

DIGITAL RIVER, INC.
DEALER AGREEMENT

This Agreement, made this 27th day of January, 1997, by and between DIGITAL RIVER, INC., a Minnesota corporation with offices located at 5198 West 76th Street, Edina, Minnesota 55439 (the Company), and Dctal Publications Limited, a

with offices located at 14-391 Marwood Drive, Oshawa, Ont. L1H7P8 (the Dealer).

Premises

The Company is engaged in the business of electronically distributing products, including computer software to end users of such products (the End Users). The Dealer owns and operates the website (the Site) identified on Exhibit A, attached hereto and incorporated herein by reference, and is engaged in the business of soliciting orders from end users for the purchase of various products, including computer software. The Company desires to engage the services of the Dealer to facilitate the distribution of computer software, and the Dealer is willing to perform such services for the Company.

In consideration of the Premises, the mutual promises of the parties, and the mutual benefits to be gained by performance, it is agreed as follows:

1. **Products** - The Company distributes the products described on Exhibit A. Such products, as may from time to time be updated, modified, or enhanced, shall be collectively referred to as "the Products." The Company may from time to time, in its sole discretion, delete Products from this Agreement. In addition, the Company may from time to time, in its sole discretion, add Products to this Agreement, and any such added software products shall be considered to be part of the Products for the purposes of this Agreement.

2. **Appointment of Dealer** - The Company hereby appoints the Dealer to solicit orders for the sale of the Products. The Dealer shall maintain and continue to operate the Site. The Site shall prominently feature advertising and promotional information about the Products, together with instructions about the means by which the Products can be purchased. As may be requested by the Company, the Dealer shall consult and cooperate with the Company in connection with the design, content, format, and graphics that are a part of the advertising and promotion of the Products on the Site. The Dealer shall in each and every instance use its best efforts to promote the sale of the Products, and shall refrain from taking any actions that could impede the sale of the Products or injure the reputation and integrity of the Company.

DR149794

3. **Order and Delivery Process** - The Dealer shall continuously maintain a link to "www.digitalriver.com." The Dealer shall pay the Company the one-time set-up fee specified on Exhibit A, and the Company shall provide reasonable assistance to the Dealer in establishing the aforementioned link and duplicating the Site. All orders for the Products shall be transmitted directly to the Company. The Company shall be responsible for the processing of payments made by End Users, payment of all applicable credit card transaction fees, payment and filing of all applicable taxes, and for the delivery of the Products to the End Users.

4. **Commissions** - The Dealer shall be paid a commission based on a percentage of net sales of the Products. The commission rate shall be as specified in Exhibit A. Within thirty (30) days after the end of each month the Company will remit commissions to the Dealer based on amounts actually received by the Company during the immediately preceding month. As used in this Agreement, the term "net sales" shall mean the actual amount paid by an End User for the Products, reduced by sales and use taxes and delivery charges. The Company may from time to time adjust the amount of commissions payable to the Dealer based on returns, refunds, and exchanges.

5. **Term** - Subject to the provisions of Section 13, the initial term of this Agreement shall commence on the date of its execution and continue for a period of one (1) year thereafter. Unless the Company provides written notice of termination to the Dealer prior to the expiration of the initial term or any renewal term, this Agreement shall automatically be renewed for successive one (1) year terms.

6. **Monthly Sales Requirement** - On a monthly basis, the Dealer shall sell the amount of the Products specified on Exhibit A. In the event the Dealer fails to sell such amount, the Dealer shall pay the Company a sales fee in the amount specified on Exhibit A. In the discretion of the Company, the amount of the sales fee may be offset against future commissions payable to the Dealer. C

7. **End User Information** - Within thirty (30) days after the end of each month the Company shall provide the Dealer with the Company's list of customers and End Users that purchased the Products through the Dealer's Site during the immediately preceding month (the Customer List). The Dealer shall have the right to use the Customer List in connection with its sales and marketing activities. The Dealer shall not reproduce or distribute the Customer List without the consent of the Company, and the Customer List may not be sold or otherwise transferred to any other person or organization.

8. **Confidential Information** - All of the trade secrets and other confidential information relating to the Company and the Products,

including without limitation, methods, processes, configurations, intended uses, marketing plans, financial information, business plans, the Customer List, and inventory information shall be maintained in confidence, and the Dealer shall not, during the term of this Agreement or subsequent to the termination of this Agreement, divulge to any other person or organization, or use in any manner whatsoever, directly or indirectly, for any reason whatsoever, any of the trade secrets or confidential information relating to the Company and the Products without receiving the prior written consent of the Company. The Dealer shall take such actions as may be necessary to ensure that its employees and agents are bound by the provisions of this Section.

9. **Distribution Restrictions** - The Company shall be the exclusive electronic supplier of the Products for the Dealer at the Site. At the Site, or through the use of similar electronic distribution systems, the Dealer shall refrain from advertising or promoting the electronic sale of the Products by other persons or organizations.
10. **Nature of Relationship** - The Dealer shall be an independent contractor and not an employee of the Company. The Dealer shall not represent or imply to any person or organization that this Agreement authorizes it to act as an agent or on behalf of the Company, other than as provided for in this Agreement. The Company shall not be obligated by any agreement, representation, or warranty made by the Dealer, nor shall the Company be obligated for damages to any person or organization for personal injuries or property damage directly or indirectly arising out of the conduct of the Dealer.
11. **Indemnification** - The Company and the Dealer shall indemnify, defend, and hold harmless each other and their successors and assigns from and against any and all manner of action or actions, suits, claims, damages, judgments, levies, and executions, including reasonable attorneys' fees, whether known or unknown, liquidated or unliquidated, fixed, contingent, direct or indirect, that relate to the conduct of their respective businesses or the breach of any of their respective obligations under this Agreement.
12. **Programming Services** - As may be requested by the Dealer, the Company may from time to time provide computer programming services to the Dealer. The provision of any such computer programming services by the Company shall be on such terms and conditions as may be mutually agreed upon by the Dealer and the Company.
13. **Termination** - The Company shall have the right to immediately terminate this Agreement in the event the Dealer fails to substantially perform any of its material obligations under this Agreement; suspends or terminates the conduct of its business; or initiates or has initiated against it,

any act, process, or proceeding under any insolvency law, the Federal Bankruptcy Act, or any other statute or law providing for the modification or adjustment of the rights of creditors.

14. Miscellaneous - Injunctive or other equitable relief shall be a remedy available to the Company in the event of a breach of any provision of this Agreement by the Dealer. In no event shall the Company's liability to the Dealer exceed the aggregate amount of commissions paid to the Dealer by the Company during the one (1) year period immediately preceding the date of termination of this Agreement. Any notices required or permitted to be given under this Agreement shall be sufficient if in writing and personally delivered or sent by certified mail to the address of the other party at the address set forth herein. The Dealer may not assign its rights or delegate its duties hereunder without receiving the prior written consent of the Company. The waiver of any provision or the breach of any provision of this Agreement shall not be effective unless expressly made in writing. This Agreement shall be governed by the laws of the State of Minnesota in the United States. For the purpose of resolving conflicts related to or arising out of this Agreement, the parties expressly agree that venue shall be in the State of Minnesota only, and, in addition, the parties hereby consent to the jurisdiction of the federal and state courts in the State of Minnesota. In the event any portion of this Agreement shall be held to be invalid, the same shall not affect in any respect whatsoever, the validity of the remainder of this Agreement. This Agreement sets forth the entire understanding between the parties, there being no terms, conditions warranties, or representations other than those contained in this Agreement, and no amendments shall be valid unless made in writing and signed by the parties to this Agreement.

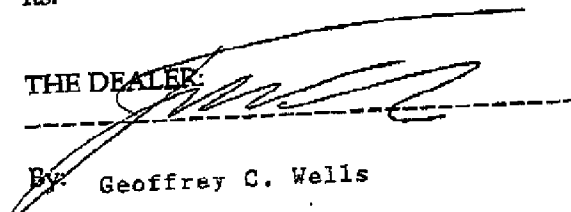

IN WITNESS WHEREOF, the parties have executed this Agreement as of the day and year first above written.

Analysis of Pricing Alternatives

Review of Alternative Strategies, Potential Markets

DDR0007681

DDR0007682

Executive Summary

Introduction

Over the past year, several companies ranging from regional Internet Service Providers to global telecommunications giants have announced their intention to provide a new breed of interactive transaction processing solutions for businesses and their customers.

These companies seek to use the Internet to provide automated services to financial institutions and companies in a growing number of other industries. These services typically enhance customer service, marketing, and new sales efforts. The quality of these products and services tends to vary greatly among competing firms and does not always correspond to a firm's size or the maturity of its products.

This report examines a cross-section of the companies which provide web-based transaction processing and other related services now offered by Syntellect. Information from a number of sources has been compiled, filtered, and analyzed to produce key insights which will help shape Syntellect's Internet strategy.

Competitive Analysis

- A handful of companies threaten the success of Syntellect Interactive Services' efforts to penetrate the online transaction processing market in the financial industry:
 - CheckFree Corporation, which has significant supplier power and strong existing capabilities
 - Security First Technologies, with its substantial experience, partnerships, and refined product offerings
 - Digital Insight, which possesses a large customer base among credit unions and is aggressively targeting this niche market

DDR0007683

Executive Summary

Analysis of Pricing Alternatives

- Flexibility is a critical success factor for all customers, particularly larger banks. Careful understanding of cost drivers and revenue expectations can facilitate customized pricing for key customers
- Smaller institutions prefer low setup fees with higher variable charges and minimum monthly fee requirements
- Medium-sized institutions are viable service bureau customers and will pay higher setup costs for more customization and somewhat reduced variable charges (per-account or per-transaction fees)

Review of Alternative Strategies & Potential Markets

- Over the next decade, countless new markets will require transaction processing services. Syntellect should consider new strategies which begin to address these future customers and their needs now. Syntellect can leverage its integrated IVR and IWR capabilities to serve additional markets including:
 - Retail transaction processing for merchants
 - Benefits enrollment and insurance providers
 - Corporate intranet development
 - Nonbank (private label) credit card issuers
 - Credit bureaus
 - Airline frequent flier and other point-based programs
 - Information providers
- Syntellect should strive to provide turnkey solutions
- Syntellect should consider creating alliances with core processors to resell its solutions

DDR0007684

Executive Summary

Recommendations

- In the transaction processing market, Syntellect Interactive Services can take the following steps to combat its competitors and create sustainable competitive advantages:
 - Leverage the company's strengths, such as its ownership of a service bureau, well-known IVR products, readily available TWR products, and general telephony experience
 - Form strategic partnerships with a variety of industry players in order to access greater numbers of customers. Suggested partnerships include:
 - Integration Financial Network
 - Synstar Systems, Inc.
 - Fiserv
 - Smaller Internet banking solutions providers with strong regional ties
 - Use innovative and flexible thinking to create marketing strategies which seek untapped customers (and unexplored solutions to their needs)
- Syntellect needs to work quickly to take advantage of its immediate readiness to offer products and services, especially while its relatively slow competitors continue to develop their products and lose ground in building their customer bases
- Syntellect should offer electronic commerce services targeted to merchants
 - The company's service bureau already possesses the core systems and software necessary to provide these functions
 - Experts project that the market for e-commerce services will grow exponentially for several years
 - By adding e-commerce services, Syntellect will be able to offer companies more complete Internet-based solutions which better meet their needs

Competitive Analysis

D:\R0007685

D:\R0007686

Security First Technologies

(www.s-f.com)

Company Profile:

- Security First (formerly Five Paces) provides Internet banking solutions including software sales and outsourcing solutions
- The company has gained market attention through its Internet bank subsidiary, Security First Network Bank.

Products:

- Financial Services Applications
 - Virtual Bank Manager
 - Virtual Credit Card Manager
 - Virtual Investment Manager
 - Virtual Loan Manager
- Security Products
- Architecture
- Implementation
- Consulting Services

D:\R0007687

Security First Technologies

(www.s-f.com)

Product Features:

- Financial Services Applications
 - Virtual Bank Manager
 - Allows bank customers to perform secure banking transactions over the Internet
 - Account summary & statement information
 - Online check imaging
 - Bill payment & payment reports (by category or payee)
 - Cash flow reports
 - Reconciliation reports (reconcile the current bank balance against the current register balance, identifying discrepancies between the bank statement and register)
 - Online help
 - All graphics, text, etc. can be customized for each bank

D:\R0007688

Security First Technologies

(www.s-1.com)

Product Features:

- Financial Services Applications
 - Virtual Credit Card Manager
 - Provides credit card customers access to a real-time account statement
 - Interface is similar to bank account information
 - Virtual Investment Manager
 - Not yet available, this will enable financial institutions to add brokerage services to their product lines
 - Will include investment research and financial analysis. No mention of real time or delayed stock quote availability.
 - Virtual Loan Manager
 - Not yet available, this will enable applications for personal or commercial loans online
 - Payments to loans can be made between online accounts
 - Virtual Net Worth
 - All components can (will) be integrated so that customers can view total portfolio of debits and credits
 - Bill Payments
 - Contracted through CheckFree, S-1 allows online scheduling of bill payments (a pretty standard approach)

Security First Technologies

(www.s-1.com)

Target Market:

- S-1 has signaled its intent to dominate the online banking market. The company aggressively promotes itself at trade shows, in industry publications, and online. The company's bank, Security First Network Bank (SFNB), has proven to be a useful sales tool (proving that it works), but some banks have expressed concerns over S-1's ownership of a competing institution.
- Currently, the company's oldest domestic client (excluding SFNB) is Huntington Banks, a stakeholder in S-1 Corporation. S-1 also recently signed an agreement with the Australia and New Zealand Banking Group, Ltd. (ANZ) to sell the Virtual Financial Manager (bank suite). A total of 13 financial institutions have signed up for S-1's products and services, and 7 of these will use the outsourcing option (S-1's service bureau).
- The service bureau (outsourcing) option appears to be favored by smaller institutions, whereas larger customers tend to purchase the solution outright. (The seven outsourcing clients manage approximately \$30 billion of the \$230 billion under management by all S-1 clients.)

Security First Technologies

(www.s-1.com)

Strategic Partnerships:

- Sun Microsystems
 - S-1 will develop a version of S-1's Virtual Financial Manager that will run in a secure operating environment based on Sun's UltraSPARC platform running Solaris. S-1 will also incorporate Java technology into its VFM architecture, thus enhancing Internet/intranet functionality and providing universal access to S-1 applications across multiple platforms. Sun's global sales, marketing and distribution channels will promote the S-1 solution on the Sun platform as well.
- CheckFree Corporation
 - S-1 has an agreement with CheckFree in which CheckFree provides back-end bill payment processing for S-1's VFM customers, and utilizes VFM for their bill payment services, as well. Additionally, CheckFree is supposed to re-market Security First's VFM solution to their financial customers. The extent to which the latter occurs is uncertain, given that CheckFree has a competing solution of its own. To date, S-1 has not gotten any new clients through this partnership.

Security First Technologies

(www.s-1.com)

Strategic Partnerships:

- Unisys
 - Unisys has agreed to recommend S-1 products to its systems customers who seek Internet solutions. In exchange for this, S-1 is rewarding Unisys with "commissions" for sales made through their referrals. It is uncertain whether this partnership has yielded any clients for S-1, but the relationship is actively pursued by S-1.
- Alltel
 - Alltel is the preferred service bureau used by S-1 customers who choose the outsourcing option. Alltel also actively promotes S-1 products to its other financial institution clients, including National Commerce Bancorporation, which recently selected S-1 as its Internet solution provider.
- Visa Interactive
 - Visa Interactive markets S-1's Virtual Financial Manager suite as its Internet banking solution and as a complement to its remote banking and bill payment services. Visa Interactive claims to offer its own solution as well, but no product literature is available. Security First has agreed to make its technology compliant with the Access Device Messaging Specification (ADMS) financial systems standard created by Visa.

Security First Technologies

(www.s-1.com)

Strategic Partnerships:

- Hewlett Packard
 - S-1 uses HP's VirtualVault security technology in its VFM product. HP is involved in the development of S-1 products and is essentially a supplier to S-1. S-1 refers clients to HP for systems solutions as an added feature of this relationship. HP promotes SFNB and S-1 solutions in the retail banking section of its web site.
- M&I Data Services
 - M&I is one of the banking industry's leading core processors. S-1 has an exclusive arrangement with M&I whereby M&I will promote only S-1 Internet banking solutions to its customers. M&I is also the service bureau used for processing SFNB transactions (a legacy of Cardinal Bancshares' relationship with M&I).
- Computer Services, Inc.
 - Structured similarly to the M&I relationship. Computer Services is a "core processor" of banking data and will market S-1 products to its customers. It will also use S-1's service bureau for the front-end processing of Internet banking applications.

D:\PROJ\07686

D:\PROJ\07686

Security First Technologies

(www.s-1.com)

Pricing:

- Setup fees: \$40,000
- Per customer fees: Variable. This fee amount has an inverse relationship with the number of a client bank's customers.
- S-1 shows a strong willingness to be flexible with pricing within a certain range. Each client may have a different contract with S-1, but each contract is designed to meet S-1's costs and achieve revenue targets.

D:\PROJ\07686

Security First Technologies

(www.s-1.com)

General Observations:

- S-1 is probably Syntellec's most significant competitor in the financial institutions market. They have several advantages over Syntellec at present:
 - Momentum - Security First has been in the market for 2 years and has attracted lots of media attention to its product offerings, primarily through SFNB ("the first Internet bank").
 - Partnerships - S-1's strong relationships with key partners, particularly the exclusive referral deals with four of the seven major "core processors" (Alltel, M&I, Computer Services, and CheckFree), are important assets to the company. Syntellec must build similar relationships in order to ensure full recognition of its web capabilities.
 - Product Development - S-1 has had a longer time to work on its product and a larger group of programmers as well. Syntellec should be able to benefit from S-1's experience, however, and this should mitigate this advantage.
- S-1 does not appear to be interested in markets other than financial services at present. Syntellec's willingness to enter diverse markets can strengthen its bid to enter the e-commerce market and accelerate the learning curve to the point at which many of the advantages enjoyed by S-1 can be met or overcome.

D:\PROJ\07686

CFI Proservices, Inc.

(www.cfipro.com)

Company Profile:

- CFI Proservices claims to be the largest provider of PC-based software to the U.S. banking industry, with over 5,000 financial institutions using the company's products and services
- The company seeks to automate lending, operations, home banking, and customer sales and service for financial institutions
- CFI's products WebPB and JavaPB enable their customers to offer full-service interactive solutions

Products:

- Personal Branch (PC banking)
 - WebPB and JavaPB (Internet banking), LoanPB
- Encore! Call Center
- ACH Manager (processes file transfers between corporate customers, the Fed, and other ACH operators)
- StarGate (middleware product)
- Self-Service Terminal (kiosk software)

CFI Proservices, Inc.

(www.cfipro.com)

Product Features:

- Personal Branch
 - Account balances
 - Account histories
 - Funds transfers
 - Bill payment
 - Download of history information to personal finance software *Quicken, Money,* and *Managing Your Money*
 - Payroll distribution information
 - Intra-bank transfers
 - Tax information
 - Institution news and information

18

Joseph Michaels, Michael Poisel and Delano Ross - Principals

CFI Proservices, Inc.

(www.cfipro.com)

Product Features:

- Encore! Call Center
 - Customer Service Module
 - Provides transaction detail, statement detail, stop function, and warning function
 - Information Reference Module
 - Provides check orders, customer contact history, mailings, branch directory, bulletins, institution policies and procedures, product information, rate information, what-if calculations, fax and phone referrals, and inter-institution telephone directory
 - Telemarketing Sales Module
 - Provides customer profiles, account opening, lead tracking, mail, product information, coupon processing, call follow-up, fax and phone referral, account opening, document preparation, call history, customer demographic and psychographic information, product recommendations, rate information, and what-if calculations
 - Letter Fulfillment Module
 - Provides letter requests, letter templates, letter printing, data merge, information about collateral materials, and fulfillment reports
 - Reporting Module
 - Provides standard reports and ad-hoc reports

CFI Proservices, Inc.

(www.cfipro.com)

Target Markets:

- CFI mainly targets the credit unions and community banks, which typically prefer outsourcing over outright purchase for technology solutions

Strategic Partnerships:

- Hewlett Packard
 - HP lists CFI as a "channel partner" under HP's virtual bank manager product offering, implying that the companies have a mutual reseller agreement for each other's services
- Credit union core processors - Afttech, Automated Systems, CU Processing, Fiserv Savings & Community Bank Group Southwest Region, Fiserv Galaxy, FiTech, Member Data Services, Share One, Summit Information Systems, and USERS
 - CFI has developed interfaces for the host processing systems of these companies, all of which serve credit unions
 - CFI and these companies also have co-marketing agreements in place for CFI's Personal Branch product

Joseph Michaels, Michael Poisel and Delano Ross - Principals

D01R0007700

© 1996, Online Decision Strategies

20

Joseph Michaels, Michael Poisel and Delano Ross - Principals

CFI Proservices, Inc.

(www.cfipro.com)

General Observations:

- CFI has focused on small financial institutions and credit unions. Note: There is concern in the market over whether their solution is scalable to larger settings
- CFI's Personal Branch software has wide acceptance, which gives the company plenty of opportunity to transition the financial institutions using PB over to CFI's new Internet-based products
- CFI's clever strategy: core processors ultimately resell CFI's solution
- Syntellect should consider mirroring CFI's partner/reseller strategy

Digital Insight

(www.diginsite.com)

Products:

- AXIS Internet Access Account System (Home Banking)
- Web services

Product Features:

- AXIS Internet Access Account System (Home Banking)
 - Account balances
 - Account histories
 - Funds transfers
 - Download of history information to *Quicken*
 - Bill Payment System
 - Internet Stock Quotes
- Web services
 - Site development, maintenance, and hosting

DDPRO07702

© 1996, Online Decision Strategies

22

Joseph Michaelis, Michael Poisel and Delano Ross *Principals*

Digital Insight

(www.diginsite.com)

Target Market:

- Digital Insight has 81 clients, 27 of whom use the company's AXIS home banking product. Credit unions comprise almost all of the clients, however the company is also clearly targeting the broader financial institutions market.

Strategic Partners:

- Travelers Express Company
 - Provides the bill paying service used to process Digital Insight's payment transactions
- Symitar Systems
 - This top-20-ranked core processor for credit unions co-markets Digital Insight's solution with its own home banking product, apparently as part of a licensing arrangement similar to those used by Security First Technologies

Digital Insight

(www.diginsite.com)

General Observations:

- Digital Insight gained market acceptance by creating and hosting web sites for small financial institutions such as credit unions
- The company's customers now see its transaction-based product as the next progression in Internet-related services
- For example, the credit unions no longer simply use the Internet as a marketing channel; they are beginning to use it as a distribution channel for interactive services
 - This trend suggests that, as they become comfortable with the technology, financial institutions will accept the evolution of interactive products
- These observations support Syntellect's decision to position its IWR product as the next step in interactive banking services for its current customer base

CheckFree Corporation

(www.checkfree.com)

Company Profile

- A \$678 million company which provides electronic bill payment and collection, electronic home banking, and other electronic commerce-related services for consumers, businesses and financial institutions
- Operates a series of service bureaus -- in Austin, Chicago, Portland (OR), Columbus, and through Intuit Services Corporation -- which enable CheckFree to handle the outsourcing of bill payments for 850 financial institutions including Wells Fargo, PNC, Chase, NationsBank, Bank America, and Bank One
- Two CheckFree service bureaus offer outsourcing services similar to those available through Syntellect
 - Using real-time network links and working off strip files, these centers located in Chicago and Austin offer banks the ability to outsource key online banking functions such as account balance information, fund transfer, etc.

CheckFree Corporation

(www.checkfree.com)

Products:

- CheckFree BankStreet Web
- CheckFree E-Bill
- Stock Quote Service

Product Features:

- CheckFree BankStreet Web
 - thin-client web banking software originally created by software company Servantis
 - can be customized by banks to feature bank's own brand name, logo, etc.

CheckFree Corporation

(www.checkfree.com)

Product Features:

- CheckFree E-Bill
 - Service which allows consumers to receive and pay bills electronically
 - Works directly through CheckFree on the web
 - Is not capable of handling all payees; only companies signed up with CheckFree
- Stock Quote Service
 - The company's purchase of software company Security APL added the popular stock quote web site PAWWS.com to CheckFree's repertoire, giving CheckFree new competencies in Internet-based financial services such as stock trading, portfolio management, company research, information for investment advisors, etc.

CheckFree Corporation

(www.checkfree.com)

Strategic Partnerships:

- Microsoft
 - Enables BankStreet Web and the web sites of CheckFree bank customers to leverage Microsoft's ActiveX technology which will enable them to create more sophisticated user interfaces and operate much like fat-client personal finance software
- QuestPoint
 - Adds QuestPoint's transaction processing capabilities and its list of bank clients and retail clients
- Security First Technologies
 - Has a joint marketing agreement with S-1
- Integriion Financial Network
 - Makes CheckFree's bill payment and other back-end services available to members of IFN
- Intuit Services Corporation
 - Brings online users of Quicken personal finance software to CheckFree
- Also AT&T, Automatic Data Processing, Spyglass, Spry and CyberCash

CheckFree Corporation

(www.checkfree.com)

Target Markets:

- CheckFree targets several large markets:
 - Financial institutions of all sizes
 - Consumers who wish to pay bills electronically
 - Corporations, small business, merchants and others which could benefit from electronic versions of bill payment and various other transactional services

Pricing (outsourcing option):

- \$50,000 - \$60,000 in setup fees
- An ongoing monthly fee graduated according to number of accounts
- No charge for each transaction

CheckFree Corporation

(www.checkfree.com)

Success Factors:

- Has large installed base of clients and customers
 - Over 1 million consumers served
- Possesses a near-monopoly on electronic bill payment
 - Has notorious reputation for pressuring partners and suppliers to offer concessions during negotiations
- Has developed comprehensive strategy to serve users of fat- and thin-client software
 - CheckFree customers can use direct dial-up, fat-client software such as *Microsoft Money*, *Quicken*, and *BankStreet*
 - Or, thanks to Microsoft's ActiveX technology, customers will be able to bank exclusively through the web using thin clients such as *BankStreet Web* and customized bank web sites
 - Either way, CheckFree promises to give all customers a feature-rich online banking experience

DD00007708

DD00007710

CheckFree Corporation

(www.checkfree.com)

General Observations:

- CheckFree poses a potential threat to Syntellect
 - The company's market power and breadth of product and service offerings make it a formidable competitor, including in the market for service bureaus
 - To deal effectively with this threat, Syntellect should consider conducting market research in order to determine customer perceptions and preferences and find weaknesses in CheckFree's positioning
- CheckFree has not publicized its presence in the service bureau market effectively
 - Syntellect should move quickly to attract and sign on its targeted customers before CheckFree decides to apply greater resources to the service bureau market
- Syntellect should consider exploiting the dissatisfaction many financial institutions feel toward CheckFree, which often exercises a Microsoft-like power over them in the bill payment market

Online Resources & Communications Corp.

(www.orec.com)

Products:

- Online Banking Services
- Customer Support Software
- Marketing Support
- The Online Business Banker
- Internet Services

Product Features:

- Online Banking
 - Web, telephone, and screenphone access provided
 - Bill Payment
 - Offered as an independent service directly to consumers, enabling them to keep current bank account
 - Account information

DD00007711

DD00007712

Online Resources & Communications Corp.

(www.orcc.com)

Online Resources & Communications Corporation

Product Features:

- Customer Support Software
 - Used by customer service centers
 - Tracks merchant records, maintains account notes, and includes entry validation protocols
- Marketing Support
 - A comprehensive marketing communications plan designed to help financial institutions develop effective consumer marketing programs
- The Online Business Banker
 - Cash management and bill paying service for small businesses
- Internet Services
 - Site development, maintenance and hosting

Online Resources & Communications Corp.

(www.orcc.com)

Online Resources & Communications Corporation

Target Markets:

- 50 institutions signed up so far
- Targets small- to mid-size institutions with up to \$11 billion in assets
- Current mid-size clients include:
 - Central Fidelity (\$11 billion)
 - First Commerce (\$8.4 billion)
 - United Carolina Bank (\$5 billion)
 - Riggs National (\$4 billion)
- Current small clients include: Mechanics Bank in California, Sandy Spring Bank in suburban Washington, D.C., and Wilber National Bank in Oneonta, New York

Strategic Partnerships:

- Deluxe Corp. - provides transaction processing and software services to banks, ATM networks, and retailers; Deluxe will be marketing ORCC products directly to its banking customers.
- Intuit Open Exchange-compliant

DD00007715

DD00007714

Online Resources & Communications Corp.

(www.orcc.com)

Online Resources & Communications Corporation

Success Factors:

- Designed for “100% outsourcing,” the company does not “sell” its service.
 - This may signal the company’s intent to focus on smaller institutions
 - ORCC offers both web-based and private network-based solutions

General Observations:

- ORCC allows consumers to sign up for bill payment regardless of whether the financial institution they use is a client of ORCC which is not unlike CheckFree’s approach to bill payment. Customers “open” an account with one of ORCC’s clients and give that account permission to draw funds from the customer’s main account. Bills are then paid from the new account, although this is transparent to the customer.
- ORCC has positioned itself to serve both consumers, small businesses and financial institutions. It remains to be seen whether financial institutions will react unfavorably toward this strategy of disintermediation.

Edify Corporation

(www.edify.com)

Company Profile:

- Edify develops, markets, and supports self-service software that enables organizations to provide automated services accessed by customers, employees, and business partners through the Internet, private Intranets, web browsers, telephones and electronic mail
- The company’s only outsourcing client is the Atlanta Internet Bank

Products:

- Electronic Workforce
- Electronic Banking System
- Employee Service System

DD00007715

DD00007716

Edify Corporation

(www.edify.com)

Product Features:

- Electronic Workforce (Software platform)
 - Can deliver services via telephones, online PCs, fax, pagers, interactive kiosks and others
 - Can quickly and cost effectively integrate with back-office systems
- Electronic Banking System
 - Account information is available (balances, account history)
 - Funds Transfer
 - Bill Payment
- Employee Service System
 - Common human resources tasks can be performed in an interactive environment

Edify Corporation

(www.edify.com)

Target Market:

- Edify supplies financial institutions with front- and back-end interactive applications. Until its recent partnership with AT&T, Edify did not offer an outsourcing solution. As a result, Edify's products may have appealed more to larger banks than to mid-size or small ones.

Strategic Partners:

- AT&T
 - Provides the outsourcing option for Edify's product using AT&T's call centers. AT&T also integrates IVR technology into Edify's solution.
- Aspect Telecommunications
 - Integrates IVR technology into Edify's product for the non-outsourced alternative (outright sale)
- NCR Customer Information Services
 - Under a licensing and distribution agreement, NCR provides an outsourcing alternative for Edify's web banking product. NCR processes data for more than 600 banks worldwide.

DDIR0007717

DDIR0007718

Edify Corporation

(www.edify.com)

Strategic Partners:

- Hewlett Packard
 - Edify licensed the VirtualVault technology to augment its product's security. In turn, HP was supposed to promote Edify's home banking solution with its electronic commerce tools. However, it is uncertain whether this has taken place.

Edify Corporation

(www.edify.com)

General Observations:

- Although Edify does not own a service bureau to provide support for its applications, the company has established strategic partnerships with AT&T and NCR to effectively provide an outsourcing alternative
- With these partners, Edify poses a competitive challenge to Syntellect in the home banking market. These partnerships demonstrate that effective competition can be enabled simply by adding strategic partners with complementary strengths. Thus, Syntellect should not dismiss as non-competitors companies which lack a comprehensive interactive solution.
- Syntellect can develop a competitive advantage over Edify by leveraging its ownership of both the technology and a service bureau to provide a more integrated and efficient solution for customers
- Edify also sees the ease of their product implementation as a strong advantage over competitors, such as Security First Technologies, which require significant effort to initiate a bank's online operations

Note: Syntellect's products can also be positioned as an easy-to-implement solution

DDIR0007719

DDIR0007720

AT&T Corporation

(www.att.com)

Company Profile:

- AT&T is a market leader in telecommunications products and services
- They have partnered with Edify to provide an Internet solution to financial institutions

Products:

- Call Center Automation
- Call Center Services
- Call Center Consulting
- Call Center Transaction Management

AT&T Corporation

(www.att.com)

Product Features:

- Call Center Automation
 - Customer Select (directs highly profitable customers to agents for cross-selling purposes)
 - Order Express (interactive voice response system to order products and services)
 - Talking Package (allows special voice messages to be included with gift products)
 - Answer Advantage (allows customers to record messages when agents are unavailable)
- Call Center Services
 - Networking of call centers
 - In-house or outsourced call routing between centers
 - Performance Monitoring
- Call Center Consulting
 - Evaluates strategic and operational aspects of a call center
 - Improves gathering and utilization of customer information
 - Offers customized services to solve specific problems
- Call Center Transaction Management
 - Allows all call center activity to be managed from a single desktop

Joseph Michaelis, Michael Poisel and Delano Ross *Principals*

DDI00007722

© 1996, Online Decision Strategies

42

Joseph Michaelis, Michael Poisel and Delano Ross *Principals*

AT&T Corporation

(www.att.com)

Target Market:

- AT&T is focused on providing complete call center support for businesses and financial institutions
- Outside of the financial services industry, AT&T targets the small- to mid-size business market. They offer site hosting and e-commerce packages to businesses through their "Easy World Wide Web (EW3)" product.

General Observations:

- AT&T is not in the business of offering front-end applications for financial institutions or businesses, but instead will partner with software companies (such as Edify) to increase penetration of their call center solutions
- Syntellect would benefit from examining AT&T's call center services to determine where further product development would enhance Syntellect's position in the service bureau market

Fiserv, Inc.

(www.fiserv.com)

Company Profile:

- Fiserv is an independent provider of financial data processing systems and related information management services and products to banks, credit unions, mortgage firms and savings institutions worldwide
- Fiserv is one of 7 major "core processors" for the banking industry

Products:

- The company's products currently do not include home banking solutions or automated customer service alternatives

Strategic Partnerships:

- Some units of Fiserv, including Fiserv Galaxy and Fiserv Savings & Community Bank Group, have a partnership with CFI Proservices. CFI has created an interface to the systems of these units to enable Fiserv to offer Internet banking to the customer groups served by these units.

DDI00007723

DDI00007724

© 1996, Online Decision Strategies

44

Joseph Michaelis, Michael Poisel and Delano Ross *Principals*

Fiserv, Inc.

(www.fiserv.com)

General Observations:

- The company has all the capabilities required to enter these markets, although it seems more likely the company would license Internet-banking technology from a vendor. Therefore, Syntellect should consider pursuing a partnership with Fiserv in order to gain access to the company's substantial customer base.
- Fiserv's relationship with CFI Proservices is limited to specific units within Fiserv and presents only a limited obstacle to Syntellect.
- In addition, Fiserv is one of very few major core processors which does not yet have a relationship with Security First Technologies (SFNB). Syntellect should actively pursue core processors such as Fiserv which are open to alternative home banking solutions.

Symitar Systems, Inc.

(www.symitar.com)

Company Profile:

- Symitar is a core processor for credit unions and offers its own Internet banking application to its clients
- Symitar considers itself to be in the top twenty of all core processors, although its entire business is comprised of credit unions. Symitar currently provides processing services for 170 credit unions in 30 states.

Products:

- MemberConnect Audio Response (IVR technology)
- MemberConnect (PC banking software package)
- Secure Internet Home Banking

D01R0007725

D01R0007726

Symitar Systems, Inc.

(www.symitar.com)

Product Features:

- MemberConnect Audio Response
 - Complete account information
 - Document ordering (including automatic faxes of certain documents)
 - Ability to transfer funds
 - Note: Bill payment is not offered
- MemberConnect and Secure Internet Home Banking
 - Account information (balances, statements, account history)
 - Funds Transfer
 - Bill Payment
 - Supports up to ten different languages (English and Spanish included with purchase)
 - Note: To our knowledge, no other companies offer this multi-lingual feature

Symitar Systems, Inc.

(www.symitar.com)

Target Market:

- Symitar seeks to provide complete interactive solutions for all credit unions and their customers

Strategic Partners:

- Digital Insight - Symitar co-markets Digital Insight's Internet banking product to its clients

Pricing Information:

- Setup and installation:
 - under \$25,000 for licensing
 - under \$25,000 for hardware
- Monthly home page basic services (hosting): \$500
- Home page design consulting: not provided
- Monthly fee, per-member fee, per-transaction fee: none

D01R0007727

D01R0007728

Symitar Systems, Inc.

(www.symitar.com)

General Observations:

- Symitar has entered into an uncommon agreement with Digital Insight whereby Symitar is allowed to market its solution to DI's customer base. In exchange, Symitar will simultaneously market DI's Internet banking solution as an alternative to its own.
- Syntellect might benefit by finding a company with which it could enter into a similar cross-marketing relationship
- Symitar might make a good strategic partner for Syntellect, however both companies would need to determine if and how such a relationship could improve the penetration of their company's products

Integrion Financial Network

(no corporate web site)

Company Profile

- Organization formed on 9/10/96 by IBM and a series of North American banks, each of whom invested several million dollars
- IFN will create a system through which member banks can offer customers a full slate of electronic banking services and share costs of technology and infrastructure development
- Integrion intends to provide customers access to banking services through 3 major access points:
 - PC / Internet
 - PC client software
 - Touch tone telephone
- Although currently focusing on consumer home banking and bill payment, Integrion ultimately intends to branch into other opportunities such as insurance industry services, commercial banking, etc.

