DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I, claims 1, 2, and 6-23 in the reply filed on March 20, 2009 is acknowledged. The traversal is on the ground(s) that Group I and Group II are not mutually exclusive. One could administer the long acting naltrexone of Group I to an individual in accordance with the method of Group II and achieve the serum AUC levels of naltrexone of Group I. This is not found persuasive because the method of Group I does not require the specific method step of treating alcohol and specific days in which the individual should or should not abstain from alcohol. Thus, claims 3-5 are withdrawn from consideration.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

> The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Regarding claims 6, 18, 20 and 22, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 6-21 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Tice et al. (6,306,425 B1).

Tice et al. teach muscular injectable naltrexone microsphere compositions and their use in reducing consumption of heroin and alcohol (see title and abstract; addresses claims 18 and 20). The composition comprises a matrix consisting of the polymer poly-(D,L-lactide) The naltrexone is released in a controlled manner for greater than 28 or about 32 days. Smaller doses may be administered after the first dose, because on continues to obtain release from the prior injected mirospheres to which is added the release from the lately administered microspheres, or one can enjoy enhanced levels of the naltrexone without increasing the amount of the microspheres which are administered (see abstract and column 6, lines 19-29; addresses claims 1, 7, 8 and 14-17). The microspheres are formulated from about 150-350 mg of naltrexone
