Case IPR2018-00163 Patent 7,923,536 B2 Issued: April 12, 2011

Title: COMPOSITIONS AND METHODS OF DELIVERY OF PHARMACOLOGICAL AGENTS

PETITION FOR INTER PARTES REVIEW

## TABLE OF CONTENTS

			rage				
I.	INTRODUCTION						
II.	OVERVIEW						
III.	MANDATORY NOTICES						
IV.	REQUIREMENTS FOR REVIEW						
V.	LEVEL OF ORDINARY SKILL IN THE ART						
VI.	THE PRIOR ART AND THE '536 PATENT						
	A.	Taxol® (paclitaxel) was an FDA-approved "wonder drug," but initially could only be administered with a toxic solvent	9				
	B.	The inventors repeatedly patented albumin-paclitaxel nanoparticles as a solution to the known problems of Taxol®	10				
	C.	Desai (EX1006) specifically discloses a nanoparticle formulation with an albumin-paclitaxel ratio of 9:1	12				
	D.	Desai, Kadima (EX1004), and Liversidge (EX1005) taught varying ranges of albumin-paclitaxel ratios, and taught lowering the ratio to increase drug concentration and reduce cost	12				
	E.	The inventors obtained their <i>third</i> round of patents on albumin-paclitaxel by arguing that a 9:1 ratio has "unexpected" benefits.	15				
VII.	PLAIN AND ORDINARY MEANINGS						
	A. "the weight ratio of albumin to paclitaxel in the composition" and "the ratio (w/w) of albumin to the paclitaxel in the pharmaceutical composition"		19				
	B.	"a particle size of less than about 200 nm"	22				
VIII.	ANA	LYSIS OF GROUNDS FOR TRIAL	23				

A.	GRC	OUND I: ANTICIPATION UNDER 35 U.S.C. §102(b)					
As shown below, claims 1–16 are anticipated by Desai (EX1006)							
	1.	Clair	m 1 is	anticipated	23		
		a.	Trea	tment of cancer in humans	24		
		b.	Albu	min-paclitaxel combination	25		
		c. Particle size of less than about 200 nm					
		d.	Albu	min-paclitaxel ratio of about 1:1 to 9:1	27		
	2.	Claims 2–16 are anticipated.			28		
	3.	The	"startii	ng" albumin-paclitaxel ratio does not change	30		
В.	GRC	UND	II: OB	VIOUSNESS UNDER 35 U.S.C. §103(a)	34		
	1.	Clair	Claim 1 would have been obvious.				
		a.	GRC	OUND II.A: Desai alone	35		
			i.	The albumin-paclitaxel ratio of about 9:1 falls within a range disclosed by Desai	38		
			ii.	Desai would have motivated a skilled artisan to lower Capxol <sup>TM</sup> 's albumin-paclitaxel ratio.	40		
			iii.	A skilled artisan would have reasonably expected the claimed albumin-paclitaxel ratio of 9:1 to retain stability.			
		b.	GRO	OUND II.B: Desai, Kadima, and Liversidge	46		
			i.	Kadima and Liversidge also disclose ranges of albumin-paclitaxel ratios including 9:1	46		
			ii.	Kadima teaches additional reasons to lower	49		

	2.	Clain	ns 2–16 would have been obvious.	52
		There is no probative evidence of secondary considerations.		54
	;	a.	The allegedly "unexpected" cell-binding results lack a nexus to the '536 patent and were expected.	55
	1	b.	The allegedly "unexpected" clinical data did not compare the closest prior art and were expected	58
	(	c.	Blocking patents prevented others from developing the claimed invention.	61
IV	CONCLUSIO	)NI		62
