating whether the potential recipient is currently available to receive an instant voice message.

31. (Previously presented): The system according to claim 20, wherein the instant voice message application generates an audible or visual effect indicating receipt of an instant voice message.

32. (Previously presented): The system according to claim 20, wherein the instant voice message application communicates in an intercom mode when a recipient of the instant voice message is currently available to receive the instant voice message and communicates in a record mode when the recipient of the instant voice message is currently unavailable to receive the instant voice message.

33. (Previously presented): The system according to claim 32, wherein the instant voice message application utilizes the intercom mode as a default communication mode.

34. (New) The system according to claim 6, wherein each of the instant voice message client systems comprises an instant voice messaging application generating an instant voice message

and transmitting the instant voice message over the packet-switched network to the messaging system.

35. (New): The system according to claim 34, wherein the instant voice messaging application includes a message database storing the instant voice message, wherein the instant voice message is represented by a database record including a unique identifier.

36. (New): The system according to claim 35, wherein the message database includes a plurality of instant voice messages recorded by a user of the client device and instant voice messages received over the packet-switched network.

37. (New): The system according to claim 36, wherein the instant voice messaging application displays at least one of the plurality of instant voice messages stored in the message database.

38. (New): The system according to claim 35, wherein the instant voice messaging application includes a file manager system performing at least one of storing, deleting and retrieving the instant voice messages from the message database.

39. (New): The system according to claim 34, wherein the instant voice messaging application includes an audio file creation system creating an audio file for the instant voice message based on input received via an audio input device coupled to the client device.

40. (New): The system according to claim 34, wherein the instant voice messaging application includes an encryption/decryption system for encrypting the instant voice messages to be transmitted over the packet-switched network and decrypting the instant voices messages received over the packet-switched network.

41. (New): The system according to claim 34, wherein the instant voice messaging application includes a compression/decompression system for compressing the instant voice messages to be transmitted over the packet-switched network and decompressing the instant voice messages received over the packet-switched network.

42. (New): The system according to claim 34, wherein the instant voice messaging application displays a list of one or more potential recipients for the instant voice message.

43. (New): The system according to claim 42, wherein the instant voice messaging application displays an indicia for each of the one or more potential recipients indicating whether the potential recipient is currently available to receive an instant voice message.

44. (New): The system according to claim 34, wherein the instant voice message application generates an audible or visual effect indicating receipt of an instant voice message.

REMARKS

By this amendment, claims 3, 4, 12, and 21 have been cancelled, claims 2, 5, 6, 13, 16-20, and 29 have been amended, and new claims 34-44 have been added. No new matter is introduced. Claims 2, 5-11, 13-20 and 22-44 will remain pending herein upon entry of this Response. For the reasons stated below, the Applicant respectfully submits that all claims pending in this application are in condition for allowance. Reconsideration of this application is respectfully requested in view of the following remarks.

The subject matter of new claim 34 is described in the specification at, for example, page 13, line 15 – page 14, line 17.

The subject matter of new claim 35 is described in the specification at, for example, page 25, lines 6-8.

The subject matter of new claim 36 is described in the specification at, for example, page 35, lines 6-8.

The subject matter of new claim 37 is described in the specification at, for example, page 14, lines 12-14.

The subject matter of new claim 38 is described in the specification at, for example, page 25, lines 8-10.

The subject matter of new claim 39 is described in the specification at, for example, page 25, lines 10-12.

The subject matter of new claim 40 is described in the specification at, for example, page 25, lines 14-15.

The subject matter of new claim 41 is described in the specification at, for example, page 25, lines 15-17.

The subject matter of new claim 42 is described in the specification at, for example, page 13, line 15 – page 14, line 17.

The subject matter of new claim 43 is described in the specification at, for example, page 29, line 18 – page 30, line 7.

The subject matter of new claim 44 is described in the specification at, for example, page 16, line 23 – page 17, line 2.

Entry of the above amendments is proper under 37 C.F.R. § 1.116 because the amendments (1) place the claims in better form for appeal if needed; and (2) do not introduce any elements requiring further search by the Examiner.

Double Patenting Rejections

Claims 2-33 are rejected on the ground of non-statutory obviousness-type double patenting as being unpatentable over claims 1-70 of U.S. Patent No. 7,535,890 (hereinafter the “‘890 patent”).

Claims 3, 4, 12, and 21 have been cancelled, rendering the rejection of these claims moot.

The Applicants file herewith a Terminal Disclaimer over the ‘890 patent. As set forth in the MPEP, a Terminal Disclaimer may be used to overcome a rejection based on obviousness-type double patenting (MPEP § 804.02(II)). Further, in legal principle, the filing of a Terminal Disclaimer simply serves the statutory function of removing the rejection of obviousness-type double patenting, and does not raise a presumption on the merits of the rejection. It is improper

to view the simple expedient of “obviation” as an admission or acquiescence on the merits.

Ortho Pharmaceutical Corp. v. Smith, 22 USPQ2d 1119, 1124 (Fed. Cir. 1992) citing *Quad Envtl. Technologies Corp. v. Union Sanitary Dist.*, 946 F.2d 870, 874, 20 USPQ2d 1392, 1394-95 (Fed. Cir. 1991).

Withdrawal of the rejection of claims 2, 5-11, 13-20, and 22-33 based on the judicially created doctrine of double patenting is respectfully requested.

35 U.S. C. § 102(e) Rejections

Claims 2-3, 6, 11, 17-18, 20, 22-23, 26, and 32-33 stand rejected under 35 U.S.C. § 102(e) as unpatentable over U.S. Patent No. 7,372,826 to Dahod et al. (“Dahod”). This rejection is respectfully traversed. However, to move prosecution forward, the Applicant incorporates the allowable subject matter of claims 4, 12, 13, 21, and 29 into independent claims, as described below. The Applicant reserves the right to pursue previously filed claims in a continuation application, and this amendment does not indicate express or implicit agreement with the Examiner's rejections of previously presented claims.

Claim 3 has been cancelled, rendering the rejection of this claim moot.

Independent claim 2 has been amended to incorporate the subject matter of claims 3 and 4. Since the Examiner indicated that claim 4, which depended from claims 2 and 3, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 2 and claim 5 (which depends from claim 2) are allowable.

Claim 6 has been rewritten in independent form incorporating the subject matter of claims 2 and 12. Since the Examiner indicated that claim 12, which depended from claims 2 and

6, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 6 and claims 7-11 and 16-19 (which depend from claim 6) are allowable.

Claim 13 has been rewritten in independent form incorporating the subject matter of claim 2. Since the Examiner indicated that claim 13, which depended from claim 2, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 13 and claims 14-15 (which depend from claim 13) are allowable.

Independent claim 20 has been amended to incorporate the subject matter of claim 21. Since the Examiner indicated that claim 21, which depended from claim 20, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 20 and claims 22-28 and 31-33 (which depend from claim 20) are allowable.

Claim 29 has been rewritten in independent form incorporating the subject matter of claim 20. Since the Examiner indicated that claim 29, which depended from claim 20, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 29 and claim 30 (which depends from claim 29) are allowable.

Withdrawing of the rejection of claims 2, 6, 11, 17-18, 20, 22-23, 26, and 32-33 under 35 U.S.C. § 102(e) is respectfully requested.

New claims 34-44 depend directly or indirectly from allowable amended claim 6. Thus, it is respectfully submitted that new claims 34-44 are allowable at least for the reasons that amended claim 6 is allowable.

AMENDMENT AFTER FINAL REJECTION UNDER 37 C.F.R. § 1.116

MAIL STOP: AF
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In response to the Final Office Action of November 29, 2013, please amend the above-identified application as follows:

Any fee necessary for consideration of this response is hereby authorized to be charged to Deposit Account Number 50-4075.

Amendments to the Claims are reflected in the listing of claims that begins on page 2 of this paper.

Remarks begin on page 9 of this paper.

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in this application.

Listing of the Claims:

1. (Cancelled).
2. (Currently amended): A system comprising:
 - a network interface connected to a packet-switched network;
 - a messaging system communicating with a plurality of instant voice message client systems via the network interface; ~~and~~
 - a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems; and
 - a user database storing user records identifying users of the plurality of instant voice message client systems, wherein each of the user records includes a user name, a password and a list of other users selected by a user.
3. (Cancelled).
4. (Cancelled).
5. (Currently amended): The system according to claim ~~[[4]]~~ 2, wherein at least part of each of the user records is encrypted.
6. (Currently amended): A system comprising:
 - a network interface connected to a packet-switched network;

a messaging system communicating with a plurality of instant voice message client systems via the network interface; and

a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems.

~~The system according to claim 2,~~ wherein the messaging system receives an instant voice message from one of the plurality of instant voice message client systems, and

wherein the instant voice message includes an object field including a digitized audio file.

7. (Previously presented): The system according to claim 6, wherein the instant voice message includes an action field identifying one of a predetermined set of permitted actions requested by the user.
8. (Currently amended): The system according to claim 7, wherein the predetermined set of permitted actions includes at least one of a connection request, a disconnection request, a subscription request, an unsubscription request, a message transmission request, and a set status request.
9. (Previously presented): The system according to claim 6, wherein the instant voice message includes an identifier field including a unique identifier associated with the instant voice message.
10. (Previously presented): The system according to claim 6, wherein the instant voice message includes a source field including a unique identifier associated with at least one of a given one of the plurality of instant voice message client systems that created the instant voice

message and a given one of the plurality of users using the given one of the plurality of instant voice message client systems.

11. (Previously presented): The system according to claim 6, wherein the instant voice message includes a destination field including a unique identifier associated with at least one of a given one of the plurality of instant voice message client systems identified as a recipient of the instant voice message and a given one of the plurality of users using the given one of the plurality of instant voice message client systems.

12. (Cancelled).

13. (Currently amended): A system comprising:

a network interface connected to a packet-switched network;

a messaging system communicating with a plurality of instant voice message client systems via the network interface; and

a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems.

~~The system according to claim 2,~~ wherein the messaging system receives connection object messages from the plurality of instant voice message client systems, wherein each of the connection object messages includes data representing a state of a logical connection with a given one of the plurality of instant voice message client systems.

14. (Previously presented): The system according to claim 13, wherein the connection object messages identifies at least one of a socket, a size of data to be transferred and a priority of the data.

15. (Previously presented): The system according to claim 13, wherein the communication platform system populates a connection list for the plurality of instant voice message client systems with the data in the connection object messages received from each of the plurality of instant voice message client systems.

16. (Currently amended): The system according to claim [[2]] 6, wherein the communication platform system assigns an IP address to each of the instant voice message client systems when the communication platform receives a connection request from each of the instant voice message client systems.

17. (Currently amended): The system according to claim [[2]] 6, further comprising: a message database storing the instant voice messages received from the instant voice message client systems.

18. (Currently amended): The system according to claim [[2]] 6, wherein, upon receipt of an instant voice message, the communication platform system determines if there is the current connection to one of the plurality of instant voice message client systems identified as a recipient of the instant voice message, and if there is no connection with the one of the plurality of instant voice message client system identified as the recipient, the instant voice message is stored and delivered when the one of the plurality of instant voice message client systems identified as the recipient re-established a connection.

19. (Currently amended): The system according to claim [[2]] 6, wherein the communication platform system updates the connection information for each of the instant voice message client systems by periodically transmitting a connection status request to the given one of the plurality of instant voice message client systems.

20. (Currently amended): A system comprising:

a client device;

a network interface coupled to the client device and connecting the client device to a packet-switched network; and

an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface,

wherein the instant voice messaging application includes a document handler system for attaching one or more files to the instant voice message.

21. (Cancelled).

22. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes a message database storing the instant voice message, wherein the instant voice messages is represented by a database record including a unique identifier.

23. (Previously presented): The system according to claim 22, wherein the instant voice message stored in the message database include a plurality of instant voice messages recorded by a user of the client device and instant voice messages received over the packet-switched network.

24. (Previously presented): The system according to claim 23, further comprising: a display displaying at least one of the plurality of instant voice messages stored in the message database.

25. (Previously presented): The system according to claim 22, wherein the instant voice messaging application includes a file manager system storing, deleting and retrieving the instant voice messages from the message database in response to a user request.

26. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes an audio file creation system creating an audio file for the instant voice message based on input received via an audio input device coupled to the client device.

27. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes an encryption/decryption system for encrypting the instant voice messages to be transmitted over the packet-switched network and decrypting the instant voices messages received over the packet-switched network.

28. (Previously presented): The system according to claim 20, wherein the instant voice messaging application includes a compression/decompression system for compressing the instant voice messages to be transmitted over the packet-switched network and decompressing the instant voice messages received over the packet-switched network.

29. (Currently amended): A system comprising:

a client device;

a network interface coupled to the client device and connecting the client device to a

packet-switched network; and

an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface.

~~The system according to claim 20, further comprising:~~ a display displaying a list of one or more potential recipients for an instant voice message.

30. (Previously presented): The system according to claim 29, wherein the display includes an indicia for each of the one or more potential recipients indicating whether the potential recipient is currently available to receive an instant voice message.

31. (Previously presented): The system according to claim 20, wherein the instant voice message application generates an audible or visual effect indicating receipt of an instant voice message.

32. (Previously presented): The system according to claim 20, wherein the instant voice message application communicates in an intercom mode when a recipient of the instant voice message is currently available to receive the instant voice message and communicates in a record mode when the recipient of the instant voice message is currently unavailable to receive the instant voice message.

33. (Previously presented): The system according to claim 32, wherein the instant voice message application utilizes the intercom mode as a default communication mode.