DDIR0007729

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

DDIR0007729

© 1996, Online Decision Strategies

50

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

Integrion Financial Network

Product Features (Front-end):

- Integrion's basic user interface and functionality has been modeled after Meca's *Managing Your Money* software, which is currently being re-written to comply with the Integrion Financial Network standard
- The interface will be completely brand-able & customize-able for individual member banks and will offer all basic banking features:
 - Balance inquiries, account statements, fund transfers, e-bill payments
 - In future:
 - Stock quotes & trading
 - Access to mutual funds
 - Loans
- Customer service functions will include
 - Direct e-mail to bank
 - E-Bill presentment
 - In future: interactive video sessions

Integrion Financial Network

Product Features (Front-end):

- Services will be accessible through any browser, ISP, or the private IBM Global Network, and ultimately through kiosks and interactive television

Product Features (Back-end):

- Increased security for financial institutions
 - Private IBM Global Network
 - Secure firewall/encryption solutions

DDIR0007731

51

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

DDIR0007732

© 1996, Online Decision Strategies

52

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

Integrion Financial Network

Target Markets:

- Large North American Banks
 - 16 U.S., Canadian partners will develop, own, and use service:

- | | |
|----------------------|---------------------------|
| • ABN AMRO | • Fleet Financial Group |
| • Bank One | • KeyCorp |
| • Bank of America | • Mellon Bank |
| • Barnett Bank | • Michigan National Bank |
| • Comerica | • NationsBank |
| • First Bank Systems | • PNC Bank |
| • First Chicago | • Royal Bank of Canada |
| • NBD | • Washington Mutual, Inc. |

Integrion Financial Network

Target Markets:

- Small North American Banks
 - Will get same services as large banks by joining network
 - Will pay per-transaction fees
- International Banks
 - IBM is currently developing a similar network to Integrion for banks in Brazil

Success Factors

- Timing
 - Pilots to begin March 31, 1997 at NationsBank, Bank One
- Economies of scale will help reduce development costs
- Open architecture, infrastructure
- Built-in clients (partner banks serve over half of U.S. customers)

DDI00007735

DDI00007734

Integrion Financial Network

Pricing:

- To be determined

General Observations:

- Integrion, if successful, could pose a challenge to today's online banking service providers
 - Integrion has the potential to shape the future of online banking, especially given the company's shared costs, billions of dollars committed to Internet-related R&D, and its impressive number of member banks
 - IFN's other competitive advantages, i.e., the company's open architecture and unrestricted use of the secure IBM Global Network, could give Integrion a sizable edge
- Transactions could be streamlined for IFN bank customers
 - For example, a customer of one IFN bank will be able to make automatic, directly-credited payments and transfers to customers of other IFN banks
- If IFN's shared-cost strategy works, certain transaction fees might be reduced or eliminated

Integrion Financial Network

General Observations:

- Window of opportunity for Syntellect-Integrion technology partnership is open, but only temporarily
 - As IBM and Integrion member banks spend the next few months creating the first iteration of their network-wide standard (what they refer to as the "Gold Standard"), the organization seeks appropriate technologies and strategic partnerships
 - Syntellect should consider quickly proposing a technology-sharing arrangement under which Integrion's member banks would license Syntellect's IWR technology or services
 - All inquiries of this type can be referred to:
 - David Chew
 - IBM
 - 1133 Westchester Avenue
 - White Plains, New York 10604
 - Syntellect should consider becoming IFN-compliant to support its bid to enter a partnership with Integrion

DDI00007735

DDI00007736

Integrion Financial Network

General Observations:

- Some downplay Integrion's threat
 - Integrion has announced so little regarding its plans, standards, etc., that some industry experts have begun to doubt the company's progress and promises
 - Underground reaction to Integrion and its public announcements can be found at the Integrion Unofficial Updates web site at <http://homepages.ihug.co.nz/~crump/Integrion/home.htm>

Q-Up Systems

(www.qup.com)

Company Profile:

- Q-Up is a privately held company which offers products and services for financial institutions including online banking, web site design/development, and investment tracking tools. The company has offered its online banking product for 8 months.

Products:

- Internet Banking System
- Internet Portfolio Manager
- Stock Market News
- Q-Up Portfolio Manager
- InsuranceQuotes.com

DDIR0007737

DDIR0007738

Q-Up Systems

(www.qup.com)

Product Features:

- Internet Banking System
 - Account information (balances, history, etc.) for deposit and loan accounts
 - Funds transfer
 - Bill payment
 - Individual portfolio management
- Internet Portfolio Manager
 - Provides individual quotes, portfolio quotes, financial news summaries, research reports, and more. The service provides this information 24 hours a day via telephone, Internet, fax and e-mail. Quote information is static (end of day) and not real-time or otherwise dynamic.
 - Offered as total or partial outsourcing option
 - Total outsourcing: bank is only responsible for marketing, no other costs. All fees billed to customer (\$19.95/month + hourly charges). Minimum fee requirement.
 - Partial outsourcing: bank provides the 800 number, signs up the customers, and administers the system. Bank pays setup fee plus monthly fee based on capacity.

Q-Up Systems

(www.qup.com)

Target Market:

- Community banks (\$250-500 million) in Texas
- 2 year plan is to service banks outside of Texas

Strategic Partners:

- None at present. Company works closely with a core processor but declines to provide the identity of that processor.
- All products are built on the Microsoft NT 4.0 platform, but the company is not OFC compliant (or compliant to any other "standard")
- Uses third party bill payment company - not CheckFree - but does not disclose the firm's name
- Q-Up currently has one bank online and has a contract with a second bank which will be implemented soon

DDIR0007739

DDIR0007740

Q-Up Systems

(www.qup.com)

Pricing:

- Setup Fees: \$1000. Setup charges are nominal, as the company is trying to build a client base. Most revenues will come through transaction- and account-based fees.
- Per-user fees: \$1.00 per user, per month
- Per-transaction fees: \$0.15 - 0.50 per transaction, depending upon type. Primarily applies to bill payment feature.
- Minimum monthly charges: \$325

Q-Up Systems

(www.qup.com)

General Observations:

- This is a small operation with only a few employees (10) at present. The outsourcing option appears to apply only to the portfolio management product and not to the web banking product.
- Like ORCC, Q-Up can offer services directly to consumers, although these product offerings are limited to investment portfolio information
- With its narrowly defined target market, this company does not present a serious threat to Syntellect. Strategic partnership may be a possibility. In such a relationship development costs could be shared, but Q-Up's technological capabilities appear to be inferior to those of Syntellect.

BBN Planet

(www.bbn.com)

Company Profile:

- BBN is a large Internet service provider attempting to diversify into electronic commerce services. The company's stated mission is to "transition core business practices to the web"

Products:

- Custom Web Hosting
- Intranets and Document Delivery
- Self-Service Solutions
- Electronic Commerce
- Newspaper Publishing

BBN Planet

(www.bbn.com)

Product Features:

- Self-Service Solutions:
 - Custom application development
 - Secure web infrastructure
 - Technical integration with content and back-end databases
 - Ongoing management of operations and maintenance
- Solutions for Investment Banking Clients:
 - Funds Information
 - Information on investment objectives, fund holdings and services; daily updates on share prices and total returns; fund performance updates; fund profiles and prospectuses; online account forms; online literature requests
 - Planning Resources
 - Information on retirement planning, IRA, employer-sponsored retirement plans, variable annuities; investment strategy tips; interactive investment worksheets for tuition, retirement and asset allocation planning
 - News and Events
 - A "What's New" section featuring recent updates to the site; online excerpts from the shareholder newsletter; background information on the firm's history and management

BBN Planet

(www.bbn.com)

Product Features:

- Electronic Commerce
 - Fee-Based Online Services
 - Enables customers to order, purchase, and receive the following services online:
 - *controlled information*
 - *subscriptions*
 - *pay-per-item services*
 - Offers clients three types of billing options: by the service, month, or click
 - Orders of Physical Goods
 - Streamlines order fulfillment process
 - Note: it is unclear whether BBN actually processes order requests or merely forwards them to vendors
 - Electronic Order Fulfillment
 - Designs solutions for online transactions involving digital content (information retrieval)
 - BBN's process:
 - *Accepts a customer's order*
 - *Verifies the validity of the order*
 - *Adds appropriate sales tax, shipping and other order charges*
 - *Collects buyer credit card payment information using a secure browser connection*
 - *Obtains payment authorization from the credit card facility*

BBN Planet

(www.bbn.com)

Pricing:

- Setup Fee: "a few thousand dollars"
 - Note: special promotion currently offers setup for \$99
- Interface Customization Fee: variable per client
- Per-transaction fees:
 - 2% of purchase amount
 - minimum: \$1.00
 - no pre-set maximum
- Monthly charge: \$450 minimum
 - applied toward variable charges

DDI00007746

© 1996, Online Decision Strategies

66

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

BBN Planet

(www.bbn.com)

Strategic Partners:

- Merchant bank partners
 - NY Stock Exchange
 - Wells Fargo Bank
 - Fidelity Investments
 - TRW Financial
 - Chemical Bank
 - Scudder Financial
 - Bank of America
 - State Street Bank
 - Chicago Mercantile Exchange
 - Liberty Mutual
 - Bank of Boston
 - Financial Services Technology Consortium

(Note: at present, BBN does not have any banks signed up for home banking)

- BBN also has many partners and customers outside of financial services

BBN Planet

(www.bbn.com)

General Observations:

- BBN Planet is a widely known organization with a relatively established reputation for providing quality products and services.
- If Syntellect offers electronic commerce solutions in the future, BBN will likely be a major competitor. Likewise, BBN is capable of entering the retail banking market and other markets contemplated by Syntellect.
- BBN's e-commerce product currently has few customers, none of which are banks
 - BBN launched the service in October 1996

Call Interactive

(<http://www.callit.com>)

Company Profile:

- Offshoot of First Data Corporation
- Provides 800- and 900-number interactive voice services
- Uses high-capacity telephone system to process up to 10,000 calls every 90 seconds
- Also analyzes various types of customer information, including customer name, address and phone number, total number of calls, number of "successful" calls (calls which meet company's goal), length of time each caller is in the calling cycle, and audience response to media buys
- Serves such clients as Signet and other banks who use First Data Corp.'s services

Products:

- Company offers no IWR-type services or products at this time
- However, company claims they **will** have a web version of their IVR service available in 3 - 4 months

Target Market:

- Primary focus (today) is credit card issuers, mostly clients of First Data Corporation

Call Interactive

(<http://www.callit.com>)

Pricing (800 Service):

- Includes call handling, 800 transport, and patent licensing
- Assessed on second-by-second basis with 30-second per call minimum

Minutes Per Month	Price Per Minute
- 0 - 50,000	.24
- 50,000 - 150,000	.23
- 150,000+	.22

Optional Automatic Number ID	.02 per call
Campaign Set-up	2,500.00
Client-requested Programming Charges	95.00 per hour
Transcription	.32 per record
OPTIONAL SERVICES	
Script recording	300.00
First Phone number	No charge
Additional Phone numbers (per #, per month)	50.00
Address Labels	.03
MINIMUM MONTHLY BILLING	8,000.00

70

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

Call Interactive

(<http://www.callit.com>)

Success Factors:

- Call Interactive's considerable experience helping banks outsource their IVR needs may increase the company's success at efforts to outsource IWR services for banks in 1997
- Therefore, speed-to-market will be the greatest factor in Call Interactive's success
- In addition, the quality of the company's IWR product and its applicability to the company's service bureau model will play significant roles in the success of their IWR outsourcing business

General Observations:

- Syntellect has a significant "head start" over Call Interactive in the race to offer IWR technology to the banking industry.
- In the next 3-4 months, Syntellect should exploit its timeframe advantage over Call Interactive and should reach out as widely as possible to potential banking customers. Syntellect can tout the nature -- and immediacy -- of its advantages over Call Interactive and other such late entrants.

MicroSolve Computer Solutions, Inc.

(www.homebank.net)

Company Profile:

- Provides services to credit unions in Canada
- MicroSolve believes it is not in the business of promoting and selling a specific product, but rather finding, installing, and maintaining solutions for a client's technological demands
- Used by 12 Canadian credit unions

Products:

- Setup, hosting, and maintenance of bank web sites
- Processing of applications (loan, credit, etc.)
- Stock Quotes
- Home Banking

D:\R0007751

© 1996, Online Decision Strategies

71

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

D:\R0007752

© 1996, Online Decision Strategies

72

Joseph Michaels, Michael Poisel and Delano Ross *Principals*

MicroSolve Computer Solutions, Inc.

(www.homebank.net)

Product Features:

- Application Processing
 - Can be customized to product offerings
 - Can be part of (or separate from) other home banking features
- Stock Quotes
 - Modeled after other Internet stock quote services
- Home Banking
 - Account information is available (balances, account history, etc.)
 - Funds Transfer
 - Bill Payment

MicroSolve Computer Solutions, Inc.

(www.homebank.net)

Target Market:

- MicroSolve currently serves the Canadian credit union market exclusively, but offers services to U.S. credit unions as well

Strategic Partners:

- None
- The company's protocol has been described and demonstrated to several credit union associations, however none has chosen to endorse it

D:\R0007754

© 1996, Online Decision Strategies

73

Joseph Michaels, Michael Poisel and DeLano Ross *Principals*

D:\R0007754

© 1996, Online Decision Strategies

74

Joseph Michaels, Michael Poisel and DeLano Ross *Principals*

MicroSolve Computer Solutions, Inc.

(www.homebank.net)

Pricing Information:

- Setup and installation: \$250.00
- Monthly home page basic services (hosting): \$200.00
- Home page design consulting: \$60.00
- Monthly fee: \$100.00
- Per-member fee: \$25 per 1,000 members
- Per-transaction fee: \$0.25 per "banking session"

MicroSolve Computer Solutions, Inc.

(www.homebank.net)

General Observations:

- This company may actually be a good strategic partner for Syntellect. MicroSolve is not exclusively focused on Internet services and solutions, and much of the company's revenues seem to come from other lines of business, such as computer systems sales. MicroSolve does not have an IVR product, so a relationship with Syntellect could enable them to offer a turnkey automated customer service feature. Essentially, MicroSolve could become a reseller of the Syntellect Bankworks suite.

75

Joseph Michaels, Michael Poisel and DeLano Ross *Principals*

D:\R0007754

© 1996, Online Decision Strategies

76

Joseph Michaels, Michael Poisel and DeLano Ross *Principals*

Implications & Recommendations

Provide turnkey solutions:

- IBM leverages this idea to great effect
- “[IBM CEO] Gerstner says the last thing he wants to do is ask customers to assemble parts themselves. “Customers have arrived at the point where they say, ‘This technology is too complex. It changes too rapidly. We can’t afford the technological obsolescence. We can’t afford the labor costs to maintain it and just stay up to date.’” - USA Today, 12/4/96
- Financial institutions appreciate vendors that can simplify and consolidate all interactive services into one suite of products.

Implications & Recommendations

Establish partnerships:

- One important aspect of every company’s interactive banking solutions strategy is the use of strategic relationships (outsourcing). Developing all of the capabilities required for a complete solution (e.g., bill payment) in-house is expensive and unnecessary.
- Effective competitors in this market are also using their strategic partners as distributors of their products to complement a direct sales force, thereby reaching a broader customer base.
- Managing and developing alternative sales channels will improve Syntellect’s access to the interactive services market.

Not all analysts are bullish on the future of Internet-based banking:

- “SRI Consulting concluded that no more than 10% of U.S. households will be banking online regularly in three to five years.” - *American Banker*, 12/13/96
- Citicorp chairman John Reed has said it could take a half-century for online banking to gain mass acceptance.

Implications & Recommendations

However, don’t doubt Internet-based banking’s potential:

- Some industry executives say the number of banks offering home banking services will triple, that the use of paper checks will drop by 60%, and the use of the Internet for banking services will multiply 40 times over the next five years. Industry officials project that banks and other organizations providing financial services will spend over \$50 billion by the year 2001 to support the development, implementation and operation of new electronic retail banking services.
- Bank clients are expected to make wide use of the Internet at home. By the year 2001, information technology industry officials believe that the volume of bill payment over the Internet will exceed \$200 billion globally.
- The Internet will also be used for sales and service of financial services products such as loans, savings, investment and insurance policies. These ‘Internet’ financial services products are expected to represent a market worth \$300 billion in additional revenues by 2001.

Analysis of Pricing Alternatives

Examples of Various Pricing Models

	Setup	Monthly	Per Transaction	Per Account	Customization
BBN	\$99	\$450	2%	-	TBD
Checkfree	\$55,000	Graduated	-	-	-
Microsolve	\$250	\$300	\$0.25	-	\$60 / Hr
S1	\$40,000	Flexible	-	-	-
Symitar	\$50,000	\$500	-	-	-
O-up	\$1000	\$325min	\$ 0.15 - 0.50	\$1.00	-

Explanation of terms:

- Setup - Initial costs including site development, and equipment
- Monthly - Maintenance costs for site hosting and other services. "Graduated" refers to a fee amount that is tied to a volume driver, such as the number of active accounts
- Per transaction - Fees assessed to each transaction
- Per account - Fees assessed for each system user or active account of the client
- Customization - Costs of designing interface to a legacy host system

Small Financial Institutions

Profile:

- Banks with less than \$1 billion in assets under management

Recommendations:

- Low Set-up Fees (under \$5,000)
- High Per-Account Monthly Fees (\$1.00 - \$3.00)
- Minimum per Month (\$200 - \$400)

D:\00007761

D:\00007762

Small Financial Institutions

Rationale:

- Since these financial institutions will not have the resources to make major up-front investments, a low set-up fee is required to attract their business.
- Most small banks use outside data processors, so customization expenses can be divided across multiple institutions
- Once activated, these institutions are more likely to agree to higher variable costs (per account) for several reasons:
 - Incremental benefits of on-line service are relatively higher than for larger organizations
 - Smaller organizations typically are subject to higher costs because of reduced bargaining power
 - Price reductions can be offered as organization achieves growth milestones

Example:

- Q-up Systems

Medium Sized Financial Institutions

Profile:

- Banks with \$1 billion to \$10 billion in assets under management

Recommendations:

- Medium Set-up Fees (\$5,000 - \$10,000)
- Graduated Per-Account Monthly Fees (\$0.25 - \$3.00)
- Minimum per Month (\$200 - \$400)

D:\00007763

D:\00007764

Medium Sized Financial Institutions

Rationale:

- Midsize banks are less likely to be deterred by higher upfront costs and are more likely to have invested large amounts in technology in the past.
- Although some of these banks use outside data processors, the variety of products and more diverse system configurations make customization more expensive.
- Graduated variable costs act as incentive to promote the on-line service, but combined labor and overhead savings are greater than those for small institutions, so this group is still willing to pay a premium for the service.

Example:

- Digital Insight

Large Financial Institutions

Profile:

- Banks with more than \$10 billion in assets under management

Recommendations

- High Set-up Fees (\$25,000 - \$50,000)
- Flexible Per-Account Monthly Fees
- Possible maximum monthly fees or flat monthly fees

Large Financial Institutions

Rationale:

- Large banks are less likely to use a service bureau (outsourcing) solution simply because the significantly higher customization costs make outright purchase of the product more attractive.
- For those which choose outsourcing, a higher setup charge is expected to cover the customization expense. This can be reduced to the extent that the client is willing to provide the programming labor required to complete the task.
- If variable costs are applied, larger organizations may insist on a maximum monthly amount, and lower, graduated fee amounts will also be demanded. Syntellect should set pricing levels to meet revenue and margin targets while ensuring that the costs are competitive.

Large Financial Institutions

Rationale:

- Alternatively, large institutions may prefer a flat monthly fee, possibly graduated based upon total system users. This makes their costs more predictable and generates higher near-term revenue for the service bureau as well.
- Critical success factor: flexibility in pricing. Although switching costs are fairly high once a bank has been signed up, it is important that each of these major clients is made to feel that its individual requirements are being met in pricing as well as services provided.

Example

- Security First Technologies

Review of Alternative Strategies & Potential Markets

Retail E-Commerce Services

Demand for e-commerce software and systems is projected to grow at a staggering rate:

- 1996 projected sales through electronic commerce: \$700 million
- By the year 2000, revenue from electronic payments will account for fully two-thirds of all non-cash transactions in the U.S.
- Within 5 years, Internet-based electronic commerce will reach \$30 billion in the U.S. alone
- Expected size of market in 2010: \$1 trillion

Syntellect's voice processing and telephony capabilities may be a source of strategic advantage over existing providers:

- Syntellect can offer service solutions not available to other e-commerce providers.

Retail E-Commerce Services

Syntellect's e-commerce solutions could become big contributors to sales and utilization of capacity if they make it easy for online merchants to:

- Sell and distribute products
- Interface effectively with customers
- Save money, resources and time while doing so

Virtual superstores such as Amazon.com and CDNow will be the wave of the future

- Typically feature unlimited selection, worldwide distribution, and carry no inventory
- Will need various services which Syntellect can provide, including:
 - Customer interface
 - Order fulfillment & tracking software
 - Customer and inventory information, etc.

Retail E-Commerce Services

Online catalogs represent growing market

- System requirements are relatively simple and are within Syntellect's capabilities
- Excellent model for outsourcing, retailers are accustomed to revenue sharing

Pricing comparison: networkMCI

- Offers E-commerce site hosting using Open Market's OM-Transport software
- Charges \$1500 for installation and \$500 monthly with unlimited transactions

Currently, no pricing standards have been established, so creative pricing and flexibility are critical advantages

Strategic Alliances to Consider:

- Owners of warehouse space for merchants' inventory
- Programmers of Intelligent Agents and Data Mining software to help merchants store and analyze customer information, buying preferences, etc.
- Internet marketing specialists
- Freight carriers (UPS, Airborne Express)

Other Industries to Target

In order to grow Syntellect's VocalPoint business, it will be critical to cross-sell the IWR product to current IVR customers and find new clients in Syntellect's currently targeted industries (banking and financial services, healthcare, newspaper publishing, etc.). Also Syntellect should expand its client base in new directions, seeking industries whose needs fit Syntellect's products and services.

The following industries and markets could serve as targets for future marketing efforts and growth:

Other Industries to Target

Benefits Enrollment

- Employees choose benefit options such as life insurance, health insurance, 401K, etc.
- Syntellect can target benefits management companies as strategic partners (similar to core processors in banking)
- This feature can be sold as an add-on to clients of the banking or merchant products.

Insurance

- Customers of insurance agencies require access to information on policy details, premium balance, etc.
- Insurance agencies can solicit customers directly by providing instant quote services and online applications.
- Customers can customize products or determine the effects of various scenarios on premiums (i.e., effect of "points" on auto insurance).
- Claims can be filed online, and customers can access claim status information automatically.

94

Joseph Michaels, Michael Poisel and DeLano Ross *Principals*

Other Industries to Target

Corporate Intranet Development

- The number of companies which are implementing internal web networks (intranets) require many of the features used by Syntellect clients for their external customer service solutions.
 - Performance measures across divisions
 - Product or project information
 - Human resource information
 - Intranet telephony (saves on tolls and may be of acceptable quality for intra-company communication) can be offered through strategic partners such as NorTel
 - Requests for information on market conditions, inventory levels, sales figures, sales quota fulfillment, etc.

Other Industries to Target

Automated retailer customer service

- Give customers of large retail stores and other private label credit card issuers the opportunity to receive online information regarding account balance, status, recent purchases, available credit limit, immediate connections with customer service representative
- Spot ads or personalized solicitations can focus on individual purchasing patterns and preferences

Nonbank private label credit card services

- Issuers of fuel company and other providers of non-bankcard credit cards will want to take advantage of lower cost automated customer service solutions to improve margins and enhance customer satisfaction.

Other Industries to Target

Credit Bureaus (Equifax, Experion, Trans Union)

- Each of these companies currently has a presence online, but none are currently providing individual credit reports online
- Syntellect can offer a secure service for consumers to order and receive their credit reports on the Web, file disputes, and investigate the status of pending disputes

Airline Frequent Flier and Other Points Programs

- Program providers can use website featuring latest partners, deals, bargains, etc. with information on account balance, recent expenditures, etc.
- Redemption requests can be made online
- Instant statements and other service requests can be made exclusively online

Other Industries to Target

Sports/News/Entertainment Information Providers

- Digital information providers are a growing market segment, and the number of consumers using these services is also increasing
- Syntellect can partner with an information provider such as a news agency to offer advertising and/or subscription reported services to online consumers
- Telephone options will provide unique access method and will distinguish Syntellect from web-only providers

Critical Success Factors

In response to new entrants into the IVR, IWR, and E-commerce markets, it will be critical to position VocalPoint products as superior on several fronts:

- Cost-Effectiveness -- Syntellect needs to be able to quantify the benefits of its services and products to potential customers
- Superior service and product quality
- Turnkey solutions -- "one stop shopping" for IWR and IVR solutions is an important, short-term differentiating factor which will be attractive to clients in many market segments
- Robust, flexible and customizable solutions which provide next generation technologies and competitive pricing
- Scalable, upgradable product offerings, particularly with regard to customized solutions. Modular offerings may be the optimal solution.

Critical Success Factors

- Commitment to client satisfaction -- a competitive market with varying cost structures across competitors requires a strong, consistent attention to quality
- Awareness and compliance with established standards -- Syntellect should work to shape these standards as the market matures
- Proven automated customer service solutions -- Syntellect should leverage its experience in this industry to create a competitive advantage. Most competitors have very limited experience and shorter histories.
- Borderless processing capabilities -- The web is global, and successful companies will focus on product and service offerings which facilitate international transactions and customer service

One Powerful Networking Resource

PC MACLAN for Windows 95 is the only software product for peer-to-peer networking between Windows 95 and Mac OS. Its 32-bit AppleShare client and server technology allows users to share files, printers, drives and other resources bi-directionally.

How PC MACLAN Works

PC MACLAN installs AppleShare client and server functionality on the Windows 95 machine, giving the PC and Mac user unmatched cross-platform print and file sharing capabilities.

As a File and Print Client...

Windows 95 PCs simply view and access Macintosh directories, hard or floppy drives, AppleTalk printers and other network resources by choosing the appropriate icons in the Network Neighborhood browser. (PC MACLAN also lets PCs read Mac files in their original long file name format).

As a File and Print Server...

PCs can share files, printers, hard or floppy drives, CD-ROMs and PostScript printers with Macintosh clients with the Macintosh Chooser interface.

DIGITAL FRONTIERS

WEB GRAPHICS DEVELOPMENT TOOLS AND PLUGINS

Item Name: HVS Color
Item Numbers: HVSMDB1
HVSMPW1 HVSMFPW1
Description: Color Reduction Plug-in

Platforms: Versions Available:

- Mac For Photoshop - \$99.00
- Mac For DeBabelizer - \$99.00
- Win 95/NT For Photoshop - \$99.00

To add an item to your Shopping Basket, click on the platform.

HVS Color is a ground breaking plugin for Adobe Photoshop and Equilibrium DeBabelizer that allows you to convert 24-bit images to 8 bits with no visible loss in quality. Its patented psychovisual algorithm models the way the human visual system perceives and masks colors. The results are truly startling -- now you can have realistic photographic images as GIF files. All the advantages of 24-bit at less than a third the size! And because HVS Color achieves its effect without dithering, your GIF files will compress up to 70% better, meaning less download time for your web pages. HVS Color also adds more sophisticated color reduction capabilities to HVS WebFocus -- together, they make an unbeatable web image development toolkit!

DIGITAL FRONTIERS

— WEB GRAPHICS DEVELOPMENT TOOLS AND PLUGINS —

Item Name: HVS WebFocus
Item Number: HVSWF1
Description: Photoshop Plug-in

Platforms/Versions Available:
• Macintosh - \$129.00

To add an item to your Shopping Basket, click on the platform.

HVS WebFocus is a comprehensive toolkit for anyone who prepares images for the World Wide Web or for multimedia. HVS WebFocus is a revolutionary new set of plug-ins that turns Photoshop into a one-step Web image factory. It has all the tools you need to edit interlaced, transparent and animated GIFs as well as progressive JPEGs. Because WebFocus incorporates Digital Frontiers' proprietary color reduction and optimized JPEG encoding, your images will look better and load more quickly.

Purchase HVS WebFocus and HVS Color for Macintosh Photoshop at the same time for only \$159 - Regular Price \$208 - Save \$49

HVS WebFocus™  **ORDER!**

Digital Frontiers Announces HVS WebFocus.

HVS WebFocus is a comprehensive plug-solution for anyone who prepares images for the World Wide Web or for multimedia. HVS WebFocus is a revolutionary new plug-in that turns Photoshop into a one-stop Web image factory. It has all the tools you need to produce interlaced, transparent and animated GIFs as well as progressive JPEGs. Because WebFocus incorporates Digital Frontiers' proprietary color reduction and optimized JPEG encoding, your images will look better and load more quickly.

The screenshot shows the HVS WebFocus interface with several panels. On the left, there's a 'Transparency control' panel with a preview of a transparent image. In the center, there's a 'QUALITY PREVIEWERS' panel showing a preview of a processed image. On the right, there's a 'HVS WebFocus' panel with various settings and a '100% application' button. The interface is designed for configuring image export options for the web.

Firm does placement

Digital River, a provider of management for companies selling software on the Internet, said Monday it received net proceeds of \$13 million from its recently completed private placement of common stock in combination with venture capital financing. The company said net proceeds from the offering, which began last November, totaled \$10 million. It received an additional \$3 million in venture capital from Wasserstein Adelson Ventures L.P., New York, a venture capital fund managed by the investment banking firm Wasserstein Perella & Co.

Information:

Total Files Size (in bytes):	59546790
-------------------------------------	----------

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Doc Code: DIST.E.FILE Document Description: Electronic Terminal Disclaimer - Filed	PTO/SB/26 U.S. Patent and Trademark Office Department of Commerce
---	---

Electronic Petition Request	TERMINAL DISCLAIMER TO OBIATE A DOUBLE PATENTING REJECTION OVER A "PRIOR" PATENT
Application Number	12906979
Filing Date	18-Oct-2010
First Named Inventor	D. Ross
Attorney Docket Number	23-CON3
Title of Invention	Methods of expanding commercial opportunities for internet websites through coordinated offsite marketing

- Filing of terminal disclaimer does not obviate requirement for response under 37 CFR 1.111 to outstanding Office Action
- This electronic Terminal Disclaimer is not being used for a Joint Research Agreement.

Owner	Percent Interest
DDR HOLDINGS, LLC	100%

The owner(s) with percent interest listed above in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of prior patent number(s)

6629135
6993572
7818399

as the term of said prior patent is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the prior patent are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of the term of any patent granted on the instant application that would extend to the expiration date of the full statutory term of the prior patent, "as the term of said prior patent is presently shortened by any terminal disclaimer," in the event that said prior patent later:

- expires for failure to pay a maintenance fee;
- is held unenforceable;
- is found invalid by a court of competent jurisdiction;
- is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321;
- has all claims canceled by a reexamination certificate;
- is reissued; or
- is in any manner terminated prior to the expiration of its full statutory term as presently shortened by any terminal disclaimer.

Terminal disclaimer fee under 37 CFR 1.20(d) is included with Electronic Terminal Disclaimer request.

I certify, in accordance with 37 CFR 1.4(d)(4), that the terminal disclaimer fee under 37 CFR 1.20(d) required for this terminal disclaimer has already been paid in the above-identified application.

Applicant claims SMALL ENTITY status. See 37 CFR 1.27.

Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

Applicant(s) status remains as SMALL ENTITY.

Applicant(s) status remains as other than SMALL ENTITY.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

THIS PORTION MUST BE COMPLETED BY THE SIGNATORY OR SIGNATORIES

I certify, in accordance with 37 CFR 1.4(d)(4) that I am:

An attorney or agent registered to practice before the Patent and Trademark Office who is of record in this application

Registration Number 38918

A sole inventor

A joint inventor; I certify that I am authorized to sign this submission on behalf of all of the inventors

A joint inventor; all of whom are signing this request

The assignee of record of the entire interest that has properly made itself of record pursuant to 37 [CFR 3.71](#)

Signature	/Louis J. Hoffman/
Name	Louis J. Hoffman

*Statement under 37 CFR 3.73(b) is required if terminal disclaimer is signed by the assignee (owner).
Form PTO/SB/96 may be used for making this certification. See MPEP § 324.

Electronic Patent Application Fee Transmittal

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Office Action Summary	Application No. 12/906,979	Applicant(s) ROSS ET AL.	
	Examiner YOGESH C. GARG	Art Unit 3625	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 09 September 2011.
- 2a) This action is **FINAL**.
- 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 5) Claim(s) 71-92 is/are pending in the application.
- 5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 71-92 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on 18 October 2010 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 12) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 2/21/12, 9/9/11, 6/28/11, 10/18/10.
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) Notice of Informal Patent Application
- 6) Other: _____

DETAILED ACTION

1. Applicant's preliminary amendments filed 9/9/2011, 6/28/2011, 10/8/2010 are entered. Currently claims 71-92 filed 9/9/2011 are pending for examination.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2.1. Claims 71-86 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims 71 and 81 contain subject matter, "automatically, with the server computer, serving to the visitor computer a composite web page of a second website that includes: (i) information associated with the commerce object associated with the link that has been activated, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page ", which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. As described in claims 71 and 81 and as well in the originally filed applicant's specification the invention includes three parties that is owner of the first website, owner of the server computer and the merchant. The limitation, cited above, indicates a fourth party in the form of a second website. The way this limitation is recited implies that the second site is separate from the owner of the first website, owner of the server computer and the

Art Unit: 3625

merchant thereby introducing the fourth party in the transaction and the same was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Since dependent claims 72-80, 82-86 do not overcome this deficiency, they are rejected for the same reasons.

Examiner suggests amending the claims 71 and 81, for example claim 71, as follows to overcome this rejection:

“automatically, with the server computer associated with a second web site , serving to the visitor computer a composite web page ~~of a~~ from the server computer associated with the second website that includes: (i) information associated with the commerce object associated with the link that has been activated, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page “.

2.2. Claims 71-86 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims 71 and 81 contain subject matter, “automatically, with the server computer, serving to the visitor computer a composite web page of a second website that includes: (i) information associated with the commerce object associated with the link that has been activated, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page “, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that

Art Unit: 3625

the inventor(s), at the time the application was filed, had possession of the claimed invention. As described in claims 71 and 81 and as well in the originally filed applicant's specification the invention includes three parties that is owner of the first website, owner of the server computer and the merchant. The way this limitation is recited implies that the second site is separate from the owner of the first website, owner of the server computer and the merchant thereby introducing the fourth party in the transaction and the same was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. . Since dependent claims 72-80, 82-86 do not overcome this deficiency, they are rejected for the same reasons.

This rejection can be overcome, as suggested above.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 71-86 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention as there is inconsistency between the limitations recited in claims 71 and 81 and Specification. **See .MPEP <2173.03 [R-1]**

Inconsistency Between Claim *>and< Specification Disclosure or Prior Art :

Although the terms of a claim may appear to be definite, inconsistency with the specification disclosure or prior art teachings may make an otherwise definite claim take on an unreasonable degree of uncertainty. In re Cohn, 438 F.2d 989, 169 USPQ 95

Art Unit: 3625

(CCPA 1971); In re Hammack, 427 F.2d 1378, 166 USPQ 204 (CCPA 1970). In Cohn, the claim was directed to a process of treating a surface with a corroding solution until the metallic appearance is supplanted by an "opaque" appearance. Noting that no claim may be read apart from and independent of the supporting disclosure on which it is based, the court found that the description, definitions and examples set forth in the specification relating to the appearance of the surface after treatment were inherently inconsistent and rendered the claim indefinite. Notwithstanding the subject matter recited in claims 71 and 81, "automatically, with the server computer, serving to the visitor computer a composite web page of a second website that includes: (i) information associated with the commerce object associated with the link that has been activated, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page ", the disclosure/definitions/examples set forth in the specification states that the invention includes three parties that is owner of the first website, owner of the server computer and the merchant. The way this limitation is recited implies that the second site is separate from the owner of the first website, owner of the server computer and the merchant thereby introducing the fourth party in the transaction which renders the claims inconsistent and indefinite. Since dependent claims 72-80, 82-86 do not overcome this deficiency, they are rejected for the same reasons.

This rejection can be overcome, as suggested above.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 3625

Claims 71-92 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims (a) 1-26 of U.S. Patent No. 7,818,399, (b) claims 1-27 of US Patent No. 6,993,572 and (c) claims 1-18 of US Patent No. 6,629,135 . Although the conflicting claims are not identical, they are not patentably distinct from each other because the inventions claimed in both the patent and the instant application are directed to the same inventive concept that is an outsource provider serving web pages offering commercial opportunities, the method comprising: (a) automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated; wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and (iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one other; (b) automatically retrieving from a storage pre-stored data associated with the source page; and then (c) automatically with the server computer-generating and transmitting to the web browser a second web page that includes: (i) information associated with the commerce object associated with the link that has been activated, and (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.

5 Discussion of best prior art:

Art Unit: 3625

(i) The prior art of Arnold et al. (US Patent, 6016,504) is already discussed and analyzed in the two BPAI decisions mailed 4/16/2010, Reexamination of US Patents 6,993,572, and 6,629,135, filed in the IDS filed 10/18/2010 in the instant application. Arnold et al., alone or combined, does not teach a transaction taking place among three separate entities that is a host website, an outsourcing provider server/web site and a merchant where on the basis of activating a link by a visitor computer on the source web page of the host website, automatically the server of the outsource provider website retrieve pre-stored data and serves to the visitor computer a composite web page including information associated with the commerce object associated with the activated link and a plurality of visually perceptible elements derived from the pre-stored data visually corresponding to the source web page of the host website.

(ii) The prior art of Tobin (US Patent 6,141, 666) is already discussed and analyzed in the parent application 11/343,464 now US Patent 7,818,399 and the applicant's arguments in remarks filed 9/8/2009 , see pages 9-11 that Tobin, alone or combined with another art does not teach or suggest a transaction taking place among three separate entities that is a host website, an outsourcing provider server/web site and a merchant where on the basis of activating a link by a visitor computer on the source web page of the host website, automatically the server of the outsource provider website retrieve pre-stored data and serves to the visitor computer a composite web page including information associated with the commerce object associated with the

Art Unit: 3625

activated link and a plurality of visually perceptible elements derived from the pre-stored data visually corresponding to the source web page of the host website.

(iii) Crosskey et al. (US Patent 6,035, 281; see Fig.1 and col.5, lines 10-34) teaches that a visitor/client computer 1 accesses a proxy server 5 such that the client computer is enabled to access objects from a provider server via hyperlinks presented on the web pages of proxy server 5 but Crosskey et al., alone or combined with other prior art does not teach or suggest a transaction taking place among three separate entities that is a host website, an outsourcing provider server/web site and a merchant where on the basis of activating a link by a visitor computer on the source web page of the host website, automatically the server of the outsource provider website retrieve pre-stored data and serves to the visitor computer a composite web page including information associated with the commerce object associated with the activated link and a plurality of visually perceptible elements derived from the pre-stored data visually corresponding to the source web page of the host website.

(iv) The article, **Infonautics provides the Atlanta Journal and Constitution with full service archives**, *Keech, Ellen S. PR Newswire*. New York: Feb 25, 1997, hereinafter Infonautics extracted from Proquest database on 6/25/2012 teaches providing access to online archives via a link from a host website Atlanta dot com. However, Infonautics alone or combined with other prior art does not teach or suggest a transaction taking place among three separate entities that is a host website, an outsourcing provider server/web site and a merchant where on the basis of activating a link by a visitor computer on the source web page of the host website, automatically the

Art Unit: 3625

server of the outsource provider website retrieve pre-stored data and serves to the visitor computer a composite web page including information associated with the commerce object associated with the activated link and a plurality of visually perceptible elements derived from the pre-stored data visually corresponding to the source web page of the host website.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to YOGESH C. GARG whose telephone number is (571)272-6756. The examiner can normally be reached on Increased Flex/Hoteling.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Smith can be reached on 571-272-6763. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Infonautics provides the Atlanta Journal and Constitution with full-service archives

Keech, Ellen S. PR Newswire. New York: Feb 25, 1997. pg. 1

Abstract (Summary)

Infonautics, Inc. (Nasdaq: INFO), a provider of online reference services and information technology products, today announced that it has built and will host an online newspaper archive retrieval service for Cox Interactive Media's (CIM) new website, Access Atlanta (<http://www.accessatlanta.com>). Through its EPP-Direct(TM) complete archival outsourcing services, combined with its Electronic Printing Press(TM) (EPP) technology, Infonautics will host nine years worth of archives for The Atlanta Journal and Constitution, and will also provide complete system maintenance, royalty reporting, and customer billing and support.

