 3. “periodically sampling acceleration data at a
predetermined sampling rate, wherein each
sample includes acceleration data measured by
the inertial sensor over a predetermined period of
time” 12

 B. Ground 4 Fails..... 13

 1. The cited *Fabio* and *Pasolini* references fail to
disclose “using a default step cadence window to
identify a time frame within which to monitor for
a next step” (Claim 5)..... 13

 a) Petitioner fails to prove *Fabio*’s validation
interval (VT) maps onto Petitioner’s own
definition for “cadence window” 14

 b) *Fabio*’s T_{S1} is not a default cadence
window 15

 2. The cited *Fabio* and *Pasolini* references fail to

I. INTRODUCTION

Uniloc 2017 LLC (“Uniloc” or “Patent Owner”) submits this Response to Petition IPR2018-00424 for *Inter Partes* Review (“Pet.” or “Petition”) of United States Patent No. 7,881,902 (“the ’902 Patent” or “EX1001”) filed by Apple, Inc. (“Petitioner”). The instant Petition is procedurally and substantively defective for at least the reasons set forth herein.

II. THE ’902 PATENT

The ’902 patent is titled “Human activity monitoring device.” The ’902 patent issued February 1, 2011, from U.S. Patent Application No. 12/694,135 filed January 26, 2010, and is a continuation of U.S. Patent Application No. 11/644,455 filed December 22, 2006.

The inventors of the ’902 patent observed that at the time, step counting devices that utilize an inertial sensor to measure motion to detect steps generally required the user to first position the device in a limited set of orientations. In some devices, the required orientations are dictated to the user by the device. In other devices, the beginning orientation is not critical, so long as this orientation can be maintained. EX1001, 1:23-30. Further, the inventors observed that devices at the time were often confused by motion noise experienced by the device throughout a user’s daily routine. The noise would cause false steps to be measured and actual steps to be missed in conventional step counting devices. Conventional step counting devices also failed to accurately measure steps for individuals who walk at a slow pace. *Id.*, 1:31-38.

According to the invention of the ’902 Patent, a device to monitor human