34. (New) The system according to claim 6, wherein each of the instant voice message client systems comprises an instant voice messaging application generating an instant voice message

and transmitting the instant voice message over the packet-switched network to the messaging system.

35. (New): The system according to claim 34, wherein the instant voice messaging application includes a message database storing the instant voice message, wherein the instant voice message is represented by a database record including a unique identifier.

36. (New): The system according to claim 35, wherein the message database includes a plurality of instant voice messages recorded by a user of the client device and instant voice messages received over the packet-switched network.

37. (New): The system according to claim 36, wherein the instant voice messaging application displays at least one of the plurality of instant voice messages stored in the message database.

38. (New): The system according to claim 35, wherein the instant voice messaging application includes a file manager system performing at least one of storing, deleting and retrieving the instant voice messages from the message database.

39. (New): The system according to claim 34, wherein the instant voice messaging application includes an audio file creation system creating an audio file for the instant voice message based on input received via an audio input device coupled to the client device.

40. (New): The system according to claim 34, wherein the instant voice messaging application includes an encryption/decryption system for encrypting the instant voice messages to be transmitted over the packet-switched network and decrypting the instant voices messages received over the packet-switched network.

41. (New): The system according to claim 34, wherein the instant voice messaging application includes a compression/decompression system for compressing the instant voice messages to be transmitted over the packet-switched network and decompressing the instant voice messages received over the packet-switched network.

42. (New): The system according to claim 34, wherein the instant voice messaging application displays a list of one or more potential recipients for the instant voice message.

43. (New): The system according to claim 42, wherein the instant voice messaging application displays an indicia for each of the one or more potential recipients indicating whether the potential recipient is currently available to receive an instant voice message.

44. (New): The system according to claim 34, wherein the instant voice message application generates an audible or visual effect indicating receipt of an instant voice message.

REMARKS

By this amendment, claims 3, 4, 12, and 21 have been cancelled, claims 2, 5, 6, 13, 16-20, and 29 have been amended, and new claims 34-44 have been added. No new matter is introduced. Claims 2, 5-11, 13-20 and 22-44 will remain pending herein upon entry of this Response. For the reasons stated below, the Applicant respectfully submits that all claims pending in this application are in condition for allowance. Reconsideration of this application is respectfully requested in view of the following remarks.

The subject matter of new claim 34 is described in the specification at, for example, page 13, line 15 – page 14, line 17.

The subject matter of new claim 35 is described in the specification at, for example, page 25, lines 6-8.

The subject matter of new claim 36 is described in the specification at, for example, page 35, lines 6-8.

The subject matter of new claim 37 is described in the specification at, for example, page 14, lines 12-14.

The subject matter of new claim 38 is described in the specification at, for example, page 25, lines 8-10.

The subject matter of new claim 39 is described in the specification at, for example, page 25, lines 10-12.

The subject matter of new claim 40 is described in the specification at, for example, page 25, lines 14-15.

The subject matter of new claim 41 is described in the specification at, for example, page 25, lines 15-17.

The subject matter of new claim 42 is described in the specification at, for example, page 13, line 15 – page 14, line 17.

The subject matter of new claim 43 is described in the specification at, for example, page 29, line 18 – page 30, line 7.

The subject matter of new claim 44 is described in the specification at, for example, page 16, line 23 – page 17, line 2.

Entry of the above amendments is proper under 37 C.F.R. § 1.116 because the amendments (1) place the claims in better form for appeal if needed; and (2) do not introduce any elements requiring further search by the Examiner.

Double Patenting Rejections

Claims 2-33 are rejected on the ground of non-statutory obviousness-type double patenting as being unpatentable over claims 1-70 of U.S. Patent No. 7,535,890 (hereinafter the “‘890 patent”).

Claims 3, 4, 12, and 21 have been cancelled, rendering the rejection of these claims moot.

The Applicants file herewith a Terminal Disclaimer over the ‘890 patent. As set forth in the MPEP, a Terminal Disclaimer may be used to overcome a rejection based on obviousness-type double patenting (MPEP § 804.02(II)). Further, in legal principle, the filing of a Terminal Disclaimer simply serves the statutory function of removing the rejection of obviousness-type double patenting, and does not raise a presumption on the merits of the rejection. It is improper

to view the simple expedient of “obviation” as an admission or acquiescence on the merits.

Ortho Pharmaceutical Corp. v. Smith, 22 USPQ2d 1119, 1124 (Fed. Cir. 1992) citing *Quad Envtl. Technologies Corp. v. Union Sanitary Dist.*, 946 F.2d 870, 874, 20 USPQ2d 1392, 1394-95 (Fed. Cir. 1991).

Withdrawal of the rejection of claims 2, 5-11, 13-20, and 22-33 based on the judicially created doctrine of double patenting is respectfully requested.

35 U.S. C. § 102(e) Rejections

Claims 2-3, 6, 11, 17-18, 20, 22-23, 26, and 32-33 stand rejected under 35 U.S.C. § 102(e) as unpatentable over U.S. Patent No. 7,372,826 to Dahod et al. (“Dahod”). This rejection is respectfully traversed. However, to move prosecution forward, the Applicant incorporates the allowable subject matter of claims 4, 12, 13, 21, and 29 into independent claims, as described below. The Applicant reserves the right to pursue previously filed claims in a continuation application, and this amendment does not indicate express or implicit agreement with the Examiner's rejections of previously presented claims.

Claim 3 has been cancelled, rendering the rejection of this claim moot.

Independent claim 2 has been amended to incorporate the subject matter of claims 3 and 4. Since the Examiner indicated that claim 4, which depended from claims 2 and 3, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 2 and claim 5 (which depends from claim 2) are allowable.

Claim 6 has been rewritten in independent form incorporating the subject matter of claims 2 and 12. Since the Examiner indicated that claim 12, which depended from claims 2 and

6, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 6 and claims 7-11 and 16-19 (which depend from claim 6) are allowable.

Claim 13 has been rewritten in independent form incorporating the subject matter of claim 2. Since the Examiner indicated that claim 13, which depended from claim 2, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 13 and claims 14-15 (which depend from claim 13) are allowable.

Independent claim 20 has been amended to incorporate the subject matter of claim 21. Since the Examiner indicated that claim 21, which depended from claim 20, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 20 and claims 22-28 and 31-33 (which depend from claim 20) are allowable.

Claim 29 has been rewritten in independent form incorporating the subject matter of claim 20. Since the Examiner indicated that claim 29, which depended from claim 20, would be allowable if rewritten in independent form, it is respectfully submitted that amended independent claim 29 and claim 30 (which depends from claim 29) are allowable.

Withdrawing of the rejection of claims 2, 6, 11, 17-18, 20, 22-23, 26, and 32-33 under 35 U.S.C. § 102(e) is respectfully requested.

New claims 34-44 depend directly or indirectly from allowable amended claim 6. Thus, it is respectfully submitted that new claims 34-44 are allowable at least for the reasons that amended claim 6 is allowable.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Doc Code: DIST.E.FILE Document Description: Electronic Terminal Disclaimer - Filed	PTO/SB/26 U.S. Patent and Trademark Office Department of Commerce
---	---

Electronic Petition Request	TERMINAL DISCLAIMER TO OBVIATE A DOUBLE PATENTING REJECTION OVER A "PRIOR" PATENT
Application Number	13546673
Filing Date	11-Jul-2012
First Named Inventor	Michael Rojas
Attorney Docket Number	EMP0024-US
Title of Invention	SYSTEM AND METHOD FOR INSTANT VoIP MESSAGING

- Filing of terminal disclaimer does not obviate requirement for response under 37 CFR 1.111 to outstanding Office Action
- This electronic Terminal Disclaimer is not being used for a Joint Research Agreement.

Owner	Percent Interest
EMPIRE IP LLC	100%

The owner(s) with percent interest listed above in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of prior patent number(s)

7535890

as the term of said prior patent is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the prior patent are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of the term of any patent granted on the instant application that would extend to the expiration date of the full statutory term of the prior patent, "as the term of said prior patent is presently shortened by any terminal disclaimer," in the event that said prior patent later:

- expires for failure to pay a maintenance fee;
- is held unenforceable;
- is found invalid by a court of competent jurisdiction;
- is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321;
- has all claims canceled by a reexamination certificate;
- is reissued; or
- is in any manner terminated prior to the expiration of its full statutory term as presently shortened by any terminal disclaimer.

Terminal disclaimer fee under 37 CFR 1.20(d) is included with Electronic Terminal Disclaimer request.

I certify, in accordance with 37 CFR 1.4(d)(4), that the terminal disclaimer fee under 37 CFR 1.20(d) required for this terminal disclaimer has already been paid in the above-identified application.

Applicant claims the following fee status:

- Small Entity
- Micro Entity
- Regular Undiscounted

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

THIS PORTION MUST BE COMPLETED BY THE SIGNATORY OR SIGNATORIES

I certify, in accordance with 37 CFR 1.4(d)(4) that I am:

- An attorney or agent registered to practice before the Patent and Trademark Office who is of record in this application

Registration Number 47743
- A sole inventor
- A joint inventor; I certify that I am authorized to sign this submission on behalf of all of the inventors as evidenced by the power of attorney in the application
- A joint inventor; all of whom are signing this request

Signature	/Kelly L. Kasha/
Name	Kelly L. Kasha

*Statement under 37 CFR 3.73(b) is required if terminal disclaimer is signed by the assignee (owner).
Form PTO/SB/96 may be used for making this certification. See MPEP § 324.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Table with columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO., EXAMINER, ART UNIT, PAPER NUMBER, NOTIFICATION DATE, DELIVERY MODE. Includes application details for Michael J. Rojas and examiner SMITH, CREIGHTON H.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

JOHN.KASHA@KASHALAW.COM

Office Action Summary	Application No. 13/546,673	Applicant(s) ROJAS, MICHAEL J.	
	Examiner CREIGHTON SMITH	Art Unit 2656	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 05 NOV '13.
 A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 5) Claim(s) 2-33 is/are pending in the application.
5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 2-33 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

- a) All b) Some * c) None of the:
1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 3) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 4) Other: _____.

DETAILED ACTION

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory double patenting rejection is appropriate where the claims at issue are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the reference application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement. A terminal disclaimer must be signed in compliance with 37 CFR 1.321(b).

The USPTO internet Web site contains terminal disclaimer forms which may be used. Please visit <http://www.uspto.gov/forms/>. The filing date of the

application will determine what form should be used. A web-based eTerminal Disclaimer may be filled out completely online using web-screens. An eTerminal Disclaimer that meets all requirements is auto-processed and approved immediately upon submission. For more information about eTerminal Disclaimers, refer to <http://www.uspto.gov/patents/process/file/efs/guidance/eTD-info-l.jsp>.

Claims 2-33 are rejected on the ground of nonstatutory double patenting as being unpatentable over claims 1-70 of U.S. Patent No. 7,535,890. Although the claims at issue are not identical, they are not patentably distinct from each other because applicant's patent claim 1 claims the instant voice messaging system that delivers IM over the Internet (Abstract). The body of the '723 patent's claim 1 claims a server that is connected to the Internet. Applicant's recital of a network interface in the instant application reads upon the patent's server. Applicant's recital of maintaining connection information for each of the client systems reads upon the server storing the instant voice message if one of the selected recipients/clients is unavailable and delivering the instant voice message if the recipient/client is available. Therefore, maintaining connection information is another way of saying whether the recipient/client is available or unavailable.

The following is a quotation of the appropriate paragraphs of pre-AIA 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 2, 3, 6, 11, 17, 18, 20, 22, 23, 26, 32, 33 are rejected under pre-AIA 35 U.S.C. 102E as being anticipated by Dahod et al ("Dahod"), U.S. Pat. #7,372,826.

Dahod teaches in col. 8, lines 15 et seq. teaches a media gateway 410A and a softswitch 425A and server 440, any of which are network interfaces. In col. 9, lines 31 et seq. Dahod discloses that media gateway ("IMG") provides for instant voice messaging ("VIM"). VIM is defined by Dahod where a subscriber defines a group of VIM, calls a phone number and records a voice message that is associated with the group VIM ("VG"). Dahod's system will then dial the group's members (the plurality of client systems) and play the recorded message to the client systems/VG. In col. 12, lines 19 et seq. Dahod discloses his system can handle cases like applicant's, if an intended recipient is unavailable to receive an instant voice message, the message is stored in a system mailbox on a system server for future delivery. Therefore, Dahod's system's gateway knows whether an intended recipient of the VIM is available or unavailable by whether or not the recipient phone is on, or if the recipient is busy on another call.

Pertaining to claim 3, Dahod discloses in col. 9, lines 35 et seq. that a subscriber will define a VIM GROUP (VG). The subscriber will then dial a phone number and record a message associated with the pre-defined VG. Dahod's system will dial out to the members of the VG and play the pre-recorded

message. In order to dial out to the group members, the group members' phone number, i.e. user records, will have been previously stored in Dahod's system by the subscriber who makes up the VIM GROUP/VG.

Regarding claim 11, in col. 10, lines 22 et seq. Dahod discloses the user identifies a destination user by keypad entry and the gateway causes the message to be delivered to a gateway corresponding to the other MS.

The following is a quotation of pre-AIA 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9, 10 are rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Dahod et al in view of Bear et al ("Bear"), USPAP #2004/0223599.

Bear discloses in P.0070 that an incoming data call such as IM or email will also include the source of the communication, i.e. an identifier of who called or sent the message. To have provided Bear's teaching of including an identifier of the source of a call in Dahod's system would have been obvious to a person having ordinary skill in the art because both references are teaching calls.

Claim 16 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Dahod et al in view of Hurttta et al ("Hurttta"), USPAP #2005/0117591.

