DOCKET A L A R M Find authenticated court documents without watermarks at <u>docketalarm.com</u>. Application/Control Number: 11/553,339 Art Unit: 1656

This Office action is in response to Applicants' remarks received January 12, 2009.

Applicants' arguments filed have been fully considered and are deemed to be persuasive to overcome some of the rejections previously applied. Rejections and/or objections not reiterated from previous Office actions are hereby withdrawn.

Claim 1 is canceled. Claims 7-9, 14-23 are withdrawn. Claims 2-6, 10-13, to the species anticancer agents, the (sub)species taxanes, and the (sub)species paclitaxel, are currently under examination.

Priority: The request for priority to provisional application 60/432317, filed December 9, 2002, is acknowledged.

Objections and Rejections

DOCKE.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-6, 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Damascelli et al. (2001 Cancer 92(10): 2592-2602) as evidenced by Ibrahim et al. (2000 Proc

Am Soc Clin Oncol 19: abstract 609F). Damascelli et al. disclose ABI-007, a paclitaxel-human

albumin nanoparticle having a dimension of 150-200 nm (p. 2593 col. 2, Fig. 1). It is known that

ABI-007 is cremophor-free (evidenced by Ibrahim et al.). Damascelli et al. do not disclose a

weight ratio of albumin to paclitaxel is about 1:1 to about 5:1.

R M Find authenticated court documents without watermarks at <u>docketalarm.com</u>.

Application/Control Number: 11/553,339 Art Unit: 1656

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Damascelli et al. by determining the optimum concentration and/or weight ratio of albumin to paclitaxel that will result in a composition that will deliver paclitaxel most effectively in an albumin delivery system (claims 2-6, 10-13). Generally, differences in concentration or temperature will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such concentration or temperature is critical. "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955) ("The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages."); In re Hoeschele, 406 F.2d 1403, 160 USPQ 809 (CCPA 1969) (Claimed elastomeric polyurethanes which fell within the broad scope of the references were held to be unpatentable thereover because, among other reasons, there was no evidence of the criticality of the claimed ranges of molecular weight or molar proportions.). For more recent cases applying this principle, see Merck & Co. Inc. v. Biocraft Laboratories Inc., 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989); In re Kulling, 897 F.2d 1147, 14 USPQ2d 1056 (Fed. Cir. 1990); and In re Geisler, 116 F.3d 1465, 43 USPQ2d 1362 (Fed. Cir. 1997).

Application/Control Number: 11/553,339 Art Unit: 1656

The previous 103(a) has been withdrawn in view of Applicants' remarks. However, the

Damascelli et al. and Ibrahim et al. references are believed to be relevant art under 103(a) as

noted above.

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marsha M. Tsay whose telephone number is (571)272-2938. The examiner can normally be reached on M-F, 9:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang can be reached on 571-272-0811. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
