### REQUEST FOR CERTIFICATE OF CORRECTION

Dear Sir:

Enclosed is a proposed Certificate of Correction correcting some errors made in the printing of the "References Cited" section of this patent.

The first seven changes arise from typographical errors made in the printing of references [see attachments to Office Action dated 7/3/12, the References cited by Applicant and considered by Examiner at page 3 (references 43 and 44), page 4 (reference 68), page 7 (references 126, 137 and 138), and page 9 (reference 165)]. In addition, one change restores a reference missing entirely from the printed patent [see attachments to Office Action dated 7/3/12, the References cited by Applicant and considered by Examiner at page 5 (reference 89)].

Because the errors for which this Certificate of Correction is sought are due to mistakes on the part of the Office, no fee is due (35 U.S.C. 254). Please forward Certificate to assignee's attorney at the address below.

Respectfully submitted,

DDR HOLDINGS, LLC.

by its attorney

Dated: May 28, 2014 /Louis J. Hoffman/

Louis J. Hoffman Reg. No. 38,918

LOUIS J. HOFFMAN, P.C. 14301 North 87<sup>th</sup> Street, Suite 312 Scottsdale, Arizona 85260

MAILING ADDRESS OF SENDER (Please do not use customer number below):

Louis J. Hoffman, P.C. 14301 North 87th Street, Suite 312 Scottsdale, Arizona 85260

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

#### New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

#### National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

#### New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

**Subject:** Private PAIR Correspondence Notification for Customer Number 26362

Aug 01, 2013 05:32:35 AM

Dear PAIR Customer:

LOUIS J. HOFFMAN, P.C. 14301 North 87th Street, Suite 312 Scottsdale, AZ 85260 UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26362, have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

#### Disclaimer:

The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

Application Document Mailroom Date Attorney Docket No.

12906979 ISSUE.NTF 07/31/2013 23-CON3

To view your correspondence online or update your email addresses, please visit us anytime at https://sportal.uspto.gov/secure/myportal/privatepair.

If you have any questions, please email the Electronic Business Center (EBC) at EBC@uspto.gov with 'e-Office Action' on the subject line or call 1-866-217-9197 during the following hours:

Monday - Friday 6:00 a.m. to 12:00 a.m.

Thank you for prompt attention to this notice,

#### ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

### **Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)**

(application filed on or after May 29, 2000)

The Patent Term Adjustment is 130 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

D. Delano Ross JR., Alpharetta, GA; Daniel D. Ross, Dunwoody, GA; Joseph R. Michaels, Marietta, GA; William R. May, Atlanta, GA; Richard A. Anderson, Powder Springs, GA;

The United States represents the largest, most dynamic marketplace in the world and is an unparalleled location for business investment, innovation, and commercialization of new technologies. The USA offers tremendous resources and advantages for those who invest and manufacture goods here. Through SelectUSA, our nation works to encourage and facilitate business investment. To learn more about why the USA is the best country in the world to develop technology, manufacture products, and grow your business, visit <u>SelectUSA.gov</u>.

Art Unit: 3625

#### Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 6/25/2013 was filed after the mailing date of the NOA on 5/13/2013. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner. Form 1449 is enclosed acknowledging the IDS.

- 2. Examiner has fully considered the three court decisions cited in the IDS filed 5/13/2013 and they do not effect the reasons of allowance mailed 5/13/2013 and the independent claims 71, 81 and 87 are patent eleigible as per the examining guidelines. Accordingly, the reasons of allowance mailed 5/13/2013 are maintained.
- 3. An interview summary as per the telephone interview condcuted with the Applicant's representative Mr. Louis J. Hoffman on 7/10/2013 is atatched.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to YOGESH C. GARG whose telephone number is (571)272-6756. The examiner can normally be reached on Increased Flex/Hoteling.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Smith can be reached on 571-272-6763. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

#### New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

#### National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

#### New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Plaintiff and Counterdefendant,

CIVIL ACTION NO. 2:06-cv-42-JRG

v.

HOTELS.COM, L.P., et al.

Defendants and Counterclaimants.

S

Defendants and Counterclaimants.

#### **MEMORANDUM OPINION AND ORDER**

Before the Court are the parties' post-trial motions. Having considered the parties' written submissions, the Court: (1) **DENIES** Defendant Digital River, Inc.'s Renewed Motion for Judgment as a Matter of Law Pursuant to Fed. R. Civ. P. 50(b) (Dkt. No. 540); (2) **DENIES** National Leisure Group, Inc.'s and World Travel Holdings, Inc.'s Renewed Motion for Judgment as a Matter of Law Pursuant to Fed. R. Civ. P. 50(b) (Dkt. No. 539); and (3) **DENIES** Defendant Digital River, Inc.'s Motion for New Trial Pursuant to Fed. R. Civ. P. 59 (Dkt. No. 562).

### I. BACKGROUND

DDR Holdings, LLC ("DDR") filed this patent infringement action against multiple defendants on January 31, 2006, alleging infringement of U.S. Patent Nos. 6,629,135 ("the '135 patent") and 6,993,572 ("the '572 patent"). The case was then stayed for almost four years until October 6, 2010, pending the reexamination proceedings at to both of the patents-in-suit. On September 9, 2011, DDR amended its complaint to add additional infringement allegations of U.S. Patent No. 7,818,399 ("the '399 patent"). This case went to trial on October 8, 2012 against Digital River, Inc. ("Digital River"), National Leisure Group, Inc., and world Travel Holdings, Inc. (collectively, "NLG"). Following a five day trial, the jury returned a unanimous verdict finding

that Digital River infringed claims 13, 17, and 20 of the '572 patent and awarded damages to DDR of \$750,000 for the period of the issue date of the patent, January 31, 2006, through the verdict date, October 12, 2012. The jury also found that NLG infringed claims 13, 17, and 20 of the '572 patent and claims 1, 3, and 9 of the '399 patent and awarded damages to DDR of \$750,000 for the period of the earliest issue date, January 31, 2006, through the verdict date. The jury did not find either infringement to be willful. The jury further found that claims 13, 17, and 20 of the '572 patent was not invalid.

#### II. APPLICABLE LAW REGARDING RULE 50

Judgment as a matter of law is only appropriate when "a reasonable jury would not have a legally sufficient evidentiary basis to find for the party on that issue." Fed. R. Civ. P. 50(a). "The grant or denial of a motion for judgment as a matter of law is a procedural issue not unique to patent law, reviewed under the law of the regional circuit in which the appeal from the district court would usually lie." Finisar Corp. v. DirectTV Group, Inc., 523 F.3d 1323, 1332 (Fed. Cir. 2008). The Fifth Circuit "uses the same standard to review the verdict that the district court used in first passing on the motion." Hiltgen v. Sumrall, 47 F.3d 695, 699 (5th Cir. 1995). Thus, a jury verdict must be upheld, and judgment as a matter of law may not be granted, unless "there is no legally sufficient evidentiary basis for a reasonable jury to find as the jury did." Id. at 700. The jury's verdict must be supported by "substantial evidence" in support of each element of the claims. Am. Home Assurance Co. v. United Space Alliance, 378 F.3d 482, 487 (5th Cir. 2004).

A court reviews all evidence in the record and must draw all reasonable inferences in favor of the nonmoving party; however, a court may not make credibility determinations or weigh the evidence, as those are solely functions of the jury. See Reeves v. Sanderson Plumbing Prods., Inc.,

530 U.S. 133, 150-51 (2000). The moving party is entitled to judgment as a matter of law "only if the evidence points so strongly and so overwhelmingly in favor of the nonmoving party that no reasonable juror could return a contrary verdict." *Int'l Ins. Co. v. RSR Corp.*, 426 F.3d 281, 296 (5th Cir. 2005).

### III. APPLICABLE LAW REGARDING RULE 59

Under Rule 59(a) of the Federal Rules of Civil Procedure, a new trial can be granted to any party to a jury trial on any or all issues "for any reason for which a new trial has heretofore been granted in an action at law in federal court." Fed. R. Civ. P. 59(a). "A new trial may be granted, for example, if the district court finds the verdict is against the weight of the evidence, the damages awarded are excessive, the trial was unfair, or prejudicial error was committed in its course." *Smith v. Transworld Drilling Co.*, 773 F.2d 610, 612-13 (5th Cir. 1985). The Court must view the evidence "in a light most favorable to the jury's verdict, and [] the verdict must be affirmed unless the evidence points so strongly and overwhelmingly in favor of one party that the court believes that reasonable persons could not arrive at a contrary conclusion." *Dawson v. Wal-Mart Stores, Inc.*, 978 F.2d 205, 208 (5th Cir. 1992).

# IV. DIGITAL RIVER'S RENEWED MOTION FOR JUDGMENT AS A MATTER OF LAW PURSUANT TO FED. R. CIV. P. 50(B) (DKT. NO. 540)

Digital River seeks judgment as a matter of law pursuant to Fed. R. Civ. P. 50(b) that (1) the asserted claims are invalid under 35 U.S.C. § 112 as indefinite; (2) the asserted claims are invalid under 35 U.S.C. §§ 102 and 103 as anticipated and/or obvious; (3) the asserted claims are invalid under 35 U.S.C. § 101 as directed to subject matter that is not eligible for patent protection; (4) Digital River does not directly infringe the asserted claims; and (5) DDR did not prove that it is entitled to any damages.

## A. The asserted claims are not invalid under 35 U.S.C. § 112 as indefinite

Digital River contends that it is entitled to judgment as a matter of law that the asserted claims are invalid as indefinite because the patent specification lacks the required objective guidance to allow one of ordinary skill in the art to know when the claimed "look and feel" element has been achieved. (Dkt. No. 540, at 2.) As support, Digital River relies on *Datamize, LLC v. Plumtree Software, Inc.* where the Federal Circuit found the term "aesthetically pleasing" to be indefinite because the patentee "offered no objective definition identifying a standard for determining when an interface screen is aesthetically pleasing." 417 F.3d 1342, 1350 (Fed. Cir. 2005). However, this Court does not find "aesthetically pleasing" to be analogous to the concept of "look and feel" in this case.

35 U.S.C. § 112 ¶ 2 requires claims to particularly point out and distinctly claim the subject matter which the applicant regards as his invention. The purpose of the definiteness requirement is to ensure that the claims delineate the scope of the invention using language that adequately notifies the public of the patentee's right to exclude. *Honeywell Int'l Inc. v. Int'l Trade Comm'n*, 341 F.3d 1332, 1338 (Fed. Cir. 2003). A claim is indefinite when it depends "solely on the unrestrained, subjective opinion of a particular individual purportedly practicing the invention." *Datamize*, 417 F.3d at 1350. However, "[i]f the meaning of the claim is discernible, even though the task may be formidable and the conclusion may be one over which reasonable persons will disagree, we have held the claim sufficiently clear to avoid invalidity on indefiniteness grounds." *Exxon Research & Eng'g Co. v. United States*, 265 F.3d 1371, 1375 (Fed. Cir. 2001). Whether a patent claim fails for indefiniteness is a question of law for the Court to decide. *Id.* at 1376.

This Court previously defined "look and feel" to be "a set of elements related to visual appearance and user interface conveying an overall appearance identifying a website; such elements include logos, colors, page layout, navigation systems, frames 'mouse-over' effects, or others [sic] elements consistent through some or all of the website." (Dkt. No. 309 at 10.) The claims define the question of whether the "look and feel" of the web pages that Digital River serves are "based on" the look and feel of the referring host site. A comparison of visual elements according to the Court's construction between a pair of websites is precisely the type of infringement question for the trier of fact to decide. Such a comparison does not render the jury's decision subjective. Indeed, claims need not have mathematically precise boundaries so long as the patent gives examples and general guidelines. See Enzo Biochem, Inc. v. Applera Corp., 599 F.3d 1325, 1335 (Fed. Cir. 2010) (the term "not interfering substantially" does not render claims indefinite); Ecolab, Inc. v. Envirochem, Inc., 264 F.3d 1358, 1367 (Fed. Cir. 2001) (terms like "about" and "substantially" are descriptive terms commonly used in patent claims to "avoid a strict numerical boundary to the specified parameter.").

A finding of indefiniteness must overcome the statutory presumption of validity. *See* 35 U.S.C. § 282. That is, the "standard [for finding indefiniteness] is met where an accused infringer shows by clear and convincing evidence that a skilled artisan could not discern the boundaries of the claim based on the claim language, the specification, and the prosecution history, as well as her knowledge of the relevant art area." *Halliburton Energy Servs., Inc. v. M-I LLC*, 514 F.3d 1244, 1249-50 (Fed. Cir. 2008). The Court does not find that Digital River has met its burden. Accordingly, judgment as a matter of law as to a finding of indefiniteness is denied.

## B. The asserted claims are not invalid as anticipated and/or obvious

Digital River contends it has shown by clear and convincing evidence, through the testimony of Mr. Pichler and Mr. Kent, that the asserted claims are invalid. Digital River argues that the claims are invalid as anticipated by the Digital River Secure Sales System ("SSS System"), and also invalid as obvious in light of the SSS System, and/or in light of the combination of the SSS System with U.S. Patent No. 6,141,666 (the "Tobin patent"). Digital River argues that since three of the exemplary "look and feel elements" from the Court's claim construction were included in its prior art system, substantial evidence contradicts the jury's conclusion that the "look and feel" limitation is not met. (Dkt. No. 557 at 5.) The Court disagrees.

As stated earlier, the Court construed "look and feel" to mean

"[a] set of elements related to visual appearance and user interface conveying an overall appearance identifying a website; such elements include logos, colors, page layout, navigation systems, frames, 'mouse-over' effects, or others [sic] elements consistent through some or all of the website."

(Dkt. No. 309 at 10.) While Digital River is correct that the list of elements in the Court's construction is exemplary and not exclusive, this term is not necessarily satisfied by matching one, three, or a specific number of the exemplary elements. Rather, it is up to the trier of fact to determine whether the combination of elements making up the overall appearance of a website has a similar "look and feel" as compared to another website.

Indeed, the trial record reveals that the jury heard from Digital River's witnesses about how the SSS System operated and what capabilities it had, and the jury has weighed the credibility of such evidence. The trial record shows that Digital River's Vice President of Product and Innovation, Mr. Gagliardi, testified that earlier Digital River systems (1) had "much more limited functionality" than the recent, infringing systems, (2) had "technical constraints" that made it

"difficult to emulate" sites, (3) relied on "rigid predefinition of templates," (4) "only had a logo" match, and (5) required a logo to appear at a fixed location absent a "hack" to change location. (10/8/2012 PM Tr. at 221:10-224:15; 10/10/12 PM Tr. at 161:11-165:2.) DDR's expert witness, Dr. Keller, also offered his opinion that the SSS System and related publications failed to show any "overall match" of appearance because the pair of websites Digital River presented "basically had a matching logo," which falls short of being "based on" the host's "look and feel." (10/11/2012 PM Tr. at 103:2-112:19.) The jury considered such evidence, including the pairs of websites that Digital River displayed, and evidently found no corresponding overall look and feel to render the '572 patent invalid in light of the SSS system.

Turning to the issue of obviousness, there is substantial evidence in the record that that claim 20 of the '572 patent is not obvious in view of the SSS System and/or in light of the combination of the SSS System and the Tobin patent. DDR's expert provided the following testimony that the jury was entitled to consider in rendering their verdict:

- Q. And when we're talking about obviousness, is it sufficient to put a reference in front of each of the elements, or do you have to show something more?
  - A. You have to show something more.
  - O. What is that something more?
- A. It's called a motivation to combine, to combine those references, to put them together.

\*\*\*

- Q. Okay. Dr. Keller, you looked at Mr. Kent's report with respect to this combination, didn't you?
  - A. Yes, I did.
- Q. Did he say -- in the report, did he say why someone would be motivated to combine these two references?
  - A. No, he did not.
- Q. And in his testimony before the jury today, did he give -- did he tell the jury what the motivation was to combine the two references?
  - A. No, he did not.

(10/11/2012 PM Tr. at 121:9-122:8.) In other words, Digital River did not meet their burden to show obviousness by clear and convincing evidence. For these reasons, the Court finds that substantial evidence supports the jury's verdict that the asserted claims are not invalid as anticipated or obvious in light of the SSS System and/or in light of the combination of the SSS System and the Tobin patent.

# C. Judgment as a matter of law of invalidity for failing to claim patent-eligible subject matter

Digital River contends that the asserted claims are invalid as unpatentable subject matter under 35 U.S.C. § 101 because they are directed to an abstract idea. (Dkt. No. 540 at 13.) In its opposition, DDR incorporates by reference its opposition to a similar argument made by defendant NLG. (Dkt. No. 552 at 7.) In reply, Digital River also incorporates by reference its responsive arguments in NLG's reply to DDR's Opposition. (Dkt. No. 557 at 6.) To similarly avoid repetition, the Court addresses this common issue in Section V(B), below.

## D. Judgment as a matter of law of no infringement of the asserted claims

Digital River contends that it is entitled to judgment as a matter of law of no infringement because no reasonable jury could find that Digital River directly infringed based on three grounds:

(1) the asserted claims require three separate entities, (2) DDR failed to perform the required element-by-element infringement analysis, and (3) substantial evidence does not support the jury's direct infringement verdict because Digital River does not store the "look and feel," as required by the asserted claims. (Dkt. No. 540 at 15-16.)

### i. The '572 patent covers two-party systems

Digital River seeks a judgment of no infringement as a matter of law based on the same arguments presented in its motion for summary judgment, which was previously denied by the

Court. (*See* Dkt. No. 500.) Digital River argues error in the Court's conclusion that the asserted claims can encompass two-party systems because it was based on a single statement in the specification. Digital River urges that "by allowing that one statement to override the remainder of the prosecution history, the Court committed legal error because even a statement in a patent can be disclaimed." (Dkt. No. 558 at 7.) Digital River asserts that during prosecution, DDR clearly and unmistakably disclaimed two-party systems by distinguishing its invention from certain prior art two-party systems. (*Id.* at 8.) In its opposition, DDR responds that Digital River merely repeats its previously rejected arguments without specifying why there is some mistake within the Court's prior ruling.

On review, the Court does not find error with its previous ruling. Contrary to Digital River's assertion that the Court allowed one statement in the specification to override the entire prosecution history, the Court specifically considered each prosecution history disclaimer argument that Digital River presented. In the Memorandum and Opinion denying Digital River's Motion For Summary Judgment (after considering the parties' written submissions, hearing oral argument, and a thorough review of the full reexamination file of the '572 patent), the Court held there was no clear disavowal of claim scope. (Dkt. No. 500 at 9.) The Court underscored the importance of context in considering the isolated statements cited by Digital River, and specifically found that "[w]hen viewed as a whole, the reexamination file shows that there is no clear and unambiguous disavowal of claim scope that would preclude the two-party embodiment expressly disclosed in the specification." (Id. at 8-9.) The Court does not reach a different conclusion when presented with the same (but simply rehashed) arguments post-trial.

For the foregoing reasons, the Court does not find legal error with its prior summary judgment ruling. Accordingly, the Court reaffirms that, as a matter of law, a party may infringe the '572 patent with a two-party system.

ii. Substantial evidence supports finding of direct infringement of AutoDesk, Adobe and VMware

Digital River contends that it is entitled to judgment as a matter of law of no infringement because DDR's infringement expert, Dr. Keller, did not compare each element of the asserted claims with each of the accused systems. Digital River argues that Dr. Keller failed to demonstrate at trial that the AutoDesk, Adobe and VMware websites encompass each element of each asserted claim. (Dkt. No. 540 at 23.)

In its opposition, DDR responds that the jury heard substantial evidence of direct infringement of the overall visual appearance elements of the asserted claims. For example, the jury observed images of the three customers' websites and a list of "visual similarities" between the website pairs, in addition to Dr. Keller's testimony that the hosted sites infringed. (Dkt. No. 552, at 8.) DDR also responds that the jury heard substantial evidence of direct infringement by AutoDesk, Adobe and VMware as to all of the other elements of the asserted claims. DDR submits that during trial, Dr. Keller testified that Digital River accomplished six different infringements (including the three challenged ones) on the same platform called the "Global Commerce System." (*Id.* at 9.) DDR also submits that Dr. Keller testified that the "Global Commerce System" directly infringes the '572 patent by using one of the six infringements as an example for purposes of stepping through the remaining claim elements. (*Id.*) Therefore, DDR argues that this testimony also applies to the other five infringements that use this platform. The Court agrees.

The trial record reflects that DDR presented substantial evidence to support a jury verdict that the AutoDesk, Adobe and VMware websites met each element of the asserted claims. Dr. Keller testified that Digital River accomplished six different infringements via six customers, including the three challenged ones, on the same platform known as the "Global Commerce System." (10/9/2012 AM Tr. at 82.18-86:22.) Dr. Keller walked through, on an element-by-element basis, how the "Global Commerce System" infringed claims 13, 17, and 20 of the '572 patent as to Trend Micro, one of the six Digital River customers. (*Id.* at 88:9-98:15 and 125:24-139:5.) Then, Dr. Keller discussed infringement of the Nuance store, another one of the six Digital River customers, and explained the differences between Global Commerce's operation of the Nuance Store from the Trend Micro store:

- Q. Does Digital River's operation of Global Commerce to provide the Nuance store differ in any way from the -- its operation of the Trend Micro store on the Global Commerce Platform?
  - A. Just a few ways.
- First of all, we're displaying -- Digital River is displaying Nuance's products rather than Trend Micro's products, and it's using the look and feel of Nuance's website as opposed to Digital River's -- sorry -- as opposed to Trend Micro's website.
- Q. So outside of the differences with respect to the particular look-and-feel match and the particular commerce content, did you identify any other differences between the operation of the Global Commerce platform for Nuance site and for Trend Micro site?
  - A. No.

(10/9/2012 AM Tr. at 139:7-22.) Dr. Keller continued in his testimony by comparing the look and feel of each website pair and listing visual similarities between them for the Nuance store (*Id.* at 139:22-145:3), Microsoft store (*Id.* at 145:6-148:8), AutoDesk (*Id.* at 148:10-149:19), Adobe (*Id.* at 149:20-151:5), and VMware (*Id.* at 151:13-153:7.)

The Court finds that Dr. Keller's testimony of how the Global Commerce platform running the Trend Micro store infringes the asserted claims, taken as a whole with the visual comparison of each of the six customer websites, supports a jury finding that each customer website running on the Global Commerce platform infringes in a similar manner. In addition, the exhibits of product pages for each customer's host website and Dr. Keller's comparison to the each customer's outsourced store page served by Digital River's Global Commerce platform constitutes substantial evidence to support the jury's verdict of direct infringement by AutoDesk, Adobe and VMware.<sup>1</sup>

iii. Substantial evidence supports a finding that Digital River directs and/or controls Akamai servers

Digital River contends there is no substantial evidence in the record that it stores the "look and feel" information as required by the asserted claims because the servers are neither owned nor operated by Digital River. (Dkt. No. 540 at 24.) Digital River asserts that trial testimony showed that it entered into an arms-length contract with Akamai to provide the servers, and such arms-length cooperation is insufficient to support a finding of direct infringement. (*Id.* at 25.)

In response, DDR first argues that Digital River waived this defense by failing to disclose it in advance of trial, pursuant to Fed. R. Civ. P. 37(c)(1), which states: "If a party fails to provide information . . . as required by Rule 26(a) or (e) . . . , the party is not allowed to use that information . . . to supply evidence on a motion, at a hearing, or at trial, unless the failure was substantially justified or is harmless." However, Rule 26(a)(3)(A) provides that "a party must provide . . . the evidence it may present at trial *other than solely for impeachment* . . . ." (emphasis added). Digital River replies that its attack on DDR's infringement case is based on Dr. Keller's revelation during cross-examination that he did not investigate the location or owner of the servers that he alleged were involved in infringement, and is thus not waived. (10/9/2012 PM Tr. at 55:21-57:7.) As DDR

<sup>1</sup> The Court notes that Digital River does not contend judgment as a matter of law of no direct infringement for its other customer websites (e.g. the Microsoft store), even though Dr. Keller did not specifically walk through the Global Commerce platform as to its operation of each website.

has provided no case law compelling the Court to find waiver in such a situation where the rules do not preclude impeachment evidence, the Court does not find waiver occurred.

DDR next argues that notwithstanding its allegations of waiver, there is substantial evidence to support the jury's verdict of infringement. DDR contends that the jury is entitled to make the reasonable inference that (1) Akamai is Digital River's agent, (2) Akamai serves a duplicated image of Digital River data, and (3) Digital River directs and controls Akamai's activities. (Dkt. No. 552 at 11.) To "use" a system for purposes of infringement, "a party must put the invention into service, i.e., control the system as a whole and obtain benefit from it . . . ."

Centillion Data Sys., LLC v. Qwest Commc'ns Int'l, Inc., 631 F.3d 1279, 1284 (Fed. Cir. 2011).

The "control" contemplated does not have to be physical or direct control; rather, it is the ability to place the system as a whole into service. Id. During trial, the jury heard testimony from Mr. Gagliardi that Digital River had a contract with Akamai to serve data from domains "c5.img.digitalriver.com" and "drh.img.digitalriver.com." (10/10/2012 PM Tr. at 155:4-156:4.)

The jury also heard expert testimony from Dr. Keller that Akamai acts on behalf of Digital River by caching copies of Digital River content for faster access:

- Q. So -- and what does Akamai -- what is Akamai's business? What do they do?
- A. They bring somebody else's content closer to you. So in this particular case, if Digital River contracts with Akamai to push their content closer to you, they're actually pushing Akamai -- they're actually pushing Digital River's content and sort of making a copy of it closer to you so you can get it quicker, but essentially doing it on behalf of Digital River and acting as -- so -- acting as a -- operating on behalf of Digital River, so it's essentially Digital River's content that came from Digital River's server.
- Q. So it would be a copy of what's on Digital River's own server, correct?
- A. That's correct. It's a copy. It's simply copied closer to make it quicker to download.

(10/9/2012 PM Tr. at 86:20-87:10.) Therefore, although Akamai owned and operated servers storing the "look and feel" information on behalf of Digital River, the Court finds that there exists substantial evidence in the record to allow a reasonable inference by the jury that the servers were under the direction and control of Digital River.

## E. Judgment as a matter of law that DDR's damages model is unsupportable

Digital River contends that no reasonable jury could find that DDR was entitled to recover \$750,000 in damages from Digital River because DDR provided no evidence at trial that ties the value of sales transactions to infringement. (Dkt. No. 557 at 10.) The patentee bears the burden of proving damages, which includes the burden to "sufficiently [tie the expert testimony on damages] to the facts of the case." *Uniloc USA, Inc. v. Microsoft Corp.*, 632 F.3d 1292, 1315 (Fed. Cir. 2011). Digital River argues that product sales were not properly tied to DDR's damages model because any such sales occurred only after the alleged infringement transpired. (Dkt. No. 557 at 10.) In its opposition, DDR responds that its damages expert, Dr. Chandler, presented substantial evidence tying his damages theory to the accused use of the invention, and that the fact that sales occur immediately after, not during, infringement is immaterial. (Dkt. No. 560 at 7.) The Court agrees with DDR.

The record reflects that Dr. Chandler explained how his damages method determines a value based on the economic benefits derived from the patented product or service. (10/9/2012 PM Tr. at 124:7-126:17; 144:4-5; 176:21-23) For example, Dr. Chandler testified:

And we looked at this in large sense with an understanding of how the private-label programs work in conjunction with the -- the Defendants. There is a basic operation for their normal course of business, and these incremental transactions contribute an extra margin, an additional margin, additional revenues that have their own profitability. And those revenues would not exist if it weren't for the functionality of the patents-in-suit.

(*Id.* at 125:23-126:6.) In addition, the '572 patent itself ties the infringed claims to the commercial activity through the claim term "commerce object," which the Court defined as a "third-party merchant's: catalog, category, product (goods or services), or dynamic selection," and the claim term "merchant," which the Court defined as a "[p]roduce, distributor, or reseller of goods or services to be sold." (Dkt. No. 560 at 6-7.)

Ultimately, the jury considered the evidence presented and awarded DDR \$750,000 for Digital River's infringement of the '572 patent, significantly less than the amount DDR was seeking. On balance, the Court has no basis from which to find that the verdict lacks a sufficient evidentiary basis that a reasonable jury could not have found as the jury did in this case.

### F. Conclusion

Based on the foregoing, the Court **DENIES** Defendant Digital River, Inc.'s Renewed Motion for Judgment as a Matter of Law Pursuant to Fed. R. Civ. P. 50(b) (Dkt. No. 540).

# V. NLG'S RENEWED MOTION FOR JUDGMENT AS A MATTER OF LAW PURSUANT TO FED. R. CIV. P. 50(B) (DKT. NO. 539)

NLG seeks judgment as a matter of law pursuant to Fed. R. Civ. P. 50(b) to (1) vacate the jury verdict of direct infringement of the asserted claims in the '572 and '399 patents, (2) vacate the jury verdict of no invalidity of the asserted claims in the '572 and '399 patents, (3) vacate the jury award because the Court improperly excluded evidence of non-accused websites, and (4) set aside or reduce the damages award as grossly excessive and against the greater weight of the evidence. Interestingly however, NLG does not move for a new trial pursuant to Rule 59 on the grounds that the jury verdict is against the weight of the evidence.

## A. Judgment as a Matter of Law Regarding Direct Infringement

NLG first contends that the jury determination of direct infringement is not supported by substantial evidence because DDR's infringement expert, Dr. Keller, did not establish all of the requisite claim elements. (Dkt. No. 539 at 4.)

### i. The "look and feel" elements

NLG argues that Dr. Keller failed to offer competent or satisfactory evidence of the correspondence of look and feel between the host and NLG websites because he offered only conclusory and non-specific statements about how the "look and feel" elements are satisfied. On review of the record, the Court disagrees. As an initial matter, the jury had the published images of all nine website pairs as evidence before it to make the ultimate factual determination that the look and feel of the host corresponded to the accused NLG websites. (*See* PX617, pp. 1-2, 20-21, 35-36, 49-52, 53-54, 55-56, 57-60, 61-62, 63-64.) Additionally, DDR presented expert testimony comparing the websites pairs for substantial similarities and listing out the similarities in a demonstrative exhibit before the jury. (10/9/2012 PM Tr. at 8:3-36:22.) Thus, the jury's verdict is supported by substantial evidence of infringement as to the "look and feel" elements.

## ii. Claim 17 of the '572 patent

NLG contends that there is no substantial evidence that NLG directly infringes step (a) of claim 17 in the '572 patent by controlling or directing its partners to provide links to NLG's site on their host sites. (Dkt. No. 539 at 6.) However, both DDR's expert witness, Dr. Keller, and NLG's expert witness, Mr. Gray, testified at trial that NLG gives the URL or link to their partners to place on their host websites for customers to access the outsource website. (10/9/2012 PM Tr. at

17:15-23; 10/11/2012 AM Tr. at 126:11-19.) Thus, the jury was presented with evidence sufficient to show that NLG controls its partners' action by giving them the link to place on their host sites.

### iii. Claim 13 of the '572 patent

NLG argues that DDR did not establish that the NLG computer processor is in communication through the Internet with the host web page as required by claim 13 of the '572 patent. (Dkt. No. 539, at 6.) However, DDR's expert witness testified that "When the computer server receives a request, when a link is clicked on or activated on the host webpage, that's how the host webpage is communicating through the Internet with the computer processor or the server." (10/9/2012 PM Tr., at 12:17-25.) Thus, the record contains clear and substantial evidence to support a jury finding that this claim element is met.

### iv. Claims 1 and 19 of the '399 patent

NLG argues that DDR did not establish that its system automatically recognizes or identifies the source web page as required by claims 1 and 19 of the '399 patent. (Dkt. No. 538 at 7.) Although NLG acknowledges that Dr. Keller's testimony and his report establish that the computer processor determines the partner using a code (e.g., OBWEB for Orbitz), NLG contends there is no evidence that the computer processor identifies the source page. (*Id.* at 7-8). However, NLG does not show where in the claim language or the Court's claim construction is there a requirement for a party to recognize the exact web address of the source web page to infringe. When opposing experts differ on how a claim limitation is met, as is the case here, it is up to the jury to decide which opinion is more credible in light of the evidence. In this case, the jury made such a determination based on substantial evidence in the record to support their finding that this claim element is met.

## v. Infringement for more than one day

NLG also takes issue with the fact that DDR did not show infringement except for the single days on which Dr. Keller examined each website. (Dkt. No. 539 at 8.) However, Dr. Keller testified that, in forming his opinions, he considered the systems as a whole, "both documents about them and source code," including "the date that they -- that they used to operate these systems" and "deposition transcripts where the people who work for the Defendants describe how their systems operated." (10/9/2012 AM Tr. at 80:18-81:17.) In addition, Dr. Keller testified that, "with respect to the host websites that are partners with the Defendants," he "looked at the websites sometimes the present current website, also past websites in order to be able to see whether the look and feel of the outsource website matches an overall appearance, the look and feel of the host website." (*Id.*) Dr. Keller further testified that he looked at "past websites" using Internet archives. (*Id.* at 81:16-82:3.)

Dr. Keller also reviewed technology NLG was currently using and compared that to "different technology" that NLG used in the past and found that although the "software [that] implemented [it] changed, ... the basic functionality is unchanged" and "the data is the same," including "the same data describing the stores, the look-and-feel description, et cetera." (10/9/2012 PM Tr. at 3:22-4:15.) Moreover, Dr. Keller testified that, from his examination of source code throughout the period of infringement, he did not find anything that "had changed in any substantial way" compared to the examples that he gave during specific testimony discussing the various hosts. (*Id.* at pp. 4-45.)

The record before the Court and the evidence presented at trial is clear that Dr. Keller considered the accused systems as a whole, including the dates of operation, how the systems

operated, the current website, as well as past websites. There is substantial evidence to support the jury's finding that NLG infringed for more than the one day during which a screenshot was captured.

# B. Judgment as a Matter of Law Regarding Invalidity For Failing to Claim Patentable Subject Matter

NLG asks the Court to find the asserted claims of the '572 and '399 patent invalid as unpatentable subject matter under 35 U.S.C. § 101 because the invention is merely a business model known as "syndicated commerce" applied to the Internet. (Dkt. No. 539 at 9.) NLG points to the trial transcript for support because the named inventors used the word "idea" at least 25 times to describe his invention. NLG argues that there is nothing computer-specific about making two e-commerce web pages look like each other, and the asserted claims recite only generic functionalities that any general purpose computer can perform.

## i. Applicable Law

35 U.S.C. § 101 defines the four categories of inventions or discoveries that are eligible for patent protection:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

35 U.S.C. § 101. "In choosing such expansive terms ... modified by the comprehensive 'any,' Congress plainly contemplated that the patent laws would be given wide scope." *Bilski v. Kappos*, 130 S.Ct. 3218, 3225 (citing *Diamond v. Diehr*, 450 U.S. 175, 308, 100 S.Ct. 2204 (1981)). "Congress took this permissive approach to patent eligibility to ensure that 'ingenuity should receive a liberal encouragement.' "*Id.* (citing 450 U.S. at 308-309, 100 S.Ct. 2204).

The Supreme Court has recognized three specific exceptions to the broad domain of patentable subject matter encompassed by § 101: "laws of nature, physical phenomena, and abstract ideas." *Bilski*, 130 S.Ct at 3225. Laws of nature and physical phenomena are not patentable subject matter "because those categories embrace 'the basic tools of scientific and technological work." *Research Corp. Techs., Inc. v. Microsoft Corp.*, 627 F.3d 859, 867-68 (Fed. Cir. 2010) (citing *Gottschalk v. Benson*, 409 U.S. 63, 67 (1972)). The Court can determine invalidity of a patent under 35 U.S.C. § 101 for failing to claim patentable subject matter as a matter of law. *Arrhythmia Research Tech., Inc. v. Corazonix Corp.*, 958 F.2d 1053, 1055 (Fed. Cir. 1992).

However, the rule against patents on naturally occurring things is "not without limits," for "all inventions at some level embody, use, reflect, rest upon, or apply laws of nature, natural phenomena, or abstract ideas," and "too broad an interpretation of this exclusionary principle could eviscerate patent law." *Association for Molecular Pathology, et al. v. Myriad Genetics, Inc., et al.*, --- S.Ct. ---, 2013 WL 2631062, at \*7 (citing *Mayo Collaborative Services v. Prometheus Laboratories, Inc.*, 132 S.Ct. 1289, 1293 (2012)). "As we have recognized before, patent protection strikes a delicate balance between creating 'incentives that lead to creation, invention, and discovery' and 'imped[ing] the flow of information that might permit, indeed spur, invention." *Id.* (citing 132 S.Ct. at 1305). Moreover, "a process is not unpatentable simply because it contains a law of nature or a mathematical algorithm," and "an *application* of a law of nature or mathematical formula to a known structure or process may well be deserving of patent protection." *Diamond v. Diehr*, 450 U.S. 175, 187, 100 S.Ct. 1048 (1981) (internal quotation marks omitted).

In addition, "[a]bstractness, also a disclosure problem addressed in the Patent Act in section 112, also places subject matter outside the statutory categories." *Research Corp.*, 627 F.3d at 868. An abstract idea "should exhibit itself so manifestly as to override the broad statutory categories of eligible subject matter and the statutory context that directs primary attention on the patentability criteria of the rest of the Patent Act." *Id.* "[I]nventions with specific applications or improvements to technologies in the marketplace are not likely to be so abstract that they override the statutory language and framework of the Patent Act." *Id.* at 869.

Furthermore, "it bears remembering that all issued patent claims receive a statutory presumption of validity ... that presumption applies when § 101 is raised as a basis for invalidity in district court proceedings." *CLS Bank Int'l, et al. v. Alice Corp. Pty. Ltd.*, 2013 WL 1920941, at \*12 (Fed. Cir. May 10, 2013) (Lourie, J., *et al.*, concurring).

## ii. Analysis

NLG only asserts the application of the "abstract ideas" exception in this case. NLG contends claims 13, 17, and 20 of the '572 patent and claims 1, 3 and 9 of the '399 patent are invalid under 35 U.S.C. § 101 because they do not satisfy the machine-or-transformation test and otherwise disclose an abstract idea. Claims 13 and 17 of the '572 patent are independent claims. They read:

## Claim 13. An e-commerce outsourcing system comprising:

- a) a data store including a look and feel description associated with a host web page having a link correlated with a commerce object; and
- b) a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the link has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer wit [sic] a look and feel based on the look and feel description in the data store and with content based on the commerce object associated wit [sic] the link.

- Claim 17. An e-commerce outsourcing process comprising the steps of:
- a) storing a look and feel description associated with a first website in a data store associated with a second website;
- b) including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a link correlating the web page with a commerce object; and
- c) upon receiving an activation of the link from a visitor computer to which the web page has been served, sewing to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the link.

Claim 1 of the '399 patent is an independent claim. It reads:

- Claim 1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:
- (a) automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated;
- (i) wherein each of the first web pages belongs to one of a plurality of web page owners;
- (ii) wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and
- (iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one other;
- (b) automatically retrieving from a storage coupled to the server pre-stored data associated with the source page; and then
- (c) automatically with the server computer-generating and transmitting to the web browser a second web page that includes:
- (i) information associated with the commerce object associated with the link that has been activated, and
- (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.

Claim 13 is a system claim. Claim 17 and claim 1 are process and method claims. The Court finds no meaningful distinction between the asserted "system," "process," and "method" claims for purposes of this § 101 analysis, and will consequently analyze them together. *Bancorp Services*, *L.L.C. v. Sun Life Assurance Co. of Canada (U.S.)*, et al., 687 F.3d 1266, 1276-77 (Fed. Cir. 2012).

In its analysis, the Court looks "not just to the type of claim but also 'to the underlying invention for patent-eligibility purposes." *Id.* (citing *CyberSource Corp. v. Retail Decisions, Inc.*, 654 F.3d 1366, 1374 (Fed. Cir. 2011)). Thus, as the Supreme Court has explained, the form of the claims should not trump basic issues of patentability. *See Parker v. Flook*, 437 U.S. 584, 593, 98 S.Ct. 2522 (1978). Here, each of the claims at issue involves storing and serving webpages having the similar look and feel of another and different webpage. There is little material difference between these categories of claims in the asserted patents for patentability analysis.

NLG's primary argument boils down to a contention that the claims disclose the business method of making two e-commerce web pages look alike; the method is no more than an abstract idea that is not dependent on computer components. In response, DDR asserts that the invention is not a method of doing business, but rather methods of displaying composite web pages that require the computer and processor to have specific tangible parts, be programmed in certain particular ways, contain specific data, and be capable of performing specific steps recited in the claims. On review of the claims at issue, the Court concludes that they are not "so manifestly" abstract as to override the statutory language of § 101. Research Corp., 627 F.3d at 868.

The claimed e-commerce outsourcing system discloses a specific set of physical linkages, including, coupling between the data store and the processor, the data store storing a look and feel description associated with a host web page and the processor programmed in certain ways to serve a composite web page. The claimed e-commerce outsourcing process requires a similar interaction between a data store storing a look and feel description of a web page and an activation of a link from a visitor computer to receive a composite web page. The method of an outsource provider also discloses a server that responds to activation by a web browser of a computer user by

retrieving pre-stored data from storage, then generating and transmitting visual elements corresponding to the source page. Each of these claimed inventions "presents functional and palpable applications in the field of computer technology." *Research Corp.*, 627 F.3d at 868. Like the claimed invention in *Research Corp.*, the process of displaying composite web pages represents an improvement to computer technologies in the marketplace. "[I]nventions with specific applications or improvements to technologies in the marketplace are not likely to be so abstract" as to be ineligible for patent protection. *Id.* 

The claimed invention also passes the machine-or-transformation test. "Under the Court of Appeals' formulation, an invention is a 'process' only if: '(1) it is tied to a particular machine or apparatus, or (2) it transforms a particular article into a different state or thing." *Bilski*, 130 S.Ct., at 3225-6 (citing *Diamond*, 450 U.S. at 182). Although the machine-or-transformation test is not the sole test for deciding whether an invention is patent-eligible, it remains a useful and important indicator in the § 101 analysis. *Id.* at 3227.