Hurtta discloses in P.0054 Ip addresses that are assigned to users. To have provided Hurtta's teaching of assigning IP addresses in Dahod's messaging system would have been obvious to a person having ordinary skill in the art because both references are teaching messaging in the packet switched network .

Claim 24 is rejected under pre-AIA 35 U.S.C. 103(a) as being unpatentable over Dahod et al in view of Weiner, USPAP #2013/0279681.

Weiner discloses in P.0103 that an instant voice message (IVM) may be displayed on a handset. To have provided Weiner's teaching of displaying an IVM in Dahod's system would have been obvious to a person having ordinary skill in the art.

Claims 4, 5, 7, 8, 12-15, 19, 21, 25, 27-31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory

period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to
CREIGHTON SMITH at telephone number (571)272-7546.

/CREIGHTON SMITH/

AMENDMENT

MAIL STOP: AMENDMENTS

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In response to the Office Action of June 5, 2013, please amend the above-identified application as follows:

Amendments to the Claims are reflected in the listing of claims that begins on page 2 of this paper.

Remarks begin on page 8 of this paper.

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in this application.

Listing of the Claims:

1. (Cancelled).
2. (New) A system comprising:
 - a network interface connected to a packet-switched network;
 - a messaging system communicating with a plurality of instant voice message client systems via the network interface; and
 - a communication platform system maintaining connection information for each of the plurality of instant voice message client systems indicating whether there is a current connection to each of the plurality of instant voice message client systems.
3. (New) The system according to claim 2, further comprising: a user database storing user records identifying users of the plurality of instant voice message client systems.
4. (New) The system according to claim 3, wherein each of the user records includes a user name, a password and a list of other users selected by a user.
5. (New) The system according to claim 4, wherein at least part of each of the user records is encrypted.
6. (New) The system according to claim 2, wherein the messaging system receives an instant voice message from one of the plurality of instant voice message client systems.
7. (New) The system according to claim 6, wherein the instant voice message includes an action field identifying one of a predetermined set of permitted actions requested by the user.

8. (New) The system according to claim 7, wherein the predetermined set of permitted actions includes a connection request, a disconnection request, a subscription request, an unsubscription request, a message transmission request, and a set status request.
9. (New) The system according to claim 6, wherein the instant voice message includes an identifier field including a unique identifier associated with the instant voice message.
10. (New) The system according to claim 6, wherein the instant voice message includes a source field including a unique identifier associated with at least one of a given one of the plurality of instant voice message client systems that created the instant voice message and a given one of the plurality of users using the given one of the plurality of instant voice message client systems.
11. (New) The system according to claim 6, wherein the instant voice message includes a destination field including a unique identifier associated with at least one of a given one of the plurality of instant voice message client systems identified as a recipient of the instant voice message and a given one of the plurality of users using the given one of the plurality of instant voice message client systems.
12. (New) The system according to claim 6, wherein the instant voice message includes an object field including a digitized audio file.
13. (New) The system according to claim 2, wherein the messaging system receives connection object messages from the plurality of instant voice message client systems, wherein each of the connection object messages includes data representing a state of a logical connection with a given one of the plurality of instant voice message client systems.

14. (New) The system according to claim 13, wherein the connection object messages identifies at least one of a socket, a size of data to be transferred and a priority of the data.
15. (New) The system according to claim 13, wherein the communication platform system populates a connection list for the plurality of instant voice message client systems with the data in the connection object messages received from each of the plurality of instant voice message client systems.
16. (New) The system according to claim 2, wherein the communication platform system assigns an IP address to each of the instant voice message client systems when the communication platform receives a connection request from each of the instant voice message client systems.
17. (New) The system according to claim 2, further comprising: a message database storing the instant voice messages received from the instant voice message client systems.
18. (New) The system according to claim 2, wherein, upon receipt of an instant voice message, the communication platform system determines if there is the current connection to one of the plurality of instant voice message client systems identified as a recipient of the instant voice message, and if there is no connection with the one of the plurality of instant voice message client system identified as the recipient, the instant voice message is stored and delivered when the one of the plurality of instant voice message client systems identified as the recipient re-established a connection.
19. (New) The system according to claim 2, wherein the communication platform system updates the connection information for each of the instant voice message client systems by

periodically transmitting a connection status request to the given one of the plurality of instant voice message client systems.

20. (New) A system comprising:

a client device;

a network interface coupled to the client device and connecting the client device to a packet-switched network; and

an instant voice messaging application installed on the client device, wherein the instant voice messaging application includes a client platform system for generating an instant voice message and a messaging system for transmitting the instant voice message over the packet-switched network via the network interface.

21. (New) The system according to claim 20, wherein the instant voice messaging application includes a document handler system for attaching one or more files to the instant voice message.

22. (New) The system according to claim 20, wherein the instant voice messaging application includes a message database storing the instant voice message, wherein the instant voice messages is represented by a database record including a unique identifier.

23. (New) The system according to claim 22, wherein the instant voice message stored in the message database include a plurality of instant voice messages recorded by a user of the client device and instant voice messages received over the packet-switched network.

24. (New) The system according to claim 23, further comprising: a display displaying at least one of the plurality of instant voice messages stored in the message database.

25. (New) The system according to claim 22, wherein the instant voice messaging application includes a file manager system storing, deleting and retrieving the instant voice messages from the message database in response to a user request.
26. (New) The system according to claim 20, wherein the instant voice messaging application includes an audio file creation system creating an audio file for the instant voice message based on input received via an audio input device coupled to the client device.
27. (New) The system according to claim 20, wherein the instant voice messaging application includes an encryption/decryption system for encrypting the instant voice messages to be transmitted over the packet-switched network and decrypting the instant voices messages received over the packet-switched network.
28. (New) The system according to claim 20, wherein the instant voice messaging application includes a compression/decompression system for compressing the instant voice messages to be transmitted over the packet-switched network and decompressing the instant voice messages received over the packet-switched network.
29. (New) The system according to claim 20, further comprising: a display displaying a list of one or more potential recipients for an instant voice message.
30. (New) The system according to claim 29, wherein the display includes an indicia for each of the one or more potential recipients indicating whether the potential recipient is currently available to receive an instant voice message.
31. (New) The system according to claim 20, wherein the instant voice message application generates an audible or visual effect indicating receipt of an instant voice message.

32. (New) The system according to claim 20, wherein the instant voice message application communicates in an intercom mode when a recipient of the instant voice message is currently available to receive the instant voice message and communicates in a record mode when the recipient of the instant voice message is currently unavailable to receive the instant voice message.

33. (New) The system according to claim 32, wherein the instant voice message application utilizes the intercom mode as a default communication mode.

REMARKS

Claim 1 is pending in this application. By this amendment, claim 1 is cancelled, and new claims 2-33 are added. Accordingly, claims 2-33 will remain pending herein upon entry of this Response. No new matter is introduced.

The subject matter of new claim 2 is described in the specification at, for example, page 27, line 12 – page 28, line 11.

The subject matter of new claim 3 is described in the specification at, for example, page 28, lines 3-8.

The subject matter of new claim 4 is described in the specification at, for example, page 28, lines 3-8.

The subject matter of new claim 5 is described in the specification at, for example, page 28, lines 9-10.

The subject matter of new claim 6 is described in the specification at, for example, page 28, lines 12-14.

The subject matter of new claim 7 is described in the specification at, for example, page 28, lines 12-17.

The subject matter of new claim 8 is described in the specification at, for example, page 28, lines 13-19.

The subject matter of new claim 9 is described in the specification at, for example, page 28, lines 12-13; 19-20.

The subject matter of new claim 10 is described in the specification at, for example, page 28, lines 12-13 and 20-22.

The subject matter of new claim 11 is described in the specification at, for example, page 29, lines 10-11.

The subject matter of new claim 12 is described in the specification at, for example, page 29, lines 11-13.

The subject matter of new claim 13 is described in the specification at, for example, page 29, lines 18-22.

The subject matter of new claim 14 is described in the specification at, for example, page 30, lines 1-3.

The subject matter of new claim 15 is described in the specification at, for example, page 30, lines 3-7.

The subject matter of new claim 16 is described in the specification at, for example, page 31, lines 2-7.

The subject matter of new claim 17 is described in the specification at, for example, page 45, line 17 – page 46, line 7.

The subject matter of new claim 18 is described in the specification at, for example, page 16, line 21 – page 17, line 7.

The subject matter of new claim 19 is described in the specification at, for example, page 28, lines 15-16.

The subject matter of new claim 20 is described in the specification at, for example, page 13, line 15 – page 14, line 17.

The subject matter of new claim 21 is described in the specification at, for example, page 24, line 23 – page 25, line 6.

The subject matter of new claim 22 is described in the specification at, for example, page 25, lines 6-8.

The subject matter of new claim 23 is described in the specification at, for example, page 25, lines 6-8.

The subject matter of new claim 24 is described in the specification at, for example, page 14, lines 12-14.

The subject matter of new claim 25 is described in the specification at, for example, page 25, lines 8-10.

The subject matter of new claim 26 is described in the specification at, for example, page 25, lines 10-12.

The subject matter of new claim 27 is described in the specification at, for example, page 25, lines 14-15.

The subject matter of new claim 28 is described in the specification at, for example, page 25, lines 15-17.

The subject matter of new claim 29 is described in the specification at, for example, page 16, lines 2-6.

The subject matter of new claim 30 is described in the specification at, for example, page 29, line 18 – page 30, line 7.

The subject matter of new claim 31 is described in the specification at, for example, page 16, line 23 – page 17, line 2.

The subject matter of new claim 32 is described in the specification at, for example, page 23, line 5 – page 24, line 2.

The subject matter of new claim 33 is described in the specification at, for example, page 24, lines 2-4.

Double Patenting Rejection of Claim 1

Claim 1 stands rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-70 of U.S. Patent No. 7,535,890. The Applicant respectfully submits that this rejection of claim 1 is moot in view of the cancellation of claim 1.

35 U.S. C. § 102(e) Rejection of Claim 1

Claim 1 stands rejected under 35 U.S.C. § 102(e) as unpatentable over U.S. Patent No. 7,372,826 to Dahod et al. (“Dahod”). This rejection is respectfully traversed.

First, the Examiner has not indicated how Dahod allegedly anticipates cancelled claim 1, but simply cites to col. 12, lines 19-26.

Second, the Applicant respectfully submits that this rejection of claim 1 is moot in view of the cancellation of claim 1.

Finally, Dahod does not disclose or suggest the limitations of new independent claims 2 and 20, or any of the claims depending therefrom. For example, the cited portion of Dahod does

Serial No.: 13/546,673
Art Unit: 2656

Attorney's Docket No.: EMP0024-US
Page 12

not disclose or suggest, "a network interface connected to a packet-switched network," as recited in claim 2, or "a network interface coupled to the client device and connecting the client device to a packet-switched network," as recited in claim 20. Therefore, the Applicant respectfully submits that all new claims 2-33 are allowable.

Conclusion

Should the Examiner have any questions or determine that any further action is desirable to place this application in even better condition for issue, the Examiner is encouraged to telephone the Applicant's undersigned representative at the number listed below.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(b)

Applicant/Patent Owner: Empire IP LLC

Application No./Patent No.: 13/546,673 Filed/Issue Date: 2012-07-11

Titled: System and Method for Instant VoIP Messaging

Empire IP LLC, a Corporation
(Name of Assignee) (Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that it is:

- 1. [X] the assignee of the entire right, title, and interest in;
2. [] an assignee of less than the entire right, title, and interest in
3. [] the assignee of an undivided interest in the entirety of (a complete assignment from one of the joint inventors was made)

the patent application/patent identified above, by virtue of either:

A. [] An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy therefore is attached.

OR

B. [X] A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: Rojas, Michael J. To: Ayalogic, Inc.

The document was recorded in the United States Patent and Trademark Office at Reel 014827, Frame 0089, or for which a copy thereof is attached.

2. From: Ayalogic, Inc. To: Empire IP LLC

The document was recorded in the United States Patent and Trademark Office at Reel 030922, Frame 0335, or for which a copy thereof is attached.

3. From: _____ To: _____

The document was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.

[] Additional documents in the chain of title are listed on a supplemental sheet(s).

[] As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 13/546,673	Applicant(s) ROJAS, MICHAEL J.	
	Examiner CREIGHTON SMITH	Art Unit 2656	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on _____.
- 2a) This action is **FINAL**.
- 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 5) Claim(s) 1 is/are pending in the application.
- 5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 1 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 3) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 4) Other: _____.

DETAILED ACTION

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-70 of U.S. Patent No. 7,535,890. Although the conflicting claims are not identical, they are not patentably distinct from each other because all the elements of claim 1 are found in the patent's claim 1 and could have been presented along with the '723 claims at the time of filing.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(E) as being anticipated by Dahod et al (“Dahod”), U.S. Pat. #7,372,826.

See col. 12, lines 19-26.

Any inquiry concerning this communication should be directed to CREIGHTON SMITH at telephone number (571)272-7546.

PUBLICATION NOTICE

Title:SYSTEM AND METHOD FOR INSTANT VoIP MESSAGING

Publication No.US-2012-0275452-A1

Publication Date:11/01/2012

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently http://www.uspto.gov/patft/.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Alexandria, VA 22313-1450 or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently http://pair.uspto.gov/. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at 1-866-217-9197.

Office of Data Management, Application Assistance Unit (571) 272-4000, or (571) 272-4200, or 1-888-786-0101

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections

SYSTEM AND METHOD FOR INSTANT VoIP MESSAGING

Preliminary Class

370

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184

Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where

the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

SelectUSA

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage, facilitate, and accelerate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit SelectUSA.gov.