The online archive retrieval service for The Atlanta Journal and Constitution can be accessed through a direct link from the [accessatlanta.com](http://www.accessatlanta.com) website. Named "The Stacks," the archive site contains nine year's worth of back articles of The Atlanta Journal and Constitution. CIM launched the [accessatlanta.com](http://www.accessatlanta.com) website to provide Atlantans with an interactive resource for current news, information, entertainment and community groups. The Stacks online archive retrieval area of the website enables visitors to conduct full-text searches of the CIM archives using keywords, questions and phrases.

Infonautics, Inc. (Nasdaq: INFO), a provider of online reference services and information technology products, today announced that it has built and will host an online newspaper archive retrieval service for Cox Interactive Media's (CIM) new website, Access Atlanta (<http://www.accessatlanta.com>). Through its EPP-Direct(TM) complete archival outsourcing services, combined with its Electronic Printing Press(TM) (EPP) technology, Infonautics will host nine years worth of archives for The Atlanta Journal and Constitution, and will also provide complete system maintenance, royalty reporting, and customer billing and support.

The online archive retrieval service for The Atlanta Journal and Constitution can be accessed through a direct link from the [accessatlanta.com](http://www.accessatlanta.com) website. Named "The Stacks," the archive site contains nine year's worth of back articles of The Atlanta Journal and Constitution. CIM launched the [accessatlanta.com](http://www.accessatlanta.com) website to provide Atlantans with an interactive resource for current news, information, entertainment and community groups. The Stacks online archive retrieval area of the website enables visitors to conduct full-text searches of the CIM archives using keywords, questions and phrases.

"Employing Infonautics to build and host its full-service archive site enables Cox to concentrate on the content and readership of its [accessatlanta.com](http://www.accessatlanta.com) site without worrying about infrastructure, customer billing and other resource-intensive issues," said Jim Beattie, vice president and general manager, new media services of Infonautics, Inc. "EPP-Direct supplies both the backbone and the external resources Cox Interactive needed to support this initiative, with rapid time-to-market."

"We selected Infonautics to host The Stacks because of their previous experience with database archiving and ability to fully customize and seamlessly integrate their services to meet our needs," explained Peter Winter, president of Cox Interactive Media. "Once we decided to use Infonautics, development of The Stacks moved forward at lightening speed."

EPP is an integrated multimedia delivery system. Its system components, based on open systems architecture, provide publishers and content creators with a scalable alternative to building their own online information system -- quickly and affordably. EPP-Direct(TM) is a turnkey solution for publishers who desire to offer their own online archive retrieval service, but wish to out-source the entire operation or a portion to Infonautics' New Media Services division for a monthly service fee. Or, EPP technology can be purchased alone on a per license basis.

The Atlanta Journal and Constitution is the leading circulation newspaper in the Southeast, winner of four Pulitzer Prizes in recent years. As a Cox newspaper, The Journal-Constitution has correspondents across the South, in Washington and in several foreign bureaus. Its Atlanta newsroom has more than 450 employees. Winner of two Society of Newspaper Design gold medals in 1993, The Atlanta Journal and Constitution is recognized as one the country's leading innovators in newspaper design and content.

Cox Interactive Media is a newly formed subsidiary of Cox Enterprises, Inc., a leading media company. Cox Enterprises, Inc. includes Cox Newspapers, Inc. (newspapers, direct mail marketing, book publishing), Cox Broadcasting, Inc. (TV, spot sales, movie/television production, research; publicly traded Cox Radio, Inc.) and publicly traded Cox Communications, Inc. (cable distribution, programming, broadband communications). The company is the world's largest operator of automobile auctions through Manheim Auctions, providing dealer financial services, government auctions, online services and price guides.

Infonautics, Inc. at <http://www.infonautics.com/> develops online reference services and information technology products for the consumer, educational and publisher markets. The company's reference services, Electric Library (TM) and Homework Helper(TM), are available through the Internet (<http://www.elibrary.com>) and consumer online services, and are marketed to schools, libraries and other academic institutions (<http://www.education.elibrary.com>). Infonautics' core technology software product -- Electronic Printing Press(TM) (EPP(TM)) -- is licensed to publishers and content creators on a site license basis and through EPP-Direct(TM), a turnkey digital service bureau. Infonautics was founded in November 1992 and is based in Wayne, Pa.

EPP-Direct, Electronic Printing Press, Electric Library and Homework Helper are service marks or trademarks of Infonautics, Inc. All other marks are of their respective holders and should be noted as such.

*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant.

¹ Applicant's unique citation designation number (optional). ² Applicant is to place a check mark here if English language Translation is attached.
This collection of information is required by 37 CFR 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.

Subject: Private PAIR Correspondence Notification for Customer Number 26362

Jul 03, 2012 05:26:24 AM

Dear PAIR Customer:

LOUIS J. HOFFMAN, P.C.
14301 North 87th Street, Suite 312
Scottsdale, AZ 85260
UNITED STATES

The following USPTO patent application(s) associated with your Customer Number, 26362 , have new outgoing correspondence. This correspondence is now available for viewing in Private PAIR.

The official date of notification of the outgoing correspondence will be indicated on the form PTOL-90 accompanying the correspondence.

Disclaimer:

The list of documents shown below is provided as a courtesy and is not part of the official file wrapper. The content of the images shown in PAIR is the official record.

CIVIL ACTION NO. 2:06-CV-42

CLAIM CONSTRUCTION ORDER

Before the Court is Plaintiff's Claim Construction Opening Brief. Dkt. No. 274. Also before the Court are Defendants' response and Plaintiff's reply. Dkt. Nos. 281 & 292. The Court held a claim construction hearing on November 17, 2011. See 11/17/2011 Minute Entry, Dkt. No. 308. Having considered the briefing, oral arguments of counsel, and all relevant papers and pleadings, the Court construes the disputed claim terms as set forth herein.

I. BACKGROUND

Plaintiff asserts United States Patents No. 6,629,135 (“the ’135 Patent”), 6,993,572 (“the ’572 Patent”), and 7,818,399 (“the ’399 Patent”), which relate to Internet commerce. Dkt. No. 274 at Exs. A-C. The ’399 Patent is a continuation of the ’572 Patent, and the ’572 Patent is a continuation of the ’135 Patent. Thus, the patents-in-suit all share a common written description. References to the written description herein shall be to the ’135 Patent. Trial is set for October 2012. *See* 9/8/2011 Scheduling Order, Dkt. No. 268.

On December 19, 2006, the Court stayed the above-captioned case pending reexamination of the ’135 Patent and the ’572 Patent. These patents emerged from reexamination on July 20, 2010. *See* Ex Parte Reexamination Certificates, Dkt. No. 274, Ex. A at 42-44 of 44 & Ex. B at 44-45 of 45. The ’399 Patent issued on October 19, 2010. *See* Dkt. No. 274 at Ex. C.

The Abstract of the ’135 Patent states:

The present invention is directed to an e-commerce outsourcing system and method that provides hosts with transparent, context sensitive e-commerce supported pages. The look and feel of a target host is captured for future use. The look and feel is captured by receiving the identification of an example page on the target host, retrieving the page, identifying the look and feel elements of the identified page and storing the identified elements. The host is provided with links correlating the host with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object contextually related to material in the page. The commerce object can be a product, a product category or a dynamic selection indicator. Upon activation of the provided link, the visitor computer is served with an e-commerce supported page with the look and feel of the host website associated with the activated link and with content based upon the commerce object associated with the activated link. Where the commerce object is a dynamic selection indicator the content is selected at the time of activation based upon an analysis of the page containing the activated link.

The Abstract of the '572 Patent states:

An e-commerce outsourcing system and method provides hosts with transparent, context-sensitive e-commerce supported pages. The look and feel of a target host is captured for future use. The host is provided with one or more links for inclusion within a page on the host website that correlates with a selected commerce object, which may be contextually related to material in the page. The commerce object can be a product, a product category, or a dynamic selection indicator. Upon activation of the provided link, a visitor computer is served with a page with the look and feel of the host website and with content based upon the associated commerce object. Where the commerce object is a dynamic selection indicator, the content is selected at the time of activation based upon an analysis of the page containing the activated link.

The Abstract of the '399 Patent states:

An e-commerce outsourcing system and method provides hosts with transparent, context-sensitive e-commerce supported pages. A plurality of visually perceptible elements associated with and identifying a source of a host's web page are stored in the form of data in a computer database for future use. The host includes one or more links within a page on the host website that correlate with a selected commerce object, which may be contextually related to material in the page. The commerce object can be a buying opportunity for a product of a third-party merchant, a product category containing a plurality of products of third-party merchants, or a dynamic selection indicator of a merchant's product. A plurality of hosts may choose to link to the same commerce object. Upon activation of the link displayed by a particular host website, a visitor computer is served with a page displaying the visually perceptible elements associated with that specific host's website and information associated with the commerce object correlated to the link. Where the commerce object is a dynamic selection indicator, the content is selected at the time of activation based upon an analysis of the page containing the activated link.

Plaintiff asserts: Claim 8 of the '135 Patent; Claims 13, 17, 20, 21, and 23 of the '572 Patent; and Claims 1, 3, 7, and 19 of the '399 Patent. The parties submit four disputed terms for construction: (1) "link"; (2) "capturing"; (3) "look and feel description"; and (4) "third parties."

The asserted claims are reproduced herein with the disputed terms italicized:

'135 Patent

8. An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:

- a) *capturing a look and feel description* associated with a host website;
- b) providing the host website with a *link* for inclusion within a page on the host website for serving to a visitor computer, wherein the provided *link* correlates the host website with a selected commerce object; and
- c) upon receiving an activation of the provided *link* from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured *look and feel description* of the host website associated with the provided *link* and with content based on the commerce object associated with the provided *link*.

'572 Patent

13. An e-commerce outsourcing system comprising:

- a) a data store including a *look and feel description* associated with a host web page having a *link* correlated with a commerce object; and
- b) a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the *link* has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the *look and feel description* in the data store and with content based on the commerce object associated with the *link*.

17. An e-commerce outsourcing process comprising the steps of:

- a) storing a *look and feel description* associated with a first website in a data store associated with a second website;
- b) including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored *look and feel description*, a *link* correlating the web page with a commerce object; and
- c) upon receiving an activation of the *link* from a visitor computer to

which the web page has been served, se[rv]ing to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored *look and feel description* of the first website and having content based on the commerce object associated with the *link*.

20. The process of claim 17 wherein the *look and feel description* comprises data defining a set of navigational *links*, used on at least some of the web pages of the first website, each of which *links link* to specific web pages of the first website.

21. The process of claim 17 wherein the *look and feel description* comprises data defining:

a) a logo associated with and displayed on at least some of the web pages of the first website;

b) a color scheme used on at least some of the web pages of the first website;

c) a page layout used on at least some of the web pages of the first website; and

d) navigational *links*, used on at least some of the web pages of the first website, each of which *links link* to specific web pages of the first website.

23. The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.

'399 Patent

1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

(a) automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a *link* displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the *link* has been activated;

(i) wherein each of the first web pages belongs to one of a plurality of web page owners;

(ii) wherein each of the first web pages displays at least one active

link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and

(iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each *third parties* with respect to one other;

(b) automatically retrieving from a storage coupled to the server pre-stored data associated with the source page; and then

(c) automatically with the server computer-generating and transmitting to the web browser a second web page that includes:

(i) information associated with the commerce object associated with the *link* that has been activated, and

(ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.

3. The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a set of navigational *links* on the source page.

7. The method of claim 1 wherein the commerce object associated with the *link* that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the second web page contains one or more selectable navigation *links* connecting a hierarchical set of additional second web pages, each pertaining to a subset of the offerings in the catalog.

19. A system useful in an outsource provider serving web pages offering commercial opportunities, the system comprising:

(a) a computer store containing data, for each of a plurality of first web pages, defining a plurality of visually perceptible elements, which visually perceptible elements correspond to the plurality of first web pages;

(i) wherein each of the first web pages belongs to one of a plurality of web page owners;

(ii) wherein each of the first web pages displays at least one active *link* associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and

(iii) wherein the selected merchant, the outsource provider, and the owner of the first web page displaying the associated *link* are each *third parties* with respect to one other;

(b) a computer server at the outsource provider, which computer server is coupled to the computer store and programmed to:

(i) receive from the web browser of a computer user a signal indicating activation of one of the *links* displayed by one of the first web pages;

(ii) automatically identify as the source page the one of the first web pages on which the *link* has been activated;

(iii) in response to identification of the source page, automatically retrieve the stored data corresponding to the source page; and

(iv) using the data retrieved, automatically generate and transmit to the web browser a second web page that displays:

(A) information associated with the commerce object associated with the *link* that has been activated, and

(B) the plurality of visually perceptible elements visually corresponding to the source page.

II. LEGAL PRINCIPLES

A determination of patent infringement involves two steps: first, the patent claims are construed, and, second, the claims are compared to the allegedly infringing device. *Cybor Corp. v. FAS Techs., Inc.*, 138 F.3d 1448, 1455 (Fed. Cir. 1998) (en banc). Claim construction is a legal question for the courts. *Markman v. Westview Instruments, Inc.*, 517 U.S. 370, 391 (1996). The legal principles of claim construction were reexamined by the Court of Appeals for the Federal Circuit in *Phillips v. AWH Corp.*, 415 F.3d 1303 (Fed. Cir. 2005) (en banc). The Federal Circuit in *Phillips* expressly reaffirmed the principles of claim construction as set forth in

Markman v. Westview Instruments, Inc., 52 F.3d 967 (Fed. Cir. 1995) (en banc), *aff'd*, 517 U.S. 370 (1996), *Vitronics Corp. v. Conceptoronic, Inc.*, 90 F.3d 1576 (Fed. Cir. 1996), and *Innova/Pure Water, Inc. v. Safari Water Filtration Sys., Inc.*, 381 F.3d 1111 (Fed. Cir. 2004).

The *Phillips* court also reaffirmed that “the prosecution history can often inform the meaning of the claim language by demonstrating how the inventor understood the invention and whether the inventor limited the invention in the course of prosecution, making the claim scope narrower than it would otherwise be.” 415 F.3d at 1317 (citing *Vitronics*, 90 F.3d at 1582–83). The prosecution history is a significant source for “evidence of how the PTO [(United States Patent and Trademark Office)] and the inventor understood the patent.” *Id.* The prosecution history is thus probative of the proper claim interpretation and may also contain a disclaimer of claim scope in some cases:

[A]n applicant’s argument that a prior art reference is distinguishable on a particular ground can serve as a disclaimer of claim scope even if the applicant distinguishes the reference on other grounds as well.” *Andersen Corp. v. Fiber Composites, LLC*, 474 F.3d 1361, 1374 (Fed. Cir. 2007). Moreover, regardless of whether the examiner agreed with [the patentee’s] arguments . . . , its statements still inform the proper construction of the term. *See Seachange Int’l, Inc. v. C-COR Inc.*, 413 F.3d 1361, 1374 (Fed. Cir. 2005) (“An applicant’s argument made during prosecution may lead to a disavowal of claim scope even if the Examiner did not rely on the argument.”); *Microsoft Corp. v. Multi-Tech Sys.*, 357 F.3d 1340, 1350 (Fed. Cir. 2004) (“We have stated on numerous occasions that a patentee’s statements during prosecution, whether relied on by the examiner or not, are relevant to claim interpretation.”).

Am. Piledriving Equip., Inc. v. Geoquip, Inc., 637 F.3d 1324, 1336 (Fed. Cir. 2011).

“[F]or prosecution disclaimer to attach, our precedent requires that the alleged disavowing actions or statements made during prosecution be both clear and unmistakable.”

Omega Eng’g, Inc. v. Raytek Corp., 334 F.3d 1314, 1325-26 (Fed. Cir. 2003); *accord Lazare*

Kaplan Int’l, Inc. v. Photoscribe Techs., Inc., 628 F.3d 1359, 1370 (Fed. Cir. 2010). The Federal Circuit has “declined to apply the doctrine of prosecution disclaimer where the alleged disavowal of claim scope is ambiguous.” *Omega Eng’g*, 334 F.3d at 1324.

The Court construes the disputed terms in accordance with the doctrines of claim construction it has outlined here along with those it has enunciated in the past. *See Pioneer Corp. v. Samsung SDI Co.*, No. 2:07-CV-170, 2008 WL 4831319, at *1-*5 (E.D. Tex. Mar. 10, 2008).

III. DISCUSSION

The parties have agreed upon the following constructions:

Term	Agreed Construction
Look and feel	A set of elements related to visual appearance and user interface conveying an overall appearance identifying a website; such elements include logos, colors, page layout, navigation systems, frames, “mouse-over” effects, or others [<i>sic</i>] elements consistent through some or all of the website.
Visually perceptible elements	Look and feel elements that can be seen.
Web page	A document that is accessible through the World Wide Web and capable of being displayed by a web browser.
First web page	Host web page.
Website	One or more related web pages at a location on the World Wide Web.
First website	Host website.
Commerce object	A third-party merchant’s: catalog, category, product (goods or services), or dynamic selection.
Merchant	Producer, distributor, or reseller of goods or services to be sold.
Host/Owner	An operator of a website that engages in Internet commerce by incorporating one or more links to an e-commerce outsource provider into its web content.

Outsource provider/e-commerce outsource provider	A party, independent from the host associated with the commerce object or merchant of the commerce object, that provides e-commerce support services between merchant(s) and host(s).
--	---

11/3/2011 Joint Claim Construction Chart, Dkt. No. 300 at 3.

A. “link”

(1) The Parties’ Positions

This term appears in claims of all three of the patents-in-suit. Plaintiff proposes that no construction is necessary. Dkt. No. 274 at 7. Alternatively, Plaintiff proposes this term means “a hypertext, text, banner, logo, graphic, or contextual element that permits a user to navigate from one web location to another web location by activating that element.” *Id.* at 9. Defendants propose this term means “HTML¹ element that, when activated by a visitor, causes the web browser to retrieve the content at the URL² previously generated by the outsource provider.” Dkt. No. 281 at 3.

Plaintiff cites the specification extensively and urges that the patents-in-suit use the term consistent with its meaning “in ordinary parlance.” Dkt. No. 274 at 8. Plaintiff submits that its alternative proposed construction is derived from one of the Defendants own documents and from a dictionary definition. *Id.* at 8-9. Plaintiff argues that contrary to Defendants’ proposal, the URL or content need not have been “previously” generated because the specification itself discloses “dynamically generated web pages . . . served by the e-commerce outsource provider.”

¹ HTML refers to “hypertext markup language.” ’135 Patent at 1:21.

² The Court assumes that the parties and the patents-in-suit use “URL” to refer to a Uniform Resource Locator, which some might refer to as a “Web address” or “Internet address.”

Id. at 10 (citing '135 Patent at 23:3-6). Plaintiff also argues that “[t]here is no reason to limit to HTML just because that is the predominant language today.” *Id.* at 10.

Defendants respond that “the specification does not describe a system that uses the ordinary type of links found on most web pages, but rather a specific type of link that is essential for the proper operation of the outsourcing system and method of the asserted claims.” Dkt. No. 281 at 4. Specifically, Defendants submit that the “outsource provider generates the specific URL and provides the URL to the host,” which in turn includes an HTML element on its website. *Id.* Defendants note that “[t]he specification only teaches a single embodiment.” *Id.* at 5. Defendants also argue that whereas “the patents-in-suit teach the e-commerce provider dynamically generating *content* for web pages,” “the Patents-in-Suit *never* teach a Host dynamically generating a *URL*.” *Id.* at 6. Finally, Defendants argue that the extrinsic evidence that Plaintiff relies upon is unreliable because it is a “decade-late, third-party legal contract.” *Id.* at 8.

Plaintiff replies by re-emphasizing “five different places, scattered through the specification, where the inventors used the term ‘link’ in the ordinary sense.” Dkt. No. 292 at 1-2 (citing '135 Patent at 3:7-11, 23:2-3 & 24:40-43). Plaintiff also submits that the contract Plaintiff cited involved a subsidiary of Defendant Expedia, Inc. and thus constitutes an admission. *Id.* at 3 (citing Fed. R. Evid. 801(d)(2)).

During the November 17, 2011 claim construction hearing, Plaintiff stressed that although limiting the term “link” to HTML might not matter for the above-captioned case, such a limitation could have ramifications for the '399 Patent, which Plaintiff submitted will not expire until the year 2022. Plaintiff suggested that although Defendants all appear to be using HTML,

the Internet could change during the next ten years. Plaintiff also argued that any construction that includes “HTML” would generate needless debate about what “HTML” is or what version of the HTML standard is relevant. Finally, Plaintiff cited the Court’s claim construction in another case in which the Court rejected the defendants’ argument that the term “Web page” be construed, in relevant part, to mean “an HTML document.” *epicRealm v. Autoflex Leasing, Inc.*, No. 5:07-cv-125 (originally No. 2:05-cv-163), Dkt. No. 194 at 7 (E.D. Tex. Aug. 15, 2006). In conclusion, Plaintiff urged, in as many words, that it does not matter to the invention how the link was generated or what language it is in; the link simply provides the necessary connection.

In response, Defendants argued that the specification defines the term “by implication,” as contemplated by *Novartis Pharm. Corp. v. Abbott Labs.*, 375 F.3d 1328, 1334 (Fed. Cir. 2004), and *Phillips*, 415 F.3d at 1321. In this vein, Defendants noted that the specification refers to a “Link”—capitalized—in several instances. Defendants also argued that any construction of “link” that is not limited to HTML would suffer from lack of enablement. Finally, Defendants argued it is unclear what “contextual element” means in Plaintiff’s alternative proposed construction

In reply, Plaintiff suggested that the word “contextual” could be removed from its alternative proposed construction. Plaintiff also responded that despite Defendants mere “assertion” regarding lack of enablement, there is no evidence in the record that a person of ordinary skill in the art could not program a non-HTML link. Moreover, Plaintiff argued, enablement is an issue for trial and not for claim construction. Plaintiff further argued that the capitalized “Link” refers to the preferred embodiment and should not be used to limit the term “link” in general.

In sur-reply, Defendants re-urged that “link” is a term that requires definition and that the specification provides that definition. Plaintiff responded that *Phillips* “expressly rejected the contention that if a patent describes only a single embodiment, the claims of the patent must be construed as being limited to that embodiment.” 415 F.3d at 1323.

(2) Construction

As a threshold matter, although Plaintiff urges that no construction is required, “when the parties present a fundamental dispute regarding the scope of a claim term, it is the court’s duty to resolve it.” *O2 Micro Int’l Ltd. v. Beyond Innovation Tech. Co.*, 521 F.3d 1351, 1362 (Fed. Cir. 2008); *see also id.* at 1361 (“A determination that a claim term ‘needs no construction’ or has the ‘plain and ordinary meaning’ may be inadequate when a term has more than one ‘ordinary’ meaning or when reliance on a term’s ‘ordinary’ meaning does not resolve the parties’ dispute.”). Also, the contract relied upon by Plaintiff as extrinsic evidence is subject to Defendants’ objection and, even if considered, would not affect the Court’s analysis of the dispute term. The Court therefore does not pass upon the contract or Defendants’ objection thereto.

As to the claims, Claim 8 of the ’135 Patent recites a step of “providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer.” Defendants’ proposal, which includes referring to “the URL previously generated by the outsource provider,” would render this language in Claim 8 superfluous.

The written description only refers to “HTML” eleven times and only once with regard to a link. That sole reference to linking using HTML appears in the Background of the Invention: “The World Wide Web began as a simple interface to the Internet using HTML (hypertext markup language) as a means of linking documents together.” ’135 Patent at 1:21-23. The

remaining references to HTML primarily concern “capturing the HTML text and images that comprise [the host’s] look and feel and embed[ding] within it the shopping HTML content.” *Id.* at 12:57-59. Likewise, the written description does not expressly limit the term “link” to “the URL previously generated by the outsource provider,” and the Court finds insufficient evidence to conclude that this definition is provided “by implication.” *Phillips*, 415 F.3d at 1321.

On balance, Defendants’ proposal that a link must be an “HTML element that, when activated by a visitor, causes the web browser to retrieve the content at the URL previously generated by the outsource provider” is rejected as lacking sufficient support. *See Phillips*, 415 F.3d at 1323 (quoted above).

The specification comports with Plaintiff’s proposed construction. The Abstracts of the patents-in-suit, as well as the Claims, teach that a link can be “activated.” *See, e.g.*, ’135 Patent at Abstract & Claim 8. The specification further explains:

Customer, visiting Host, activates link to commerce object within context of Host’s website. This activation is typically accomplished by clicking on a hyperlink of some kind within a webpage of the Host’s website.

Id. at 24:40-43; *see also id.* at 15:5-7. Thus, although the use of a hyperlink is “typical,” the patent does not exclude other types of elements from being links. For example, the written description refers to the use of a clickable “image” or “banner-style link” but does not require that they be a “hyperlink” or “HTML” link. *See id.* at 23:1-6 (“The customer selects the item(s) that she wishes to purchase by clicking a product image, banner-style link, or text link, or other offer format taking her to a dynamically generated web pages [*sic*]”)

As to the function of a link, the Background of the Invention discloses that “[i]n the early stages [of the Internet], website programmers increased visitor traffic by placing ‘links’ within

their websites to other websites, usually related in content or function, in exchange for a reciprocal link.” *Id.* at 1:30-33. The written description also notes that “[a] Host is the operator of a website that engages in Internet commerce by incorporating one or more link [*sic*] to the e-commerce outsource provider into its web content.” *Id.* at 22:11-13. This supports Plaintiff’s proposal that a link permits a user to navigate from one web location to another web location. *See also id.* at 3:9-20 (“Upon actuation of such a link,” the “visitor” is presented with “pages served by a server other than the host but with the host’s look and feel”) & 3:23-24 (referring to “links included by the host directed to the outsource provider”). The asserted Claims provide further support by reciting that upon activation of a link, a special web page is served to the visitor. *See, e.g.,* ’135 Patent at Claim 8.

The Detailed Description of the Inventions also comports with this construction by disclosing a “Link Generator” and noting that “[e]ach Link is assigned a unique Link ID. The Link ID identifies who the host is, who the merchant is, and what commerce object (catalog, category, product or dynamic selection) is linked to.” *Id.* at 13:48-51. In the preferred embodiment, upon adding a new link, “the link is saved to the system database 765, and the representative is provided with a link to include within a page on the host website 770.” *Id.* at 14:58-60. “When a customer clicks on a host buying opportunity (link), the next page loaded will be a shopping page.” *Id.* at 12:54-55.

As to Defendants’ argument at the claim construction hearing regarding enablement, the Court of Appeals for the Federal Circuit has “certainly not endorsed a regime in which validity analysis is a regular component of claim construction.” *Phillips*, 415 F.3d at 1327; *accord Pfizer, Inc. v. Teva Pharm., USA, Inc.*, 429 F.3d 1364, 1376 (Fed. Cir. 2005) (quoting *Phillips*

and rejecting argument that district court's claim construction would render the claims invalid for lack of enablement). Because the Court has arrived at a construction using the "the available tools of claim construction," the Court does not here consider any dispute regarding enablement. *Phillips*, 415 F.3d at 1327 (citation and internal quotation marks omitted).

Finally, as to Defendants' concern that the phrase "contextual element" may be too vague, the Court applies Plaintiff's suggestion to remove the word "contextual" from Plaintiff's proposed construction.

The Court therefore substantially adopts Plaintiff's proposal and construes "**link**" to mean "**a hypertext, text, banner, logo, graphic, or other element that permits a user to navigate from one web location to another web location by activating that element.**"

B. "capturing"

This term appears in Claim 8 of the '135 Patent. Plaintiff proposed that no construction was necessary. Dkt. No. 274 at 11. Alternatively, Plaintiff proposed this term means "taking possession from a third party of something not already in possession using at least partially automated techniques." *Id.* Defendants proposed this term means "automatically, by a party other than the host, extracting elements from a web page of the host website, specifically excluding receiving look and feel elements from the host or having the host input, upload, submit, or forward the look and feel elements." Dkt. No. 281 at 14.

On the morning of the November 17, 2011 claim construction hearing, the Court provided the parties with a preliminary construction of this term to mean "automatically, by a party other than the host, retrieving elements from a web page of the host website, specifically excluding having the host input the look and feel elements." The parties conferred and reached

agreement that “**capturing**” be construed to mean “**automatically, by a party other than the host, retrieving elements from the host website.**”

C. “look and feel description”

(1) The Parties’ Positions

This term appears in the asserted claims of the ’135 Patent and the ’572 Patent. Plaintiff proposes that no construction is necessary. Dkt. No. 274 at 14. Alternatively, Plaintiff proposes this term means “code or data defining look and feel.” *Id.* Defendants propose this term means “HTML code and images that define the look and feel.” Dkt. No. 281 at 9.

Plaintiff argues that because the parties agree on the meaning of “look and feel,” “[o]nce the jury is instructed on what ‘look and feel’ means, the jury can easily decide whether a data set qualifies as a ‘description’ thereof.” Dkt. No. 274 at 14. Plaintiff also argues there is no reason to find that data is stored as HTML code because that is not conventional and “is just one of many options” and, moreover, the specification places no restrictions on data format. *Id.* at 14-15.

Defendants respond that “the term ‘look and feel description’ is not subject to ordinary meaning because the term has no accepted understanding in the art and has no ordinary meaning.” Dkt. No. 281 at 9. Defendants argue that Plaintiff’s proposal of “code or data” is not the plain and ordinary meaning of “description.” *Id.* Defendants submit that the specification teaches, as to the invention as a whole, that “HTML text and images” are captured and stored. *Id.* at 11 (quoting ’135 Patent at 12:57-59). Defendants also argue that “[w]hether the data store can contain additional information in different formats is irrelevant” because what matters is the meaning of “look and feel description,” not “data store.” *Id.* at 13. Defendants further note that

the look and feel “elements” referred to by the specification all relate to HTML text or images.
Id. at 13-14.

Plaintiff replies that because the specification provides no special definition, “‘look and feel description’ simply should mean any ‘description’ (as used in ordinary English) of a ‘look and feel,’ regardless of format.” Dkt. No. 292 at 7. Plaintiff argues that “even if the ‘*look and feel*’ that is captured is encoded in ‘HTML text and images’ in a given case, the ‘look and feel descriptions’ that are stored in the ‘data store’ can be encoded in any format, not just HTML text and images.” *Id.* at 8.

At the November 17, 2011 claim construction hearing, Plaintiff emphasized that “description” is readily understandable to any English speaker. Plaintiff concluded that the term “look and feel description” requires no construction apart from the parties’ agreed construction of the constituent term “look and feel.” Plaintiff also noted that whereas unasserted Claim 1 of the ’562 Patent recites “storing HTML code corresponding to the look and feel description,” asserted Claims 13 and 17 do *not* recite HTML.

Defendants responded that the term “look and feel description” might be indefinite but for five “clues” in the written description that explain that the processor captures “HTML text and images,” which are then stored without any modification. ’135 Patent at 4:46-60 & 12:57-59. Defendants also argued that although Plaintiff cites Figure 14 as disclosing that capturing is optional, in Figure 14 the “capturing” has already occurred. Finally, Defendants argue that Plaintiff’s interpretation of “look and feel description” is overly broad because the “description” that is captured is the underlying code, *not* the elements as they appear in a web browser.

Plaintiff replied that Defendants have the burden to show that there is some “special

usage” in the patents-in-suit and have failed to do so. Plaintiff also argued that Figure 14 shows that “capturing” is optional because the e-commerce service provider could design a website by creating a “look and feel description” without doing any capturing.

In sur-reply, Defendants and Plaintiff re-urged their positions as set forth above.

(2) Construction

As a threshold matter, although Plaintiff urges that no construction is required, “when the parties present a fundamental dispute regarding the scope of a claim term, it is the court’s duty to resolve it.” *O2 Micro*, 521 F.3d at 1362; *see also id.* at 1361 (“A determination that a claim term ‘needs no construction’ or has the ‘plain and ordinary meaning’ may be inadequate when a term has more than one ‘ordinary’ meaning or when reliance on a term’s ‘ordinary’ meaning does not resolve the parties’ dispute.”).

The Summary of the Invention provides some context (emphasis added):

According to the present invention the *look and feel* of each participating Host is captured and stored. Hosts may include links to selected products or product categories within pages residing on the Hosts’ [*sic*] website. Upon actuation of such a link by a visitor of the Host website, a page is presented to the visitor incorporating a replica of the Host’s *look and feel* directed to the sale of the selected products or product categories.

The *look and feel* of a host is captured and stored by receiving an identification of an example page of a target host. The identified page is retrieved. The *look and feel* elements of the page are identified, and these elements are stored for future use in generating outsourced transparent pages, pages served by a server other than the host but with the host’s *look and feel*. Such pages give the viewer of the page the impression that she is viewing pages served by the host.

’135 Patent at 3:6-22; *see also id.* at 12:42-53.

The parties’ agreed upon construction for the constituent term “look and feel” is also enlightening:

A set of elements related to visual appearance and user interface conveying an overall appearance identifying a website; such elements include logos, colors, page layout, navigation systems, frames, “mouse-over” effects, or others [sic] elements consistent through some or all of the website.

11/3/2011 Joint Claim Construction Chart, Dkt. No. 300 at 3.

Further context is provided in the description of the “role of the outsource provider,” which includes to “Create, maintain, and update the ‘look & feel capture’ process through which consumers are able to shop in a Merchant-controlled storefront within the design and navigational context of the Host website, preserving the ownership of the visit experience by the Host.” *Id.* at 22:37-41. The written description also discloses “capturing the HTML text and images that comprise [the host’s] look and feel and embed[ding] within it the shopping HTML content.” ’135 Patent at 12:57-59.

On one hand, Defendants are correct that the potential for various “data store” formats does not control the construction of the “look and feel description,” which is a specific type of data. On the other hand, the disclosure of “HTML text and images that comprise [the host’s] look and feel” is part of the preferred embodiment and should not be imported into the claims:

[W]e recognize that the distinction between using the specification to interpret the meaning of a claim and importing limitations from the specification into the claim can be a difficult one to apply in practice. . . . [T]he line between construing terms and importing limitations can be discerned with reasonable certainty and predictability if the court’s focus remains on understanding how a person of ordinary skill in the art would understand the claim terms. For instance, although the specification often describes very specific embodiments of the invention, we have repeatedly warned against confining the claims to those embodiments.

Phillips, 415 F.3d at 1323.

The doctrine of claim differentiation, as applied to independent Claims 1, 13, and 17 of the ’572 Patent, also disfavors Defendants’ proposed construction.

[T]wo considerations generally govern this claim construction tool when applied to two independent claims: (1) claim differentiation takes on relevance in the context of a claim construction that would render additional, or different, language in another independent claim superfluous; and (2) claim differentiation can not broaden claims beyond their correct scope.

Curtiss-Wright Flow Control Corp. v. Velan, Inc., 438 F.3d 1374, 1381 (Fed. Cir. 2006) (citation and internal quotation marks omitted). Claim 1 recites “HTML code corresponding to the look and feel description.” Defendants’ proposed construction would thus render the recitation of “HTML code” in Claim 1 superfluous. Applying such a construction to Claims 13 and 17, which recite “a look and feel description” but do not recite HTML, is therefore disfavored. *See id.*; *see also Phillips*, 415 F.3d at 1314 (“Because claim terms are normally used consistently throughout the patent, the usage of a term in one claim can often illuminate the meaning of the same term in other claims.”).

On balance, the Court rejects Defendants’ proposal based on the context provided by other claims, the doctrine of claim differentiation, and the canon that limitations not be imported from a preferred embodiment. *See Phillips*, 415 F.3d at 1314, 1323.

As to the proper construction, Claim 13 of the ’572 Patent recites “a data store including a look and feel description,” and Claim 17 of the ’572 Patent recites “storing a look and feel description associated with a first website in a data store associated with a second website.” Claims 20 and 21 of the ’572 Patent, which depend from Claim 17, recite that “the look and feel description comprises data defining” various elements. Also, the written description discloses “storing the captured look and feel description in the data store.” ’135 Patent at 4:51-52. Finally, the Abstract of the ’399 Patent discloses that “[a] plurality of visually perceptible elements associated with and identifying a source of a host’s web page are *stored in the form of*

data in a computer database for future use.” (emphasis added).

As a final note, Figure 14 pertains to a preferred embodiment and, as demonstrated by the parties’ extensive arguments during the claim construction hearing, can be interpreted in several different ways. On balance, Figure 14 does not move the Court’s analysis one way or the other.

In sum, the most that can be said is that a “look and feel description” is composed of data. Plaintiff’s proposal of the additional word “code” does not find support in the specification, and the meaning of “code” as applied to the claims would not be clear. The word “code” is therefore not included in the Court’s construction.

The Court thus construes “**look and feel description**” to mean “**data defining the look and feel.**”

D. “third parties”

(1) The Parties’ Positions

This term appears in the asserted claims of the ’399 Patent. Plaintiff proposes this term means “separate legal entities under separate control.” Dkt. No. 274 at 16. Defendants propose this term means “separate legal entities.” Dkt. No. 281 at 27.

Plaintiff submits that it made the following disclaimer during prosecution, as noted in a May 11, 2010 Interview Report:

The key point, assignee’s representative explained, is that the parties are different entities, as opposed to one being under control of another (nor the two entities being under common control).

...

Assignee also agreed to the definition of the term ‘third party’ as requiring that each of the entities recited be different, with one not being under control of each [*sic*, the] other (nor both being under common control).

Dkt. No. 274, Ex. I at 3 of 9 (DDR0081142).

Defendants respond there was no “clear and unmistakable surrender of subject matter” because the language at issue was removed from the claims. Dkt. No. 281 at 27-28. Defendants submit that finding a disclaimer under these circumstances—particularly in an interview summary that was drafted by Plaintiff during the pendency of the present litigation—“would afford a patentee the ability to create self-serving definitions during litigations.” *Id.* at 27. As support for their proposed construction, Defendants cite a reference in the specification (as well as in an August 18, 2010 examiner amendment during prosecution of the ’399 Patent) to the “three main parties in the outsourced e-commerce relationship” being “Merchants, Hosts, and the e-commerce outsource provider.” *Id.* at 29 (quoting ’135 Patent at 21:43-45).

Plaintiff replies that the examiner must have agreed with Plaintiff’s definition of “third party” because the examiner later stated (in an attachment to the Notice of Allowability) that Plaintiff’s report of the interview “seems complete.” Dkt. No. 292 at 10 (quoting Dkt. No. 274, Ex. I at 9 of 9 (DDR0081114)).

