revision 1.5

date: 2005-01-10 16:56:58 -0600; author: davidc; state: dead; lines: +0 -0;

Remove all packages except for the ones that we are currently supporting: bandon, wilson, and trio. This includes removing all RADkit-related packages and all demo packages that were build upon the RADkit.

revision 1.4

date: 2002-05-10 11:40:02 -0500; author: davidc; state: Exp; lines: +4 -4;

Changed to use the ClockSync[Encode] instead of ClockSync[SlaveEncode] because the SlaveEncode edge no longer exists.

revision 1.3

date: 2002-05-08 22:07:29 -0500; author: davidc; state: Exp; lines: +3 -3;

Renamed the "Encode" edge of the ClockSync bead to "SlaveEncode".

This is the first phase in merging the functionality of the "Encode" and "MasterEncode" edge. This will allow me to add the new edge as the "Encode" edge without having to port every package to use the new edge.

revision 1.2

date: 2002-01-28 13:40:34 -0600; author: davidc; state: Exp; lines: +2 -2;

Changed the IP addresses to my local setup.

revision 1.1

date: 2002-01-28 09:08:08 -0600; author: davidc; state: Exp;

A package encapsulating the server half of the fight-club synchronized video demo.
