(57) **ABSTRACT**

An exterior rearview mirror assembly for a vehicle includes a bracket fixedly secured to the vehicle, a mirror casing secured to the bracket and defining a primary opening, and a single mirror support movably secured within the mirror casing disposed adjacent the primary opening. A primary mirror is fixedly secured to the single mirror support and disposed within the primary opening for providing a view rearward of the vehicle through a primary field of view, and a spotting mirror is fixedly secured to the single mirror support and disposed adjacent the primary mirror. The spotting mirror is defined by a single radius of curvature differing from the primary mirror such that the spotting mirror provides a second field of view rearward of the vehicle, such that the first field of view of the primary mirror overlaps the second field of view of the spotting mirror.