As discussed above, the asserted claims disclose a specific set of physical linkages that involve a data store, server, computer, that together, and through the claimed interconnectivity, accomplishes the process of displaying composite web pages having the look and feel of the source web page. NLG urges the Court to find the invention is only a business method of making two web pages look alike. While the '572 and '399 patents do, indeed, cover the concept of two web pages with visually corresponding elements, there is more to the asserted claims when considered as a whole. "Diehr emphasized the need to consider the invention as a whole, rather than 'dissect[ing] the claims into old and new elements and then ... ignor[ing] the presence of the old elements in the analysis." Bilski, 130 S.Ct., at 3230 (citing Diehr, 450 U.S. at 177). When the asserted claims are

considered as a whole, the claimed invention lies in stark contrast to the facts of *Bancorp*. In *Bancorp*, the claimed "mathematical concept of managing a stable value protected life insurance policy" was found unpatentable as an abstract idea because mere mathematical computer was not dependent upon the computer components required to perform it. 687 F.3d at 1279-80. In contrast, the interactions and linkages of computer machinery to generate composite web pages in this case are integral to each of DDR's asserted claims. Accordingly, the first prong of the machine-or-transformation test is satisfied. That being the case, this Court needs not address the transformation prong at this time.

The Court is also not persuaded that the inventor's use of the word "idea" at least 25 times to describe his invention is evidence of unpatentable subject matter. The inventor's testimony was given during a one week trial, and it is not unusual to explain a patent claim as a "gist" or "core idea." Such testimony is not instructive that a claim is an abstract idea for purposes of § 101 patentability. Moreover, "all inventions at some level embody, use, reflect, rest upon, or apply laws of nature, natural phenomena, or abstract ideas," yet, "too broad an interpretation of this exclusionary principle could eviscerate patent law." *Mayo*, 132 S.Ct. at 1293.

Accordingly, the Court does not find that NLG has met its burden to show by clear and convincing evidence that the asserted claims of the '572 and '399 patents are invalid for failure to claim patentable subject matter under 35 U.S.C. § 101.

# C. Judgment as a Matter of Law that the Asserted Claims are Indefinite as a Matter of Law

NLG contends that the "look and feel" terms render the asserted claims invalid as indefinite because there is no objective standard for determining whether a pair of web pages has the same "look and feel." (Dkt. No. 539 at 16.) NLG's argument is essentially a repeat of Digital

River's renewed motion for judgment of law on the same subject (Dkt. No. 540). Although Digital River's motion addressed only the '572 patent and not the '399 patent, the indefiniteness arguments center on similar claim terms present in both patents. The Court previously construed "visually perceptible elements" in the '399 patent to mean "look and feel elements that can be seen." (Dkt. No. 309 at 10.) Thus, the Court's ruling that Digital River has not met its burden to show by "clear and convincing evidence that a skilled artisan could not discern the boundaries of the claim based on the claim language, the specification, and the prosecution history, as well as her knowledge of the relevant art area," is equally applicable to NLG's parallel arguments. *Halliburton*, 514 F.3d at 1249-50.

The one extra point that NLG makes in this Motion is that indefiniteness can be found in DDR's inconsistent infringement contentions, where Dr. Keller opined that web page pairs for NLG and its partners have the same look and feel, whereas web page pairs for the current American Airlines page are not alleged to have the same look and feel. (Dkt. No. 539 at 18.) For support, NLG cites Dr. Keller's trial testimony. (10/9/2012 PM Tr. at 62:4-9.) In response, DDR clarifies that shortly after NLG's citation of Dr. Keller's testimony, and in the same testimony sequence, Dr. Keller said "I haven't made an opinion as to whether they are substantially the same or not right now in my report." (10/9/2012 PM Tr. at 68:4-6.) The Court does not find Dr. Keller's testimony to be inconsistent. The Court finds that NLG has failed to meet its burden by clear and convincing evidence to establish that the "look and feel" claim term is insolubly ambiguous.

Accordingly, judgment as a matter of law as to a finding of indefiniteness is denied.

# D. Judgment as a Matter of Law that the Court Improperly Excluded Evidence of Non-accused Websites

NLG contends the Court committed prejudicial error by precluding it from questioning witnesses or eliciting testimony relating to non-accused websites, but does not identify the remedy it seeks. (Dkt. No. 539.) Although this is raised in a 50(b) motion, NLG's argument is more in line with the requisite standard for a motion for new trial under Rule 59. "A new trial may be granted, for example, if the district court finds the verdict is against the weight of the evidence, the damages awarded are excessive, the trial was unfair, or prejudicial error was committed in its course." *Transworld Drilling*, 773 F.2d at 612-13. Therefore, the Court will construe this issue as a request for a new trial.

The core of NLG's contention is that the Court acted unfairly by excluding evidence of non-accused websites that run on the same platform as the accused websites, although such evidence is "directly relevant to issues of non-infringement, invalidity for indefiniteness, and invalidity for failing to claim patentable subject matter," and "would have helped to make clear the issues in this case for the Court and the jury." (Dkt. No. 539 at 19.) In response, DDR argues that the Court did not bar NLG from questioning witnesses or eliciting testimony relating to non-accused websites generally. The Court agrees. The Court's grant of DDR's motions *in limine* Nos. 2 and 3 (Dkt No. 481) was not a definitive ruling on the admissibility of evidence, but is merely an order requiring the offering party to first approach the bench and seek leave from the Court prior to mentioning such matters before the jury. When the parties approached the bench on a particular evidentiary matter regarding the American Airlines site, the Court considered the parties arguments, and exercised its discretion in making a limited ruling:

The Court: "Okay. There is a clear point in time at which the Plaintiffs have accused you of infringement. The sites and screenshots that take place outside

of that clear point of reference in time, to me, I don't see the relevance. That's what I understand the basis of your objection is.

Mr. Crosby: That is, yes.

The Court: You're welcome -- you're welcome to cross-examine this witness on materials that come from his report that relate to the period of time in which your client's accused of infringement, but to put up screenshots that are later in time than the period of the infringement or the accused infringement is potentially confusing and irrelevant.

(10/9/2012 PM Tr. at 71:6-19.) Nonetheless, the Court still permitted trial testimony relating to the non-accused American Airlines website, even though NLG may consider it to be limited. (*Id.* at 67:19-68:17.)

Also, the Court does not find that NLG has shown that the evidence it would have presented about the non-accused websites "points so strongly and overwhelmingly" in its favor that reasonable persons could not have arrived at a contrary conclusion as the jury verdict. *Dawson*, 978 F.2d at 208. NLG presents no specific reasons why the jury would have ruled in NLG's favor had they seen more evidence of non-accused websites; its arguments can be boiled down to hollow allegations that such evidence "would have helped to make clear the issues in this case." (Dkt. No. 539 at 19.) Accordingly, the Court does not find that it has precluded NLG from questioning witnesses or eliciting testimony relating to non-accused websites or permitted such prejudice toward NLG as to warrant a new trial.

# E. Judgment as a Matter of Law that the Jury's Damages Award Should be Set Aside

NLG contends that the jury's damages award should be set aside or reduced because it is grossly excessive and against the greater weight of the evidence. NLG argues the damages award is flawed and lists multiple reasons why DDR's damages claim was improper, including application of the 5.5% royalty rate, ignoring deductible costs, including telephone sales in the royalty base, and failure to consider acceptable non-infringing substitutes. DDR responds that

even if NLG's criticisms are correct, showing error in DDR's damages claim does not demonstrate any error in the jury's damages award. The Court agrees. Determining the credibility of the evidence and weighing the evidence are within the exclusive purview of the jury. *Reeves*, 530 U.S. at 150-51. Absent evidence that points so overwhelmingly in favor of NLG that no reasonable jury could return a contrary verdict, the Court properly assumes that the jury chose to believe or disbelieve the testimony they heard as a part of weighing all the evidence and then reaching their verdict. *RSR Corp.*, 426 F.3d at 296.

NLG also argues that the damages award is grossly excessive because DDR did not establish infringement for more than one specific date for which Dr. Keller presented screen shots in his report. This is an obvious repetition of NLG's earlier argument that DDR did not show infringement except for the single days on which Dr. Keller examined each website. (Dkt. No. 539, at 8.) As discussed earlier, the record is clear that Dr. Keller considered the accused systems as a whole and DDR's claims are not limited to the specific date the screen shots were captured.

The Court has no specific insights into how the jury precisely arrived at its award in this case. Consequently, NLG cannot attempt to reverse engineer the jury's math in reaching the \$750,000 award and use its substituted, and purely speculative, analysis to call the award excessive. Absent further insight into the jury's apportionment, the Court does not find that the verdict lacks sufficient evidentiary basis for a reasonable jury to find as this jury did in this case.

### F. Conclusion

Based on the foregoing, the Court **DENIES** National Leisure Group, Inc.'s and World Travel Holdings, Inc.'s Renewed Motion for Judgment as a Matter of Law Pursuant to Fed. R. Civ. P. 50(b) (Dkt. No. 539).

# VI. DIGITAL RIVER'S MOTION FOR NEW TRIAL PURSUANT TO FEDERAL RULE OF CIVIL PROCEDURE 59 (DKT. NO. 562)

Pursuant to Fed. R. Civ. P. 59, Digital River moves for a new trial with respect to invalidity of the '572 patent based on lack of enablement, invalidity based on anticipation and/or obviousness, non-infringement, and damages. (Dkt. No. 562.) All of Digital River's arguments, with the exception of the enablement issue, rely on the same arguments as addressed above in the section on Digital River's renewed judgment as a matter of law. Based on the same reasoning as discussed above, the Court disagrees with each of Digital River's arguments and does not find the verdict to be against the weight of the evidence. The Court will now specifically address the enablement argument.

## A. Digital River waived its enablement defense as to the "look and feel" elements

Digital River contends that it is entitled to a new trial on the issue of whether the asserted claims of the '572 patent are invalid for lack of enablement because it fails to teach one of ordinary skill in the art the concept of "look and feel." (Dkt. No. 562 at 3-4.) Digital River argues that it had presented more than sufficient evidence at trial to support the submission of a question and instruction on enablement in the jury charge, which the Court denied. Digital River also argues that it was prejudiced by the Court's failure to instruct the jury where a lack of enablement constitutes an independent ground for invalidating all the asserted claims.

In response, DDR asserts that Digital River waived its new enablement defense by failing to disclose it in advance of trial, either through its interrogatory answers or its invalidity contentions. (Dkt. No. 564 at 1.) Although Digital River touched on lack of enablement in light of another claim term, DDR contends that none of those disclosures hint at a non-enablement defense relating to the "look and feel" term.

Local Patent Rule 3.3(d) requires each party opposing a claim of patent infringement to serve invalidity contentions which disclose "[a]ny grounds of invalidity based on indefiniteness under 35 U.S.C. § 112(2) or enablement or written description under 35 U.S.C. § 112(1) of any of the asserted claims." On review of Digital River's amended invalidity contentions, the Court finds that it only asserted lack of enablement based on the "link correlated with a commerce object" limitation. (*See* Dkt. No. 564, Ex. 3.) Digital River did not put forward a lack of enablement based on the "look and feel" element at any point before trial either by complying with its disclosure obligations, responding to discovery, or in its invalidity expert report. Further, Digital River did not raise this issue during trial. During the charge conference, the Court struck the non-enablement jury instruction because Digital River had presented no arguments or evidence at trial based on the disclosed enablement defense. Nonetheless, Digital River did not specifically mention lack of enablement of the "look and feel" term in making its objection. (10/12/2012 AM Tr. at 10:8-13:15.) In essence, Digital River did not provide notice to DDR or the Court of its enablement defense based on the "look and feel" term until raising it for the first time in their Rule 59 motion.

One purpose of Patent Rule 3.3 is for early disclosure and notice of the Defendant's invalidity-based defenses to facilitate discovery and the preparation of both sides' claims and defenses well in advance of trial. Just as a prior art reference has to be specifically disclosed on an element-by-element level in a claim chart format, a § 112(2) defense must at least identify the claim element that causes a claim to fail for lack of enablement. Contrary to Digital River's argument, the Court does not find there to be sufficient disclosure of this issue in the pleadings or at any time prior to this motion. Additionally, this Court is not receptive to Digital River's argument that it may disclose the specific theory of non-enablement for the first time in the trial

testimony. Such would emasculate Rule 3.3 and return the litigants to the discredited practice of

trial by ambush.

For the foregoing reasons, the Court finds that Digital River has waived its enablement

defense as to the "look and feel" element. Accordingly, the Court does not reach the merits of

Digital River's invalidity defense for lack of enablement of the "look and feel" element.

**B.** Conclusion

Based on the foregoing, the Court DENIES Defendant Digital River, Inc.'s Motion for

New Trial Pursuant to Fed. R. Civ. P. 59 (Dkt. No. 562).

VII. CONCLUSION

For the reasons discussed, the Court: (1) DENIES Defendant Digital River, Inc.'s

Renewed Motion for Judgment as a Matter of Law Pursuant to Fed. R. Civ. P. 50(b) (Dkt. No.

540); (2) DENIES National Leisure Group, Inc.'s and World Travel Holdings, Inc.'s Renewed

Motion for Judgment as a Matter of Law Pursuant to Fed. R. Civ. P. 50(b) (Dkt. No. 539); and (3)

**DENIES** Defendant Digital River, Inc.'s Motion for New Trial Pursuant to Fed. R. Civ. P. 59

(Dkt. No. 562).

RODNEY GILSTRAP

UNITED STATES DISTRICT JUDGE

## IN THE UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF TEXAS MARSHALL DIVISION

DDR HOLDINGS, LLC

Plaintiff and Counterdefendant,

CIVIL ACTION NO. 2:06-cv-42-JRG

v.

HOTELS.COM, L.P., et al.

Defendants and Counterclaimants.

\$

Defendants and Counterclaimants.

## **MEMORANDUM OPINION AND ORDER**

## I. INTRODUCTION

Before the Court is Plaintiff DDR Holdings, LLC's ("DDR") Motion for Entry of Judgment. (Dkt. No. 538.) Having considered the parties' written submissions, the Court **GRANTS** DDR's Motion as set forth below. The Court has separately entered a Final Judgment contemporaneously herewith, consistent with the findings and holdings of this Opinion.

### II. FACTS & PROCEDURAL BACKGROUND

On October 12, 2012, following a week-long trial, the jury returned a verdict in favor of DDR, finding that Digital River, Inc. ("Digital River") had infringed claims 13, 17 and 20 of United States Patent No. 6,993,572 ("the '572 Patent") and awarding DDR \$750,000.00 in damages. The jury also found that Defendant National Leisure Group, Inc. and World Travel Holdings, Inc. ("NLG/WTH") infringed claims 13, 17 and 30 of the '572 Patent, as well as claims 1, 3 and 19 of United States Patent No. 7,818,399 ("the '399 Patent") and awarded damages to DDR of \$750,000.00. The jury further determined that claims 13, 17 and 20 of the '572 Patent were not invalid.

### III. DISCUSSION

## A. Prejudgment Interest

The parties dispute whether pre-judgment interest should be awarded in DDR's favor and, if so, in what amount. DDR contends that it is entitled to prejudgment interest from both Defendants beginning from the date of the parties' hypothetical negotiation calculated at the average prime rate (4.83%), compounded annually. (Dkt. No. 538, at 3.) Digital River contends that (1) DDR is entitled to prejudgment interest at the statutory, not the prime, rate; (2) that DDR is not entitled to prejudgment before 2010; and (3) that DDR is not entitled to prejudgment interest during the four-year stay of this litigation during a USPTO reexamination of the asserted patents. (Dkt. No. 545.) NLG/WTH joins in Digital River's opposition, and further asserts that DDR is not entitled to prejudgment interest because "DDR is a non-practicing entity and should not be entitled to prejudgment interest." (Dkt. No. 543.)

Upon a finding of patent infringement, "the court shall award patent damages ... together with interest and costs as fixed by the court." 35 U.S.C. § 284. Prejudgment interest should be awarded under Section 284 absent some justification for withholding such an award. *Gen. Motors Corp. v. Devex Corp.*, 461 U.S. 648, 657 (1983); *Telcordia Techs., Inc. v. Cisco Sys., Inc.*, 612 F.3d 1365, 1378 (Fed. Cir. 2010). The purpose of prejudgment interest is to place the patentee in as good a position as he would have been had the infringer paid a reasonable royalty instead of infringing. *Beatrice Foods v. New England Printing*, 923 F.2d 1576, 1580 (Fed. Cir. 1991).

## 1. Prejudgment Interest Begins at the Date of the Hypothetical Negotiation

The first question the Court must resolve in determining the issue of pre-judgment interest is the date when pre-judgment interest should begin to accrue. DDR contends that such date should be January 31, 2006, which was the date of the hypothetical negotiation as set by Defendants' joint damages expert. (Dkt. No. 531, at 12-13) ("And that's the opinion I have with respect to the payment structure that the parties would have agreed to, if they had gotten together and negotiated a license earlier in time, in [January] 2006, during ... a hypothetical negotiation.")

Digital River argues, however, that the date of the parties' hypothetical negotiation is immaterial, because DDR's damages expert based his damages model against Digital River upon accused products sold only from 2010 to 2012. (Dkt. No. 545.) Digital River contends that DDR is precluded from obtaining prejudgment interest from 2006 to 2012, when DDR's expert only calculated damages based on revenue from 2010 to 2012. *Id*.

In this case, the Court instructed the jury to award damages running from the date of the hypothetical negotiation, which in this case was agreed to by all parties to be January 31, 2006. As Digital River's damages expert testified at trial, "you kind of need the hypothetical negotiation to happen right around the time of the *alleged first infringement*, because that's the time when whoever's accused of using the technology or the teachings of the patents-in-suit would have needed a license ... And that would be in *January 2006* ..." (Dkt. No. 531, at 15) (emphasis added). Although DDR's expert presented Digital River from only 2010 to 2012, the jury was clearly instructed to award DDR a "royalty payment that a patent holder and the infringer ... would have agreed to in a hypothetical negotiation taking place at a time period just prior to when the infringement first began." (Dkt. No. 532, at 61-62.) Thus, the jury's \$750,000.00 damages

award constituted an award to DDR for Digital River's infringement occurring just prior to the first infringement; in this case, January 2006.

2. DDR is Entitled to Prejudgment Interest During the Time-Period that this Case was Stayed Pending Reexamination

Both Digital River and NLG/WTH argue that, regardless of the time when prejudgment interest begins to accrue, DDR is not entitled to prejudgment interest during the four year stay of this case while the asserted patent claims were undergoing reexamination at the USPTO. (Dkt. No. 545, at 4); (Dkt. No. 543, at 2.) Specifically, the Defendants ask this Court to toll the prejudgment interest from December 19, 2006 (the date this Court granted DDR's motion to stay the litigation) to October 6, 2010 (the date this Court granted DDR's motion to reopen the case). (Dkt. No. 178, 194.)

Defendants acknowledge that Court's customarily decline to toll prejudgment interest while re-examination proceedings are pending, but argue that the present case is distinguishable because: (1) the party seeking to recover prejudgment interest (DDR) is the party that initiated the re-examination proceedings; (2) DDR initiated the re-examination proceedings voluntarily and unilaterally; (3) DDR is the party that moved to stay the litigation; (4) Digital River opposed the stay of the litigation; and (4) the re-examination proceeding stayed the litigation for four year, a period longer than the parties actually spent litigating the case; and (5) the re-examination proceeding did not result in the narrowing of any issues in the litigation. (Dkt. No. 545, at 5) (Dkt. No. 543, at 2-5.)

Withholding prejudgment interest "is the exception, not the rule." *Lummus Indus., Inc. v. D.M. & E. Corp.*, 862 F.2d 267, 275 (1988). Defendants do not cite one case where another Court has denied a plaintiff's motion for prejudgment interest during the period of reexamination. At

best, Defendants cite to cases that suggest that a Court may deny prejudgment interest for undue delay. But at least one other District Court, in a case directly on-point, has expressly ruled that a Plaintiff-initiated reexamination does not constitute undue delay with regard to the prejudgment interest inquiry:

In this case ... Plaintiff sought the stay and Defendant opposed it. However, just as in *Allen*, the stay conserved judicial and attorney resources. Had the reexamination resulted in the rejection of the claim in question, Krippelz would have had to narrow or cancel the claim, or appeal the decision of the reexamination, and the litigation would have taken a different track or come to an end. Even though Krippelz 'caused' the delay by requesting a stay, because the stay conserved the resources of the parties and the court, it was neither unreasonable nor unjustified. For this reason, prejudgment interest should be awarded for the period during with the case was stayed.

See Krippelz v. Ford Motor Co., 670 F. Supp. 2d 815, 819-20 (N.D. Ill. 2009). The Court agrees with the analysis in Krippelz, the reexamination conserved judicial and party resources and it was not unreasonable or unjustified for DDR to seek a stay. For at least this reason, the Court declines to toll accrual of prejudgment interest during the reexamination of the claims.

3. DDR's Status as a Non-Practicing Entity Does Not Preclude an Award of Prejudgment Interest

NLG/WTH contends that "DDR is a non-practicing entity and should not be entitled to prejudgment interest." (Dkt. No. 543, at 4.) NLG/WTH does not cite to *any* case law to support its position, but rather argues that "any damage DDR has sustained has been addressed through the jury award, and adding prejudgment interest to such an award would give DDR, a non-practicing entity, a windfall. (Dkt. No. 543, at 4.) After reviewing the parties' written submissions, the Court finds no justification or basis to support NLG/WTH's argument that DDR should be precluded from an award of prejudgment interest because it is a non-practicing entity.

4. Prejudgment Interest is Calculated Using the Prime Rate

Prejudgment interest on the actual damages assessed against Digital River and NLG/WTH shall be paid from the date of the hypothetical negotiation calculated at the average prime rate (4.83%), compounded annually.

## **B.** Post-Judgment Interest

The parties agree that post-judgment interest should be set, pursuant to 28 U.S.C. §1961(a), at the statutory rate. The Court concurs.

### C. Costs

DDR argues that, as the prevailing party in this litigation, it is entitled to costs consistent with Federal Rule of Civil Procedure 54(d) and 28 U.S.C. § 1920. The Defendants do not oppose this request. Therefore, the Court awards costs to DDR.

### IV. Conclusion

A consistent Final Judgment is entered contemporaneously herewith.

CIVIL ACTION NO. 2:06-cv-42-JRG

v.

HOTELS.COM, L.P., et al.

Defendants and Counterclaimants.

S

Defendants and Counterclaimants.

#### **JUDGMENT**

A jury trial commenced on October 8, 2012. The jury returned a unanimous verdict on October 12, 2012. Pursuant to Rule 58 of the Federal Rules of Civil Procedure and in accordance with the jury's verdict, the Court hereby renders the following Judgment:

- 1. The jury having determined that Defendant Digital River, Inc. ("Digital River") infringed claims 13, 17, and 20 of U.S. Patent No. 6,993,572 ("the '572 Patent"); and the jury having determined that those same claims of the '572 Patent are not invalid; and the jury having awarded damages of \$750,000.00 to DDR for Digital River's infringement through October 12, 2012; it is **ORDERED** that DDR have and recover from Digital River the sum of Seven Hundred and Fifty Thousand Dollars (\$750,000.00) as compensatory damages for infringement through October 12, 2012 in this case;
- 2. The jury having determined that Defendants National Leisure Group, Inc. and World Travel Holdings, Inc. ("NLG/WTH") infringed Claims 13, 17, and 20 of the '572 Patent and Claims 1, 3, and 19 of U.S. Patent No. 7,818,399 ("The '399 Patent); and the jury having determined that those same claims of the '572 Patent are not invalid; and

- the jury having awarded damages of \$750,000.00 to DDR for NLG/WTH's infringement through October 12, 2012; it is **ORDERED** that DDR have and recover from NLG/WTH the sum of Seven Hundred and Fifty Thousand Dollars (\$750,000.00) as compensatory damages for infringement through October 12, 2012 in this case;
- 3. Pursuant to 35 U.S.C. § 284, the Court awards DDR an additional Two Hundred Eighty-One Thousand, Four Hundred and Four Dollars (\$281,404.00) in pre-judgment interest from Digital River, based upon the average prime interest rate of 4.83% as calculated and applying from the date the damages for infringement should have been paid, January 31, 2006, through October 31, 2012, compounded annually. Accordingly, the total damages awarded to DDR from Digital River is One Million, Thirty-One Thousand, Four Hundred and Four Dollars (\$1,031,404.00), plus an additional amount at the per diem rate of One Hundred Thirty-One Dollars and Seventy-One Cents (\$131.71) per day beginning on November 1, 2012, through the entry of this Judgment.
- 4. Pursuant to 35 U.S.C. § 284, the Court awards DDR an additional Two Hundred Eighty-One Thousand, Four Hundred and Four Dollars (\$281,404.00) in pre-judgment interest from NLG/WTH, based upon the average prime interest rate of 4.83% as calculated and applying from the date the damages for infringement should have been paid, January 31, 2006 through October 31, 2012, compounded annually. Accordingly, the total damages awarded to DDR from NLG/WTH is One Million, Thirty-One Thousand, Four Hundred and Four Dollars (\$1,031,404.00), plus an additional amount at the per diem rate of One Hundred Thirty-One Dollars and

Seventy-One Cents (\$131.71) per day beginning on November 1, 2012, through the entry of this Judgment.

- 5. Pursuant to Rule 54(d) of the Federal Rules of Civil Procedure and 28 U.S.C. § 1920, the Court finds that DDR is the prevailing party in this matter and is entitled to costs consistent therewith.
- 6. Pursuant to 28 U.S.C. § 1961, the Court awards DDR post-judgment interest applicable to all sums awarded herein, at the statutory rate, from the entry of this Judgment until paid.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

#### New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

#### National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

#### New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

#### SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Dear Sir:

Assignee discloses the Judgment and accompanying Opinions listed on attached form PTO-1449 (Modified) from the lawsuit previously disclosed, Case No. 2:06CV42 (E.D. Tex.).

In the Notice of Allowance, at paragraph 3, the examiner quoted from assignee's Response to Office Action in February 2013, where assignee said that it expected to file a Supplemental IDS with further information about the trial. The examiner's comment noted that no Supplemental IDS had been received.

Assignee's comment (to which the examiner referred) recorded assignee's expectation in February 2013 that the Court's decision on post-trial motions would be made soon. Assignee thought that the most concise way to advise the Office what happened at the trial in October 2012 and would be to disclose, by filing another IDS, the Judgment in the lawsuit and the Court's Opinion on the defense motions.

Unfortunately from a timing perspective, things did not go as planned: The Court did not issue its opinion and judgment "shortly" after the February 2013 paper; rather, the Court issued the opinion and judgment only in June 2013. By that time, the Office had allowed this application. Also unfortunately (in some sense) the examiner did not accept assignee's request to schedule an interview before the next action, apparently because the examiner decided that assignee's Response to Office Action contained remarks that were persuasive and that the claims should be allowed. Had the

examiner agreed to schedule the interview, assignee had planned to advise the examiner of the status of the lawsuit and offered to answer questions before allowance.

Because of that combination of circumstances and the relative timing of the Judgment and the Notice of Allowance, assignee is filing this Supplemental Disclosure Statement after allowance, rather than before allowance as expected.

The only items being cited are the Court's Judgment and Opinions, which assignee received last week. Thus, pursuant to MPEP 609, assignee includes the certification that the materials cited were received only recently, as follows:

To the knowledge of the undersigned attorney after making reasonable inquiry, no item of information contained in this Information Disclosure Statement was either (1) cited in a communication from a foreign patent office in a counterpart foreign application, or (2) known to any individual designated in 37 C.F.R. § 1.56(c), more than three months ago. The fee set forth in 37 C.F.R. § 1.17(p) accompanies this submission.

The Court's Opinions refer, among other things, to certain arguments by defendant Digital River, Inc. contending that the patents-in-suit were invalid over prior art under 35 U.S.C. §§ 102 and 103, as well as arguments by defendants that the patents-in-suit were invalid under 17 U.S.C. §§ 101 and 112(1), (2). The examiner should recall that the patents-in-suit are parents to the claims of this application and have some overlapping claim terms.

With regard to the non-art defense contentions, the examiner can review the Court's Opinions. In addition, regarding the argument under 17 U.S.C. § 101, the examiner should take note of the two Federal Circuit decisions issued in the last six weeks on that subject, in *CLS Services Ltd. v. Alice Corporation Pty Ltd.*, No. 2011-1301 (Fed. Cir. May 10, 2013) (en banc), and *Ultramercial, Inc. v. Hulu, LLC*, No. 2010-1544 (Fed. Cir. June 21, 2013) (panel decision on remand from Supreme Court).

With regard to Digital River's prior art contentions, although the Opinions summarize (and reject) the defense arguments, assignee wishes to offer the examiner further assistance if needed. Assignee has previously cited the litigation case file in its entirety and requested that the Office review the publicly available materials in those

files. Although assignee repeats that request here, assignee recognizes that the lawsuit case file contains a lot of material. Given the volume, and to assist the examiner, assignee specifically offers to help the examiner access any materials, should the examiner have any questions or wish to review anything more, and assignee also assists by offering the following remarks about the Opinions cited in this IDS as related to the prior art arguments made at trial.

As the examiner can see from the Opinions, the prior art invalidity arguments presented against the parent patent at trial centered on Digital River's own operations, specifically a system called the "Secure Sales System," abbreviated "SSS," which Digital River pointed out was working before the effective filing date and supported sales to its customers. Digital River also cited a patent, called the Tobin patent, to support an obviousness rejection of at least one dependent patent claim.

The Tobin patent has long been of record in this application; indeed, it was carefully reviewed in parent applications.

DDR supplied the Office in this application, through previous IDS filings, lots of materials regarding the Digital River SSS system. The undersigned believes that the previously cited materials contain adequate information about the Digital River SSS, and provide a good representation of the SSS system as operational or as disclosed by Digital River before this application's effective filing date.

At trial, the primary defense witness who testified about prior art was Mr. Kent, the expert whose report assignee supplied in an earlier IDS, and which the Office used in a previous rejection. Mr. Kent relied heavily on the Digital River SSS in his report. At trial, the Court constrained Mr. Kent so that he did not testify to subjects beyond his report, so the examiner should have access to the information required to understand Mr. Kent's testimony from the already reviewed report.

Nevertheless, at trial, Digital River relied on some kinds of information other than what is found in Mr. Kent's report. First, Digital River presented testimony from certain Digital River former-employee witnesses explaining the SSS system and how and when it worked. Second, Digital River presented in open court certain exhibits that

Digital River had previously marked as confidential, which earlier prevented DDR or its counsel from citing them to the Office in previous IDS filings (because to do so would have violated the Court's protective order). Third, Digital River demonstrated in open court a reconstructed machine that purportedly operated like the SSS system at the relevant time. Fourth, Digital River offered attorney argument supposedly summarizing evidence related to the SSS system.

Among the Kent expert report, printed documents discussing SSS, certain customer examples, and a video showing a demonstration of the reconstructed machine – all of which the examiner has previously seen – assignee believes that DDR has provided the Office with sufficient information about SSS. However, if the examiner believes that it would be helpful to see more, including specifically any trial transcripts or exhibits released at trial, the examiner has only to ask, and DDR will supply further information in response to such a request.

DDR believes that the examiner should fairly conclude that the Opinion and Judgment cited here are completely consistent with the conclusion of patentability made by the Office in the Notice of Allowance. DDR is citing the Opinion and Judgment nonetheless so that the examiner can make his own determination.

If the Office has any questions, please feel free to contact assignee's undersigned attorney of record.

Respectfully submitted, DDR HOLDINGS, LLC

by its attorney

|----------------|---------------|---------------|---------------------|----------------------|------------------|------------|
| nonprovisional | SMALL         | \$890         | \$0                 | \$0                  | \$890            | 09/03/2013 |

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

#### HOW TO REPLY TO THIS NOTICE:

I. Review the ENTITY STATUS shown above. If the ENTITY STATUS is shown as SMALL or MICRO, verify whether entitlement to that entity status still applies.

If the ENTITY STATUS is the same as shown above, pay the TOTAL FEE(S) DUE shown above.

If the ENTITY STATUS is changed from that shown above, on PART B - FEE(S) TRANSMITTAL, complete section number 5 titled "Change in Entity Status (from status indicated above)".

For purposes of this notice, small entity fees are 1/2 the amount of undiscounted fees, and micro entity fees are 1/2 the amount of small entity fees

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

#### PART B - FEE(S) TRANSMITTAL

#### Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE

Mail Stop ISSUE FEE Commissioner for Patents P.O. Box 1450

Alexandria, Virginia 22313-1450 or <u>Fax</u> (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

maintenance fee notifications. Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission. CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address) Certificate of Mailing or Transmission I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below. 26362 7590 05/31/2013 LOUIS J. #### Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 155 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 155 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

#### **Privacy Act Statement**

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

#### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/11/2013 has been entered.
- 2. Claims 71-79, 81-87, 89-92 are amended. Claims 71-92 are pending for examination.
- 3. The Applicant stated in his Remarks, filed 2/11/2013, page 13, " At trial, the jury found that assignee's claims asserted from the '572 Patent were not invalid over the prior art references that Mr. Kent testified anticipated the claims or made them obvious. **The Supplemental Information Disclosure Statement expected to be filed soon will contain more information about the jury's verdict.** " to submit a supplemental IDS, and that has not been received so far.
- 4. In view of the current amendments to claims 71-79, 81-87, 89-92 filed 2/11/2013 and the applicant's arguments filed 2/11/2013, see pages 10-19, which are found compelling and persuasive, previous rejection of claims 71, 73, 80, 81, 83, 87-88, 90 under 35 USC 102 and rejection of claims 72, 74-77, 82, 84-85, 89, 91-92 under 35 USC 103 are now moot and withdrawn.
- 5. Claims 71-92 are allowed, wherein claims 71, 81 and 87 are independent claims and the rest are their dependencies.

Art Unit: 3625

6. The following is an examiner's statement of reasons for allowance:

Regarding claim 71, the prior art of record, alone or combined, neither teaches nor renders obvious a method comprising steps, as a whole, upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a uniform resource locator (URL) within a source web page that has been served to the visitor computer when visiting a first website, wherein the URL correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant, (a) automatically, with a server computer associated with a second website, retrieving data pre-stored in a storage device accessible to the server computer, and (b) automatically, with the server computer, serving to the visitor computer a composite web page of the second website, which composite web page includes: (i)information associated with the commerce object associated with the URL that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data defining an overall appearance of the composite web page that, excluding the information associated with the commerce object, visually corresponds to the source web page, wherein the owner of the first website is a third party with respect to the owner of the server computer, and the merchant also a third party with respect to the owner of the server computer.

Since the other two independent claims 81 and 87 include similar limitations as those of claim 71, they are analyzed and allowed on the basis of same rationale as set forth for claim 71 above.

Page 3

Application/Control Number: 12/906,979 Page 4

Art Unit: 3625

The reasons for allowance for all dependent claims are the same as set forth for claim 71 above.

#### 7. Prior art discussion:

- (i) Applicant's arguments filed 2/11/2013, see pages 10-19, are compelling and persuasive that the prior art of Saliba et al. (US Pub: 20020065772A1), SexToy (Prior art provided in the IDS file 7/30/2012 and cited in reference #55, "Expert Report" of the IDS.) and Alloul et al. (US Patent 6032130), alone or combined, teaches all the elements, as a whole, recited in claims 71, 81 and 87.
- (ii) Kirsch [US Patent 5,963,915; see at least Abstract, Figs.1-3, claims 16-18] teaches a server 22 providing a web page 24 with one or more embedded URLS, see Fig.2, and one or more URLS can be associated with a purchasable item, by activating the one or more URLs a request is received by another server 34 which in response takes the necessary steps to respond. Kirsch does not teach automatically, with the server computer [server 34 in Kirsch], serving to the visitor computer a composite web page of the second website [corresponding to server 34], which composite web page includes: (i)information associated with the commerce object associated with the URL that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data defining an overall appearance of the composite web page that, excluding the information

Art Unit: 3625

associated with the commerce object, visually corresponds to the source web page [corresponds to server 22 | Kirsch].

(iii) Merriman et al. (US Patent 7,930,207; see at least Figs 1-2 and col.3, lines 29-67) teaches an affiliate web server [12] providing a HTML link to a user browser [15] wherein by clicking that link a message is sent to a advertising server [19] which provides the Advertisement object as a composite on the affiliate web site's page image displayed on the user browser. Merriman et al. does not teach automatically, with the server computer [server 19 in Merriman], serving to the visitor computer a composite web page of the second website [corresponding to server 19], which composite web page includes: (i)information associated with the commerce object associated with the URL that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data defining an overall appearance of the composite web page that, excluding the information associated with the commerce object, visually corresponds to the source web page [corresponds to server 12 in Merriman].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 3625

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to YOGESH C. GARG whose telephone number is (571)272-6756. The examiner can normally be reached on Increased Flex/Hoteling.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Smith can be reached on 571-272-6763. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

This collection of information is required by 37 CFR 1.114. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

## **Privacy Act Statement**

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
- A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

### **AMENDMENT ACCOMPANYING RCE**

Dear Sir:

In response to the issues raised in the Office Action dated October 10, 2012, which contains a new art rejection and was made final, assignee submits the below amendments (beginning on page 2) and remarks (beginning on page 10).

This document accompanies a Request for Continued Examination. Assignee is filing this RCE to cite additional information reporting on the positive outcome (for assignee) of a federal court trial of certain claims of parent applications and to allow assignee a free hand to amend the claims to complete prosecution of this application most effectively, with maximum ease for the examiner.

A supplemental information disclosure statement will be submitted soon, before the examiner considers this case.

Assignee also submits concurrently an Interview Request to promote quick action and answer the examiner's questions, if any, so as to facilitate prompt completion of this application. Assignee asks the examiner to call to schedule the interview at a time that is best, before the next decision.

Accordingly, assignee respectfully requests prompt action to conclude prosecution in a compact fashion.

#### **Amendments**

### IN THE CLAIMS

Please amend the claims as follows:

- 1-70. (Cancelled)
- 71. (Currently amended) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link uniform resource locator (URL) within a source web page that has been served to the visitor computer when visiting a first website, wherein the link URL correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

- (a) automatically, with a server computer associated with a second website, retrieving data pre-stored in a storage device accessible to the server computer, and
- (b) automatically, with the server computer, serving to the visitor computer a composite web page of the second website, which composite web page includes:
  - (i) information associated with the commerce object associated with the link URL that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL, and
  - (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data [[and]] <u>defining an overall appearance of the composite web page that, excluding the information associated with the commerce object, visually correspond[[ing]]s to the source web page,</u>

wherein the owner of the first website[[,]] <u>is a third party with respect to</u> the owner of the server computer, and the merchant <del>are each</del> <u>is also a</u> third <del>parties</del> <u>party</u> with respect to <del>each other</del> <u>the owner of the server computer</u>.

72. (Currently amended) The method of claim 71 wherein the visually perceptible elements comprise data defining a set <u>composed</u> of <u>a plurality of</u>

Serial No. 12/906,979

navigational links <u>URLs</u>, used <u>each of which URLs appear</u> on at least some of the web pages of the first website, <u>and each of which links URLs link point</u> to <u>specific respective</u> web pages of the first website.

- 73. (Currently amended) The method of claim 71 wherein the commerce object associated with the link <u>URL</u> that has been activated comprises information defining an electronic catalog having a multitude of <u>products offered for sale by the</u> merchant <u>offerings</u> through the second web site, and wherein the composite web page contains one or more selectable <u>navigation links URLs</u> connecting a hierarchical set of additional web pages <u>of the second web site</u>, each pertaining to a subset of the <u>product</u> offerings in the catalog.
- 74. (Currently amended) The method of claim 73 further comprising, automatically with the server computer, (i) accepting search parameters inputted through the browser of the visitor computer, and automatically with the server computer (ii) using said parameters to search for specific products within the catalog, and (ii) serving the results for display using the browser of the visitor computer.
- 75. (Currently amended) The method of claim 71 wherein the commerce object associated with the link <u>URL</u> that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising, <u>automatically with the server computer</u>, (i) accepting search parameters <u>inputted</u> through the browser of the visitor computer, <u>and automatically with the server computer</u> (ii) using said parameters to search for specific products within the plurality of products, and (<u>iiii</u>) serving the results for display using the browser of the visitor computer.
- 76. (Currently amended) The method of claim 71 wherein the owner of the source web page is party to a contract providing for receipt of a commission <u>based</u> on the level of sales made through activation of the <u>URL</u> as a result of a transaction involving the commerce object displayed on the source web page.