Information:					

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

This collection of information is required by 37 CFR 1.76. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 23 minutes to complete, including gathering, preparing, and submitting the completed application data sheet form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

10

BACKGROUND OF THE INVENTION

Technical Field of the Invention

15

The present invention generally relates to Internet telephony (IP telephony). More particularly, the present invention is directed to a system and method for enabling local and global instant VoIP messaging over an IP network, such as the Internet, with PSTN support.

20

Description of the Prior Art

Traditional telephony is based on a public switched telephone network (i.e., "PSTN"). In the PSTN, a telephone terminal is electrically connected to a conventional or legacy switch. The telephone terminal and the legacy switch communicate via a proprietary protocol, which may be different depending on the vendor of the legacy switch. Circuit switching provides a communication path (i.e., dedicated circuit) for a telephone call from the telephone terminal to another device over the PSTN, including another

25

telephone terminal. During the telephone call, voice communication takes place over that communication path.

An alternative to the PSTN is Voice over Internet Protocol (i.e., “VoIP”),
5 also known as IP telephony or Internet telephony. In the IP telephony, a VoIP terminal device is connected to a packet-switched network (e.g., Internet) and voice communication from the VoIP terminal device is digitized, packetized and transmitted over the packet-switched network to a destination VoIP terminal device, which reconstructs the packets and audibly plays, stores or otherwise processes the transmission. The VoIP terminal device
10 may be a VoIP telephone or a general-purpose personal computer (PC) enabled for IP telephony. More specifically, the PC is programmed with the software and equipped with audio input/output devices (e.g., a combination of microphone and speaker or a headset) to serve as a VoIP terminal device. The PC so enabled and equipped will herein be referred to as a VoIP terminal device or a VoIP softphone.

15

Figure 1 is an illustrative example of a prior art IP telephony system 100. The IP telephony system 100 comprises a packet-switched IP network 102, such as the Internet, which transmits VoIP traffic from and to a plurality of terminal devices 104, 106 and 110. Terminal device 104 is a VoIP softphone that is enabled for IP telephony over the
20 network 102. Terminal device 106 is a VoIP telephone, which is connected to the network 102 via a softswitch 108. The VoIP softswitch 108 is disposed on the packet-switched network (e.g., Internet) 102 between an origination terminal device (such as VoIP softphone 104) and a destination terminal device (such as VoIP telephone 106), and routes packets

over the packet-switched IP network 102. The softswitch 108 may also manage and perform administrative functions for the terminal device or devices (e.g., VoIP telephone 106) to which it is connected. Whether the terminal device is a VoIP softphone 104 or a VoIP telephone 106, the terminal device is connected to the IP network 102 via a networking
5 standard such as Ethernet, Bluetooth, IEEE 1394 (also known as “Firewire”), IEEE 802.11 (also known as “WiFi”), or networking over serial communication channels such as the Universal Serial Bus (i.e., “USB”). Data communication over the network then takes place using a connection protocol, e.g., transfer control protocol/Internet protocol (i.e., “TCP/IP”).

10 Further regarding Fig. 1, terminal device 110 is a legacy telephone that is connected to a legacy switch 112 for (circuit-switched) voice communications over the PSTN 116 with other terminal devices. A media gateway 114 may be provided between the legacy switch 112 and the packet-switched network 102 to enable IP telephony between the legacy telephone 110 and a VoIP terminal device, such as a VoIP softphone 104 or VoIP
15 telephone 106. More specifically, the media gateway 114 converts the audio signal carried over PSTN to packets carried over the packet-switched IP network 102. In addition, a media gateway 118 may be disposed over the PSTN 116 and connected to a softswitch 120 to convert the audio signal from the legacy telephone 110 to packets routed over the IP network 102 via the softswitch 120.

20

Voice messaging in both the VoIP and PSTN is known. More specifically, the foregoing systems may be provided with a facility to allow users to leave voice messages for recipients, which is a feature that is familiar to anyone who uses a telephone.

Conventionally, leaving a voice message involves dialing the recipient's telephone number (often without knowing whether the recipient will answer), waiting for the connection to be established, speaking to an operator or navigating through a menu of options, listening to a greeting message, and recording the message for later pickup by the recipient. In that
5 message, the user must typically identify himself or herself in order for the recipient to return the call.

Instant text messaging is likewise known. More specifically, a user is provided with a client terminal, which is typically a general-purpose PC programmed with
10 instant text messaging software and in data communication over an IP network with an instant text-messaging server. The instant text-messaging server presents the user, via the client terminal, with a list of persons who are currently "online" and ready to receive text messages on their own client terminals. The user then uses the client terminal to select one or more persons to whom the message will be sent and types in a text message. The text
15 message is sent immediately via the text-messaging server to the selected one or more persons and is displayed on their respective client terminals.

However, notwithstanding the foregoing advances in the VoIP/PSTN voice communication and voice/text messaging, there is still a need in the art for providing a
20 system and method for providing instant VoIP messaging over an IP network. More particularly, there is a need in the art for providing local and global instant voice messaging over VoIP with PSTN support.

SUMMARY OF THE INVENTION

The present invention is directed to a system and method for enabling local and global instant VoIP messaging over an IP network, such as the Internet.

5

According to an embodiment of the present invention, there is provided an instant voice messaging system for delivering instant messages over a packet-switched network, the system comprising: a client connected to the network, the client selecting one or more recipients, generating an instant voice message therefor, and transmitting the
10 selected recipients and the instant voice message therefor over the network; and a server connected to the network, the server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients over the network, the selected recipients being enabled to audibly play the instant voice message.

15

According to another embodiment of the present invention, there is provided an instant voice messaging system for delivering instant messages over a packet-switched network enabling public switched telephone network (PSTN) support, the system comprising: a PSTN telephone connected to the network for providing input audio; a client connected to the network, the client selecting one or more recipients, generating an instant
20 voice message therefor using the input audio provided by the PSTN telephone, and transmitting the selected recipients and the instant voice message therefor over the network; a server connected to the network, the server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients

over the network, the selected recipients being enabled to audibly play the instant voice message.

According to a further embodiment of the present invention, there is provided
5 an instant voice messaging system for delivering instant messages over a packet-switched network, the system comprising: a voice-over-internet-protocol (VoIP) telephone connected to the network for providing input audio; a client connected to the network, the client selecting one or more recipients, generating an instant voice message therefor using the input audio provided by the VoIP telephone, and transmitting the selected recipients and the
10 instant voice message therefor over the network; a server connected to the network, the server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients over the network, the selected recipients being enabled to audibly play the instant voice message.

15 According to still another embodiment of the present invention, there is provided an instant voice messaging system for delivering instant messages over a plurality of packet-switched networks, the system comprising: a client connected to a local network, the client selecting one or more external recipients connected to an external network outside the local network, generating an instant voice message therefor, and transmitting the
20 selected recipients and the instant voice message therefor over the local network and the external network; and a server connected to the external network, the server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients over the external network, the selected recipients being

enabled to audibly play the instant voice message.

According to yet another embodiment of the present invention, there is provided an instant voice messaging system for delivering instant messages over a plurality of packet-switched networks enabling public switched telephone network (PSTN) support, the system comprising: a PSTN telephone connected to a local network for providing input audio; a client connected to the local network, the client selecting one or more external recipients connected to an external network outside the local network, generating an instant voice message therefor using the input audio provided by the PSTN telephone, and transmitting the selected recipients and the instant voice message therefor over the local network and the external network; a server connected to the external network, the server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients over the external network, the selected recipients being enabled to audibly play the instant voice message.

15

According to yet a further embodiment of the present invention, there is provided an instant voice messaging system for delivering instant messages over a plurality of packet-switched networks, the system comprising: a voice-over-internet-protocol (VoIP) telephone connected to a local network for providing input audio; a client connected to the local network, the client selecting one or more external recipients connected to an external network outside the local network, generating an instant voice message therefor using the input audio provided by the VoIP telephone, and transmitting the selected recipients and the instant voice message therefor over the local network and the external network; an server

connected to the external network, the external server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients over the external network, the selected recipients being enabled to audibly play the instant voice message.

5

According to still a further embodiment of the present invention, there is provided an instant voice messaging system for delivering instant messages over a plurality of packet-switched networks, the system comprising: a client connected to an external network, the client selecting one or more recipients connected to a local network, generating
10 an instant voice message therefor, and transmitting the selected recipients and the instant voice message therefor over the external network; an external server system connected to the external network, the external server system receiving the selected recipients and the instant voice message, and routing the selected recipients and the instant voice message over the external network and the local network; a local server connected to the local network, the
15 local server receiving the selected recipients and the instant voice message therefor, and delivering the instant voice message to the selected recipients over the local network, the selected recipients being enabled to audibly play the instant voice message.

According to an embodiment of the present invention, there is provided a
20 method for instant voice messaging over a packet-switched network, the method comprising: selecting one or more recipients for instant voice messaging at a client; generating an instant voice message for the selected recipients at the client; transmitting the selected recipients and the instant voice message therefor over the network from the client to

a server; receiving the selected recipients and the instant voice message therefor at the server; delivering the instant voice message from the server to the selected recipients over the network; and audibly playing the instant voice message at the selected recipients.

5 According to another embodiment of the present invention, there is provided a method for instant voice messaging over a packet-switched network enabling public switched telephone network (PSTN) support, the method comprising: providing input audio via a PSTN telephone connected over the network; selecting one or more recipients for instant voice messaging at a client; generating an instant voice message using the input
10 audio from the PSTN telephone for the selected recipients at the client; transmitting the selected recipients and the instant voice message therefor over the network from the client to a server; receiving the selected recipients and the instant voice message therefor at the server; delivering the instant voice message from the server to the selected recipients over the network; and audibly playing the instant voice message at the selected recipients.

15 According to a further embodiment of the present invention, there is provided a method for instant voice messaging over a packet-switched network, the method comprising: providing input audio via a voice-over-internet-protocol (VoIP) telephone connected over the network; selecting one or more recipients for instant voice messaging at
20 a client; generating an instant voice message using the input audio from the VoIP telephone for the selected recipients at the client; transmitting the selected recipients and the instant voice message therefor over the network from the client to a server; receiving the selected recipients and the instant voice message therefor at the server; delivering the instant voice

message from the server to the selected recipients over the network; and audibly playing the instant voice message at the selected recipients.

According to still another embodiment of the present invention, there is
5 provided a method for instant voice messaging over a plurality of packet-switched networks,
the method comprising: selecting one or more external recipients for instant voice
messaging at a client connected to a local network, the one or more external recipients
connected to an external network outside the local network; generating an instant voice
message for the selected external recipients at the client; transmitting the selected external
10 recipients and the instant voice message therefor over the local network and the external
network; receiving the selected external recipients and the instant voice message therefor at
an external server connected to the external network; delivering the instant voice message to
the selected external recipients over the external network; and audibly playing the instant
voice message at the selected external recipients.

15

According to yet another embodiment of the present invention, there is
provided a method for instant voice messaging system over a plurality of packet-switched
networks enabling public switched telephone network (PSTN) support, the method
comprising: providing input audio via a PSTN telephone connected to a local network;
20 selecting one or more external recipients for instant voice messaging at a client, the one or
more external recipients connected to an external network outside the local network;
generating an instant voice message for the one or more external recipients using the input
audio provided by the PSTN telephone; transmitting the selected recipients and the instant

voice message therefor over the local network and the external network; receiving the selected recipients and the instant voice message therefor at a server connected to the external network; delivering the instant voice message to the selected recipients from the server over the external network; and audibly playing the instant voice message at the
5 selected recipients.

According to still a further embodiment of the present invention, there is provided a method for instant voice messaging system over a plurality of packet-switched networks, the method comprising: providing input audio via a voice-over-internet-protocol
10 (VoIP) telephone connected to a local network; selecting one or more external recipients for instant voice messaging at a client, the one or more external recipients connected to an external network outside the local network; generating an instant voice message for the one or more external recipients using the input audio provided by the VoIP telephone;
transmitting the selected recipients and the instant voice message therefor over the local
15 network and the external network; receiving the selected recipients and the instant voice message therefor at a server connected to the external network; delivering the instant voice message to the selected recipients from the server over the external network; and audibly playing the instant voice message at the selected recipients.

20 According to yet a further embodiment of the present invention, there is provided a method for instant voice messaging over a plurality of a plurality of packet-switched networks, the method comprising: selecting one or more recipients connected to a local network at a client connected to an external network; generating an instant voice

message for the selected recipients at the client; transmitting the selected recipients and the instant voice message therefor over the external network from the client to an external server system; receiving the selected recipients and the instant voice message at the external server system; routing the selected recipients and the instant voice message over the external network and the local network; receiving the selected recipients and the instant voice message therefor at a local server connected to the local network; delivering the instant voice message to the selected recipients over the local network; audibly playing the instant voice message at the selected recipients.

10

BRIEF DESCRIPTION OF THE DRAWINGS

The objects, features and advantages of the present invention will become apparent to one skilled in the art, in view of the following detailed description taken in combination with the attached drawings, in which:

15

Figure 1 illustrates an example of a prior art IP telephony system;

Figure 2 illustrates an exemplary local IVM system for enabling instant voice messaging according to the present invention;

Figure 3 illustrates an exemplary IVM client of Figure 2 for enabling instant voice messaging according to the present invention;

20

Figure 4 illustrates an exemplary IVM server of Figure 2 for enabling instant voice messaging according to the present invention;

Figure 5 illustrates an exemplary global IVM system comprising a local IVM system and global IVM clients, according to the present invention;

Fig. 6 illustrates an exemplary global IVM server system depicted in Fig. 5,

according to the present invention;

Fig. 7 illustrates an exemplary transport server depicted in Fig. 6, according to the present invention;

Fig. 8 illustrates an exemplary directory server depicted in Fig. 6, according to the present invention; and

Fig. 9 illustrates an exemplary global IVM system comprising a plurality of local IVM systems and global IVM clients, according to the present invention.

