NEW QUATERNARY AMMONIUM COMPOUNDS, THEIR PREPARATION AND USE

This is a continuation, of application Ser. No. ⁵ 286,442, filed Dec. 19, 1988, now abandoned.

The invention relates to quaternary ammonium compounds, and the preparation and use thereof. The compounds of the invention may be prepared by methods 10 known per se and used as pharmaceuticals, particularly for inhalation.

We have found that the introduction of a quaternary ammonium group at a suitable point in the molecules of 15 known broncholytically active compounds which are effective when inhaled makes it possible to eliminate unwanted systemic side effects to a great extent whilst substantially retaining the broncholytic (topical) effect. 20 We have found that the nature of the quaternary ammonium grouping may be selected from a wide range of variations without crucially affecting the differentiation between desirable and undesirable effects according to 25 the invention.

According to the invention, we provide compounds of formula I

$$\begin{array}{ccc} R_4 & R_5 & (I) & 30\\ Q-CH-CH-NH-C-(CH_2)_n-R & \\ I & I \\ OH & R_6 & \end{array}$$

wherein

Q represents a substituted phenyl group;

R represents a group, such as an alkoxy, arylalkoxy, aryloxyalkoxy, aryl, aryloxy arylcarbonamido group, a heterocyclic group or a heterocyclically substituted 40 carbonamido group, which includes also a quaternary ammonium grouping;

R4 represents H, CH3 or C2H5;

R₅ represents H or CH₃;

R₆ represents H or CH₃;

n represents an integer selected from 1, 2, 3, 4 and 5.

The compounds of the invention may in one preferred embodiment be represented essentially by the 50 formula Ia

in which, unless otherwise stated, n represents an integer selected from 1, 2, 3, 4 and 5;

R1 represents H, CH3, OCH3, Cl, or F;

R₂ represents H, R₃O-, -CH₂OH, -NHCHO,

-NHCOCH₃, -NHSO₂CH₃, or -NHCONH₂; R3 represents H, acyl, or N,N-dialkylcarbamoyl, the groups R₃O being in the 4- or 5- positions; the group II

2

may also represent one of the groups

(IIa) (IIb) (IIc) HN R₃C

wherein R3 is as hereinbefore defined and R₈ represents H or CH₃; R₄ represents H, CH₃, or C₂H₅; R₅ represents H or CH₃; R_6 represents H or CH₃;

R7 represents a single bond or a divalent bridging member which may also be bound to the ammonium nitrogen via ring atoms of a heterocyclic group;

-'n⊕–

represents a quaternary ammonium group; $An\Theta$ represents an anion.

In a further preferred embodiment, the grouping

primarily represents one of the groups

— Е,	(III a)
-Ar-B-E,	(III b)
-O-Ar-B-E,	(III c)
-NH-CO-E,	(III d)
-NH-CO-Ar-B-E,	(III e)
$-O-(C_mH_{2m})-A-E$	(III f)

(II)

(III g) (III h)

(III i)

n and R_1 to R_6 being as defined hereinbefore. In the above definitions of (IIIa) to (IIIi), m represents an integer selected from 2, 3, 4, 5 and 6;

represents a nitrogen heterocycle which may be condensed with a benzene ring and which may be substituted or unsubstituted and may optionally contain 25 one or more additional heteroatoms in the ring;

- Ar represents arylene, preferably unsubstituted or substituted phenylene or naphthylene;
- A represents a single bond or a NH-CO-(C1-4)-alkylene group;
- B represents a single bond or an $-O-(C_{1.4})$ -alkylene, ³⁰ $-NH-CO-(C_{1-4})$ -alkylene, or $-(C_{1-4})$ -alkylene group;
- D represents a $-(C_{1.4})$ -alkylene group; and
- E represents one of the groups

$$\begin{array}{c} R_{9} \\ I \\ -N^{\oplus} - R_{10}, -^{\oplus} N \end{array} \xrightarrow{\text{(Het)}} \text{and } \stackrel{\oplus}{\longrightarrow} N \xrightarrow{\text{(Het)}} \\ I \\ R_{11} \\ R_{9} \end{array}$$

(in which

R9 represents a (C1.4)-alkyl group;

- R_{10} represents a (C_{1.4})-alkyl group; or
- R₉ and R₁₀ together represent a (C4-6)-alkylene group; and
- R_{11} represents a (C₁₋₄)-alkyl, (C₁₋₄)-alkylene-COO Θ , (C₁₋₄)-alkylene-SO₃ \ominus , (C₁₋₄)-alkylene-OH, or (C₃₋₆)cycloalkyl group; and the group 50

is as defined above). Typical examples of E include $-N^{\oplus}(CH_3)_3,$

- $-N^{\oplus}(CH_3)_2CH_2CH_2CH_2SO_3^{\ominus},$
- $-N^{\oplus}(CH_3)_2-(CH_2)_4-SO_3^{\ominus}$,

$$-N^{\oplus}(CH_3)_2CH_2CH_2CO_2^{\ominus},$$

$$-\oplus_N$$
, $N\oplus-CH_3$ and,

4

Particular mention should be made of the following 10 preferred definitions for the grouping

in which the groupings and groups are as defined above:

$$-N^{\oplus}R_{9}R_{10}R_{11} \qquad (III a 1)$$
(III a 2)

(III b 2)

(III i)

$$Het
 $\oplus_N =$
 $H_{R_9}$$$

$$-\mathbf{A}_{\mathbf{r}} - \mathbf{B} - \mathbf{N}^{\oplus} \mathbf{R}_{9} \mathbf{R}_{10} \mathbf{R}_{11}$$
 (III b 1)