- 77. (Currently amended) The method of claim 76 further comprising computer-facilitating automatic payment of the commission to the owner of the source web page, once the transaction is completed.
- 78. (Currently amended) The method of claim 71, wherein the composite web page contains a further link <u>URL</u> associated with the information associated with the commerce object associated with the link <u>URL</u> that has been activated, which link <u>URL</u>, when activated by the web browser, places data representing the commerce object into a virtual shopping cart, and further comprising, automatically with the server computer, accepting inputted billing information from the visitor computer, recording the billing information, and using the billing information to facilitate payment to the merchant for the commerce object associated with the activated <u>link URL</u> when the server computer detects activation by the web browser of a checkout <u>link URL</u> associated with the shopping cart.
- 79. (Currently amended) The method of claim 78 further comprising computer-facilitating automatic payment of the commission to the owner of the source web page, once the transaction is completed.
- 80. (Previously presented) The method of claim 71, wherein the composite web page appears to the computer user to be generated by a server associated with the source page.
- 81. (Currently amended) A computer system apparatus for an outsource provider serving web pages offering commercial opportunities, the apparatus comprising:
  - (a) an electronic storage device containing data defining a plurality of visually perceptible elements visually corresponding to a source web page,
    - (i) wherein the source web page contains at least one active link uniform resource locator (URL) that is served to the visitor computer when visiting the first website, which link URL correlates the source web

- page with at least one commerce object associated with a buying opportunity of a merchant, and
- (ii) wherein the owner of the first website[[,]] <u>is a third party with</u>

  <u>respect to</u> the outsource provider, and the merchant <del>are each</del> <u>is also a</u>

  third <del>parties</del> <u>party</u> with respect to <del>each other</del> <u>the outsource provider; and</u>
- (b) a computer server device controlled by the outsource provider and associated with a second website, which computer server is coupled device has a data coupling to the electronic storage device, and which computer server device is programmed to, upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link URL, automatically:
  - (i) retrieve from the storage device the stored data defining the plurality of visually perceptible elements visually corresponding to the source web page, and
  - (ii) serve to the visitor computer a composite web page of the second website, which <u>composite</u> web page includes:
    - (A) information associated with the commerce object associated with the link <u>URL</u> that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL, and
    - (B) the plurality of visually perceptible elements derived from the retrieved data, which visually perceptible elements define an overall appearance of the composite web page that, excluding the information associated with the commerce object, visually corresponds to the source web page.
- 82. (Currently amended) The apparatus of claim 81 wherein the visually perceptible elements comprise data defining a set <u>composed</u> of <u>a plurality of</u> navigational links <u>URLs</u>, used <u>each of which URLs appear</u> on at least some of the web

pages of the first website, <u>and</u> each of which <u>links</u> <u>URLs</u> <u>link</u> <u>point</u> to <u>specific</u> <u>respective</u> web pages of the first website.

- 83. (Currently amended) The apparatus of claim 81 wherein the commerce object associated with the link <u>URL</u> comprises information defining an electronic catalog having a multitude of <u>products offered for sale by the merchant offerings through the second web site,</u> and wherein the composite web page contains one or more selectable <u>navigation links URLs</u> connecting a hierarchical set of additional web pages <u>of the second website</u>, each pertaining to a subset of the <u>product</u> offerings in the catalog.
- 84. (Currently amended) The apparatus of claim 83 wherein the computer server <u>device</u> is further programmed to: (i) upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the <u>link URL</u>, accept search parameters <u>inputted</u> through the browser of the visitor computer and automatically use the search parameters to search for specific products within the catalog, and (ii) serve the results for display using the browser of the visitor computer.
- 85. (Currently amended) The apparatus of claim 81 further comprising a computerized accounting module programmed to cause the computer system to automatically record payment to the owner of the first website, once the transaction is completed, wherein the owner is party to a contract with the outsource provider providing for receipt of a commission based on the level of sales made through activation of the URL as a result of a transaction involving the commerce object displayed on the source web page.
  - 86. (Currently amended) The apparatus of claim 85 wherein:
  - (i) the composite web page contains a further link <u>URL</u> associated with the information associated with the commerce object associated with the link <u>URL</u> that has been activated, which link <u>URL</u>, when activated by the web browser, places data representing the commerce object into a virtual shopping cart,

- (ii) the computer server <u>device</u> is further programmed to automatically accept inputted billing information from the visitor computer, and record the billing information, and
- (iii) the computerized accounting module is further programmed to cause the computer system to automatically use the billing information to record payment to the merchant for the commerce object associated with the activated <a href="https://link.with.nih.google.com/link.google.com/lin
- 87. (Currently amended) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a <code>link</code> uniform resource locator (URL) within a source web page that has been served to the visitor computer when visiting a first website, wherein the <code>link</code> URL correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

automatically, with a server computer associated with a second website, serving to the visitor computer a dynamically generated composite web page containing instructions directing the visitor computer to display:

- (i) information associated with the commerce object associated with the link URL that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL, and
- (ii) a plurality of visually perceptible elements visually corresponding to the source web page, which visually perceptible elements define an overall appearance of the composite web page that, excluding the information associated with the commerce object, visually corresponds to the source web page,

wherein the instructions direct the visitor computer to download data defining the visually perceptible elements from a storage device that is accessible to the visitor computer through the Internet, and

wherein the owner of the first website[[,]] <u>is a third party with respect to</u> the owner of the server computer, and the merchant <u>are each is also a</u> third <u>parties party</u> with respect to <u>each other the owner of the server computer</u>.

- 88. (Previously presented) The method of claim 87 wherein the storage device is coupled to the server computer associated with the second website.
- 89. (Currently amended) The method of claim 87 wherein the visually perceptible elements comprise data defining a set <u>composed</u> of <u>a plurality of</u> navigational links <u>URLs</u>, <u>used each of which URLs appear</u> on at least some of the web pages of the first website, <u>and each of</u> which <u>links URLs link point</u> to <u>specific respective</u> web pages of the first website.
- 90. (Currently amended) The method of claim 87 wherein the commerce object associated with the link <u>URL</u> that has been activated comprises information defining an electronic catalog having a multitude of <u>products offered for sale by the</u> merchant <u>offerings through the second web site</u>, and wherein the composite web page contains one or more selectable <u>navigation links URLs</u> connecting a hierarchical set of additional web pages <u>of the second website</u>, each pertaining to a subset of the <u>product</u> offerings in the catalog.
- 91. (Currently amended) The method of claim 90 further comprising, automatically with the server computer, (i) accepting search parameters inputted through the browser of the visitor computer, and automatically with the server computer (ii) using said parameters to search for specific products within the catalog, and (iii) serving the results for display using the browser of the visitor computer.
- 92. (Currently amended) The method of claim 87 wherein the commerce object associated with the link <u>URL</u> that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising.

Serial No. 12/906,979

automatically with the server computer, (i) accepting search parameters inputted through the browser of the visitor computer, and automatically with the server computer (ii) using said parameters to search for specific products within the plurality of products, and (iii) serving the results for display using the browser of the visitor computer.

#### **Remarks**

The Office Action, which was made final, withdrew the previous indication of allowance of all claims and rejected most claims as either anticipated by U.S. Pat. Pub. 2002/0065772 (Saliba) or obvious in view of Saliba in view of the SexToy reference, "Official Notice," or the Alloul patent (newly cited). The Office Action indicates continued allowability, however, of certain dependent claims, namely claims 78, 79, and 86. Although the approval of certain claims is appreciated, assignee respectfully requests reconsideration of the rejection of the other claims, for the reasons stated below. The amendments presented here, and the reasons for them, are explained in each section of this paper, as relevant.

1. Saliba does not anticipate independent claims 81, 81, and 87. Assignee respectfully requests reconsideration of the rejection of all claims on the principal grounds that Saliba fails to disclose the claimed features of any "commerce object" of a "merchant." Independent claims 71, 81, and 87 each contain the limitation that the "URL correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant," and each require that the "composite web page" contain "information associated with the commerce object associated with the URL that has been activated, which commerce object includes at least one product available for sale through the second website after activating the URL."

Saliba discloses a service-center computer that displays customer-specific information to customers on behalf of financial-service companies, each of which has its own website. Saliba does not meet the claim limitations quoted above because, in Saliba, the URL does not lead to any "commerce object" of a "merchant." Rather, Saliba's URL would lead to a page from which the customer can select, for viewing, a bill from a company already billing the customer for something (such as a telephone company or an electric utility).

At several points in various rejections (e.g., p. 7), the Office Action refers to "a commercial object such as a bill from a [biller]." With respect, a bill, even if it could

fairly be called a "commercial object" in some ordinary speech (which is questionable at minimum), is not a "commerce object" of a "merchant," as stated in the claims.

The terms "merchant" and "commerce object" were interpreted by the Patent Office's Board of Appeals in a matter concerning the same specification as pending here, and by a district court in the previously disclosed litigation involving the same parent patent.

As to "merchant," the Board ruled: "The Specification of the '572 Patent [a parent case with substantially the same specification as is pending here] defines 'merchants' as 'producers, distributors, or resellers of the goods to be sold through the outsource provider.' (Spec. col. 23, Il. 18-19)." *See* Appeal 2009-013987, p. 7, finding of fact #1. The district court construed the term "merchant" as a "producer, distributor, or reseller of goods or services to be sold."

As to "commerce object," the Board of Appeals held, in the same appeal (p. 13), "The Specification of the '572 Patent [again, the same one here] defines a commerce object as 'a catalog, category, product or dynamic selection'." The district court likewise construed "commerce object" as "a third-party merchant's: catalog, category, product (goods or services), or dynamic selection." *See also*, *e.g.*, specification, p. 24, lines 29-31.

To make the Office's decision here easy, assignee has made certain amendments to copy pertinent portions of the proper constructions into the claim language itself, which removes any need to do the construction work done by the Board and the court. Specifically, assignee has added into the claim the limitation that the "commerce object includes at least one product available for sale through the second website after activating the URL," to amplify the existing claim language that the "URL correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant." Because the added language simply incorporates

<sup>&</sup>lt;sup>1</sup> Assignee has, throughout the claims, changed the term "link" to "URL," which similarly avoids a debate over the construction of that term. The term "URL" is explicitly referenced in the specification. *See, e.g.*, p. 22, lines 18-23 ("URL"); *see also* p. 41, lines 1-3 ("hyperlink of some kind"). Because this change is consistent with the district court's interpretation of the term "link," no narrowing is accomplished by this change.

established constructions (as shown in more detail below), the amendments are not narrowing amendments.

Saliba's billing company is not a "merchant," because it is not selling any products (goods or services) through the second website, as claimed (as the Board explained, this is the "outsource provider" that practices the method or controls the equipment claimed). According to the explanation of Saliba in the final Office Action, the "outsource provider" is supposedly Saliba's "service-center" that facilitates access to the bills of the "billers." But the billers (the supposed "merchants") offer no products through the website of the "service-center." Accordingly, Saliba's billers cannot be "merchants" as defined in the claim or under the established construction of that term.<sup>2</sup>

Similarly, Saliba's link does not lead to any "commerce object" as defined in the claim or as properly construed, because a bill or collection of bills contains (referring to the claims) no "product [neither goods nor services of a merchant] available for sale through the second website" (the "service-center"). Referring to the established constructions, the bills are not a catalog (of products), not a category (of products), not a product, and not a dynamic selection (of products).

The Office Action refers to the expert report of Mr. Peter Kent (a witness for litigation defendants cited by assignee) as support for the rejection. Although at several locations (e.g.,  $\P\P$  152, 343, 368, 819-820, 881-882), Mr. Kent's report asserts that Saliba's "multiple Billers" are "merchants," and that Saliba disclose linked "commerce objects" (e.g., Kent  $\P\P$  161, 351, 375, 838-839, 904-905), nowhere does Mr. Kent's report provide any explanation or justification for those conclusions.

In the lawsuit in which Mr. Kent filed his report, assignee submitted a rebuttal expert report explaining errors in Mr. Kent's report, which included mention of Mr. Kent's failure to justify his conclusions that Saliba disclosed "merchants" selling "commerce objects." Mr. Kent was not obligated to reply to the rebuttal report, but he testified at trial, and he opined that certain asserted claims of the parent '572 Patent

<sup>&</sup>lt;sup>2</sup> The billers presumably sold products at some earlier time to the users, which resulted in the bills. But that does not make them "merchants" with respect to the activity described in the claims in question.

were invalid.<sup>3</sup> In his trial testimony, however, Mr. Kent did not repeat the argument from his expert report that Saliba anticipated the claims. Although a number of explanations are possible, it is a reasonable inference to suppose that Mr. Kent was persuaded by the responsive expert report, or perhaps considered it unwise to pursue an argument that he could not win before the jury. Regardless of Mr. Kent's reasons for dropping reliance on Saliba, though, the Office Action's reliance on Mr. Kent's report does not buttress any rejection.

At trial, the jury found that assignee's claims asserted from the '572 Patent were not invalid over the prior art references that Mr. Kent testified anticipated the claims or made them obvious. The Supplemental Information Disclosure Statement expected to be filed soon will contain more information about the jury's verdict.

Because neither the final Office Action nor Mr. Kent identified any evidence showing that Saliba taught a service-center offering any "commerce object" of any "merchant," assignee respectfully requests that the Office find as a fact that Saliba lacks those elements and withdraw the anticipation rejection of all claims.

Although not relevant directly to the rejection, assignee has amended all independent claims in a few other respects:

First, assignee has broadened the explanation of the "third party" relationship among the parties. The specification, p. 36, lines 15-18, explains that a single legal entity (such as a company) can "play the dual role of Host and Merchant." In all cases, however, the Host is a third party from the Outsource Provider, and the Merchant is a third party to the Outsource Provider. Disregarding previous strategy or any comments that may have been made before now, assignee wishes to present claims, through this RCE, that cover the scenarios identified in the specification. Therefore, the Office should understand that the Host and the Merchant may be the same, related, or unrelated, but that both Host and Merchant are third parties with respect to the Outsource Provider.

Serial No. 12/906,979

<sup>&</sup>lt;sup>3</sup> The asserted claims were claims 13, 17, and 20 of the '572 Patent. Those claims include reference to "commerce objects," like the claims pending here.

Second, assignee has clarified (using, for example, the wording of claim 71) that "the composite web page includes ... a plurality of visually perceptible elements derived from the retrieved pre-stored data defining an overall appearance of the composite web page that, excluding the information associated with the commerce object, visually corresponds to the source web page." The point of the amendments is simply to clarify directly in the claim language what was already contained in the claim term "visually perceptible elements" as interpreted by the district court, namely that they define "overall appearance" and that the correspondence between the "source web page" and the "composite web page" is based on that overall appearance. See, e.g., specification, Figs. 15, 19; p. 4, lines 6-15; p. 6, line 28 to p. 7, line 3; p. 21, lines 11-14, 18-22; p. 27, lines 12-24; p. 37, lines 26-28; p. 38, lines 17-20; p. 41, lines 4-10. However, the correspondence need not extend to the other part of the "composite web page" (described in part (b)(i) of claim 71, for example), namely the "information associated with the composite object," because, obviously, and as explained in the specification at the above-listed places, the commerce object "information" appears on the composite page but not the source page.4

2. Saliba does not anticipate dependent claims 73, 83, and 90 (electronic catalog). These claims add the limitation "wherein the commerce object associated with the URL that has been activated comprises information defining an electronic catalog having a multitude of products offered for sale by the merchant through the second web site, and wherein the composite web page contains one or more selectable URLs connecting a hierarchical set of additional web pages of the second web site, each pertaining to a subset of the product offerings in the catalog."

<sup>&</sup>lt;sup>4</sup> In addition, assignee has made a number of amendments to the dependent claims. Most of those are discussed in the next sections. However, assignee has also amended claims 74-75 and 91-92, not discussed separately below, to clarify that the "server computer" both accepts the search parameters and uses them. No change in scope is intended; these changes are for grammar, form, and better clarity only. In addition, in the same dependent claims plus claim 84, assignee has added the word "inputted" in the phrase "through the browser," again for better clarity. These amendments conform the language to the form used in dependent claims 78 and 86, which are indicated allowable and relate to "billing information," which can be inputted in a manner similar to the "search parameters" of these claims.

Assignee's amendments contain grammatical clarification, specifying that the referenced "offerings" are *product* offerings through the second website. That was made clear in the previous version through antecedent reference, and assignee's amendments clarify it for ease of reference. Accordingly, no narrowing is being performed.

As noted above, there is no "merchant" disclosed by Saliba in connection with following the URLs discussed in that reference. Moreover, Saliba involves distribution of financial documents and does not disclose "a hierarchical set of additional web pages of the second website, each pertaining to a subject of the product offerings in the catalog" at least because there is no catalog of product offerings in Saliba.

The Office Action (p. 5) refers to Saliba's paragraph 41, which "displays a list of Biller names," which the rejection says "is a catalog of multiple merchant offerings which can be selected." But there is no product or service offered for sale through such list, so a list of biller names is not a set of "product offerings," nor is it a "catalog." Saliba teaches displaying bills of "billers," which does not meet the claim limitations in these dependent claims. These claims should be indicated allowable as well as the independent claims.

3. The Saliba/SexToy combination does not obviate dependent claims 72, 82, and 89 (return URLs). Turning to the rejections of certain dependent claims for obviousness, the Office Action (pp. 6-7) rejects dependent claims 72, 82, and 89 over Saliba in view of the set of references called "SexToy." These pending claims add the limitation that "the visually perceptible elements comprise data defining a set composed of a plurality of URLs, each of which URLs appear on at least some of the web pages of the first website, and which URLs point to respective web pages of the first website."

Assignee's amendments simply correct the grammar and simplify the language for ease of understanding (and use the term "URL," as explained above, consistently). In particular, assignee has removed the confusing phrase "links link," made clear what

Serial No. 12/906,979

"used on" was intended to mean, clarified that the term "set" was intended to contain plural members, and corrected the singular/plural problem that arose from the use of the word "each." Again, no narrowing is being done.

With the more simple language, the Office can understand more easily that the "composite page" has plural URLs that reproduce URLs of the first site and that "point" back to specific pages of the first site. This cannot be just the ineffective unitary "return to referring website' links" criticized in the specification. *See* p. 3, lines 9-11.

The Office Action (p. 6) concedes that Saliba does not disclose the feature added by the dependent part of these claims. The Office Action says, though, that "SexToy teaches presenting to visitors multiple navigational links back to host web site." However, the Office Action cites SexToy generally, and it is not apparent exactly where the Office Action thinks SexToy "teaches" the feature. Assignee does not find any place where SexToy contains such a teaching, neither any printed suggestion in SexToy documents to have a set of navigational links, nor any evidence of any SexToy affiliate who actually put such a set of navigational links in the affiliate's header or footer in a commercial example predating the effective date of this application.

The Office Action cites generally the discussion of SexToy in the Kent Expert Report, but that does not remedy the omission. Mr. Kent's report (¶¶ 477-481) seems to say that it *might* have been "possible" to include, or that there "could" have been, links back to the host (first) website, but he never shows that there actually were such links back. Mr. Kent cites the following testimony from the SexToy founder (Mr. Levine):

Q. Was it possible for the HTML code to include graphics?

A. Yes. And, in fact, we, you know, advertised or marketed to the fact that you could put links back to your site, to other sites, images, banners, whatever you want. Yes.

Q. So if they had a series of navigational links or a hierarchy, they could include that at the top of the page and it would be reproduced by the Sextoy servers? A. Yes. [Levine depo at p. 35.]

However, neither Mr. Levine nor Mr. Kent cited any actual document showing such supposed "advertisement or marketing" of plural links back to respective host web pages. Rather, Mr. Kent (¶179) cites only a suggestion of a single link to the main site, the technique criticized by the specification here. Mr. Levine orally confirmed Mr. Kent's view that it is *possible* that an affiliate *could* have created a link, but neither person provided any evidence that any SexToy affiliate actually created the specified set of plural URLs before the critical date.

In the litigation in which Mr. Kent testified, again, assignee's rebuttal expert report identified Mr. Kent's report's omissions with respect to SexToy as described above. Again, in his trial testimony, Mr. Kent did not repeat the argument from his expert report that SexToy disclosed this feature. Indeed, Mr. Kent did not discuss SexToy at all at trial. Similarly, although the litigation defendants identified Mr. Levine as a witness and even sought special accommodations for him to appear, in the end, defendants never called Mr. Levine as a witness. Again, although a number of explanations are possible, it is a reasonable inference to suppose that Mr. Kent and defendants were persuaded by the responsive expert report, or perhaps considered it unwise to make an argument based on SexToy that they could not win. Regardless of Mr. Kent's or defendants' reasons for dropping reliance on SexToy, the Office Action's reference to Mr. Kent's report does not buttress the rejection.

Because it is admitted that Saliba doesn't disclose the feature, and because the Office does not meet its burden of showing any place where SexToy remedied the omission, these claims should be indicated allowable regardless of the decision on the independent claims.

4. The Saliba/Official Notice combination does not obviate claims 76-77 and 85 (commission payments). The Office Action (pp. 8-9) rejects dependent claims 76, 77, 85, and 92 as obvious over Saliba in view of "official notice." Claim 76 adds the limitation "wherein the owner of the source web page is party to a contract providing for receipt of a commission based on the level of sales made through activation of the

URL as a result of a transaction involving the commerce object displayed on the source web page." Claim 77 depends on claim 76 and adds the further limitation: "further comprising computer-facilitating automatic payment of the commission to the owner of the source web page, once the transaction is completed." Claim 85 refers to an "accounting module" that is programmed to record payment in accordance with such a contract.<sup>5</sup>

As used in the specification, a "commission," in the context of sales, is "an amount of money … based on the level of sales," or "a percentage of the sales" paid for producing or assisting in them. Again, to make it easy, assignee has amended the claims to refer explicitly to "a commission based on the level of sales made through activation of the URL." Because that change merely confirms the normal interpretation, it is not a narrowing amendment.

Turning to the rejection, as an initial matter, the Office Action (p. 9) observes that the added limitation "does not involve any machinery" so as "to be qualified as a statutory process limitation." However, no Section 101 rejection is made, so no response is deemed necessary to this observation, despite assignee's disagreement with the statement. In any event, claim 85 contains specific machinery, as it is an apparatus claim that depends on independent apparatus claim 81.8

<sup>&</sup>lt;sup>5</sup> Claim 92 appears to have been listed in this rejection in error, because it relates to different subject matter.

<sup>6 &</sup>lt;u>http://www.businessdictionary.com/definition/sales-commission.html</u> (see attached).

<sup>&</sup>lt;sup>7</sup> <u>http://www.wisegeek.com/what-does-it-mean-to-be-paid-on-commission.htm</u> (see attached).

<sup>&</sup>lt;sup>8</sup> Assignee has amended independent apparatus claim 81 to clarify the phrase "which computer server device is coupled to the electronic storage device." To avoid any implication that the coupling must be only direct or local, and to clarify the type of coupling, assignee has amended this phrase to "which computer server has a data coupling to the electronic storage device." In other words, the coupling is a "data coupling," namely any connection that can allow data flow. This wording better conforms apparatus claim 81 to the independent method claims, which refer to "a storage device accessible to the server computer" in claim 71 (and "through the Internet" in claim 87). Assignee also has amended claim 81 and certain dependent claims to refer consistently to "computer server device."

More central to the rejection actually made, the "official notice" taken (p. 9) is "that an entity like a bank in Saliba can charge a fee/commission for providing the service of displaying links" for bills "provided to the customers" and "an automatic payment can be made to the bank" with "known electronic payment methods." To put it simply, the Office Action seems to take "official notice" that banks could charge the customers a fee for viewing bills and deduct that fee electronically.

Assuming the "official notice" is fair, however, it does not satisfy the claim language. By referring to "fee/commission," the Office Action implies that the two words are the same, which is not true. Official notice that Saliba's bank might receive a "fee" for access to certain information does not necessarily imply that the bank would receive a "commission" based on a sale made. The "official notice" here does not assert that the examiner is aware of banks having received *commission* based on sales made through some kind of linked activity, in any relevant, comparable context.

Also, the claim requires that the payment to the bank (however it is characterized) be "as a result of a transaction involving the commerce object displayed on the source web page." As noted above, the "official notice" refers to a payment "for providing the service of displaying links to bills." Providing a bill is not a "transaction," though, and no official notice is taken of any payment for any "transaction." In this context, a "transaction involving the commerce object" is a sale agreement or legal transfer of property, *i.e.*, the goods or services defined by the "commerce object."

Because it is admitted that Saliba doesn't disclose the feature, and because the "official notice" (even assuming that the notice is fair and the rationale for combining the two is justifiable) is not sufficient to meet the admittedly missing element, the Saliba/Official Notice combination does not obviate dependent claims 76-77 and 85, and these claims should be indicated allowable regardless of the decision on the independent claims.

In view of the above showing, all claims should be allowed.

# \*sales commission

#### Definition

The amount of money that an individual receives based on the level of sales he or she has obtained. The sales person is provided a certain amount of money in addition to his/her standard salary based on the amount of sales obtained.

Rare webinar exposes 1 new law that will kill your wealth in 2013 unless you take action now...

Being paid on commission means that a person is paid a percentage of the sales that he or she makes. When people are paid totally on commission, they are not receiving a <u>salary</u> or an hourly rate, but rather are paid only according to the sales dollars they bring in. This has both advantages and disadvantages.

When people are paid on a commission basis, they have an incentive to try harder to make sales since this is the only way that they can earn money. However, some people say that some workers paid on commission may take advantage of the situation so that they can earn more. For example, some mechanics are paid this way, and some customers may feel they have been charged for the mechanic to fix things that may have not needed repairing. Although many mechanics are trustworthy, many people feel that a being paid on a commission basis invites dishonesty in order to earn more pay.

Some real <u>estate</u> agents are paid on commission and usually earn good pay when a house is sold. Real estate agents paid on a salary basis may earn more or less than those who only earn a commission. The commission rates vary widely as they must be negotiated with the seller when the home is listed.

## ☆ transaction

#### Definitions (5)

- 1. General: Agreement, contract, exchange, understanding, or transfer of cash or property that occurs between two or more parties and establishes a legal obligation. Also called booking or reservation.
- 2. Accounting: Event that effects a change in the asset, liability, or net worth account. Transactions are recorded first in journal and then posted to a ledger.
- 3. Banking: Activity affecting a bank account and performed by the account holder or at his or her request.
- 4. Commerce: Exchange of goods or services between a buyer and a seller. Every transaction has three components: (1) transfer of good/service and money, (2) transfer of title which may or may not be accompanied by a transfer of possession, and (3) transfer of exchange rights.
- 5. Computing: Event or process (such as an input message) initiated or invoked by a user or computer program, regarded as a single unit of work and requiring a record to be generated for processing in a database. In a secure transaction (see ACID qualities) such events are regarded as a single unit of work and must either be processed in their totality or rejected as a failed transaction.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

#### New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

#### National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

#### New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

## **DETAILED ACTION**

1. Applicant's amendment filed 7/30/2012 is entered. Claims 71 and 81 are amended. Claims 71-92 are pending for examination.

## Terminal Disclaimer

2. The terminal disclaimer filed on 7/30/2012 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of (i) US Patent 6,629,135, (ii) US Patent 6,993,572 and (iii) US Patent 7,818,399 has been reviewed and is accepted. The terminal disclaimer has been recorded.

In view of the said terminal Disclaimer the previous rejection of claims 71-92 on the grounds of nonstatutory obviousness type double patenting are now moot and withdrawn.

3. In view of the current amendments to claims 71 and 81, previous rejections of claims 71-86 under 35 USC 112, first and second paragraphs are now moot and withdrawn.

## FINAL REJECTION

4. Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on 7/30/2012 prompted the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 609.04(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 71, 73, 80, 81, 83, 87-88, 90 are rejected under 35 U.S.C. 102(e) as being anticipated by Saliba et al. (US 2002/0065772 A1), hereinafter Saliba cited by the Applicant in the IDS filed 7/30/2012, see reference # 55 " Expert Report of Peter Kent. .

Regarding claim 71, Saliba teaches a method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant (a) automatically, with a server computer associated with a second website, retrieving data pre-stored in a storage device accessible to the server computer, and (b) automatically, with the server computer, serving to the visitor computer a composite web page of the second website, which composite web page includes: (i) information associated with the commerce object associated with the link that has been activated, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page, wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other (see Figs 1-4, 6. In Fig. 1, paragraphs 8-9, 40-46, 51, 65. A Bank web site 26 corresponds to the first website and displays a source web page to a customer 28, Service center system "24" corresponds to the server computer and the Billers 22 correspond to merchants and the commercial objects associated with a buying opportunity of a merchant are displayed on the service center web page, see Figs 4 and 6, including the plurality of visually perceptible elements of the source webpage of the bank including the bank's branding indicia, logo, etc. are retrieved from a database "40" and are applied to the composite web page of a biller, and displayed to the customer on his browser such that the user gets the

impression that he is still on the bank's web site. The owner of Bank web site, the owner of the service center computer and the biller[merchant] all are separate entities. ).

Regarding claim 73, Saliba discloses that the Service Center system web site 24 presents a commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog (see at least paragraph 41 which displays a list of Biller names that is a catalog of multiple merchant offerings which can be selected.).

Regarding claim 80, Saliba teaches that the method of claim 71, wherein the composite web page appears to the computer user to be generated by a server associated with the source page (This limitations is already covered in the analysis of claim 71 wherein it was analyzed that the customer is not exposed to the transfer due to the activation of the link, see also paragraph 41 at least).

Regarding claims 81, 83, 87-88, 90, their limitations are similar to the limitations of claims 71 and 73 and are therefore analyzed and rejected on the basis of same rationale as set forth for claims 71 and 73 above.

Application/Control Number: 12/906,979 Page 6

Art Unit: 3625

## Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6.1. Claims 72, 82 and 89 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saliba over SexToy (Prior art provided in the IDS file 7/30/2012 and cited in reference #55, "Expert Report" of the IDS.)

Regarding claims 72, Saliba teaches all the limitations of claim 72 including that the customer is presented with a composite web page from a merchant's [Biller's] website but with the look and feel of the first web site that is the Bank's web site. Saliba does not specifically teach that the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website. However, in the same field of endeavor, SexToy teaches presenting to visitors multiple navigational links back to host web site. Therefore, in view of SexToy, it would have been obvious to an ordinary skilled in the art at the time of the applicant's invention to have included the concept of to include in the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website because it will, as per the

intent of Saliba, to make the customer feel that he is not separated from the host web site.

Regarding claims 82 and 89, their limitations are similar to the limitations of claim 71 and are therefore analyzed and rejected on the basis of same rationale as set forth for claim 72 above.

6.2. Claims 74-75, 84 and 91 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saliba over Alloul et al. (US Patent 6,032,130), hereinafter Alloul.

Regarding claims 74, Saliba teaches all the limitations of claim 73 including that the customer is presented with a composite web page including information associated with a commercial object such as a bill from a merchant's [Biller's] but with the look and feel of the first web site that is the Bank's web site and that composite web page can also display multiple merchant offerings such as multiple bills. Saliba does not specifically teach accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer. However, in the same field of e-commerce, Alloul teaches this well-known aspect (see col.10, lines 41-57, "....In a preferred embodiment of the present invention, for improved shopping convenience, the browser application may be equipped with search engines for finding a specific item or a specific group of items into the local product database. This may be done by using keywords either for searching a product, a group of products, a brand-name or other association of product

characteristics......). In view of Alloul, it would have been obvious to an ordinary skilled in the art at the time of the applicant's invention to have modified Saliba to incorporate the concept of accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer because it would improve the shopping experience (see col. 10, lines 41-57).

Regarding claim 75, its limitations are similar to the limitations covered in both claims 73 and 74 and therefore claim 75 is analyzed and rejected on the basis of same rationale as set forth for claims 73 and 74 above.

Regarding claims 84 and 91 their limitations are similar to the limitations of claims 74-75 and are therefore analyzed and rejected on the basis of same rationale as set forth for claims 74-75 above.

6.3 Claims 76-77, 85 and 92 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saliba in view of Official Notice.

Regarding claim 76, Saliba teaches all the limitations of claim 71 including that the customer is presented with a composite web page including information associated with a commercial object such as a bill from a merchant's [Biller's ] but with the look and

feel of the first web site that is the Bank's web site. The limitations in claim 76 do not further narrow down any of the manipulative steps of claim 1 but instead they describe a contractual relationship of the owner of the source web page that is of a bank in Saliba for receiving a commission if there is a transaction involving the commercial object. This limitation does not involve any machinery implementing a function or transformation of a subject matter to be qualified as a statutory process limitation. Saliba does not teach this contractual relationship for the bank. Saliba does not specifically teach the recited limitations of claims 76-77 but Examiner takes Official Notice that it is a well-known fact at the time of the applicant's invention that an entity like a bank in Saliba can charge a fee/commission for providing the service of displaying links for commercial objects like various bill services for the billers which can be provided to the customers and in order to realize his commission an automatic payment can be made to the bank owner of the source web page on completion of a transaction related to the commercial object with the known electronic payment methods. Therefore in view of the Official Notice, it would be obvious to one of an ordinary skilled in the art at the time of applicant's invention that an owner of the source web page like a bank in Saliba would have charges a fee/commission for providing the service of displaying links for commercial objects like various bill services for the billers and realize the payment automatically at the completion of a transaction with the well- known methods at the time of the applicant's invention.

Regarding claims 85 and 92, their limitations are similar to the limitations of claims 76-77 and are therefore analyzed and rejected on the basis of same rationale as set forth for claims 76-77 above.

7. Claims 78-79 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Similarly claim 86 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The reason for allowability would be that the prior art, alone or combined, neither teaches nor renders obvious the limitations recited in claims 78 and 86 that is wherein the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart, and further comprising, automatically with the server computer, accepting inputted billing information from the visitor computer, recording the billing information, and using the billing information to facilitate payment to the merchant for the commerce object associated with the activated link when the server computer detects activation by the web browser of a checkout link associated with the shopping cart in the context of the limitations recited in claims 71 and 81, as a whole.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to YOGESH C. GARG whose telephone number is (571)272-6756. The examiner can normally be reached on Increased Flex/Hoteling.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Smith can be reached on 571-272-6763. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

**Subject:** Private PAIR Correspondence Notification for Customer Number 26362

Oct 10, 2012 05:26:03 AM

Dear PAIR Customer:

LOUIS J. HOFFMAN, P.C. 14301 North 87th Street, Suite 312 Scottsdale, AZ 85260 UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26362, have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

### Disclaimer:

The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

## Warnings:

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

## New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

## National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

### New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

PART I

#### ITEM 1. BUSINESS

The SABRE Group Holdings, Inc. is a holding company incorporated in Delaware on June 25, 1996. Pursuant to a reorganization consummated on July 2, 1996 (the "Reorganization"), the Company became the successor to the businesses of The SABRE Group which were formerly operated as divisions or subsidiaries of American Airlines, Inc. ("American") or AMR Corporation ("AMR"). Unless otherwise indicated, references herein to the "Company" include The SABRE Group Holdings, Inc. and its consolidated subsidiaries and, for any period prior to the Reorganization, the business of AMR constituting The SABRE Group. On October 17, 1996, the Company completed an initial public offering (the "Offering") of 23,230,000 shares of its Class A Common Stock, par value \$.01 per share, constituting approximately 17.8% of the economic interest of the Company's outstanding common equity. AMR retained all 107,374,000 shares of the Company's Class B Common Stock, representing approximately 82.2% of the economic interest and 97.9% of the combined voting power of all classes of voting stock of the Company.

The Company is a world leader in the electronic distribution of travel through its proprietary travel reservation and information system, SABRE(R), and is the largest electronic distributor of travel in the United States. In addition, the Company is a leading provider of solutions to the airline industry and fulfills substantially all of the data processing, network and distributed systems needs of American and AMR's other subsidiaries.

### ELECTRONIC TRAVEL DISTRIBUTION

SABRE and other global distribution systems are the principal means of air travel distribution in the United States and a growing means of air travel distribution internationally. Through SABRE, travel agencies, corporate travel departments and individual consumers ("subscribers") can access information on and book reservations with airlines and other providers of travel and travel-related products and services ("associates"). As of December 31, 1996, travel agencies with more than 30,000 locations in over 70 countries on six continents subscribed to SABRE, and three million individuals subscribed to Travelocity (SM) and easySABRE(SM), the Company's consumer-direct products. SABRE subscribers are able to make reservations with more than 400 airlines and more than 50 car rental companies and more than 200 hotel companies covering approximately 35,000 hotel properties worldwide.

During 1996, more airline bookings in the United States were made through SABRE than through any other global distribution system. In 1996, approximately 67.9% of the Company's revenue was generated by the electronic distribution of travel, primarily through booking fees paid by associates.

### THE SABRE GLOBAL DISTRIBUTION SYSTEM

SABRE, like other global distribution systems, creates an electronic marketplace where travel providers display information about their products and warehouse and manage inventory. Subscribers -- principally travel agencies but also corporate travel departments and individual consumers -- access information and purchase travel products and services. In 1996, more than 700 travel providers displayed information about their products and services through SABRE, and the Company estimates that more than \$40 billion in travel products and services were reserved through SABRE.

In addition to providing information to subscribers about airlines and other travel providers and their products and services, SABRE reports transaction data from subscriber-generated sales to the travel providers allowing them to manage inventory and revenues. SABRE also allows travel agency subscribers to print airline tickets, boarding passes and itineraries. Additionally, SABRE provides subscribers with travel information on matters such as currency, medical and visa requirements, weather and sightseeing. By accessing the SABRE system, a subscriber can, from a single source, obtain schedule, availability and pricing information from multiple travel providers for complex travel itineraries.

### ASSOCIATE PARTICIPATION

The Company derives its electronic travel distribution revenues primarily from booking fees paid by associates for reservations made through SABRE for their products and services. In addition to airlines, associates include car rental companies, hotel companies, railroads, tour operators, ferry companies and cruise lines, which participate in SABRE through products designed for such associates, such as CARS Plus(SM), SHAARP Plus(SM), SABRETail(SM), SABRE TourGuide(R), SABRE Navigator(SM) and SABRE CruiseDirector(R). SABRE subscribers can also purchase travel insurance or book theater tickets or limousines through SABRE.

Depending on the level of participation or "functionality" in SABRE, airlines and other associates can display, warehouse, manage and sell their inventory in SABRE. The booking fee per transaction paid by an associate to the Company depends upon several factors, including the associate's level of participation in SABRE and the type of products or services provided by the associate. Airlines are provided with a wide range of participation levels from which to choose. The lowest level of functionality for airlines -- Basic Booking Request(SM)  $\mbox{--}$  is aimed at the "no-frills" carriers and provides schedules and electronic booking only. Higher levels of functionality for airlines, such as Direct Connect Availability(SM), provide greater levels of communication between SABRE and associates, thus enabling SABRE to provide subscribers with more detailed information and associates with improved inventory management. For an associate selecting one of the higher levels of participation, SABRE provides subscribers with a direct connection to the associate's internal reservation system, allowing SABRE to provide real-time information and allowing the associate to optimize revenue for each flight.

Car rental companies and hotel operators are provided with similar levels of participation from which to select. From 1992 to 1996, the number of bookings for car rental companies and hotels grew at a compound annual rate of 13.6%

The Company also provides associates, upon request, marketing data derived from SABRE bookings for fees that vary depending on the amount and type of information provided.

#### SUBSCRIBER ACCESS

Access to SABRE enables subscribers to electronically locate, price, compare and purchase travel products and services provided by associates. The Company tailors the interface and functionality of SABRE to the needs of its different types of subscribers. Marketing is targeted to travel agencies, corporations and individual consumers.

TRAVEL AGENTS. The Company provides travel agents with the hardware, software, technical support and other services needed to use SABRE in return for fees that typically vary with the travel agency's productivity, as measured by the number of bookings generated. Such fees are payable over the term of the travel agent's agreement with the Company, generally five years in the United States and Latin America, three years in Canada and one year in Europe.

Because travel agencies have differing needs, based on, among other things, volume and location, the Company has modified the SABRE interface to meet the specific needs of different categories of travel agents. Travel agents can choose interfaces that range from simple, text-based systems to feature-laden graphical ones. For instance, using its expertise in its solutions services business, the Company developed Turbo SABRE(TM), an advanced point-of-sale interface that allows for customized screens and structured sales and eliminates unique commands, reducing keystrokes and training requirements for high-volume travel agencies who may need high levels of functionality. Turbo SABRE also provides data sources other than SABRE, such as back office hosts or LAN databases.

Planet SABRE(TM), which the Company introduced in February 1997, is a graphical interface consisting of a suite of Windows(1) based applications. It includes a graphical launch pad, which allows the user to move to any function with one or two clicks of a mouse; a customizer feature, which allows travel agencies to tailor Planet SABRE to meet their own specific needs; a tutorial; online help; a place to store notes about clients, destinations or procedures; and a suggestion system. Planet SABRE transforms SABRE from a complex command-oriented system to an all-graphic interface with continued access to the SABRE host system and its capabilities.

<sup>(1)</sup> Windows is a registered trademark of Microsoft Corporation.

SABRE interfaces are available in English, Spanish, Portuguese, French, German, Italian and Japanese. In addition, the Company offers travel agencies back-office accounting systems and further supports travel agencies by offering a simplified method to develop and place their own marketing presence on the World Wide Web.

CORPORATIONS. The Company sells Commercial SABRE(TM) to travel agencies to supply to corporations with which they work closely. Using Commercial SABRE, a traveler inputs booking details on a personal computer, which are then transmitted to the SABRE travel agent who reviews the travel plans, makes the reservations and issues the travel documents.

The Company also provides SABRE to corporations through SABRE Business Travel Solutions(TM) ("SABRE BTS(TM)") released in October 1996. SABRE BTS is designed for corporate travelers, travel arrangers and travel managers. It is a fully-integrated product suite for travel planning and booking, expense reporting and decision-making. SABRE BTS provides corporations with tools to better manage travel costs, ensure compliance with corporate travel policies, automate expense reporting and obtain real-time information on all aspects of travel for a corporation. It will operate with Windows and corporate intranet browser software.