**DETAILED DESCRIPTION OF THE
PREFERRED EMBODIMENT OF THE INVENTION**

The present invention is directed to a system and method for enabling local and global instant VoIP messaging over an IP network with PSTN support.

Figure 2 is an exemplary illustration of a local instant voice messaging (IVM) system 200 according to the present invention. The instant voice messaging system 200 comprises a local IVM server 202 that provides the core functionality for enabling instant voice messaging with PSTN support according to the present invention. The architecture of the local IVM server 202 will be described in detail hereinbelow with reference to Fig. 4.

According to the exemplary IVM system 200, the local IVM server 202 is enabled to provide instant voice messaging to one or more IVM clients 206 and 208, as well support instant voice messaging for PSTN legacy telephones 110. It is noted that although Fig. 2 depicts one of each IVM client 206, 208 and legacy telephone 110 for clarity and brevity, the local IVM server 202 is enabled to support a plurality of each of the foregoing IVM

clients 206, 208 and legacy telephone 110. The local packet-switched IP network 204 interconnects the IVM clients 206, 208 and the legacy telephone 110 to the local IVM server 202 as well as interconnecting the local IVM server 202 to the local IP network 204. The network 204 may be a local area network (LAN), a wide area network (WAN), or the like, which supports both wired and wireless devices. The exemplary IVM client 208 is a VoIP softphone, the architecture of which will be described in detail hereinbelow with reference to Fig. 3. A microphone 212 is connected to the IVM client 208 and enables the recording of an instant voice message according to the present invention into an audio file 210 for transmission to the local IVM server 202 over the network 204. An input device 218 (e.g., a keyboard) is connected to the IVM client 208 to select one or more recipients that are to receive the recorded instant voice message. Although not depicted in Fig. 2, the input device 218 may include a trackball, digitizing pad or mouse, or the like. A display device 216 is connected to the IVM client 208 to display instant voice messages recorded and/or received by a user of the IVM client 208. An audio device 214, such as external speaker, is connected to the IVM client 208 to play received instant voice messages. It is noted that the microphone 212, audio device 214, display device 216 and input device 218 may form integral parts of the IVM client 208.

Further with reference to Fig. 2, IVM client 206 is interconnected via the network 204 to the local IVM server 202. An exemplary IVM client 206 is a VoIP telephone, which comprises a screen display (not shown) capable of displaying instant voice messages recorded and/or received by a user of the IVM client 206 according to the present invention. The VoIP telephone 206 further comprises a handset and/or speakerphone for

recording instant voice messages and listening to instant voice messages received at the VoIP telephone 206 according to the present invention. The VoIP telephones which may be implemented to provide instant voice messaging functionality according to the present invention are commercially available from many vendors, including Alcatel™, Lucent™, 5 NECT™ and Cisco™, to name just a few. In addition to the foregoing IVM clients 206, 208, the IVM system 200 supports a legacy telephone 110 for instant voice messaging according to the present invention. The legacy telephone 110 is connected to a legacy switch 112. The legacy switch 112 is further connected to a media gateway 114. Both the legacy switch 112 and the media gateway 114 interconnect the legacy telephone 110 via the network 204 to the 10 local IVM server 202, thereby facilitating instant voice messaging according to the present invention. The media gateway 114 may be a gateway that supports trunk pack network control (i.e., “TPNCP”) protocol, media gateway control protocol (i.e., “MGCP”), or a media gateway control H.428 protocol (i.e., “MEGACO”). As previously mentioned, the media gateway 114 converts the audio signal carried over PSTN to packets to be transmitted 15 over a packet-switched IP network, such as the local network 204.

The implementation of the instant voice messaging for IVM client 208 will be described first and will be followed by the implementations for IVM client 206 and legacy telephone 110, with reference to the local IVM system 200 depicted in Fig. 2. These 20 implementations implement a “record mode” of the instant voice messaging according to the present invention. There will further be described an “intercom mode” of the instant voice messaging according to the present invention. Therefore, in operation of the IVM client 208 according to Fig. 2, the IVM client (IVM softphone) 208 is connected over the network 204

to the IVM server 202, which as aforementioned enables instant voice messaging functionality over the network 204. The IVM client 208 displays a list of one or more IVM recipients on its display 216, provided and stored by the local IVM server 202, as will be particularly described hereinbelow with reference to Fig. 4. The user operates the IVM client 208 by using the input device 218 to indicate a selection of one or more IVM recipients from the list. The user selection is transmitted to the IVM server 202. The user selection also generates a start signal to the IVM client 208 that the user is ready to begin instant voice messaging according to the present invention. In response to the start signal, the IVM client (softphone) 208 listens to the input audio device 212 and records the user's speech into a digitized audio file 210 (i.e., instant voice message) stored on the IVM client 208. The audio file 210 at the IVM client 208 is finalized via a stop signal, which is generated by the user via the input device 218 or a preset time period without speech input via the input audio device 212 on the IVM client 208. Once the recording of the user's speech is finalized, IVM client 208 generates a send signal indicating that the digitized audio file 210 (instant voice message) is ready to be sent to the selected recipients. The user generates the send signal when the user operates the IVM client 208 via the input device 218, e.g., pressing a key on a keyboard or clicking a button on a mouse. The IVM client 208 transmits the digitized audio file 210 and the send signal to the local IVM server 202. In response to the send signal indicating that the instant voice message is ready to be sent, the IVM client 208 sends the recorded audio file 210 destined for the selected one or more recipients via local IVM server 202. After receiving the audio file 210, the IVM server 202 thereafter delivers the transmitted instant voice message to the selected one or more recipients via the local IP network 204. The one or more recipients are enabled to display an

indication that the instant voice message has been received and audibly play the instant voice message to an associated user. It should be understood that only the available IVM recipients, currently connected to the IVM server 202, will receive the instant voice message. It is noted that if a recipient IVM client is not currently connected to the local IVM server 202 (i.e., is unavailable), the IVM server temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the local IVM server 202 (i.e., is available).

There are several embodiments for the operation of the IVM client (VoIP telephone) 206 within the IVM system 200, according to the present invention. In the first embodiment, the VoIP telephone 206 is a standalone IVM client 206 enabled for instant voice messaging according to the present invention. In the second embodiment, the VoIP telephone 206 operates synchronously either with the IVM client 208 or IVM server 202 to enable instant voice messaging according to the present invention. Thus, in operation according to the first embodiment in Fig. 2, the IVM client (VoIP telephone) 206 is connected over the network 204 to the IVM server 202, which as aforementioned enables instant voice messaging functionality over the local network 204. The IVM client 206 displays a list of one or more IVM recipients on its associated display provided and stored by the local IVM server 202, as will be particularly described hereinbelow with reference to Fig. 4. The user operates the IVM client 206 by using a keypad on the VoIP telephone 206 to indicate a selection of one or more IVM recipients from the list. The VoIP telephone 206 transmits the selection to the IVM server 202. The user selection also generates a start signal to the IVM client 206 indicating the user is ready to begin instant voice messaging

according to the present invention. The user speaks into the handset of the IVM client 206 or a speakerphone on the IVM client 206. Although not shown in Fig. 2, the VoIP telephone 206 may provide a dedicated storage device, which in response to the start signal records an audio file, similar to the audio file 210 in the IVM client 208. The audio file is finalized via a stop signal. The stop signal is generated when the user presses a button on the keypad, a preset time period without speech input to the VoIP telephone 206, or when the user returns the handset to the cradle of the VoIP telephone 206. Once the recording of the user's speech is complete, a send signal is generated indicating that the instant voice message is ready to be sent to the selected recipients. The user generates the send signal when the user presses a button on the keypad or returns the handset of the VoIP telephone 206 to its cradle (on-hook). In response to the send signal, the IVM client 206 sends the recorded audio to the local IVM server 202 via the network 204. The IVM server 202 thereafter delivers the instant voice message to the selected one or more recipients via the IP network 204. As before, the one or more recipients are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message. As aforementioned, if a recipient IVM client is not currently connected to the local IVM server 202, the IVM server 202 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the local IVM server 202.

20 In the second embodiment of the IVM client 206 according to Fig. 2, the VoIP telephone 206 operates synchronously either with the IVM client 208 or the IVM server 202 to enable instant voice messaging according to the present invention. Thus, in operation according to the second embodiment, the IVM client (VoIP telephone) 206 is still

connected over the network 204 to the IVM server 202, which as aforementioned enables instant voice messaging functionality over the local network 204. However, VoIP telephone 206 cooperates with the IVM client 208 or IVM server 202 to record and send an instant voice message. More specifically, the VoIP telephone 206 is only used as a

5 recording/listening device for recording or listing to instant voice messages, while the IVM client 208 is used for displaying and selecting instant voice message recipients as described hereinabove. In operation, the IVM client 208 displays a list of IVM recipients on the display device 216 provided and stored by the local IVM server 202. The user operates the IVM client 208 by using the input device 218 on the IVM client 208 to indicate a selection

10 of one or more IVM recipients from the list. The user selection is transmitted to the IVM server 202. The user selection generates a start signal to the IVM server 202 indicating that the user is ready to begin instant voice messaging according to the present invention. In response to receiving the start signal, the IVM server 202 transmits a ring signal to the VoIP telephone 206, thereby indicating to the user the IVM system 200 is ready to record an

15 instant voice message. The IVM server 202 also signals the IVM client 208 to generate audio file 210 to record the instant voice message. As the user picks up the handset of the VoIP telephone 206 (off-hook), a connection is established via the network 204 between the local IVM server 202 and the VoIP telephone 206. Thereafter, the IVM server 202 forwards the user's speech transmitted from VoIP telephone 206 to the IVM client 208 for storage

20 into digitized audio file 210 on the IVM client 208. The audio file 210 is finalized by returning the handset its cradle (on-hook) or by pressing a designated button on the keypad VoIP telephone 206, which transmits the stop signal to the IVM server 202 and further from the IVM server 202 to the IVM client 208. Returning the handset to its cradle preferably

generates a send signal to the IVM server 202, which transmits the signal to the IVM client 208. The IVM client thereafter transmits the recorded audio file 210 (instant voice message) to IVM server 202 for delivery to the selected one or more IVM recipients. Alternatively, the user may press a key on the keyboard 218 to initiate the send signal. In response to the send signal, the IVM client 206 sends the recorded audio to the local IVM server 202 via the network 204. The IVM server 202 thereafter delivers the instant voice message to the selected one or more recipients via the IP network 204. The one or more recipients are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message. If a recipient IVM client is not currently connected to the local IVM server 202, the IVM server 202 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the local IVM server 202.

In operation of the legacy telephone 110 according to Fig. 2, the legacy telephone 110 is connected to the local IVM server 202 via media gateway 114 and legacy switch 112. The legacy telephone 110 cooperates with the IVM client 208 to record and send an instant voice message. More specifically, the legacy telephone 110 is used as a recording/listening device for recording or listing to instant voice messages, while the IVM client 208 is used for displaying and selecting instant voice message recipients as described hereinabove. Thus, in operation the IVM client 208 displays a list of IVM recipients on the display device 216 provided and stored by the local IVM server 202. The user operates the IVM client 208 by using the input device 218 on the IVM client 208 to indicate a selection of one or more IVM recipients from the list. The user selection is transmitted to the IVM

server 202. The user selection generates a start signal to the IVM server 202 indicating that the user is ready to begin instant voice messaging according to the present invention. In response to receiving the start signal, the IVM server 202 transmits an emulation code to the legacy telephone 110 to ring, thereby indicating to the user the IVM system 200 is ready to record an instant voice message. As the user picks up the handset of the legacy telephone 110 (off-hook), a connection is established via the network 204 between the legacy telephone 110 and the IVM server 202. Thereafter, the IVM server forwards the user's speech transmitted from the legacy telephone 110 to the IVM client 208 for storage into the digitized audio file 210 (i.e., instant voice message). The audio file on the IVM client 208 is finalized by returning the handset of the legacy telephone 110 to its cradle (on-hook) or by pressing a designated button on the keypad of the legacy telephone 110, which transmits a stop signal to the IVM server 202 and further to the IVM client 208. Returning the handset to its cradle also generates a send signal to the IVM server to transmit the recorded audio file (instant voice message) to the selected one or more IVM recipients. The IVM server 202 thereafter delivers the instant voice message to the selected one or more recipients via the IP network 204. The one or more recipients are enabled to display an indication that the received instant voice message has been received and audibly play the instant voice message. If a recipient IVM client is not currently connected to the local IVM server 202, the IVM server 202 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the local IVM server 202.

Regarding the operational embodiments described with reference to Fig. 2 for recoding and transmitting an instant voice message according to the present invention, the

digitized audio file is preferably compressed by applying a compression algorithm before sending the audio file to the one or more selected recipients. The audio file is preferably compressed within the IVM clients 206, 208 before forwarding the audio file to the IVM server 202 for subsequent delivery to the one or more selected recipients. Alternatively, the compression may be implemented within the IVM server 202 before the audio file is transmitted to the one or more selected recipients. A Lempel-Ziv compression algorithm is preferably used to compress the audio file according to the present invention. It is noted that many suitable compression algorithms are known to persons of skill in the art, including Huffman encoding, audio compression standards promulgated by the Moving Pictures Experts Group (“MPEG”), G.722 wideband speech encoding standard, fractal compression, and wavelet compression. Any of the foregoing compression algorithms may be implemented within the scope of the present invention.