At the November 17, 2011 claim construction hearing, Plaintiff argued that the written description sets forth two-separate-party embodiments (in which one party can be both the host and the merchant) and three-separate-party embodiments, in which the host, the merchant, and the e-commerce outsource provider are all separate entities.

Defendants responded that Plaintiff’s statement during prosecution of the ’339 Patent was litigation-driven because at the time of the statement, Plaintiff had already initiated reexaminations of the other two patents-in-suit based on prior art identified in Defendants’ invalidity contentions before the above-captioned case was stayed. Defendants also argued that the comments in the interview summary are “new matter.” Defendants further noted that

although the examiner commented that, “[t]o the best of the examiner’s recollection,” Plaintiff’s interview summary “seems complete,” the examiner’s computer hard drive crashed shortly after the interview and “[a]pologies were given for not remembering the interview and forgetting that an agreement was reached.” Dkt. No. 274, Ex. I at 9 of 9 (DDR0081114)). Defendants submitted that these circumstances undermine the reliability of the Interview Report prepared by Plaintiff’s counsel. Finally, Defendants reiterated that the “under separate control” language was not pertinent to the examiner’s allowance.

Plaintiff replied that the examiner stated that the Interview Report matched the “examiner’s recollection” and, moreover, what matters is that the examiner was relying upon the Interview Report at the time of allowance.

(2) Construction

“To invoke argument-based estoppel, the prosecution history must evince a clear and unmistakable surrender of subject matter.” *Deering Precision Instruments, L.L.C. v. Vector Distrib. Sys., Inc.*, 347 F.3d 1314, 1326 (Fed. Cir. 2003) (citations and internal quotation marks omitted).

The Interview Report cited by the parties discusses removing the phrase “unrelated to the outsource provider” from certain claims and moving the term “third party” to a different location within some of the claims:

Discussion of substantive matters:

First, the Examiner expressed concern that the claims as written might suffer from problems relating to "functional descriptive language" or Section 112/2 indefiniteness as to the phrase "unrelated to the outsource provider," which appears several times in the independent claims, as amended. The specific concern was the Examiner's uncertainty as to what element that phrase modified,

grammatically. Assignee's representative explained that the parties were all independent companies. The Examiner observed that some "relationship" was required, such as a contractual relationship, and assignee agreed. The key point, assignee's representative explained, is that the parties are different entities, as opposed to one being under control of another (nor the two entities being under common control).

The Examiner observed that the claims already identified the parties as "third parties" and considered the phrases "unrelated to the outsource provider" as superfluous in expressing the concept. The Examiner thought that the third-party relationship among the parties should be placed at a proper location in the claim.

Based on the Examiner's remarks, assignee agreed (1) to remove the phrases "unrelated to the outsource provider" and (2) to move the "third party" language to a common location. Assignee also agreed to the definition of the term "third party" as requiring that each of the entities recited be different, with one not being under control of each [*sic*, the] other (nor both being under common control).

The Examiner proposed the claims language be modified accordingly, and assignee agreed to the modifications. Assignee understands that neither the deletion of "unrelated to the outsource provider" nor the grouping of the term "third party" narrows the substantive scope of the claims, for the reasons stated above.

Dkt. No. 274, Ex. I at 3 of 9.

Although Defendants argue that Plaintiff's statement in the Interview Report was self-serving and was not relied upon by the Examiner, the Examiner's Amendment that followed this interview reflects that the "unrelated to the outsource provider" language had been used to describe the "third party" recited in certain claims. *See* 8/13/2010 Examiner's Amendment, Dkt. No. 282, Ex. 5 at DDR0081115. The meaning of "third party" was thus germane to resolving the examiner's "concern that the claims as written might suffer from problems relating to 'functional descriptive language' or Section 112/2 indefiniteness as to the phrase 'unrelated to the outsource provider'" *See* Dkt. No. 274, Ex. I at 3 of 9; *see also* *Lucent Techs., Inc. v. Gateway, Inc.*, 525 F.3d 1200, 1212 (Fed. Cir. 2008) ("[S]tatements by the applicants must be read in the

context of its overall argument.”).

Finally, Defendants raised an enablement argument during the claim construction hearing, arguing that “under separate control” is “new matter” that is beyond the scope of the specification. The Court of Appeals for the Federal Circuit has “certainly not endorsed a regime in which validity analysis is a regular component of claim construction.” *Phillips*, 415 F.3d at 1327; *accord Pfizer*, 429 F.3d at 1376 (quoting *Phillips* and rejecting argument that district court’s claim construction would render the claims invalid for lack of enablement). Because the Court can arrive at a construction using the “the available tools of claim construction,” the Court does not here consider any dispute regarding enablement. *Phillips*, 415 F.3d at 1327 (citation and internal quotation marks omitted).

On balance, Plaintiff has established a “clear and unmistakable surrender of subject matter” by the above-quoted statements during prosecution regarding the term “third party.” *Deering*, 347 F.3d at 1326; *accord Omega Eng’g*, 334 F.3d at 1325-26; *see also Am. Piledriving*, 637 F.3d at 1336 (quoted in Section II., above). The Court therefore adopts Plaintiff’s proposal and construes “**third parties**” to mean “**separate legal entities under separate control.**”

IV. CONCLUSION

The Court hereby **ORDERS** the disputed claim terms construed as set forth above.

IT IS SO ORDERED.

SIGNED this 21st day of November, 2011.

CAROLINE M. CRAVEN
UNITED STATES MAGISTRATE JUDGE

**IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF TEXAS
MARSHALL DIVISION**

CIVIL ACTION NO. 2:06-CV-42

ORDER

Before the Court are Defendants’ Rule 72 Objections and Motion for Reconsideration. Dkt. No. 310. Also before the Court are Plaintiff’s response and Defendants’ reply. Dkt. Nos. 312 & 313. Having considered the briefing and all relevant papers and pleadings, the Court finds that Defendants’ motion for reconsideration should be DENIED.

I. BACKGROUND

The Court referred the above-captioned case to United States Magistrate Judge Caroline M. Craven for claim construction proceedings. *See* 11/14/2011 Order, Dkt. No. 286. Judge Craven held a Claim Construction Hearing on November 17, 2011, and issued a Claim Construction Order on November 21, 2011. *See* 11/17/2011 Minute Entry, Dkt. No. 308; 11/21/2011 Claim Construction Order, Dkt. No. 309. Defendants move for reconsideration of the Claim Construction Order (sometimes referred to by the parties as the “Opinion” or the “Order”) as to the term “link.” *See* Dkt. No. 310.

Plaintiff asserts United States Patents No. 6,629,135 (“the ’135 Patent”), 6,993,572 (“the ’572 Patent”), and 7,818,399 (“the ’399 Patent”), which relate to Internet commerce. Dkt. No.

274 at Exs. A-C. The '399 Patent is a continuation of the '572 Patent, and the '572 Patent is a continuation of the '135 Patent. Thus, the patents-in-suit all share a common written description. References to the written description herein shall be to the '135 Patent. Trial is set for October 2012. *See* 1/6/2012 Scheduling Order, Dkt. No. 315.

On December 19, 2006, the Court stayed the above-captioned case pending reexamination of the '135 Patent and the '572 Patent. These patents emerged from reexamination on July 20, 2010. *See* Ex Parte Reexamination Certificates, Dkt. No. 274, Ex. A at 42-44 of 44 & Ex. B at 44-45 of 45. The '399 Patent issued on October 19, 2010. *See* Dkt. No. 274 at Ex. C.

The Abstract of the '135 Patent is representative and states:

The present invention is directed to an e-commerce outsourcing system and method that provides hosts with transparent, context sensitive e-commerce supported pages. The look and feel of a target host is captured for future use. The look and feel is captured by receiving the identification of an example page on the target host, retrieving the page, identifying the look and feel elements of the identified page and storing the identified elements. The host is provided with links correlating the host with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object contextually related to material in the page. The commerce object can be a product, a product category or a dynamic selection indicator. Upon activation of the provided link, the visitor computer is served with an e-commerce supported page with the look and feel of the host website associated with the activated link and with content based upon the commerce object associated with the activated link. Where the commerce object is a dynamic selection indicator the content is selected at the time of activation based upon an analysis of the page containing the activated link.

Plaintiff asserts: Claim 8 of the '135 Patent; Claims 13, 17, 20, 21, and 23 of the '572 Patent; and Claims 1, 3, 7, and 19 of the '399 Patent. The asserted claims are reproduced herein with the disputed term "link" italicized:

'135 Patent

8. An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:
- a) capturing a look and feel description associated with a host website;
 - b) providing the host website with a *link* for inclusion within a page on the host website for serving to a visitor computer, wherein the provided *link* correlates the host website with a selected commerce object; and
 - c) upon receiving an activation of the provided *link* from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided *link* and with content based on the commerce object associated with the provided *link*.

'572 Patent

13. An e-commerce outsourcing system comprising:
- a) a data store including a look and feel description associated with a host web page having a *link* correlated with a commerce object; and
 - b) a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the *link* has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer wit[h] a look and feel based on the look and feel description in the data store and with content based on the commerce object associated wit[h] the *link*.
17. An e-commerce outsourcing process comprising the steps of:
- a) storing a look and feel description associated with a first website in a data store associated with a second website;
 - b) including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a *link* correlating the web page with a commerce object; and
 - c) upon receiving an activation of the *link* from a visitor computer to

which the web page has been served, se[rv]ing to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the *link*.

20. The process of claim 17 wherein the look and feel description comprises data defining a set of navigational *links*, used on at least some of the web pages of the first website, each of which *links link* to specific web pages of the first website.

21. The process of claim 17 wherein the look and feel description comprises data defining:

- a) a logo associated with and displayed on at least some of the web pages of the first website;
- b) a color scheme used on at least some of the web pages of the first website;
- c) a page layout used on at least some of the web pages of the first website; and
- d) navigational *links*, used on at least some of the web pages of the first website, each of which *links link* to specific web pages of the first website.

23. The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.

'399 Patent

1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

- (a) automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a *link* displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the *link* has been activated;
 - (i) wherein each of the first web pages belongs to one of a plurality of web page owners;
 - (ii) wherein each of the first web pages displays at least one active

link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and

(iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one other;

(b) automatically retrieving from a storage coupled to the server pre-stored data associated with the source page; and then

(c) automatically with the server computer-generating and transmitting to the web browser a second web page that includes:

(i) information associated with the commerce object associated with the *link* that has been activated, and

(ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.

3. The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a set of navigational *links* on the source page.

7. The method of claim 1 wherein the commerce object associated with the *link* that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the second web page contains one or more selectable navigation *links* connecting a hierarchical set of additional second web pages, each pertaining to a subset of the offerings in the catalog.

19. A system useful in an outsource provider serving web pages offering commercial opportunities, the system comprising:

(a) a computer store containing data, for each of a plurality of first web pages, defining a plurality of visually perceptible elements, which visually perceptible elements correspond to the plurality of first web pages;

(i) wherein each of the first web pages belongs to one of a plurality of web page owners;

(ii) wherein each of the first web pages displays at least one active *link* associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and

(iii) wherein the selected merchant, the outsource provider, and the owner of the first web page displaying the associated *link* are each third parties with respect to one other;

(b) a computer server at the outsource provider, which computer server is coupled to the computer store and programmed to:

(i) receive from the web browser of a computer user a signal indicating activation of one of the *links* displayed by one of the first web pages;

(ii) automatically identify as the source page the one of the first web pages on which the *link* has been activated;

(iii) in response to identification of the source page, automatically retrieve the stored data corresponding to the source page; and

(iv) using the data retrieved, automatically generate and transmit to the web browser a second web page that displays:

(A) information associated with the commerce object associated with the *link* that has been activated, and

(B) the plurality of visually perceptible elements visually corresponding to the source page.

II. LEGAL PRINCIPLES

Defendants do not challenge the general principles of claim construction set forth in the Order. Dkt. No. 309 at 8-10. The Court therefore incorporates that discussion by reference. *Id.*

Because claim construction is a matter of law, this Court can review the magistrate judge's claim construction *de novo*. See 28 U.S.C. § 636(b); *cf. Barrow v. Greenville Indep. School Dist.*, 202 F.R.D. 480, 482 (N.D. Tex. 2001) (regarding magistrate judge's decision concerning leave to take depositions, noting that "[t]he 'clearly erroneous' standard applies to the factual components of the magistrate judge's decision" but that "[t]he magistrate judge's legal

conclusions are freely reviewable.”).

III. DISCUSSION

The disputed term “link” appears in claims of all three of the patents-in-suit. Plaintiff proposed that no construction was necessary. Dkt. No. 274 at 7. Alternatively, Plaintiff proposed this term means “a hypertext, text, banner, logo, graphic, or contextual element that permits a user to navigate from one web location to another web location by activating that element.” *Id.* at 9. Defendants proposed this term means “HTML¹ element that, when activated by a visitor, causes the web browser to retrieve the content at the URL² previously generated by the outsource provider.” Dkt. No. 281 at 3. The parties’ arguments on this term before Judge Craven are summarized by the Claim Construction Order. *See* Dkt. No. 309 at 11-14.

Judge Craven construed the term “link” to mean **“a hypertext, text, banner, logo, graphic, or other element that permits a user to navigate from one web location to another web location by activating that element.”** *Id.* at 17.

Defendants argue that the Claim Construction Order: (1) “is clearly erroneous in stating that the specification did not provide support for Defendants’ proposed construction”; (2) “expands the definition of ‘link’ to include non-HTML elements is [*sic*] based on an erroneous understanding of the technology and facts”; (3) “erroneously states that Defendants’ definition would render certain language in claim 8 of the ’135 patent superfluous”; (4) improperly bases the construction on extrinsic evidence because “the Opinion’s construction is almost a verbatim

¹ As noted in the Claim Construction Order, HTML refers to “hypertext markup language.” ’135 Patent at 1:21; Dkt. No. 309 at 11 n.1.

² The Claim Construction Order assumed that the parties and the patents-in-suit use “URL” to refer to a Uniform Resource Locator, which some might refer to as a “Web address” or “Internet address.” Dkt. No. 309 at 11 n.2.

quote from the supposedly non-relied upon extrinsic evidence”; (5) “is also clearly erroneous because the term ‘other elements’ is vague and unsupported by the specification”; and (6) “ignores the clear intent of the patentee to use a special definition of ‘link.’” Dkt. No. 310 at 4, 5, 6, 7-8 & 9. The Court addresses these arguments in turn.

A. “stating that the specification did not provide support for Defendants’ proposed construction”

Defendants argue that “many of the cited passages of the specification in the Opinion actually provide better support for Defendants’ definition than Plaintiff’s.” Dkt. No. 310 at 3. Defendants emphasize that “the specification teaches, not implies, but actually teaches, that the outsource provider must first generate the URL for the link (i.e. the ‘link’ must be ‘previously generated’) before that link is provided to the host or used by the host.” *Id.* at 4. In their reply brief, Defendants argue that “the type of ‘link’ claimed in the disputed claim elements is a specialized link that the patentee describes in the specification,” as opposed to the “old-style links” that the specification describes with reference to the prior art. Dkt. No. 313 at 1; ’135 Patent at 2:41-44. Defendants urge that they are not attempting to import a limitation but “[i]nstead, Defendants construction is focused on the *general and required* technique taught by the specification to implement the invention: the ‘link’ must be ‘previously generated by the outsource provider.’” *Id.* at 2. Defendants also argue that “the Host cannot generate the link without being logged into the outsourced provider system. While the Host may request a ‘link,’ it is the outsource provider’s manager system that is actually generating the ‘link.’” *Id.* at 3.

The Claim Construction Order found that “the written description does not expressly limit the term ‘link’ to ‘the URL previously generated by the outsource provider,’ and the Court

[found] insufficient evidence to conclude that this definition is provided “by implication.” Dkt. No. 309 at 15. Defendants disagree, but on balance, the Claim Construction Order properly found that the claim term “link” is not limited to the embodiment cited by Defendants.

The Court therefore rejects Defendants’ argument in this regard.

B. “expands the definition of ‘link’ to include non-HTML elements is [sic] based on an erroneous understanding of the technology and facts”

Defendants argue that “the Opinion’s error is one of fact and technological implementation.” Dkt. No. 310 at 5.

First, Defendants characterize the “clear error” as “one of fact” (*id.*), and although the Court reviews a magistrate judge’s claim construction *de novo*, the Court is nonetheless inclined to review the underlying factual findings for clear error. *See* Fed R. Civ. P. 72(a); 28 U.S.C. § 636(b)(1)(A); *cf. Barrow*, 202 F.R.D. at 482. The Claim Construction Order considered the written description and rejected Defendants’ proposal to limit the term “link” to a specific type of link, namely an “HTML element.” Dkt. No. 309 at 14-15. On balance, Defendants have not shown any clear factual error.

Alternatively and in addition, even upon *de novo* review the Court rejects Defendants’ proposal to limit the term “link” to mean an HTML element. For example, as cited by Plaintiff, the written description describes an exemplary “transaction flow” as including a step of: “Customer, visiting Host, *activates link* to commerce object within context of Host’s website. This activation is *typically* accomplished by clicking on a *hyperlink of some kind* within a webpage of the Host’s website.” ’135 Patent at 24:40-43 (emphasis added). On balance, the patentee did not expressly limit the term “link” to mean an HTML element, and the Court

declines to import such a limitation from the description into the claims.

The Court therefore rejects Defendants' argument in this regard.

C. “erroneously states that Defendants’ definition would render certain language in claim 8 of the ’135 patent superfluous”

Claim 8 recites (emphasis added):

8. An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:

a) capturing a look and feel description associated with a host website;

b) *providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer*, wherein the provided link correlates the host website with a selected commerce object; and

c) upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.

Defendants propose that “link” means “an HTML element that, when activated by a visitor, causes the web browser to retrieve the content at the URL previously generated by the outsource provider.” Dkt. No. 310 at 10.

Defendants argue that “the Opinion concludes, without any support, that Defendants’ proposed definition would render claim 8 of the ’135 patent superfluous.” Dkt. No. 310 at 6. Defendants submit that their proposal “is limited to who *generates* the link, not who *provides* it to the host.” *Id.* at 7. In their reply brief, Defendants urge that “Despite Plaintiff’s assertion to the contrary, the difference between who generates and who provides is not a ‘fine distinction’

because the difference is a fundamental technological and business distinction.” Dkt. No. 313 at 4.

The Claim Construction Order found:

As to the claims, Claim 8 of the '135 Patent recites a step of “providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer.” Defendants’ proposal, which includes referring to “the URL previously generated by the outsource provider,” would render this language in Claim 8 superfluous.

Dkt. No. 309 at 14. The Claim Construction Order thus appears to equate the “providing” step with the “generat[ing]” portion of Defendants’ proposed construction.

Out of an abundance of caution, in reviewing the construction of “link,” the Court does not rely on any finding that Claim 8 would be rendered superfluous by Defendants’ proposed construction. Because this portion of the Claim Construction Order is part of the analysis and not part of the construction, however, the Court need not vacate this portion of the Claim Construction Order.

D. “the Opinion’s construction is almost a verbatim quote from the supposedly non-relied upon extrinsic evidence”

Defendants argue that the Claim Construction Order violated *Phillips* by favoring extrinsic evidence over intrinsic evidence. Dkt. No. 310 at 7. In particular, Defendants argue that although the Claim Construction Order purports not to consider Plaintiff’s extrinsic evidence (namely the “November 1, 2009 Affiliate Program Agreement of Ian.com, L.P.”), the Claim Construction Order nonetheless substantially adopted Plaintiff’s proposed construction. *Id.* at 7-8. Defendants submit that this contract was “written by a third party to this suit eleven years after the priority date of the Patents-in-Suit.” *Id.* at 8. Defendants urge that “[b]ecause no other basis

is provided for the construction, the Opinion erred by relying on the contract.” *Id.* at 8-9.

Plaintiff responds that although “defendants question the Magistrate Judge’s word that she did not use [the contract] in establishing her construction,” “the Magistrate Judge took great care in the Order (on pages 15-16) to show specifically how the adopted construction had support in the specification.” Dkt. No. 312 at 12.

Defendants’ reply on the extrinsic evidence issue is, in its entirety, as follows:

Plaintiff fails to refute that the Opinion’s construction of “link” is incorrectly formulated using improper extrinsic evidence. Plaintiff fails to offer any evidence that the description of “link” in the relied-upon extrinsic evidence (i.e., the Ian.com contract) is the definition of “link” that a person of ordinary skill in the art at the time the patents were filed would have used. No evidence exists that the contract was written by or for one of skill in the art and the contract postdates the patents-in-suit by nearly a decade.

Dkt. No. 313 at 5.

On balance, the Court agrees with Plaintiff that the Claim Construction Order expressly found that the contract, “even if considered, would not affect the Court’s analysis of the dispute[d] term. The Court therefore does not pass upon the contract or Defendants’ objection thereto.” Dkt. No. 309 at 14. The Claim Construction Order then evaluated Plaintiff’s proposed construction in light of the specification and found that “[t]he specification comports with Plaintiff’s proposed construction.” *Id.* at 15-16 (discussing ’135 Patent at Abstract, Claim 8, 1:30-33, 3:9-20, 3:23-24, 12:54-55, 13:48-51, 14:58-60, 15:5-7, 22:11-13, 23:1-6 & 24:40-43).

The Court therefore rejects Defendants’ argument in this regard.

E. “the term ‘other elements’ is vague and unsupported by the specification”

Defendants argue that Plaintiff’s proposed construction:

included a vague term “contextual element.” The Opinion agreed that “contextual element” was vague and replaced it with the equally vague and unsupported term “other elements.” The Opinion offers no support, either intrinsic or extrinsic, for this phrase.

Dkt. No. 310 at 9.

Plaintiff responds:

The point of the term “other element” is precisely to clarify that the user can click anything on the Host web page that serves as a “link,” because, as the specification says and the Court agreed, what is clicked just does not matter. *See* Order, p. 15 (“the patent does not exclude other types of elements from being links”). The concept of “anything” is broad, perhaps, but it is quite definite.

Dkt. No. 312 at 6 n.4. Defendants’ reply brief does not address this issue. *See* Dkt. No. 313.

On balance, the Court agrees with Plaintiff’s above-quoted reading of the Claim Construction Order. The Court therefore rejects Defendants’ argument in this regard.

F. “ignores the clear intent of the patentee to use a special definition of ‘link’”

Defendants argue:

If the Patentee had meant for the “link” to be an ordinary link, as suggested by the Opinion, the Patentee would not have capitalized “Link” in the specification and spent considerable time discussing how the “Link” functioned. This extensive description of the capitalized “Link” in the “Detailed Description” section of the Patent-in-Suit is in stark contrast to the “Background” section of the Patent-in-Suit, which discusses “old-style links” and does not capitalize the term “link.”

Dkt. No. 310 at 10.

Plaintiff responds that “[t]he Court’s Order construing the claim term ‘link’ (pp. 15-16) cites many places where the specification refers to the ‘link’ of the disclosed inventions in the lower-case, ordinary-parlance way.” Dkt. No. 312 at 4 (citing ’135 Patent at 3:7-11, 23:2-3 & 24:40-43). Plaintiff notes that the use of the capitalized word “Link” refers to “computer code discussed as part of an *exemplary* ‘Link Generator’ embodiment.” *Id.* at 5 (citing ’135 Patent at

cols. 13, 14 & 16).

Defendants reply that they are not attempting to import a limitation but “[i]nstead, Defendants construction is focused on the *general and required* technique taught by the specification to implement the invention” Dkt. No. 313 at 2.

On balance, the Court agrees with Plaintiff. The Court therefore rejects Defendants’ argument in this regard.

IV. CONCLUSION

Defendants’ Rule 72 Objections and Motion for Reconsideration (Dkt. No. 310) are hereby **DENIED**.

IT IS SO ORDERED.

SIGNED this 21st day of February, 2012.

SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Dear Sir:

Assignee discloses the two court orders listed on attached form SB/08/b. These are orders construing certain claim terms of the parent patents, which are involved in a previously disclosed lawsuit, case No. 2:06CV42 (E.D. Tex.). Assignee continues to request that the Office review any materials thought useful from that litigation case file.

If the Office has any questions, please feel free to contact assignee's undersigned attorney of record.

Respectfully submitted,
DDR HOLDINGS, LLC
by its attorney

SUPPLEMENTAL PRELIMINARY AMENDMENT

Dear Sir:

Assignee submits the following additional amendments and requests prompt examination of this continuation application.

- **Amendments to the Claims** begin on page 2.
- **Remarks** begin on page 8.

The application as amended herein contains twenty-two (22) total claims, three (3) of which are independent claims. Assignee has previously paid for twenty (20) total claims and three (3) independent claims, therefore, the fee in the amount of \$52 (\$26/claim x 2 claims) is submitted herewith.

Amendments

IN THE CLAIMS

Please amend the claims as follows:

1-70. (Cancelled)

71. (Previously presented) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

- (a) automatically, with a server computer, retrieving data pre-stored in a storage device accessible to the server computer, and
- (b) automatically, with the server computer, serving to the visitor computer a composite web page of a second website that includes:
 - (i) information associated with the commerce object associated with the link that has been activated, and
 - (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page,

wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other.

72. (Previously presented) The method of claim 71 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

73. (Previously presented) The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the

composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

74. (Previously presented) The method of claim 73 further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer.

75. (Previously presented) The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the plurality of products and serving the results for display using the browser of the visitor computer.

76. (Previously presented) The method of claim 71 wherein the owner of the source web page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

77. (Previously presented) The method of claim 76 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.

78. (Previously presented) The method of claim 71, wherein the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart, and further comprising, automatically with the server computer, accepting inputted billing information from the visitor computer, recording the billing information, and using the billing information to facilitate payment to the merchant for

the commerce object associated with the activated link when the server computer detects activation by the web browser of a checkout link associated with the shopping cart.

79. (Previously presented) The method of claim 78 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.

80. (Previously presented) The method of claim 71, wherein the composite web page appears to the computer user to be generated by a server associated with the source page.

81. (Previously presented) A computer system apparatus for an outsource provider serving web pages offering commercial opportunities, the apparatus comprising:

- (a) an electronic storage device containing data defining a plurality of visually perceptible elements visually corresponding to a source web page,
 - (i) wherein the source web page contains at least one active link that is served to the visitor computer when visiting the first website, which link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant, and
 - (ii) wherein the owner of the first website, the outsource provider, and the merchant are each third parties with respect to each other; and
- (b) a computer server device controlled by the outsource provider, which computer server is coupled to the electronic storage device and programmed to, upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, automatically:
 - (i) retrieve from the storage device the stored data defining the plurality of visually perceptible elements visually corresponding to the source web page, and
 - (ii) serve to the visitor computer a composite web page of a second website that includes:

(A) information associated with the commerce object associated with the link that has been activated, and

(B) the plurality of visually perceptible elements derived from the retrieved data.

82. (Previously presented) The apparatus of claim 81 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

83. (Previously presented) The apparatus of claim 81 wherein the commerce object associated with the link comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

84. (Previously presented) The apparatus of claim 83 wherein the computer server is further programmed to: (i) upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, accept search parameters through the browser of the visitor computer and automatically use the search parameters to search for specific products within the catalog, and (ii) serve the results for display using the browser of the visitor computer.

85. (Previously presented) The apparatus of claim 81 further comprising a computerized accounting module programmed to cause the computer system to automatically record payment to the owner of the first website, once the transaction is completed, wherein the owner is party to a contract with the outsource provider providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

86. (Previously presented) The apparatus of claim 85 wherein:

(i) the composite web page contains a further link associated with the information associated with the commerce object associated with the link that

has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart,

(ii) the computer server is further programmed to automatically accept inputted billing information from the visitor computer, and record the billing information, and

(iii) the computerized accounting module is further programmed to cause the computer system to automatically use the billing information to record payment to the merchant for the commerce object associated with the activated link when the computer server detects activation by the web browser of a checkout link associated with the shopping cart.

87. (New) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

automatically, with a server computer associated with a second website, serving to the visitor computer a dynamically generated composite web page containing instructions directing the visitor computer to display:

- (i) information associated with the commerce object associated with the link that has been activated, and
- (ii) a plurality of visually perceptible elements visually corresponding to the source web page,

wherein the instructions direct the visitor computer to download data defining the visually perceptible elements from a storage device that is accessible to the visitor computer through the Internet, and

wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other.

88. (New) The method of claim 87 wherein the storage device is coupled to the server computer associated with the second website.

89. (New) The method of claim 87 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

90. (New) The method of claim 87 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

91. (New) The method of claim 90 further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer.

92. (New) The method of claim 87 wherein the commerce object associated with the link that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the plurality of products and serving the results for display using the browser of the visitor computer.

Remarks

Assignee respectfully submits additional claims. No new matter is included. These claims, like the one previously submitted, are related to the claims allowed and issued in parent U.S. Patents 7,818,399 and 6,993,572, in that they take certain wording from each of those patents. The key points of distinction from prior art references cited, in combination, are maintained in these claims. In comparison with the '399 Patent allowed most recently, for example, the current claims maintain the points that (1) the "source web page" has a "link" that correlates the source web page with at least one "commerce object associated with a buying opportunity of a merchant," (2) "the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other," and (3) the "composite" or "second" web page includes the data about the commerce object associated with the activated link and "a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page." Prompt review and allowance are respectfully requested.

Claim 87 is a modified version of previously submitted claim 71. Part (a) of claim 71, which said, "automatically, with a server computer, retrieving data pre-stored in a storage device accessible to the server computer," is replaced (in claim 87) with the limitation of "a server computer associated with a second website, serving to the visitor computer a dynamically generated composite web page containing instructions directing the visitor computer to display" the commerce object information and visually perceptible elements (which two items are also present in claim 71), and "the instructions direct the visitor computer to download data defining the visually perceptible elements from a storage device that is accessible to the visitor computer through the Internet." The specification at page 5, lines 5-6 discloses that the composite page is "dynamically constructed," and various places in the specification, including page 41, lines 4-6, specify that the outsource provider "launches" or serves the page. That the page contains instructions (normally to a browser) directing the visitor computer to download the data defining the visually perceptible elements and display

the page is apparent from the use of HTML in the examples disclosed and various places in the specification, such as page 25, lines 17 ff. and page 38, lines 17-20. Moreover, the specification at page 6, lines 24-26 discloses a combination with a "data store," without specifying the location of that storage device.

Please note that claim 87 does not specifically define the location of the storage device except that it is accessible through the Internet, but dependent claim 88 specifies that the storage device is coupled to the server computer associated with the second website. Dependent claim 88, therefore, refers to an embodiment disclosed, for example, at page 5, lines 7-10, which refers to the "data store" being in a "database server layer"; page 6, line 27-28, which specifies that the "processor" (of the outsource provider) is what stores descriptions in the data store; and page 7, line 6, which refers to the "preferred embodiment" of Fig. 1 (which in turn is described as a "typical hardware architecture") and identifies the data store as implemented by a database system connected to the identified computers of the outsource provider. Further, for claim 88 specifically, it should be understood that the storage device is not located at the visitor computers, which (as shown in Fig. 1) are across the Internet from the data store.

Dependent claims 89-93 correspond to previously submitted claims 71-75.

Please feel free to telephone the undersigned if it would in any way advance prosecution of this application.

Respectfully submitted,
DDR HOLDINGS, LLC
by its attorney

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

JOINT CLAIM CONSTRUCTION AND PREHEARING STATEMENT

Pursuant to Patent Local Rule 4-3, the parties submit this joint statement.

(a) The claim terms, phrases, or clauses on which the parties agree, and their constructions:

Term	Agreed-upon constructions
Look and feel ¹	A set of elements related to visual appearance and user interface conveying an overall appearance identifying a website; such elements include logos, colors, page layout, navigation systems, frames, “mouse-over” effects, or others elements consistent through some or all of the website.
Visually perceptible elements ²	look and feel elements that can be seen.
Web page	a document that is accessible through the World Wide Web and capable of being displayed by a web browser.
First web page	Host web page.

¹ Defendants reserve the right to argue that the term “look and feel” is indefinite and offer this definition in the alternative.

² Defendants reserve the right to argue that the term “visually perceptible elements” is indefinite and offer this definition in the alternative.

Term	Agreed-upon constructions
Website	One or more related web pages at a location on the World Wide Web.
First web site	Host website.
Commerce object	a third-party merchant's: catalog, category, product (goods or services), or dynamic selection.
Merchant	producer, distributor, or reseller of goods or services to be sold.
Host/owner	an operator of a website that engages in Internet commerce by incorporating one or more links to an e-commerce outsource provider into its web content.
Outsource provider/ e-commerce outsource provider	a party, independent from the host associated with the commerce object or merchant of the commerce object, that provides e-commerce support services between merchant(s) and host(s).

(b) The claim terms, phrases, or clauses that the parties dispute, and each party's proposed construction:

Term	DDR's construction	Defendants' construction
Link/active link	Ordinary meaning and does not require construction. <u>Alternatively:</u> a hypertext, text, banner, logo, graphic, or contextual element that permits a user to navigate from one web location to another web location by activating that element.	HTML element that, when activated by a visitor, causes the web browser to retrieve the content at the URL previously generated by the outsource provider.
Look and feel description <i>(found in claims of the '135, '572 Patents only)</i>	Ordinary meaning for the word "description"; does not require construction separately from "look and feel." <u>Alternatively:</u> code or data defining a look and feel.	the HTML code and images that define the look and feel. ³
Capturing <i>(found in claim 8 of the '135 Patent only)</i>	Ordinary meaning and does not require construction. <u>Alternatively:</u> taking possession from a third party of something not already in possession, using at least partially automated techniques.	automatically, by a party other than the host, extracting elements from a web page of the host website, specifically excluding receiving look and feel elements from the host or having the host input, upload, submit, or forward the look and feel elements.
Third parties <i>(found in claims of the '399 Patent only)</i>	separate legal entities under separate control.	separate legal entities.

³ Defendants reserve the right to argue that the term "look and feel description" is indefinite and offer this definition in the alternative.

Identification of all references from the specification or prosecution history that support that construction, and an identification of any extrinsic evidence known to the party on which it intends to rely either to support its proposed construction of the claim or to oppose any other party’s proposed construction of the claim, including, but not limited to, as permitted by law, dictionary definitions, citations to learned treatises and prior art, and testimony of percipient and expert witnesses:

Term	DDR’s citations	Defendants’ citations
Link/active link	'135 Patent, Figure 14, 1:20-36, 12:54-55, 23:1-6, 24:40-43; IAN affiliate agreement; Barron’s Dictionary of Computer and Internet Terms. ⁴	'135 Patent, Abstract; 1:20-36; 3:7-13; 3:22-31; 23: 1-6; 23:43-49; 12:54-64; 13:8-9; 13:45-15:35; 13:36-39; 16:15-20; 16:61-17:3; '135 Patent Prosecution, DDR ROA 10/15/2002 at 5-7; '572 Patent Reexamination, DDR ROA 11/24/2008 at 21, 29, 39.
Look and feel description	'135 Patent, Figures 11-14, 3:16-19, 4:46-49, 12:42-53; '572 appeal decision, p. 8; PCMag.com encyclopedia; Free Online Dictionary of Computing; “web design glossary” of “Regents of the University of Minnesota Duluth,” at: www.d.umn.edu/itss/support/Training/Online/webdesign/glossary/l.html (page visited June 19, 2009) (cited in File History of '399 Patent, RTFOA, p. 2).	'135 Patent, Abstract, 3:14-21; 3:14-22; 12:42-53, 12:54-61, 22:27-45, 24:44-49; '135 Patent, Claim 6(c); '135 Patent, Claim 15(iii); '135 Patent, Fig. 11; '399 Patent Prosecution, DDR ROA 7/17/2009 at 2; '135 Reexamination ROA 11/24/2008 at 10-27; '135 DDR ROA 10/10/2002 at 5; '572 Reexamination ROA 11/24/2008 at 15, 20, 24, 46; '572 DDR ROA 01/06/2005 at 17-18; Web Design Reference, University of Minnesota Duluth, http://web.archive.org/web/20060506123656/http://www.d.umn.edu/itss/support/Training/Online/webdesign/glossary/l.html (May 6, 2006 version of www.d.umn.edu/itss/support/Training/Online/webdesign/glossary/l.html as archived by the Internet Archive.)

⁴ Defendants reserve the right to argue that DDR’s cited extrinsic evidence related to link/active link was not timely disclosed.

Term	DDR's citations	Defendants' citations
Capturing	File history of the '572 reexamination: appeal brief, pp. 15-16; reply brief, pp. 4-5; transcript of oral argument on appeal; '572 appeal decision, pp. 12, 18.	'135 Patent, Abstract; 3:14-21; 4:49-51; 12:42-67; 13:3-5; Figs. 6, 11-13; '135 Patent Prosecution, DDR ROA 10/15/2002 at 5-6, 8; '135 Patent Reexamination, DDR ROA 11/24/2008 at 5-6, 10, 15, 20-21; '572 Patent Reexamination, DDR ROA 11/24/2008 at 8; '135 Patent Reexamination, Opening Brief on Appeal at 11, 13-14; '572 Patent Reexamination, Opening Brief on Appeal at 13, 15-16; '135 Patent Reexamination, Reply Brief at 3, 4; '572 Patent Reexamination, Reply Brief at 4-5; '572 Patent Prosecution, DDR ROA 1/6/2005 at 19-20; '135 and '572 Patent Reexamination, Oral Argument Transcript at 18, 19.
Third parties	File history of '399 Patent: RTOAIII, p. 9; Final interview report of discussion with examiner, p. 2; file history of the '572 reexamination: RTOA, p. 46.	'135 Patent, 21:43-49; '399 Patent Prosecution, Notice of Allowability 8/18/2010 at 2-9; '399 Patent Prosecution, Examiner Interview Summary 5/17/2010, Continuation Sheet (PTOL-413); '399 Patent Prosecution, DDR ROA 10/22/2009 at 9-10; DDR ROA 9/8/2009 at 9-10; '399 Patent Prosecution, Interview Report 5/11/2010 at 2; "Third party." The Compact Oxford English Dictionary, 2nd Ed. 1989, pg. 956.

NOTE: All parties reserve the right to discuss the specification, prosecution history, and extrinsic evidence listed by others. The parties may rely on parallel citations from other patents or file histories.

(c) The anticipated length of time necessary for the Claim Construction Hearing: As ordered by the Court during the scheduling conference, 90 minutes for each side.

(d) Whether any party proposes to call one or more witnesses, including experts, at the Claim Construction Hearing, the identity of each such witness, and for each expert, a summary of each opinion to be offered in sufficient detail to permit a meaningful deposition of that expert: None.

(e) A list of any other issues which might appropriately be taken up at a prehearing conference prior to the Claim Construction Hearing, and proposed dates, if not previously set, for any such prehearing conference: None; the Court has set time for a tutorial and status conference at 2pm the day before the claim construction hearing; the parties do not believe that this is necessary.

RESPECTFULLY SUBMITTED this 9th day of September, 2011.

