The '813 patent provides improved systems, devices and methods that allow users to securely authenticate their identity when using a “point-of-sale” (“POS”) device; e.g., when making a retail credit card transaction. Ex. 1001 ('813 patent) at Fig. 31, 43:4-51:55. When used in conjunction with the patent’s Universal Secure Registry (“USR”), the claimed Electronic ID Device can both securely identify the user, and separately authenticate and approve the user’s financial transaction requests made through a POS device. *Id.* at 43:4-15, Fig. 31. The USR (USR 10 in Fig. 1, USR 356 in Fig. 31) includes a secure database that stores account (e.g., credit card) information for a plurality of users. *Id.*, 44:39-53.

According further embodiments, the multi-factor authentication process can also employ the identification of the account selected by the user for the current transaction. That is, the system 350 can authenticate the user based on a combination of two or more of something the user knows, something the user is, something that the user has and an account selected by the user for the current transaction (i.e., the transaction for which the authentication is being completed). For example, in one embodiment, encrypted authentication information is generated from a non-predictable value generated by the user device 352, identifying information for the selected user account 360, and at least one of the biometric information and secret information the user knows (for example, a PIN). According to one embodiment, the authentication information (for example, encrypted authentication information) is communicated to the secure registry for authentication and approval of the requested account access and/or financial transaction. In a further embodiment, one or