 $O-Ar-B-N \oplus R_9 R_{10} R_{11}$ (III c 1)

$$-NH-CO (Het)$$

 \downarrow
 R_{\circ}

$$-\mathrm{NH}-\mathrm{CO}-\mathrm{Ar}-\mathrm{B}-\mathrm{N}\oplus\mathrm{R}_{0}\mathrm{R}_{10}\mathrm{R}_{11} \qquad (\mathrm{III}\ e\ 1)$$

$$-\mathrm{O}-(\mathrm{C}_{m}\mathrm{H}_{2m})-\mathrm{A}-\mathrm{N}\oplus\mathrm{R}_{0}\mathrm{R}_{10}\mathrm{R}_{11} \qquad (\mathrm{III}\ f\ 1)$$

$$-O - (C_m \dot{H}_{2m}) - \dot{A} - Ar - B - \dot{N} \oplus \dot{R}_9 \dot{R}_{10} \dot{R}_{11}$$
 (III g 1

$$(III h 1)$$

$$\dot{N} =$$

The alkyl and alkylene groups in the above definitions may be straight-chained or branched. Unless oth-60 erwise stated, they contain 1 to 6, preferably 1 to 4, and most particularly 1 or 2 carbon atoms. This also applies to the carbon chains which are components of other groups. Examples of substituents in aryl(ene) include, in particular, F, Cl, CH₃ and CH₃O groups. The terms "aryl" and "arylene" refer to the appropriate groups 65 derived from benzene or naphthalene. "Acyl groups" in this case denote carboxylic acid groups with up to 7 carbon atoms, particularly acetyl. The bridge R7 may be

Find authenticated court documents without watermarks at docketalarm.com.

represents a group

linked to the nitrogen atom of the quaternary ammonium group. Alternatively, if the quaternary ammonium group is part of a heterocyclic group, the bridge may be connected to another ring atom of the heterocyclic 5 group. Groups falling into this latter category include in particular

(in which R^{11} represents H or $C_{1.4}$ -alkyl), and triazines.

In a further preferred embodiment of the invention

R1 represents H, CH3, OCH3, Cl or F;

- R_2 represents OH or, when R_1 equals Cl or F, R_2 may also represent H; or
- R1 and R2 together may also represent

(in which R_8 is as hereinbefore defined) R₃ represents a hydrogen atom; R4 represents H or C2H5; R₅ and R₆ both represent H or both represent CH₃;

n represents an integer selected from 1, 2 and 3; R_7

whilst B, D and R₁₁ are as hereinbefore defined).

- Particular mention should be made of the compounds in which the following combinations of substituents 60 occur:
 - (a) R1 represents a methyl or methoxy group, R2 represents a hydroxyl group, and R3 represents a 4hydroxyl group;
- 65 (b) R1 represents a hydrogen atom, R2 represents a hydroxyl group, and R3 represents a 4- or 5-hydroxyl group;
 - (c) R_1 and R_2 together represent

R₃ represents a 4- or 5-hydroxyl group; R4 represents a hydrogen atom, if R5 and R6 represent 10 methyl groups, but C₂H₅, if R₅ and R₆ represent H;

represents

(in which R_{12} and R_{13} represent CH₃, CH₂--COO \ominus , 45 CH_2 — CH_2 — $COO \ominus$ or CH_2 — CH_2 — CH_2 — $SO_3 \ominus$).

The compounds according to the invention may occur as mixtures of enantiomers, particularly as racemates, and optionally either as pairs of diastereoisomers or as pure enantiomers, and as salts with (preferably 50 Compounds selected from Cl-(C1.4)-alkylene-SO3Na physiologically acceptable) acids, and the invention extends to all such forms of the compounds of formula I.

The compounds of the invention may be prepared by a variety of methods.

Accordingly, in a further aspect of the invention, we provide a process for preparing compounds of formula I as described above, wherein

a) a compound of formula IV

$$\begin{array}{ccc} R_4 & R_5 \\ l & l \\ Q-CH-CH-NH-C-(CH_2)_n-R', \\ l & l \\ OH & R_6 \end{array}$$

wherein n, Q, R_4 , R_5 and R_6 are as defined above, R' is a tertiary amino group which corresponds at least in part to the quaternary ammonium group-containing

group R, or a protected form thereof in which any hydroxyl group or amino group it is desired to protect is protected by hydrogenolytically-removable protecting groups, is reacted with an alkylating agent, and any protecting groups present are removed by hydrogenolvsis;

b) if it is desired to prepare a compound of formula VII

wherein n, R4, R5, R6 and Q are as defined above and R_7 represents a group R_7 which is bound to the quaternary ammonium nitrogen via an aliphatic carbon atom, a compound of formula VIII

$$\begin{array}{ccc} R_4 & R_5 & (VIII) \\ Q-CH-CH-NH-C-(CH_2)_n-R_7'-X, \\ I & I \\ OH & R_6 \end{array}$$

(wherein the symbols are all defined as above and X represents a leaving group is reacted with a tertiary 30 amine

to provide the desired quaternary ammonium compound, followed, if desired, by separation of any mixture of enantiomers into pure enantiomeric forms or other enantiomeric mixtures, and formation of any de-40 sired acid addition salts.

Process (a) above is suitable for preparing compounds of formula I in which the quaternary ammonium group is not in the form

and HO-(C14)-alkylene-SO2-O-(C14)-alkylene-SO₃Na are particularly suitable for the introduction of a (C₁₋₄)-alkylene-SO₃ \ominus group.

The reaction is expediently carried out in an inert polar solvent at ambient temperature or at an elevated temperature up to about 100° C.

The starting materials of formula IV may be obtained by methods known per se. Thus, aminoketones of for-60 mula V

wherein Q, R⁴, R⁵, R⁶, R¹ and n are as defined above, or Schiff base of the formula VI
