## Gigabit Ethernet Technical Brief Achieving End-to-End Performance

```
Goals of Gigabit Ethernet
   Uses of Gigabit Ethernet
   Gigabit Ethernet History
   Gigabit Ethernet Momentum
      Workstation Speed 4
      Desktop Multimedia
      Multivendor Interoperability
Migrating to Gigabit Ethernet
   Gigabit Ethernet Components
   Upgrade Scenarios 6
      Upgrading Connections to Centralized File and Compute Servers 7
      Upgrading Connections between Switches 8
      Upgrading a Switched Fast Ethernet Backbone
      Upgrading a Shared FDDI Backbone
Protocol Architecture
                     10
   Physical Interface Characteristics
   Serializer/Deserializer
   8B/10B Encoding
   MAC Layer 11
   Upper Layers 11
Cabling types and distances
Flow Control 12
   Full-Duplex Transmission
   Half-duplex Transmission
      Carrier Extension 14
Technology Advances
                      15
   Ethernet Adapters
      First Generation Ethernet Adapters
      Second Generation Ethernet Adapters
                                           17
      Third Generation Ethernet Adapters—The Alteon Difference
   Ethernet Switches
      Specialized ASICs to meet the Performance Demands of Gigabit Ethernet
      Seamless Integration with Ethernet and Fast Ethernet 21
      Standard Ethernet Management 21
Conclusion
```

## Gigabit Ethernet Technical Brief Achieving End-to-End Performance

Intranet Web servers, centralized file and compute servers, data warehousing, groupware, medical imaging, CAD/CAM applications, 3-D modeling, animation, video, pre-press applications, server farms, seismic processing...

The list goes on and on. The demand for high-speed network connections is proliferating at a pace almost as rapid as the speed requirements of the applications themselves. Evidence is everywhere: the rapid acceptance of 10/100 Mbps connections on today's desktop computers, Ethernet switching at the department level, and the deployment of Fast Ethernet switches in corporate backbones are a few examples of the need for faster and faster networks.

And still, bottlenecks remain. Server network connections have been limited to 100 Mbps since FDDI was shipping in volume in the late 1980's. Fast Ethernet made it easier to build internetworking products, but did not provide a faster server interface. Today, centralized servers are often configured with multiple 100 Mbps network connections to meet bandwidth requirements.

Enter Gigabit Ethernet.

Gigabit Ethernet is a new technology that will provide seamless interoperability with Ethernet and Fast Ethernet. Gigabit Ethernet transfers data at a blazingly fast speed: one gigabit per second, or 100 times the rate of standard Ethernet. Gigabit Ethernet is designed to deliver the same benefits as Fast Ethernet: seamless integration with installed Ethernets, dramatically higher performance than the previous standard, and a familiar management environment.

It couldn't happen at a better time. Multimedia over IP is just starting to take off with the proposed IETF standards, real-time transfer protocol (RTP) and resource reservation protocol (RSVP). These protocols, combined with gigabit networks, high-performance desktops, and Internet technology, will quickly change the way corporations access information.

Ethernet. Fast Ethernet. Gigabit Ethernet. Networking made simple!

#### **Goals of Gigabit Ethernet**

Under development in the IEEE by the 802.3z Task Force, Gigabit Ethernet has the following primary goals:

- Complete interoperability with Ethernet and Fast Ethernet
  - Retain the installed base of NICs
  - Leverage the investment in hubs, switches, and routers
  - Leverage the network management environment

## Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## **Real-Time Litigation Alerts**

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

### **Advanced Docket Research**

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## **Analytics At Your Fingertips**

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

#### API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

#### **LAW FIRMS**

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

#### **FINANCIAL INSTITUTIONS**

Litigation and bankruptcy checks for companies and debtors.

### **E-DISCOVERY AND LEGAL VENDORS**

Sync your system to PACER to automate legal marketing.
