Our mission is to create the world's first and best Strings-enabled digital audio relay.

Juno will allow users to continue to leverage their investment in analog audio components while adding new digital audio capabilities. From playing MP3s stored on your PC on your living room stereo to enjoying the services of a personalized digital DJ, Juno will transform the way consumers think about home audio.

Leveraging the power and flexibility of Strings, Juno will enable users to deliver audio from any source to any Juno-enabled analog components in the home.