Further regarding the operational embodiments described with reference to Fig. 2 for recoding and transmitting an instant voice message according to the present invention, the digitized audio file (which may or may not be compressed as described above) is further preferably encrypted via an encryption algorithm before transmitting the audio file to the one or more selected recipients. The encryption is preferably implemented within the IVM clients 206, 208 before forwarding the audio file to the IVM server 202 for subsequent delivery to the one or more selected recipients. Alternatively, the encryption may be implemented within the IVM server 202 before the audio file is transmitted to the one or more selected recipients. An AES (Rijndael) encryption algorithm is preferably used to encrypt the audio file according to the present invention. It is noted that many suitable

encryption algorithms are known to persons skilled in the art, including DES, Triple DES, Blowfish, Twofish, Serpent, and the like. Any of the foregoing encryption algorithms may be implemented within the scope of the present invention.

5 Lastly with reference to Fig. 2, in addition to the “record mode” of instant voice messaging, the instant voice messaging system 200 also supports an “intercom mode” of voice messaging. The “intercom mode” represents real-time instant voice messaging. In the “intercom mode,” instead of creating an audio file 210, one or more buffers (not shown) of a predetermined size are generated in the IVM client 206, 208 or local IVM server 202.

10 The one or more buffers are used to automatically write successive portions of the instant voice message. Once a first buffer is full, i.e., input audio of the predetermined size is written to the buffer, the content of the first buffer is automatically transmitted to the IVM server 202 for transmission to the one or more IVM recipients. A second buffer is meanwhile written with the next successive portion of input audio. Once, the second buffer

15 is full, i.e., input audio of the predetermined size is written to the buffer, the content of the second buffer is transmitted to the IVM server 202 for transmission to the one or more IVM recipients. If the entire instant voice message or a successive portion thereof (such as a last successive portion in the instant voice message) written to either buffer is smaller than the predetermined size, then the buffered content of less than the predetermined size is

20 automatically transmitted to the IVM server 202. The foregoing buffering using the first and second buffers is repeated until the entire instant voice message has been transmitted to the IVM server 202 for transmission to the one or more IVM recipients. It is noted that the invention is not limited to a particular number of buffers. The foregoing buffering and

transmission allows a “real-time” instant voice message to be transmitted to the one or more IVM recipients. The “intercom mode” may be designated as a default mode when an IVM recipient is on-line, while the “record mode” may be designated as a default if the IVM recipient is unavailable, i.e., not on-line. The user may easily change the “intercom mode”
5 to the “record mode” on the respective IVM client 206, 208. Finally, the audio contents of the buffers may be signal processed (for clarity), encrypted and compressed before transmission, as will be described in more detail hereinbelow with reference to Fig. 3.

Fig 3. an exemplary illustration of the architecture in the IVM client 208 for
10 enabling instant voice messaging according to the present invention. More specifically, the IVM client 208 comprises a client platform 302 for generating an instant voice message and a messaging system 320 for messaging between the IVM client 208 and the IVM server 202 for enabling instant voice messaging according to the present invention. The IVM client 208 is a general-purpose programmable computer equipped with a network interface (not
15 shown), such as an Ethernet card, to provide connectivity to the network 204. It is noted that any suitable networking protocol, not only Ethernet, could be used to connect the IVM client to a network 204 and thus is considered within the scope of the present invention. The client platform 302 comprises a client engine 304, which controls other components, namely the document handler 306, file manager 308, audio file creation 312, signal processing 314,
20 encryption/decryption 316, and compression/decompression 318. The messaging system 320 and the client engine 304 communicate via standard inter-process communication. The messaging system 320 and client engine 304 also communicate with the IVM server 202 over the network interface via the network 204. The document handler 306 oversees the

retrieving, sending, receiving and storing of one or more documents (or files) attached to instant voice messages from/to the one or more selected IVM recipients that may be communicating with the IVM client 208. More specifically, when an instant voice message is to be transmitted to the one or more IVM recipients, one or more documents may be attached to the instant voice message to be, stored or displayed by the one or more selected IVM recipients. The file manager accesses a message database 310, in which both the received and recorded instant voice messages are represented as database records, each record comprising a message identifier and the instant voice message. The file manager 308 services requests from the user to record, delete or retrieve messages to/from the message database 310. Audio file creation 312 creates an instant voice message as audio file 210, and is responsible for receiving input speech for the instant voice message from audio input device 212 or via network 204 and storing the input speech into audio file 210. Signal processing 314 performs noise removal and signal optimization in the audio file 210. Encryption/decryption 316 provides for respectively encrypting/decrypting of outgoing/incoming audio files (i.e., instant voice messages), and compression/decompression 318 respectively compresses/decompresses the outgoing/incoming audio files.

Further with reference to Fig. 3, the reception of an instant voice message is described as follows. It is assumed that the local IVM server 202 has determined that the IVM client 208 is available to receive an instant voice message by checking the IVM client's 208 current status, i.e., whether the IVM client 208 is "on-line." The local IVM server 202 maintains the current status of the IVM clients connected to the local IVM server

202, i.e., IVM clients 206, 208. It is further assumed that an IVM client has transmitted an instant voice message to the IVM client 208. The local IVM server 202 receives the instant voice message over the local IP network 204 and forwards the instant voice message to the IVM client 208. Upon receipt at the IVM client 208, the instant voice message is decrypted at 316, decompressed at 318, and stored in the message database 310 using the file manager 308. Any files attached to the instant voice message are also stored in the message database 310 using the file manager 308. A visual and/or sound effect is initiated to notify a user of the IVM client 208 that a new instant voice message has been received at the IVM client 208. At this point in time, the instant voice message and any file attachments are available to the user. The user can select the instant voice message from a listing of available instant voice messages displayed on the IVM client 208 and play the newly received instant voice message. The user may also open any file attachments and move or save the files to a separate location on the client using a drag-and-drop process.

Still further with reference to Fig. 3, the generation and transmission of an instant voice message is described as follows. The user selects the available one or more IVM recipients and initiates the creation of an instant voice message as described above with reference to Fig. 2. The client engine 304 detects the start signal and invokes audio file creation 312 of the audio file 210. The audio file 210 is initialized and captures the audio voice message input by the user. Once the client engine 304 detects a stop signal, the instant voice message is finalized in the audio file 210 via audio file creation 312. The audio file 210 is adjusted for gain, and noise is removed via signal processing 314. The audio file 210 is further compressed at 318 and encrypted at 316. The completion of these processes

causes the client engine 304 to inform the user via display 216 that the instant voice message is available to be sent. After the client engine 304 detects the send signal from the user, the instant voice message (audio file 210) is transferred to the local IVM server 202. Before the transmission of the instant voice message (i.e., before the send signal), the user has the option to review the instant voice message, re-record the instant voice message, delete the instant voice, as well as attach one or more files (i.e., documents). The attachment of one or more files is enabled conventionally via a methodology such as “drag-and-drop” and the like, which invokes the document handler 306 to make the appropriate linkages to the one or more files and flags the messaging system 320 that the instant voice message also has the attached one or more files.

Fig 4. an exemplary illustration of the local IVM server 202 for enabling instant voice messaging according to the present invention. The IVM server 202 is a general-purpose programmable computer equipped with a network interface, such as an Ethernet card, to provide connectivity to a network 204. It is noted that any suitable networking protocol may be implemented to connect the IVM server 202 to a network 204. The IVM server 202 comprises a server communication platform 402, a messaging system 436 and a database 414, thereby enabling instant voice messaging according to the present invention. The server communication platform 402 comprises a server engine 404, client manager 406, station manager 408, gateway manager 410, database manager 412 that accesses database 414, supplemental servers 416 (including particular server subsystems 418-424), as well as a control layer 426 (including non-proprietary server subsystems 428, 430 and proprietary server subsystems 432, 434). The messaging system 436 and the server

engine 304 communicate via standard inter-process communication. The messaging system 436 and the server engine are also able to communicate with the IVM clients 206, 208 over the network interface via the network 204. The database 414 stores users (e.g., IVM clients as well as legacy telephone clients) that are known to the IVM server 202 via the database manager 412. The users are represented in the database as records, each record comprising a user name, a password, and a contact list (a list of other users with whom the user wishes to exchange instant voice messages), and other data relating to the user. The database manager 412 services requests to add, update, delete, or retrieve database records to/from the database 414. The password may be stored in the database 414 as plaintext, in encrypted form, or as a hash (e.g., MD5 hash). The messaging system 436 communicates to the server engine 404 via message objects.

A message object comprises an action field, an ID field, a source field, a destination field, and an object field. The content of the action field is selected from a list of permitted actions, which among other actions includes: connect, disconnect, subscribe, unsubscribe, and post message. In addition, the actions include: determining if an IVM client is awake (i.e., pinging), disconnecting from the IVM client, processing an IVM client message, and notifying IVM clients if the IVM server 202 goes down. The client messages include sending an instant voice message portions, checkin message, send message, set status message, send a phone command message, and send control parameters message. The content of the ID field represents a unique identifier for the message object. The content of the source field is a globally unique identifier (“GUID”) that uniquely identifies the sender of the message. This unique identifier can be generated by any known way, including the

Globally Unique ID function call available in the Microsoft Windows and Microsoft .NET environments. In some circumstances, the source field is set to a special value to indicate that the sender of the message object is entitled to special privileges. The senders with special privileges are in fact IVM servers. This allows the IVM servers to broadcast

5 messages to one another, subscribe to special events, and directly send messages to specific IVM servers. These privileges can depend upon whether the IVM servers are local servers or global servers. As an example, there can exist more than one local IVM server, each of these local IVM servers automatically has privileges to communicate to other local IVM server. On a global server system, a directory server can communicate with one or more

10 transport servers. The content of the destination field is a GUID of an intended IVM recipient of the instant voice message. The content of the object field is a block of data being carried by the message object, which may be, for example, a digitized instant voice message. Depending on the circumstances in which the message object is sent, some of the message object fields may be left blank or ignored. For example, the message object may

15 merely require an action to be performed based upon the GUID supplied. In this case, the action does not necessarily require any data to be sent or received and some of the message object's fields may be left blank or ignored.

Connection objects maintain the logical connections between the IVM server 202 and IVM clients 206, 208 connected to the IVM server 202. More specifically, a

20 connection object comprises data representing the state of the connection and code (one or more methods) for establishing and maintaining the logical connections between the IVM server 202 and the IVM clients 206, 208 within the IVM system 200 of Fig. 2. The

connection object can contain both data and/or commands, including information that describes the socket, the size of the data to be transferred, and the priority of the transfer (e.g., high, normal, low, unknown). On start up the local IVM server 202 generates and maintains a list for each IVM client 206, 208. The local IVM server 202 then waits to
5 receive connection objects from the IVM clients 206, 208 that are stored in the respective lists, decodes the received connection objects to obtain specific requests, and then services the specific requests from the IVM clients 206, 208.

Further with reference to Fig. 4, the server engine 404 controls all other subsystems in the server communication platform 402, and it is responsible for startup and
10 shutdown of the IVM server 202 and the IVM system 200. The client manager 406 controls the IVM clients 206, 208, providing contact presence (connection) information and message scheduling and delivery. The station manager 408 controls the individual legacy telephone 110 and coordinates its activity to work synchronously with the IVM client 208 and server 202. The gateway manager 410 enables the IVM server 202 to communicate with the
15 legacy telephones, such as legacy telephone 110. The control layer 426 comprises a plurality of server subsystems 428-434, each of which provides translation services to different proprietary and non-proprietary gateways 114, such as TPNCP, MGCP, and MEGACO gateways. The proprietary server subsystems 428, 430 and non-proprietary server subsystems 432, 434 are connected to respective gateways 114 via the local IP
20 network 204. The supplemental server subsystems 416 provide a number of required services such as display manager subsystem 418, dynamic host configuration protocol (i.e., “DHCP”) subsystem 420, trivial file transfer protocol (i.e., “TFTP”) server subsystem 422,

and hypertext transfer protocol (i.e., "HTTP"). Each of the supplemental servers 418-424 in the subsystem 416 is used during the initial set-up of the IVM system 200. The boot-up process and allocation of IP addresses to IVM clients 206, 208 are performed through an LCD panel (not shown) associated with the local IVM server 202. The LCD manager 418 supports this boot-up process. The DHCP server 420 is used to allocate IP addresses as required and allows the advanced configuration of network settings in the instant voice messaging system. The TFTP server 422 provides a TCP/IP file transfer capability. Lastly, the HTTP server 424 provides services for a web server.

Figure 5 is an exemplary illustration of a global instant voice messaging (IVM) system 500, according to the present invention. In the global IVM system 500, the local IVM system 200 is depicted as a local IVM system 510, which is connected to a packet-switched network 102 (i.e., Internet). The global IVM system 500 comprises the local IVM system 510, global IVM server system 502, and global IVM clients 506 and 508 that are optionally connected via local IP network 504. The global IVM server system 502 is connected to the IP network (i.e., Internet) 102 for enabling the local IVM clients 206, 208 and legacy telephone 110 in the local IVM system 510 to generate and send instant voice messages to the global IVM clients 506, 508, as well as the local IVM clients 206, 208 to receive instant voice messages from the global IVM clients 506, 508. The implementation of the global instant voice messaging for the IVM client 208 will be described first and will be followed by the implementations for IVM client 206 and legacy telephone 110, with reference to the global IVM system 500 depicted in Fig. 5. Thereafter, instant voice messaging for global clients 506 and 508 will be described according to the

present invention. These implementations implement a “record mode” of the instant voice messaging according to the present invention. Thereafter, there will lastly be described an “intercom mode” of the instant voice messaging according to the present invention.