INDIVIDUAL CONSUMERS. Through the Company's Travelocity(SM) and easySABRE(SM) products, individual consumers can compare prices, make travel reservations and obtain destination information. These products are available to individual consumers free of charge (other than access fees charged by a computer on-line service or Internet service provider).

Travelocity is accessible through the Internet and computer on-line services. It currently features booking and purchase capability for all airline, car rental and hotel companies for which booking and purchase capability is available in SABRE. Travelocity also offers access to a database of destination and interest information, chat groups and forums, articles from travel correspondents and a merchandise mall offering a variety of travel-related products. The Internet address for Travelocity is http://www.travelocity.com/.

Travelocity was developed jointly by the Company and Worldview Systems Corporation ("Worldview"). The Company recently acquired Worldview's interest in the Travelocity brand name and Internet site. Worldview will continue to provide the site's destination information, chat groups and forums.

The Company introduced easySABRE in 1985 as one of the world's first home booking systems for travel. easySABRE is available through a number of computer on-line information systems such as Prodigy and CompuServe(2) and on the Internet. With easySABRE, consumers can view travel reservation information and make bookings directly in SABRE for no fee (other than access fees charged by a computer on-line service or Internet service provider). easySABRE has a membership of more than 2.5 million, of which more than 100,000 members are active users each month. The Internet address for easySABRE is http://www.easySABRE.com/.

After reservations are made through either Travelocity or easySABRE, if a ticket is needed, the consumer may have a travel agent issue the ticket, have the Company's customer service center issue the ticket and deliver it to the consumer or call the travel provider directly. The Company receives booking fees from travel providers for purchases of their travel products and services pursuant to reservations made through Travelocity and easySABRE.

INTERNATIONAL MARKETING. The Company is actively involved in marketing SABRE internationally either directly or through joint venture or distributorship arrangements, depending upon the dynamics of the particular international market targeted. The Company's global marketing partners principally include foreign airlines that have strong relationships with travel agents in such airlines' primary markets and entities that operate smaller global distribution systems or other travel-related network services.

4

<sup>(2)</sup> Prodigy and CompuServe are the trademarks of their respective owners.

The Company competes in electronic travel distribution primarily against other large and well-established global distribution systems. SABRE's principal competitors include Amadeus/System One, Galileo/Apollo and Worldspan. Amadeus/System One is owned by Air France, Continental Airlines, Iberia and Lufthansa. Galileo/Apollo is owned by United Airlines, British Airways, Swissair, KLM Royal Dutch and USAirways, among others. The Canadian affiliate of Galileo/Apollo is owned by Air Canada. Worldspan is owned by Delta, Northwest and TWA and is affiliated with ABACUS, an Asian global distribution system. Each of these competitors offers many products and services similar to those of the Company.

Moreover, although certain barriers exist for any new provider of electronic commerce -- barriers such as the need for significant capital investment to acquire or develop the hardware, software and network facilities necessary to operate effectively a global distribution system -- the Company is always faced with the potential of new competitors, particularly as new channels for travel distribution develop.

Competition to attract and retain travel agent subscribers is very intense. Factors affecting competitive success of global distribution systems include depth and breadth of information, ease of use, reliability, service and incentives to travel agents and range of products available to travel providers, travel agents and consumers.

Although distribution through travel agents continues to be the primary method of travel distribution, new channels of direct distribution to businesses and consumers, through computer on-line services, the Internet and private networks, are developing rapidly. The Company faces competition in these channels not only from its principal competitors but also from possible new entrants in the sale of travel products. Some of these new entrants may have considerably greater financial resources than the Company and/or may be businesses that are firmly established in these new channels of distribution. For example, in July 1996 American Express Co. and Microsoft Corporation announced an on-line travel booking service for corporations, which they have scheduled for release in the first half of 1997. In addition, the Internet permits consumers to have direct access to travel providers, thereby by-passing both traditional travel agents and global distribution systems such as SABRE. The Company has positioned its SABRE BTS, Travelocity and easySABRE products to compete in these emerging distribution channels.

### INDUSTRY REGULATION

Regulations promulgated by the U.S. Department of Transportation (the "DOT") govern the relationship of SABRE with airlines and travel agencies. Specifically, these regulations (the "U.S. Regulations") govern the relationships of global distribution systems doing business in the United States which are offered by an airline or an airline affiliate (like the Company) ("Airline-Affiliated Systems") with airlines doing business in the United States that own five percent or more of a global distribution system (a "GDS-Affiliated Airline") and with travel agencies. The U.S. Regulations do not expressly govern the marketing of a global distribution system to consumers or business travel departments, and the prevailing interpretation of the U.S. Regulations is that the rules do not apply to SABRE BTS, Travelocity or easySABRE. The current form of U.S. Regulations was adopted in 1992. The U.S. Regulations will expire on December 31, 1997, unless they are extended.

One of the principal requirements of the U.S. Regulations is that displays of airline services by Airline- Affiliated Systems must be nondiscriminatory. This means that the global distribution system may not use carrier identity in ordering the display of services or in building connecting flights. Travel agencies, however, may utilize software to override the neutral displays of an Airline-Affiliated System. Airline-Affiliated Systems are required to charge the same fees to all air carriers for the same level of service, to update information for all air carriers with the same degree of care and timeliness and to provide, on request, detailed bills. Any product feature offered to one or more air carriers must be offered to all other air carriers on nondiscriminatory terms.

The U.S. Regulations also govern relationships between Airline-Affiliated Systems and travel agents. The U.S. Regulations require, among other things, that contracts between travel agency subscribers and an Airline-Affiliated System be for no longer than five years. The rules also forbid an Airline-Affiliated System from impeding a travel agent's use of another system by, for example, making it a breach of contract for an agency to fail to make a designated minimum number of bookings. The rules do allow, however, systems to provide a credit against monthly fees to travel agents who achieve certain booking thresholds, with the agency being obligated to pay the system for any shortfall. The U.S. Regulations also forbid Airline-Affiliated Systems from entering into

contracts with travel agents containing exclusivity clauses or that require the agency to maintain a certain percentage of computer terminals or bookings for a particular system, vis-a-vis other systems.

The rules prohibit GDS-Affiliated Airlines from linking the payment of commissions to travel agents to the travel agent's use of the system with which the GDS-Affiliated Airline is affiliated. Further, an Airline-Affiliated System may not ban travel agents from using software provided by third parties in connection with the system's equipment, unless that software threatens to impair the integrity of the system.

The U.S. Regulations require any GDS-Affiliated Airline doing business in the United States to participate in competing Airline-Affiliated Systems at the same level as it does in its affiliated system and to provide data on its flights to competing Airline-Affiliated Systems that is as complete, accurate and timely as the information given to its affiliated system, so long as the competing system offers terms for participation that are commercially reasonable

The Company also has operations in Australia, Canada and the European Union. The overall approach of the regulations for global distribution systems in each of these three jurisdictions is similar to that of the United States. In each of these jurisdictions, rules require nondiscriminatory displays of airline services and nondiscriminatory booking fees, and forbid airlines affiliated with global distribution systems from linking travel agency commissions to the use of a particular system. Further, these rules to varying extents forbid airlines affiliated with global distribution systems from discriminating against competing systems with respect to the data that they furnish

There are, however, unique aspects of each set of rules. The European rules dictate the precise order in which flights must be displayed and permit travel agents to cancel their subscription agreements at the end of the first year of the contract. The Canadian rules forbid contracts with travel agencies of more than three years in duration and forbid certain uses of carriers' sales forces for promoting global distribution systems. The prevailing interpretation of the current Canadian and European Union rules is that the rules apply to Travelocity and easySABRE. The European rules are currently under review and are expected to be revised within the next year. The Company does not anticipate that any revision will materially affect its operations in Europe.

The Company also has operations in the Caribbean, Latin America and Asia. In jurisdictions in those regions, there is no regulation of global distribution systems for travel products.

The Company currently does business in more than 70 countries outside the U.S. The DOT, in conjunction with the U.S. Department of State, is charged with assuring fair and open access for U.S. air carriers, and U.S. global distribution systems owned by airlines, to overseas markets. In this regard, the DOT has provided assistance to the Company in entering several overseas markets. This assistance by the DOT to the Company could cease if SABRE were not offered to travel agencies by an airline.

The regulations in Australia, Canada and the European Union also contain, in varying degrees, remedies the Company can use to assist in the eradication of discriminatory practices that may impede the Company's access to the regulated market.

### INFORMATION TECHNOLOGY SOLUTIONS

The Company is a leading provider of solutions to the airline industry. The Company also employs its airline expertise to offer solutions to other industries that face similar complex operations issues, including the airport, railroad, logistics, hospitality and financial services industries. The solutions offered by the Company include software development and product sales, transactions processing and consulting. In addition, pursuant to an information technology services agreement, the Company provides data processing, network and distributed systems services to American and AMR's other subsidiaries, fulfilling substantially all of their information technology requirements. In 1996, approximately 32.1% of the Company's revenue was generated by the provision of information technology solutions.

The Company offers a comprehensive set of solutions to the airline industry. These solutions include: (i) consulting, which includes capabilities ranging from reengineering to functional consulting; (ii) software development, sales and licensing, which includes individual sales of specific products as well as custom development and integration; and (iii) full solutions outsourcing. Recruiting and retaining capable personnel, particularly those with expertise in operations research, information technology and industrial engineering, is vital to the provision of solutions by the Company.

The Company's solutions have helped American become one of the most technologically advanced airlines in the world. The Company has provided solutions to over 120 additional airlines or airline associations. These solutions have many applications for airlines. For instance, (i) with Fare Action Evaluator(SM), airlines can seek to enhance revenue using statistical and database sources that estimate the economic implications of fare actions before they are implemented, (ii) with AIRPRICE(SM), airlines can analyze and manage fares and react to competitors' changes, (iii) with AIRFLITE(SM), airlines can determine superior flight schedules and (iv) with AIRCREWS(SM), airlines can improve crew member scheduling thus reducing staffing costs.

The Company also provides real-time transactions processing services whereby the Company provides access to its hardware and software to airlines for reservations, flight operations, departure control and other related services. Local computer terminals at a customer's location are linked to the Company's mainframes, and the Company maintains and operates the entire system on a secure and confidential basis.

Building on its base of experience established in the development of solutions for the airline industry, the Company has extended its software solutions and consulting businesses to other industries, particularly those that face complex operations issues similar to the airline industry, including the airport, hospitality, logistics, railroad and financial services industries

The Company distributes its solutions and consulting services through a sales and marketing organization with offices in ten cities on four continents (Boston, Chicago, Dallas, Tulsa, Vancouver, London, Paris, Kuwait, Hong Kong and Sydney). The Company also maintains agency relationships to support sales efforts in key markets, including India, China and the Middle East. To date, the Company has provided business solutions to nearly 400 clients located in more than 50 countries.

### TECHNOLOGY SERVICES

The Company provides data processing, network and distributed systems services to American and AMR's other subsidiaries. The Company fulfills substantially all of American's data processing requirements and manages all voice and data communication services for American and AMR's other subsidiaries, including data networks, voice networks and radio services. The Company also provides American with the services required to design, install, operate and maintain its range of local area networks, desktop, mobile computing and peripheral devices. In 1995, the Company introduced SABRE Wireless(SM), which provides American's airport personnel the ability to access SABRE from mobile devices.

As part of the Reorganization, the Company entered into an information technology services agreement with American to provide these services for a term of ten years for most services (three and five years for others).

## COMPETITION

In information technology solutions, the Company competes both against solutions companies and full-service providers of technology outsourcing, some of which have considerably greater financial resources than the Company, and against smaller companies that offer a limited range of products. Among the Company's full-service competitors are Electronic Data Systems, IBM/ISSC, Unisys, Andersen Consulting and Lufthansa Systems. Many of these competitors have formed strategic alliances with large companies in the travel industry, and the Company's access to these potential customers is thus limited. The Company believes that its competitive position in the travel industry is enhanced by its experience in developing systems for American and by its ability to offer not only software applications but also systems development, integration and maintenance and transactions processing services.

In connection with the Reorganization, American transferred to the Company the software used in the operation of the business of The SABRE Group. This software, along with other software, proprietary information and intellectual property rights, are significant assets of the Company. The Company relies on a combination of copyright and trademark laws, trade secrets, confidentiality procedures and contractual provisions to protect these assets. The Company's software and related documentation, however, are protected principally under trade secret and copyright laws, which afford only limited protection. In addition, the laws of some foreign jurisdictions may provide less protection than the laws of the United States for the Company's proprietary rights. Unauthorized use of the Company's intellectual property could have a material adverse effect on the Company, and there can be no assurance that the Company's legal remedies would adequately compensate it for the damages to its business caused by such use.

#### EMPLOYEES

As of December 31, 1996 the Company had approximately 7,900 full-time employees. A central part of the Company's philosophy is to attract and maintain a highly capable staff. The Company considers its current employee relations to be good. None of the Company's U.S.-based employees are represented by a labor union.

### ITEM 2. PROPERTIES

The Company's principal executive offices are located in Fort Worth, Texas, primarily in two buildings, one of which is owned by the Company and one of which is leased from the Dallas/Fort Worth International Airport Board pursuant to a lease that expires in 2023, subject to four renewal options, exercisable by the Company, of five years duration each. In February 1997, the Company purchased from American a second facility on the Fort Worth campus that will be used to accommodate expected growth over the next few years. The Company also leases office facilities in approximately 70 other locations worldwide. The Company's data center is located in an underground facility in Tulsa, Oklahoma (the "Data Center"). The land on which the Data Center is located is leased from the Tulsa Airport Improvements Trust, a public trust organized under the laws of the State of Oklahoma, pursuant to a lease that expires in 2038.

SABRE and the Company's data processing services are dependent on the Company's central computer operations and information processing facility located in the Data Center, which contains over 120,000 square feet of space and houses seventeen mainframes having 15.3 terabytes of storage and over 4,000 million instructions per second ("MIPS") of processing power. The SABRE system, which is connected to nearly 200,000 computer terminals and operates 365 days a year, constructs over one billion air fares (updated five times per business day), averages 160 million requests for information per day and has processed up to 5,291 requests for information per second (in March 1997). The Company also utilizes a computer center located in one of its office buildings in Fort Worth (the "Fort Worth Center"). At the Fort Worth Center, the Company operates and manages a wide variety of computer systems as well as server based and client/server distributed systems.

The Company's travel agency and corporate subscribers connect to SABRE through leased access circuits. These leased access circuits, in turn, connect to the domestic and international data networks leased by the Company from Societe Internationale de Telecommunications Aeronautiques, which is owned by a consortium of Airlines, including American, which connect to the Data Center.

The Company believes that its office facilities will be adequate for its immediate needs and that additional or substitute space is available if needed to accommodate expansion. The Company also believes that its Data Center, Fort Worth Center and network access will be adequate for its immediate and foreseeable needs. The Company, however, continuously invests in research and development to upgrade these facilities to meet changing technological needs.

DOCUMENTS INCORPORATED BY REFERENCE

Part III of this Form 10-K incorporates by reference certain information from the Proxy Statement for the Annual Meeting of Stockholders to be held May 20, 1998

------

#### PART I

#### ITEM 1. BUSINESS

The SABRE Group Holdings, Inc. is a holding company incorporated in Delaware on June 25, 1996. Pursuant to a reorganization consummated on July 2, 1996 (the "Reorganization"), the Company became the successor to the businesses of The SABRE Group which were formerly operated as divisions or subsidiaries of American Airlines, Inc. ("American") or AMR Corporation ("AMR"). Unless otherwise indicated, references herein to the "Company" include The SABRE Group Holdings, Inc. and its consolidated subsidiaries and, for any period prior to the Reorganization, the business of AMR and American constituting The SABRE Group. On October 17, 1996, the Company completed an initial public offering (the "Offering") of 23,230,000 shares of its Class A Common Stock, par value \$.01 per share, constituting approximately 17.8% of the economic interest of the Company's outstanding common equity. As of March 24, 1998, AMR owned all 107,374,000 shares of the Company's Class B Common Stock, representing approximately 82.4% of the economic interest and 97.9% of the combined voting power of all classes of voting stock of the Company.

The Company is a world leader in the electronic distribution of travel through its proprietary travel reservation and information system, SABRE(R), and is the largest electronic distributor of travel in North America. In addition, the Company is a leading provider of information technology solutions to the travel and transportation industry and fulfills substantially all of the data processing, network and distributed systems needs of American and AMR's other subsidiaries, Canadian Airlines International, Ltd., and other customers.

#### ELECTRONIC TRAVEL DISTRIBUTION

SABRE and other global distribution systems are the principal means of air travel distribution in the United States and a growing means of air travel distribution internationally. Through the SABRE system, travel agencies, corporate travel departments and individual consumers ("subscribers") can access information on and book reservations with airlines and other providers of travel and travel-related products and services ("associates"). As of December 31, 1997, travel agencies with more than 30,000 locations in over 70 countries on six continents subscribed to SABRE. SABRE subscribers are able to make reservations with more than 400 airlines and more than 50 car rental companies and more than 200 hotel companies covering approximately 39,000 hotel properties worldwide.

During 1997, more airline bookings in North America were made through SABRE than through any other global distribution system. In 1997, approximately 67.3% of the Company's revenue was generated by the electronic distribution of travel, primarily through booking fees paid by associates.

### THE SABRE GLOBAL DISTRIBUTION SYSTEM

SABRE, like other global distribution systems, creates an electronic marketplace where travel providers display information about their products and warehouse and manage inventory. Subscribers -- principally travel agencies but also corporate travel departments and individual consumers -- access information and purchase travel products and services. In 1997, more than 700 vendors, called "Associates", displayed information about their products and services through SABRE, and the Company estimates that more than \$66 billion of travel-related products and services were sold through SABRE.

In addition to providing information to subscribers about airlines and other travel-related vendors, SABRE reports to the travel providers transaction data about subscriber-generated reservations, allowing vendors to better manage inventory and revenues. The SABRE system also allows travel agency subscribers to print airline tickets, boarding passes and itineraries. Additionally, SABRE provides subscribers with travel information on matters such as currency, medical and visa requirements, weather and sightseeing. By accessing the SABRE system, a subscriber can, from a single source, obtain schedule, availability and pricing information from multiple travel providers for complex travel itineraries.

#### ASSOCIATE PARTICIPATION

3

The Company derives its electronic travel distribution revenues primarily from booking fees paid by associates for reservations made through SABRE for their products and services. In addition to airlines, associates include car rental companies, hotel companies, railroads, tour operators, ferry companies and cruise lines.

Airlines and other associates can display, warehouse, manage and sell their inventory in SABRE. The booking fee paid by an associate depends upon several factors, including the associate's level of participation in SABRE and the type of products or services provided by the associate. Airlines are offered a wide range of participation levels. The lowest level of functionality for airlines, Basic Booking Request(SM), provides schedules and electronic booking only. Higher levels of functionality for airlines, such as Direct Connect Availability(SM) , provide greater levels of communication with SABRE, giving subscribers more detailed information and associates improved inventory management. For an associate selecting one of the higher levels of participation, SABRE provides subscribers with a direct connection to the associate's internal reservation system, allowing SABRE to provide real-time information and allowing the associate to optimize revenue for each flight. Car rental companies and hotel operators are provided with similar levels of participation from which to select. The Company also provides associates, upon request, marketing data derived from SABRE bookings for fees that vary depending on the amount and type of information provided.

#### SUBSCRIBER ACCESS

Access to SABRE enables subscribers to electronically locate, price, compare and purchase travel products and services provided by associates. The Company tailors the interface and functionality of SABRE to the needs of its different types of subscribers. Marketing is targeted to travel agencies, corporations and individual consumers.

TRAVEL AGENTS. The Company provides travel agents with the hardware, software, technical support and other services needed to use SABRE, in return for fees that typically vary inversely with the travel agency's productivity, as measured by the number of bookings generated. Such fees are payable over the term of the travel agent's agreement with the Company, generally five years in the United States and Latin America, three years in Canada, and one year in Europe.

Because travel agencies have differing needs, the Company has modified the SABRE interface to meet the specific needs of different categories of travel agents. Travel agents can choose interfaces that range from simple, text-based systems to feature-laden graphical systems. For example, the Company developed Turbo SABRE(TM), an advanced point-of-sale interface and application development tool that enables advanced functionality such as customized screens, automated quality control, database integration, and eliminates complex commands, reducing keystrokes and training requirements.

Planet SABRE(TM), which the Company introduced in February 1997, includes a graphical launch pad, which enables the user to move to any function with one or two clicks of a mouse; a customizer feature, which allows travel agencies to tailor Planet SABRE to meet their own specific needs; a tutorial; online help; a place to store notes about clients, destinations or procedures; and a suggestion system. Planet SABRE transforms SABRE from a complex command-oriented system to an all-graphic interface with continued access to the SABRE host system and its capabilities.

SABRE interfaces are available in English, Spanish, Portuguese, French, German, Italian and Japanese. In addition, the Company offers travel agencies back-office accounting systems and further supports travel agencies by offering a simplified method to develop and place their own marketing presence on the World Wide Web.

CORPORATIONS. The Company sells Commercial SABRE(TM) to corporations and home-based travel agents who are sponsored by travel agencies. Using Commercial SABRE, a traveler or agent can connect to the SABRE system and make bookings which are automatically delivered to the sponsoring agency where travel documents are issued.

3

The Company also markets SABRE to corporations through SABRE Business Travel Solutions(TM) ("SABRE BTS(TM)") released in October 1996. SABRE BTS is designed for corporate travelers, travel arrangers and travel managers. It is a fully-integrated product suite for travel planning and booking, expense reporting and decision-support. SABRE BTS provides corporations with tools to better manage travel costs, ensure compliance with corporate travel policies, automate expense reporting and obtain real-time information on all aspects of travel.

INDIVIDUAL CONSUMERS. Through the Company's Travelocity(SM) and easySABRE(R) products, individual consumers can compare prices, make travel reservations and obtain destination information. These products are available to individual consumers free of charge.

Travelocity is accessible through the Internet and computer on-line services. It features booking and purchase capability for all airline, car rental and hotel companies for which booking and purchase capability is available in SABRE. Vacation and cruise packages are available as well. Travelocity also offers access to a database of destination and interest information, articles from travel correspondents and interactive maps. Travelocity averages approximately 22.6 million page views per month. The Internet address for Travelocity is http://www.travelocity.com/.

The Company has entered into numerous co-branding agreements to provide access to Travelocity on complementary Internet Web sites. These agreements include a deal with Netscape Communications Corporation to launch Netcenter Travel by Travelocity, accessible through the Netscape Netcenter free online service. The Company also signed an agreement with Yahoo! Inc. for Travelocity to become the exclusive co-branded travel booking service for Yahoo! and Yahoo! Travel.

The Company introduced easySABRE in 1985 as one of the world's first consumer booking systems for travel. easySABRE is available through a number of computer on-line information systems and on the Internet. With easySABRE, consumers can view travel reservation information and make bookings directly in SABRE for no fee. The Internet address for easySABRE is http://www.easySABRE.com/.

The Company receives booking fees from travel providers for purchases of their travel products and services pursuant to reservations made through Travelocity and easySABRE.

### INTERNATIONAL MARKETING

4

The Company is actively involved in marketing SABRE internationally either directly or through joint venture or distributorship arrangements. The Company's global marketing partners principally include foreign airlines that have strong relationships with travel agents in such airlines' primary markets and entities that operate smaller global distribution systems or other travel-related network services.

In February 1998, the Company signed long-term agreements with ABACUS International Holdings Ltd. which created a Singapore-based joint venture company to manage travel distribution in the Asia-Pacific region. The Company owns 35 percent of the joint venture company, called ABACUS International Ltd., and provides it with transaction processing on the SABRE computer reservations system.

## COMPETITION

The Company competes in electronic travel distribution primarily against other large and well-established global distribution systems. SABRE's principal competitors in marketing to travel agents include Amadeus/System One, Galileo/Apollo and Worldspan. Each of these competitors offers many products and services substantially similar to those of the Company.

Although certain barriers exist for any new provider of electronic commerce -- barriers such as the need for significant capital investment to acquire or develop the hardware, software and network facilities necessary to operate a global distribution system -- the Company is faced with the potential of new competitors, particularly as new channels for travel distribution develop.

The global market to attract and retain agency subscribers is intensely competitive. Factors affecting competitive success of global distribution systems include depth and breadth of information, ease of use, reliability, service and incentives to travel agents and range of products available to travel providers, travel agents and consumers.

Although distribution through travel agents continues to be the primary method of travel distribution, new channels of direct distribution to businesses and consumers, through computer on-line services, the Internet and private networks, are developing rapidly. The deployment and adoption of these tools is currently quite low, however the pace of adoption is expected to accelerate. The Company believes that it has positioned its SABRE BTS, Travelocity and easySABRE products to effectively compete in these emerging distribution channels.

#### CRS INDUSTRY REGULATION

The Company's electronic travel distribution business is subject to regulation in the United States, the European Union, Canada, Australia and New Zealand. These regulations address the relationships among computer reservation systems ("CRSs"), airline associates, and travel agency subscribers. These regulations do not currently address relationships with non-airline associates, but future regulations in the European Union may include rail associates. In general, these regulations are directed at ensuring fair competition among travel providers. Among the principles addressed in the current regulations are: unbiased CRS displays of airline information, fair treatment of airline associates by CRSs, equal participation by airlines in non-owned CRSs, and fair competition for subscribers. The CRS regulations in the United States and the European Union are currently being revised, but the Company does not expect the revisions to materially adversely affect its operations.

#### OTHER REGULATION

The Company is subject to regulations affecting issues such as: exports of technology, telecommunications, data privacy, and electronic commerce. Some portions of the Company's business, such as its Internet-based electronic travel distribution, may be affected by newly-developed regulations. Regulations affecting other areas of the Company's business may be revised from time to time. Regulations also vary among jurisdictions. The Company believes that it is capable of addressing these regulatory issues as they arise.

## INFORMATION TECHNOLOGY SOLUTIONS

The Company is a leading provider of information technology services to the travel and transportation industry. The Company employs its airline technology expertise to offer information technology solutions to other industries that face similar complex operations issues, including the airport, railroad, logistics and hospitality industries. The solutions offered by the Company include software development and product sales, transactions processing, consulting, as well as comprehensive information technology outsourcing. The Company provides data processing, network and distributed systems services to American and AMR's other subsidiaries, Canadian Airlines International, Ltd., and other customers fulfilling substantially all of their information technology requirements. In 1997, approximately 32.7% of the Company's revenue was generated by the provision of information technology solutions.

The Company is aggressively pursuing strategic information technology relationships that add a new dimension to traditional outsourcing agreements by integrating our airline applications and business processes into customer operations. Clients entering into a strategic agreement with the Company benefit from our extensive airline industry expertise, experience with complex operating and transaction environments and our extensive suite of software products and applications.

### SOLUTIONS

The Company offers a comprehensive set of information technology solution services to the airline industry. These solutions include: (i) information technology outsourcing; (ii) software development, sales and licensing; and (iii) consulting, which includes capabilities ranging from reengineering to functional consulting. Recruiting and retaining capable personnel, particularly those with expertise in operations research, information technology and industrial engineering, is vital to the provision of solutions by the Company.

The Company's solutions have helped American become one of the most technologically advanced airlines in the world. The Company has provided solutions to over 170 airlines or airline associations. These solutions have many applications for airlines. For example, (i) with Fare Action Evaluator(SM), airlines can seek to enhance revenue using statistical and database sources that estimate the economic implications of fare actions before they are implemented, (ii) with AIRPRICE(SM), airlines can analyze and manage fares and react to competitors' changes, (iii) with AIRFLITE(SM), airlines can determine superior flight schedules and (iv) with AIRCREWS(SM), airlines can improve crew member scheduling thus reducing staffing costs.

The Company also provides real-time transaction processing services, whereby the Company provides access to its hardware and software to airlines for reservations, flight operations, departure control and other related services. Local computer terminals at a customer's location are linked to the Company's mainframes, and the Company maintains and operates the entire system on a secure and confidential basis.

The Company distributes its solutions and consulting services through a sales and marketing organization with offices in eleven cities on four continents (Boston, Chicago, Dallas, Tulsa, Vancouver, London, Paris, Kuwait City, Hong Kong, Sydney and Auckland). The Company also maintains agency relationships to support sales efforts in key markets, including India, China and the Middle East. To date, the Company has provided business solutions to nearly 500 clients located in more than 50 countries.

#### TECHNOLOGY SERVICES

In 1996, the Company executed an information technology services agreement with American for a term of ten years for most services (three and five years for others). Under this agreement, the Company provides data processing, network, distributed systems, and applications development services to American and AMR's other subsidiaries. The Company fulfills substantially all of American's data processing requirements and manages all voice and data communication services for American and AMR's other subsidiaries, including data networks, voice networks and radio services. The Company also provides American with the services required to design, install, operate and maintain its range of local area networks, desktop, mobile computing and peripheral devices. The Company completes nearly all of the applications development for American, as well as manages the AMR Year 2000 project office and completes most of AMR system's Year 2000 testing and compliance enhancements.

In January 1998, the Company completed the execution of a 25-year, multibillion dollar technology agreement with US Airways, Inc. to provide substantially all of US Airways' information technology services. As a part of the agreement, the Company purchased approximately \$47 million of US Airways' information technology assets, and hired more than 600 former employees of US Airways. The agreement covers the management and operation of US Airways' systems and information technology services, including the migration or conversion of US Airways' legacy systems to the Company's systems by mid-1999. Additionally, the Company agreed to assist US Airways in making its information systems Year 2000 compliant.

In February 1998, the Company executed a 10-year information technology services agreement with Gulf Air. Under the agreement, the Company will be responsible for all of Gulf Air's information technology infrastructure, including application development and maintenance, as well as data center and network management.

## COMPETITION

In information technology solutions, the Company competes both against solutions companies and full-service providers of technology outsourcing, some of which have considerably greater financial resources than the Company, and against smaller companies that offer a limited range of products. Among the Company's full-service competitors are Electronic Data Systems, IBM Global Services, Unisys, Andersen Consulting and Lufthansa Systems. Some of these competitors have formed strategic alliances with large companies in the travel industry, and the Company's access to these potential customers is thus limited. The Company believes that its competitive position in the travel and transportation industry is enhanced by its experience in developing systems for American and other airlines and by its ability to offer not only software applications but also systems development, integration and maintenance and transaction processing services.

#### INTELLECTUAL PROPERTY

In connection with the Reorganization, American transferred to the Company the software used in the operation of the business of The SABRE Group. This software, along with other software, proprietary information, patents, copyrights, trade secrets, trademarks and intellectual property rights, are significant assets of the Company. The Company relies on a combination of patent, copyright, trade secret and trademark laws, confidentiality procedures and contractual provisions to protect these assets. The Company's software and related documentation are protected principally under trade secret and copyright laws, which afford only limited protection. In addition, the laws of some foreign jurisdictions may provide less protection than the laws of the United States for the Company's proprietary rights. Unauthorized use of the Company's intellectual property could have a material adverse effect on the Company, and there can be no assurance that the Company's legal remedies would adequately compensate it for the damages to its business caused by such use.

#### EMPLOYEES

As of December 31, 1997 the Company had approximately 8,500 full-time employees. A central part of the Company's philosophy is to attract and maintain a highly capable staff. The Company considers its current employee relations to be good. None of the Company's employees based in the United States are represented by a labor union.

#### TTEM 2. PROPERTIES

The Company's principal executive offices are located in Fort Worth, Texas, primarily in three buildings, two of which are owned by the Company and one of which is leased from the Dallas/Fort Worth International Airport Board under a lease that expires in 2019, subject to four renewal options of five years each, exercisable at the option of the Company. The Company leases a fourth office building in Southlake, Texas, under a lease that expires in 2003, subject to two renewal options of five years each, exerciseable at the option of the Company. Additionally, the Company leases office facilities in approximately 70 other locations worldwide.

The Company's principal data center is located in an underground facility in Tulsa, Oklahoma (the "Data Center"). The land on which the Data Center is located is leased from the Tulsa Airport Improvements Trust, a public trust organized under the laws of the State of Oklahoma, pursuant to a lease that expires in 2038. SABRE and the Company's data processing services are dependent on the Company's central computer operations and information processing facility located in the Data Center. The Company also utilizes a computer center located in one of its office buildings in Fort Worth (the "Fort Worth Center"). At the Fort Worth Center, the Company operates and manages a wide variety of server based and client/server distributed systems.

The Company's travel agency and corporate subscribers connect to SABRE through leased access circuits. These leased access circuits, in turn, connect to the domestic and international data networks leased by the Company, such as those leased from Societe Internationale de Telecommunications Aeronautiques ("SITA"), which is owned by a consortium of Airlines, including American.

The Company believes that its office facilities will be adequate for its immediate needs and that additional or substitute space is available if needed to accommodate expansion. The Company also believes that its Data Center, Fort Worth Center and network access will be adequate for its immediate and foreseeable needs. The Company, however, continuously invests in research and development to upgrade these facilities to meet changing technological needs.

- -----(Title of Class)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or  $15\,(d)$  of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes X No  $\phantom{0}$ .

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (Section 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. [X]

The aggregate market value of the voting stock held by non-affiliates of the registrant as of March 15, 1999 was approximately \$945,351,834. As of March 15, 1999, 22,572,421 shares of the registrant's Class A Common Stock and 107,374,000 shares of the registrant's Class B Common Stock were outstanding.

# DOCUMENTS INCORPORATED BY REFERENCE

Part III of this Form 10-K incorporates by reference certain information from the Proxy Statement for the Annual Meeting of Stockholders to be held May 19, 1999.

#### ITEM 1. BUSINESS

The Sabre Group Holdings, Inc. is a holding company incorporated in Delaware on June 25, 1996. Pursuant to a reorganization consummated on July 2, 1996 (the "Reorganization"), the Company became the successor to the businesses of The Sabre Group which were formerly operated as divisions or subsidiaries of American Airlines, Inc. ("American") or AMR Corporation ("AMR"). Unless otherwise indicated, references herein to the "Company" include The Sabre Group Holdings, Inc. and its consolidated subsidiaries and, for any period prior to the Reorganization, the business of AMR and American constituting The Sabre Group. On October 17, 1996, the Company completed an initial public offering (the "Offering") of 23,230,000 shares of its Class A Common Stock, par value \$.01 per share, constituting approximately 17.8% of the economic interest of the Company's outstanding common equity. As of March 15, 1999, AMR owned all 107,374,000 shares of the Company's Class B Common Stock, representing approximately 82.6% of the economic interest and 97.9% of the combined voting power of all classes of voting stock of the Company.

The Company is the world leader in the electronic distribution of travel through its SABRE-Registered Trademark-(1) computer reservations system ("the SABRE system"). In addition, the Company is a leading provider of information technology solutions to the travel and transportation industries and fulfills substantially all of the data processing, network and distributed systems needs of American and AMR's other subsidiaries, Canadian Airlines International, Ltd., ("Canadian"), US Airways, Inc. ("US Airways") and other customers.

### ELECTRONIC TRAVEL DISTRIBUTION

The SABRE system and other global distribution systems are the principal means of air travel distribution in the United States and a growing means of air travel distribution internationally. Through the SABRE system, travel agencies, corporate travel departments and individual consumers ("subscribers") can access information about and book reservations with airlines and other providers of travel and travel-related products and services ("associates"). As of December 31, 1998, travel agencies with approximately 40,000 locations in over 100 countries on six continents subscribed to the SABRE system. Subscribers are able to make reservations with more than 420 airlines, more than 50 car rental companies and more than 200 hotel companies covering approximately 40,000 hotel properties worldwide.

During 1998, more airline bookings in North America were made through the SABRE system than through any other global distribution system. In 1998, approximately 57.4% of the Company's revenue was generated by the electronic distribution of travel, primarily through booking fees paid by associates.

# THE SABRE GLOBAL DISTRIBUTION SYSTEM

The SABRE system, like other global distribution systems, creates an electronic marketplace where travel providers display information about their products and warehouse and manage inventory. Subscribers -- principally travel agencies but also corporate travel departments and individual consumers -- access information and purchase travel products and services. In 1998, over 850 associates displayed information about their products and services through the SABRE system, and the Company estimates that more than \$70 billion of travel-related products and services were sold through the SABRE system.

In addition to providing information to subscribers about airlines and other travel-related vendors, the SABRE system reports to the travel providers transaction data about subscriber-generated reservations, allowing vendors to better manage inventory and revenues. The SABRE system also allows travel agency subscribers to print airline tickets, boarding passes and itineraries. Additionally, the SABRE system provides subscribers with travel information on matters such as currency, medical and visa requirements, weather and sightseeing. By accessing the SABRE system, a subscriber can, from a single source, obtain schedule, availability and pricing information from multiple travel providers for complex travel itineraries.

<sup>(1)</sup> All marks are trademarks and/or service marks of their respective owners. Sabre is a registered trademark of a subsidiary of the Sabre Group Holdings, Inc.

### ASSOCIATE PARTICIPATION

The Company derives its electronic travel distribution revenues primarily from booking fees paid by associates for reservations made through the SABRE system for their products and services. In addition to airlines, associates include car rental companies, hotel companies, railroads, tour operators, ferry companies and cruise lines.

Airlines and other associates can display, warehouse, manage and sell their inventory in the SABRE system. The booking fee paid by an associate depends upon several factors, including the associate's level of participation in the SABRE system and the type of products or services provided by the associate. Airlines are offered a wide range of participation levels. The lowest level of participation for airlines, SABRE BASIC BOOKING REQUEST-SM- participation level, provides schedules and electronic booking functionality only. Higher levels of participation for airlines, such as SABRE DIRECT CONNECT AVAILABILITY-SM- participation level, provide greater levels of communication with the SABRE system, giving subscribers more detailed information and associates improved inventory management. For an associate selecting one of the higher levels of participation, the SABRE system provides subscribers with a direct connection to the associate's internal reservation system, allowing the SABRE system to provide real-time information and allowing the associate to optimize revenue for each flight. Car rental companies and hotel operators are provided with similar levels of participation from which to select. The Company also provides associates, upon request, marketing data derived from the SABRE system bookings for fees that vary depending on the amount and type of information provided.

#### SUBSCRIBER ACCESS

Access to the SABRE system enables subscribers to electronically locate, price, compare and purchase travel products and services provided by associates. The Company tailors the interface and functionality of the SABRE system to the needs of its different types of subscribers. Marketing is targeted to travel agencies, corporations and individual consumers.

TRAVEL AGENTS. The Company provides travel agents with the hardware, software, technical support and other services needed to use the SABRE system, in return for fees that typically vary inversely with the travel agency's productivity, as measured by the number of bookings generated. Such fees are payable over the term of the travel agent's agreement with the Company, generally five years in the United States and Latin America, three years in Canada, and one year in Europe.

Because travel agencies have differing needs, the Company has modified the SABRE system interface to meet the specific needs of different categories of travel agents. Travel agents can choose interfaces that range from simple, text-based systems to feature-laden graphical systems. For example, the Company developed TURBO SABRE-TM- software, an advanced point-of-sale interface and application development tool that enables advanced functionality such as customized screens, automated quality control, database integration, and eliminates complex commands, reducing keystrokes and training requirements.

PLANET SABRE-SM- software, which the Company introduced in February 1997, includes a graphical launch pad, which enables the user to move to any function with one or two clicks of a mouse; a customizer feature, which allows travel agencies to tailor PLANET SABRE-SM- software to meet their own specific needs; a tutorial; online help; a place to store notes about clients, destinations or procedures; and a suggestion system. PLANET SABRE-SM- software transforms the SABRE system from a complex command-oriented system to an all-graphic interface with continued access to the SABRE system and its capabilities.

The SABRE system interfaces are available in English, Spanish, Portuguese, French, German, Italian and Japanese. In addition, the Company offers travel agencies back-office accounting systems and further supports travel agencies by offering a simplified method to develop and place their own marketing presence on the World Wide Web.

CORPORATIONS. The Company sells COMMERCIAL SABRE-Registered Trademark-software to corporations and home-based travel agents that are sponsored by travel agencies. Using COMMERCIAL SABRE-Registered Trademark-software, a traveler or agent can connect to the SABRE system and make bookings which are automatically delivered to the sponsoring agency where travel documents are issued.

The Company also markets the SABRE system to corporations through the SABRE BUSINESS TRAVEL SOLUTIONS-TM- system ("the SABRE BTS-TM- system"). Released in October 1996, the SABRE BTS-TM- system is designed for corporate travelers, travel arrangers and travel managers. It is a fully-integrated product suite for travel planning and booking, expense reporting and decision-support. The SABRE BTS-TM- system provides corporations with tools to better manage travel costs, ensure compliance with corporate travel policies, automate expense reporting and obtain real-time information on all aspects of travel.

INDIVIDUAL CONSUMERS. Through the Company's TRAVELOCITY.COM-SM- online travel site ("the TRAVELOCITY.COM-SM- site") and EASYSABRE-Registered Trademark-reservations site ("the EASYSABRE-Registered Trademark- site"), individual consumers can compare prices, make travel reservations and obtain destination information online. These products are available to individual consumers free of charge.