ABOUT THE AUTHORS

Douglas Downing teaches economics and quantitative methods and is undergraduate program director for the School of Business and Economics at Seattle Pacific University. He is the author of several books in both Barron's Easy Way and Business Review series. He is also the author of *Java Programming the Easy Way* and *Dictionary of Mathematics Terms*, published by Barron's Educational Series, Inc. He holds the Ph.D. degree in economics from Yale University.

Michael Covington is Associate Director of the Artificial Intelligence Center at the University of Georgia. He is a contributing editor for *Poptronics* magazine and is the author of *Computer Science Study Keys* (published by Barron's). He holds the Ph.D. degree in linguistics from Yale University.

Melody Mauldin Covington is a graphic designer living in Athens, Georgia. She is the author of *Dictionary of Desktop Publishing* (published by Barron's).

Even with no special codes in it, a text file is still a valid HTML document.

Although you can use almost any word processor or page layout program to produce HTML, it is much easier to use a program specially designed for the job (Adobe PageMill, Corel Xara, Microsoft FrontPage, and other "web publishers"). Many of the newer programs provide a WYSIWYG environment for designing web pages, then automatically produce the correct HTML codes.

For other examples of HTML, *see* FORM, TABLE, FRAME, JAVASCRIPT, JAVA, and DYNAMIC HTML.

HTTP (Hypertext Transfer Protocol) a standard method of publishing information as hypertext in HTML format on the Internet. URLs (addresses) for web sites usually begin with `http:`. *See* URL; HYPERTEXT; HTML; INTERNET; WORLD WIDE WEB.

HTTPS a variation of HTTP that uses SSL encryption for security.

hub on a network with star topology, the device that links several computers together. A hub is typically a small box with five or more RJ-45 connectors that accept cables from the individual computers (nodes). One of the connectors may be labeled uplink, which means that it has the transmit and receive signals swapped in order to connect to another hub rather than to a computer. *See* TOPOLOGY; IOBASE-T; 100BASE-T. *Contrast* ROUTER; BRIDGE; SWITCH (definition 2).

hue color (red vs. green vs. orange, etc.). *See* HSB.

hunt and peck (*slang*) to type by gazing at the keyboard, hunting for the letters, and pressing them one by one with one finger, rather like a trained chicken.

hyperdocument *see* HYPERTEXT.

hyperlink an item on a WEB PAGE which, when selected, transfers the user directly to another location in a hypertext document or to some other web page, perhaps on a different machine. Also simply called a LINK. For an example, *see* HTML.

hypertext (hyperdocuments) electronic documents that present information that can be read by following many different connections, instead of just sequentially like reading a book. The World Wide Web is an example of hypertext, as are Microsoft Windows help files and CD-ROM encyclopedias.

A hypertext document typically starts with a computer screen full of information (text, graphics, and/or sound). The user then will have different options as to what related screen to go to next; typically, options are selected with a mouse.

Encyclopedia information is especially suitable for hypertext presentation. Each entry can be a screen of information, and each cross-reference can be a button that the user can click on in order to jump to

And this is with a computer millions of times faster than any that presently exist. Obviously, it will never be feasible to solve the traveling salesman problem for more than a few cities unless a much better algorithm is found.

Another interesting class of computational problems, known as *NP-complete* problems, has been proved to be equivalent to the traveling salesman problem; if a better algorithm is found for any NP-complete problem, it will be applicable to all of them.

line

1. in geometry, the shortest path connecting two points. A geometric line is always perfectly straight and has no width.
2. in graphics, a visible representation of a geometric line. A line in this sense has a definite color and width (normally at least 0.5-point for good visibility on paper; *see* HAIRLINE) and may be continuous, dashed, or dotted.
3. a printed line of type. Punched cards and non-graphical computer screens usually accommodate 80 characters per line, but text is most readable with a line length of about 65 characters. *See also* WORD WRAP; LINESPACING.
4. an electronic communication path, such as a telephone line. *See* T1 LINE; T3 LINE.

linear fill a way of filling an object with color so that it makes a smooth transition from one color at one side of the object to another color at the other side. You can specify the angle of the linear fill. *Contrast* RADIAL FILL.

line cap the end of a drawn line. In most DRAW PROGRAMS, you can choose square or rounded ends, or even arrowheads.

line drawing an illustration that can be represented as a series of hard-edged black lines and black areas on a white background. Line drawings are easily converted to vector images by tracing them.

line feed *see* LF.

line spacing the spacing in between lines of type. Also called LEADING.

link

1. any kind of communication path between two computers.
2. an entry in one directory or menu that points directly to something in some other directory or menu; a SHORTCUT. Links can be used to make the same file accessible from more than one directory or to put the same program on more than one menu.
3. an item on a WEB PAGE which, when selected, transfers the user directly to some other web page, perhaps on a different machine. Also called a HYPERLINK. For example *see* HTML.
4. in Windows, a DDE or OLE communication path between programs. *See* DDE; OLE.

Home > Solutions > Encyclopedia > look and feel

Search: Search Encyclopedia Browse the index

Definition of: look and feel

The user interface of an operating system, application or Web page. The look refers to how logos, graphics, menus and other elements are laid out on the page. The feel refers to the interactions: the way menus are organized and the way functions are selected and performed (the "method of operation").

Copyright the Look, Not the Feel

There have been two landmark cases regarding the look and feel of software. In the late 1980s, Apple sued Microsoft, claiming that Windows copied the Mac OS look and feel. However, due to a previous licensing agreement between both companies, the case never resulted in a statute, and both parties settled.

In the mid-1990s, Lotus sued Borland, claiming that Borland's Quattro Pro spreadsheet emulated the look and feel of Lotus 1-2-3. Much to the woe of proprietary software vendors, the court decision resolved that although visual elements of the graphical user interface could be copyrighted, the method of operation (menus and functions) could not. See user interface.

Title : Methods of expanding commercial opportunities for Internet
websites through coordinated offsite marketing

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Filed via EFS – July 1, 2011

SUPPLEMENTAL PRELIMINARY AMENDMENT

Dear Sir:

Assignee's June 28, 2011, amendment inadvertently omitted claim status identifiers. Assignee submits the current amendment to cure that omission and requests entry of the following amendments as part of this continuation application.

- **Amendments to the Claims** begin on page 2.
- **Remarks** begin on page 7.

Amendments

IN THE CLAIMS

Please amend the claims as follows:

1-70. (Cancelled)

71. (New) A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

- (a) automatically, with a server computer, retrieving data pre-stored in a storage device accessible to the server computer, and
- (b) automatically, with the server computer, serving to the visitor computer a composite web page of a second website that includes:
 - (i) information associated with the commerce object associated with the link that has been activated, and
 - (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page,

wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other.

72. (New) The method of claim 71 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

73. (New) The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page

contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

74. (New) The method of claim 73 further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer.

75. (New) The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the plurality of products and serving the results for display using the browser of the visitor computer.

76. (New) The method of claim 71 wherein the owner of the source web page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

77. (New) The method of claim 76 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.

78. (New) The method of claim 71, wherein the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart, and further comprising, automatically with the server computer, accepting inputted billing information from the visitor computer, recording the billing information, and using the billing information to facilitate payment to the merchant for the commerce object associated with the activated link when the server computer detects activation by the web browser of a checkout link associated with the shopping cart.

79. (New) The method of claim 78 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.

80. (New) The method of claim 71, wherein the composite web page appears to the computer user to be generated by a server associated with the source page.

81. (New) A computer system apparatus for an outsource provider serving web pages offering commercial opportunities, the apparatus comprising:

- (a) an electronic storage device containing data defining a plurality of visually perceptible elements visually corresponding to a source web page,
 - (i) wherein the source web page contains at least one active link that is served to the visitor computer when visiting the first website, which link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant, and
 - (ii) wherein the owner of the first website, the outsource provider, and the merchant are each third parties with respect to each other; and
- (b) a computer server device controlled by the outsource provider, which computer server is coupled to the electronic storage device and programmed to, upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, automatically:
 - (i) retrieve from the storage device the stored data defining the plurality of visually perceptible elements visually corresponding to the source web page, and
 - (ii) serve to the visitor computer a composite web page of a second website that includes:
 - (A) information associated with the commerce object associated with the link that has been activated, and
 - (B) the plurality of visually perceptible elements derived from the retrieved data.

82. (New) The apparatus of claim 81 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

83. (New) The apparatus of claim 81 wherein the commerce object associated with the link comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

84. (New) The apparatus of claim 83 wherein the computer server is further programmed to: (i) upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, accept search parameters through the browser of the visitor computer and automatically use the search parameters to search for specific products within the catalog, and (ii) serve the results for display using the browser of the visitor computer.

85. (New) The apparatus of claim 81 further comprising a computerized accounting module programmed to cause the computer system to automatically record payment to the owner of the first website, once the transaction is completed, wherein the owner is party to a contract with the outsource provider providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

86. (New) The apparatus of claim 85 wherein:

(i) the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart,

(ii) the computer server is further programmed to automatically accept inputted billing information from the visitor computer, and record the billing information, and

(iii) the computerized accounting module is further programmed to cause the computer system to automatically use the billing information to record payment to the merchant for the commerce object associated with the activated link when the computer server detects activation by the web browser of a checkout link associated with the shopping cart.

Remarks

Assignee respectfully submits a new set of claims. No new matter is included. These claims are related to the claims allowed and issued in parent U.S. Patents 7,818,399 and 6,993,572, in that they take certain wording from each of those patents. The key points of distinction from prior art references cited, in combination, are maintained in these claims. In comparison with the '399 Patent allowed most recently, for example, the current claims maintain the points that (1) the "source web page" has a "link" that correlates the source web page with at least one "commerce object associated with a buying opportunity of a merchant," (2) "the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other," and (3) the "composite" or "second" web page includes the data about the commerce object associated with the activated link and "a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page." Prompt review and allowance are respectfully requested.

Please feel free to telephone the undersigned if it would in any way advance prosecution of this application.

Respectfully submitted,
DDR HOLDINGS, LLC
by its attorney

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

SUPPLEMENTAL PRELIMINARY AMENDMENT

Dear Sir:

Assignee requests entry of the following amendments as part of this continuation application.

- **Amendments to the Claims** begin on page 2.
- **Remarks** begin on page 7.

Amendments

IN THE CLAIMS

Please amend the claims as follows:

1-70. (Cancelled)

71. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:

upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of a link within a source web page that has been served to the visitor computer when visiting a first website, wherein the link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant,

- (a) automatically, with a server computer, retrieving data pre-stored in a storage device accessible to the server computer, and
- (b) automatically, with the server computer, serving to the visitor computer a composite web page of a second website that includes:
 - (i) information associated with the commerce object associated with the link that has been activated, and
 - (ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page,

wherein the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other.

72. The method of claim 71 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

73. The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or

more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

74. The method of claim 73 further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the catalog and serving the results for display using the browser of the visitor computer.

75. The method of claim 71 wherein the commerce object associated with the link that has been activated comprises information defining a multitude of products of at least the merchant, and further comprising accepting search parameters through the browser of the visitor computer and automatically with the server computer using said parameters to search for specific products within the plurality of products and serving the results for display using the browser of the visitor computer.

76. The method of claim 71 wherein the owner of the source web page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

77. The method of claim 76 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.

78. The method of claim 71, wherein the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart, and further comprising, automatically with the server computer, accepting inputted billing information from the visitor computer, recording the billing information, and using the billing information to facilitate payment to the merchant for the commerce object associated with the activated link when the server computer detects activation by the web browser of a checkout link associated with the shopping cart.

79. The method of claim 78 further comprising computer-facilitating automatic payment to the owner of the source web page, once the transaction is completed.

80. The method of claim 71, wherein the composite web page appears to the computer user to be generated by a server associated with the source page.

81. A computer system apparatus for an outsource provider serving web pages offering commercial opportunities, the apparatus comprising:

- (a) an electronic storage device containing data defining a plurality of visually perceptible elements visually corresponding to a source web page,
 - (i) wherein the source web page contains at least one active link that is served to the visitor computer when visiting the first website, which link correlates the source web page with at least one commerce object associated with a buying opportunity of a merchant, and
 - (ii) wherein the owner of the first website, the outsource provider, and the merchant are each third parties with respect to each other; and
- (b) a computer server device controlled by the outsource provider, which computer server is coupled to the electronic storage device and programmed to, upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, automatically:
 - (i) retrieve from the storage device the stored data defining the plurality of visually perceptible elements visually corresponding to the source web page, and
 - (ii) serve to the visitor computer a composite web page of a second website that includes:
 - (A) information associated with the commerce object associated with the link that has been activated, and
 - (B) the plurality of visually perceptible elements derived from the retrieved data.

82. The apparatus of claim 81 wherein the visually perceptible elements comprise data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.

83. The apparatus of claim 81 wherein the commerce object associated with the link comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the composite web page contains one or more selectable navigation links connecting a hierarchical set of additional web pages, each pertaining to a subset of the offerings in the catalog.

84. The apparatus of claim 83 wherein the computer server is further programmed to: (i) upon receiving over the Internet an electronic request generated by a visitor computer in response to selection of the link, accept search parameters through the browser of the visitor computer and automatically use the search parameters to search for specific products within the catalog, and (ii) serve the results for display using the browser of the visitor computer.

85. The apparatus of claim 81 further comprising a computerized accounting module programmed to cause the computer system to automatically record payment to the owner of the first website, once the transaction is completed, wherein the owner is party to a contract with the outsource provider providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source web page.

86. The apparatus of claim 85 wherein:

(i) the composite web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart,

(ii) the computer server is further programmed to automatically accept inputted billing information from the visitor computer, and record the billing information, and

(iii) the computerized accounting module is further programmed to cause the computer system to automatically use the billing information to record payment to the merchant for the commerce object associated with the activated link when the computer server detects activation by the web browser of a checkout link associated with the shopping cart.

Remarks

Assignee respectfully submits a new set of claims. No new matter is included. These claims are related to the claims allowed and issued in parent U.S. Patents 7,818,399 and 6,993,572, in that they take certain wording from each of those patents. The key points of distinction from prior art references cited, in combination, are maintained in these claims. In comparison with the '399 Patent allowed most recently, for example, the current claims maintain the points that (1) the "source web page" has a "link" that correlates the source web page with at least one "commerce object associated with a buying opportunity of a merchant," (2) "the owner of the first website, the owner of the server computer, and the merchant are each third parties with respect to each other," and (3) the "composite" or "second" web page includes the data about the commerce object associated with the activated link and "a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source web page." Prompt review and allowance are respectfully requested.

Please feel free to telephone the undersigned if it would in any way advance prosecution of this application.

(54) Title: SYSTEM FOR PROVIDING A DISPLAY OF MERCHANDISE AS SPECIFIED BY RETAIL AND WHOLESALE MERCHANDISE PROVIDERS

(57) Abstract

A system for displaying merchandise to a potential shopper via a communication network is disclosed. A plurality of shoppers can access the system to view information provided by a plurality of retailers acting in concert with a plurality of manufacturers. Each shopper, retailer, and manufacturer has a personal computer equipped with communication software (22, 23, 24) and communicates via a communication link (21) with servers (18, 19, 20). The information that is accessible to a shopper is determined jointly by templates (12, 13) and databases (10, 11) for the manufacturer and retailer, respectively, and includes electronic advertising. The templates specify information format while the databases determine information availability and content.

SYSTEM FOR PROVIDING A DISPLAY OF MERCHANDISE AS SPECIFIED BY RETAIL AND WHOLESALE
MERCHANDISE PROVIDERS1 **FIELD OF THE INVENTION**

2

3 The present invention relates to the dissemination by a digital communication network of
4 information embodied in displays, and particularly to the replication of display objects from a
5 first class of providers into displays of a second class of providers.

6

7 **BACKGROUND OF THE INVENTION**

8

9 The dissemination over digital communication networks (such as the Internet) of
10 information presented in the form of displays is well known. On the Internet there exists the
11 World-Wide Web, wherein each source of information is displayed as a "web site" or "web
12 page", and each web site is identified by a "universal resource locator" (URL).

13 Techniques have been devised for visually correlating related displays of information.
14 One such technique, known as "hypertext link", consists of providing in a present display an icon
15 or legend connoting a display that is related to the present display and which thus may be of
16 interest to a user viewing the present display; if the user selects that icon or legend (as by (
17 clicking" on it with a pointing device, such as a "mouse") the related display is automatically
18 fetched for the user, and replaces the present display.

1 Although this provides some measure of convenience for the user, it is not seamlessly
2 integrated inasmuch as it requires that the display he was viewing be erased and replaced with
3 the new display; should he wish to make further use of the previous display he must find his way
4 back to it; and, simultaneous viewing of the old and new displays is not possible.

5 These drawbacks can be more far-reaching if the information being disseminated involves
6 product sales information. For example, if the user was viewing a display provided by a retailer,
7 and if the icon he selected pertained to information provided by a supplier (wholesaler or
8 manufacturer) about a product stocked by the retailer, it is to the retailer's detriment for
9 the user to leave the retailer's display (web site) to go to the supplier's web site. The user may
10 not find his way back, and the retailer may thus lose an opportunity for a sale.

11 Also under the hypertext link scheme, the display pertaining to product information
12 (which display might typically be a supplier's web site) can have no provision for indicating
13 unique aspects of a particular retailer's handling of those products, such as retail price, retailer's
14 stock number, availability, 64 package deals", and so forth.

15 To assist with this problem, a class of "web storefront software" has been developed (for
16 example, "Store" from Viaweb, "Electronic Commerce Suite" from iCat) and is commercially
17 available (see also U.S. Patent 5,715,734); this software aids the retailer in creating "electronic
18 storefront" websites which include product information provided by suppliers, thus reducing the
19 need for a purchaser to switch from the retailer's web page to the supplier's. These programs
20 facilitate the creation by a retailer of a database of information about the products available from
21 suppliers. The more sophisticated of these packages permit "importing" product information
22 from a database or spreadsheet provided by a supplier into the retailer's database, while the less
23 sophisticated ones require product information to be manually transcribed into the user's

1 database. Once the product information has thus been imported or transcribed into the
2 retailer's web page, it can be customized to a particular retailer's situation.

3 This is not a "dynamic" or "real-time" data distribution scheme, but a "batch" scheme;
4 changes to product data do not automatically propagate to retailers, but reach a retailer only when
5 the retailer next imports or transcribes the then-current information.

6 A drawback of this method is that changes made by a supplier to his product catalog will
7 not be reflected in a retailer's web pages until the next-time that retailer carries out the import or
8 transcription procedure, which the supplier is powerless to hasten. And, once a supplier releases
9 product information he may have difficulty controlling which retailers carry it, the extent to
10 which they modify it, and so forth.

11

12 **SUMMARY OF THE INVENTION**

13

14 It is thus a general object of the present invention to provide improved dissemination of
15 information.

16 It is a particular object of the present invention to provide improved dissemination over a
17 communication network of information embodied in displays.

18 It is a more particular object of the present invention to facilitate the integration of
19 information originating from multiple providers and transmitted over a communication network.

20 It is further particular object of the present invention to enable a first class of providers to
21 provide display objects for incorporation into displays provided by a second class of providers.

1 It is a further particular object of the present invention to immediately disseminate new
2 information to users of the second providers' displays as soon as such new information is entered
3 by the first providers.

4 It is a further particular object of the present invention to allow the first providers
5 immediate and continuing control over which second providers may carry first providers' display
6 objects and how they modify the display objects.

7 The present invention overcomes the shortcomings of the prior art and meets the stated
8 objects by introducing a system and method for first providers (such as product manufacturers) to
9 provide display objects describing their products, and for second providers (such as retailers) to
10 selectively incorporate replicates of those display objects into their own displays with the
11 capability for the second provider to insert some of his unique information into the display object
12 replicates.

13 These and other objects of the invention will be clear to those skilled in the art after
14 consulting the following description of the preferred embodiment, cast in the context of
15 disseminating marketing information in the jewelry trade, and the appended drawings, wherein:

16

17 **BRIEF DESCRIPTION OF THE DRAWINGS**

18

19 Fig. 1 depicts the system of the present invention.

20 Fig. 2 shows further detail of the contents of databases depicted in Fig. 1.

21 Figs. 3A through 3C illustrate flow through the system of the present invention initiated
22 by a customer requesting to see a retail jeweler's web page and requesting further information
23 therefrom.

1 Figs. 4A through 4D summarize at a high level the interaction facilitated by the present
2 invention among a jewelry manufacturer, a retail jeweler, and a potential customer of the retail
3 jeweler, and also show typical displays seen by the customer in response to that interaction.

4 Figs. 5A through 5E depict a "command console" display presented to a retail jeweler to
5 facilitate his altering the content and appearance of his web page.

6 Figs. 6A through 6E depict a "command console" display presented to a manufacturer to
7 facilitate his altering content and control information pertaining to his boutiques.

8

9 **DESCRIPTION OF A PREFERRED EMBODIMENT OF THE INVENTION**

10

11 A preferred embodiment of the invention exists in, and will now be disclosed in, a
12 context of disseminating via the Internet marketing information pertinent to the jewelry trade.
13 However, those skilled in the art will contemplate the use of the invention to disseminate any
14 type of information via any digital communication network.

15 Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access
16 the system to view information provided by a plurality of retail jewelers acting in concert with a
17 plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal
18 computer (PC) (well known in the art and not shown) each equipped with communication
19 software 22 (Jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the
20 communication link 21.

21 In a present embodiment, communication link 21 is the Internet, but many other
22 communication media may be contemplated for use in the present invention. Communication
23 link 21 enables communication with servers 18, 19, and 20. In keeping with trends prevalent and

1 well known in the communication arts to generate distributed systems, the servers 18, 19, and 20
2 may be associated with the same host computer or with different host computers. The path 14
3 may thus be internal to one host machine, or it may itself include a communications path among
4 a number of host machines.

5 The information that is accessible to a shopper is determined jointly by templates 13 and
6 database 11, associated with retail jewelers, and templates 12 and database 10, associated with
7 jewelry manufacturers, and typically includes information in electronic form, including
8 electronic advertising. The templates specify formats for respective portions of the information
9 while the databases determine availability and content of the respective portions. The templates
10 and database contents may be entered through system control unit 25, or by the jewelers and
11 manufacturers from their PCs through their communication software 22 and 23 respectively.

12 A shopper who, through communication software 24, accesses the system of the present
13 invention does so by directing his inquiry to a particular communication address-- in the Internet-
14 based implementation of the present embodiment he would enter the URL (using the well known
15 HTTP protocol) of a particular jeweler's web site, which would cause communication link 21 to
16 connect him to server 20, associated with a host machine with which the templates 13 and
17 the jeweler's database 11 are also associated. Database 11 comprises datasets 111, 112, and so
18 forth, one dataset for each particular jeweler accessible on the system. Similarly, there is a
19 database 10 associated with manufacturers, and it includes datasets 101, 102, and so forth, one
20 dataset for each manufacturer who wishes to be represented in the system.

21 The screen display that will be seen by the shopper in response to this inquiry is
22 determined by the templates 13 and the particular jeweler's dataset, and may include display
23 objects provided by manufacturers and determined by templates 12 and a manufacturer's dataset.

1 Generally, the templates specify layouts (formats) which are filled in by content information
2 specified in a dataset as directed by control information specified in a dataset, both found in the
3 datasets within databases 10 and 11. The respective content information and control information
4 may be entered by a system operator through system control unit 25, or it may be entered or
5 modified by jewelers and manufacturers through communication software 22 and 23 respectively
6 and forwarded through communication link 21.

7 Hierarchical levels of access privilege are contemplated, and it is desirable that some of
8 the information be provided only through a central system control so that a jeweler or
9 manufacturer is not able to capriciously raise his access level. On the other hand, some of the
10 information can be changed at will by the jewelers and manufacturers, thus enhancing the
11 flexibility of the system and the currency of information that may be seen by shoppers.

12 To respond to a shopper's request, under control of display processor information
13 contained in templates 13 specifies the general format of a display screen for a jeweler, and the
14 general format is "filled in" with information unique to the particular jeweler whom the shopper
15 has requested, according to content information found in the dataset (such as the jeweler's name
16 and address, for example) associated with that jeweler.

17 The content information may also specify that "virtual boutiques" may appear in the
18 jeweler's display. (The display objects that may be provided by manufacturers for displaying the
19 manufacturer's wares within the jeweler's web page are analogous to the manufacturer's
20 "boutiques" or "kiosks" often found in actual jewelry stores, and for that reason are sometimes
21 referred to herein as "virtual boutiques" or simply as "boutiques".)

22 The jeweler's dataset contains information about whether a particular manufacturer's
23 boutique is to be shown and attributes specifying how the jeweler wishes it to be shown, while

1 the manufacturer's templates 12 as filled in according to the manufacturer's dataset specify the
2 content of the boutique. The manufacturer's dataset also includes control information which
3 specifies such things as whether the particular jeweler is permitted to carry the boutique.

4 Replicating a boutique from the manufacturer's database 10 into a display being made up
5 by display processor 17 largely from jeweler's database 11 requires data transmission over path
6 14, which, as previously mentioned may be a hard path within a single host machine or a
7 communications link between two host machines.

8 As is known to those in the art, database 11 may or may not be implemented as an object-
9 oriented database. If it is object-oriented, it will have instructions embedded in it and will
10 initiate on its own a request over path 14 for the requisite information from database 10, and will
11 provide all the information necessary for a display to display processor 17. If it is not object-
12 oriented, display processor 17 will have to initiate requests for such information over path 14,
13 and display processor 17 will be responsible for assembling information for a complete display
14 from database 10 and database 11.

15 Display processor 17 forwards the display information through server 20 and over
16 communication link 21 to the shopper's communication software 24 which presents the shopper
17 with the indicated display on his monitor.

18 Further detail of databases 10 and 11 is shown in Fig. 2. Fig. 2 is seen to include the path
19 14 also shown in Fig. 1. Databases 10 and 11 are seen to be connected to path 14. As was shown
20 in Fig. 1, system control 25 and display processors 15, 16, and 17 also have connection to path
21 14 although they are not shown in Fig. 2; through path 14, system control 25 and display
22 processors 15, 16, and 17 have access to databases 10 and 11.

1 Database 11 has a dataset for each retail jeweler 111, 112, 113, etc. who may have a web
2 page under the present embodiment; although that number is virtually unlimited, only one
3 jeweler's dataset (111) is shown in detail in Fig. 2, and is seen to include content information
4 1111, three boutique references 1112, 1114, and 1116, and customization information 1113,
5 1115, and 1117 associated with the respective boutique references.

6 The jeweler's content 1111 includes items that may be filled on his templates 12 (not
7 shown in Fig. 2) to appear on his web page, such as his address and phone number, and may also
8 include items such as his markup, affiliations and memberships, etc.

9 Jeweler 111 may carry or offer a number of boutiques on his web page, and in the present
10 example is carrying three, with a reference to each in his dataset (1112, 1114, and 1116). These
11 references are to boutiques 1011 and 1014 associated with manufacturer 101, and boutique 1021
12 associated with manufacturer 102, now to be discussed in connection with database 10.

13 Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may
14 provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number
15 of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101
16 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each
17 manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler
18 111.

19 The datasets for jewelers other than jeweler 111 may contain references to some or all of
20 the same boutiques as jeweler 111, and as well to other boutiques of those manufacturers and to
21 the boutiques of other manufacturers.

22 Associated with each boutique in database 10 is a set of inclusion rules and a set of
23 exclusion rules; for example, associated with boutique 1011 are inclusion rules 1012 and

1 exclusion rules 1013. It is through these sets of rules that a manufacturer has control over which
2 retailers may carry the boutique and which portions of the boutique they may customize. That a
3 jeweler has a reference to a boutique does not of itself ensure that he will display the boutique;
4 the corresponding inclusion rules must permit him to carry it, and the exclusion rules must not
5 prohibit him from carrying it. At their simplest, these lists may entail specific identifications of
6 retail jewelers allowed to carry (in inclusion rules) or prohibited from carrying (in exclusion
7 rules) the boutique. The specific identifications may be by name, or by some other means such
8 as an identification number.

9 Inclusion or exclusion of retail jewelers may be expressed in other ways as well; for
10 example, the jeweler's membership in certain trade associations, his geographical location, his
11 credit rating, etc.

12 Since jeweler 111's dataset contains boutique reference 1112 to boutique 1011, and since
13 in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the
14 boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when
15 a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by
16 clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by
17 display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from
18 templates 12 and HTML content information contained in boutique 1011. The HTML
19 description is passed by path 14 to display processor 17. Display processor 17 has already
20 assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and
21 replicate into that web page the boutique specified by 1011. The HTML description received
22 over path 14 may contain specifications that some of the information in the display object is
23 subject to modification by the retail jeweler. This modification will be performed according to

1 criteria specified in the customization list associated with the boutique reference, in this case
2 1113. Typically, an identification of the boutique will appear in the display object and will not
3 be specified as modifiable by the retail jeweler. Fields that typically are modifiable are the prices
4 of items (to be adjusted according to the retailer's markup), SKU numbers (stock-keeping unit
5 numbers, well known in retailing and related to UPC (universal price code) methodology), the
6 names and descriptions associated with items, etc.

7 After making these modifications in the manufacturer's display object, the object is
8 forwarded through server 20 and communication link 21 to shopper 24 where it appears
9 incorporated in the retailer's web page.

10 Those skilled in the art will appreciate that under this scheme, changes made by the
11 manufacturer to his boutique description (such as 1011) take effect immediately-- all shoppers
12 requesting the boutique after such a change will see the new information. This is in marked
13 contrast with the storefront software of the prior art, in which such changes are not seen on a
14 retailer's web page until such time as that retailer next performs an import or a manual
15 transcription of the new information. Numerous cases are known of web pages that are many
16 weeks, and even months, out of date. Similarly, changes to inclusion rules 1012 and exclusion
17 rules 1013 take effect immediately.

18 This ability to display completely current information on the web pages of a great many
19 retail jewelers is highly beneficial to a manufacturer compared to having a single website of his
20 own. It is also beneficial to the jeweler to be able to showcase products from various
21 manufacturers on his own website, under his own name, and with his own particulars.

22 Yet, a separation of concerns is observed -- a manufacturer may choose what jewelers
23 may carry his display objects and what contents of them a jeweler may change, and a jeweler,

1 may choose to carry or not to carry any of the boutiques a manufacturer makes available to him,
2 and to enter contents of his choice into the fields the manufacturer has approved for such
3 changes.

4 A flow through the system of the present invention is illustrated in Figs. 3A, 3B, and 3C.
5 Fig. 4A shows schematically and at a high level the interaction provided by the present invention
6 among a retail jeweler, a jewelry manufacturer, and a prospective customer of the retail jeweler;
7 Figs. 4B) 4C, and 4D depict a series of displays that might appear on the shopper's monitor as a
8 result of this interaction.

9 It is seen at a high level in Fig. 4A that a local jeweler (for ease of description named
10 "Ima Juler") has a dataset 111 in database 11. It contains his name and address; the markup
11 (100%) that he wishes to apply to wholesale prices; an indication that he is a member of the
12 American Federation of Jewelers (AFofJ); references to manufacturers' boutiques he wishes to
13 display; and a description in HTML (hypertext markup language, well known in the art) of the
14 web page he wishes shoppers to see.

15 Similarly, it is seen at a high level in Fig. 4A that a ring manufacturer (for ease of
16 description named "RingCo") has a dataset 101 in database 10. It contains RingCo's name and
17 address, a list of retail jeweler's permitted to carry their boutique, and an HTML description of
18 their boutique. The boutique as specified by that HTML is shown as element 26.

19 In Fig. 3A, a shopper who lives in the vicinity of Ima Juler's store and who is
20 contemplating the purchase of a ring enters at his PC a request to visit Ima Juler's web page,
21 causing his communication software 24 (Fig. 1) to issue Ima Juler's URL, typically of the form

22 <http://www.imajuler.com>

1 That URL is forwarded to communications link 21 (the Internet in the present
2 embodiment, not shown in Fig. 3A) which forwards it to server 20 (also not shown in Fig. 3A)
3 where it causes the invocation of display processor program 17.

4 Reference should now be had to Fig. 2 along with Fig. 3A. Display processor 17
5 accesses database 11 and templates 13 by means of path 14. It will be recalled that since the
6 computer equipments supporting the present invention may be in the form of a distributed
7 system, this usage of path 14 may be over a hard path within a single machine, or over a
8 communication link between machines. The determination of which kind of path access to
9 perform may be performed by instructions within the programs comprising display processor 17,
10 or by instructions embedded within data references if display processor 17 is "object oriented".

11 Display processor 17 finds among templates 13 the basic template for a local jeweler's
12 web page, and assemble's jeweler 111's basic web page by filling in the template with the local
13 jeweler 111's content information 1111. The web page is returned over the Internet 21 to
14 communication software 24, which causes it to display on the monitor associated with, the
15 shopper's PC. The shopper may then view it. A typical example is seen in Fig. 4B.

16 It is seen in Fig. 4B that the shopper is invited to visit manufacturer's boutiques. He may
17 now request a list of available boutiques by clicking on the appropriate legend in Fig. 4B. When
18 he does so (referring now to Fig. 3B), his communication software 24 issues to the Internet a
19 URL of the form

20 `http://server_id/program_name?parameters`

21 which in the present case might specifically be

22 `http://www.imajuler.com/boutiquepage?jeweler = 111`

23 This reaches server 20 according to the server id of www.imajuler.com. Server 20 invokes
24 display processor 17 which is instructed by the URL to run a particular one of its constituent

1 programs, a program named "boutiquepage", which is called with a parameter of "jeweler =
2 111".

3 Program boutiquepage locates in templates 13 the template required for the page
4 requested by the shopper. A feature of templates is that they may contain the names of
5 subprograms, including subprograms required for their own filling in. Display processor 17
6 contains the subprograms and, upon finding the subprogram names in the template, calls the
7 specified subprograms, passing them the argument "jeweler= 111.

8 The subprograms called in this case query the dataset for jeweler 111, and find his
9 boutique references (BR). For each boutique reference, it is determined whether the retail
10 jeweler has specified whether he wishes to display the referenced boutique. If so, the
11 corresponding boutique is located via path 14, and it is determined whether the manufacturer
12 wishes the current particular jeweler to carry the boutique. That is, the inclusion rules are
13 checked to verify that the retail jeweler is specified in them, and the exclusion rules are checked
14 to ascertain that the retail jeweler is not specified in them. For example, the inclusion rules
15 might specify that all members of a particular trade association are included, but the exclusion
16 rules may exclude particular jewelers despite their membership in the trade association,, for such
17 reasons as credit rating, unfavorable transaction history, and so forth. if the jeweler's boutique
18 reference and the manufacturer's boutique both indicate that the jeweler is permitted to display
19 the referenced boutique, the boutique name is included in the result set. After all boutique
20 references have been thus processed by the subprograms, the result set is returned to program
21 boutiquepage.

22 According to the current template and the result set, a new display page containing the list
23 of available boutiques is made up and returned via communication link 21 to the shopper's

1 communication software 24. It is displayed to the shopper, who views it. A typical example is
2 shown in Fig. 4C.

3 Referring now to Fig. 3C, the shopper requests to view a particular one of the available
4 boutiques. He does so typically by clicking on the name of a desired boutique. Since he is
5 contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo"
6 (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name
7 invocation of "showboutique" and a parameter indicating the boutique reference, such as 1112.

8 The request reaches display processor 17 which runs its constituent program
9 showboutique, which finds in templates 13 the appropriate template for the page, and also finds
10 the boutique reference 1112, from which it can be determined that the requested boutique is
11 1011. Constituent subprograms of display processor 17 as named in the retrieved template are
12 called with an argument specifying boutique 1011. Over path 14, they find information 1011
13 specifying the display object (boutique), and they find the template from templates 12 specifying
14 the form or layout of the boutique. The template is filled in according to information 1011, thus
15 producing a copy of the requested display object, which is returned to program show boutique.
16 Showboutique then, either internally or through the invocation of other subprograms, finds the
17 retail jeweler's customization information associated with the boutique reference (in this case
18 customization information 1113 associated with boutique reference 1112) and incorporates the
19 customization information into the display object.

20 A web page is assembled including the requested display object (boutique) and returned
21 via communication link 21 to the shopper's communication software 24, which causes it to be
22 displayed to the shopper who now views it. A typical example is shown as element 26A in Fig.
23 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in

1 it are seen to be different. This is a result of the aforementioned customization. The prices
2 specified by RingCo's HTML description in element 26 are wholesale prices; after applying Ima
3 Juler's customization with his markup of 100%, the prices shown in element 26A are twice those
4 shown in element 26. Similarly, where element 26 shows SKU numbers, element 26A shows
5 different "stock numbers". This conversion could be specified by Ima Juler in order to prevent
6 the shopper from learning the true SKU number which might facilitate the shopper's "shopping
7 around" for the item, which might be detrimental to Ima Juler.

8 Thus, the shopper is able to see the manufacturer's information without leaving the retail
9 jeweler's web page, including all updates made by the manufacturer. And, the shopper sees the
10 retail jeweler's customization of the manufacturer's information. These factors in conjunction
11 facilitate a satisfying purchase for the customer,, a sale for the jeweler, and a sale for the
12 manufacturer.

13 If the manufacturer or the jeweler wish to change their content information or their
14 control information, they can do so from their PC's (not shown) through their communication
15 software 23 and 22 respectively. Note on Fig. 1 that servers 18 and 19 (which the jeweler or
16 manufacturer respectively would reach, typically by accessing the associated URLs) may
17 possibly be secured servers, whereas server 20 for the use of shoppers is always an open server.
18 The jeweler or manufacturer may thus be required to demonstrate access privilege in order to be
19 accepted by the servers, typically by entering predetermined passwords as is well known in the
20 art.

21 In the present embodiment, they are then shown "command console" displays facilitating
22 their manipulation of their information.

1 Figs. 5A through 5E show the screens provided to a retail jeweler to facilitate his
2 maintaining the boutiques in his web page.

3 On first accessing server 18 (of Fig. 1) and entering his password (if required), the
4 jeweler is shown a screen like that of which Fig. 5A is representative. Boutiques offered by
5 manufacturers are listed, categorized as being from "Branded" or "Non-Branded" manufacturers.
6 Some may have a symbol (such as a circle with a line through it, not shown) indicating that the
7 jeweler is not presently permitted to carry the boutique, though he may preview it and inquire
8 about it as mentioned below. There may be more to display than can fit on his screen at once; by
9 means well known in the art he may have to "scroll" vertically to view listings of all available
10 boutiques.

11 He can click on the Inquiry column for a boutique and be shown information, for
12 example, on the requirements for making the boutique available to him.

13 He can click on the Preview column for a boutique and he will then see what the boutique
14 would look like on his web page as seen by one of his customers.

15 He can click the Status column and be shown a screen on which he may, among other
16 things, select whether an available boutique will or will not be carried on his web page.