5 Therefore, in operation of the IVM client 208 according to Fig. 5, the IVM client 208 is connected via the networks 204, 102 to the global IVM server system 502, which enables the global instant voice messaging functionality outside the local IVM system 510 over the network (i.e., Internet) 102. More specifically, the IVM client 208 requests from the global IVM server system 502 a global contact list (not shown) of global one or
10 more IVM recipients with which the IVM client 208 may exchange instant voice messages. For the purposes of illustration, it is assumed that global IVM clients 506, 508 are in the contact list. The global IVM server system 502 stores and maintains this contact list. Thus, the global IVM server system 502 responds by transmitting the contact list to the IVM client 208. The IVM client 208 displays the contact list on its display 216. Alternatively, the
15 global contact list may be replicated to the local IVM server 202 within the local IVM system 510, in which case the local IVM client 208 obtains the global contact list from the local IVM server 202. The user operates the IVM client 208 by using the input device 218 to indicate a selection of one or more IVM recipients from the global contact list. Here, for the purposes of illustration it is again assumed that IVM client 208 selected global IVM
20 clients 506, 508. The user selection is transmitted to the IVM server 202. The user selection also generates a start signal to the IVM client 208 that the user is ready to begin instant voice messaging. In response to the start signal, the IVM client 208 listens to the input audio device 212 and records the user’s speech into a digitized audio file 210 (i.e.,

instant voice message) stored on the IVM client 208. The audio file 210 is finalized via a stop signal, which is generated by the user via the input device 218 or a preset time period without speech input via the input audio device 212. Once the recording is finalized, the IVM client 208 generates a send signal indicating that the digitized audio file 210 (instant voice message) is ready to be sent to the selected one or more IVM recipients. The user generates the send signal when the user operates the IVM client 208 via the input device 218. The IVM client 208 transmits the digitized audio file 210 and the send signal to the global IVM server system 502 via the local IP network 204 and the global IP network 102. After receiving the audio file 210, the global IVM server system 502 delivers the transmitted instant voice message to the selected one or more recipients (e.g., IVM clients 506 and 508) via the IP network 102. The one or more recipients are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message to an associated user. It is noted that if a recipient IVM client 506, 508 is not currently connected to the global IVM server system 502, the global IVM server system 502 temporarily saves the instant voice message and delivers it to the global IVM client 506, 508 when the IVM client connects to the global IVM server system 502.

There are several embodiments for the operation of the IVM client (VoIP telephone) 206 within the global IVM system 500 of Fig. 5, according to the present invention. In the first embodiment, the VoIP telephone 206 is a standalone IVM client 206 enabled for instant voice messaging according to the present invention. In the second embodiment, the VoIP telephone 206 operates synchronously with the IVM client 208 to enable instant voice messaging according to the present invention. Thus, in operation

according to the first embodiment in Fig. 5, the IVM client 206 is connected via the networks 204, 102 to the global IVM server system 502, which enables instant voice messaging functionality over the IP network (Internet) 102. As mentioned previously, the IVM client 206 is also connected to the local IVM server 202. The IVM client 208 requests from the global IVM server system 502 a global contact list (not shown) of the global one or more IVM recipients with which the IVM client 206 may exchange instant voice messages. For the purposes of illustration, it is assumed that the global IVM clients 506, 508 are in the contact list. The global IVM server system 502 stores and maintains this contact list. Thus, the global IVM server system 502 responds by transmitting the global contact list to the IVM client 206. Alternatively, the global contact list may be replicated to the local IVM server 202 within the local IVM system 510, in which case the local IVM client 206 obtains the global contact list from the local IVM server 202. The IVM client 206 displays a list of the one or more IVM recipients on its associated display. The user operates the IVM client 206 by using a keypad on the VoIP telephone 206 to indicate a selection of one or more IVM recipients from the list. The VoIP telephone 206 transmits the selection to the global IVM server system 502. The user selection also generates a start signal to the IVM client 206 indicating the user is ready to begin instant voice messaging according to the present invention. The user speaks into the handset of the IVM client 206 or a speakerphone on the IVM client 206. Although not shown in Fig. 5, the VoIP telephone 206 may provide a dedicated storage device, which in response to the start signal records an audio file, similar to the audio file 210 in the IVM client 208. The audio file is finalized via a stop signal. The stop signal is generated when the user presses a button on the keypad, a preset time period without speech input to the VoIP telephone 206, or when the user returns the handset to the

cradle of the VoIP telephone 206. Once the recording of the user's speech is complete, a send signal is generated indicating that the instant voice message is ready to be sent to the selected recipients. The user generates the send signal when the user presses a button on the keypad or returns the handset of the VoIP telephone 206 to its cradle. In response to the send signal, the IVM client 206 sends the recorded audio file (instant voice message) to the global IVM server system 502 via the networks 204, 102 for delivery to the selected one or more IVM recipients. The global IVM server 502 thereafter delivers the instant voice message to the selected one or more recipients (e.g., IVM clients 506 and 508) via the IP network 102. As before, the one or more recipients are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message. If a recipient IVM client is not currently connected to the global IVM server system 502, the global IVM server system 502 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the global IVM server system 502.

In the second embodiment of the IVM client 206 according to Fig. 5, the VoIP telephone 206 operates synchronously with the IVM client 208 to enable global instant voice messaging according to the present invention. Thus, in operation according to the second embodiment in Fig. 5, the VoIP telephone 206 is connected over the network 204 to the IVM client 208 and the IVM client 208 is connected via the networks 204, 102 to the global IVM server system 502, which enables instant voice messaging functionality over the IP network (Internet) 102. The VoIP telephone 206 cooperates with the IVM client 208 to record and send a global instant voice message outside the local IVM system 510. The IVM client 208 displays a global contact list of IVM recipients (not shown) on the display device

216 provided by the global IVM server system 502, as described hereinabove.

Alternatively, the global contact list may be replicated to the local IVM server 202 within the local IVM system 510, in which case the IVM client 208 obtains the global contact list from the local IVM server 202. The user operates the IVM client 208 by using the input
5 device 218 to indicate a selection of one or more IVM recipients from the contact list. The user selection generates a start signal in the IVM client 208 indicating that the user is ready to begin instant voice messaging according to the present invention. In response to the start signal, the IVM client 208 generates audio file 210 to record an instant voice message and transmits a ring signal to the VoIP telephone 206. As the user picks up the handset of the
10 VoIP telephone 206 (off-hook), a connection is established via the network 204 between the local IVM client 208 and the VoIP telephone 206. Thereafter, the VoIP telephone 206 forwards the user's speech to the IVM client 208 for storage into the audio file 210. The audio file 210 is finalized by returning the handset its cradle (on-hook) or by pressing a designated button on the keypad VoIP telephone 206, which transmits the stop signal to the
15 IVM client 208. Returning the handset to its cradle preferably generates a send signal to the IVM client 208. The IVM client thereafter transmits the recorded audio file 210 (instant voice message) to the global IVM server system 502 via networks 204, 102 for delivery to the selected one or more IVM recipients. Alternatively, the user may press a key on the keyboard 218 to initiate the send signal. In response to the send signal, the IVM client 208
20 sends the recorded audio file to the global IVM server system 502 for delivery to the selected one or more IVM recipients. The global IVM server system 502 thereafter delivers the instant voice message to the selected one or more recipients (e.g., IVM clients 506 and 508) via the IP network 102. As before, the one or more IVM recipients are enabled to

display an indication that the instant voice message has been received and audibly play the instant voice message. If a recipient IVM client is not currently connected to the global IVM server system 502, the global IVM server system 502 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the global IVM server system 502.

In operation of the legacy telephone 110 according to Fig. 5, the legacy telephone 110 is connected to the local IVM client 208 via media gateway 114, legacy switch 112 and network 204. The legacy telephone 110 cooperates with the IVM client 208 to record and send an instant voice message outside the local IVM system 510. More specifically, the legacy telephone 110 is used as a recording/listening device for recording or listing to instant voice messages, while the IVM client 208 is used for displaying and selecting instant voice message recipients as described hereinabove. Thus, in operation the IVM client 208 requests from the global IVM server system 502 a global contact list of global one or more IVM recipients with which the IVM client 208 may exchange instant voice messages. Alternatively, the global contact list may be replicated to the local IVM server 202 within the local IVM system 510, in which case the IVM client 208 obtains the global contact list from the local IVM server 202. The IVM client 208 displays the global list of IVM recipients, as described hereinabove. The user operates the IVM client 208 to indicate a selection of one or more IVM recipients from the global contact list. The IVM client 208 transmits the user selection to the global IVM server system 502. The user selection generates a start signal in the IVM client 208 indicating that the user is ready to begin instant voice messaging according to the present invention. In response to the start

signal, the IVM client 208 transmits an emulation code to the legacy telephone 110 to ring, thereby indicating to the user the global IVM system 500 is ready to record an instant voice message. As the user picks up the handset of the legacy telephone 110 (off-hook), a connection is established via the network 204 between the legacy telephone 110 and the IVM client 208. Thereafter, the user's speech is transmitted from the legacy telephone 110 to the IVM client 208 for storage into the digitized audio file 210 (i.e., instant voice message). The audio file 210 is finalized by returning the handset of the legacy telephone 110 to its cradle (on-hook) or by pressing a designated button on the keypad of the legacy telephone 110, which transmits a stop signal to the IVM client 208. Returning the handset to its cradle may also generate a send signal to the IVM client 208 to transmit the recorded audio file (instant voice message) to the global IVM server system 502 for delivery to the selected one or more IVM recipients. Alternatively, the send signal is preferably generated from the IVM client 208 as described hereinabove. The global IVM server system 502 thereafter delivers the instant voice message to the selected one or more IVM recipients via the IP network (Internet) 102. The one or more recipients are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message. If a recipient IVM client is not currently connected to the global IVM server system 502, the global IVM server system 502 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the global IVM server 502.

Further with reference to Fig. 5, the instant voice messaging for global clients 506 and 508 will be described according to the present invention. In a first embodiment,

each of the global IVM clients 506, 508 is enabled to independently send an instant voice message. The IVM clients 506, 508 have like peripheral devices and functionality described respectively with reference to local IVM clients 206, 208 in Fig. 2. In second embodiment described below, the VoIP telephone 506 operates in conjunction with the IVM client 508 to send an instant voice message. Therefore, in operation of the global IVM clients 506 and 508 according the first embodiment in Fig. 5, the IVM clients 506, 508 are connected via the networks 204, 102 to the global IVM server system 502, which enables the global instant voice messaging functionality outside the local IVM system 510 over the network (i.e., Internet) 102. Each of the global IVM clients 506, 508 is enabled to request from the global IVM server system 502 a contact list (not shown) of global one or more IVM recipients with which each of the global IVM client 506, 508 may exchange instant voice messages. For the purposes of this illustration, it is assumed that the IVM clients 206 and 208 within the local IVM system 510 are in the contact list for each global IVM client 506, 508. The global IVM server system 502 stores and maintains the foregoing contact list for each global IVM client 506, 508. Upon request, the global IVM server system 502 responds by transmitting the contact list to each of the IVM clients 506, 508. Each of the IVM clients 506, 508 displays the contact list on its display. The user operates the IVM client 506, 508 to indicate a selection of one or more IVM recipients from the contact list. Each of the global IVM clients 506, 508 transmits the user selection to the global IVM server system 502. The user selection also generates a start signal to the IVM clients 506, 508 that the user is ready to begin instant voice messaging. In response to the start signal, the IVM clients 506, 508 record the user's speech into a digitized audio file (i.e., instant voice message) stored on the global IVM clients 506, 508. The audio file is finalized via a stop signal,

which is generated by the user by operating the global IVM client 506, 508. Once the recording is finalized, the IVM client 506, 508 generates a send signal indicating that the digitized audio file (instant voice message) is ready to be sent to the selected one or more recipients. The user generates the send signal when the user operates the global IVM client 506, 508. The IVM client 208 transmits the digitized audio file and the send signal to the global IVM server system 502. After receiving the audio file, the global IVM server system 502 delivers the transmitted instant voice message to the local IVM server 202 in the local IVM system 510 for delivery to the selected one or more recipients (e.g., local IVM clients 206 and 208) via the local IP network 204. The one or more recipients IVM 206, 208 are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message to an associated user. It is noted that if a recipient IVM client 206, 208 is not currently connected to the local IVM server 202, the IVM server 202 temporarily saves the instant voice message and delivers it to the local IVM client 206, 208 when the IVM client connects to the local IVM server 202.