The TRAVELOCITY.COM-SM- site is accessible through the Internet and computer on-line services. It features booking and purchase capability for all airline, car rental and hotel companies for which booking and purchase capability is available in the SABRE system. Vacation and cruise packages are available as well. The TRAVELOCITY.COM-SM- site also offers access to a database of destination and interest information, articles from travel correspondents and interactive maps. The TRAVELOCITY.COM-SM- site has over 5 million members and averages approximately 60 million page views per month. The Internet address for the TRAVELOCITY.COM-SM- site is www.travelocity.com.

The Company has entered into numerous co-branding agreements to provide access to the TRAVELOCITY.COM-SM- site on complementary Internet Web sites. These agreements include deals with Netscape Communications Corporation to launch Netcenter Travel on the TRAVELOCITY.COM-SM- site, accessible through the Netscape Netcenter free online service and an agreement with Yahoo! Inc. for the TRAVELOCITY.COM-SM- site to be the exclusive co-branded travel booking service for Yahoo! and Yahoo! Travel.

The Company receives booking fees and commissions from travel providers for purchases of their travel products and services pursuant to reservations made through the TRAVELOCITY.COM-SM- and EASYSABRE-Registered Trademark- sites.

#### INTERNATIONAL MARKETING

The Company is actively involved in marketing the SABRE system internationally either directly or through joint venture or distributorship arrangements. The Company's global marketing partners principally include foreign airlines that have strong relationships with travel agents in such airlines' primary markets and entities that operate smaller global distribution systems or other travel-related network services.

In February 1998, the Company signed long-term agreements with ABACUS International Holdings Ltd. which created a Singapore-based joint venture company to manage travel distribution in the Asia/Pacific region. The Company owns 35 percent of the joint venture company, called ABACUS International Ltd., and provides it with transaction processing and product development services on the SABRE system .

# COMPETITION

The Company competes in electronic travel distribution primarily against other large and well-established global distribution systems. The Company's principal competitors in marketing to travel agents include Amadeus, Galileo and Worldspan. Each of these competitors offers many products and services substantially similar to those of the Company.

The Company markets the SABRE system to corporations through the SABRE BTS-TM- system. The Company's main competitors in marketing to corporations include American Express, Internet Travel Network, E-Travel, Inc., Xtra Online Corporation and Travel Technologies Group.

The Company also distributes travel through the Internet and computer on-line services to consumers directly through the TRAVELOCITY.COM-SM- site. Its main competitors include Expedia (owned by Microsoft Corporation), Preview Travel and Internet Travel Network. Increasingly, many travel suppliers are developing their own web sites, some of which offer an array of products and services, that directly target consumers.

The Company potentially faces many new competitors as new travel distribution channels develop. Still, significant barriers exist for these new players including: significant capital investment, development of global network facilities, development or acquisition of hardware and software systems with global scales and reach, and ability to connect to disparate travel suppliers' and travel agents' systems.

The global market to attract and retain agency subscribers is intensely competitive. Factors affecting competitive success of global distribution systems include depth and breadth of information, ease of use, reliability, service and incentives to travel agents and range of products available to travel providers, travel agents and consumers.

Although distribution through travel agents continues to be the primary method of travel distribution, new channels of direct distribution to businesses and consumers, through computer on-line services, the Internet and private networks, are developing rapidly. The adoption of these tools is currently quite low, but it is growing quickly. The Company believes that it has positioned its SABRE BTS-TM- system and TRAVELOCITY.COM-SM- website products and services to effectively compete in these emerging distribution channels.

#### CRS INDUSTRY REGULATION

The Company's electronic travel distribution business is subject to regulation in the United States, the European Union, Canada, Australia and New Zealand. These regulations address the relationships among computer reservation systems ("CRSs"), airline associates, and travel agency subscribers. These regulations do not currently address relationships with non-airline associates, but the regulations in the European Union were revised effective March 15, 1999 and include rail associates in certain circumstances. In general, these regulations are directed at ensuring fair competition among travel providers. Among the principles addressed in the current regulations are: unbiased CRS displays of airline information, fair treatment of airline associates by CRSs, equal participation by airlines in non-owned CRSs, and fair competition for subscribers. The CRS regulations in the United States are currently being revised. In addition, the Department of Civil Aviation of Brazil is considering the adoption of comprehensive CRS regulations. The Company does not believe that the revisions to the European Union code, the possible revisions to the United States code, or possible adoption of a code in Brazil will materially adversely affect its operations.

#### OTHER REGULATION

The Company is subject to regulations affecting issues such as: exports of technology, telecommunications, data privacy and electronic commerce. Some portions of the Company's business, such as its Internet-based electronic travel distribution, may be affected by newly-developed regulations. Regulations affecting other areas of the Company's business may be revised from time to time. Regulations also vary among jurisdictions. The Company believes that it is capable of addressing these regulatory issues as they arise.

# INFORMATION TECHNOLOGY SOLUTIONS

The Company is a leading provider of information technology services to the travel and transportation industries. The Company employs its airline technology expertise to offer information technology solutions to clients that face similar complex operations issues, including airport, railroad, trucking and hospitality companies. The services offered by the Company include software development and product sales, transactions processing, consulting, as well as comprehensive information technology outsourcing. The Company provides data processing, network and distributed systems services to American and AMR's other subsidiaries, Canadian, US Airways and other customers, fulfilling substantially all of their information technology requirements. In 1998, approximately 42.6% of the Company's revenue was generated by the provision of information technology solutions.

The Company is aggressively pursuing strategic information technology relationships that add a new dimension to traditional outsourcing agreements by integrating its airline applications and business processes into customer operations. Clients enter into strategic agreements with the Company in order to benefit from its extensive airline industry expertise, experience with complex operating and transaction environments and its extensive suite of software products and services.

The Company offers a comprehensive set of information technology solution services to the airline industry. These solutions include: (i) information technology outsourcing; (ii) software development, sales and licensing; and (iii) consulting, which includes capabilities ranging from reengineering to functional consulting. Recruiting and retaining capable personnel, particularly those with expertise in operations research, information technology and industrial engineering, is vital to the provision of solutions by the Company.

- (i) INFORMATION TECHNOLOGY OUTSOURCING: The Company offers information technology outsourcing to airlines for desktop, data center, network and application development. The Company extends real-time transaction processing services by providing access to its hardware and software to airlines for reservations, flight operations, departure control and other related services. Local computer terminals at a customer's location are linked to the Company's mainframes, and the Company maintains and operates the entire system on a secure and confidential basis. The Company also provides services for establishing systems security, voice networks, data center connectivity, helpdesk support and desktop applications. Some of the major clients for the outsourcing business include American, Canadian, Aerolineas Argentinas, US Airways, Pakistan International Airlines, and Gulf Air.
- (ii) SOFTWARE DEVELOPMENT, SALES AND LICENSING: The Company provides software and consulting solutions to more than 170 airlines or airline associations. These solutions have many applications for airlines. For example, (a) with the SABRE AIRMAX-SM- revenue management system, airlines can seek to enhance revenue using statistical and database sources that estimate the economic implications of fare actions before they are implemented, (b) with the SABRE AIRPRICE-SM- fares management system, airlines can analyze and manage fares and react to competitors' changes, (c) with the SABRE AIRFLITE-SM- flight scheduling system, airlines can determine superior flight schedules and (d) with the SABRE AIRCREWS-SM- crew management system, airlines can improve crew member scheduling thus reducing staffing costs. The Company develops ready off the shelf products as well as customized software for some of its larger clients. Some of the most popular products support flight scheduling, flight operations, revenue management, crew scheduling, sales automation, cargo tracking, passenger systems and frequent flyer programs. The Company's solutions have helped American become one of the most technologically advanced airlines in the world.
- (iii) CONSULTING: The Company's consulting services assist businesses in the travel and transportation industries in collecting and analyzing operational and customer data in order to improve internal operations and product distribution in the market place. These services enable businesses to improve airport and other operations and optimally distribute their fares, schedules and inventories through all available channels with special emphasis on distribution through computer reservations and global distribution systems.

The Company distributes its solutions and consulting services through a sales and marketing organization with offices in ten cities on four continents (Boston, Chicago, Dallas, Vancouver, London, Paris, Kuwait City, Hong Kong, Sydney and Auckland). The Company also maintains agency relationships to support sales efforts in key markets, including India, China and the Middle East. To date, the Company has provided business solutions to nearly 550 clients located in more than 85 countries.

In 1996, the Company executed an information technology services agreement with American for a term of ten years for most services (three and five years for others). Under this agreement, the Company provides data processing, network, distributed systems, and applications development services to American and AMR's other subsidiaries. The Company fulfills substantially all of American's data processing requirements and manages all voice and data communication services for American and AMR's other subsidiaries, including data networks, voice networks and radio services. The Company also provides American with the services required to design, install, operate and maintain its range of local area networks, desktop, mobile computing and peripheral devices. The Company completes nearly all of the applications development for American, as well as manages the AMR Year 2000 project office and completes most of AMR system's Year 2000 testing and compliance enhancements.

In January 1998, the Company completed the execution of a 25-year, multibillion dollar technology agreement with US Airways to provide substantially all of US Airways' information technology services. As a part of the agreement, the Company purchased approximately \$47 million of US Airways' information technology assets, hired more than 600 former employees of US Airways and granted to US Airways two tranches of stock options, each to acquire 3 million shares of the Company's Class A Common Stock. The agreement covers the management and operation of US Airways' systems and information technology services. Additionally, the Company agreed to assist US Airways in making its information systems Year 2000 compliant. For further discussion of the US Airways transaction, see Note 4 to the Consolidated Financial Statements.

In connection with the US Airways agreement, in December 1998, the Company successfully managed the largest information technology system migration ever performed in the airline industry. Within a two-day timeframe more than 200 US Airways systems were successfully converted or migrated, including all core systems--Passenger Service System, Flight Operating System and Cargo--and other systems such as yield management and in-flight dining. The migration included the conversion of more than 3.5 million passenger name records and more than two million electronic tickets to the SABRE system.

In February 1998, the Company executed a 10-year information technology services agreement with Gulf Air. Under the terms of the agreement, the Company will be responsible for all of Gulf Air's information technology infrastructure, including application development and maintenance, as well as data center and network management.

In November 1998, the Company executed a 10-year agreement with Aerolineas Argentinas that calls for the airline to outsource the management and provision of its information technology functions to the Company. The contract also calls for the Company to provide specialized information technology services to Aerolineas Argentinas' affiliate, Austral Lineas Aereas-Cielos Del Sur.

In December 1998, the Company executed a 15-year agreement with Pakistan International Airlines in which the airline will outsource all information technology functions to the Company. This agreement followed a three-year consulting agreement signed between the two companies in March 1998.

### COMPETITION

In information technology solutions, the Company competes both against solutions companies and full-service providers of technology outsourcing, some of which have considerably greater financial resources than the Company, and against smaller companies that offer a limited range of products. Among the Company's full-service competitors are Electronic Data Systems, IBM Global Services, Unisys, Andersen Consulting and Lufthansa Systems. The Company believes that its competitive position in the travel and transportation industries is enhanced by its experience in developing systems for American and other airlines and by its ability to offer not only software applications but also systems development, integration and maintenance and transaction processing services.

# RESEARCH AND DEVELOPMENT EXPENSES

Research and development costs approximated \$39\$ million for 1998 and \$24\$ million for 1997. Prior to 1997, research and development costs were not material.

# SEGMENT INFORMATION

Financial information for the Company's operating segments and geographical revenues and assets are included in Note 12 to the Consolidated Financial Statements.

#### INTELLECTUAL PROPERTY

In connection with the Reorganization, American transferred to the Company the software used in the operation of the business of The Sabre Group. This software, along with other software, proprietary information, patents, copyrights, trade secrets, trademarks and intellectual property rights, are significant assets of the Company. The Company relies on a combination of patent, copyright, trade secret and trademark laws, confidentiality procedures and contractual provisions to protect these assets. The Company's software and related documentation are protected principally under trade secret and copyright laws, which afford only limited protection. In addition, the laws of some foreign jurisdictions may provide less protection than the laws of the United States for the Company's proprietary rights. Unauthorized use of the Company, and there can be no assurance that the Company's legal remedies would adequately compensate it for the damages to its business caused by such use.

#### EMPLOYEES

As of December 31, 1998 the Company had approximately 10,800 employees. A central part of the Company's philosophy is to attract and maintain a highly capable staff. The Company considers its current employee relations to be good. None of the Company's employees based in the United States are represented by a labor union

### ITEM 2. PROPERTIES

The Company's principal executive offices are located in Fort Worth, Texas, primarily in three buildings, two of which are owned by the Company and one of which is leased from the Dallas/Fort Worth International Airport Board under a lease that expires in 2019, subject to four renewal options of five years each, exercisable at the option of the Company. The Company leases a fourth office building in Southlake, Texas, under a lease that expires in 2006, subject to two renewal options of five years each, exercisable at the option of the Company. Additionally, the Company leases office facilities in Westlake, Texas under leases expiring in 2003, subject to a three-month or a three-year option, exercisable at the option of the Company. The Company also leases office facilities in approximately 70 other locations worldwide.

The Company's principal data center is located in an underground facility in Tulsa, Oklahoma (the "Data Center"). The land on which the Data Center is located is leased from the Tulsa Airport Improvements Trust, a public trust organized under the laws of the State of Oklahoma, pursuant to a lease that expires in 2038. The SABRE system and the Company's data processing services are dependent on the Company's central computer operations and information processing facility located in the Data Center. The Company also utilizes a computer center located in one of its office buildings in Fort Worth (the "Fort Worth Center"). At the Fort Worth Center, the Company operates and manages a wide variety of server based and client/server distributed systems.

The Company's travel agency and corporate subscribers connect to the SABRE system through leased access circuits. These leased access circuits, in turn, connect to the domestic and international data networks leased by the Company, such as those leased from Societe Internationale de Telecommunications Aeronautiques ("SITA"), which is owned by a consortium of Airlines, including American.

The Company believes that its office facilities, Data Center and Fort Worth Center will be adequate for its immediate needs and that additional or substitute space is available if needed to accommodate expansion. The Company also believes that its network access will be adequate for its immediate and foreseeable needs. The Company, however, continuously invests to upgrade these facilities to meet changing technological needs.

LENGTH: 658 words

**HEADLINE: Netscape and The SABRE Group Launch** Innovative Travel Booking Service on **Netscape** Netcenter; Travelocity Featured as Exclusive Travel Partner for Netcenter's Marketplace.

DATELINE: MOUNTAIN VIEW, Calif. and FORT WORTH, Texas, Jan. 26

### **BODY:**

**Netscape** Communications Corporation (Nasdaq: NSCP) and The SABRE Group (NYSE: TSG) announced today the launch of Netcenter Travel by Travelocity, a co-branded service accessible through the **Netscape** Netcenter ( http://www.home.netscape.com ) free online service.

**Netscape** Netcenter, launched in September, has now reached the 2.6 million member milestone. Netcenter enables users to access and personalize online resources easily from one central location. Netcenter is organized into four major categories: Content, Community, Software and Commerce.

Netcenter Travel by Travelocity can be accessed from both the Commerce area of **Netscape** Netcenter as well as within Netcenter's new Marketplace. Netcenter Marketplace provides users with the opportunity to purchase items such as computers, office supplies, gifts, travel, books, music, software and discount products. The new Travelocity service provides the ability to make air, car and hotel reservations, buy vacation and cruise packages online, as well as research popular travel destination locations.

"As the exclusive travel service for Netcenter, Travelocity provides business and leisure travelers a variety of travel planning tools," said Terry Jones, chief information officer of The SABRE Group. "In addition, consumers now have access to the SABRE system, the same system which provides travel information to more than 33,000 travel agencies worldwide."

"This agreement combines The SABRE Group's leadership in electronic travel with **Netscape's** world-leading Internet site and growing online service," said Jennifer Bailey, vice president of **Netscape's** Web site. "Saving time is an important issue for our customers who want easy access to travel bookings. We are furthering our goal to make Netcenter the business hub for Internet users to access the online services they need."

Netscape and The SABRE Group Launch Innovative Travel Booking Service on Netscape Netcenter; Travelocity Featured as Exclusive Travel Partner for Netcenter's Marketplace. PR Newswire January 26, 1

Travelocity (http://www.travelocity.com), owned and operated by The SABRE Group, provides schedules for more than 700 airlines and reservations capability for more than 420 airlines, 37,000 hotels and more than 50 car rental companies, the most on the Web. Since its launch in March 1996, Travelocity has registered more than 1.6 million members and logs more than 25 million page views per month.

The SABRE Group is a world leader in the electronic distribution of travel and travel-related services around the globe, and is a leading provider of information technology solutions for the travel and transportation industry, including customized software development and software product sales, transaction processing, consulting and total information technology outsourcing.

**Netscape** Communications Corporation is a leading provider of open software for linking people and information over enterprise networks and the Internet. The company offers a full line of clients, servers, development tools, and commercial applications to create a complete platform for next generation, live online applications. Traded on Nasdaq under the symbol "NSCP," **Netscape** Communications Corporation is based in Mountain View, California.

Additional information on **Netscape** Communications Corporation is available on the Internet at http://home.netscape.com, by sending e-mail to info@netscape.com, or by calling 650-937-2555 (corporations) or 650-937-3777 (individuals).

# YAHOO! AND THE SABRE GROUP TEAM UP TO BRING USERS TRAVEL BOOKING SERVICES

Largest Search and Navigational Guide Chooses Travelocity As Exclusive, Co-Branded Travel Booking Engine on Yahoo.com

SANTA CLARA, CALIF. & FORT WORTH, TX -- November 10, 1997 -- The Internet's leading navigational guide, Yahoo! ☐ (http://www.yahoo.com), and the leader in electronic travel transactions, The SABRE Group (NYSE: TSG), have joined forces to bring travel booking services to Yahoo! users, the largest audience of Internet users of any Web site or online service (Mediamark Research Inc., Fall 1997). The agreement names the Web's leading travel site, SABRE's Travelocity (www.travelocity.com) as the exclusive co-branded travel booking service for Yahoo! and Yahoo! Travel (travel.yahoo.com), Yahoo!'s comprehensive resource for planning and booking travel itineraries announced today in a separate release.

With an average of 25.4 million unique U.S. adult users per month (measured from March through August, 1997), Yahoo! has a larger audience of Internet users than any other Web site or online service according to the latest research results released by Mediamark Research Inc. (MRI). The new booking services available through Yahoo! and Travelocity make purchasing airline tickets and booking car rental and hotel reservations on the Internet accessible to the largest audience of users on the Web.

According to Terry Jones, CIO of The SABRE Group, the agreement capitalizes on the leadership position of both companies. "By combining Yahoo!'s unprecedented reach with The SABRE Group's position as the leader in online travel, we're poised to take advantage of the growing online travel services market which is predicted to reach nearly \$5 billion by the year 2000 (Jupiter Communications' Online Travel: Five Year Outlook report, April 1997)," said Jones.

David Kirby, editor of Interactive Travel Report, a publication which closely monitors trends in online travel, views Yahoo! as a key alliance for Travelocity. "Yahoo! is the most popular navigational engine on the Web and one of the most visited Web sites. This alliance places Travelocity in the enviable position of potentially attracting the eyes of more travelers than any other online location. And it follows through on Travelocity's longstanding efforts to provide travel content and take bookings everywhere it can in cyberspace," said Kirby.

"Yahoo! continues to expand the value-added services we offer our users by working with industry leaders such as Travelocity," said Ellen Siminoff, vice president of business development at Yahoo!. "Through Travelocity, Yahoo! Travel now offers access to the same system used by more than 30,000 travel agencies worldwide, providing users with the resources they need to quickly and conveniently find the best travel bargains and purchase them online."

Travelocity, owned and operated by The SABRE Group, provides schedules for more than 700 airlines and reservations capability for more than 400 airlines, 35,000 hotels and more than 50 car rental companies. This reservations capability in Travelocity is paired with access to a vast database of up-to-the-minute destination and interest information, chats and forums and travel merchandise vendors. Since its launch in March 1996, Travelocity has registered more than 1.6 million members and logs more than 18 million page views per month.

Yahoo! Inc. (NASDAQ: YHOO) is a global Internet media company that offers a network of branded Web programming that serves millions of users daily. As the first online navigational guide to the Web, (www.yahoo.com) is the single largest guide in terms of traffic, advertising, household and business user reach, and is one of the most recognizable brands associated with the Internet. Yahoo! Inc. provides targeted Internet resources and communications services for a broad range of audiences, based on demographic, key-subject and geographic interests. Yahoo! is headquartered in Santa Clara, Calif.

The SABRE Group is a world leader in the electronic distribution of travel and travel-related services around the globe, and is a leading provider of information technology solutions for the travel and transportation industry, including customized software development and software product sales, transaction processing, consulting and total information technology outsourcing.

## FOR IMMEDIATE RELEASE

# THE SABRE GROUP RENEWS CONTRACT BETWEEN TRAVELOCITY.COM AND YAHOO!

FORT WORTH, Texas -- Jan. 24, 1999 -- The SABRE Group (NYSE: TSG) today announced that it has renewed the contract between Travelocity.com, an online travel expert, and Yahoo! (NASDAQ: YHOO), making Travelocity the premier provider of air, car and hotel booking capabilities on Yahoo! Travel (http://travel.yahoo.com). "The renewal of this agreement continues the powerful combination of two of the best-known players on the Web," said Terry Jones, chief information officer of The SABRE Group. "Yahoo! is one of the most recognized brands on the Internet, and with online travel revenue expected to reach almost \$21 billion by 2001, Travelocity is positioned to reach more people than any other travel site." According to the most recent data released by Media Metrix, the Yahoo! network of properties is ranked No. 1 in reach among work users (49.6%) and is second only to AOL Web sites in home reach (43.7%). By 2001, Forrester Research predicts that online travel revenue will increase almost seven times from 1998 revenues estimated at \$3.1 billion. In addition, online travel also will become the largest business-to-consumer product on the Internet by 2003, accounting for 12 percent of the overall travel market. "We're extremely pleased to renew our existing contract with Travelocity," said Ellen Siminoff, vice president of business development and strategic planning for Yahoo! Inc. "This relationship allows us to continue to provide our users with direct access to the same airline reservation system used by more than 40,000 travel agents worldwide, along with car and hotel booking capabilities."

Travelocity is owned and operated by The SABRE Group, a world leader in the electronic distribution of travel and travel-related services around the globe. Travelocity provides reservation capabilities for more travel providers than any other Internet site with more than 420 airlines, representing 95 percent of all airline seats sold, more than 40,000 hotels, and more than 50 car rental companies. This reservation capability is paired with access to a vast database of destination and interest information. To date, The SABRE Group has sold more than 2.5 million airline tickets online, and since its launch in March of 1996, Travelocity has registered more than 4 million members and logs more than 55 million page views per month. The SABRE Group is a leading provider of information technology solutions for the travel and transportation industries, including customized software development and software products, transaction processing, consulting and total information technology outsourcing.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

#### New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

#### National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

### New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

## SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Dear Sir:

Assignee discloses the materials listed on form PTO-1449 attached to this document. The materials were produced by defendants and received on August 2, 2012, in litigation Case No. 2:06CV42 (E.D. Tex.). The documents appear to contain some information on the Travelocity "co-branding" system previously referenced in other cited materials.

By citing these references, assignee does not concede that all qualify as prior art, nor that the listed dates are accurate.

Please feel free to telephone the undersigned if it would be helpful in advancing prosecution and concluding examination of this application efficiently.

Respectfully submitted,

DDR HOLDINGS, LLC

## **RESPONSE TO OFFICE ACTION**

## Dear Sir:

In response to the Office Action dated July 3, 2012, which contains no art rejections, assignee submits the below amendments (beginning on page 2) and remarks (beginning on page 9).

A terminal disclaimer is submitted concurrently to overcome the double-patenting rejection.

Fees for the terminal disclaimer and a supplemental information disclosure statement are submitted with those documents.

### Amendments

## IN THE CLAIMS

Please amend the claims as follows:

- 1-70. (Cancelled)
- 71. (Currently amended) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

- (a) automatically, with a server computer <u>associated with a second website</u>, retrieving data pre-stored in a storage device accessible to the server computer, and
- (b) automatically, with the server computer, serving to the visitor computer a composite web page of [[a]] the second website, which composite web page that includes:
  - (i) information associated with the commerce object associated with the link that has been activated, and
  - (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page,

wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other.

72. (Previously presented) The method of claim 71 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

- 73. (Previously presented) The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.
- 74. (Previously presented) The method of claim 73 further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer.
- 75. (Previously presented) The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the plurality of products and serving the results for display using the browser of the visitor computer.
- 76. (Previously presented) The method of claim 71 wherein the owner of the source web page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.
- 77. (Previously presented) The method of claim 76 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.
- 78. (Previously presented) The method of claim 71, wherein the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a

virtual shopping cart, and further comprising, automatically with the server computer, accepting inputted billing information from the visitor computer, recording the billing information, and using the billing information to facilitate payment to the merchant for the commerce object associated with the activated link when the server computer detects activation by the web browser of a checkout link associated with the shopping cart.

- 79. (Previously presented) The method of claim 78 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.
- 80. (Previously presented) The method of claim 71, wherein the composite web page appears to the computer user to be generated by a server associated with the source page.
- 81. (Currently amended) A computer system apparatus for an outsource provider serving web pages offering commercial opportunities, the apparatus comprising:
  - (a) an electronic storage device containing data defining a plurality of visually perceptible elements visually corresponding to a source web page,
    - (i) wherein the source web page contains at least one active link that is served to the visitor computer when visiting the first website, which link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant, and
    - (ii) wherein the owner of the first website, the outsource provider, and the merchant are each third parties with respect to each other; and
  - (b) a computer server device controlled by the outsource provider <u>and</u> <u>associated with a second website</u>, which computer server is coupled to the electronic storage device and programmed to, upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, automatically:

- (i) retrieve from the storage device the stored data defining the plurality of visually perceptible elements visually corresponding to the source web page, and
- (ii) serve to the visitor computer a composite web page of [[a]] <u>the</u> second website, which web page that includes:
  - (A) information associated with the commerce object associated with the link that has been activated, and
  - (B) the plurality of visually perceptible elements derived from the retrieved data.
- 82. (Previously presented) The apparatus of claim 81 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.
- 83. (Previously presented) The apparatus of claim 81 wherein the commerce object associated with the link comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.
- 84. (Previously presented) The apparatus of claim 83 wherein the computer server is further programmed to: (i) upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, accept search parameters through the browser of the visitor computer and automatically use the search parameters to search for specific products within the catalog, and (ii) serve the results for display using the browser of the visitor computer.
- 85. (Previously presented) The apparatus of claim 81 further comprising a computerized accounting module programmed to cause the computer system to automatically record payment to the owner of the first website, once the transaction is completed, wherein the owner is party to a contract with the outsource provider

Serial No. 12/906,979

providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

- 86. (Previously presented) The apparatus of claim 85 wherein:
- (i) the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart,
- (ii) the computer server is further programmed to automatically accept inputted billing information from the visitor computer, and record the billing information, and
- (iii) the computerized accounting module is further programmed to cause the computer system to automatically use the billing information to record payment to the merchant for the commerce object associated with the activated link when the computer server detects activation by the web browser of a checkout link associated with the shopping cart.
- 87. (Previously presented) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

automatically, with a server computer associated with a second website, serving to the visitor computer a dynamically generated composite web page containing instructions directing the visitor computer to display:

- (i) information associated with the commerce object associated with the link that has been activated, and
- (ii) a plurality of visually perceptible elements visually corresponding to the source web page,

Serial No. 12/906,979

wherein the instructions direct the visitor computer to download data defining the visually perceptible elements from a storage device that is accessible to the visitor computer through the Internet, and

wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other.

- 88. (Previously presented) The method of claim 87 wherein the storage device is coupled to the server computer associated with the second website.
- 89. (Previously presented) The method of claim 87 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.
- 90. (Previously presented) The method of claim 87 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.
- 91. (Previously presented) The method of claim 90 further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer.
- 92. (Previously presented) The method of claim 87 wherein the commerce object associated with the link that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the

| plurality of products and serving the results for display using the browser of the visitor computer. |

### **Remarks**

In response to the Section 112 rejections of claims 71-86, assignee moots the rejection by submitting amendments to independent claims similar to those suggested by the Examiner in the Office Action at page 3. Assignee notes that no Section 112 rejections have been applied to claims 87-91.

In response to the double-patenting rejection, assignee moots the rejection by filing a terminal disclaimer through the PTO's electronic system.

A supplemental information disclosure is submitted concurrently to cite recent information from the previously referenced litigation. Assignee has provided comments in the cover sheet to the forms PTO-1449 to assist the examiner in considering the new material in the context of certain defense arguments.

Having overcome all rejections, assignee respectfully requests prompt issuance of a notice of allowance.

If the Office has any questions, please feel free to contact assignee's undersigned attorney of record.

Respectfully submitted,

DDR HOLDINGS, LLC

## SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Dear Sir:

Assignee discloses the materials listed on form PTO-1449 attached to this document.

By citing these references, assignee does not concede that all qualify as prior art, nor that the listed dates are accurate. The fee set forth in 37 C.F.R. § 1.17(p) accompanies this submission.

In general, the materials were produced by (or created by) defendants in litigation Case No. 2:06CV42 (E.D. Tex.) since assignee's last Supplemental Information Disclosure Statement.

In the return copies of forms PTO-1449, the examiner lined out references to a set of invalidity contentions dated in 2011, even though assignee submitted copies of those documents to the Office, because the form PTO-1449 did not mention a date for them. Since then, defendants have served somewhat updated contentions (earlier in 2012) and an expert report explaining same. Thus, assignee cites the updated, newer versions in this Supplemental Information Statement in place of the 2011 ones lined through (see attached form PTO-1449 at items 1-4 and 55-56).

As revealed in those materials, defendants' contentions, which relate to possible invalidity of the parent patents, have most recently focused on six primary references and four secondary references. In some instances, the "references" refer to collections of documents related to alleged prior uses, not individual documents.

With respect to the six *primary* references relied on by defendants, based on the initials indicating which references the examiner has considered, the Office has *already* considered all available public materials regarding all of those, including all patents or patent applications within the six. Certain additional material concerning two of those six, namely the Digital River and TravelNow systems, is included in the attached. A variety of documents regarding both of those systems were previously submitted and apparently considered before.

With respect to the four <u>secondary</u> references, three of those are new and are included in the references attached, and the fourth is a U.S. patent that was previously considered.

In addition, the items attached include a variety of miscellaneous references that defendants have cited and apparently relied upon but were not included in their top ten references, as well as some materials from assignee's predecessor-in-interest that have been cited by defendants.

Defendants' contentions (in the updated sets of invalidity contentions) that the parent patents are invalid for <u>non</u>-prior-art reasons have included various arguments under 35 U.S.C. §§101, 112(1) and (2), and double-patenting. Materials on these contentions have also been submitted to the Office before. In particular, defendants updated materials focus their non-art invalidity arguments on the following contentions: (1) that the "capturing" element of the '135 Patent is invalid under 35 U.S.C. §112(1) because of lack of enablement or written description, (2) that the '399 Patent is invalid for obviousness-type double-patenting, and (3) that the term "link" is not enabled because the specification discloses only "HTML" links but the Court construed the term "link" such that HTML was optional.

Item 57 attached was submitted in a previous Information Disclosure Statement in this application, as well as in all parent applications, but the examiner lined out the reference because of the lack of a date in the form PTO-1449. Assignee supplies the date and another copy.

With respect to the few documents marked with calendar years only, *i.e.*, items 50, 57, 61, and 65 attached, assignee notes that the years of publication (1995-96 and 1996) are sufficiently earlier than the effective U.S. filing date (which is either 9/17/1998 for claims supported by the provisional parent or 9/17/1999 for other claims) so that the particular month of publication is not in issue.

Regarding priority, defendants have also observed that the provisional parent application does not support all claims (a point to which assignee has agreed), that the inventors named on the provisional include only three of the five inventors listed on the regular patent applications, and that certain flow charts attached to the provisional were authored by one of the two persons listed as an inventor on the regular applications but not listed on the provisional application.

Assignee does not view the above-indexed arguments, or the new references attached, as altering the results of examination of this application.

If the Office or the examiner has any questions concerning the materials attached, or any arguments made by defendants in litigation, assignee would be open to supplying responses. Please feel free to telephone the undersigned if it would be helpful in advancing prosecution and concluding examination of this application efficiently.

Respectfully submitted, DDR HOLDINGS, LLC by its attorney

#### I. INTRODUCTION

Defendants Hotels.com, L.P., Expedia, Inc., Travelocity.com LP, Site59.com LLC, Internetwork Publishing Corporation d/b/a Lodging.com, Neat Group Corporation, Orbitz Worldwide, LLC, International Cruise & Excursion Gallery, Inc., OurVacationStore.com, Inc., and Digital River, Inc. (collectively, "Defendants") respectfully submit these Amended Invalidity Contentions pursuant to Patent Rule(s) 3-3 and 3-6 and the Court's Scheduling Order [DI 315]. This statement, including the accompanying claim charts, sets forth Defendants' Amended invalidity contentions with respect to the asserted claims of U.S. Patent Nos. 6,629,135 ("the '135 Patent"), 6,993,572 ("the '572 Patent"), and 7,818,399 ("the '399 Patent") (collectively "the patents in suit"). Defendants assert these contentions based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012. By including in this disclosure prior art that would anticipate or render obvious the patents in suit based on the scope or construction apparently applied by DDR to the claims, Defendants' contentions herein are not, and should in no way be seen as, adoptions or admissions as to the accuracy of that scope or construction, nor an assertion of a particular construction by Defendants.

Defendants' discovery and investigation in connection with this lawsuit are continuing, and thus, these disclosures are based on information obtained to date. Defendants expect that further discovery will reveal additional prior art, including related disclosures and corresponding evidence for many of the prior art references identified below. For example, for any given company's commercial products, Defendants expect that additional documentation relating to these products will be discovered, and Defendants reserve the right to rely on such

documentation to further support these invalidity contentions. In particular, for example,

Defendants may serve subpoenas on, and/or take depositions of, DDR and third parties, and

expect to update these contentions to reflect information and materials received pursuant to such subpoenas and/or depositions, and other information.

These disclosures are also based on the purported identification of asserted claims made by DDR in its Amended infringement contentions. To the extent DDR seeks to modify and/or amend its infringement contentions to assert any additional claims (or for any other reason), and is permitted to do so by the Court, Defendants reserve the right to amend and/or supplement these disclosures.

These contentions reflect the potential scope of the claims that DDR appears to be advocating, as suggested by the Amended infringement contentions that DDR has served on January 23, 2012. Defendants' contentions herein should not be seen as a suggestion that DDR's reading or interpretation of the patent claims is correct.

Subject to the foregoing, references cited in Exhibits 1A-46B disclose the elements of the asserted claims either explicitly and/or inherently, alone and/or in combination, and/or may be relied upon to show the state of the art in the relevant timeframes. The relevant timeframes vary because numerous limitations in the asserted claims are not supported by the disclosure of U.S. Provisional Application Serial No. 60/100,697 ("the Provisional Application"), which DDR appears to be relying upon, and therefore are not entitled to an effective filing date of that provisional application.<sup>1</sup> Defendants reserve the right to amend these contentions upon the Court's determination of the priority date of the asserted claims. In addition, the suggested

<sup>1</sup> 

<sup>&</sup>lt;sup>1</sup> Based on Plaintiff's 3-1 and 3-2 disclosures, DDR alleges that all asserted claims are entitled to a priority date of Sept 17, 1998 except as follows: '572 claim 21, '399 claim 3. According to Plaintiff these two claims are only entitled to Sept 17, 1999 as the priority date. DEFENDANTS' AMENDED INVALIDITY CONTENTIONS PURSUANT TO LOCAL PATENT RULE 3-6-2

obviousness combinations are in addition to Defendants' anticipation contentions and are not to

be construed to suggest that any reference included in the combinations is not anticipatory on its

own.

Further, Defendants have endeavored to identify exemplary portions of the references

based on presently available information and DDR's current allegations. The references,

however, may contain additional support for particular claim limitations. Defendants expressly

reserve the right to rely on uncited portions of the prior art references, other documents, and

expert testimony to provide context or to aid in understanding the cited portions of the

references. Where Defendants cite to a particular figure in a reference, the citation should be

understood to encompass the caption and description of the figure and any text relating to or

discussing the figure. Conversely, where Defendants cite to particular text referring to a figure,

the citation should be understood to include the figure as well.

The identity of each item of prior art relied upon in this submission is stated herein and in

the attached claim charts, including prior art systems, publications, websites, and patents. The

publications describing the prior art systems have been produced to DDR as part of the normal

document production process to the extent that they have been located, and to the extent that

such systems are in Defendants' possession, they have been produced and/or will be made

available for inspection.

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-3

## II. U.S. PATENT 6,629,135

#### A. Identification of Prior Art

Pursuant to Patent Rule 3-3(a), Defendants identify the following prior art ("the '135 Patent's Invalidating Art") now known to them to anticipate claim 8 of the '135 Patent, either expressly or inherently as understood by a person having ordinary skill in the art, at least under the claim constructions apparently adopted by DDR in its infringement contentions. In some instances, Defendants treated certain prior art as anticipatory where certain elements are inherently present based on DDR's apparent claim construction in its infringement contentions.

The following patents and publications are prior art under at least 35 U.S.C. §§ 102(a), (b), (e), (f), and/or (g), and the charts found in Exhibits 1A-10A, 12A-13A, 17A-28A, 30A-32A and 43A-44A specify the invalidity basis for such patents and publications.

#### B. Obviousness

Defendants further contend under P.R. 3-2(b) that claim 8 of the '135 Patent, is invalid as obvious under 35 U.S.C. § 103. Defendants incorporate, as if fully set forth herein, Section IV.D.2.b, *infra*, related to obviousness.

#### 1. Claim Overview: Claim 8

In addition to these overarching factors that render the alleged invention obvious in light of the prior art, the following discussion provides more particular analysis tailored to the various asserted claims.

#### a. Claim 8

As mentioned above, by the asserted priority date of the alleged invention, persons of ordinary skill in the art were already familiar with e-commerce outsourcing processes including host website communication with a visitor website and at least in the context of frames made such a system transparent. The parties have agreed that the term "capturing" should be construed to mean "automatically, by a party other than the host, retrieving elements from the host website." [DI 309 at 17-18]. Notwithstanding this agreed construction however it is apparent, based on Plaintiff's Amended Infringement Contentions (January 23, 2012), that Plaintiff continues to construe the term "capturing" in a manner that would not be in accord with the understanding of a person of ordinary skill in the art. As such, the prior art identified by DEFENDANTS' AMENDED INVALIDITY CONTENTIONS PURSUANT TO LOCAL PATENT RULE 3-6-7

Defendants discloses that capturing the look and feel<sup>6</sup> of a webpage, as that term appears to be construed by Plaintiff, was also well-established at the time.<sup>7</sup> Host websites frequently were given specific links to include on their webpages which by the very nature of the Internet resulted in a second page being served to the user upon activation and such links often resulted in an e-commerce related webpage being returned to the user. It was also well known to return such e-commerce supported pages from a third-party but yet maintain a particular visual appearance to the user.

## 2.35 U.S.C. § 103 Combinations

In addition to the above discussion, certain particular combinations bear further explanation:

- Tobin, Fields and Saliba [Ex. 34A]
- Travelocity and Wiecha [Ex. 35A]
- Saliba and DR SSS [Ex. 36A]
- Saliba and Moore [Ex. 39A]
- DR SSS and Wiecha [Ex. 38A]
- SexToy, Saliba and Fields [Ex. 40A]
- IBM, Saliba and Fields [Ex. 42A]
- ViaWeb Prior Art and ShopSite Prior Art and IBM Net.Commerce Prior Art [Ex. 45A]

## a. U.S. Patent No. 6,141,666 ("Tobin")

-

<sup>&</sup>lt;sup>6</sup> The parties agree that the term "look and feel" should be construed to mean: "a set of elements related to visual appearance and user interface conveying an overall appearance identifying a website; such elements include logos, colors, page layout, navigation systems, frames, "mouse-over" effects, or others elements consistent through some or all of the website."

<sup>&</sup>lt;sup>7</sup> Defendants' invalidity position regarding the "capturing" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct.

Tobin discloses "capturing a look and feel description associated with a host website," as required by claim 8 as it appears to be construed by Plaintiff. See Ex. 17A, at 8(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Tobin with the teachings of Fields '655 to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of Tobin. See Ex. 34A. For example, Tobin teaches that capturing the look and feel description of the host website "to take advantage of the consumers [sic] familiarity with the participating Internet site's position in the marketplace, the consumer's trust in the participating Internet site's established brand name, or the consumer's existing relationship with the participating Web site." Column 5, lines 18-29 of Tobin; see Ex. 17A. Similarly, Fields also teaches techniques for capturing a look and feel description associated with a host website. See Ex. 17A, at 8(a). Accordingly, when confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Fields, and to combine such teachings with the teachings of Tobin to arrive at the alleged invention recited in the claims of the '135 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 402-403 (2007) ("When there is a design need or market pressure to solve a problem and there are a finite

<sup>&</sup>lt;sup>8</sup> Defendants' invalidity position regarding the "captured look and feel description" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct. DEFENDANTS' AMENDED INVALIDITY CONTENTIONS PURSUANT TO LOCAL PATENT RULE 3-6-9

number of identified, predictable solutions, a person of ordinary skill in the art has good reason to pursue the known options within his or her technical grasp").