17 After he makes his desired inquiries and selections he may click on the Continue button,
18 whereupon he is shown a screen like that of Fig. 5B. He is shown a list of the boutiques he has
19 selected; if the list is not satisfactory he can click on "ADD/DELETE BOUTIQUES" and be
20 returned to the screen of Fig. 5A; if the list is satisfactory he can click on "CONTINUE" and
21 proceed to a screen like that of Fig. 5C.

22 In the screen of Fig. 5C each boutique is seen to be associated with an input box
23 containing a number; boutiques will be displayed in the order of these numbers. He can click

1 these boxes and enter new numbers in them so that the order of numbers reflects his desired order
2 of display.

3 If he wishes to alter the title or text associated with a boutique (and if he has permission
4 to change them as by the manufacturer having checked the "RENAMABLE" checkbox as shown
5 in Fig. 6C to be discussed below) he clicks on the boutique name. For example, if he clicks on
6 the link "PhotoScribe", he is shown a screen as in Fig. 5D, which has a box containing the
7 boutique name and another box containing the text; clicking on either of these enters a mode, as
8 is known in the art, where these items may be edited.

9 Upon returning from the screens of Figs. 5C and 5D he has the option (by clicking a
10 PREVIEW button, not shown) to see a screen like that of Fig. 5E, which is a preview of what his
11 boutique selection page, as presented to his retail customers, will look like. Fig 5E is thus
12 analogous to Fig. 4C, which contains different exemplary matter and was previously discussed in
13 a different connection.

14 Figs 6A through 6E show a series of screens that would be shown to a manufacturer to
15 enable him to maintain and edit the boutiques that are to be carried by retail jewelers. Upon
16 entering the server 19 (of Fig. 1) and validating with his password, he is shown a screen like that
17 of Fig. 6A.

18 If he clicks on "Edit/Add a Manufacturer" he is shown a screen like that of Fig. 6B,
19 where he may edit his company name as it will appear in his boutiques, whether his boutiques
20 will be listed as "branded" or "non-branded" (see Fig. 5A) and various other information. The
21 "Properties" block is provided as a catch-all programming mechanism in which various
22 parameters may be presented for information or for the insertion of values.

1 If from the screen of Fig. 6A the manufacturer selects "Edit/Add a Boutique" he is shown
2 a screen like that of Fig. 6C, where he can enter various information descriptive or controlling of
3 a boutique.

4 If from the screen of Fig. 6A the manufacturer selects "Edit Boutique Inclusion Rules",
5 he is shown a screen like that of Fig. 6D. Here he may enter such things as predetermined
6 business types that carry the boutique, and predetermined site types that may carry it. It may be
7 limited to sites in a particular country, and to a particular state. Additionally, certain named
8 companies can be permitted to carry the boutique even if they do not fall within any of the named
9 categories such as site type or business type.

10 If from the screen of Fig. 6A the manufacturer selects "Edit Boutique Exclusion Rules",
11 he is shown a screen like that of Fig. 6E, which exemplarily shows much of the same contents as
12 the screen of Fig. 6D. The inclusions of Fig. 6D and LOGICAL NOT'd with the exclusions of
13 Fig. 6E. For an inclusion to be effected, a condition must appear in the inclusions and must not
14 appear in the exclusions. (If Figs. 6D and 6E were used in actual practice, there would, in effect,
15 be no inclusions -- no jeweler would be permitted to carry the ABC Company boutique.)

16 Since modifications and changes varied to fit particular requirements and environments
17 will be apparent to those skilled in the art, the invention is not limited to the embodiments set
18 forth or suggested herein. It is to be understood that the invention is not limited thereby. It is
19 also to be understood that the specific details shown are merely illustrative, and that the
20 invention may be carried out in other ways without departing from the broad spirit and scope of
21 the specification.

1 What is claimed is:

2 1. In a system for providing a display of merchandise to a potential purchaser, said
3 display associated with a retailer and containing information specified in part by a wholesaler
4 and in part by said retailer, the system being resident on one or more host machines:

5 first control information and first content information stored on one of said one or
6 more a host machines and associated with said retailer;

7 second control information and second content information stored on one of said
8 one or more host machines and associated with said wholesaler;

9 a first server program resident on one of said one or more host machines for
10 receiving a request from said purchaser to display information from said retailer according to
11 data stored in the first and second content information and the first and second control
12 information, the display including information specified by said retailer and further including a
13 replicate of a display object specified by said wholesaler as qualified according to the first
14 control information,

15 whereby the retailer and the wholesaler severally control the availability,
16 appearance, and content of the replicates of display objects.

17

18 2. The system recited in claim 1, wherein further:

19 a system control machine is operatively connected to the host machines storing
20 the first and the second content information and control information; and

21 any of the first and the second content information and control information can be
22 entered and modified as specified by an operator of the system control machine.

23

1 3. The system recited in claim 1, wherein further:
2 a second server program is responsive to requests from retailers for accordingly
3 modifying predetermined certain of the first content information and the first control
4 information.

5

6 4. The system recited in claim 1, wherein further:
7 a third server program is responsive to requests from wholesalers for accordingly
8 modifying predetermined certain of the second content information and the second control
9 information.

10

11 5. The system recited in claim 4, wherein further:
12 a second server program is responsive to requests from retailers for accordingly
13 modifying predetermined certain of the first content information and the first control
14 information.

15

16 6. In a system for displaying, to a plurality of potential purchasers, displays as
17 specified by providers, the system being resident on one or more host machines and there being a
18 communication link for interconnecting the providers, potential purchasers, and host machines:

19 first control information and first content information stored on one of said one or
20 more host machines and associated with certain providers which are retailers;

21 second control information and second content information stored on one of said
22 one or more host machines and associated with certain providers which are wholesalers;

1 a first server program resident on one of said one or more host machines for
2 receiving requests from potential purchasers, each request being associated with one certain of
3 the retailers and for accordingly providing a display to a requesting potential purchaser according
4 to data stored in the first and second content information and the first and second control
5 information,, the display including information specified by said associated retailer and further
6 including replicates of display objects specified by certain of the wholesalers as qualified
7 according to the first control information,

8 whereby the retailers and the wholesalers severally control the availability,
9 appearance, and content of the replicated display objects.

10

11 7. The system recited in claim 6, wherein further:

12 the first control information further includes first templates for specifying the
13 form of displays associated with the retailers; and

14 the second control information further includes second templates for specifying
15 the form of display objects associated with the wholesalers.

16

17 8. The system recited in claim 7, wherein further:

18 the first templates include names of subprograms to be executed under control of
19 the first server program for generating the displays associated with the retailers and the display
20 objects associated with the wholesalers; and

21 the first server program is responsive to said names of subprograms to execute
22 said subprograms.

23

1 9. The system recited in claim 6, wherein further:
2 a system control machine is operatively connected to the host machines storing
3 the first and the second content information and control information; and
4 any of the first and the second content information and control information can be
5 entered and modified as specified by an operator of the system control machine.

6

7 10. The system recited in claim 6, wherein further:
8 a second server program is responsive to requests from retailers for accordingly
9 modifying predetermined certain of the first content information and the first control
10 information.

11

12 11. The system recited in claim 6, wherein further:
13 a third server program is responsive to requests from wholesalers for accordingly
14 modifying predetermined certain of the second content information and the second control
15 information.

16

17 12. The system recited in claim 11, wherein further:
18 a second server program is responsive to requests from retailers for accordingly
19 modifying predetermined certain of the first content information and the first control
20 information.

21

1 13. In a system for displaying, to a plurality of potential purchasers, displays as
2 specified by retailers, the system being resident on one or more host machines and there being a
3 communication link for interconnecting the retailers, potential purchasers, and host machines:

4 first control information and first content information stored on one of said one or
5 more host machines and associated with the retailers;

6 second control information and second content information stored on one of said
7 one or more host machines and associated with wholesalers;

8 a first server program resident on one of said one or more host machines for
9 receiving requests from potential purchasers, each request being associated with one certain of
10 the retailers and for accordingly providing a display to a requesting potential purchaser according
11 to data stored in the first content information and the first control information, the display
12 comprising information specified by said associated retailer and further including a list of
13 available replicates of display objects specified by certain of the wholesalers.

14

15 14. The system recited in claim 13, wherein further:

16 the first server program is responsive to requests from potential purchasers to
17 include in a display provided to a potential purchaser a replicate of a display object selected by
18 the potential purchaser from said list of available replicates; and

19 the first server program includes in the display a replicate of the selected display
20 object constructed according to the second content information and the second control
21 information and qualified according to the first control information,

22 whereby the retailers and the wholesalers severally control the availability,
23 appearance, and content of the replicates of the display objects.

1

2 15. The system recited in claim 14, wherein further:

3 the first control information further includes first templates for specifying the
4 form of displays associated with the retailers; and

5 the second control information further includes second templates for specifying
6 the form of display objects associated with the wholesalers.

7

8 16. The system recited in claim 15, wherein further:

9 the first templates include names of subprograms to be executed under control of
10 the first server program for generating the displays associated with the retailers and the display
11 objects associated with the wholesalers; and

12 the first server program is responsive to said names of subprograms to execute
13 said subprograms.

14

15 17. The system recited in claim 14, wherein further:

16 a system control machine is operatively connected to the host machines storing
17 the first and the second content information and control information; and

18 any of the first and the second content information and control information can be
19 entered and modified as specified by an operator of the system control machine.

20

21 18. The system recited in claim 14, wherein further:

1 a second server program is responsive to requests from retailers for accordingly
2 modifying predetermined certain of the first content information and the first control
3 information.

4

5 19. The system recited in claim 14, wherein further:

6 a third server program is responsive to requests from wholesalers for accordingly
7 modifying predetermined certain of the second content information and the second control
8 information.

9

10 20. The system recited in claim 19, wherein further:

11 a second server program is responsive to requests from retailers for accordingly
12 modifying predetermined certain of the first content information and the first control
13 information.

14

15 21. In a system for providing an information display to a requester, said display
16 associated with a first provider and containing information specified in part by a second provider
17 and in part by said first provider, the system being resident on one or more host machines:

18 first control information and first content information stored on one of said one or
19 more a host machines and associated with said first provider;

20 second control information and second content information stored on one of said
21 one or more host machines and associated with said second provider;

22 a first server program resident on one of said one or more host machines for
23 receiving a request from said requester to display information from said first provider according

1 to data stored in the first and second content information and the first and second control
2 information, the display including information specified by said first provider and further
3 including a replicate of a display object specified by said second provider as qualified according
4 to the first control information,

5 whereby the first provider and the second provider severally control the
6 availability, appearance, and content of the replicates of display objects.

7

8 22. The system recited in claim 21, wherein further:

9 a system control machine is operatively connected to the host machines storing
10 the first and the second content information and control information; and

11 any of the first and the second content information and control information can be
12 entered and modified as specified by an operator of the system control machine.

13

14 23. The system recited in claim 21, wherein further:

15 a second server program is responsive to requests from first providers for
16 accordingly modifying predetermined certain of the first content information and the first control
17 information.

18

19 24. The system recited in claim 21, wherein further:

20 a third server program is responsive to requests from second providers for
21 accordingly modifying predetermined certain of the second content information and the second
22 control information.

23

1 25. The system recited in claim 24, wherein further:
2 a second server program is responsive to requests from first providers for
3 accordingly modifying predetermined certain of the first content information and the first control
4 information.

5

6 26. In a system for displaying, to a plurality of requesters, displays as specified by
7 providers, the system being resident on one or more host machines and there being a
8 communication link for interconnecting the providers, requesters, and host machines:

9 first control information and first content information stored on one of said one or
10 more host machines and associated with first providers;

11 second control information and second content information stored on one of said
12 one or more host machines and associated with second providers;

13 a first server program resident on one of said one or more host machines for
14 receiving requests from requesters, each request being associated with one certain of the first
15 providers and for accordingly providing a display to a requester according to data stored in the
16 first and second content information and the first and second control information, the display
17 including information specified by said associated first provider and further including replicates
18 of display objects specified by certain of the second providers as qualified according to the first
19 control information,

20 whereby the first providers and the second providers severally control the
21 availability, appearance, and content of the replicated display objects.

22

23 27. The system recited in claim 26, wherein further:

1 the first control information further includes first templates for specifying the
2 form of displays associated with the first providers; and

3 the second control information further includes second templates for specifying
4 the form of display objects associated with the second providers.

5

6 28. The system recited in claim 27, wherein further:

7 the first templates include names of subprograms to be executed under control of
8 the first server program for generating the displays associated with the first providers and the
9 display objects associated with the second providers; and

10 the first server program is responsive to said names of subprograms to execute
11 said subprograms.

12

13 29. The system recited in claim 26, wherein further:

14 a system control machine is operatively connected to the host machines storing
15 the first and the second content information and control information; and

16 any of the first and the second content information and control information can be
17 entered and modified as specified by an operator of the system control machine.

18

19 30. The system recited in claim 26, wherein further:

20 a second server program is responsive to requests from first providers for
21 accordingly modifying predetermined certain of the first content information and the first control
22 information.

23

1 31. The system recited in claim 26, wherein further:

2 a third server program is responsive to requests from second providers for
3 accordingly modifying predetermined certain of the second content information and the second
4 control information.

5

6 32. The system recited in claim 31, wherein further:

7 a second server program is responsive to requests from first providers for accordingly
8 modifying predetermined certain of the first content information and the first control
9 information.

10

11 33. In a system for displaying, to a plurality of requesters, displays as specified by
12 first providers, the system being resident on one or more host machines and there being a
13 communication link for interconnecting the first providers, requesters, and host machines:

14 first control information and first content information stored on one of said one or
15 more host machines and associated with the first providers;

16 second control information and second content information stored on one of said
17 one or more host machines and associated with second providers;

18 a first server program resident on one of said one or more host machines for
19 receiving requests from requesters, each request being associated with one certain of the first
20 providers and for accordingly providing a display to a requester according to data stored in the
21 first content information and the first control information, the display comprising information
22 specified by said associated first provider and further including a list of available replicates of 5
23 display objects specified by certain of the second providers.

1

2 34. The system recited in claim 33, wherein further:

3 the first server program is responsive to requests from requesters to include in a
4 display provided to a requester a replicate of a display object selected by the requester from said
5 list of available replicates; and

6 the first server program includes in the display a replicate of the selected display
7 object constructed according to the second content information and the second control
8 information and qualified according to the first control information, whereby the first providers
9 and the second providers severally control the availability, appearance, and content of the
10 replicates of the display objects.

11

12 35. The system recited in claim 34, wherein further:

13 the first control information further includes first templates for specifying the
14 form of displays associated with the first providers; and

15 the second control information further includes second templates for specifying
16 the form of display objects associated with the second providers.

17

18 36. The system recited in claim 35, wherein further:

19 the first templates include names of subprograms to be executed under control of
20 the first server program for generating the displays associated with the first providers and the
21 display objects associated with the second providers; and

22 the first server program is responsive to said names of subprograms to execute
23 said subprograms.

1

2 37. The system recited in claim 34, wherein further:

3 a system control machine is operatively connected to the host machines storing
4 the first and the second content information and control information; and

5 any of the first and the second content information and control information can be
6 entered and modified as specified by an operator of the system control machine.

7

8 38. The system recited in claim 34, wherein further:

9 a second server program is responsive to requests from first providers for
10 accordingly modifying predetermined certain of the first content information and the first control
11 information.

12

13 39. The system recited in claim 34, wherein further:

14 a third server program is responsive to requests from second providers for
15 accordingly modifying predetermined certain of the second content information and the second
16 control information.

17

18 40. The system recited in claim 39, wherein further:

19 a second server program is responsive to requests from first providers for
20 accordingly modifying predetermined certain of the first content information and the first control
21 information.

I. INTRODUCTION

Defendants Hotels.com, L.P, Expedia, Inc., Travelocity.com LP, Site59.com, LLC, Internetwork Publishing Corporation d/b/a Lodging.com, Neat Group Corporation, Orbitz Worldwide, LLC, International Cruise & Excursion Gallery, Inc., OurVacationStore, Inc., and Digital River, Inc. (collectively, “Defendants”) respectfully submit these Invalidity Contentions pursuant to Patent Rule 3-3 and the Court’s Docket Control Order.¹ This statement, including the accompanying claim charts, sets forth Defendants’ invalidity contentions with respect to the asserted claims of 6,629,135 (“the ’135 Patent”), U.S. Patent 6,993,572 (“the ’572 Patent”), and U.S. Patent Nos. 7,818,399 (“the ’399 Patent”) (collectively “the patents in suit”). Defendants assert these contentions based on the constructions that DDR Holdings, LLC (“DDR”) appears to be advancing, based on DDR’s Infringement Contentions served April 15, 2011, which Defendants contend are defective under the Local Patent Rules. Specifically, DDR asserted 41 claims against the Defendants. As such, these contentions should be read in the context of DDR’s over disclosure of claims, which DDR must reduce to 10 total claims by July 8, 2011 based on this Court’s scheduling order. *See* D.I. 235. By including in this disclosure prior art that would anticipate or render obvious the patents in suit based on the scope or construction apparently applied by DDR to the claims, Defendants’ contentions herein are not, and should in no way be seen as, adoptions or admissions as to the accuracy of that scope or construction, nor an assertion of a particular construction by Defendants.

Defendants’ discovery and investigation in connection with this lawsuit are continuing, and thus, these disclosures are based on information obtained to date. Defendants expect that further discovery will reveal additional prior art, including related disclosures and corresponding

¹ Defendants incorporate their previously served invalidity contentions of August 21, 2006 as if fully set forth herein.

evidence for many of the prior art references identified below. For example, for any given company's commercial products, Defendants expect that additional documentation relating to these products will be discovered, and Defendants reserve the right to rely on such documentation to further support these invalidity contentions. In particular, for example, Defendants will serve subpoenas on, and/or take depositions of, DDR and third parties, and expect to update these contentions to reflect information and materials received pursuant to such subpoenas and/or depositions, and other information.

These disclosures are also based on the purported identification of asserted claims made by DDR in its infringement contentions. To the extent DDR seeks to modify and/or amend its infringement contentions to assert any additional claims (or for any other reason), and is permitted to do so by the Court, Defendants reserve the right to amend and/or supplement these disclosures.

This statement and the accompanying claim charts were prepared prior to the Court's claim construction ruling or claim construction positions from DDR. Defendants' position on the invalidity of particular claims will depend on how those claims are construed by the Court. In the absence of a claim construction ruling, these contentions are made in the alternative and are not necessarily intended to be consistent with each other and other invalidity contentions herein. These contentions are made out of an abundance of caution to reflect the potential scope of the claims that DDR appears to be advocating, as suggested by the infringement contentions that DDR has made. Defendants' contentions herein should not be seen as a suggestion that DDR's reading or interpretation of the patent claims is correct. Defendants reserve the right to amend these contentions upon receipt of the Court's construction.

Subject to the foregoing, references cited in Exhibits 1A-32C disclose the elements of the asserted claims either explicitly and/or inherently, and/or may be relied upon to show the state of the art in the relevant timeframes. The relevant timeframes vary because numerous limitations in the asserted claims are not supported by the disclosure of U.S. Provisional Application Serial No. 60/100,697 (“the Provisional Application”), which DDR appears to be relying upon, and therefore are not entitled to an effective filing date of that provisional application, as discussed more fully below. Defendants reserve the right to amend these contentions upon the Court’s determination of the priority date of the asserted claims. In addition, the suggested obviousness combinations are in addition to Defendants’ anticipation contentions and are not to be construed to suggest that any reference included in the combinations is not anticipatory on its own.

Further, Defendants have endeavored to identify exemplary portions of the references based on presently available information and DDR’s current allegations. The references, however, may contain additional support for particular claim limitations. Defendants expressly reserve the right to rely on uncited portions of the prior art references, other documents, and expert testimony to provide context or to aid in understanding the cited portions of the references. Where Defendants cite to a particular figure in a reference, the citation should be understood to encompass the caption and description of the figure and any text relating to or discussing the figure. Conversely, where Defendants cite to particular text referring to a figure, the citation should be understood to include the figure as well.

The identity of each item of prior art relied upon in this submission is stated herein and in the attached claim charts, including prior art systems, publications, websites, and patents. The publications describing the prior art systems have been produced to DDR as part of the normal document production process to the extent that they have been located, and to the extent that

such systems are in Defendants' possession, they have been produced and/or will be made available for inspection.

II. U.S. PATENT 6,629,135

A. Identification of Prior Art

Pursuant to Patent Rule 3-3(a), Defendants identify the following prior art (“the ’135 Patent’s Invalidating Art”) now known to them to anticipate claims 8, 13, and 14 of the ’135 Patent, either expressly or inherently as understood by a person having ordinary skill in the art, at least under the claim constructions apparently adopted by DDR in its infringement contentions. In some instances, Defendants treated certain prior art as anticipatory where certain elements are inherently present based on DDR’s apparent claim construction in its infringement contentions.

The following patents and publications are prior art under at least 35 U.S.C. §§ 102(a), (b), (e), (f), and/or (g), and the charts found in Exhibits 1A-10A, 12A-13A, 17A-28A, 30A-32A specify the invalidity basis for such patents and publications.

	PRIOR ART PATENTS	Filing Date	Issue Date	Exh.
1.	U.S. Patent 6,330,575 (Moore) [DFNDT0000180-0000206]	Mar. 31, 1998	Dec. 11, 2001	1A
2.	U.S. Patent 6,490,567 (Gregory) [DFNDT0000144-0000162]	Jan. 15, 1997	Dec. 3, 2002	2A
3.	U.S. Patent 6,7565,308 (Bollay) [DFNDT0000132-0000143]	Mar. 25, 1999	Jul. 21, 2009	3A
4.	U.S. Patent 6,209,007 (Kelley) [DFNDT0000163-0000179]	Nov. 26, 1997	Mar. 27,2001	4A
5.	WO 1999/ 046709 A1 (Voorhees) [DFNDT0000239-0000293]	Mar. 11, 1998	Sept. 16, 1999 (publication date)	5A
6.	U.S. Patent 5,870,717 (Wiecha) [DFNDT0000217-0000238]	Nov. 13, 1995	Feb. 9, 1999	6A
7.	U.S. Patent 6,141,666 (Tobin) [DFNDT0000001-0000053]	Jan 21, 1997 (claiming priority to provisional filed Jan 22, 1996)	Oct. 31, 2000	17A
8.	U.S. Patent 6,128,655 (Fields) [DFNDT0000054-0000076]	July 10, 1998	Oct. 3, 2000	18A
9.	U.S. Patent 5,991,740 (Messer) [DFNDT0000114-0000131]	June 10, 1997	Nov. 23, 1999	19A
10.	U.S. Patent 6,016,504 (Arnold) [DFNDT0000076-0000113]	Aug. 28, 1996	Jan. 18, 2000	23A

The following systems or software products are prior art under at least 35 U.S.C.

§§ 102(a), (b), (f) and/or (g).⁵ Although Defendants' investigation continues, information available to date indicates that each system or software product was (1) known or used in this country before the alleged invention of the claimed subject matter of the asserted claims, (2) was in public use and/or on sale in this country and/or was the subject of a printed publication more than one year before the filing date of the patent, and/or (3) was invented by another who did not abandon, suppress, or conceal, before the alleged invention of the claimed subject matter of the asserted claims.

⁵ Digital River asserts a defense under 35 U.S.C. § 273 in view of the Digital River Secure Sales System. *See* Exs. 9A-9C. Travelocity also asserts a defense under 35 U.S.C. § 273 in view of Travelocity's systems. *See* Exs. 8A-8C. Expedia also asserts a defense under 35 U.S.C. § 273 in view of Hotels.com's previous system. *See* Exs. 10A-10C.

PRIOR ART SYSTEMS	
13.	REI
14.	Net.Commerce
15.	CIS

B. Obviousness

Defendants further contend under P.R. 3-2(b) that claims 8, 13, and 14 of the '135 Patent, are invalid as obvious under 35 U.S.C. § 103. Defendants incorporate, as if fully set forth herein, Section V, *infra*, related to obviousness.

1. ***Claim Overview: Claims 8, and 13-14***

In addition to these overarching factors that render the alleged invention obvious in light of the prior art, the following discussion provides more particular analysis tailored to the various asserted claims.

a. **Claim 8**

As mentioned above, by the asserted priority date of the alleged invention, persons of ordinary skill in the art were already familiar with e-commerce outsourcing processes including host website communication with a visitor website and at least in the context of frames made such a system transparent. Capturing the look and feel⁶ of a webpage was also well-established at the time. Host websites frequently were given specific links to include on their webpages which by the very nature of the Internet resulted in a second page being served to the user upon activation and such links often resulted in an e-commerce related webpage being returned to the user. It was also well known to return such e-commerce supported pages from a third-party but yet maintain a particular visual appearance to the user.

b. **Claims 13-14**

⁶ Defendants do not admit that the term “look and feel,” as used in the patents-in-suit, meets the requirements of patentability. *See, e.g.,* Exs. 33A-C.

As discussed above, it was often the case that a link provided on a host webpage would specifically target a particular e-commerce object or product category. For example, a specific item for purchase or a listing of items within a particular category (airplanes, adult products, stock quotes, etc.)

2. **35 U.S.C. § 103 Combinations**

In addition to the above discussion, certain particular combinations bear further explanation:

- Tobin [Ex. 34A]
- Travelocity [Ex. 35A]
- Saliba [Exs. 36A and 39A]
- Moore [Ex. 37A]
- DR SSS [Ex. 38A]
- SexToys [Ex. 40A]
- Lycos [Ex. 41A]
- IBM [Ex. 42A]

a. **U.S. Patent No. 6,141,666 (“Tobin”)**

Tobin discloses “capturing a look and feel description associated with a host website,” as required by claim 8. *See* Ex. 17A, at 8(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Tobin with the teachings of Internet Scrapbook to meet that claim limitation of the ’135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Internet Scrapbook with the teachings of Tobin. For example, Tobin teaches that capturing the look and feel description of the host website “to take advantage of the consumers [sic] familiarity with the participating Internet site’s position in the marketplace, the consumer’s trust in the participating Internet site’s established brand name, or the consumer’s existing relationship with the participating Web site.” Column 5, lines 18-29 of Tobin; *see* Ex. 17A. Similarly, Internet Scrapbook also teaches

techniques for capturing a look and feel description associated with a host website. *See* Ex. 7A, at 8(a). Accordingly, when confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Internet Scrapbook, and to combine such teachings with the teachings of Tobin to arrive at the alleged invention recited in the claims of the '135 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Internet Scrapbook because both references teach capturing the look and feel descriptions of a host website. *KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 402-403 (2007) (“When there is a design need or market pressure to solve a problem and there are a finite number of identified, predictable solutions, a person of ordinary skill in the art has good reason to pursue the known options within his or her technical grasp”).

Moreover, Tobin discloses a “host website,” an “e commerce supported page,” and a “selected commerce object.” To the extent the host website, the e commerce supported page, the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of Tobin to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of Tobin. For example, Tobin teaches an Internet site, providing floral and gift products (of FTD, Nature’s Bloom, Hickory Farms, etc.) through web site pages that are customized to the requirements of the hosts. *See* Ex. 17A. Similarly, Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11 of Bollay; *see* Ex. 3A. The invention of Bollay has “the advantage that it

enables a sale to be complete without the buyer leaving the affiliate's site." Column 2, lines 36-37 of Bollay; *see* Ex. 3A. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of Tobin to arrive at the alleged invention recited in the claims of the '135 Patent because it would enable a sale to be completed using an e-commerce support page without the buyer knowingly leaving the affiliate's site. *In re Sernaker*, 702 F.2d 989, 994-95, 217 USPQ 1, 5-6 (Fed. Cir. 1983) (the strongest rationale for combining references in a recognition, expressly or impliedly in the prior art that some advantage or expected beneficial result would have been produced by their combination).

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Bollay because both references teach a method and system where a host website uses an e-commerce outsource provider to sell goods on the host website. *KSR at* 402-403.

Additionally, and for the reasons stated above with respect to Internet Scrapbook and Bollay, Tobin can be combined with any of the following references to yield predictable results:

A host website, an e-commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8A
- Digital River. *See* Ex. 9A
- TravelNow.com. *See* Ex. 10A
- ITN/Get There. *See* Ex. 12A
- Preview Travel. *See* Ex. 13A
- Trip.com. *See* Ex. 20A
- Saliba. *See* Ex. 31A

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1A
- Kelly. *See* Ex. 4A
- Internet Scrapbook. *See* Ex. 7A
- Digital River. *See* Ex. 9A
- Preview Travel. *See* Ex. 13A
- Sextoys. *See* Ex. 24A
- Arnold. *See* Ex. 23A

The combination of any of these references with Tobin renders claims 8, and 13-14 of the '135 Patent invalid.

b. **Travelocity**

Travelocity discloses “upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.” *See Ex. 8A.* To the extent the host website, the captured look and feel description, or the commerce object, or any other claim element is argued or found not to be adequately disclosed in Travelocity, it would have been obvious to one of ordinary skill in the art to combine the teachings of Wiecha with the teachings of Travelocity to meet that claim limitation of the asserted patents because a teaching, suggestion, or motivation exists to combine the teachings of Wiecha with the teachings of Travelocity. For example, Travelocity teaches that a visitor to Yahoo! Travel could select airline tickets, car rentals, and hotel reservations via the co-branded page served by SABRE Interactive. *See Ex. 8A.* Further, Travelocity teaches serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See Wiecha at Abstract.* The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both Travelocity and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Wiecha with the teaching of Travelocity to arrive at the alleged invention recited in the claims of the asserted patents because it would enable an e-commerce provider to provide a host website with a hyperlink to a co-branded page, where the link is correlated with a selected commerce object such as air, hotel, or car reservation.

Additionally, and for the reasons stated above with respect to Travelocity, Wiecha can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- IBM. *See* Ex. 27A
- Digital River. *See* Ex. 9A
- TravelNow.com. *See* Ex. 10A
- ITN/Get There. *See* Ex. 12A
- Preview. *See* Ex. 13A
- Trip.com. *See* Ex. 20A
- Saliba. *See* Ex. 31A

The combination of any of these references with Wiecha renders claims 8, and 13-14 of the '135 Patent invalid.

c. U.S. Patent Application No. 09/995,278 (“Saliba”)

Saliba discloses all limitations of the '135 Patent; and, one skilled in the art would also understand that Saliba could be combined with U.S. Patent No. 6,330,575 (“Moore”). Likewise, this combination discloses all claim limitations of the '135 Patent.

There is motivation to combine Saliba and Moore because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. Moore discloses development applications for a merchant to

utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See Moore at Abstract.* Both Saliba and Moore disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Moore, Saliba can be combined with any of the following references to yield predictable results:

- Kelley. *See Ex.4A*
- Wiecha. *See Ex.6A*
- Internet Scrapbooking. *See Ex.7A*
- Travelocity. *See Ex.8A*
- DR SSS Prior Art. *See Ex.9A*
- TravelNow.com. *See Ex.10A*
- ITN/Get There. *See Ex.12A*
- Preview Travel. *See Ex. 13A*
- Tobin. *See Ex.17A*
- Fields. *See Ex.18A*
- Trip.com. *See Ex.20A*
- Arnold. *See Ex.23A*
- SexToys.com. *See Ex.24A*

The combination of any of those references with Saliba renders claims 8, and 13-14 of the '135 Patent invalid.

Moreover, one skilled in the art would understand that Saliba could be combined with the Digital River Secure Sales System ("Digital River SSS"). Likewise, this combination discloses all claim limitations of the '135 Patent.

There is motivation to combine Saliba and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See Saliba at Abstract.* The Digital River Secure Sales System brought

together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9A. Both Saliba and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Digital River SSS, Saliba can be combined with any of the following references to yield predictable results:

- Moore. *See* Ex.1A
- Kelley. *See* Ex.4A
- Wiecha. *See* Ex.6A
- Internet Scrapbooking. *See* Ex.7A
- Travelocity. *See* Ex.8A
- TravelNow.com. *See* Ex.10A
- ITN/Get There. *See* Ex.12A
- Preview Travel. *See* Ex. 13A
- Tobin. *See* Ex.17A
- Fields. *See* Ex.18A
- Trip.com. *See* Ex.20A
- Arnold. *See* Ex.23A
- SexToys.com. *See* Ex.24A

The combination of any of those references with Saliba renders claims 8, and 13-14 of the '135 Patent invalid.

d. U.S. Patent No. 6,330,575 (“Moore”)

The Moore Patent discloses all limitations of the '135 Patent; and, one skilled in the art would also understand that Moore could be combined with U.S. Patent No. 7,565,308 (“Bollay”). Likewise, this combination discloses all claim limitations of the '135 Patent.

There is a motivation to combine Moore with Bollay because they are related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Similarly, Bollay discloses a network configuration of a number of affiliate web sites and a number of vendor web

sites designed to execute sales of vendor products featured on the affiliate websites. *See* Bollay at Abstract. The affiliate websites feature products from a manufacturer where a buyer can browse the various products, research information about the products, and purchase the products. Both Moore and Bollay disclose electronic commerce systems that are directed to efficiently selling commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Bollay, Moore can be combined with any of the following references to yield predictable results:

- Kelley. *See* Ex.4A
- Wiecha. *See* Ex.6A
- Internet Scrapbooking. *See* Ex.7A
- Travelocity. *See* Ex.8A
- DR SSS Prior Art. *See* Ex.9A
- TravelNow.com. *See* Ex.10A
- ITN/Get There. *See* Ex.12A
- Preview Travel. *See* Ex. 13A
- Tobin. *See* Ex.17A
- Fields. *See* Ex.18A
- Trip.com. *See* Ex.20A
- Arnold. *See* Ex.23A
- SexToys.com. *See* Ex.24A
- Saliba. *See* Ex.31A

The combination of any of those references with Moore renders claims 8, and 13-14 of the '135 Patent invalid.

e. **Digital River Secure Sales Sytem (“Digital River SSS”)**

The Digital River SSS Prior Art discloses all claim limitations of the '135 Patent; and, one skilled in the art would also understand that the Digital River SSS Prior Art could be combined with U.S. Patent No. 5,870,717 (“Wiecha”). Likewise, this combination discloses all claim limitations of the '135 Patent.

According to Plaintiff’s Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River SSS Prior Art with Wiecha because both are

related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River SSS brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9A. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See* Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River SSS and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Additionally, and for the reasons stated above with respect to Wiecha, the DR SSS Prior Art can be combined with any of the following references to yield predictable results:

- Moore. *See* Ex.1A
- Bollay. *See* Ex.3A
- Kelley. *See* Ex.4A
- Internet Scrapbooking. *See* Ex.7A
- Travelocity. *See* Ex.8A
- TravelNow.com. *See* Ex.10A
- ITN/Get There. *See* Ex.12A
- Preview Travel. *See* Ex. 13A
- Tobin. *See* Ex.17A
- Fields. *See* Ex.18A
- Trip.com. *See* Ex.20A
- Arnold. *See* Ex.23A
- SexToys.com. *See* Ex.24A
- Saliba. *See* Ex.31A

The combination of any of those references with the DR SSS Prior Art renders claims 8, and 13-14 of the '135 Patent invalid.

f. **Sextoys**

Sextoys discloses “capturing a look and feel description associated with a host website,” as required by claim 8. *See* Ex. 24A, at 8(a). To the extent the capturing element or any other

claim element is argued or found not to be adequately disclosed in Sextoys, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields with the teachings of Sextoys to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of Sextoys. For example, Sextoys teaches capturing a look and feel description associated with a host website when the host website operator emailed to dml@sextoy.com or faxed to (617) 666-3421 the promote your own sextoy site page. *See* Ex. 24A. Similarly, Fields teaches different techniques for capturing a look and feel description associated with a host website. *See* Ex. 18A, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Fields, and to combine such teachings with the teachings of Sextoys to arrive at the alleged invention recited in the claims of the '135 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Sextoys with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR*, 550 U.S. at 402-403 (“When there is a design need or market pressure to solve a problem and there are a finite number of identified, predictable solutions, a person of ordinary skill in the art has good reason to pursue the known options within his or her technical grasp”).

Moreover, Sextoys discloses a “host website,” an “e commerce supported page,” and a “selected commerce object.” To the extent the host website, the e commerce supported page, the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in Sextoys, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of Sextoys to meet that claim limitation of the '135

Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of Sextoys. For example, Sextoys teaches a process and system that where adult webmasters (i.e., affiliates) set up, customize, and brand their own sex toy stores with Convergence, Inc. handling billing, fulfillment, the shipping (via a third party), and customer service. *See* Ex. 24A. Similarly, Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11 of Bollay; *see* Ex. 3A. The invention of Bollay has “the advantage that it enables a sale to be complete without the buyer leaving the affiliate’s site.” Column 2, lines 36-37 of Bollay; *see* Ex. 3A. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of Sextoys to arrive at the alleged invention recited in the claims of the ‘135 Patent because it would enable a sale to be completed using an e commerce support page without the buyer knowingly leaving the affiliate’s site. *Sernaker*, 702 F.2d at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Sextoys with Bollay because both references teach a method and system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Bollay and Fields, Sextoys can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant’s goods, etc.

- Travelocity. *See* Ex. 8A
- Digital River. *See* Ex. 9A
- TravelNow.com. *See* Ex. 10A
- ITN/Get There. *See* Ex. 12A
- Preview Travel. *See* Ex. 13A
- Trip.com. *See* Ex. 20A
- Saliba. *See* Ex. 31A

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1A
- Kelly. *See* Ex. 4A
- Internet Scrapbook. *See* Ex. 7A
- Digital River. *See* Ex. 9A
- Preview Travel. *See* Ex. 13A
- Tobin. *See* Ex. 17A
- Arnold. *See* Ex. 23A

The combination of any of these references with Sextoys renders claims 8, and 13-14 of the '135 Patent invalid.

g. Lycos

Lycos discloses “capturing a look and feel description associated with a host website,” as required by claim 8. *See* Ex. 28A, at 8(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in Lycos, it would have been obvious to one of ordinary skill in the art to combine the teachings of Lycos with the teachings of Internet Scrapbook to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Internet Scrapbook with the teachings of Lycos. For example, Lycos teaches that News Alert, Inc. captured the look and feel description when News Alert, Inc. created the News Alert website. *See* Ex. 28A. Similarly, Internet Scrapbook teaches techniques for capturing a look and feel description associated with a host website. *See* Ex. 7A, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Internet Scrapbook, and to combine such teachings with the teachings of Lycos to arrive at the alleged invention recited in the claims of the '135 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Lycos with Internet Scrapbook because both references teach capturing the look and feel descriptions of a host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Internet Scrapbook, Lycos can be combined with any of the following references to yield predictable results:

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1A
- Kelly. *See* Ex. 4A
- Bollay. *See* Ex. 3A
- Digital River. *See* Ex. 9A
- Preview Travel. *See* Ex. 13A
- Tobin. *See* Ex. 17A
- Arnold. *See* Ex. 23A

The combination of any of these references with Lycos renders claims 8, and 13-14 of the '135 Patent invalid.

h. IBM

IBM discloses “capturing a look and feel description associated with a host website,” as required by claim 8. *See* Ex. 27A, at 8(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields with the teachings of IBM to meet that claim limitation of the '135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of IBM. For example, IBM teaches capturing a look and feel description when a script that dynamically generates the IBM Ordering website was written or when the e commerce support page was dynamically generated by the script on December 20, 1996. *See* IBM; Ex. 27A. Similarly, Fields teaches various techniques for capturing a look and feel description associated with a host website. *See* Ex. 18A, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Fields, and to combine such teachings with the teachings of IBM to arrive at the alleged invention recited in the claims of the '135 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR* at 402-403.