15

In the second embodiment of the IVM client 506 according to Fig. 5, the VoIP telephone 506 operates synchronously with the IVM client 508 to enable global instant voice messaging according to the present invention. In this embodiment, the VoIP telephone 506 and the IVM client 508 may be located in a user's residence and be connected to a local IP network 504. This local IP network 504 can be a WiFi network or a local area network (i.e., LAN), which is also within the user's residence. The local IP network 504 may be connected to the IP network (Internet) 102 via a digital subscriber line (i.e., DSL) connection, cable connection, dialup connection, or the like. As noted above, the IVM

20

clients 506, 508 have like peripheral devices and functionality described respectively with reference to local IVM clients 206, 208 in Fig. 2. Thus, in operation according to this embodiment in Fig. 5, the global IVM client 508 requests from the global IVM server system 502 a contact list of global one or more IVM recipients with which each of the global IVM client 508 may exchange instant voice messages. For the purposes of this illustration, it is assumed that the IVM clients 206 and 208 within the local IVM system 510 are in the contact list for the global IVM client 508. The global IVM server system 502 stores and maintains the foregoing contact list for the global IVM client 508. The IVM client 508 displays a contact list of IVM recipients on the associated display device provided by the global IVM server system 502, as described hereinabove. The user operates the IVM client 508 by using the associated input device to indicate a selection of one or more IVM recipients from the contact list. The user selection generates a start signal in the IVM client 508 indicating that the user is ready to begin instant voice messaging according to the present invention. In response to the start signal, the IVM client 508 generates audio file to record an instant voice message and transmits a ring signal to the VoIP telephone 506 via local IP network 504. As the user picks up the handset of the VoIP telephone 206 (off-hook), a connection is established via the local network 504 between the local IVM client 508 and the VoIP telephone 506. Thereafter, the VoIP telephone 506 forwards the user's speech to the IVM client 508 for storage into the audio file at the IVM client 508. The audio file is finalized by returning the handset its cradle (on-hook) or by pressing a designated button on the keypad associated with the VoIP telephone 506, which transmits the stop signal to the IVM client 508. Returning the handset to its cradle preferably generates a send signal to the IVM client 508. The IVM client thereafter transmits the recorded audio file

(instant voice message) to the global IVM server system 502 for delivery to the selected one or more IVM recipients. Alternatively, the user may press a key on the input device associated with the IVM client 508 to initiate the send signal. In response to the send signal, the IVM client 508 sends the recorded audio file to the global IVM server system 502 for
5 delivery to the selected one or more IVM recipients. The global IVM server system 502 thereafter transmits the instant voice message to the local IVM server 202 for delivery selected one or more recipients (e.g., local IVM clients 206 and 208) via the local IP network 204. As before, the one or more recipients are enabled to display an indication that the instant voice message has been received and audibly play the instant voice message. If a
10 recipient IVM client is not currently connected to the local IVM server 202, the local IVM server 202 temporarily saves the instant voice message and delivers it to the IVM client when the IVM client connects to the local IVM server 202.

Lastly with reference to Fig. 5, in addition to the “record mode” of instant
15 voice messaging as described above, the instant voice messaging system 500 also supports an “intercom mode” of the instant voice messaging. The “intercom mode” represents real-time instant voice messaging. In the “intercom mode,” instead of creating an audio file as described hereinabove, one or more buffers (not shown) of a predetermined size are generated. The buffers may be generated in any one of the IVM clients 206, 208, 506 and
20 508, depending on how the global IVM system 500 is defined. The one or more buffers are used to automatically write successive portions of the instant voice message. Once a first buffer is full, i.e., input audio of the predetermined size is written to the buffer, the content of the first buffer is automatically transmitted. If the transmission is generated at a local

IVM client 206, 208 and destined for one or more local IVM recipients, the content of the first buffer is transmitted to the local IVM server 202 for delivery to the local one or more recipients. If the transmission is generated at a local IVM client 206, 208 and destined for one or more global IVM recipients 506, 508, the content of the first buffer is transmitted to the global IVM server system 502 for delivery to the one or more global recipients. In addition, if the transmission is generated at a global IVM client 506, 508 and destined for the other global IVM clients, the content of the first buffer is transmitted to the global IVM server system 502, such as for example clients 506, 508. Lastly, if the transmission is generated at a global IVM client 506, 508 and destined for the local IVM clients 206, 208, the content of the first buffer is transmitted to the global IVM server system 502 and further transmitted by the global IVM server 502 to the local IVM server 202 for delivery to clients 206, 208 within the local IVM system 510. A second buffer is meanwhile written with the next successive portion of input audio. Once, the second buffer is full, i.e., input audio of the predetermined size is written to the buffer, the content of the second buffer is transmitted in similar fashion to the first buffer. If the entire instant voice message or a successive portion thereof (such as a last successive portion in the instant voice message) written to either buffer is smaller the predetermined size, then the buffered content of less than the predetermined size is automatically transmitted to the IVM server 202. The foregoing buffering using the first and second buffers is repeated until the entire instant voice message has been transmitted as described above. It is noted that the invention is not limited to a particular number of buffers. The foregoing buffering and transmission allows a “real-time” instant voice message to be transmitted to the one or more local, as well as global, IVM recipients. The “intercom mode” may be designated as a default mode when an IVM

recipient is on-line, while the “record mode” may be designated as a default if the IVM recipient is unavailable, i.e., not on-line. The user may easily change the “intercom mode” to the “record mode” on the respective IVM client 206, 208, 506, 508. Finally, the audio contents of the buffers may be signal processed (for clarity), encrypted and compressed before transmission, as was described previously.

Fig. 6 is an exemplary detailed illustration 600 of the global IVM server system 502 depicted in Fig. 5, according to the present invention. More specifically, the local IVM system 510 described in Fig. 5 is connected via the IP network (Internet) 102 to the global IVM server system 502. The global IVM server system 502 comprises an IVM transport server mesh 602 and an IVM directory server 608. The IVM transport server mesh 602 comprises a plurality of interconnected IVM transport servers 604, 606. Although the mesh 602 is depicted as having two IVM transport servers 604, 606, it is to be understood that as many IVM transport servers as are desired or required for redundancy and load balancing may be interconnected in a mesh. The IVM transport servers 604, 606 may be centrally located and configured to communicate (i.e., forward and receive messages) with local IVM clients 206, 208, local IVM server 202 and global IVM client 506, 508 (not depicted in Fig. 6). The plurality of IVM transport servers 604, 606 in the IVM transport server mesh 602 permits load balancing and redundancy in the global IVM system 500. The directory server 608 maintains a transport server list of all the IVM transport servers 604, 606 currently connecting to the mesh 602. Each of the IVM transport servers 604, 606 first connects to the directory server 608. The directory server 608 informs each of the connecting IVM transport servers 604, 606 of all the other IVM transport servers currently

in the mesh 602 based on an active list (not shown) of transport servers 604, 606 in the mesh 602. The connecting IVM transport server then connects to each of the IVM transport servers in the transport server list, resulting in an interconnected mesh 602 of IVM transport servers 604, 606. The IVM transport servers 604, 606 and the IVM directory server 608
5 communicate via messages.

Further with reference to Fig. 6, the IVM transport servers 604, 606 connected in the mesh 602 share a database (not shown) of IVM clients, so that each IVM transport server 604, 606 refers to the same client database. It is preferable that each IVM
10 transport server 604, 606 maintains its own copy of the client database, which is mirrored and replicated conventionally amongst the IVM transport servers 604, 606 in the mesh 602. The client database may further be replicated to the local IVM server 202. Alternatively, the client database is stored on a separate file server (not shown) in data communication with the IVM transport servers 604, 606 over a network (not shown).

15
Fig. 7 is an exemplary detailed illustration of a transport server 604, 606 depicted in Fig. 6, according to the present invention. The IVM transport server 604, 606 is a general-purpose programmable computer comprising a network interface (not shown) connected to IP network (Internet) 102, a communication platform 702, a message database 712, and a messaging system 714. The communication platform 702 comprises a server
20 engine 704, which controls a user manager 706, a local server manager 708, and a storage manager 710. The messaging system 714 and the server engine 704 communicate via standard inter-process communication. The storage manager 710 handles retrieving,

5 sending, and storing of messages, including instant voice messages and attachments thereto,
to/from the message database 712. The user manager 706 is responsible for
creating/maintaining IVM clients 206, 208, 506, 508, identifying them and relaying their
status to the server engine 704. When an IVM client communicates an instant voice
10 message within the global IVM system 500, the user manager 706 notifies the server engine
704 whether the one or more recipients are unavailable, and thereby the instant voice
message is saved in the message database 712. When the one or more IVM recipients
become available, the user manager 706 notifies the server engine 704, which instructs the
storage manager 710 to retrieve any undelivered instant voice messages for the one or more
15 recipients and delivers the instant voice messages to the designated one or more IVM
recipients. The local server manager 708 is responsible for creating/maintaining and
providing the status of available local IVM servers, such as IVM server 202 in Fig. 2. The
availability status of the local IVM servers is checked periodically and updated.

15 Fig. 8 is an exemplary detailed illustration of a directory server 608 depicted
in Fig. 6, according to the present invention. The directory server 608 is a general-purpose
programmable computer equipped with a network interface (not shown) connected to IP
network (Internet) 102, a messaging system 812, and a communication platform 802. The
communication platform 802 comprises a server engine 804, which controls a local server
20 manager 806, a user manager 808, and a transport manager 810. The messaging system 812
and the server engine 804 communicate via standard inter-process communication. The
transport manager 810 maintains the status of the IVM transport servers 604, 606 in the
IVM transport server mesh 602 within the global IVM system 500 and using a load-

balancing mechanism distributes instant voice messages to available transport server 604, 606 for routing to the one or more IVM recipients. The user manager 808 is responsible for creating/maintaining IVM clients 206, 208, 506, 508, identifying and relaying their status via the server engine 804 to the IVM transport server 604, 606 to be used. The local server manager 806 is responsible for creating/maintaining and providing the status of available local IVM servers, such as IVM server 202 in Fig. 2. The availability status of the local IVM servers is checked periodically and updated.

Fig. 9 illustrates an exemplary a global instant voice messaging (IVM) system 900, which comprises a plurality of local IVM systems and a plurality of global IVM clients, according to the present invention. In the global IVM system 900, there are depicted a plurality of local IVM systems 902, 910 connected to the global IP network 102. The internal representation and functionality of each local IVM system 902, 904 is identical to the local IVM system 510 described with reference to Fig. 5. In global IVM system 900 of Fig. 9, there are also depicted a plurality of global IVM clients 918-928 and a global IVM server system 502 connected to the global IP network (i.e., Internet) 102. The internal representations of the global IVM client 918-928 and the global IVM server system 502 are identical to the respective IVM client 508 (and/or IVM client or 506) and the global IVM server system 502 described with reference to Fig. 5. In the local IVM system 902, each local IVM client 206, 208 is enabled to request local IVM recipients from the local IVM server 202 and global IVM recipients from either the global IVM server system 502 or the local IVM server 202. For example, the local IVM client 1A 208 displays a list 904 to a user, comprising both local and global IVM recipients. More specifically, the list 904

enables IVM client 1A to send instant voice messages according to the present invention to local IVM clients 1B 208 and 1C 206, global IVM client C 922 and global IVM client 2A 208 in the local IVM system 910. Similar lists 906-916 are displayed to the users of the respective IVM clients 1B-1C in local IVM system 902, and 2A-2C in local IVM system 5 910. In addition, the global clients A-F 918-928 are enabled to request IVM recipients from the global IVM server system 502 and display the respective lists of IVM recipients 930-940 on the respective IVM clients 918-928.

While the invention has been particularly shown and described with regard to 10 preferred embodiments thereof, it will be understood by those skilled in the art that the foregoing and other changes in form and details may be made therein without departing from the spirit and scope of the invention.

CLAIMS:

What is claimed is:

1. A method for instant voice messaging over a packet-switched network, the method comprising:
 - receiving an instant voice message having one or more recipients;
 - delivering the instant voice message to the one or more recipients over a packet-switched network;
 - temporarily storing the instant voice message if a recipient is unavailable; and
 - delivering the stored instant voice message to the recipient once the recipient becomes available.

ABSTRACT

Methods, systems and programs for instant voice messaging over a packet-switched network are provided. A method for instant voice messaging may comprise receiving an instant voice message having one or more recipients, delivering the instant voice message to the one or more recipients over a packet-switched network, temporarily storing the instant voice message if a recipient is unavailable; and delivering the stored instant voice message to the recipient once the recipient becomes available.

Declaration and Power of Attorney For Patent Application English Language Declaration

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name,

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled

SYSTEM AND METHOD FOR INSTANT VOIP MESSAGING

the specification of which

is attached hereto.

was filed on _____ as United States Application No. or PCT International Application Number _____ and was amended on _____

(if applicable)

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the national or PCT international filing date of the continuation-in-part application.

I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or (f), or 365(b) of any foreign application(s) for patent, or plant breeder's rights certificate(s), or 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below, by checking the box, any foreign application for patent, inventor's or plant breeder's rights certificate(s), or any PCT international application having a filing date before that of the application on which priority is claimed.

Prior Foreign Application(s)			Priority Not Claimed
_____ (Number)	_____ (Country)	_____ (Day/Month/Year Filed)	<input type="checkbox"/>
_____ (Number)	_____ (Country)	_____ (Day/Month/Year Filed)	<input type="checkbox"/>
_____ (Number)	_____ (Country)	_____ (Day/Month/Year Filed)	<input type="checkbox"/>

I hereby claim the benefit under 35 U.S.C. Section 119(e) of any United States provisional application(s) listed below:

(Application Serial No.)	(Filing Date)
(Application Serial No.)	(Filing Date)
(Application Serial No.)	(Filing Date)

I hereby claim the benefit under 35 U. S. C. Section 120 of any United States application(s), or Section 365(c) of any PCT International application designating the United States, listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States or PCT International application in the manner provided by the first paragraph of 35 U.S.C. Section 112, I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, C. F. R., Section 1.56 which became available between the filing date of the prior application and the national or PCT International filing date of this application:

(Application Serial No.)	(Filing Date)	(Status) (patented, pending, abandoned)
(Application Serial No.)	(Filing Date)	(Status) (patented, pending, abandoned)
(Application Serial No.)	(Filing Date)	(Status) (patented, pending, abandoned)

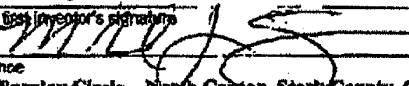

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

POWER OF ATTORNEY: As a named inventor, I hereby appoint the following attorney(s) and/or agent(s) to prosecute this application and transact all business in the Patent and Trademark Office connected therewith. *(list name and registration number)*