Moreover, Tobin discloses a "host website," an "e commerce supported page," and a "selected commerce object." To the extent the host website, the e commerce supported page, the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Saliba '278 with the teachings of Tobin to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Saliba with the teachings of Tobin. For example, Tobin teaches an Internet site, providing floral and gift products (of FTD, Nature's Bloom, Hickory Farms, etc.) through web site pages that are customized to the requirements of the hosts. See Ex. 17A. Similarly, Saliba teaches an ecommerce outsourcing process related to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank. The bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site. A new Web page that incorporates the customer's bills is then presented to the customer. See Ex. 31A at 8(b). Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Saliba with the teaching of Tobin to arrive at the alleged invention recited in the claims of the '135 Patent because it would enable a sale to be completed using an e commerce support page without the buyer knowingly leaving the affiliate's site. *In re Sernaker*, 702 F.2d 989, 994-95, 217 USPQ 1, 5-6 (Fed. Cir. 1983) (the strongest rationale for combining references in a recognition, expressly or impliedly in the prior art that some advantage or expected beneficial result would have been produced by their combination).

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Saliba because both references teach a method and system where a host website uses an e-commerce outsource provider to sell goods on the host website. *KSR at* 402-403.

Additionally, and for the reasons stated above with respect to Fields and Saliba, Tobin can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8A
- Digital River. See Ex. 9A
- TravelNow.com. See Ex. 10A
- ITN/Get There. See Ex. 12A
- Preview Travel. See Ex. 13A
- Saliba. See Ex. 31A
- ViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

## Capturing the look and feel description of a host website, etc.

- Moore. See Ex. 1A
- Kelly. See Ex. 4A
- Digital River. See Ex. 9A
- Preview Travel. See Ex. 13A
- SexToy. See Ex. 24A
- Arnold. See Ex. 23A
- ViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

The combination of any of these references with Tobin renders claim 8 of the '135 Patent invalid.

#### b. Travelocity

Travelocity discloses "upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel

corresponding to the captured look and feel description<sup>9</sup> of the host website associated with the provided link and with content based on the commerce object associated with the provided link." See Ex. 8A. To the extent the host website, the captured look and feel description, or the commerce object, or any other claim element is argued or found not to be adequately disclosed in Travelocity, it would have been obvious to one of ordinary skill in the art to combine the teachings of Wiecha '717 with the teachings of Travelocity to meet that claim limitation of the asserted patents because a teaching, suggestion, or motivation exists to combine the teachings of Wiecha '717 with the teachings of Travelocity. [See Ex. 35A] For example, Travelocity teaches that a visitor to Yahoo! Travel could select airline tickets, car rentals, and hotel reservations via the co-branded page served by SABRE Interactive. See Ex. 8A. Further, Travelocity teaches serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. Wiecha '717 discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. See Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both Travelocity and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Wiecha '717 with the teaching of Travelocity to arrive at the alleged invention recited in the claims of the asserted patents because it would enable an e-commerce provider to provide a host

<sup>&</sup>lt;sup>9</sup> Defendants' invalidity position regarding the "captured look and feel description" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct. DEFENDANTS' AMENDED INVALIDITY CONTENTIONS PURSUANT TO LOCAL PATENT RULE 3-6-12

website with a hyperlink to a co-branded page, where the link is correlated with a selected commerce object such as air, hotel, or car reservation.

Additionally, and for the reasons stated above with respect to Wiecha, Travelocity can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- IBM. *See* Ex. 27A
- Digital River. See Ex. 9A
- TravelNow.com. See Ex. 10A
- ITN/Get There. See Ex. 12A
- Preview. See Ex. 13A
- Saliba. See Ex. 31AViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

The combination of any of these references with Wiecha renders claim 8 of the '135 Patent invalid.

## c. U.S. Patent Application No. 09/995,278 ("Saliba")

Saliba discloses all limitations of the '135 Patent; and, one skilled in the art would also understand that Saliba could be combined with U.S. Patent No. 6,330,575 ("Moore"). Likewise, this combination discloses all claim limitations of the '135 Patent. *See* Ex. 39A.

There is motivation to combine Saliba and Moore because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Both

Saliba and Moore disclose electronic commerce systems that are directed to offering commerce

objects over the Internet.

Additionally, and for the reasons stated above with respect to Moore, Saliba can be

combined with any of the following references to yield predictable results:

• Kelley. See Ex.4A

• Wiecha. See Ex.6A

• Travelocity. See Ex.8A

• DR SSS Prior Art. See Ex.9A

• TravelNow.com. See Ex.10A

• ITN/Get There. See Ex.12A

Preview Travel. See Ex. 13A

• Tobin. See Ex.17A

• Fields. See Ex.18A

• Arnold. See Ex.23A

• SexToyexToy.com. See Ex.24A

ViaWeb Prior Art. See Ex. 43A

ShopSite Prior Art. See Ex. 44A

The combination of any of those references with Saliba renders claim 8 of the '135 Patent

invalid.

Moreover, one skilled in the art would understand that Saliba could be combined with the

Digital River Secure Sales System ("Digital River SSS"). Likewise, this combination discloses

all claim limitations of the '135 Patent. See Ex. 36A.

There is motivation to combine Saliba and Digital River SSS because they are both

related to e-commerce outsourcing processes for selling products over the Internet and thus are in

the same field of endeavor. Saliba discloses an electronic financial system for providing

financial services over the Internet and includes multiple billers, a service center, and multiple

financial institutions. See Saliba at Abstract. The Digital River Secure Sales System brought

together manufacturers and dealers enabling them to sell and deliver products via the Internet

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS
BURSLIANT TO LOCAL BATENT BULE 2, 6, 14

PURSUANT TO LOCAL PATENT RULE 3-6-14

through vendor websites. *See* Exhibit 9A. Both Saliba and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Digital River SSS, Saliba can be combined with any of the following references to yield predictable results:

- Moore. See Ex.1A
- Kelley. See Ex.4A
- Wiecha. See Ex.6A
- Travelocity. See Ex.8A
- TravelNow.com. See Ex.10A
- ITN/Get There. See Ex.12A
- Preview Travel. See Ex. 13A
- Tobin. See Ex.17A
- Fields. See Ex.18A
- Arnold. See Ex.23A
- SexToy.com. See Ex.24A
- ViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

The combination of any of those references with Saliba renders claim 8 of the '135 Patent invalid.

# d. Digital River Secure Sales System ("Digital River SSS")

The Digital River SSS Prior Art discloses all claim limitations of the '135 Patent; and, one skilled in the art would also understand that the Digital River SSS Prior Art could be combined with U.S. Patent No. 5,870,717 ("Wiecha"). Likewise, this combination discloses all claim limitations of the '135 Patent. See Ex. 38A.

According to Plaintiff's Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River SSS Prior Art with Wiecha '717 because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River SSS brought together

manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 9A. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. See Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River SSS and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Additionally, and for the reasons stated above with respect to Wiecha, the DR SSS Prior Art can be combined with any of the following references to yield predictable results:

- Moore. See Ex.1A
- Kelley. See Ex.4A
- Travelocity. See Ex.8A
- TravelNow.com. See Ex.10A
- ITN/Get There. See Ex.12A
- Preview Travel. See Ex. 13A
- Tobin. See Ex.17A
- Fields. See Ex.18A
- Arnold. See Ex.23A
- SexToy.com. See Ex.24A
- Saliba. See Ex.31A
- ViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

The combination of any of those references with the DR SSS Prior Art renders claim 8 of the '135 Patent invalid.

#### e. SexTov

SexToy discloses "capturing a look and feel description associated with a host website," as that term is apparently construed by Plaintiff<sup>10</sup>. See Ex. 24A, at 8(a). To the extent the

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

<sup>&</sup>lt;sup>10</sup> Defendants' invalidity position regarding the "capturing" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct.

capturing element or any other claim element is argued or found not to be adequately disclosed in SexToy, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields '655 with the teachings of SexToy to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of SexToy. For example, SexToy teaches capturing a look and feel description associated with a host website when the host website operator emailed to dml@sextoy.com or faxed to (617) 666-3421 the promote your own sextoy site page. See Ex. 24A. Similarly, Fields teaches different techniques for capturing a look and feel description associated with a host website. See Ex. 18A, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Fields, and to combine such teachings with the teachings of SexToy to arrive at the alleged invention recited in the claims of the '135 Patent. See Ex. 40A.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine SexToy with Fields '655 because both references teach capturing the look and feel descriptions of a host website. *KSR*, 550 U.S. at 402-403 ("When there is a design need or market pressure to solve a problem and there are a finite number of identified, predictable solutions, a person of ordinary skill in the art has good reason to pursue the known options within his or her technical grasp').

Moreover, SexToy discloses a "host website," an "e commerce supported page," and a "selected commerce object." To the extent the host website, the e commerce supported page, the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in SexToy, it would have been obvious to one of ordinary skill in the art to combine

the teachings of Saliba '278 with the teachings of SexToy to meet that claim limitation of the

'135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of

Saliba with the teachings of SexToy. For example, SexToy teaches a process and system that

where adult webmasters (i.e., affiliates) set up, customize, and brand their own sex toy stores

with Convergence, Inc. handling billing, fulfillment, the shipping (via a third party), and

customer service. See Ex. 24A. Similarly, Saliba teaches an e-commerce outsourcing process

related to systems and methods for presenting electronic bills to customers of a financial

institution, such as a bank. The bank's Web server links to the service center's server without

exposing this transfer to the customer. The customer still believes that he/she is connected to and

communicating with the bank's Web site. A new Web page that incorporates the customer's bills

is then presented to the customer. See Ex. 31A at 8(b). Accordingly, one of ordinary skill in

the art would be motivated to combine the teaching of Saliba with the teaching of SexToy to

arrive at the alleged invention recited in the claims of the '135 Patent because it would enable a

sale to be completed using an e commerce support page without the buyer knowingly leaving the

affiliate's site. Sernaker, 702 F.2d at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to

combine SexToy with Saliba because both references teach a method and system where a host

website uses an e commerce outsource provider to provide goods or services on the host website.

KSR at 402-403.

Additionally, and for the reasons stated above with respect to Saliba and Fields, SexToy

can be combined with any of the following references to yield predictable results:

A host website, an ecommerce outsource provider, and a merchant's goods, etc.

• Travelocity. See Ex. 8A

• Digital River. See Ex. 9A

• TravelNow.com. See Ex. 10A

The combination of any of these references with SexToy renders claim 8 of the '135 Patent invalid.

#### f. IBM

IBM discloses "capturing a look and feel description associated with a host website," as that term is apparently construed by Plaintiff<sup>11</sup>. *See* Ex. 27A, at 8(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields '655 with the teachings of IBM to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of IBM. For example, IBM teaches capturing a look and feel description when a script that dynamically generates the IBM Ordering website was written or when the e commerce support page was dynamically generated by the script on December 20, 1996. *See* IBM; Ex. 27A.

<sup>&</sup>lt;sup>11</sup> Defendants' invalidity position regarding the "capturing" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct.

Similarly, Fields teaches various techniques for capturing a look and feel description associated with a host website. *See* Ex. 18A, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Fields, and to combine such teachings with the teachings of IBM to arrive at the alleged invention recited in the claims of the '135 Patent. See Ex. 42A.

Alternatively, to one of ordinary skill in the art, it would have been obvious to try to combine IBM with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR* at 402-403.

Moreover, IBM discloses a "host website," an "e commerce supported page," and a "selected commerce object." To the extent the host website, the e commerce supported page, the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Saliba '278 with the teachings of IBM to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Saliba with the teachings of IBM. For example, IBM teaches that IBM Credit Corporation provided a host website with a link to a website of IBM Corporation where the visitors could order products of one of IBM's business partners. *See* Ex. 27A. Similarly, Saliba teaches an e-commerce outsourcing process related to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank. The bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site. A new Web page that incorporates the customer's bills is then presented to the customer. See Ex. 31A at 8(b). Accordingly, one

of ordinary skill in the art would be motivated to combine the teaching of Saliba with the teaching of IBM to arrive at the alleged invention recited in the claims of the '135 Patent because it would enable a sale to be completed using an e commerce support page without the buyer knowingly leaving the affiliate's site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Saliba because both references teach a host website and a system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Fields and Saliba, IBM can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8A
- Digital River. See Ex. 9A
- TravelNow.com. See Ex. 10A
- ITN/Get There. See Ex. 12A
- Preview Travel. See Ex. 13A
- Saliba. See Ex. 31A
- ViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

Capturing the look and feel description of a host website, etc.

- Moore. See Ex. 1A
- Kelly. *See* Ex. 4A
- Digital River. See Ex. 9A
- Preview Travel. See Ex. 13A
- Tobin. See Ex. 17A
- Arnold. See Ex. 23A
- ViaWeb Prior Art. See Ex. 43A
- ShopSite Prior Art. See Ex. 44A

The combination of any of these references with IBM renders claim 8 of the '135 Patent invalid.

## g. ViaWeb Prior Art

ViaWeb prior art discloses "capturing a look and feel description associated with a host website," as that term is apparently construed by Plaintiff<sup>12</sup>. See Ex. 27A, at 8(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in ViaWeb Prior Art, it would have been obvious to one of ordinary skill in the art to combine the teachings of ShopSite Prior Art and IBM Net.Commerce with the teachings of ViaWeb Prior Art to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of ShopSite Prior Art and IBM Net.Commerce with the teachings of ViaWeb Prior Art. For example, ViaWeb Prior Art teaches software that a host can use to create an e-commerce outsourcing website to sell commerce objects. See ViaWeb Prior Art; Ex. 44A. Similarly, ShopSite Prior Art and IBM Net.Commerce teaches software that a host can use to create an e-commerce outsourcing website to sell commerce objects. See Ex. 14A and Ex. 43A. When confronted with the problem of creating an e commerce outsourcing process, one of ordinary skill in the art would have been motivated to consider the techniques taught by ShopSite Prior Art and the IBM Net.Commerce, and to combine such teachings with the teachings of ViaWeb Prior Art to arrive at the alleged invention recited in the claims of the '135 Patent. See Ex. 45A.

Alternatively, to one of ordinary skill in the art, it would have been obvious to try to combine ViaWeb Prior Art with ShopSite Prior Art and IBM Net.Commerce because both references teach capturing the look and feel descriptions of a host website. *KSR* at 402-403.

-

Defendants' invalidity position regarding the "capturing" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct.

Additionally, and for the reasons stated above with respect to ShopSite Prior Art and IBM Net.Commerce, ViaWeb Prior Art can be combined with any of the following references to yield predictable results:

- Travelocity. See Ex. 8A
- Digital River. See Ex. 9A
- TravelNow.com. See Ex. 10A
- ITN/Get There. See Ex. 12A
- Preview Travel. See Ex. 13A
- Saliba. See Ex. 31A
- Moore. See Ex. 1A
- Kelly. See Ex. 4A
- Digital River. See Ex. 9A
- Preview Travel. See Ex. 13A
- Tobin. See Ex. 17A
- Arnold. See Ex. 23A

The combination of any of these references with ViaWeb Prior Art renders claim 8 of the '135 Patent invalid.

## C. Additional Prior Art

Defendants are investigating additional prior art, including commercial software programs, and are attempting to obtain related documentation and information through discovery. For those reasons, Defendants reserve the right to amend and supplement this disclosure with additional prior art as needed.

# D. 35 U.S.C. § 112

As discussed below and in Exhibit 33A, asserted claim 8 of the '135 Patent is invalid for failure to comply with the definiteness and enablement requirements of 35 U.S.C. § 112. In addition, claim 8 is invalid under 35 U.S.C. § 112, ¶1, for lack of an adequate written description.

#### 1. Claim 8 is Indefinite

Claim 8 of the '135 Patent fails to particularly point out and distinctly claim the subject matter which the applicant regards as his invention. As such, claim 8 is invalid under 35 U.S.C. § 112, ¶2 as indefinite. Attached as Amended Exhibit 33A is a chart specifically identifying the § 112 indefiniteness issues.

## 2. Claim 8 is Not Enabled

# a. The "capturing" Limitation

The specification of the '135 patent does not provide disclosure sufficient to enable a person of ordinary skill in the art to practice the claimed invention without undue experimentation. In particular, claim element 8(a) is not enabled. Claim element 8(a) recites:

a) capturing a look and feel description associated with a host website;

The parties have agreed that the term "capturing" be construed to mean "automatically, by a party other than the host, retrieving elements from the host website." [Claim Const. Order, DI 309, at 17-18.] There is no disclosure within the '135 patent that would inform a person of ordinary skill how to implement the claimed automatic capture of a look and feel description associated with a host website. Instead, the '135 discloses only the passive capture of Header HTML and Footer HTML. [See '135 at Fig. 6, Steps 2 and 3]. As the patent further makes clear, the capturing of these elements is not "automatic" as required under the agreed construction, but rather require the owner of the host website to manually enter the HTML code for these elements using the Host Manager interface. [See '135 at Figs. 12 and 13]. Moreover, the disclosed capturing is not performed "by a party other than the host" as required under the agreed construction. For example, the Host Manager interface explains that the capture of the Header element requires the manager of the host website to manually provide the Header HTML:

"IN STEP 2 AND STEP 3, **YOU WILL BE PROVIDING THE HTML CODE** DEFENDANTS' AMENDED INVALIDITY CONTENTIONS PURSUANT TO LOCAL PATENT RULE 3-6-24

COMPRISING THE TEXT, IMAGES, AND LINKS) THAT WILL APPEAR ON YOUR STOREFRONT. FOR THESE STEPS, YOU WILL NEED TO BE VIEWING THE SOURCE HTML CODE OF THE PAGE YOU ENTERED IN STEP 1." ['135 at Fig. 12, step 2]

Similarly, capture of the footer element requires manual entry of data by the manager of the host website through the host manager interface:

"JUST LIKE IN STEP 2, **YOU WILL BE PROVIDING THE HTML CODE** COMPRISING THE TEXT, IMAGES, AND LINKS) THAT WILL APPEAR ON YOUR STOREFRONT. FOR THESE STEPS, YOU WILL NEED TO BE VIEWING THE SOURCE HTML CODE OF THE PAGE YOU ENTERED IN STEP 1." ['135 at Fig. 13, step 3].

A person of ordinary skill in the art of web commerce would not understand these manual data entry steps through the host manager interface to be "automatic" capture "by a party other than the host. Indeed, the '135 patent is entirely lacking in disclosure sufficient to enable a person of ordinary skill to implement the claimed automatic capture of look and feel description. Nor would a person of ordinary skill at the time the '135 patent was filed have been aware of such automatic capture methods. This fact is supported by both the prior art as well as the presently accused state-of-the art products, none of which are able to implement such automatic capture of look and feel description of a host webpage.

Accordingly, Claim 8 of the '135 patent is invalid under 35 U.S.C. § 112 for lack of enablement. Defendants reserve the right to amend this disclosure to the extent that DDR asserts and/or the Court adopts additional claim constructions that would render the claims invalid under 35 U.S.C. § 112.

## b. The "link" Limitation

The specification of the '135 patent does not provide disclosure sufficient to enable a person of ordinary skill in the art to practice the claimed invention without undue

experimentation. In particular, the "link" limitation of independent claim 8 is not enabled.

Claim 8 recites a "link" which "correlated with a commerce object". The claim requires that the host website include such a link.

In its claim construction order, the Court substantially adopted Plaintiff's proposed construction of this term, construing the term "link" to mean "a hypertext, text, banner, logo, graphic, or other element that permits a user to navigate from one web location to another web location by activating that element." [DI 309 at 17] In accepting this definition, the Court rejected Defendants' proposal that the claimed "link" must be limited to an HTML link. There is no enabling disclosure in the '135 patent specification that would support a system wherein the host webpage includes "non-HTML" links, as would be permitted under the broad scope of the Court's construction. Indeed, the entire disclosure related to the "Link Generator" is specifically premised upon the use of HTML code for generating and embedding the link. [See '135 at 13:45-14:20]. There is no disclosure that would enable a person of ordinary skill to generate and embed "non-HTML" links. Accordingly, for at least this additional reason, independent Claim 8 is invalid under 35 U.S.C. § 112 for lack of enablement.

## E. Invalidity Under 35 U.S.C. §§ 101 and 116

Although not required to be disclosed under Local Patent Rule 3-3, Defendants reserve the right to argue that one or more of the asserted claims are invalid under (1) 35 U.S.C. § 101 as being directed to non-statutory subject matter and/or § 116 as having improper inventorship.

Under Section 101, there are three broad exceptions to patentability including "laws of nature, physical phenomena, and abstract ideas." *See Diamond v. Chakrabarty*, 447 U.S. 303, 308-09 (1980). Thus, a claimed process is unpatentable or invalid under 35 U.S.C. § 101 if it

merely claims an abstract idea. Defendants assert that process Claim 8 of the '135 Patent is patentable because the claim is directed to abstract ideas and does not meet the requirements of 35 U.S.C. § 101.

The Supreme Court attempted to clarify patentability under Section 101 in its recent *Bilski v. Kappos* decision. 130 S.Ct. 3218 (2010). In this opinion, the Court followed years of precedent in holding that the process claims at issue were unpatentable because they attempted to patent the use of an abstract idea. *See id.* at 3222. Claim 8 of the '135 Patent is likewise directed to abstract ideas that should not receive patent protection. Further, the Court analyzed the machine-or-transformation test that was introduced by the Federal Circuit for determining whether certain inventions were patentable. The Court held that the machine-or-transformation test "may be a useful and important clue or investigative tool, [however] it is not the sole test for deciding whether an invention is a patent-eligible 'process' under § 101." *Id.* In addition to claiming an abstract idea, claim 8 fails the machine-or-transformation test.

The '135 Patent attempts to patent abstract ideas. The asserted independent process claim in the '135 Patent (Claim 8) attempts to claim an "e-commerce outsourcing process." This "e-commerce outsourcing process" is nothing more than an abstract manner of doing business on a network, such as the Internet. The claims resemble the prior methods of outsourcing the marketing, distribution, and sale of a product. For example, a product may be produced by one company, but marketed, distributed, and sold by another. An analysis of claim 8 proves that the claim is merely an abstract manner of doing business.

Claim 8 of the '135 Patent recites:

8. An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:

a) capturing a look and feel description associated with a host website;

b) providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link

correlates the host website with a selected commerce object; and

c) upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel

description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.

These steps are abstract ideas or manners of doing business that do not meet the

requirements of Section 101. Any alleged structural limitations are insignificant post-solution

activities that do not apply meaningful limitations to the claims. Thus, claim 8 of the '135

Patent is unpatentable or invalid under 35 U.S.C. § 101.

Claim 8 also fails the machine-or-transformation test. Under this test, a process may be

patentable if it (1) "is tied to a machine or apparatus or (2) transforms a particular article into a

different state or thing." Bilski, 130 S.Ct. at 3225. Claim 8 is not tied to a particular machine or

apparatus because any alleged structural limitations, including brief recitations of a computer or

website, do not meaningfully limit the claims. The claims attempt to preempt the use of the

underlying abstract idea or method of doing and business, and thus have the practical effect of

being a patent on the idea itself. Further, nothing in these claims "transforms a particular article

into a different state or thing." The claims fail to recite a particular article or the production of

an article, much less an article that underwent transformation. Thus, Claim 8 of the '135 Patent

fails both prongs of the machine-or-transformation test.

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

## III.U.S. PATENT 6,993,572

## A. Identification of Prior Art

Pursuant to Patent Rule 3-3(a), Defendants identify the following prior art ("the '572 Patent's Invalidating Art") now known to them to anticipate claims 13, 17, 20, 21 and 23 of the '572 Patent, either expressly or inherently as understood by a person having ordinary skill in the art, at least under the claim constructions apparently adopted by DDR as based on review of DDR's Amended infringement contentions. In some instances, Defendants treated certain prior art as anticipatory where certain elements are inherently present based on DDR's apparent claim construction in its Amended infringement contentions.

The following patents and publications are prior art under at least 35 U.S.C. §§ 102(a), (b), (e), (f), and/or (g), and the charts found in Exhibits 1B-10B, 12B-13B, 17B-32B and 43B-44B specify the invalidity basis for such patents and publications.

|     | PRIOR ART PATENTS  | Filing<br>Date   | Issue<br>Date                     | Exh. |

#### B. Obviousness

Defendants further contend under P.R. 3-2(b) that claims 13, 17, 20, 21 and 23 of the '572 Patent are invalid as obvious under 35 U.S.C. § 103. Defendants incorporate, as if fully set forth herein, Section IV.D.2.b, *infra*, related to obviousness.

## 1. Claim Overview: 13, 17, 20, 21 and 23

In addition to these overarching factors that render the alleged invention obvious in light of the prior art, the following discussion provides more particular analysis tailored to the various asserted claims.

## a. Claims 13 and 17

As mentioned above, by the asserted priority date of the alleged invention, persons of skill in the art were already familiar with e-commerce outsourcing processes including host website communication with a visitor website and at least in the context of frames made such a system transparent. Storing the look and feel description of a webpage was also well-established at the time. Moreover, in order to retrieve that information, the storage location had to be coupled to the potential webserver. Host websites frequently were given specific links to include

on their webpages which by the very nature of the Internet resulted in a second page being served to the user upon activation and such links often resulted in an e-commerce related webpage being returned to the user. It was also well known to return such e-commerce supported pages from a third-party but yet maintain a particular visual appearance to the user.

## b. Claims 20 and 21

It was well known in the art that a webpage could be identified by special color schemes (HTML specifically allowed for this) or logos or customized footers, headers, or sidebars.

Associating such portions of a webpage with defining the appearance would have been well known to one of skill in the art.

## c. Claim 23

As discussed above, it was often the case that a link provided on a host webpage would specifically target a particular e-commerce object or product category. For example, a specific item for purchase or a listing of items within a particular category (airplanes, adult products, stock quotes, etc.) Moreover, one of skill in the art would have easily known that if a user requested a link about a specific commerce object, more information could be returned with the second page request. Accepting search parameters was also well known in the art and a fundamental feature of HTMLs GET and POST requests. One of skill in the art would have known to combine the common elements of HTML within a link to define a search for a specialized product or e-commerce object.

## 2.35 U.S.C. § 103 Combinations

In addition to the above discussion, certain particular combinations bear further explanation:

- Tobin, Fields and Saliba [Ex. 34B]
- Travelocity and Wiecha [Ex. 35B]

- Saliba and DR SSS [Ex. 36B]
- Saliba and Moore [Ex. 39B]
- DR SSS and Wiecha [Ex. 38B]
- SexToy, Saliba and Fields [Ex. 40B]
- IBM, Saliba and Fields [Ex. 42B]
- ViaWeb Prior Art and ShopSite Prior Art and IBM Net.Commerce Prior Art [Ex. 45B]

# a. U.S. Patent No. 6,141,666 ("Tobin")

Tobin discloses storing a "look and feel description" as required by claims 13 and 17. See Ex. 17B, at 13(a). To the extent the storing a "look and feel description element or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Tobin with the teachings of Fields '655 to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields '655 with the teachings of Tobin. See Ex. 34B. For example, Tobin teaches storing the look and feel description of the host website to "to take advantage of the consumers [sic] familiarity with the participating Internet site's position in the marketplace, the consumer's trust in the participating Internet site's established brand name, or the consumer's existing relationship with the participating Web site." Column 5, lines 18-29 of Tobin; see Ex. 17B. Similarly, Fields '655 also teaches techniques for storing a look and feel description associated with a host website. See Ex. 7B, at 13(a). Accordingly, when confronted with the problem of storing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the techniques taught by Fields '655, and to combine such teachings with the teachings of Tobin to arrive at the alleged invention recited in the claims of the '572 Patent. See Ex. 34B.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with See Ex. 34B. because both references teach storing the look and feel descriptions of a host website. *KSR at* 402-403.

Moreover, Tobin discloses a "host website," a "second website," (or "a composite web page") and a "commerce object." To the extent the host website, the second website (or composite we page), the commerce object, or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Saliba '278 with the teachings of Tobin to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Saliba with the teachings of Tobin. For example, Tobin teaches an Internet site, providing floral and gift products (of FTD, Nature's Bloom, Hickory Farms, etc.) through web site pages that are customized to the requirements of the hosts. See Ex. 17B. Similarly, Saliba teaches an ecommerce outsourcing process related to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank. The bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site. A new Web page that incorporates the customer's bills is then presented to the customer. See Ex. 31B. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Saliba with the teaching of Tobin to arrive at the alleged invention recited in the claims of the '572 Patent because it would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate's site. Sernaker at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Saliba because both references teach a method and system where a host

website uses an e commerce outsource provider to sell goods on the host website. *KSR at* 402-403.

Additionally, and for the reasons stated above with respect to Fields and Saliba, Tobin can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8B
- Digital River. See Ex. 9B
- TravelNow.com. See Ex. 10B
- ITN/Get There. See Ex. 12B
- Preview Travel. See Ex. 13B
- Saliba. See Ex. 31B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

# Capturing the look and feel description of a host website, etc.

- Moore. See Ex. 1B
- Kelly. See Ex. 4B
- Digital River. See Ex. 9B
- Preview Travel. See Ex. 13B
- SexToy. See Ex. 24B
- Arnold. See Ex. 23B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

The combination of any of these references with Tobin renders claims 13, 17, 20, 21 and 23 of the '572 Patent invalid.

## b. Travelocity

Travelocity discloses storing a "look and feel description" associated with a host website," as required by claims 13 and 17. *See* Ex. 8B, at 13(a). To the extent the storing a look and feel description element or any other claim element is argued or found not to be adequately disclosed by Travelocity, it would have been obvious to one of ordinary skill in the art to combine the teachings of Wiecha '717 with the teachings of Travelocity to meet that claim limitation of the asserted patents because a teaching, suggestion, or motivation exists to combine

the teachings of Wiecha with the teachings of Travelocity. See Ex. 35B. For example,

Travelocity teaches that a visitor to Yahoo! Travel could select airline tickets, car rentals, and

hotel reservations via the co-branded page served by SABRE Interactive. See Ex. 8B. Further,

Travelocity teaches serving to the visitor computer from the second website page with a look and

feel corresponding to the stored look and feel description of the host website associated with the

provided link and with content based on the commerce object associated with the provided link.

See Ex. 8B, at element 13(b). Wiecha '717 discloses a corporate computer network for ordering

products from numerous electronic catalogs that are accessible by employees of that corporation.

See Wiecha at Abstract. The employees may research, select, and process the purchase of the

products provided in the electronic catalogs. Both Travelocity and Wiecha disclose electronic

commerce systems that are directed to efficiently selling commerce objects through a computer

network.

Accordingly, one of ordinary skill in the art would be motivated to combine the teaching

of Wiecha with the teaching of Travelocity to arrive at the alleged invention recited in the claims

of the asserted patents because it would enable an e-commerce provider to provide a host website

with a hyperlink to a co-branded page, where the link is correlated with a selected commerce

object such as air, hotel, or car reservation.

Additionally, and for the reasons stated above with respect to Wiecha, Travelocity can be

combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- IBM. See Ex. 27B
- Digital River. See Ex. 9B
- TravelNow.com. See Ex. 10B
- ITN/Get There. See Ex. 12B
- Preview. See Ex. 13B
- Saliba. See Ex. 31B
- ViaWeb Prior Art. See Ex. 43B

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-37

• ShopSite Prior Art. See Ex. 44B

The combination of any of these references with Wiecha renders claims 13, 17, 20, 21 and 23 of the '572 Patent invalid.

c. U.S. Patent Application No. 09/995,278 ("Saliba")

Saliba discloses all limitations of the '572 Patent; and, one skilled in the art would also understand that Saliba could be combined with U.S. Patent No. 6,330,575 ("Moore"). Likewise, this combination discloses all claim limitations of the '572 Patent. See Ex. 39B

There is motivation to combine Saliba and Moore because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Both Saliba and Moore disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Moore, Saliba can be combined with any of the following references to yield predictable results:

- Kelley. See Ex.4B
- Wiecha. See Ex.6B
- Travelocity. See Ex.8B
- DR SSS Prior Art. See Ex.9B
- TravelNow.com. See Ex.10B
- ITN/Get There. See Ex.12B
- Preview Travel. See Ex. 13B
- Tobin. See Ex.17B
- Fields. See Ex.18B
- Arnold. See Ex.23B

• SexToy.com. See Ex.24B

• ViaWeb Prior Art. See Ex. 43B

• ShopSite Prior Art. See Ex. 44B

The combination of any of those references with Saliba renders claims 13, 17, 20, 21 and 23 of the '572 Patent invalid.

Moreover, one skilled in the art would understand that Saliba could be combined with the Digital River Secure Sales System ("Digital River SSS"). Likewise, this combination discloses all claim limitations of the '572 Patent. See Ex. 36B.

There is motivation to combine Saliba and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet has multiple billers, a service center, multiple financial institutions. *See* Saliba at Abstract. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9B. Both Saliba and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Digital River SSS, Saliba can be combined with any of the following references to yield predictable results:

• Moore. See Ex.1B

• Kelley. See Ex.4B

• Wiecha. See Ex.6B

• Travelocity. See Ex.8B

• TravelNow.com. See Ex.10B

• ITN/Get There. See Ex.12B

• Preview Travel. See Ex. 13B

• Tobin. See Ex.17B

• Fields. See Ex.18B

• Arnold. See Ex.23B

• SexToy.com. See Ex.24B

ViaWeb Prior Art. See Ex. 43B

• ShopSite Prior Art. See Ex. 44B

The combination of any of those references with Saliba renders claims 13, 17, 20, 21 and 23 of the '572 Patent invalid.

d. Digital River Secure Sales System ("Digital River SSS")

The Digital River SSS Prior Art discloses all claim limitations of the '572 Patent (See Ex. 09B); and, one skilled in the art would also understand that the Digital River SSS Prior Art could be combined with U.S. Patent No. 5,870,717 ("Wiecha"). Likewise, this combination discloses all claim limitations of the '572 Patent. See Ex. 38B.

According to Plaintiff's Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River SSS Prior Art with Wiecha '717 because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River SSS brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9B. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See* Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River SSS and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Additionally, and for the reasons stated above with respect to Wiecha, the DR SSS Prior Art can be combined with any of the following references to yield predictable results:

- Moore. See Ex.1B
- Bollay. See Ex.3B

- Kelley. See Ex.4B
- Travelocity. See Ex.8B
- TravelNow.com. See Ex.10B
- ITN/Get There. See Ex.12B
- Preview Travel. See Ex. 13B
- Tobin. See Ex.17B
- Fields. See Ex.18B
- Arnold. See Ex.23B
- SexToy.com. See Ex.24B
- Saliba. See Ex.31B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

The combination of any of those references with the DR SSS Prior Art renders claims 13, 17, 20, 21 and 23 of the '572 Patent invalid.

## e. **Sextoy**

The Sextoy prior art discloses storing a "look and feel description" associated with a host website," as required by claims 13 and 17. *See* Ex. 24B, at 1(a). To the extent the storing a look and feel element or any other claim element is argued or found not to be adequately disclosed in SexToy, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields '655 with the teachings of SexToy to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of SexToy.

For example, SexToy teaches storing a look and feel description associated with a host website when the host website operator emailed to dml@sextoy.com or faxed to (617) 666-3421 the promote your own sextoy site page. See Ex. 24B. Similarly, Fields teaches different techniques for storing a look and feel description associated with a host website. See Ex. 18B, at 13(a). When confronted with the problem of storing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the

techniques taught by Fields, and to combine such teachings with the teachings of SexToy to arrive at the alleged invention recited in the claims of the '572 Patent. See Ex. 40B.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine SexToy with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR at* 402-403.

Moreover, SexToy discloses a "host website," an "second website," (or "a composite web page") and a "commerce object." To the extent the host website, the second website (or composite we page), the commerce object, or any other claim element is argued or found not to be adequately disclosed in SexToy, it would have been obvious to one of ordinary skill in the art to combine the teachings of the published Saliba '278 application with the teachings of SexToy to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Saliba with the teachings of SexToy. For example, SexToy teaches a process and system that where adult webmasters (i.e., affiliates) set up, customize, and brand their own sex toy stores with Convergence, Inc. handling billing, fulfillment, the shipping (via a third party), and customer service. See Ex. 24B. Similarly, Saliba teaches an e-commerce outsourcing process related to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank. The bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site. A new Web page that incorporates the customer's bills is then presented to the customer. See Ex. 31B. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Saliba with the teaching of SexToy to arrive at the alleged invention recited in the claims of the '572 Patent because it

would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate's site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine SexToy with Saliba because both references teach a method and system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR at* 402-403.

Additionally, and for the reasons stated above with respect to Saliba and Fields, SexToy can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8B
- Digital River. See Ex. 9B
- TravelNow.com. See Ex. 10B
- ITN/Get There. See Ex. 12B
- Preview Travel. See Ex. 13B
- Saliba. See Ex. 31B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

Storing the look and feel description of a host website, etc.

- Moore. See Ex. 1B
- Kelly. See Ex. 4B
- Digital River. See Ex. 9B
- Preview Travel. See Ex. 13B
- Tobin. See Ex. 17B
- Arnold, See Ex. 23B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

The combination of any of these references with SexToy renders claims 13, 17, 20, 21 and 23 of the '572 Patent invalid.

f. **IBM** 

IBM discloses storing a "look and feel description" associated with a host website," as required by claims 13 and 17. See Ex. 27B, at 13(a). To the extent the storing a "look and feel description" element or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields '655 with the teachings of IBM to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of IBM. For example, IBM teaches storing a look and feel description when a script that dynamically generates the IBM Ordering website was written or when the second website (or composite web page) was dynamically generated by the script on December 20, 1996. See IBM; Ex. 27B. Similarly, Fields '655 teaches various techniques for storing a look and feel description associated with a host website. See Ex. 18B. When confronted with the problem of storing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the techniques taught by Fields, and to combine such teachings with the teachings of IBM to arrive at the alleged invention recited in the claims of the '572 Patent. See Ex. 42B.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Fields because both references teach storing the look and feel descriptions of a host website. *KSR* at 402-403.

Moreover, IBM discloses a "host website," a "second website," (or "a composite web page") and a "commerce object." To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of the published Saliba '278 application with the teachings of

IBM to meet that claim limitation of the '572 Patent because a teaching, suggestion, or

motivation exists to combine the teachings of Saliba with the teachings of IBM. For example,

IBM teaches that IBM Credit Corporation provided a host website with a link to a website of

IBM Corporation where the visitors could order products of one of IBM's business partners. See

Ex. 27B. Similarly, Saliba teaches an e-commerce outsourcing process related to systems and

methods for presenting electronic bills to customers of a financial institution, such as a bank.

The bank's Web server links to the service center's server without exposing this transfer to the

customer. The customer still believes that he/she is connected to and communicating with the

bank's Web site. A new Web page that incorporates the customer's bills is then presented to the

customer. See Ex. 31B. Accordingly, one of ordinary skill in the art would be motivated to

combine the teaching of Saliba with the teaching of IBM to arrive at the alleged invention recited

in the claims of the '572 Patent because it would enable a sale to be completed using a second

website (or composite web page) without the buyer knowingly leaving the affiliate's site.

Sernaker at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to

combine IBM with Saliba because both references teach a host website and a system where a

host website uses an e commerce outsource provider to sell goods on the host website. KSR at

402-403.

Additionally, and for the reasons stated above with respect to Fields and Saliba, IBM can

be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

• Travelocity. See Ex. 8B

• Digital River. See Ex. 9B

• TravelNow.com. See Ex. 10B

• ITN/Get There. See Ex. 12B

• Preview Travel. See Ex. 13B

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-45

- Saliba. See Ex. 31B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

# Storing the look and feel description of a host website, etc.

- Moore. See Ex. 1B
- Kelly. See Ex. 4B
- Digital River. See Ex. 9B
- Preview Travel. See Ex. 13B
- Tobin. See Ex. 17B
- Arnold. See Ex. 23B
- ViaWeb Prior Art. See Ex. 43B
- ShopSite Prior Art. See Ex. 44B

The combination of any of these references with IBM renders claims 13, 17, 20, 21, and 23 of the '572 Patent invalid.

## g. ViaWeb Prior Art

ViaWeb Prior Art discloses "capturing a look and feel description associated with a host website," as that term is apparently construed by Plaintiff<sup>17</sup>. *See* Ex. 44B. To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in ViaWeb Prior Art, it would have been obvious to one of ordinary skill in the art to combine the teachings of ShopSite Prior Art and IBM Net.Commerce with the teachings of ViaWeb Prior Art to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of ShopSite Prior Art and IBM Net.Commerce with the teachings of ViaWeb Prior Art. For example, ViaWeb Prior Art teaches software that a host can use to create an e-commerce outsourcing system or process to sell commerce objects. *See* ViaWeb Prior Art; Ex. 44B. Similarly, ShopSite Prior Art and IBM Net.Commerce teaches software that

<sup>&</sup>lt;sup>17</sup> Defendants' invalidity position regarding the "capturing" element of claim 8 is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct.

a host can use to create an e-commerce outsourcing system or process to sell commerce objects. *See* Ex. 14B and Ex. 43B. When confronted with the problem of creating an e-commerce outsourcing system or process, one of ordinary skill in the art would have been motivated to consider the techniques taught by ShopSite Prior Art and the IBM Net.Commerce, and to combine such teachings with the teachings of ViaWeb Prior Art to arrive at the alleged invention recited in the claims of the '135 Patent. See Ex. 45B.