Moreover, IBM discloses a “host website,” an “e commerce supported page,” and a “selected commerce object.” To the extent the host website, the e commerce supported page, the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of IBM to meet that claim limitation of the ’135 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of IBM. For example, IBM teaches that IBM Credit Corporation provided a host website with a link to a website of IBM Corporation where the visitors could order products of one of IBM’s business partners. *See* Ex. 27A. Similarly, Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11; *see* Ex. 3A. The invention of the Bollay has “the advantage that it enables a sale to be complete without the buyer leaving the affiliate’s site.” Column 2, lines 36-37 of Bollay; *see* Ex. 3A. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of IBM to arrive at the alleged invention recited in the claims of the ’135 Patent because it would enable a sale to be completed using an e commerce support page without the buyer knowingly leaving the affiliate’s site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Bollay because both references teach a host website and a system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Fields and Bollay, IBM can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8A
- Digital River. *See* Ex. 9A
- TravelNow.com. *See* Ex. 10A
- ITN/Get There. *See* Ex. 12A
- Preview Travel. *See* Ex. 13A
- Trip.com. *See* Ex. 20A
- Saliba. *See* Ex. 31A

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1A
- Kelly. *See* Ex. 4A
- Internet Scrapbook. *See* Ex. 7A
- Digital River. *See* Ex. 9A
- Preview Travel. *See* Ex. 13A
- Tobin. *See* Ex. 17A
- Arnold. *See* Ex. 23A

The combination of any of these references with IBM renders claims 8, and 13-14 of the '135 Patent invalid.

C. Additional Prior Art

Defendants are investigating additional prior art, including commercial software programs, and are attempting to obtain related documentation and information through discovery. For those reasons, Defendants reserve the right to amend and supplement this disclosure with additional prior art as needed.

D. 35 U.S.C. § 112

Asserted claims 8, and 13-14 of the '135 Patent are invalid for failure to comply with the written description and enablement requirement of 35 U.S.C. § 112, paragraph 1. The disclosure of the '135 Patent fails to reasonably convey to a person of ordinary skill in the art that the inventor had possession of the full scope of the claimed alleged invention and fails to disclose sufficient information to enable a person of ordinary skill in the art to practice the full scope of

the alleged invention. Attached as Exhibit 33A is a chart specifically identifying the § 112 issues.

Defendants reserve the right to amend this disclosure to the extent that DDR asserts and/or the Court adopts claim constructions that would render the claims invalid under 35 U.S.C. § 112.

E. Invalidity Under 35 U.S.C. §§ 101 and 116

Although not required to be disclosed under Local Patent Rule 3-3, Defendants reserve the right to argue that one or more of the asserted claims are invalid under (1) 35 U.S.C. § 101 as being directed to non-statutory subject matter and/or § 116 as having improper inventorship.

Under Section 101, there are three broad exceptions to patentability including “laws of nature, physical phenomena, and abstract ideas.” *See Diamond v. Chakrabarty*, 447 U.S. 303, 308-09 (1980). Thus, a claimed process is unpatentable or invalid under 35 U.S.C. § 101 if it merely claims an abstract idea. Defendants assert that process Claims 8, and 13-14 of the ’135 Patent are unpatentable because they claim abstract ideas and do not meet the requirements of 35 U.S.C. § 101.

The Supreme Court attempted to clarify patentability under Section 101 in its recent *Bilski v. Kappos* decision. 130 S.Ct. 3218 (2010). In this opinion, the Court followed years of precedent in holding that the process claims at issue were unpatentable because they attempted to patent the use of an abstract idea. *See id.* at 3222. The process claims at issue in the ’135 and Patent are likewise abstract ideas that should not receive patent protection. Further, the Court analyzed the machine-or-transformation test that was introduced by the Federal Circuit for determining whether certain inventions were patentable. The Court held that the machine-or-transformation test “may be a useful and important clue or investigative tool, [however] it is not the sole test for deciding whether an invention is a patent-eligible ‘process’ under § 101.” *Id.* In

addition to claiming an abstract idea, these process claims fail the machine-or-transformation test.

The '135 Patent attempts to patent abstract ideas. The independent process claims in the '135 Patent (Claim 8) attempts to claim an “e-commerce outsourcing process.” This “e-commerce outsourcing process” is nothing more than an abstract manner of doing business on a network, such as the Internet. The claims resemble the prior methods of outsourcing the marketing, distribution, and sale of a product. For example, a product may be produced by one company, but marketed, distributed, and sold by another. An analysis of these process claims prove that they claim an abstract manner of doing business.

Claim 8 of the '135 Patent recites:

8. An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:

- a) capturing a look and feel description associated with a host website;
- b) providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and
- c) upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.

These steps are abstract ideas or manners of doing business that do not meet the requirements of Section 101. Any alleged structural limitations are insignificant post-solution activities that do not apply meaningful limitations to the claims. The dependent claims at issue (claims 13 and 14 of the '135 Patent) are also abstract ideas that do not apply meaningful limitations to the claims. Thus, claims 8, 13, and 14 of the '135 Patent are unpatentable or invalid under 35 U.S.C. § 101.

The process claims at issue also fail the machine-or-transformation test. Under this test, a process may be patentable if it (1) “is tied to a machine or apparatus or (2) transforms a particular article into a different state or thing.” *Bilski*, 130 S.Ct. at 3225. The process claims at issue are not tied to a particular machine or apparatus because any alleged structural limitations, including brief recitations of a computer or website, do not meaningfully limit the claims. The claims attempt to preempt the use of the underlying abstract idea or method of doing and business, and thus have the practical effect of being a patent on the idea itself. Further, nothing in these claims “transforms a particular article into a different state or thing.” The claims fail to recite a particular article or the production of an article, much less an article that underwent transformation. Thus, Claims 8, 13, and 14 of the ’135 Patent fail both prongs of the machine-or-transformation test.

III. U.S. PATENT 6,993,572

A. Identification of Prior Art

Pursuant to Patent Rule 3-3(a), Defendants identify the following prior art (“the ’572 Patent’s Invalidating Art”) now known to them to anticipate claims 1, 4, 5, 13, 17-27 of the ’572 Patent, either expressly or inherently as understood by a person having ordinary skill in the art, at least under the claim constructions apparently adopted by DDR as based on review of DDR’s infringement contentions. In some instances, Defendants treated certain prior art as anticipatory where certain elements are inherently present based on DDR’s apparent claim construction in its infringement contentions.

The following patents and publications are prior art under at least 35 U.S.C. §§ 102(a), (b), (e), (f), and/or (g), and the charts found in Exhibits 1B-10B, 12B-13B, 17B-32B specify the invalidity basis for such patents and publications.

	PRIOR ART PATENTS	Filing Date	Issue Date	Exh.
1.	U.S. Patent 6,330,575 (Moore) [DFNDT0000180-0000206]	Mar. 31, 1998	Dec. 11, 2001	1A
2.	U.S. Patent 6,490,567 (Gregory) [DFNDT0000144-0000162]	Jan. 15, 1997	Dec. 3, 2002	2A
3.	U.S. Patent 6,756,308 (Bollay) [DFNDT0000132-0000143]	Mar. 25, 1999	Jul. 21, 2009	3A
4.	U.S. Patent 6,209,007 (Kelley) [DFNDT0000163-0000179]	Nov. 26, 1997	Mar. 27, 2001	4A
5.	WO 1999/ 046709 A1 (Voorhees) [DFNDT0000239-0000293]	Mar. 11, 1998	Sept. 16, 1999 (publication date)	5A
6.	U.S. Patent 5,870,717 (Wiecha) [DFNDT0000217-0000238]	Nov. 13, 1995	Feb. 9, 1999	6A
7.	U.S. Patent 6,141,666 (Tobin) [DFNDT0000001-0000053]	Jan 21, 1997 (claiming priority to provisional filed Jan 22, 1996)	Oct. 31, 2000	17A
8.	U.S. Patent 6,128,655 (Fields) [DFNDT0000054-0000076]	July 10, 1998	Oct. 3, 2000	18A
9.	U.S. Patent 5,991,740 (Messer) [DFNDT0000114-0000131]	June 10, 1997	Nov. 23, 1999	19A
10.	U.S. Patent 6,016,504 (Arnold)	Aug. 28, 1996	Jan. 18, 2000	23A

	PRIOR ART PATENTS	Filing Date	Issue Date	Exh.
	[DFNDT0000076-0000113]			
11.	U.S. Patent Application US2002/0065772 (Saliba) [DFNDT0000294-0000313]	Nov. 26, 2001 (continuation of application filed June 8, 1998)	May 30, 2002 (publication date)	31A

B. Obviousness

Defendants further contend under P.R. 3-2(b) that claims 1, 4, 5, 13, 17-27 of the '572 Patent are invalid as obvious under 35 U.S.C. § 103. Defendants incorporate, as if fully set forth herein, Section V, *infra*, related to obviousness.

1. ***Claim Overview: 1, 4, 5, 13, and 17-27***

In addition to these overarching factors that render the alleged invention obvious in light of the prior art, the following discussion provides more particular analysis tailored to the various asserted claims.

a. **Claim 1, 13, and 22**

As mentioned above, by the asserted priority date of the alleged invention, persons of skill in the art were already familiar with e-commerce outsourcing processes including host website communication with a visitor website and at least in the context of frames made such a system transparent. Capturing the look and feel of a webpage was also well-established at the time. Moreover, it was well known that once information was captured it had to be stored somewhere to be useful. Moreover, in order to retrieve that information, the storage location had to be coupled to the potential webserver. Host websites frequently were given specific links to include on their webpages which by the very nature of the Internet resulted in a second page being served to the user upon activation and such links often resulted in an e-commerce related

webpage being returned to the user. It was also well known to return such e-commerce supported pages from a third-party but yet maintain a particular visual appearance to the user.

b. Claims 4-5, and 23-25

As discussed above, it was often the case that a link provided on a host webpage would specifically target a particular e-commerce object or product category. For example, a specific item for purchase or a listing of items within a particular category (airplanes, adult products, stock quotes, etc.) Moreover, one of skill in the art would have easily known that if a user requested a link about a specific commerce object, more information could be returned with the second page request.

c. Claims 18-21

It was well known in the art that a webpage could be identified by special color schemes (HTML specifically allowed for this) or logos or customized footers, headers, or sidebars. Associating such portions of a webpage with defining the appearance would have been well known to one of skill in the art.

d. Claim 23

Accepting search parameters was also well known in the art and a fundamental feature of HTMLs GET and POST requests. One of skill in the art would have known to combine the common elements of HTML within a link to define a search for a specialized product or e-commerce object.

e. Claim 26

Capturing billing information was well known on the Internet.

f. Claim 27

Contracting with vendors to permit specific items for sale and including such items in a database was also common on the Internet and one of skill in the art would have known how to

accomplish the task of including such commerce objects in a data store for later retrieval upon a search by a user.

2. ***35 U.S.C. § 103 Combinations***

In addition to the above discussion, certain particular combinations bear further explanation:

- Tobin [Ex. 34B]
- Travelocity [Ex. 35B]
- Saliba and DR SSS [Ex. 36B and 39B]
- Moore [Ex. 37B]
- DR SSS [Ex. 38B]
- SexToys [Ex. 40B]
- Lycos [Ex. 41B]
- IBM [Ex. 42B]

a. **U.S. Patent No. 6,141,666 (“Tobin”)**

Tobin discloses “capturing a look and feel description associated with a host website,” as required by claim 1. *See* Ex. 17B, at 1(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Tobin with the teachings of Internet Scrapbook to meet that claim limitation of the ’572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Internet Scrapbook with the teachings of Tobin. For example, Tobin teaches that capturing the look and feel description of the host website to “to take advantage of the consumers [sic] familiarity with the participating Internet site’s position in the marketplace, the consumer’s trust in the participating Internet site’s established brand name, or the consumer’s existing relationship with the participating Web site.” Column 5, lines 18-29 of Tobin; *see* Ex. 17B. Similarly, Internet Scrapbook also teaches techniques for capturing a look and feel description associated with a host website. *See* Ex. 7B, at 1(a). Accordingly, when confronted with the problem of capturing a look and feel description

associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Internet Scrapbook, and to combine such teachings with the teachings of Tobin to arrive at the alleged invention recited in the claims of the '572 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Internet Scrapbook because both references teach capturing the look and feel descriptions of a host website. *KSR at 402-403.*

Moreover, Tobin discloses a “host website,” an “second website,” (or “a composite web page”) and a “commerce object.” To the extent the host website, the second website (or composite web page), the commerce object, or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of Tobin to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of Tobin. For example, Tobin teaches an Internet site, providing floral and gift products (of FTD, Nature’s Bloom, Hickory Farms, etc.) through web site pages that are customized to the requirements of the hosts. *See Ex. 17B.* Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11 of Bollay; *see Ex. 3B.* The invention of the Bollay has “the advantage that it enables a sale to be complete without the buyer leaving the affiliate’s site.” Column 2, lines 36-37 of Bollay; *see Ex. 3B.* Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of Tobin to arrive at the alleged invention recited in the claims of the '572 Patent because it would enable a sale to be completed using a second webpage

(or composite web page) without the buyer knowingly leaving the affiliate's site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Bollay because both references teach a method and system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Internet Scrapbook and Bollay, Tobin can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8B
- Digital River. *See* Ex. 9B
- TravelNow.com. *See* Ex. 10B
- ITN/Get There. *See* Ex. 12B
- Preview Travel. *See* Ex. 13B
- Trip.com. *See* Ex. 20B
- Saliba. *See* Ex. 31B

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1B
- Kelly. *See* Ex. 4B
- Internet Scrapbook. *See* Ex. 7B
- Digital River. *See* Ex. 9B
- Preview Travel. *See* Ex. 13B
- Sextoys. *See* Ex. 24B
- Arnold. *See* Ex. 23B

The combination of any of these references with Tobin renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

b. Travelocity

Travelocity discloses "capturing a look and feel description associated with a host website," as required by claim 1. *See* Ex. 8B, at 1(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed by Travelocity, it would have been obvious to one of ordinary skill in the art to combine the teachings of Wiecha with the

teachings of Travelocity to meet that claim limitation of the asserted patents because a teaching, suggestion, or motivation exists to combine the teachings of Wiecha with the teachings of Travelocity. For example, Travelocity teaches that a visitor to Yahoo! Travel could select airline tickets, car rentals, and hotel reservations via the co-branded page served by SABRE Interactive. *See Ex. 8C.* Further, Travelocity teaches serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. *See Ex. 8B, at element 1(c).* Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See Wiecha at Abstract.* The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both Travelocity and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Wiecha with the teaching of Travelocity to arrive at the alleged invention recited in the claims of the asserted patents because it would enable an e-commerce provider to provide a host website with a hyperlink to a co-branded page, where the link is correlated with a selected commerce object such as air, hotel, or car reservation.

Additionally, and for the reasons stated above with respect to Travelocity, Wiecha can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- IBM. *See Ex. 27B*
- Digital River. *See Ex. 9B*
- TravelNow.com. *See Ex. 10B*
- ITN/Get There. *See Ex. 12B*
- Preview. *See Ex. 13B*

- Trip.com. *See* Ex. 20B
- Saliba. *See* Ex. 31B

The combination of any of these references with Wiecha renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

c. **U.S. Patent Application No. 09/995,278 (“Saliba”)**

Saliba discloses all limitations of the '572 Patent; and, one skilled in the art would also understand that Saliba could be combined with U.S. Patent No. 6,330,575 (“Moore”). Likewise, this combination discloses all claim limitations of the '572 Patent.

There is motivation to combine Saliba and Moore because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Both Saliba and Moore disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Moore, Saliba can be combined with any of the following references to yield predictable results:

- Kelley. *See* Ex.4B
- Wiecha. *See* Ex.6B
- Internet Scrapbooking. *See* Ex.7B
- Travelocity. *See* Ex.8B
- DR SSS Prior Art. *See* Ex.9B
- TravelNow.com. *See* Ex.10B
- ITN/Get There. *See* Ex.12B
- Preview Travel. *See* Ex. 13B
- Tobin. *See* Ex.17B
- Fields. *See* Ex.18B

- Trip.com. *See* Ex.20B
- Arnold. *See* Ex.23B
- SexToys.com. *See* Ex.24B

The combination of any of those references with Saliba renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

Moreover, one skilled in the art would understand that Saliba could be combined with the Digital River Secure Sales System (“Digital River SSS”). Likewise, this combination discloses all claim limitations of the '572 Patent.

There is motivation to combine Saliba and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet has multiple billers, a service center, multiple financial institutions. *See* Saliba at Abstract. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9B. Both Saliba and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Digital River SSS, Saliba can be combined with any of the following references to yield predictable results:

- Moore. *See* Ex.1B
- Kelley. *See* Ex.4B
- Wiecha. *See* Ex.6B
- Internet Scrapbooking. *See* Ex.7B
- Travelocity. *See* Ex.8B
- TravelNow.com. *See* Ex.10B
- ITN/Get There. *See* Ex.12B
- Preview Travel. *See* Ex. 13B
- Tobin. *See* Ex.17B
- Fields. *See* Ex.18B
- Trip.com. *See* Ex.20B
- Arnold. *See* Ex.23B

- SexToys.com. *See* Ex.24B

The combination of any of those references with Saliba renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

d. **U.S. Patent No. 6,330,575 (“Moore”)**

The Moore Patent discloses all limitations of the '135 Patent; and, one skilled in the art would also understand that Moore could be combined with U.S. Patent No. 7,565,308 (“Bollay”). Likewise, this combination discloses all claim limitations of the '572 Patent.

There is a motivation to combine Moore with Bollay because they are related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Similarly, Bollay discloses a network configuration of a number of affiliate web sites and a number of vendor web sites designed to execute sales of vendor products featured on the affiliate websites. *See* Bollay at Abstract. The affiliate websites feature products from a manufacturer where a buyer can browse the various products, research information about the products, and purchase the products. Both Moore and Bollay disclose electronic commerce systems that are directed to efficiently selling commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Bollay, Moore can be combined with any of the following references to yield predictable results:

- Kelley. *See* Ex.4C
- Wiecha. *See* Ex.6C
- Internet Scrapbooking. *See* Ex.7C
- Travelocity. *See* Ex.8C
- DR SSS Prior Art. *See* Ex.9C
- TravelNow.com. *See* Ex.10C
- ITN/Get There. *See* Ex.12C

- Preview Travel. *See* Ex. 13C
- Tobin. *See* Ex.17C
- Fields. *See* Ex.18C
- Trip.com. *See* Ex.20C
- Arnold. *See* Ex.23C
- SexToys.com. *See* Ex.24C
- Saliba. *See* Ex.31C

The combination of any of those references with Moore renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

e. **Digital River Secure Sales Sytem (“Digital River SSS”)**

The Digital River SSS Prior Art discloses all claim limitations of the '572 Patent; and, one skilled in the art would also understand that the Digital River SSS Prior Art could be combined with U.S. Patent No. 5,870,717 (“Wiecha”). Likewise, this combination discloses all claim limitations of the '572 Patent.

According to Plaintiff’s Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River SSS Prior Art with Wiecha because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River SSS brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9B. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See* Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River SSS and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Additionally, and for the reasons stated above with respect to Wiecha, the DR SSS Prior Art can be combined with any of the following references to yield predictable results:

- Moore. *See* Ex.1B
- Bollay. *See* Ex.3B
- Kelley. *See* Ex.4B
- Internet Scrapbooking. *See* Ex.7B
- Travelocity. *See* Ex.8B
- TravelNow.com. *See* Ex.10B
- ITN/Get There. *See* Ex.12B
- Preview Travel. *See* Ex. 13B
- Tobin. *See* Ex.17B
- Fields. *See* Ex.18B
- Trip.com. *See* Ex.20B
- Arnold. *See* Ex.23B
- SexToys.com. *See* Ex.24B
- Saliba. *See* Ex.31B

The combination of any of those references with the DR SSS Prior Art renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

f. **Sextoys**

Sextoys discloses “capturing a look and feel description associated with a host website,” as required by claim 8. *See* Ex. 24B, at 1(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in Sextoys, it would have been obvious to one of ordinary skill in the art to combine the teachings of Fields with the teachings of Sextoys to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of Sextoys. For example, Sextoys teaches capturing a look and feel description associated with a host website when the host website operator emailed to dml@sextoy.com or faxed to (617) 666-3421 the promote your own sextoy site page. *See* Ex. 24B. Similarly, Fields teaches different techniques for capturing a look and feel description associated with a host website. *See* Ex. 18B, at 1(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught

by Fields, and to combine such teachings with the teachings of Sextoys to arrive at the alleged invention recited in the claims of the '572 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Sextoys with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR at 402-403*.

Moreover, Sextoys discloses a “host website,” an “second website,” (or “a composite web page”) and a “commerce object.” To the extent the host website, the second website (or composite we page), the commerce object, or any other claim element is argued or found not to be adequately disclosed in Sextoys, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of Sextoys to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of Sextoys. For example, Sextoys teaches a process and system that where adult webmasters (i.e., affiliates) set up, customize, and brand their own sex toy stores with Convergence, Inc. handling billing, fulfillment, the shipping (via a third party), and customer service. *See Ex. 24B*. Similarly, Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11 of Bollay; *see Ex. 3B*. The invention of the Bollay has “the advantage that it enables a sale to be complete without the buyer leaving the affiliate’s site.” Column 2, lines 36-37 of Bollay; *see Ex. 3B*. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of Sextoys to arrive at the alleged invention recited in the claims of the '572 Patent because it would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate’s site. *Sernaker at 994-95*.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Sextoys with Bollay because both references teach a method and system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR at 402-403.*

Additionally, and for the reasons stated above with respect to Bollay and Fields, Sextoys can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See Ex. 8B*
- Digital River. *See Ex. 9B*
- TravelNow.com. *See Ex. 10B*
- ITN/Get There. *See Ex. 12B*
- Preview Travel. *See Ex. 13B*
- Trip.com. *See Ex. 20B*
- Saliba. *See Ex. 31B*

Capturing the look and feel description of a host website, etc.

- Moore. *See Ex. 1B*
- Kelly. *See Ex. 4B*
- Internet Scrapbook. *See Ex. 7B*
- Digital River. *See Ex. 9B*
- Preview Travel. *See Ex. 13B*
- Tobin. *See Ex. 17B*
- Arnold. *See Ex. 23B*

The combination of any of these references with Sextoys renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

g. Lycos

Lycos discloses “capturing a look and feel description associated with a host website,” as required by claim 1. *See Ex. 28B, at 1(a).* To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in Lycos, it would have been obvious to one of ordinary skill in the art to combine the teachings of Lycos with the teachings of Internet Scrapbook to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Internet Scrapbook with the

teachings of Lycos. For example, Lycos teaches that News Alert, Inc. captured the look and feel description of Lycos when News Alert, Inc. created the News Alert website. *See* Ex. 28B. Similarly, Internet Scrapbook teaches techniques for capturing a look and feel description associated with a host website. *See* Ex. 7B, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Internet Scrapbook, and to combine such teachings with the teachings of Lycos to arrive at the alleged invention recited in the claims of the '572 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Lycos with Internet Scrapbook because both references teach capturing the look and feel descriptions of a host website. *KSR at* 402-403.

Additionally, and for the reasons stated above with respect to Internet Scrapbook, Lycos can be combined with any of the following references to yield predictable results:

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1B
- Kelly. *See* Ex. 4B
- Bollay. *See* Ex. 3B
- Digital River. *See* Ex. 9B
- Preview Travel. *See* Ex. 13B
- Tobin. *See* Ex. 17B
- Arnold. *See* Ex. 23B

The combination of any of these references with Lycos renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

h. IBM

IBM discloses “capturing a look and feel description associated with a host website,” as required by claim 1. *See* Ex. 27B, at 1(a). To the extent the capturing element or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been

obvious to one of ordinary skill in the art to combine the teachings of Fields with the teachings of IBM to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Fields with the teachings of IBM. For example, IBM teaches capturing a look and feel description when a script that dynamically generates the IBM Ordering website was written or when the second website (or composite web page) was dynamically generated by the script on December 20, 1996. *See* IBM; Ex. 27B. Similarly, Fields teaches various techniques for capturing a look and feel description associated with a host website. *See* Ex. 18B, at 8(a). When confronted with the problem of capturing a look and feel description associated with a host website, one of ordinary skill in the art would have been motivated to consider the capturing techniques taught by Fields, and to combine such teachings with the teachings of IBM to arrive at the alleged invention recited in the claims of the '572 Patent.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Fields because both references teach capturing the look and feel descriptions of a host website. *KSR* at 402-403.

Moreover, IBM discloses a “host website,” an “second website,” (or “a composite web page”) and a “commerce object.” To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of IBM to meet that claim limitation of the '572 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of IBM. For example, IBM teaches that IBM Credit Corporation provided a host website with a link to a website of IBM Corporation where the

visitors could order products of one of IBM's business partners. *See* Ex. 27B. Similarly, Bollay teaches "a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server." Column 1, lines 8-11 of Bollay; *see* Ex. 3B. The invention of the Bollay has "the advantage that it enables a sale to be complete without the buyer leaving the affiliate's site." Column 2, lines 36-37 of Bollay; *see* Ex.B. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of IBM to arrive at the alleged invention recited in the claims of the '572 Patent because it would enable a sale to be completed using a second website (or composite web page) without the buyer knowingly leaving the affiliate's site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Bollay because both references teach a host website and a system where a host website uses an e commerce outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Fields and Bollay, IBM can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8B
- Digital River. *See* Ex. 9B
- TravelNow.com. *See* Ex. 10B
- ITN/Get There. *See* Ex. 12B
- Preview Travel. *See* Ex. 13B
- Trip.com. *See* Ex. 20B
- Saliba. *See* Ex. 31B

Capturing the look and feel description of a host website, etc.

- Moore. *See* Ex. 1B
- Kelly. *See* Ex. 4B
- Internet Scrapbook. *See* Ex. 7B
- Digital River. *See* Ex. 9B
- Preview Travel. *See* Ex. 13B
- Tobin. *See* Ex. 17B

- Arnold. *See* Ex. 23B

The combination of any of these references with IBM renders claims 1, 4, 5, 13, and 17-27 of the '572 Patent invalid.

C. Additional Prior Art

As noted above with respect to the '135 Patent, Defendants are investigating additional prior art, including commercial software programs, and are attempting to obtain related documentation and information. For the reasons described above with respect to the '135 Patent, Defendants reserve the right to amend and supplement this disclosure with additional prior art as needed.

D. 35 U.S.C. § 112

Asserted claims 1, 4, 5, 13, and 17-27 of the '572 Patent are invalid for failure to comply with the written description and enablement requirement of 35 U.S.C. § 112, paragraph 1. The disclosure of the '572 Patent fails to reasonably convey to a person of ordinary skill in the art that the inventor had possession of the full scope of the claimed alleged invention and fails to disclose sufficient information to enable a person of ordinary skill in the art to practice the full scope of the alleged invention. Attached as Exhibit 33B is a chart specifically identifying the § 112 issues.

Defendants reserve the right to amend this disclosure to the extent that DDR asserts and/or the Court adopts claim constructions that would render the claims invalid under 35 U.S.C. § 112.

E. Invalidity Under 35 U.S.C. §§ 101 and 116

See Section II.E, *supra*. The same analysis applies with respect to the '572 Patent. The independent claims of the '572 Patent are claims 1, 13, and 17. For the same reasons identified

above¹¹, the independent claims are directed to unpatentable subject matter. Moreover, the asserted dependent claims 4-5 and 18-27 of the '572 add no meaningful limitations to the independent claims and are similarly directed to unpatentable subject matter.

¹¹ Independent claim 13 is a system claim with similar limitations to process claims 1 and 17.

IV. U.S. PATENT NO. 7,818,399

A. Identification of Prior Art

Pursuant to Patent Rule 3-3(a), Defendants identify the following prior art (“the ’399 Patent’s Invalidating Art”) now known to them to anticipate claims 1, 3-20, and 22-25 of the ’399 Patent, either expressly or inherently as understood by a person having ordinary skill in the art, at least under the claim constructions apparently adopted by DDR as based on review of DDR’s infringement contentions. In some instances, Defendants treated certain prior art as anticipatory where certain elements are inherently present based on DDR’s apparent claim construction in its infringement contentions.

The following patents and publications are prior art under at least 35 U.S.C. §§ 102(a), (b), (e), (f), and/or (g), and the charts found in Exhibits 1C-10C, 12C-13C, 17C-20C, 23C-27C, and 30C-32C specify the invalidity basis for such patents and publications.

	PRIOR ART PATENTS	Filing Date	Issue Date	Exh.
1.	U.S. Patent 6,330,575 (Moore) [DFNDT0000180-0000206]	Mar. 31, 1998	Dec. 11, 2001	1A
2.	U.S. Patent 6,490,567 (Gregory) [DFNDT0000144-0000162]	Jan. 15, 1997	Dec. 3, 2002	2A
3.	U.S. Patent 6,7565,308 (Bollay) [DFNDT0000132-0000143]	Mar. 25, 1999	Jul. 21, 2009	3A
4.	U.S. Patent 6,209,007 (Kelley) [DFNDT0000163-0000179]	Nov. 26, 1997	Mar. 27,2001	4A
5.	WO 1999/ 046709 A1 (Voorhees) [DFNDT0000239-0000293]	Mar. 11, 1998	Sept. 16, 1999 (publication date)	5A

B. Obviousness

¹⁵ Digital River asserts a defense under 35 U.S.C. § 273 in view of the Digital River Secure Sales System. *See* Exs. 9A-9C. Travelocity also asserts a defense under 35 U.S.C. § 273 in view of Travelocity's systems. *See* Exs. 8A-8C. Expedia also asserts a defense under 35 U.S.C. § 273 in view of Hotels.com's previous system. *See* Exs. 10A-10C.

Defendants further contend under P.R. 3-2(b) that claims 1, 3-20, and 22-25 of the '399 Patent are invalid as obvious under 35 U.S.C. § 103. Defendants incorporate, as if fully set forth herein, Section V, *infra*, related to obviousness.

1. ***Claim Overview: 1, 3-20, and 22-25***

In addition to these overarching factors that render the alleged invention obvious in light of the prior art, the following discussion provides more particular analysis tailored to the various asserted claims.

a. **Claims 1, 8, 19, and 20**

As mentioned above, by the asserted priority date of the alleged invention, persons of skill in the art were already familiar with e-commerce outsourcing processes for serving webpages offering commercial opportunities by dynamically generating and transmitting a second web page in response to the activation of a link by a visitor of a first web page. It was also well-established that the second web page may have visually perceptible elements from the first web page so that the visitor perceives that he did not leave the first web page. To accomplish this it was well known that pre-stored data related to the first page must be stored and later retrieved in the process of generating the second web page. Moreover, in order to retrieve that information, the storage location had to be coupled to the server. Host websites frequently were given specific links to include on their webpages which by the very nature of the Internet resulted in a second page being served to the user upon activation and such links often resulted in an e-commerce related webpage being returned to the user. In these e-commerce outsourcing processes it was common that three parties were involved in the sale of a commerce object over the Internet – a merchant, an outsource provider, and the owner of the first web page.

b. **Claims 3-6**

It was well known in the art that a webpage could be identified by special color schemes, (HTML specifically allowed for this) or logos, navigational links, or customized footers, headers, or sidebars. Associating such portions of a webpage with defining the appearance would have been well known to one of skill in the art.

c. Claims 7 and 22

It was well known in the art that e-commerce web pages included electronic catalog information having a number of commercial offerings and a manner to search for desired commercial offerings through a hierarchical set of navigation links. This configuration for electronic catalogs on the Internet was well known to one of skill in the art.

d. Claims 9-10, 15-16, and 23-24

Contracting with vendors to permit specific items for sale on an e-commerce web page, such that the vendor would receive a commission from each sale, was also common on the Internet. Facilitating automatic payment through the e-commerce web page was also common on the Internet to one of ordinary skill in the art. Many prior art systems operated in this manner.

e. Claims 11-12, 18 and 25

Storing visually perceptible elements related to the first web page in a database and generating the second web page from these stored elements was also common on the Internet. Thus, the visitor believes that he did not leave the first web page. One of skill in the art would have known how to accomplish the task of including such information in a data store for later retrieval.

f. Claims 13-14, 17, and 24

The use of virtual shopping carts to facilitate purchases of commerce objects on the Internet was well-known. One of ordinary skill in the art would recognize that virtual shopping

carts and electronic catalogs were commonly used to make the operation of online shopping more efficient. Many prior art systems used this type of configuration.

2. **35 U.S.C. § 103 Combinations**

In addition to the above discussion, certain particular combinations bear further explanation:

- Tobin [Ex. 34C]
- Travelocity [Ex. 35C]
- Saliba and DR SSS [Ex. 36C and 39C]
- Moore [Ex. 37C]
- DR SSS [Ex. 38C]
- SexToys [Ex. 40C]
- IBM [Ex. 42C]

a. **U.S. Patent No. 6,141,666 (“Tobin”)**

Tobin discloses “the selected merchant, the outsource provider, and the owner of the first web page” are each third parties with respect to one other, as required by claims 1, 19, and 20. *See* Ex. 17C, at 1(a), 19(a), and 20. To the extent the this element or any other claim element is argued or found not to be adequately disclosed in Tobin, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of Tobin to meet that claim limitation of the ’399 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of Tobin. For example, Tobin teaches an Internet site, providing floral and gift products (of FTD, Nature’s Bloom, Hickory Farms, etc.) through web site pages that are customized to the requirements of the hosts. *See* Ex. 17C. Similarly, Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11 of Bollay; *see* Ex. 3C. The invention of the Bollay has “the advantage that it enables a sale to be complete without the buyer leaving the affiliate’s site.” Column 2, lines 36-37 of Bollay; *see* Ex. 3C. Accordingly, one of

ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of Tobin to arrive at the alleged invention recited in the claims of the '399 Patent because it would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate's site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Tobin with Bollay because both references teach a method and system where a host website uses an outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Bollay, Tobin can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8C
- Digital River. *See* Ex. 9C
- TravelNow.com. *See* Ex. 10C
- ITN/Get There. *See* Ex. 12C
- Preview Travel. *See* Ex. 13C
- Trip.com. *See* Ex. 20C
- Saliba. *See* Ex. 31C

The combination of any of these references with Tobin renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

b. Travelocity

Travelocity discloses “the selected merchant, the outsource provider, and the owner of the first web page” are each third parties with respect to one other, as required by claims 1, 19, and 20 of the '399 patent. *See* Ex. 8C, at 1(a), 19(a), and 20. To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in Travelocity, it would have been obvious to one of ordinary skill in the art to combine the teachings of Wiecha with the teachings of Travelocity to meet that claim limitation of the asserted patents because a teaching,

suggestion, or motivation exists to combine the teachings of Wiecha with the teachings of Travelocity. For example, Travelocity teaches that a visitor to Yahoo! Travel could select airline tickets, car rentals, and hotel reservations via the co-branded page served by SABRE Interactive. *See* Ex. 8C. Further, Travelocity teaches serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link. Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See* Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both Travelocity and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Wiecha with the teaching of Travelocity to arrive at the alleged invention recited in the claims of the asserted patents because it would enable an e-commerce provider to provide a host website with a hyperlink to a co-branded page, where the link is correlated with a selected commerce object such as air, hotel, or car reservation.

Additionally, and for the reasons stated above with respect to Travelocity, Wiecha can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- IBM. *See* Ex. 27C
- Digital River. *See* Ex. 9C
- TravelNow.com. *See* Ex. 10C
- ITN/Get There. *See* Ex. 12C
- Preview. *See* Ex. 13C
- Trip.com. *See* Ex. 20C
- Saliba. *See* Ex. 31C

The combination of any of these references with Wiecha renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

c. **U.S. Patent Application No. 09/995,278 (“Saliba”)**

Saliba discloses all limitations of the '399 Patent; and, one skilled in the art would also understand that Saliba could be combined with U.S. Patent No. 6,330,575 (“Moore”). Likewise, this combination discloses all claim limitations of the '399 Patent.

There is motivation to combine Saliba and Moore because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Both Saliba and Moore disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Moore, Saliba can be combined with any of the following references to yield predictable results:

- Kelley. *See* Ex.4C
- Wiecha. *See* Ex.6C
- Internet Scrapbooking. *See* Ex.7C
- Travelocity. *See* Ex.8C
- DR SSS Prior Art. *See* Ex.9C
- TravelNow.com. *See* Ex.10C
- ITN/Get There. *See* Ex.12C
- Preview Travel. *See* Ex. 13C
- Tobin. *See* Ex.17C
- Fields. *See* Ex.18C
- Trip.com. *See* Ex.20C
- Arnold. *See* Ex.23C

- SexToys.com. *See* Ex.24C

The combination of any of those references with Saliba renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

Moreover, one skilled in the art would understand that Saliba could be combined with the Digital River Secure Sales System (“Digital River SSS”). Likewise, this combination discloses all claim limitations of the '399 Patent.

There is motivation to combine Saliba and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba discloses an electronic financial system for providing financial services over the Internet and includes multiple billers, a service center, and multiple financial institutions. *See* Saliba at Abstract. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9C. Both Saliba and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Digital River SSS, Saliba can be combined with any of the following references to yield predictable results:

- Moore. *See* Ex.1C
- Kelley. *See* Ex.4C
- Wiecha. *See* Ex.6C
- Internet Scrapbooking. *See* Ex.7C
- Travelocity. *See* Ex.8C
- TravelNow.com. *See* Ex.10C
- ITN/Get There. *See* Ex.12C
- Preview Travel. *See* Ex. 13C
- Tobin. *See* Ex.17C
- Fields. *See* Ex.18C
- Trip.com. *See* Ex.20C
- Arnold. *See* Ex.23C
- SexToys.com. *See* Ex.24C

The combination of any of those references with Saliba renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

d. **U.S. Patent No. 6,330,575 (“Moore”)**

The Moore Patent discloses all limitations of the '399 Patent; and, one skilled in the art would also understand that Moore could be combined with U.S. Patent No. 7,565,308 (“Bollay”). Likewise, this combination discloses all claim limitations of the '399 Patent.

There is a motivation to combine Moore with Bollay because they are related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. *See* Moore at Abstract. Similarly, Bollay discloses a network configuration of a number of affiliate web sites and a number of vendor web sites designed to execute sales of vendor products featured on the affiliate websites. *See* Bollay at Abstract. The affiliate websites feature products from a manufacturer where a buyer can browse the various products, research information about the products, and purchase the products. Both Moore and Bollay disclose electronic commerce systems that are directed to efficiently selling commerce objects over the Internet.

