(57) ABSTRACT

Reexamination Certificate for:
Patent No.: 6,059,576
Issued: May 9, 2000
Appl. No.: 08/976,228
Filed: Nov. 21, 1997

An electronic device, system and method for monitoring an individual on proper motion during physical activity. The system employs an electronic device which monitors an individual's motion through a pedometer capable of measuring parameters related to the individual's movement. The device includes a programmable microprocessor which stores and responds to data relating to the individual's movement based on customizable operation parameters. The microprocessor is connected to the movement data, a power source, a display, and other components. The data from the device to other components contained within the system, and the output components. The downloaded data can be worn at various positions and used for various purposes depending on the task being performed. The device also records movements made while the device is worn. A preprogrammed recordable event is recorded the time and date of the occurrence and provides feedback to the wearer via visual, auditory, or other means.

US 6,059,576 C1 Claim 1 vs. GARMIN

Claim 1

1. A portable, self-contained device for monitoring movement of body parts during physical activity, comprising:

- a movement sensor capable of measuring data associated with unrestrained movement direction and generating signals indicative of said movement;

- a power source;

- a microprocessor connected to said movement sensor and to said power source, said microprocessor capable of receiving, interpreting, storing and responding to said movement data and user-defined operational parameters, *detecting a first user-defined event based on the movement data and at least one of the user-defined operational parameters regarding the movement data, and providing first event information related to the detected first user-defined event along with first time start information reflecting a time at which the movement data causing the first user-defined event*

- at least one user input connected to said microprocessor for controlling the operation of

- a real-time clock connected to said microprocessor;

- memory for storing said movement data; and

- an output indicator connected to said microprocessor for signaling the occurrence of user-defined events;

wherein said movement sensor measures the angle and velocity of said movement.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