Alternatively, to one of ordinary skill in the art, it would have been obvious to try to combine ViaWeb Prior Art with ShopSite Prior Art and IBM Net. because both references teach a host website and a system where a host website uses an e-commerce outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to ShopSite Prior Art and IBM Net.Commerce, ViaWeb Prior Art can be combined with any of the following references to yield predictable results:

- Travelocity. See Ex. 8B
- Digital River. See Ex. 9B
- TravelNow.com. See Ex. 10B
- ITN/Get There. See Ex. 12B
- Preview Travel. See Ex. 13B
- Saliba. See Ex. 31B
- Moore. See Ex. 1B
- Kelly. See Ex. 4B
- Digital River. See Ex. 9B
- Preview Travel. See Ex. 13B
- Tobin. See Ex. 17B
- Arnold. See Ex. 23B

The combination of any of these references with IBM renders claims 13, 17, 20, 21, and 23 of the '572 Patent invalid.

#### C. Additional Prior Art

As noted above with respect to the '135 Patent, Defendants are investigating additional prior art, including commercial software programs, and are attempting to obtain related documentation and information. For the reasons described above with respect to the '135 Patent, Defendants reserve the right to amend and supplement this disclosure with additional prior art as needed.

## D. 35 U.S.C. § 112

Asserted claims 13, 17, 20, 21 and 23 of the '572 Patent are invalid for failure to comply with either the definiteness and/or enablement requirement of 35 U.S.C. § 112. In addition, one or more of these claims are invalid under 35 U.S.C. § 112, ¶1, for lack of an adequate written description.

#### 1. Claims 13 and 17 are Indefinite

Claims 13 and 17 of the '572 Patent fail to particularly point out and distinctly claim the subject matter which the applicant regards as his invention. As such, claims 13 and 17 are invalid under 35 U.S.C. § 112, ¶2 as indefinite. Attached as Amended Exhibit 33B is a chart specifically identifying the § 112 indefiniteness issues. Dependent claims 20, 21 and 23 are each invalid as depending from an indefinite claim.

## 2. Claims 13 and 17 Are Not Enabled

The specification of the '572 patent does not provide disclosure sufficient to enable a person of ordinary skill in the art to practice the claimed invention without undue experimentation. In particular, independent claims 13 and 17 are not enabled. Each of these claims recites a "link correlated with a commerce object" limitation, requiring that the host website include such a link.

In its claim construction order, the Court substantially adopted Plaintiff's proposed

construction of this term, construing the term "link" to mean "a hypertext, text, banner, logo, graphic, or other element that permits a user to navigate from one web location to another web location by activating that element." [DI 309 at 17] In accepting this definition, the Court rejected Defendants' proposal that the claimed "link" must be limited to an HTML link. There is no enabling disclosure in the '572 patent specification that would support a system wherein the host webpage includes "non-HTML" links, as would be permitted under the broad scope of the Court's construction. Indeed, the entire disclosure related to the "Link Generator" is specifically premised upon the use of HTML code for generating and embedding the link. [See '572 at 15:10-54]. There is no disclosure that would enable a person of ordinary skill to generate and embed "non-HTML" links. Accordingly, Independent Claims 13 and 17 (as well as any claims depending therefrom) are invalid under 35 U.S.C. § 112 for lack of enablement.

# E. Invalidity Under 35 U.S.C. §§ 101 and 116

See Section II.D.2.b, supra. The same analysis applies with respect to the '572 Patent.

The asserted independent claims of the '572 Patent are claims 13 and 17. For the same reasons identified above 18, the independent claims are directed to unpatentable subject matter.

Moreover, the asserted dependent claims 20, 21 and 23 of the '572 add no meaningful limitations to the independent claims and are similarly directed to unpatentable subject matter.

-

 <sup>&</sup>lt;sup>18</sup> Independent claim 13 is a system claim with similar limitations to process claim 17.
 DEFENDANTS' AMENDED INVALIDITY CONTENTIONS
 PURSUANT TO LOCAL PATENT RULE 3-6-49

## IV. U.S. PATENT NO. 7,818,399

### A. Identification of Prior Art

Pursuant to Patent Rule 3-3(a), Defendants identify the following prior art ("the '399 Patent's Invalidating Art") now known to them to anticipate claims 1, 3, 7 and 19 of the '399 Patent, either expressly or inherently as understood by a person having ordinary skill in the art, at least under the claim constructions apparently adopted by DDR as based on review of DDR's infringement contentions. In some instances, Defendants treated certain prior art as anticipatory where certain elements are inherently present based on DDR's apparent claim construction in its infringement contentions.

The following patents and publications are prior art under at least 35 U.S.C. §§ 102(a), (b), (e), (f), and/or (g), and the charts found in Exhibits 1C-10C, 12C-13C, 17C-20C, 23C-27C, 30C-32C and 43C-44C specify the invalidity basis for such patents and publications.

|     | PRIOR ART PATENTS  | Filing<br>Date   | Issue<br>Date                     | Exh. |

#### B. Obviousness

Defendants further contend under P.R. 3-2(b) that claims 1, 3, 7 and 19 of the '399 Patent are invalid as obvious under 35 U.S.C. § 103. Defendants incorporate, as if fully set forth herein, Section D.2.b, *infra*, related to obviousness.

### 1. Claim Overview: 1, 3, 7 and 19

In addition to these overarching factors that render the alleged invention obvious in light of the prior art, the following discussion provides more particular analysis tailored to the various asserted claims.

### a. Claims 1 and 19

As mentioned above, by the asserted priority date of the alleged invention, persons of skill in the art were already familiar with e-commerce outsourcing processes for serving webpages offering commercial opportunities by dynamically generating and transmitting a second web page in response to the activation of a link by a visitor of a first web page. It was also well-established that the second web page may have visually perceptible elements from the first web page so that the visitor perceives that he did not leave the first web page. To accomplish this it was well known that pre-stored data related to the first page must be stored and later retrieved in the process of generating the second web page. Moreover, in order to retrieve that information, the storage location had to be coupled to the server. Host websites frequently were given specific links to include on their webpages which by the very nature of the Internet resulted in a second page being served to the user upon activation and such links often resulted in an e-commerce related webpage being returned to the user. In these e-commerce

outsourcing processes it was common that three parties were involved in the sale of a commerce object over the Internet – a merchant, an outsource provider, and the owner of the first web page.

#### b. Claim 3

It was well known in the art that a webpage could include visually perceptible elements, including navigational links, as required by claim 3. (HTML specifically allowed for including navigational links on a webpage). Associating such navigational links, embedded in a webpage, with the visually perceptible elements on the page would have been well known to one of skill in the art.

### c. Claim 7

It was well known in the art that e-commerce web pages included electronic catalog information having a number of commercial offerings and a manner to search for desired commercial offerings through a hierarchical set of navigation links. This configuration for electronic catalogs on the Internet was well known to one of skill in the art.

# 2.35 U.S.C. § 103 Combinations

In addition to the above discussion, certain particular combinations bear further explanation:

- Tobin, Fields and Saliba [Ex. 34C]
- Travelocity and Wiecha [Ex. 35C]
- Saliba and DR SSS [Ex. 36C]
- Saliba and Moore [Ex. 39C]
- DR SSS and Wiecha [Ex. 38C]
- SexToy, Saliba and Fields [Ex. 40C]
- IBM, Saliba and Fields [Ex. 42C]
- ViaWeb Prior Art and ShopSite Prior Art and IBM Net.Commerce Prior Art [Ex. 45C]

## a. U.S. Patent No. 6,141,666 ("Tobin")

Tobin discloses "the selected merchant, the outsource provider, and the owner of the first web page" are each third parties with respect to one other, as required by claims 1 and 19. See Ex. 17C, at 1(a) and 19(a). To the extent the this element or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of the published Saliba '278 application with the teachings of Tobin to meet that claim limitation of the '399 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Saliba with the teachings of Tobin. See Ex. 34C. For example, Tobin teaches an Internet site, providing floral and gift products (of FTD, Nature's Bloom, Hickory Farms, etc.) through web site pages that are customized to the requirements of the hosts. See Ex. 17C. Similarly, Saliba teaches an e-commerce outsourcing process related to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank. The bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site. A new Web page that incorporates the customer's bills is then presented to the customer. See Ex. 31C. Fields teaches an outsourcing system that retrieve from a storage coupled to the server pre-stored data associated with the source page. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Saliba '278 and Fields' 655 with the teaching of Tobin to arrive at the alleged invention recited in the claims of the '399 Patent because it would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate's site. Sernaker at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Saliba and Fields because all three references teach a method and system

where a host website uses an outsource provider to sell goods on the host website. *KSR at* 402-403.

Additionally, and for the reasons stated above with respect to Saliba and Fields, Tobin can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8C
- Digital River. See Ex. 9C
- TravelNow.com. See Ex. 10C
- ITN/Get There. See Ex. 12C
- Preview Travel. See Ex. 13C
- Saliba. See Ex. 31C
- ViaWeb Prior Art. See Ex. 43C
- ShopSite Prior Art. See Ex. 44C

The combination of any of these references with Tobin renders claims 1, 3, 7 and 19 of the '399 Patent invalid.

## b. Travelocity

Travelocity discloses "the selected merchant, the outsource provider, and the owner of the first web page" are each third parties with respect to one other, as required by claims 1 and 19 of the '399 patent. *See* Ex. 8C, at 1(a) and 19(a). To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in Travelocity, it would have been obvious to one of ordinary skill in the art to combine the teachings of Wiecha '717 with the teachings of Travelocity to meet that claim limitation of the asserted patents because a teaching, suggestion, or motivation exists to combine the teachings of Wiecha with the teachings of Travelocity. See Ex. 35C. For example, Travelocity teaches that a visitor to Yahoo! Travel could select airline tickets, car rentals, and hotel reservations via the co-branded page served by SABRE Interactive. *See* Ex. 8C. Further, Travelocity teaches serving to the visitor computer from the second website

page with a look and feel corresponding to the captured look and feel description of the host

website associated with the provided link and with content based on the commerce object

associated with the provided link. Wiecha '717 discloses a corporate computer network for

ordering products from numerous electronic catalogs that are accessible by employees of that

corporation. See Wiecha at Abstract. The employees may research, select, and process the

purchase of the products provided in the electronic catalogs. Both Travelocity and Wiecha

disclose electronic commerce systems that are directed to efficiently selling commerce objects

through a computer network.

Accordingly, one of ordinary skill in the art would be motivated to combine the teaching

of Wiecha with the teaching of Travelocity to arrive at the alleged invention recited in the claims

of the asserted patents because it would enable an e-commerce provider to provide a host website

with a hyperlink to a co-branded page, where the link is correlated with a selected commerce

object such as air, hotel, or car reservation.

Additionally, and for the reasons stated above with respect to Wiecha, Travelocity can be

combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

IBM. See Ex. 27C

Digital River. See Ex. 9C

TravelNow.com. See Ex. 10C

• ITN/Get There. See Ex. 12C

Preview. See Ex. 13C

Saliba. See Ex. 31C

ViaWeb Prior Art. See Ex. 43C

ShopSite Prior Art. See Ex. 44C

The combination of any of these references with Wiecha renders claims 1, 3, 7 and 19 of

the '399 Patent invalid.

U.S. Patent Application No. 09/995,278 ("Saliba") c.

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-57

Saliba discloses all limitations of the '399 Patent; and, one skilled in the art would also

understand that Saliba could be combined with U.S. Patent No. 6,330,575 ("Moore"). Likewise,

this combination discloses all claim limitations of the '399 Patent. See Ex. 39C.

There is motivation to combine Saliba and Moore because they are both related to e-

commerce outsourcing processes for selling products over the Internet and thus are in the same

field of endeavor. Saliba discloses an electronic financial system for providing financial services

over the Internet and includes multiple billers, a service center, and multiple financial

institutions. See Saliba at Abstract. Moore discloses development applications for a merchant to

utilize in the design of its Web page or Web site that allow the merchant to become part of a

distributed Internet commerce system for selling its products. See Moore at Abstract. Both

Saliba and Moore disclose electronic commerce systems that are directed to offering commerce

objects over the Internet.

Additionally, and for the reasons stated above with respect to Moore, Saliba can be

combined with any of the following references to yield predictable results:

• Kelley. See Ex.4C

• Wiecha. See Ex.6C

• Travelocity. See Ex.8C

• DR SSS Prior Art. See Ex.9C

• TravelNow.com. See Ex.10C

ITN/Get There. See Ex.12C

Preview Travel. See Ex. 13C

Tobin. See Ex.17C

• Fields. See Ex.18C

• SexToy.com. See Ex.24C

ViaWeb Prior Art. See Ex. 43C

ShopSite Prior Art. See Ex. 44C

The combination of any of those references with Saliba renders claims 1, 3, 7 and 19 of

the '399 Patent invalid.

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-58

Page 406

Moreover, one skilled in the art would understand that Saliba could be combined with the Digital River Secure Sales System ("Digital River SSS"). Likewise, this combination discloses all claim limitations of the '399 Patent. See Ex. 36C.

There is motivation to combine Saliba and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9C. Both Saliba and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Digital River SSS, Saliba can be combined with any of the following references to yield predictable results:

- Moore. See Ex.1C
- Kelley. See Ex.4C
- Wiecha. See Ex.6C
- Travelocity. See Ex.8C
- TravelNow.com. See Ex.10C
- ITN/Get There. See Ex.12C
- Preview Travel. See Ex. 13C
- Tobin. See Ex.17C
- Fields. See Ex.18C
- SexToy.com. See Ex.24C
- ViaWeb Prior Art. See Ex. 43C
- ShopSite Prior Art. See Ex. 44C

The combination of any of those references with Saliba renders claims 1, 3, 7 and 19 of the '399 Patent invalid.

d. Digital River Secure Sales System ("Digital River SSS")

The Digital River SSS Prior Art discloses all claim limitations of the '399 Patent; and, one skilled in the art would also understand that the Digital River SSS Prior Art could be combined with U.S. Patent No. 5,870,717 ("Wiecha"). Likewise, this combination discloses all claim limitations of the '399 Patent. See Ex. 38C.

According to Plaintiff's Amended Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River SSS Prior Art with Wiecha '717 because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River SSS brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9C. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See* Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River SSS and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network. See Ex. 38C.

Additionally, and for the reasons stated above with respect to Wiecha, the DR SSS Prior Art can be combined with any of the following references to yield predictable results:

- Moore. See Ex.1C
- Bollay. See Ex.3C
- Kelley. See Ex.4C
- Travelocity. See Ex.8C
- TravelNow.com. See Ex.10C
- ITN/Get There. See Ex.12C
- Preview Travel. See Ex. 13C
- Tobin. See Ex.17C
- Fields. See Ex.18C
- SexToy.com. See Ex.24C
- Saliba. See Ex.31C
- ViaWeb Prior Art. See Ex. 43C

• ShopSite Prior Art. See Ex. 44C

The combination of any of those references with the DR SSS Prior Art renders claims 1, 3, 7 and 19 of the '399 Patent invalid.

### e. SexTov

SexToy discloses "the selected merchant, the outsource provider, and the owner of the first web page" are each third parties with respect to one other, as required by claims 1 and 19. See Ex. 24C, at 1(a) and 19(a). To the extent that this element or any other claim element is argued or found not to be adequately disclosed in SexToy, it would have been obvious to one of ordinary skill in the art to combine the teachings of the published Saliba '278 application with the teachings of SexToy to meet that claim limitation of the '399 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Saliba with the teachings of SexToy. See Ex. 40C. For example, SexToy teaches a process and system that where adult webmasters (i.e., affiliates) set up, customize, and brand their own sex toy stores with Convergence, Inc. handling billing, fulfillment, the shipping (via a third party), and customer service. See Ex. 24C. Similarly, Saliba teaches an e-commerce outsourcing process related to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank. The bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site. A new Web page that incorporates the customer's bills is then presented to the customer. See Ex. 31A at 8(b). Fields teaches an outsourcing system that retrieve from a storage coupled to the server pre-stored data associated with the source page. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Saliba '278 and Fields '655 with the teaching of SexToy to arrive at the alleged invention recited

in the claims of the '399 Patent because it would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate's site.

Sernaker at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine SexToy with Saliba and Fields because all three references teach a method and system where a host website uses an outsource provider to sell goods on the host website. *KSR at* 402-3.

Additionally, and for the reasons stated above with respect to Saliba and Fields, SexToy can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8C
- Digital River. See Ex. 9C
- TravelNow.com. See Ex. 10C
- ITN/Get There. See Ex. 12C
- Preview Travel. See Ex. 13C
- Saliba. See Ex. 31C
- ViaWeb Prior Art. See Ex. 43C
- ShopSite Prior Art. See Ex. 44C

The combination of any of these references with SexToy renders claims 1, 3, 7 and 19 of the '399 Patent invalid.

#### f. IBM

IBM discloses "the selected merchant, the outsource provider, and the owner of the first web page" are each third parties with respect to one other, as required by claims 1 and 19. *See* Ex. 27C, at 1(a) and 19(a). To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of the published Saliba '278 application with the teachings of IBM to meet that claim limitation of the '399 Patent because a teaching, suggestion, or motivation exists

to combine the teachings of Saliba with the teachings of IBM. For example, IBM teaches that

IBM Credit Corporation provided a host website with a link to a website of IBM Corporation

where the visitors could order products of one of IBM's business partners. See Ex. 27C.

Similarly, Saliba teaches an e-commerce outsourcing process related to systems and methods for

presenting electronic bills to customers of a financial institution, such as a bank. The bank's

Web server links to the service center's server without exposing this transfer to the customer. The

customer still believes that he/she is connected to and communicating with the bank's Web site.

A new Web page that incorporates the customer's bills is then presented to the customer. See Ex.

31C. Fields teaches an outsourcing system that retrieve from a storage coupled to the server pre-

stored data associated with the source page. Accordingly, one of ordinary skill in the art would

be motivated to combine the teaching of Saliba and Fields with the teaching of IBM to arrive at

the alleged invention recited in the claims of the '399 Patent because it would enable a sale to be

completed using a second website (or composite web page) without the buyer knowingly leaving

the affiliate's site. See Sernaker at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to

combine IBM with Saliba and Fields because all three references teach a host website and a

system where a host website uses an outsource provider to sell goods on the host website. KSR

at 402-403.

Additionally, and for the reasons stated above with respect to Saliba and Fields, IBM can

be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. See Ex. 8C
- Digital River. See Ex. 9C
- TravelNow.com. See Ex. 10C
- ITN/Get There. See Ex. 12C
- Preview Travel. See Ex. 13C

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-63

• Saliba. See Ex. 31C

ViaWeb Prior Art. See Ex. 43C

• ShopSite Prior Art. See Ex. 44C

The combination of any of these references with IBM renders claims 1, 3, 7 and 19 of the '399 Patent invalid.

### g. ViaWeb Prior Art

ViaWeb Prior Art discloses "the selected merchant, the outsource provider, and the owner of the first web page" are each third parties with respect to one other and the other elements of claims 1, 3, 7, and 19. See Ex. 27C. To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in ViaWeb Prior Art, it would have been obvious to one of ordinary skill in the art to combine the teachings of ShopSite Prior Art and IBM Net. Commerce with the teachings of ViaWeb Prior Art to meet that claim limitation of the '399 Patent because a teaching, suggestion, or motivation exists to combine the teachings of ShopSite Prior Art and IBM Net.Commerce with the teachings of ViaWeb Prior Art. For example, ViaWeb Prior Art teaches systems and methods that can be used to serve web pages offering commercial opportunities. See ViaWeb Prior Art; Ex. 44C. Similarly, ShopSite Prior Art and IBM Net.Commerce teaches systems and methods that can be used to serve web pages offering commercial opportunities. See Ex. 30C and Ex. 43C. When confronted with the problem of creating systems and methods that can be used to serve web pages offering commercial opportunities, one of ordinary skill in the art would have been motivated to consider the techniques taught by ShopSite Prior Art and the IBM Net.Commerce, and to combine such teachings with the teachings of ViaWeb Prior Art to arrive at the alleged invention recited in the claims of the '399 Patent. See Ex. 45C.

Alternatively, to one of ordinary skill in the art, it would have been obvious to try to

combine ViaWeb Prior Art with ShopSite Prior Art and IBM Net. because both references teach

a host website and a system where a host website uses an e-commerce outsource provider to sell

goods on the host website. KSR at 402-403.

Additionally, and for the reasons stated above with respect to ShopSite Prior Art and

IBM Net.Commerce, ViaWeb Prior Art can be combined with any of the following references to

yield predictable results:

• Travelocity. See Ex. 8C

• Digital River. See Ex. 9C

TravelNow.com. See Ex. 10C

• ITN/Get There. See Ex. 12C

• Preview Travel. See Ex. 13C

• Saliba. See Ex. 31C

• Moore. See Ex. 1C

• Kelly. See Ex. 4C

• Digital River. See Ex. 9C

• Preview Travel. See Ex. 13C

• Tobin. See Ex. 17C

The combination of any of these references with IBM renders claims 1, 3, 7 and 19 of the

'399 Patent invalid.

C. Additional Prior Art

As noted above with respect to the '135 Patent, Defendants are investigating additional

prior art, including commercial software programs, and are attempting to obtain related

documentation and information. For the reasons described above with respect to the '135 Patent,

Defendants reserve the right to amend and supplement this disclosure with additional prior art as

needed.

D. 35 U.S.C. § 112

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-65

Asserted claims 1, 3, 7 and 19 of the '399 Patent are invalid for failure to comply with the written description and enablement requirement of 35 U.S.C. § 112. In addition, one or more of these claims are invalid under 35 U.S.C. § 112, ¶1, for lack of an adequate written description.

#### 1. Claims 1 and 19 Are Indefinite

Claims 1 and 19 of the '399 Patent fail to particularly point out and distinctly claim the subject matter which the applicant regards as his invention. As such, claims 1 and 19 are invalid under 35 U.S.C. § 112, ¶2 as indefinite. Attached as Amended Exhibit 33C is a chart specifically identifying the § 112 indefiniteness issues. Dependent claims 3 and 7 are also each invalid as depending from an indefinite claim.

### 2. Claims 1 and 19 Are Not Enabled

## a. The "third party" Limitation

The specification of the '399 patent does not provide disclosure sufficient to enable a person of ordinary skill in the art to practice the claimed invention without undue experimentation. In particular, independent claims 1 and 19 are not enabled. Each of these claims recite a "third party" limitation, requiring that the selected merchant, the outsource provider, and the owner of the first web-page are *third parties* with respect to each other. In its claim construction order, the Court adopted Plaintiff's proposed construction of this term, construing the term "third parties" to mean "*separate legal entities under separate control*." [DI 309 at 27] The specification of the '399 patent, however, contains no discussion sufficient to inform a person of ordinary skill that the disclosed e-commerce system would encompass systems wherein the selected merchant, the outsource provider, and the owner of the first web-page are "separate legal entities under separate control." Indeed, there is no discussion in the

specification regarding the respective legal relationships among these parties.<sup>23</sup> Rather, the specification teaches that Hosts and Merchants may often *not* be "third parties" with respect to each other at all:

"There are three main parties in the outsourced e-commerce relationship, excluding the end consumer. These parties include Merchants, Hosts, and the e-commerce outsource provider. *This folds into two parties where one party plays the dual role of Host and Merchant*." ['399 at 22:9-13]

The fact that a single party may "play the role" of both Host and Merchant would indicate to a person of ordinary skill that these are not "separate legal entities under separate control" as required by the claims. Accordingly, Independent Claims 1 and 19 (as well as any claims depending therefrom) are invalid under 35 U.S.C. § 112 for lack of enablement.

#### b. The "link" Limitation

The specification of the '399 patent does not provide disclosure sufficient to enable a person of ordinary skill in the art to practice the claimed invention without undue experimentation. In particular, independent claims 1 and 19 are not enabled. Each of these claims recite a "link" or an "active link" limitation, requiring that the host website include such a link.

In its claim construction order, the Court substantially adopted Plaintiff's proposed construction of this term, construing the term "link" to mean "a hypertext, text, banner, logo, graphic, or other element that permits a user to navigate from one web location to another web location by activating that element." [DI 309 at 17] In accepting this definition, the Court rejected Defendants' proposal that the claimed "link" must be limited to an HTML link. There is no enabling disclosure in the '399 patent specification that would support a system wherein the

<sup>&</sup>lt;sup>23</sup> The reference to "third parties" contained in the Abstract of the '399 patent is new matter that was not presented in the prior '572 and '135 patents.

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-67

host webpage includes "non-HTML" links, as would be permitted under the broad scope of the Court's construction. Indeed, the entire disclosure related to the "Link Generator" is specifically premised upon the use of HTML code for generating and embedding the link. [See '399 at 14:10-15:5]. There is no disclosure that would enable a person of ordinary skill to generate and embed "non-HTML" links. Accordingly, for at least this additional reason, independent Claims 1 and 19 (as well as any claims depending therefrom) are invalid under 35 U.S.C. § 112 for lack of enablement.

### E. INVALIDITY - DOUBLE PATENTING

35 U.S.C. § 101 precludes an inventor from receiving more than one patent for the same invention. The related non-statutory doctrine of double-patenting extends the statutory provision "to prevent issuance of a patent on claims that are nearly identical to claims in an earlier patent." *See Eli Lilly and Co. v. Teva Pharmaceuticals USA, Inc.*, 619 F.3d 1329, 1341-1342 (Fed. Cir. 2010). In evaluating invalidity based on double patenting, the primary inquiry is "whether the claims in the latter patent are more than a "slight variant" from the claims in the earlier patent." *Id.* Because the claims of the asserted '399 patent are nothing more than a slight variant from the claims of the previously issued '572 and '135 patents, the '399 patent is invalid under the judicially created doctrine of obviousness-type double patenting.<sup>24</sup>

All the limitations in independent claims 1 and 19 of the '399 are also present in, or are mere slight variants of, one or more claims of the related '572 and '135 patents. Two claim charts demonstrating the claim correspondence are provided as Exhibits 46A and 46B. The similarity among claim elements for these claims is either directly apparent or is inherent based

Moreover, no terminal disclaimer has been filed with respect to the '399 patent that would be sufficient to cure the double-patenting problem.

on the agreed claim constructions in this case. For example, both claims 1 and 19 of the '399 patent include a limitation regarding the "third party" status of merchants, owners of the first webpage, and outsource providers:

- (iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one other; ['399, cl. 1 at 26:57-59]
- (iii) wherein the selected merchant, the outsource provider, and the owner of the first web page displaying the associated link are each third parties with respect to one other; ['399. cl. 19 at 28:11-14]

Although the "third party" relationship limitation recited in claims 1 and 19 of the '399 are not literally recited in the issued claims of the '572 or '135 patents, that limitation is an inherent requirement of the prior claims, based on the claim construction order issued in this case. The parties agreed to the following constructions which govern the relationship of parties as recited in all the asserted patents:

| Term  | Agreed Construction   |
|---|---|
| Merchant  | Producer, distributor, or reseller of goods or services to be sold.   |
| Host/Owner  | An operator of a website that engages in Internet commerce by incorporating one or more links to an e-commerce outsource provider into its web content.                               |
| Outsource<br>provider/ecommerce<br>outsource provider | A party, independent from the host associated with the commerce object or merchant of the commerce object, that provides e-commerce support services between merchant(s) and host(s). |

[See Claim Construction Order, DI 309, at 10-11] Taken together, the agreed constructions for "merchant", "Host/Owner" and "Outsource provider/ecommerce outsource provider" make clear that each of these are third parties with respect to one another. As such, this limitation is inherent in the previously issued claims of the '572 and '135 patents. As shown in the claim

charts of Exhibits 46A and 46B, claims 1 and 19 of the '399 patent are merely obvious, slight variations of the previously issued claims. Accordingly, the '399 patent is invalid under the doctrine of obviousness-type double patenting.

#### V. OBVIOUSNESS

The '572 Patent issued from an application that was a continuation that resulted in the '135 Patent. The '399 Patent issued from an application that was a continuation that resulted in the '572 Patent. As such, the specifications of all three patents-in-suit are the same and the background art applies equally to each of the asserted patents.

### A. Overview

Each anticipatory prior art reference disclosed in section A, either alone or in combination with other prior art, also renders the asserted claims obvious to one of ordinary skill in the art. In particular, each anticipatory prior art reference on its own renders obvious the claimed inventions, and also may be combined with (1) information known to persons skilled in the art at the time of the alleged invention, and/or (2) any of the other anticipatory prior art references. To the extent that DDR contends that any of the anticipatory prior art fails to disclose explicitly or inherently one or more limitations of the asserted claims, Defendants reserve the right to argue that any difference between the reference and the corresponding patent claims would have been obvious to one of ordinary skill in the art even if it has not specifically denoted that the reference is to be combined with the knowledge of a person of ordinary skill in the art. Further, Defendants reserve the right to identify other prior art references that, when combined with anticipatory prior art, would render the claims obvious.

The United States Supreme Court clarified the standard for what types of inventions are patentable. *See KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 127 S. Ct. 1727 (2007). In particular, the Supreme Court emphasized that inventions arising from ordinary innovation, ordinary skill or common sense should not be patentable. *Id.* at 1732, 1738-1739, 1742-1743, 1746. Restated, "the combination of familiar elements according to known methods is likely to

be obvious when it does no more than yield predictable results." *Id.* at 1731. Because the '135 Patent simply combines elements well known in the art and yields no more than one skilled in the art would expect from such a combination, the combination is obvious. The asserted claims are therefore invalid under 35 U.S.C. § 103 because they do nothing more than combine known techniques and apparatuses according to their known and ordinary uses to yield predictable results.

The Supreme Court further held that, "[w]hen a work is available in one field of endeavor, design incentives and other market forces can prompt variations of it, either in the same field or a different one. If a person of ordinary skill can implement a predictable variation, § 103 likely bars its patentability. For the same reason, if a technique has been used to improve one device, and a person of ordinary skill in the art would recognize that it would improve similar devices in the same way, using the technique is obvious unless its actual application is beyond his or her skill . . . . " Id. at 1740. Accordingly, a person of ordinary skill in the art would have been motivated to combine or adapt known or familiar methods in the art, especially where market forces prompt such variations. Here, market forces demanded that users be able to trust the electronic commerce website with which they were doing business such that one of ordinary skill in the art would have thought to combine or modify e-commerce solutions and white labeling techniques identified in the references, which one of ordinary skill in the art would have recognized as offering improvements to solutions of that time. Each of the above references described methods that were known to offer such improvements, and, accordingly, one of ordinary skill in the art would have been motivated to combine or modify the references as identified in each of the combinations above.

In fact, the background section of the patents-in-suit disclose many of the features of the

alleged inventions demonstrating that the overall result was nothing more than a predictable result of the combination of known elements. For example, the patents-in-suit recognize that affiliate programs were well known in the art. See '135 Patent 2:7-19.25 Moreover, the system of maintaining a "look and feel" with the headers, footers, and side bars were also known in the art through the use of frames. *Id.* at 2:30-32. The disclosure also makes clear that use of "links" was well known and that HTML had been well established. Id. at 1:20-22, 1:47-2:6. Moreover, these "links" could take one directly to a specific product or product category. *Id.* at 1:33-37, 1:64-2:19. The entire concept of e-commerce was also well known in the art prior to the patented inventions. Id. at 2:7-19. That is, the concept of shopping carts, collecting credit card information, purchasing products, maintaining inventory, and providing payment fees to referring websites were well established in the art. 26 Id. at 2:7-18. In fact, the background section of the patent further makes clear that the alleged inventions were mere minimal improvements over the existing art. *Id.* at 2:31-33 (noting that one prior art solution was at least "marginally effective"). Moreover, crawling webpages in order to capture the content of those pages was also well known in the art. *Id.* at 1:32-37.

Based on the disclosure of the '135 Patent itself, techniques disclosed and reduced to practice by the priority date of the claimed invention, and/or technology widely developed and implemented in commerce by the priority date of the claimed invention, the asserted claims are therefore invalid under 35 U.S.C. § 103 because they do nothing more than combine known

-

<sup>&</sup>lt;sup>25</sup> Because the patents share a common specification, unless otherwise specified, all citations in this section refer to the '135 Patent.

At least the following references teach the concepts of e-commerce, shopping carts, collecting billing information, maintaining inventory, and paying fees to affiliate sites: Wiecha, IBN Net.Commerce, Amazon.com, Tobin, Moore, Gregory, , and the Digital River Secure Sales System. Any of these references can be combined with any of the anticipatory art identified above or any of the § 103 combinations below with respect to the asserted dependent claims related to a consumer completing the purchase of a specified product.

techniques and apparatus according to their known and ordinary uses to yield predictable results.

The alleged invention relates to a "transparent" way of providing an e-commerce solution. Such systems were widely developed and implemented in commerce by the priority date of the claimed invention. For example, a tremendous amount of knowledge already existed to one of skill in the art about implementing the types of solutions allegedly the subject of the asserted claims. In Section V.B, below, Defendants identify a myriad of background art references that color what one of ordinary skill in the art would have known.

In addition, while a showing of a specific "teaching, suggestion, or motivation" is no longer required in view of *KSR*, 127 S. Ct. 1727, it is nevertheless clear that ample teaching, suggestion, and motivation existed in the prior art to render the asserted claims obvious. As evidenced by the art identified as anticipatory above, one of ordinary skill in the art would have been aware of many techniques for implementing a computer-based platform that supports capturing<sup>27</sup> a "look and feel" (as that term is apparently construed by Plaintiff) and performing such white labeling processes. When confronted with the problem of providing a consumer a white-labeled website, one of ordinary skill in the art would have been motivated to consider the techniques taught by the identified anticipatory references, and to combine such teachings to arrive at the alleged invention recited in the claims of the patents-in-suit. Each of the elements of the claims of the patents-in-suit are disclosed in the identified anticipatory references and perform the same functions. "The combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results." *KSR*, 127 S. Ct. at 1739. "[I]f a technique has been used to improve one device, and a person of ordinary

\_

<sup>&</sup>lt;sup>27</sup> Defendants invalidity position regarding the "captured look and feel description" element of claim 8 of the '135 patent is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct.

skill would recognize that it would improve similar devices in the same way, [then] using the technique is obvious unless its actual implementation is beyond his or her skill." *KSR*, 127 S. Ct. at 1740. Thus, the combined teaching of the identified anticipatory art, knowledge of one of ordinary skill in the art, the overall background knowledge, and the nature of the problem to be solved as a whole would have suggested the claimed combinations of elements to one of ordinary skill in the art at the time of the alleged invention.

## B. Background Art

Defendants contend that additional prior art affiliate marketing, co-branding, private labeling, e-commerce, and on-line retailing industry technologies embody each element of each asserted claim in patents-in-suit. The additional prior art discloses e-commerce outsourcing systems that (i) captured the "look and feel" description associated with the host website (as that term is apparently construed by Plaintiff), (ii) provided the host website with a link correlating the host website with a selected commerce object, and (iii) served a visitor computer with a webpage that had the same "look and feel" as the host's webpage with content based on the commerce object associated with the link.

Defendants reserve the right to rely on any of the below references to provide background as to what one of ordinary skill in the art would have known.

## 1. Prior Art System

### a. Hard Rock Hotel and Tunes

As early as August of 1997, as discussed in *Hard Rock Cafe Int'l v. Morton*, No. 97 Civ. 94833, 1999 WL 717995 (S.D.N.Y. Sept. 9, 1999) (DFNDT000488-000515), Hard Rock Hotel and Tunes used an e-commerce outsourcing system described in part as follows:

The Tunes link from the Hard Rock Hotel web site is accessed in the following way: When the computer user clicks on the "Shop"

icon on the first page of the Hard Rock Hotel web site, a page appears that includes an icon reading "record store." As of December 1997, clicking on this icon took the user to a Tunes page "framed" by a border on the left and a border on the top, each of which contained a Hard Rock Hotel logo. In the Tunes portion of the page, the computer user can listen to portions of various music CDs and/or purchase music CDs. The CDs are sold by Tunes, not by Hard Rock Hotel. No Hard Rock Hotel logo is shown on the CD packaging but Hard Rock Hotel receives a 5% commission for each of these sales. Only two CDs have been sold in this fashion through the link on the Hard Rock Hotel web site. (Tr. at 363:8-367:14, 424:2-425:2 (Stone)). *Id.* at \*15.

In *Hard Rock Hotel*, the Hard Rock Hotel/Tunes was further described as follows:

[T]he Hard Rock Hotel Mark and the Tunes site are combined together into a single visual presentation and the Hard Rock Hotel Mark is used to promote the sale of CDs by Tunes. Because the Tunes material appears as a window within the original linking page, it is not clear to the computer user that she or he has left the Hard Rock Hotel web site. The domain name appearing at the top of the computer screen, which indicates the location of the user in the World Wide Web, continues to indicate the domain name of Hard Rock Hotel, not that of Tunes. (Tr. at 367:1-4 (Stone); DX 227). The Tunes web page is reached in the same fashion as any other section of the Hard Rock Hotel web site, by clicking on a button labeled "record store" which resembles the other buttons leading to web pages maintained by Hard Rock Hotel. (Tr. at 361:12-364:4 (Stone)). The spinning globe, Hard Rock Hotel's logo, appears not only to the side of the framed Tunes web page, but also within the Tunes menu bar, on the Tunes page itself. (Tr. 368:1-10 (Stone); DX 227). The Hard Rock Hotel web site and the Tunes web page are thus smoothly integrated. In light of this seamless presentation of the Tunes web page within the Hard Rock Hotel web site, the only possible conclusion is that the Hard Rock Hotel Mark is used or exploited to advertise and sell CDs. Id. at \*25.

See also archived webpages at the relevant time (DFNDT000516-000558).

### b. Vignette

Defendants' believe that Vignette Corporation was providing a co-branded e-commerce outsourcing solution called "StoryServer" for customers prior to the critical date of the patents-in-suit. Upon information and belief, Vignette Corporation's StoryServer system would "capture DEFENDANTS' AMENDED INVALIDITY CONTENTIONS PURSUANT TO LOCAL PATENT RULE 3-6-76

look and feel elements" associated with its customer's websites (as that capturing process is apparently construed by Plaintiff), provide the customer's website with a link that correlates the customer website to a commerce object, such as a product for sale, and serve a visitor computer with a webpage that had the same "look and feel" as the customer's webpage with product content associated with the link.

Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

## c. Century Technology Group / Nexchange Corporation

Upon information and belief, Century Technology Group and/or Nexchange Corporation may have described its e-commerce system in a printed publication, publicly used its e-commerce system, and/or offered for sale its e-commerce system more than one year before the filing date of the earliest non-provisional application of the patents in suit and possibly also more than one year before the filing date of the provisional application for the patents in suit.

Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit

#### d. Weather Channel

Defendants' believe that The Weather Channel was providing a co-branded e-commerce outsourcing solution for customers prior to the critical date of the patents-in-suit. Upon information and belief, The Weather Channel would "capture look and feel elements" associated with its customer's websites (as that term is apparently construed by Plaintiff), provide the customer's website with a link that correlates the customer website to a commerce object, such as the weather, and serve a visitor computer with a webpage that had the same "look and feel" as the customer's webpage with weather content associated with the link.

Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

#### e. World Choice Travel Prior Art

The World Choice Travel ("WCT") private label and co-branding technology was an e-commerce outsourcing solution that provided travel booking capability to numerous customers with the same "look and feel" as that customer's proprietary website. WCT captured the "look and feel" associated with its customers" websites (as that term is apparently construed by Plaintiff) when WCT "receiv[ed] the full design and logo artwork from [its customer]." WCT provided a link to its customers that was correlated with a selected commerce object such as lodging. Visitor computers were served a webpage that had the same "look and feel" as the customer's webpage. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

### f. EasySabre Prior Art

EaasySabre provided a co-branded e-commerce outsourcing solution for customers such as Prodigy and Compuserve. The co-branded travel reservation systems were displayed in connection with Prodigy's and Compuserve's dial up private network service and maintained the same "look and feel" elements as their private network host. The "look and feel" elements

<sup>&</sup>lt;sup>28</sup> USAHotelGuide.com Announces Private Label Program, Press Release, September 27, 1999 ("Private labeled sites will be customized to have the same look and feel of the partner company's site ...). [DFNDT000856-000857].

were captured by screen scraping the elements from existing Prodigy and Compuserve pages.<sup>32</sup>

Defendants continue to research this prior art to determine the full scope and depth of its

teachings and its impact on the patents in suit.

