Innovations in optical fiber technology are revolutionizing world communications. The impact of fiber materials, devices, and systems on communications in the coming decades will create an abundance of primary literature and the need for up-to-date reviews. **Optical Fiber Technology: Materials, Devices, and Systems** is a new cutting-edge journal designed to fill a niche in this rapidly evolving field, with emphasis on communications systems. The journal considers both theoretical and experimental papers on fiber materials, devices, and system performance evaluation and measurements with emphasis on practical applications. It will provide valuable information for engineers and researchers in optical fiber technology—both in industry and academia.