-

<sup>&</sup>lt;sup>32</sup> Defendants invalidity position regarding the "captured look and feel description" element of claim 8 of the '135 patent is presented in the alternative, and should not be construed as an admission that Plaintiff's apparent construction of this term as applied to the accused products is correct

#### **Sabre Business Travel Solutions** g.

Sabre Business Travel Solutions ("Sabre BTS") provided a co-branded/private-labeled ecommerce outsourcing solution to major corporations.<sup>33</sup> Sabre BTS "give[s] corporations their own graphical access to Sabre reservations [sic]. 34 For example, Sabre BTS allowed BTI Americas to "private label the BTS software under its Portico brand name." Upon information and belief, Sabre BTS provided a link to its customers that was correlated with commerce objects between such as air, hotel, and car reservations. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

#### Travelocity Prior Art<sup>36</sup> h.

#### (i) Travelocity/Japan Airlines Prior Art

The SABRE Interactive ("SI") (now Travelocity) co-branded web site was an ecommerce outsourcing solution for Japan Airlines ("JAL") so that JAL had travel reservation capability under its own name with the same "look and feel" as its own website. SI captured "look and feel" elements (as that term is apparently construed by Plaintiff) - such as Japan Airline's logo. For example, "JAL will supply SI with all artwork necessary to add Jail's logo to such pages. The artwork must be submitted in electronic form and according to specifications provided by SI . . . . "37 SI provided JAL with a link that was correlated with a selected commerce object by "granting] JAL a non-exclusive and non-transferable right to place Sis logo as a

DEFENDANTS' AMENDED INVALIDITY CONTENTIONS

PURSUANT TO LOCAL PATENT RULE 3-6-92

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")1

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the U.S. Patent No. 6,330,575 to Moore anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135  | Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")  |
|--------------|--|--|
| 8            | An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of: | Briefly, according to the invention a method for designing a Web page, to be hosted on a Web page server, comprises: providing an object-oriented, template-driven interface for a customer to utilize in the design of the Web page. This allows the customer, through the use of the interface, to design the Web page. The method also comprises the step of publishing the Web page at a destination of the customer's choosing.  Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server, designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page. |
| 8(a)         | capturing a look and feel description associated with a host website;  | Moore '575, 3:23-39.  The Development Tool is object-oriented and template-driven, and it enables its customer, which is the merchant, to design a web site in only a few minutes and does not require any special Internet knowledge from the merchant. The Development Tool breaks the design process down into four steps. The first is to select a Web site category. The second is to collect optional page header and footer information. The third is to choose the defaults for the background color or image and for the page style. The fourth is to fill in the content of each page.   |

<sup>&</sup>lt;sup>1</sup> Unless noted, all citations in this chart are to U.S. Patent No. 6,330,575 by Victor S. Moore and Glen R. Walters (filed March 31, 1998, issued December 11, 2001). [DFNDT0000181-0000207]

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")   |
|--------------|---|---|
| (11)         |   | Moore '575, 10:44-53.   |
|              |   | The first step is to select a category. The category is selected from a list of ten industries such as automotive, dining, and education. Referring to FIG. 6, there is shown a screen 600 containing a list of possible industries to choose from in the Development Tool. Alternate embodiments could employ different industries and a different number of choices. The list 600 also illustrates the simplicity of the merchant interface. The selected category is used by the Development Tool to preselect the image libraries and page style libraries that will be used in the fourth step. The Development Tool thus simplifies for the merchant the processes of finding appropriate clip art and page styles. |
|              |   | The second step is to create the default header and footer. The page header and footer are typically used for the company name and logo. An email address and a link URL are also commonly included. As with many of the features of the Development Tool, the field size may be adjusted and images may be loaded. In this case, the height of the header, for example, may need to be increased in order to accommodate a particular company logo. Referring to FIG. 7, there is shown a screen 700 in which the merchant is prompted to enter the information for the header and the footer. The screen 700 further illustrates the simplicity of the merchant interface.  |
|              |   | The third step is to select the default background, which may be a color or an image, and page style. The Development Tool simplifies the process of choosing by offering grids of selections. The color grid, or pallet, contains 16 different colors. This color pallet can be used or the merchant can define his own. Similarly, a grid of clip art images is available for the merchant to choose from for background images. These default conditions for each page constitute a template, and begin to illustrate the template-driven nature of the Development Tool. The default background may be separately changed by the merchant for any   |

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore "575")  |
|--------------|---|--|
|              |   | particular page.   |
|              |   | Page styles allocate certain portions of each page to text, images, multimedia, etc. The style thus provides a template for all of the different content-related objects ("style components") that will appear on a page. Although the position and sizes of the style components are defined by the style, they can be changed by the merchant for any page. Referring to FIG. 8, there is shown a screen 800 which prompts the merchant to select a background and a style for the page. Page styles are further elaborated in FIG. 9, and FIG. 10 shows one style or template in isolation.   |
|              |   | The fourth step is to fill in the content for each of the style components. As shown, for example, in FIG. 10, each of the style components must be filled in. To do this, the merchant clicks on the style component and the Development Tool presents a "dialog" box which steps the merchant through the choices necessary to fill in the style component. FIGS. 11-13 show dialog boxes for image, text, and multimedia style components, respectively. For images, the merchant is presented with a selection, but may use other images as well. It is common for a merchant to scan logos and images that the merchant wants to use on his Web site. Any style component can also have a URL attached to it, and the dialog box allows the merchant to select this option. |
|              |   | Each page created by the merchant can, as mentioned earlier, be modified. Style components can be added, deleted, moved, resized, etc. Another feature of the Development Tool is that it presents the page just as a Web customer will see it. This feature, called WYSIWYG for "what you see is what you get" allows the merchant to see, without publishing and browsing, what the published page will look like when it is published. Additionally, the Development Tool also provides a previewing option which uploads all of the pages and allows the merchant to view the entire Web site with a Web browser.  |

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135   | Relevant Disclosure iu U.S. Patent No. 6,330,575 ("Moore '575")   |
|--------------|---|---|
|              |   | When the pages are all created, the Development Tool allows the merchant to upload or publish the Web pages to a site specified by the merchant.  Moore '575, 10:59-11:64. See also Figs. 6-13.   |
| 8(b)         | providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and  | Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.  |
|              |   | Moore '575, 3:23-39.  |
| 8(c)         | upon receiving an activation of the provided link from the visitor computer an ecommerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. | The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Website (e.g. pictures, prices, search engines, etc.). There is provided, according to the present invention, a Development Tool for designing the Web storefront 106. This tool greatly simplifies the task of creating the Web storefront initially and of modifying it and updating it. The Tool also ensures that the operation with the Transaction Server 202 is seamless for the customer 114.  |
|              |   | The Tool derives much of its utility from the fact that it contains a series of templates, tailored to different industries, for creating pages. The fields on these templates can be filled with text, or with images from clip art (also included with the tool) or can be tailored to suit a specific merchant's needs. The task is greatly simplified by the inclusion of a prompting mode in which the tool will actually step a user through the process. As an additional tailoring feature, the tool can be adapted to whatever "look and fee!" the customer may desire. The customer may |

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")   |
|--------------|---|---|
|              |   | want to match the look and feel to that of other applications that the<br>customer uses, or may simply feel more comfortable with another look<br>and feel.   |
|              |   | Moore '575, 5:27-48.  |
|              |   | The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") \$06. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product. |
|              |   | Moore '575, 6:12-22.  |
|              |   | See also Figs. 6-16.  |

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")1

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the U.S. Patent No. 6,490,567 to Gregory anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135  | Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '367")   |
|--------------|--|---|
| 8            | An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:                           | Distributed electronic commerce is conducted over a network by substantially separating transaction functionality from merchant content. Electronic commerce transaction functionality is provided by a commerce server having a commerce database. The commerce server stores merchant and purchaser profile data and merchant content summaries on the commerce database. The purchaser browses and searches for product and merchant information using the commerce server, and is provided with more detailed information stored at a separate merchant content server system. The purchaser selects products to purchase, and a purchase order is sent to the commerce server. The commerce server initiates the settlement of accounts between the merchant and purchaser, and initiates of fulfillment for the selected product. The separation of transaction functionality and merchant content onto separate servers under the control of a commerce service provider and a merchant, respectively, provides a more efficient and effective way of carrying out electronic commerce over a network. |
|              |  | Gregory '567, Abstract.   |
| 8(a)         | capturing a look and feel description associated with a host website;  |   |
| 8(b)         | providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and | A purchaser requests the commerce server to send shopping information.  The purchaser browses or searches for products on the commerce server, and data regarding products and merchants is retrieved from the commerce database. At the purchaser's request for more information on a product or merchant, the commerce server refers the purchaser to an appropriate merchant content server, which contains much more detailed   |

 $<sup>^1</sup>$  Unless noted, all citations in this chart are to U.S. Patent No. 6,490,567 by James McKanna Gregory (filed January 15, 1997, issued December 3, 2002). [DFNDT0000145-0000163]

- 5 -

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135   | Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory "56?")  |
|--------------|---|--|
|              |   | information about the product and merchant than is available from the commerce database.  While browsing or searching the merchant content server, the purchaser may select one or more products for purchase. When the purchaser indicates he is ready to effectuate such a transaction, data concerning the selected product or products are sent to the commerce server. The data include information sufficient to identify the product, purchaser and selling merchant. The commerce server communicates with an external payment system to debit the purchaser's account and credit the merchant's account, effectuating the sale. The commerce server also generates a fulfillment message that ensures product delivery to the purchaser.  Gregory '567, 2:48-67.  |
| 8(c)         | upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. | See also 13-14, infra.  "The present invention thus advantageously provides a convenient and efficient way for a purchaser to shop over a network through simple and easy to understand interfaces. An embodiment of such an interface is shown in FIG.  11." Gregory '567, 7:54-57.  A purchaser may choose to view product and merchant information by predetermined category, such as home appliances 113, outdoor gear 114, or electronics 115. Alternatively, the purchaser may wish to carry out a search of the commerce database. Such a search may be boolean, e.g., HIKING AND (BOOTS OR SHOES). In another embodiment, the search is in a natural language format as is known in the art, e.g., 1  NEED HIKING BOOTS FOR BACKPACKING.  An embodiment of a screen responsive to such a natural language inquiry is shown in FIG. 12. Here, the response is shown according to the names of merchants 121, 122, 123 and 124 who sell hiking boots. In |

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")   |
|--------------|---|---|
|              |   | another embodiment, the response is shown in accordance with hiking boots products listed in the commerce database. In the embodiment shown in FIG. 12, tokens are displayed for each merchant indicating the types of payment accepted by the merchant 125 and the number of days in the merchant's money-back guarantee 126. This is merely meant to be exemplary of the types of information that could be supplied to the purchaser at this stage. Other types of information such as warranty information and service telephone numbers could also be included.  |
|              |   | Upon selecting a merchant from the screen shown in FIG. 12, the purchaser is referred by the commerce server to the content server on which the selected merchant has placed his merchant content. In one embodiment in which the present invention is implemented on the Internet, the URL of the merchant is contained in a table in the commerce database that cross-references it to the merchant identifier in the product data structure. In another embodiment, the network address of the content server is included in the product data structure as an additional field.  |
|              |   | Upon accessing the content server, the purchaser is presented with an electronic version of the merchant's store. Such stores are well known in the art as websites on the World Wide Web (WWW). The purchaser is able to search and browse among products offered by the merchant; learn detailed information regarding the merchant's return policy, learn about forms of payment accepted by the merchant; and order products. An example of a product screen at a content server is shown in FIG. 13. The picture of the boot 131 may be animated, and the boot could be slowly turned so all sides may be animated, and the boot could be picture, describing the advantageous features of the boot. This is supplemented with textual information 132, as well as information about the boot's available sizes 133, weight 134, suggested retail price 135, offer price 136, and offer expiration date 137. If the purchaser wants to select the boot for purchase, the purchaser selects the Buy This button |

### Comparison of U.S. Patent No. 6,629,135 and PCT Application WO 99146709 to Voorhees ("Voorhees '709")<sup>1</sup>

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the PCT Application WO 99146709 to Voorthees anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of D.S. Patent No. 6,629,135  | Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees +709")  |
|--------------|--|---|
| 8            | An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of: | Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 Jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.  In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines. |
|              |  | The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered  |

<sup>&</sup>lt;sup>1</sup> Unless noted, all citations in this chart are to PCT Application WO 99146709 to Voorhees, Arciere, and Blanchard (filed on March 11, 1998 and published on September 16, 1999). [DFNDT\_0000240-0000294].

|--------------|---|--|
|              |   | through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.   |
|              |   | Voortees '709, 3:23-39.  |
|              |   | See also, Figs. 1-2, 4:7-12; 8:4-17.   |
| 8(a)         | capturing a look and feel description associated with a host website; | The screen display that will be seen by the shopper in response to this inquiry is determined by the templates 13 and the particular jeweler's dataset, and may include display objects provided by manufacturers and determined by templates 12 and a manufacturer's dataset. Generally, the templates specify layouts (formats) which are filled in by content information specified in a dataset as directed by control information specified in a dataset as directed by control information specified in a dataset as directed by control information specified in a dataset, both found in the datasets within databases 10 and 11. The respective content information and control information may be entered by a system operator through system control unit 25, or it may be entered or modified by jewelers and manufacturers through communication software 22 and 23 respectively and forwarded through communication link 21  |
|              |   | To respond to a shopper's request, under control of display processor information contained in templates 13 specifies the general format of a display screen for a jeweler, and the general format is "filled in" with information unique to the particular jeweler whom the shopper has requested, according to content information found in the dataset (such as the jeweler's name and address, for example) associated with that jeweler   |
|              |   | The jeweler's dataset contains information about whether a particular manufacturer's boutique is to be shown and attributes specifying how the jeweler wishes it to be shown, while the manufacturer's templates 12 as filled in according to the manufacturer's dataset specify the content of the boutique. The manufacturer's dataset also includes control information which specifies such things as whether the particular jeweler is permitted to carry the boutique.   |

-9-

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees 709")   |
|--------------|---|---|
|              |   | Voorhees '709, 6:21 – 8:3.  |
|              |   | Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler 111    |
|              |   | Associated with each boutique in database 10 is a set of inclusion rules and a set of exclusion rules; for example, associated with boutique 1011 are inclusion rules 1012 and exclusion rules 1013. It is through these sets of rules that a manufacturer has control over which retailers may carry the boutique and which portions of the boutique they may customize  |
|              |   | The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler |
|              |   | Voorhees '709, 9:13-11:6.   |
|              |   | Thus, the shopper is able to see the manufacturer's information without leaving the retail jeweler's web page, including all updates made by the manufacturer. And the shopper sees the retail jeweler's customization of the manufacturer's information. These factors in conjunction facilitate a satisfying purchase for the customer, a sale for the jeweler, and a sale for the manufacturer.  |
|              |   | Voorhees '709, 16:8-12.   |
| 8(b)         | providing the host website with a link for  | Since jeweler 111's dataset contains boutique reference 112 to boutique   |

| Claim<br>No.                            | Chaim Language of U.S. Patent No. 6,629,135   | Relevant Disclosure in PCT Application WO 99146709 to Vaorhees ("Voorhees 700")   |
|---|---|---|
| *************************************** | inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and | 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler |
|   |   | the object is forwarded through server 20 and communication link 21 to<br>shopper 24 where it appears incorporated in the retailer's web page   |
|   |   | Voorhees '709, 10:12-11:9.  |
|   |   | Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.  |
|   |   | The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page,  |

| _ | 4 |

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135  | Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees "709")  |
|--------------|--|---|
|              |  | and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argmment specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information information into the display object. |
|              |  | A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.   |
|              |  | Voorhees '709, 15:3-22.   |

| NO.          |   | Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.  |
|              |   | The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argament specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference [1112] and incorporates the customization information information into the display object. |
|              |   | A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.   |
|              |   | Voorhees '709, 15:3-22.   |
|              |   | See also Figs. 3A-3C, 4A-4D.  |

### Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717")1

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the U.S. Patent No. 5,870,717 to Wiecha anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135  | Relevant Disclosure in U.S. Patent No. 5.870,717 to Wiecha ("Wiecha "717")   |
|--------------|--|--|
| 8            | An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of: | 1. An employee 17 preferably accesses one or more electronic catalogs 24 stored on a shadow catalog server 22, accessed via a local area network 20 preferably by means of a employee workstation 18. These catalogs contain only those items for which a price has been negotiated between the enterprise and a particular supplier, so the verification by the enterprise's Purchasing department described above is obviated.  2. The employee selects items from the catalogs preferably with a mouse or similar device. Catalog items may be displayed with pictures, descriptions and other information in a fashion similar to a paper catalog. Where similar items are available, a "Compare" icon can be selected on the screen, causing the items to be listed side by side, with differences highlighted. Items can be located by searching down the taxonomy tree of the catalog (much as one searches through a paper catalog by finding the appropriate general section and then looking for a particular item), or by entering a search word or phrase. |
|              |  | Wiecha '717, 3:10-28.  |
|              |  | The client environment is shown in the lower segment of FIG. 6, defined by shadow server 106 which maintains a customized copy of the master catalog for distribution to local clients 102 and 104. Purchase orders are received by a Local buyer master server 86 from a data pathway connecting remote shadow LAN 108 with local buyer master LAN 88. The Buyer Master Server also performs the server function in the   |

### Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the Travelocity/Yahoo! Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135   | Relevant Disclosure in the Travelocity/Yahoo! Prior Art  |
|--------------|---|--|
| 8            | An e commerce outsourcing process providing a<br>host website in communication with a visitor<br>computer with context sensitive, transparent e<br>commerce support pages, comprising the steps | The SABRE Interactive ( <u>now Travelocity</u> ) co-branded web site was an e-commerce outsourcing solution for Yahoo! so that Yahoo! had travel reservation capability under its own name with the same look and feel as its own website.   |
|              | of:   | "A. Yahoo! operates a search engine and World Wide Web directory under the brand 'Yahoo!'  |
|              |   | B. SI operates a travel booking engine and interactive Internet travel services through its 'Travelocity' site, located at http://www.travelocity.com (the 'Travelocity Site). C. Yahoo! and SI wish to provide Yahoo! users with travel booking services by distributing SI's booking engine on the Yahoo! Site and to advertise and promote SI's interactive Internet travel services, all in accordance with the terms and conditions of this Agreement."  Travel Services Advertising and Promotion Agreement, June 30, 1997. See DFNDT000388-412. |
|              |   | "2.1 Yahoo! Travel Page. Yahoo! shall provide a prominent hyperlink on the Yahoo! Travel Page to the Co-Branded Pages described in Section 2.2. Such hyperlink shall be placed above the fold on the Yahoo! Travel Page."  Travel Services Advertising and Promotion Agreement, June 30, 1997. See DFNDT000388-412.  |
|              |   | "Purpose:  To provide the ability to make flight, car and hotel reservations via Travelocity starting from a prominent hyperlink on the Yahoo! Travel Page."  Yahoo! Travel Booking Engine. High Level Requirements, July 14, 1997, last modified on February 18, 1998. See DFNDT000413-422.   |
| 8(a)         | capturing a look and feel description associated with a host website;   | Capture took place either when Yahoo! sent its look and feel elements directly to SABRE Interactive or when SABRE Interactive scraped the look and feel elements from an existing Yahoo! page.   |

### Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135  | Relevant Disclosure in the Travelocity/Yahoo! Prior Art   |
|--------------|--|---|
|              |  | "This 'look and feel' will include the Yahoo! logo, the background color, and the toolbars."  |
|              |  | The Look and feel capture includes automatic capture of look and feel elements:   |
|              |  | "3.1 Each cobranded page will have the Yahoo! masthead (460 wide by 60 high) in place of the Travelocity logo. The IMG SRC to this masthead will point to the Yahoo! site."   |
|              |  | See Yahoo! Travel Booking Engine - Scope Definition, last modified on 8/1/1997. See DFNDT000423-428.  |
| 8(b)         | providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and | SABRE Interactive provided Yahoo! with a hyperlink to the co-branded page; Yahoo! then provided its Yahoo! website with the hyperlink. The link was correlated with a selected commerce object such as air, hotel, or car reservation.  |
|              |  | "2.1 <u>Yahoo! Travel Page.</u> Yahoo! shall provide a prominent hyperlink on the Yahoo! Travel Page to the Co-Branded Pages described in Section 2.2. Such hyperlink shall be placed above the fold on the Yahoo! Travel Page."  |
|              |  | Travel Services Advertising and Promotion Agreement, June 30, 1997. See DFNDT000388 412.  |
|              |  | "Purpose:  To provide the ability to make flight, car and hotel reservations via Travelocity starting from a prominent hyperlink on the Yahoo! Travel Page."  Yahoo! Travel Booking Engine - High Level Requirements, July 14, 1997, last modified on February 18, 1998. See DFNDT000413-422. |
|              |  | "Travelocity URL's and URL parameter names will be provided to Yahoo! three weeks after start of development.   |
|              |  | The Yahool travel page will include a flight express path. Modify the Travelocity entry point to accept the following parameters:   |

### $Comparison \ of the \ U.S.\ Patent\ No.\ 6,629,135\ and\ Travelocity/Yahoo!\ Prior\ Art$

-1-

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135   | Relevant Disclosure in the Travelocity/Yahoo! Prior Art   |
|--------------|---|---|
| 100          |   | Number of passengers Leaving from / going to cities Departure date/ departure time Return date / return time Return date / return time The Yahoo! travel page will include a cars express path. Modify the Travelocity entry point to accept the following parameters: Pick-up city Pick-up date / pick-up time Return date / return time Return date / return time Number of travelers - Type of car The Yahoo! travel page will include a cars express path. Modify the Travelocity entry point to accept the following parameters: Check-in city Check-in / check-out dates Number of travelers Number of travelers Number of roms"  Yahoo! Travel Booking Engine - Scope Definition, last modified on 8/1/1997 (emphasis added). See DFNDT000423-428.   |
| 8(c)         | upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. | Once the hyperlink was activated, SABRE Interactive served a co-branded Yahoo! webpage corresponding to the Yahoo! look and feel in which the visitor was able to carry out travel planning using the selected commerce objects. As far as the scope of the claimed "look and feel" can be determined, the look and feel of the co-branded Yahoo! page served by SABRE Interactive included the Yahoo! logo, colors, travel menus, advertising, and toolbars.  "2.2 Co-Branded Pages. SI shall create and serve a series of co-branded pages that guide Yahoo! Site users through the booking process for the Travel Services, at a minimum (the 'Co-Branded Pages'). The Co-Branded Pages shall include all pages through the first page containing a price quotation for travel-related services, but shall not include any pages in payment process."  Travel Services Advertising and Promotion Agreement, June 30, 1997. See DFNDT00388-412. |

### Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Dischoure in the Travelocity/Yahoo! Prior Art  |
|--------------|---|---|
|              |   | "1.1 "Booking Engine" means a database containing availability, schedule, and price information connected to a graphical user interface that allows users of the World Wide Web to make reservations for Travel Services, as a minimum, and complete payment for such Travel Services online."  Travel Services Advertising and Promotion Agreement, June 30, 1997. See DFNDT000388-412.  |
|              |   | "(b) <u>User Interface</u> . The Co-Branded Pages shall conform to the graphical user interface utilized by Yahoo! across Yahoo!'s network of branded Internet properties as of the first date of the Exclusivity Period, and Yahoo! shall have the right reasonably to approve the final design of all Co-Branded Pages. Any material changes to the Co-Branded Pages thereafter shall be made upon the mutual agreement of the parties. Yahoo! shall assign one individual to work with SI to ensure that the Co-Branded Pages satisfy Yahoo! requirements. Yahoo! will use reasonable best efforts to ensure continuity of Yahoo! personnel involved in the design process. All pages displayed to Yahoo! Site users, other than the Co-Branded Pages, shall conform to the graphical interface utilized by SI, provided however Yahoo! shall have a reasonable right of approval with respect to such interface."  Travel Services Advertising and Promotion Agreement, June 30, 1997. See DFNDT000388 412. |
|              |   | "Because the Yahoo! Travel express page will be hosted on Yahoo!'s site, Yahoo! must have the ability to receive and pass the Session Identification (SID) between Travelocity in order to keep the user's Travelocity session established. This does not apply for users that have cookie browsers because the SID is stored and retrieved from the cookie.  |
|              |   | Modify Igbecome pgd, vars.sub, Igmennew.pgd, Igmemcon.pgd, Igiogin.pgd, Igmewinf.pgd, and Igspflog.cll to pass the session parameters to ensure the reservation process can continue without interruption. Place the session parameters into the Parameter's Database (PDB) and remove them from the PDB once the user has completed the login process."  |

### Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629,135 | Relevant Disclosure in the Travelocity/Yahoo! Prior Art   |
|--------------|---|---|
|              |   | Yahoo! Travel Booking Engine - Scope Definition, last modified on 8/1/1997. See<br>DFNDT000423-428.   |
|              |   | "Certain pages within Travelocity will be designated as co-brand. Co-brand means that the pages will look and feel like Yahoo! pages, but will function the same as they do today in terms of required data elements, navigation and flow; except where otherwise indicated in this document."  Yahoo! Travel Booking Engine - High Level Requirements, July 14, 1997, last modified on February 18, 1998. See DFNDT000413-422. |
|              |   | "Several Travelocity pages (fprqst, fpdisp1, fpdisp2, fpprice and bargain) will be designed with the Yahoo! masthead, footer and toolbar.  1. All references to Travelocity within the above pages will be modified to reflect Yahoo! Travel."  Yahoo! Travel Build your own itinerary, last modified on March 24, 1998. See DFNDT000429-432.   |

Comparison of U.S. Patent No. 6,629,135 and Digital River Secure Sales System Prior Art1

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the Digital River Secure Sales System (SSS) anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of U.S.<br>Patent No. 6,629,135   | Digital River Secure Sales System  |
|--------------|--|--|
| 8            | An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of: | "Digital River's Secure Sales System (SSS) brings together software manufacturers and dealers enabling them to sell and deliver product via the Interuet. This service will provide all digital delivery, security, collections and reporting of the sale of software. Throughout this process, it will appear to the consumer as if the transaction is being processed by the manufacturer or dealer while the Digital River SSS is handling the whole transaction behind the scenes'." [sic]  Digital River – Secure Encrypted Software Distribution, http://web.archive.org/web/19370412100754/http://www.digitalriver.com/; [DR000001-2].  |
|              |  | "Extend your selling environment Better yet, the entire transaction takes place in the selling environment you've created, surrounded by the look and feel of your identity, with your products presented the way you want them presented, with no competition. Your customers simply hit the purchase icon at your site and the whole process unfolds smoothly. There's no sensation of being suddenly hustled off to another location. Your customers won't end up at some foreign-looking page where they have to hunt to find your product." Digital River – Secure Encrypted Software Distribution, <a href="http://web.archive.org/web/19971221024519/digitalriver.com/Page3.html">http://web.archive.org/web/19971221024519/digitalriver.com/Page3.html</a> ; [DR000003-4] (emphasis original). |
|              |  | Maintain your own identity and branding.  Digital River facilitates the sale of your products to your customers. To most consumers, our services often appear as nothing more than a web site "buy" button. But behind this simple device is sophisticated electronic commerce technology which gives consumers the ability to immediately and easily purchase and download the digital products of their choice. As   |

The Digital River SSS process was offered for sale, sold, and publicly used in connection with more than 500 client websites prior to September 17, 1998. While the referenced steps of the Digital River SSS process were consistently used with respect to these client websites, the specific elements Digital River utilized to create "transparent e-commerce support pages" for its clients varied based upon the specific look and feel of the host (client) website. The documents expressly referenced herein are provided as illustrative examples of the Digital River SSS process as utilized prior to September 17, 1998. Additional documents evidencing the offer for sale, sale and public use of the Digital River SSS process will be produced pursuant to Local Patent Rule 3-4(b).

| Claim<br>No. | Claim Language of U.S.<br>Patent No. 6.629.135                              | Digital River Secure Sales System   |
|--------------|---|---|
|              |   | consumers become more savvy, this efficiency of purchase and delivery will become one of<br>the primary advantages of selling digital products over the Interuet.   |
|              |   | When customers want to purchase, they push the "buy" button and are transferred immediately and transparently to the Digital River Central Commerce Server. This retains the "look and feel" of your own site and encourages the customer to buy – easily and quickly. Depending on your preferences and marketing initiatives, buyers can be offered additional cross-sell, up-sell, special offer and bundled products related to their purchases. Credit information is verified, the sale is transacted and the purchases are then downloaded to the buyer. |

# Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions" 1

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, the U.S. Patent No. 6,141,666 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as deseribed in part below.

| Claim<br>No. | Claim Language of U.S. Patent No.<br>6,629,135   | Relevant Disclosure in U.S. Patent No. 6.141.666 ("the '666 patent")  |
|--------------|--|---|
| 8            | An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of: | "Although the present invention can be used in many applications which can utilize customization marketing tools unique to client/server communications across variety of communication network structures, the present invention is deserbled in its application to PC Flowers & Gifts, an Internet site providing floral and gift services through Web site pages which are dynamically customized to the requirements of other Internet sites referring clients, i.e., consumers, to the PC Flowers & Gifts Web site pages." Column 5, lines 3-11.   |
|              |  | "The automatic tracking of the participating or referring Internet sites is crucial to transparently customizing Web site pages to take advantage of brand name recognition and customer loyalty." Column 5, lines 42-45.   |
|              |  | Also see column 9, lines 5-51; FIGs. 11A-20.  |
| 8(a)         | capturing a look and feel description associated with a host website;  | The '666 patent teaches:  a host website (http://homearts.com; FIGs. 21 A-B; and http://pathfinder.com/; FIGs. 11A-B).  |
|              |  | "The PC Flowers & Gifts marketing program comprising the floral and gift Web site pages are dynamically customized in accordance with the participating Internet site's requirements which may be co-branded, private label or, a program of labeling unique to the participating Web site. More specifically, the PC Flowers & Gifts Web site pages are customized in both a graphic and a content format to take advantage of the consumers [sic] familiarity with the participating Internet site's position in the marketplace, the consumer's trust in the participating Internet site's established brand |

Unless noted, all citations in this chart are to U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions" by William J. Tobin (filed Jan. 21, 1997, issued Oct. 31, 2000). [DFNT0000001-0000053]

### Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions

| Claim | Claim Language of U.S. Patent No.  | 7. N  |
|-------|--|---|
| No.   | 6,629,135  | Relevant Disclosure in U.S. Patent No. 6.141.666 ("the "666 patent")  name, or the consumer's existing relationship with the participating Web site."  Column 5, lines 18-29.   |
|       |  | "[I]f a consumer were to visit one of the private label floral and gift services home page of the Internet site "Homearts", all the graphics and product categories on each of the PC Flowers & Gifts Web site pages, available through a hypertext link from a Homearts Web site, are fully customized in graphic and content format to reflect only the Homearts brand name." Column 5, lines 55-60.  |
|       |  | "Still referring to FIG. 21C, like the home page image map 101 discussed above, the home page image map 2101 herein is a grouping of the hypertext links 108-112, wherein the sever files for the linked Web site pages are dynamically created to reflect preferences of the marketing partner, which in this instance is a private label customizing for Homearts. Accordingly, all the server Web site pages accessed through the home page image map 2101 are anchored to PC Flowers & Gifts Web site pages that are dynamically created with fully customized graphic and text features according to Homearts' preferences. Such a private label customization of the Web site pages takes advantage of the client's existing relationship and familiarity with the marketing partner, Homearts. In addition, the hypertext link grouping 2103 retains the links 102-107 of the PC Flowers & Gifts Web site pages, however, like the home page image map 2101, the hypertext link grouping 2103 provides jumps to PC Flowers and Web site pages that are fully customized with the private label Homearts." Column 10, lines 8-26; FIG. 21C. |
|       |  | Also see column 9, lines 5-51; FIGs. 11A-20.  |
| 8(b)  | providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and | The '666 Patent teaches:  • the host website (http://homearts.com; FIGs. 21A-B; and http://pathfinder.com/; FIGs. 11A-B);  • a link (label 21B1 in FIG. 21B; and label 11B3 in FIG. 11B); and  • a page (http://homearts.com/market/Main/; FIG. 21B; and http://pathfinder.com/; FIG. 11B).   |

### Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content" 1

Based upon the Court's claim construction order [DI 309], the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Amended Infringement Contentions served January 23, 2012, U.S. Patent No. 6,128,655 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

| Claim<br>No. | Claim Language of U.S. Patent No. 6,629;135  | Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")   |
|--------------|--|--|
| 8            | An e commerce outsourcing process providing a<br>host website in communication with a visitor<br>computer with context sensitive, transparent e<br>commerce support pages, comprising the steps<br>of: | "These pieces of content are then recast into a new web page by means of an HTML template 121 that matches the look and feel of the hosting Web site. The new page includes the graphics of the hosting provider as well as the navigational features of the hosting site. This page is then sent 123 to the client 113 for presentation by the browser." Column 4, lines 57-63. |
|              |  | "1. A method for recasting web content on a hosting site, comprising the steps of:   |
|              |  | responsive to a request from a client browser for a recast web page from a hosting web server, generating a request by the hosting web server for an original web page from a content provider web server;   |
|              |  | parsing the original web page for a first set of desired content elements;   |
|              |  | inserting the first set of desired content elements into a web page template containing a hosting web server format, thus creating the recast web page; and  |
|              |  | serving the recast web page to the client browser;   |
|              |  | wherein the appearance of the recast page when presented by the client browset is as though all elements originated at the hosting web server."  Column 17, lines 52-67.   |
| 8(a)         | capturing a look and feel description associated with a host website;  | The '655 patent discloses automatically, by a party other than the host, retrieving look and feel elements from the host website   |

While Levine's conventional affiliate system was launched after SportSource and CDNow, his pioneering role was the invention of "vcommerce" an e-commerce business model halfway between traditional affiliate systems and outright etailing.

. [T]he v-commerce operation pioneered by Levine offers ... [a] central e-supplier provid[ing] an online "catalog" from which the vcommerce affiliate can select. Each product selected by the affiliate goes into a cookie-cutter web page supplied by the mother site which offers a number of different pre-programmed and customizable styles from which to select.

When an order is placed in the affiliate's store, the mother site then works in the background, handling everything else from order taking and payments to shipping customer service and returns -- all within an e-commerce environment that looks just like the whole process is rnn by the affiliate.

| Claim Claim Language of U.S. Patent No. 6,629.135 Relevant Disclosure in Sextoy.com Prior Art No. |   |
|---|---|
|   | "We have been drop shipping sextoys from web-generated orders since February          |
|   | 1995. Thanks to our huge selection, user-friendly web site, great prices, quick       |
|   | customer service, reliable shipping, and easy secure payment options, we consistently |
|   | out sell any other sextoy sites in cyberspace."                                       |
|   | More information - Promote your own sextoy site,                                      |
|   | http://web.archive.org/web/19980517011212/sextoy.com/cnv/moreinfo.html                |

Building upon the adult industry's experience, v-commerce was discovered by the non-adult market in 1998 when venture capitalists funded more than a dozen start-ups including vcommerce.com (born as Vstore) which backed by more than \$54 million in venture capital, is the non-adult patriarch in this field.

By early 2001, most other non-adult v-commerce operations had burned through their venture capital and were either out of business (Affinia.com, Nexchange), hanging on by a thread (Iconomy, Vitessa) or trying to re-invent themselves into another category that would attract more venture capital (esaler.com reborn as pop2it, a so-called "contextual commerce technology company.)

Thanks to the product affiliate sales system he invented, Levine has succeeded in making a profit from ecommerce on the Internet something that has eluded hundreds of venture-financed etailers who have collectively poured billions of investment dollars down a very large and seemingly insatiable cyber-rathole. Significantly, Levine has been profitable from his first few months on the Web. Amazon and other are still scrambling to get out of the loss columns.") (this article is referring to sextoy.com, not sextoyfun.com; David Levine began an affiliate program on sextoy.com in 1996). [DFNDT0001048-0001059]; also see WHOIS Record for sextoyfun.com,

http://www.networksolutions.com/whois/results.jsp?whoistoken=13 (last visited August 8, 2006) (sextoyfun.com was first registered on September 9, 1998) [DFNDT0001065-0001068]

<sup>5</sup> Also see David Levine, http://www.davelevine.com (last visited on August 11, 2006)("[O]ne idea was to take orders on the web and then forward the orders to companies who would drop ship the products to my customers. My goal was (and still is) to build a billion dollar company with no employees, no corporate office, and no inventory. I named my business Convergence, Inc. I started Wicked Cool Mall and opened stores selling lobsters, sneakers, watches, paintings, t-shirts, etc. Eventually I decided I could make more money focusing on one product niche rather than many different stores in a mall. Since SEXTOY.com had the most sales, highest profit margins, and biggest traffic I decided to become the king of sex toys.

In 1996, I started the first affiliate program for adult products. An affiliate program allows anyone to sigu up and get their own sextoy site for free. They can make the site look like their own, but we handle the orders and fulfilment [sic] and then send the affiliate a commission check each month for the sales in their store.") [DFNDT0001078-0001079]

<sup>&</sup>lt;sup>4</sup> Also see Lewis Perdue, EroticaBiz How Sex Shaped the Internet 5-6 (IdeaWorx 2002), available at http://www.eroticabiz.com/ ("Actual profits from an affiliate system had to wait until David Levine built SexToyFun (www.sextoyfun.com) [sic] a substantial but decidedly quirky sex paraphernalia site. Levine said he launched his site in 1994 and began his first affiliate program in the spring of 1996. ... Levine's affiliate program was actually a virtual store service which allowed adult webmasters to set up, customize and brand their own sex toy stores with Levine's operation handling all the billing, fulfillment, shipping and customer service. Then in early 1997, Levine set up a more conventionally structured affiliate system like that used by Amazon and CDNow so webmasters could get referral commissions from the sale of products from his store.

### Comparison of U.S. Patent No. 6,629,135 and Sextoy.com Prior Art

| Claim | Claim Language of U.S. Patent No. 6,629,135                           | Relevant Disclosure in Sextoy.com Prior Art  |
|-------|---|--|
| No.   |   | (emphasis removed) (May 17, 1998 version of sextoy.com/cnv/moreinfo.html as  |
|       |   | archived by the Internet Archive <sup>6</sup> ). [DFNDT000947]   |
|       |   | It is well know to a person skilled in the art at the priority date of the '572 Application that drop shipping is a procedure where a manufacturer, supplier, or distributor ships the product (i.e., a sex toy) to a store's customer. One of the corporate philosophies of Covergence, Inc., the owner and operator of sextoy.com, is "[r]ather than make large investments in overhead or employees, we pay other companies to perform all jobs that are not our core business Outsourcing is not only more efficient but also keeps our organization more nimble. Rather than having large investments that need to be paid off, by outsourcing, more costs become variable. If we decide to make sudden changes in business direction, we don't have to worry about liquidating any previous investments, we can just terminate a relationship we had with a company we were outsourcing to." Convergence, Inc., Febrnary 4, 1998 version (emphasis removed). [DFNDT0001080-000181] |
|       |   | Accordingly, it is obvious to a person skilled in the art at the priority date of the '572 Application that Convergence, Inc. did not sell its own products or products it owned. Rather, Convergence, Inc. sold the products of a third party (i.e., the supplier, distributor, or manufacturer) at sextoy.com.   |
| 8(a)  | capturing a look and feel description associated with a host website; | Capture took place when the host website operator emailed to dnl@sextoy.com or faxed to (617) 666-3421 the Promote your own sextoy site page.  |

### Comparison of the U.S. Patent No. 6,629,135 and IBM Prior Art

|     | Claim Language of U.S. Patent No. | Relevant Disclosure in IBM Prior Art  |
|-----|-----------------------------------|---|
| No. | 6,629,135                         | text links were shown in blue underlined text and visited text links were shown in red underlined text on both web pages. <sup>10</sup> As described below, the look and feel also include using similar headers and footers. <sup>11</sup>   |
|     |                                   | Additionally, both web pages had headers with a similar look and feel. Both headers had the same blue IBM® logo in the top left corner with a copyright notice below the logo. The copyright notice was separated from the IBM® logo by a pink line that extended the length of the header. On the right side, both headers had a rectangular picture superposed over a portion of the pink line and a rectangular box superposed over a portion of the picture. Both rectangular boxes included text in the same font, size, and color. The text in both boxes was a short title or description of the web page. |

<sup>&</sup>lt;sup>10</sup> Both pages used the default colors of the web browser of the visitor computer for text colors. In the web browser that was used to view these pages, the default colors are blue, red and black for unused text links, visited text links, and regular text respectively. The actual colors of the links and text would have varied based on the default settings of the web browser of the visitor computer but the colors would have been consistent between the two web pages.

http://web.archive.org/web/19961219011414/http://www.pc.ibm.com/thinkpad/ (December 19, 1996 version of www.pc.ibm.com/thinkpad/ as archived by the Internet Archive; see note 4)) [DFNDT0001893-0001904]; End-user Customer Financing website.

http://web.archive.org/web/19961104164326/http://www.financing.hosting.ibm.com/CFCALLIE.HTM (November 11, 1996 version of www.financing.hosting.ibm.com/CFCALLIE.HTM as archived by the Internet Archive; see note 4)); [DFND10001905-0001917]; Remarketer Financing website,

http://web.archive.org/web/19961104164859/http://www.financing.hosting.ibm.com/CFTALBOT.HTM (November 11, 1996 version of www.financing.hosting.ibm.com/ CFTALBOT.HTM as archived by the Internet Archive; see note 4)); [DFNDT0001918-0001927]; 1995 Annual Report of IBM Credit Corp., December 19, 1996 version; [DFNDT0001879-0001882].

### Comparison of the U.S. Patent No. 6,629,135 and IBM Prior Art

| Claim<br>No. | Claim Language of U.S. Patent No.<br>6.629.135   | Relevant Disclosure in IBM Prior Art  |
|--------------|--|---|
|              | United All States  | partners planetwide." <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798]   |
|              |  | "[I]n some countries you can even order online." IBM Ordering web page, December 20, 1996 version. [DFNDT0001798]   |
|              |  | IBM Credit Corporation, IBM Corporation, and IBM's business partners are separate and independent corporate entities. 1995 Annual Report of IBM Credit Corp. [DFNDT0001879-0001882]. The host is, for example, IBM Credit Corporation, the outsource provider is IBM Corporation, and the selected merchant is IBM's business partners. |
| 8(c)         | upon receiving an activation of the provided link from the visitor   | From the IBM Ordering web page, a visitor ordered products and services from IBM and its business partners.   |
|              | computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the-commerce object associated with the provided link. | "IBM Direct: Your source for products and services from IBM and our busines partners planetwide." <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798]   |
|              |  | "[I]n some countries you can even order online." IBM Ordering web page, December 20, 1996 version. [DFNDT0001798]   |
|              |  | The look and feel of the IBM Ordering web page was the same as the look and feel of the Leasing & Financing web page. Specifically, both the IBM Orderin web page and the Leasing & Financing web page used a single column format with text in the same font, size, and black color on a white background. Unuse                       |