Additionally, and for the reasons stated above with respect to Bollay, Moore can be combined with any of the following references to yield predictable results:

- Kelley. *See* Ex.4C
- Wiecha. *See* Ex.6C
- Internet Scrapbooking. *See* Ex.7C
- Travelocity. *See* Ex.8C
- DR SSS Prior Art. *See* Ex.9C
- TravelNow.com. *See* Ex.10C
- ITN/Get There. *See* Ex.12C
- Preview Travel. *See* Ex. 13C
- Tobin. *See* Ex.17C

- Fields. *See* Ex.18C
- Trip.com. *See* Ex.20C
- Arnold. *See* Ex.23C
- SexToys.com. *See* Ex.24C
- Saliba. *See* Ex.31C

The combination of any of those references with Moore renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

e. **Digital River Secure Sales Sytem (“Digital River SSS”)**

The Digital River SSS Prior Art discloses all claim limitations of the '399 Patent; and, one skilled in the art would also understand that the Digital River SSS Prior Art could be combined with U.S. Patent No. 5,870,717 (“Wiecha”). Likewise, this combination discloses all claim limitations of the '399 Patent.

According to Plaintiff’s Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River SSS Prior Art with Wiecha because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River SSS brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. *See* Exhibit 9C. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. *See* Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River SSS and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Additionally, and for the reasons stated above with respect to Wiecha, the DR SSS Prior Art can be combined with any of the following references to yield predictable results:

- Moore. *See* Ex.1C

- Bollay. *See* Ex.3C
- Kelley. *See* Ex.4C
- Internet Scrapbooking. *See* Ex.7C
- Travelocity. *See* Ex.8C
- TravelNow.com. *See* Ex.10C
- ITN/Get There. *See* Ex.12C
- Preview Travel. *See* Ex. 13C
- Tobin. *See* Ex.17C
- Fields. *See* Ex.18C
- Trip.com. *See* Ex.20C
- Arnold. *See* Ex.23C
- SexToys.com. *See* Ex.24C
- Saliba. *See* Ex.31C

The combination of any of those references with the DR SSS Prior Art renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

f. **Sextoys**

Sextoys discloses “the selected merchant, the outsource provider, and the owner of the first web page” are each third parties with respect to one other, as required by claims 1, 19, and 20. *See* Ex. 24C, at 1(a), 19(a), and 20. To the extent the this element or any other claim element is argued or found not to be adequately disclosed in Sextoys, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of Sextoys to meet that claim limitation of the '399 Patent because a teaching, suggestion, or motivation exists to combine the teachings of Bollay with the teachings of Sextoys. For example, Sextoys teaches a process and system that where adult webmasters (i.e., affiliates) set up, customize, and brand their own sex toy stores with Convergence, Inc. handling billing, fulfillment, the shipping (via a third party), and customer service. *See* Ex. 24C. Similarly, Bollay teaches “a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server.” Column 1, lines 8-11 of Bollay; *see* Ex. 3C. The invention of the Bollay has “the advantage that it enables a sale to be complete without the buyer leaving the affiliate’s site.” Column 2, lines 36-37 of Bollay; *see* Ex. 3C. Accordingly, one of ordinary skill

in the art would be motivated to combine the teaching of Bollay with the teaching of Sextoys to arrive at the alleged invention recited in the claims of the '399 Patent because it would enable a sale to be completed using a second webpage (or composite web page) without the buyer knowingly leaving the affiliate's site. *Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine Sextoys with Bollay because both references teach a method and system where a host website uses an outsource provider to sell goods on the host website. *KSR* at 402-3.

Additionally, and for the reasons stated above with respect to Bollay, Sextoys can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8C
- Digital River. *See* Ex. 9C
- TravelNow.com. *See* Ex. 10C
- ITN/Get There. *See* Ex. 12C
- Preview Travel. *See* Ex. 13C
- Trip.com. *See* Ex. 20C
- Saliba. *See* Ex. 31C

The combination of any of these references with Sextoys renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

g. IBM

IBM discloses “the selected merchant, the outsource provider, and the owner of the first web page” are each third parties with respect to one other, as required by claims 1, 19, and 20. *See* Ex. 27C, at 1(a), 19(a), and 20. To the extent the host website, the second website (or composite web page), the selected commerce object, or any other claim element is argued or found not to be adequately disclosed in IBM, it would have been obvious to one of ordinary skill in the art to combine the teachings of Bollay with the teachings of IBM to meet that claim limitation of the '399 Patent because a teaching, suggestion, or motivation exists to combine the

teachings of Bollay with the teachings of IBM. For example, IBM teaches that IBM Credit Corporation provided a host website with a link to a website of IBM Corporation where the visitors could order products of one of IBM's business partners. *See* Ex. 27C. Bollay teaches "a method by which a buyer can execute a sale from an affiliate web site with a vendor using a hub server." Column 1, lines 8-11 of Bollay; *see* Ex. 3C. The invention of the Bollay has "the advantage that it enables a sale to be complete without the buyer leaving the affiliate's site." Column 2, lines 36-37 of Bollay; *see* Ex. 3C. Accordingly, one of ordinary skill in the art would be motivated to combine the teaching of Bollay with the teaching of IBM to arrive at the alleged invention recited in the claims of the '399 Patent because it would enable a sale to be completed using a second website (or composite web page) without the buyer knowingly leaving the affiliate's site. *See Sernaker* at 994-95.

Alternatively, to one of ordinary skill in the art, it would have been obviously to try to combine IBM with Bollay because both references teach a host website and a system where a host website uses an outsource provider to sell goods on the host website. *KSR* at 402-403.

Additionally, and for the reasons stated above with respect to Bollay, IBM can be combined with any of the following references to yield predictable results:

A host website, an e commerce outsource provider, and a merchant's goods, etc.

- Travelocity. *See* Ex. 8C
- Digital River. *See* Ex. 9C
- TravelNow.com. *See* Ex. 10C
- ITN/Get There. *See* Ex. 12C
- Preview Travel. *See* Ex. 13C
- Trip.com. *See* Ex. 20C
- Saliba. *See* Ex. 31C

The combination of any of these references with IBM renders claims 1, 3-20, and 22-25 of the '399 Patent invalid.

C. Additional Prior Art

As noted above with respect to the '135 Patent, Defendants are investigating additional prior art, including commercial software programs, and are attempting to obtain related documentation and information. For the reasons described above with respect to the '135 Patent, Defendants reserve the right to amend and supplement this disclosure with additional prior art as needed.

D. 35 U.S.C. § 112

Asserted claims 1, 3-20, and 22-25 of the '399 Patent are invalid for failure to comply with the written description and enablement requirement of 35 U.S.C. § 112, paragraph 1. The disclosure of the '399 Patent fails to reasonably convey to a person of ordinary skill in the art that the inventor had possession of the full scope of the claimed alleged invention and fails to disclose sufficient information to enable a person of ordinary skill in the art to practice the full scope of the alleged invention. Attached as Exhibit 33C is a chart specifically identifying the § 112 issues.

Defendants reserve the right to amend this disclosure to the extent that DDR asserts and/or the Court adopts claim constructions that would render the claims invalid under 35 U.S.C. § 112.

V. OBVIOUSNESS

The '572 Patent issued from an application that was a continuation that resulted in the '135 Patent. The '399 Patent issued from an application that was a continuation that resulted in the '572 Patent. As such, the specifications of all three patents-in-suit are the same and the background art applies equally to each of the asserted patents.

A. Overview

Each anticipatory prior art reference disclosed in section A, either alone or in combination with other prior art, also renders the asserted claims obvious to one of ordinary skill in the art. In particular, each anticipatory prior art reference on its own renders obvious the claimed inventions, and also may be combined with (1) information known to persons skilled in the art at the time of the alleged invention, and/or (2) any of the other anticipatory prior art references. To the extent that DDR contends that any of the anticipatory prior art fails to disclose explicitly or inherently one or more limitations of the asserted claims, Defendants reserve the right to argue that any difference between the reference and the corresponding patent claims would have been obvious to one of ordinary skill in the art even if it has not specifically denoted that the reference is to be combined with the knowledge of a person of ordinary skill in the art. Further, Defendants reserve the right to identify other prior art references that, when combined with anticipatory prior art, would render the claims obvious.

The United States Supreme Court clarified the standard for what types of inventions are patentable. *See KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 127 S. Ct. 1727 (2007). In particular, the Supreme Court emphasized that inventions arising from ordinary innovation, ordinary skill or common sense should not be patentable. *Id.* at 1732, 1738-1739, 1742-1743, 1746. Restated, "the combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results." *Id.* at 1731. Because the '135

Patent simply combines elements well known in the art and yields no more than one skilled in the art would expect from such a combination, the combination is obvious. The asserted claims are therefore invalid under 35 U.S.C. § 103 because they do nothing more than combine known techniques and apparatuses according to their known and ordinary uses to yield predictable results.

The Supreme Court further held that, “[w]hen a work is available in one field of endeavor, design incentives and other market forces can prompt variations of it, either in the same field or a different one. If a person of ordinary skill can implement a predictable variation, § 103 likely bars its patentability. For the same reason, if a technique has been used to improve one device, and a person of ordinary skill in the art would recognize that it would improve similar devices in the same way, using the technique is obvious unless its actual application is beyond his or her skill” *Id.* at 1740. Accordingly, a person of ordinary skill in the art would have been motivated to combine or adapt known or familiar methods in the art, especially where market forces prompt such variations. Here, market forces demanded that users be able to trust the electronic commerce website with which they were doing business such that one of ordinary skill in the art would have thought to combine or modify e-commerce solutions and white labeling techniques identified in the references, which one of ordinary skill in the art would have recognized as offering improvements to solutions of that time. Each of the above references described methods that were known to offer such improvements, and, accordingly, one of ordinary skill in the art would have been motivated to combine or modify the references as identified in each of the combinations above.

In fact, the background section of the patents-in-suit disclose many of the features of the alleged inventions demonstrating that the overall result was nothing more than a predictable

result of the combination of known elements. For example, the patents-in-suit recognize that affiliate programs were well known in the art. *See* '135 Patent 2:7-19.¹⁶ Moreover, the system of maintaining a “look and feel” with the headers, footers, and side bars were also known in the art through the use of frames. *Id.* at 2:30-32. The disclosure also makes clear that use of “links” was well known and that HTML had been well established. *Id.* at 1:20-22, 1:47-2:6. Moreover, these “links” could take one directly to a specific product or product category. *Id.* at 1:33-37, 1:64-2:19. The entire concept of e-commerce was also well known in the art prior to the patented inventions. *Id.* at 2:7-19. That is, the concept of shopping carts, collecting credit card information, purchasing products, maintaining inventory, and providing payment fees to referring websites were well established in the art.¹⁷ *Id.* at 2:7-18. In fact, the background section of the patent further makes clear that the alleged inventions were mere minimal improvements over the existing art. *Id.* at 2:31-33 (noting that one prior art solution was at least “marginally effective”). Moreover, crawling webpages in order to capture the content of those pages was also well known in the art. *Id.* at 1:32-37.

Based on the disclosure of the '135 Patent itself, techniques disclosed and reduced to practice by the priority date of the claimed invention, and/or technology widely developed and implemented in commerce by the priority date of the claimed invention, the asserted claims are therefore invalid under 35 U.S.C. § 103 because they do nothing more than combine known techniques and apparatus according to their known and ordinary uses to yield predictable results.

¹⁶ Because the patents share a common specification, unless otherwise specified, all citations in this section refer to the '135 Patent.

¹⁷ At least the following references teach the concepts of e-commerce, shopping carts, collecting billing information, maintaining inventory, and paying fees to affiliate sites: Wiecha, IBN Net.Commerce, Amazon.com, Tobin, Moore, Gregory, Bollay, and the Digital River Secure Sales System. Any of these references can be combined with any of the anticipatory art identified above or any of the § 103 combinations below with respect to the asserted dependent claims related to a consumer completing the purchase of a specified product.

The alleged invention relates to a “transparent” way of providing an e-commerce solution. Such systems were widely developed and implemented in commerce by the priority date of the claimed invention. For example, a tremendous amount of knowledge already existed to one of skill in the art about implementing the types of solutions allegedly the subject of the asserted claims. In Section V.B, below, Defendants identify a myriad of background art references that color what one of ordinary skill in the art would have known.

In addition, while a showing of a specific “teaching, suggestion, or motivation” is no longer required in view of *KSR*, 127 S. Ct. 1727, it is nevertheless clear that ample teaching, suggestion, and motivation existed in the prior art to render the asserted claims obvious. As evidenced by the art identified as anticipatory above, one of ordinary skill in the art would have been aware of many techniques for implementing a computer-based platform that supports capturing a “look and feel” and performing such white labeling processes. When confronted with the problem of providing a consumer a white-labeled website, one of ordinary skill in the art would have been motivated to consider the techniques taught by the identified anticipatory references, and to combine such teachings to arrive at the alleged invention recited in the claims of the patents-in-suit. Each of the elements of the claims of the patents-in-suit are disclosed in the identified anticipatory references and perform the same functions. “The combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results.” *KSR*, 127 S. Ct. at 1739. “[I]f a technique has been used to improve one device, and a person of ordinary skill would recognize that it would improve similar devices in the same way, [then] using the technique is obvious unless its actual implementation is beyond his or her skill.” *KSR*, 127 S. Ct. at 1740. Thus, the combined teaching of the identified anticipatory art, knowledge of one of ordinary skill in the art, the overall background knowledge,

and the nature of the problem to be solved as a whole would have suggested the claimed combinations of elements to one of ordinary skill in the art at the time of the alleged invention.

B. Background Art

Defendants contend that additional prior art affiliate marketing, co-branding, private labeling, e-commerce, and on-line retailing industry technologies embody each element of each asserted claim in patents-in-suit. The additional prior art discloses e-commerce outsourcing systems that (i) captured the “look and feel” description associated with the host website, (ii) provided the host website with a link correlating the host website with a selected commerce object, and (iii) served a visitor computer with a webpage that had the same “look and feel” as the host’s webpage with content based on the commerce object associated with the link.

Defendants reserve the right to rely on any of the below references to provide background as to what one of ordinary skill in the art would have known.

1. Prior Art System

a. Hard Rock Hotel and Tunes

As early as August of 1997, as discussed in *Hard Rock Cafe Int’l v. Morton*, No. 97 Civ. 94833, 1999 WL 717995 (S.D.N.Y. Sept. 9, 1999) (DFNDT000488-000515), Hard Rock Hotel and Tunes used an e-commerce outsourcing system described in part as follows:

The Tunes link from the Hard Rock Hotel web site is accessed in the following way: When the computer user clicks on the “Shop” icon on the first page of the Hard Rock Hotel web site, a page appears that includes an icon reading “record store.” As of December 1997, clicking on this icon took the user to a Tunes page “framed” by a border on the left and a border on the top, each of which contained a Hard Rock Hotel logo. In the Tunes portion of the page, the computer user can listen to portions of various music CDs and/or purchase music CDs. The CDs are sold by Tunes, not by Hard Rock Hotel. No Hard Rock Hotel logo is shown on the CD packaging but Hard Rock Hotel receives a 5% commission for each of these sales. Only two CDs have been sold in this fashion

through the link on the Hard Rock Hotel web site. (Tr. at 363:8-367:14, 424:2-425:2 (Stone)). *Id.* at *15.

In *Hard Rock Hotel*, the Hard Rock Hotel/Tunes was further described as follows:

[T]he Hard Rock Hotel Mark and the Tunes site are combined together into a single visual presentation and the Hard Rock Hotel Mark is used to promote the sale of CDs by Tunes. Because the Tunes material appears as a window within the original linking page, it is not clear to the computer user that she or he has left the Hard Rock Hotel web site. The domain name appearing at the top of the computer screen, which indicates the location of the user in the World Wide Web, continues to indicate the domain name of Hard Rock Hotel, not that of Tunes. (Tr. at 367:1-4 (Stone); DX 227). The Tunes web page is reached in the same fashion as any other section of the Hard Rock Hotel web site, by clicking on a button labeled “record store” which resembles the other buttons leading to web pages maintained by Hard Rock Hotel. (Tr. at 361:12-364:4 (Stone)). The spinning globe, Hard Rock Hotel’s logo, appears not only to the side of the framed Tunes web page, but also within the Tunes menu bar, on the Tunes page itself. (Tr. 368:1-10 (Stone); DX 227). The Hard Rock Hotel web site and the Tunes web page are thus smoothly integrated. In light of this seamless presentation of the Tunes web page within the Hard Rock Hotel web site, the only possible conclusion is that the Hard Rock Hotel Mark is used or exploited to advertise and sell CDs. *Id.* at *25.

See also archived webpages at the relevant time (DFNDT000516-000558).

b. Vignette

Defendants’ believe that Vignette Corporation was providing a co-branded e-commerce outsourcing solution called “StoryServer” for customers prior to the critical date of the patents-in-suit. Upon information and belief, Vignette Corporation’s StoryServer system would “capture look and feel elements” associated with its customer’s websites, provide the customer’s website with a link that correlates the customer website to a commerce object, such as a product for sale, and serve a visitor computer with a webpage that had the same “look and feel” as the customer’s webpage with product content associated with the link.

Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

c. **Century Technology Group / Nexchange Corporation**

Upon information and belief, Century Technology Group and/or Nexchange Corporation may have described its e-commerce system in a printed publication, publicly used its e-commerce system, and/or offered for sale its e-commerce system more than one year before the filing date of the earliest non-provisional application of the patents in suit and possibly also more than one year before the filing date of the provisional application for the patents in suit.

Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit

d. **Weather Channel**

Defendants' believe that The Weather Channel was providing a co-branded e-commerce outsourcing solution for customers prior to the critical date of the patents-in-suit. Upon information and belief, The Weather Channel would "capture look and feel elements" associated with its customer's websites, provide the customer's website with a link that correlates the customer website to a commerce object, such as the weather, and serve a visitor computer with a webpage that had the same "look and feel" as the customer's webpage with weather content associated with the link.

Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

e. **World Choice Travel Prior Art**

The World Choice Travel ("WCT") private label and co-branding technology was an e-commerce outsourcing solution that provided travel booking capability to numerous customers

with the same “look and feel” as that customer’s proprietary website.¹⁸ WCT captured the “look and feel” associated with its customers’ websites when WCT “receiv[ed] the full design and logo artwork from [its customer].”¹⁹ WCT provided a link to its customers that was correlated with a selected commerce object such as lodging.²⁰ Visitor computers were served a webpage that had the same “look and feel” as the customer’s webpage. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

f. **EaasySabre Prior Art**

EaasySabre provided a co-branded e-commerce outsourcing solution for customers such as Prodigy and Compuserve. The co-branded travel reservation systems were displayed in connection with Prodigy’s and Compuserve’s dial up private network service and maintained the same “look and feel” elements as their private network host.²¹ The “look and feel” elements were captured by screen scraping the elements from existing Prodigy and Compuserve pages. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

¹⁹ *World Choice Travel, Inc. Revenue Sharing and Services Agreement*, draft agreement, 1999, § 1.4. [DFNDT000858-000866].

²⁰ See DFNDT000858 at §1.3.

²¹ See JOHN L. VIESCAS, *THE OFFICIAL GUIDE TO THE PRODIGY SERVICE 260* (1991) (showing the co-branded travel site in Figure 7-16) [DFNDT000867-000877] see also BRAD SCHEPP AND DEBRA SCHEPP, *THE COMPLETE GUIDE TO COMPUSERVE 412-15* (1990) [DFNDT000878-000882].

g. Sabre Business Travel Solutions

Sabre Business Travel Solutions (“Sabre BTS”) provided a co-branded/private-labeled e-commerce outsourcing solution to major corporations.²² Sabre BTS “give[s] corporations their own graphical access to Sabre r eservations [sic].²³ For example, Sabre BTS allowed BTI Americas to “private label the BTS software under its Portico brand name.”²⁴ Upon information and belief, Sabre BTS provided a link to its customers that was correlated with commerce objects between such as air, hotel, and car reservations. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

h. Travelocity Prior Art²⁵

(i) Travelocity/Japan Airlines Prior Art

The SABRE Interactive (“SI”) (now Travelocity) co-branded web site was an e-commerce outsourcing solution for Japan Airlines (“JAL”) so that JAL had travel reservation capability under its own name with the same “look and feel” as its own website. SI captured “look and feel” elements such as Japan Airline’s logo. For example, “JAL will supply SI with all artwork necessary to add Jail’s logo to such pages. The artwork must be submitted in electronic form and according to specifications provided by SI”²⁶ SI provided JAL with a link that was correlated with a selected commerce object by “granting] JAL a non-exclusive and non-transferable right to place Sis logo as a graphical hypertext link on Jail’s Website to the [co-

²⁵ Any of the Travelocity Prior Art references are combinable as 103 references with the Travelocity Charts (Exhibits 8A-8C).

²⁶ *Co-branding Agreement between The SABRE Group, Inc. and Japan Airlines Company, Ltd.* executed on December 15, 1997, Article II, see DFNDT000373-387; see generally *Japan Airlines Travel Booking Engine - Scope Definition*, August 1997, see DFNDT000350-372.

branded page].”²⁷ SI served a visitor computer with a webpage that had the same “look and feel” as the JAL webpage.²⁸ Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

(ii) **Travelocity/Netscape Air Prior Art**

The Travelocity co-branded web site was an e-commerce outsourcing solution for Netscape Netcenter Marketplace Travel (“Netscape”) so that Netscape had travel reservation capability under its own name with the same “look and feel” as its own website.²⁹ On information and belief, Travelocity captured “look and feel” elements of Nescafe’s web site, such as page headers, page footers, navigational tool bars, colors, text, and other graphics.³⁰ The Travelocity/Netscape co-branded website had content based on selected commerce objects such as hotel, air, and car reservations. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

(iii) **Travelocity/US Airways Prior Art**

Travelocity provided a private label e-commerce outsourcing solution website for US Airways so that US Airways had travel reservation capability under its own name with the same “look and feel” as its own website. Travelocity captured “look and feel” elements such as US Airways colors and graphics.³¹ For example, “US Airways will supply [The SABRE Group]

³¹ “The private label product must have the US Airways ‘look and feel’. This will be limited to the application name, graphics, and background color.” *US Airways Internet Reservation System Phase I: Travelocity Private Label*, December 5, 1997, p. 1. See DFNDT000340-344.

with all artwork necessary to modify Travelocity as provided herein.”³² Travelocity provided US Airways a link that was correlated with a selected commerce object by “granting] US Airways a non-exclusive and non-transferable right to place graphical Links on the Customer Websites to the US Airways [private label Travel Booking Engine].”³³ The private label booking engine utilized commerce objects such as “Flights,” “Cars,” and “Hotels” modules.³⁴ Travelocity served the private label website exhibiting the same “look and feel” as the US Airways webpage to visitor computers. Defendants continue to research this prior art to determine the full scope and depth of its teachings and its impact on the patents in suit.

(iv) **Travelocity/Online Italia Prior Art**

SABRE Interactive (now Travelocity) provided Travel Online Italia “an on-line travel reservation product with its own look and feel.”³⁵ The “look and feel” customization of Travel Online Italians private label page included replacing Travelocity graphics and tool bars with those provided by Travel Online Italia.³⁶

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,330,575 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<p>Briefly, according to the invention a method for designing a Web page, to be hosted on a Web page server, comprises: providing an object-oriented, template-driven interface for a customer to utilize in the design of the Web page. This allows the customer, through the use of the interface, to design the Web page. The method also comprises the step of publishing the Web page at a destination of the customer's choosing.</p> <p>Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.</p> <p>Moore '575, 3:23-39.</p>
8(a)	capturing a look and feel description associated with a host website;	<p>The Development Tool is object-oriented and template-driven, and it enables its customer, which is the merchant, to design a web site in only a few minutes and does not require any special Internet knowledge from the merchant. The Development Tool breaks the design process down into four steps. The first is to select a Web site category. The second is to collect optional page header and footer information. The third is to choose the defaults for the background color or image and for the page style. The fourth is to fill in the content of each page.</p> <p>Moore '575, 10:44-53.</p>

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,330,575 by Victor S. Moore and Glen R. Walters (filed March 31, 1998, issued December 11, 2001). [DFNDT0000181-0000207]

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>The first step is to select a category. The category is selected from a list of ten industries such as automotive, dining, and education. Referring to FIG. 6, there is shown a screen 600 containing a list of possible industries to choose from in the Development Tool. Alternate embodiments could employ different industries and a different number of choices. The list 600 also illustrates the simplicity of the merchant interface. The selected category is used by the Development Tool to preselect the image libraries and page style libraries that will be used in the fourth step. The Development Tool thus simplifies for the merchant the processes of finding appropriate clip art and page styles.</p> <p>The second step is to create the default header and footer. The page header and footer are typically used for the company name and logo. An email address and a link URL are also commonly included. As with many of the features of the Development Tool, the field size may be adjusted and images may be loaded. In this case, the height of the header, for example, may need to be increased in order to accommodate a particular company logo. Referring to FIG. 7, there is shown a screen 700 in which the merchant is prompted to enter the information for the header and the footer. The screen 700 further illustrates the simplicity of the merchant interface.</p> <p>The third step is to select the default background, which may be a color or an image, and page style. The Development Tool simplifies the process of choosing by offering grids of selections. The color grid, or pallet, contains 16 different colors. This color pallet can be used or the merchant can define his own. Similarly, a grid of clip art images is available for the merchant to choose from for background images. These default conditions for each page constitute a template, and begin to illustrate the template-driven nature of the Development Tool. The default background may be separately changed by the merchant for any particular page.</p>

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>Page styles allocate certain portions of each page to text, images, multimedia, etc. The style thus provides a template for all of the different content-related objects ("style components") that will appear on a page. Although the position and sizes of the style components are defined by the style, they can be changed by the merchant for any page. Referring to FIG. 8, there is shown a screen 800 which prompts the merchant to select a background and a style for the page. Page styles are further elaborated in FIG. 9, and FIG. 10 shows one style or template in isolation.</p> <p>The fourth step is to fill in the content for each of the style components. As shown, for example, in FIG. 10, each of the style components must be filled in. To do this, the merchant clicks on the style component and the Development Tool presents a "dialog" box which steps the merchant through the choices necessary to fill in the style component. FIGS. 11-13 show dialog boxes for image, text, and multimedia style components, respectively. For images, the merchant is presented with a selection, but may use other images as well. It is common for a merchant to scan logos and images that the merchant wants to use on his Web site. Any style component can also have a URL attached to it, and the dialog box allows the merchant to select this option.</p> <p>Each page created by the merchant can, as mentioned earlier, be modified. Style components can be added, deleted, moved, resized, etc. Another feature of the Development Tool is that it presents the page just as a Web customer will see it. This feature, called WYSIWYG for "what you see is what you get" allows the merchant to see, without publishing and browsing, what the published page will look like when it is published. Additionally, the Development Tool also provides a previewing option which uploads all of the pages and allows the merchant to view the entire Web site with a Web browser.</p>

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>When the pages are all created, the Development Tool allows the merchant to upload or publish the Web pages to a site specified by the merchant.</p> <p>Moore '575, 10:59-11:64. See also Figs. 6-13.</p>
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.</p> <p>Moore '575, 3:23-39.</p>
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Website (e.g. pictures, prices, search engines, etc.). There is provided, according to the present invention, a Development Tool for designing the Web storefront 106. This tool greatly simplifies the task of creating the Web storefront initially and of modifying it and updating it. The Tool also ensures that the operation with the Transaction Server 202 is seamless for the customer 114.</p> <p>The Tool derives much of its utility from the fact that it contains a series of templates, tailored to different industries, for creating pages. The fields on these templates can be filled with text, or with images from clip art (also included with the tool) or can be tailored to suit a specific merchant's needs. The task is greatly simplified by the inclusion of a prompting mode in which the tool will actually step a user through the process. As an additional tailoring feature, the tool can be adapted to whatever "look and feel" the customer may desire. The customer may want to match the look and feel to that of other applications that the</p>

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,490,567 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	Distributed electronic commerce is conducted over a network by substantially separating transaction functionality from merchant content. Electronic commerce transaction functionality is provided by a commerce server having a commerce database. The commerce server stores merchant and purchaser profile data and merchant content summaries on the commerce database. The purchaser browses and searches for product and merchant information using the commerce server, and is provided with more detailed information stored at a separate merchant content server system. The purchaser selects products to purchase, and a purchase order is sent to the commerce server. The commerce server initiates the settlement of accounts between the merchant and purchaser, and initiates order fulfillment for the selected product. The separation of transaction functionality and merchant content onto separate servers under the control of a commerce service provider and a merchant, respectively, provides a more efficient and effective way of carrying out electronic commerce over a network. Gregory '567, Abstract.
8(a)	capturing a look and feel description associated with a host website;	
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	A purchaser requests the commerce server to send shopping information. The purchaser browses or searches for products on the commerce server, and data regarding products and merchants is retrieved from the commerce database. At the purchaser's request for more information on a product or merchant, the commerce server refers the purchaser to an appropriate merchant content server, which contains much more detailed information about the product and merchant than is available from the commerce database.

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
		While browsing or searching the merchant content server, the purchaser may select one or more products for purchase. When the purchaser indicates he is ready to effectuate such a transaction, data concerning the selected product or products are sent to the commerce server. The data include information sufficient to identify the product, purchaser and selling merchant. The commerce server communicates with an external payment system to debit the purchaser's account and credit the merchant's account, effectuating the sale. The commerce server also generates a fulfillment message that ensures product delivery to the purchaser. Gregory '567, 2:48-67. See also 13-14, <i>infra</i> .
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	"The present invention thus advantageously provides a convenient and efficient way for a purchaser to shop over a network through simple and easy to understand interfaces. An embodiment of such an interface is shown in FIG. 11." Gregory '567, 7:54-57. A purchaser may choose to view product and merchant information by predetermined category, such as home appliances 113, outdoor gear 114, or electronics 115. Alternatively, the purchaser may wish to carry out a search of the commerce database. Such a search may be boolean, e.g., HIKING AND (BOOTS OR SHOES). In another embodiment, the search is in a natural language format as is known in the art, e.g., I NEED HIKING BOOTS FOR BACKPACKING. An embodiment of a screen responsive to such a natural language inquiry is shown in FIG. 12. Here, the response is shown according to the names of merchants 121, 122, 123 and 124 who sell hiking boots. In another embodiment, the response is shown in accordance with hiking boots products listed in the commerce database. In the embodiment

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 7,565,308 to Bolley ("Bolley '308")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,209,007 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bolley '308")
8	An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:	<p>A central hub server stands between a number of affiliate web sites and a number of vendor web sites to execute sales of vendor products featured on the affiliate web sites. Affiliate sites sign-up with the hub server and select products offered by vendors. The affiliate sites feature selected vendor products on their web sites. A buyer that browses an affiliate web site causes identifiers of the buyer, the affiliate site, and the product to be sent to the hub server. The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit information and shipping address. The hub server returns a form to the user visiting the affiliate site, including a picture of the product, its price and a submit icon superimposed on the picture. If the buyer clicks on the submit icon, the purchase information is returned to the hub server. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less commissions credited to the affiliate site and the hub. The form submitted to the vendor site includes all information necessary to make the purchase: product code, price, hub affiliate ID, and buyer shipping and billing information. The vendor site processes the sale and ships the product to the buyer's address.</p> <p>Bolley '308, Abstract.</p>
8(a)	capturing a look and feel description associated with a host website;	<p>Refer to FIG. 4 which is a flow diagram of computer software implementing select vendor products software. A list of available vendor products obtained from the vendors during the vendor sign-up procedure is displayed 402. Alternatively, product categories may be displayed. Affiliate sites may select 404 any number of different vendor's products to sell, or product categories, suited to the nature of the affiliate's web site. A separate template is generated 406</p>

Comparison of U.S. Patent No. 6,629,135 and PCT Application WO 99146709 to Voorhees ("Voorhees '709")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, PCT Application WO 99146709 to Voorhees anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<p>Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 Jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.</p> <p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
		through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.
		Voorhees '709, 3:23-39.
		See also, Figs. 1-2, 4:7-12; 8:4-17.
8(a)	capturing a look and feel description associated with a host website;	<p>The screen display that will be seen by the shopper in response to this inquiry is determined by the templates 13 and the particular jeweler's dataset, and may include display objects provided by manufacturers and determined by templates 12 and a manufacturer's dataset. Generally, the templates specify layouts (formats) which are filled in by content information specified in a dataset as directed by control information specified in a dataset, both found in the datasets within databases 10 and 11. The respective content information and control information may be entered by a system operator through system control unit 25, or it may be entered or modified by jewelers and manufacturers through communication software 22 and 23 respectively and forwarded through communication link 21</p> <p>To respond to a shopper's request, under control of display processor information contained in templates 13 specifies the general format of a display screen for a jeweler, and the general format is "filled in" with information unique to the particular jeweler whom the shopper has requested, according to content information found in the dataset (such as the jeweler's name and address, for example) associated with that jeweler. . . .</p> <p>The jeweler's dataset contains information about whether a particular manufacturer's boutique is to be shown and attributes specifying how the jeweler wishes it to be shown, while the manufacturer's templates 12 as filled in according to the manufacturer's dataset specify the content of the boutique. The manufacturer's dataset also includes control information which specifies such things as whether the particular jeweler is permitted to carry the boutique.</p>

- 2 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ("Voorhees '709")
		<p>Voorhees '709, 6:21 – 8:3.</p> <p>Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler 111. . . .</p> <p>Associated with each boutique in database 10 is a set of inclusion rules and a set of exclusion rules; for example, associated with boutique 1011 are inclusion rules 1012 and exclusion rules 1013. It is through these sets of rules that a manufacturer has control over which retailers may carry the boutique and which portions of the boutique they may customize. . . .</p> <p>The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>Voorhees '709, 9:13-11:6.</p> <p>Thus, the shopper is able to see the manufacturer's information without leaving the retail jeweler's web page, including all updates made by the manufacturer. And the shopper sees the retail jeweler's customization of the manufacturer's information. These factors in conjunction facilitate a satisfying purchase for the customer, a sale for the jeweler, and a sale for the manufacturer.</p> <p>Voorhees '709, 16:8-12.</p>
8(b)	providing the host website with a link for	Since jeweler 111's dataset contains boutique reference 112 to boutique

- 3 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ("Voorhees '709")
	inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page.</p> <p>Voorhees '709, 10:12-11:9.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page,</p>

- 4 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ("Voorhees '709")
		<p>and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.</p> <p>Voorhees '709, 15:3-22.</p> <p>See also Figs. 3A-3C, 4A-4D.</p>
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>Replicating a boutique from the manufacturer's database 10 into a display being made up by display processor 17 largely from jeweler's database 11 requires data transmission over path 14, which, as previously mentioned may be a hard path within a single host machine or a communications link between two host machines.</p> <p>As is known to those in the art, database 11 may or may not be implemented as an object-oriented database. If it is object-oriented, it will have instructions embedded in it and will initiate on its own a request over path 14 for the requisite information from database 10, and will provide all the information necessary for a display to display processor 17. If it is not object-oriented, display processor 17 will have to initiate requests for such information over path 14, and display processor 17 will be responsible for assembling information for a complete display from database 10 and database 11.</p>

- 5 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ("Voorhees '709")
		<p>Display processor 17 forwards the display information through server 20 and over communication link 21 to the shopper's communication software 24 which presents the shopper with the indicated display on his monitor.</p> <p>Voorhees '709, 8:4-17.</p> <p>Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page.</p> <p>Voorhees '709, 10:12-11:9.</p>

- 6 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99146709 in Voorhees ("Voorhees '709")
		<p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.</p> <p>Voorhees '709, 15:3-22.</p> <p>See also Figs. 3A-3C, 4A-4D.</p>
13	The process of claim 8, wherein the selected commerce object is a selected product.	<p>In Voorhees the selected product may be a piece or type of jewelry.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the</p>

- 7 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in PCT Application WO 99146709 in Voorhees ("Voorhees '709")
		<p>same general layout as element 26 in Fig. 4A, some items in it are seen to be different. This is a result of the aforementioned customization. The prices specified by RingCo's HTML description in element 26 are wholesale prices; after applying Ima Juler's customization with his markup of 100%, the prices shown in element 26A are twice those shown in element 26. Similarly, where element 26 shows SKU numbers, element 26A shows different "stock numbers." This conversion could be specified by Ima Juler in order to prevent the shopper from learning the true SKU number which might facilitate the shopper's "shopping around" for the item, which might be detrimental to Ima Juler.</p> <p>Thus, the shopper is able to see the manufacturer's information without leaving the retail jeweler's web page, including all updates made by the manufacturer. And the shopper sees the retail jeweler's customization of the manufacturer's information. These factors in conjunction facilitate a satisfying purchase for the customer, a sale for the jeweler, and a sale for the manufacturer.</p> <p>Voorhees '709, 15:20-16:12.</p> <p>See also, Fig. 4D.</p>
14	The process of claim 8, wherein the selected commerce object is a selected product category.	<p>In Voorhees the selected product category may be a boutique.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 1112. . . .</p> <p>Showboutique then, either internally or through the invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p>

Comparison of U.S. Patent No. 6,629,135 and U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<ol style="list-style-type: none"> 1. An employee 17 preferably accesses one or more electronic catalogs 24 stored on a shadow catalog server 22, accessed via a local area network 20 preferably by means of an employee workstation 18. These catalogs contain only those items for which a price has been negotiated between the enterprise and a particular supplier, so the verification by the enterprise's Purchasing department described above is obviated. 2. The employee selects items from the catalogs preferably with a mouse or similar device. Catalog items may be displayed with pictures, descriptions and other information in a fashion similar to a paper catalog. Where similar items are available, a "Compare" icon can be selected on the screen, causing the items to be listed side by side, with differences highlighted. Items can be located by searching down the taxonomy tree of the catalog (much as one searches through a paper catalog by finding the appropriate general section and then looking for a particular item), or by entering a search word or phrase. <p>Wiecha '717, 3:10-28.</p> <p>The client environment is shown in the lower segment of FIG. 6, defined by shadow server 106 which maintains a customized copy of the master catalog for distribution to local clients 102 and 104. Purchase orders are received by a Local buyer master server 86 from a data pathway connecting remote shadow LAN 108 with local buyer master LAN 88. The Buyer Master Server also performs the server function in the</p>

Comparison of U.S. Patent No. 6,629,135 and Internet Scrapbook¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, "Internet Scrapbook: Automating Web Browsing Tasks By Demonstration," Sugnira and Koseki, 1998 ("Internet Scrapbook") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended In Validity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Internet Scrapbook
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<p>In Internet Scrapbook, the host website includes web pages designed by the user and specified by URLs (Uniform Source Locators) where user computers can obtain a weather forecast, cyber news and sports results.</p> <p>The information that users need is usually distributed across several different pages. In cases where users need to obtain a weather forecast, cyber news and sports results from different pages, for example, they have to access all the necessary pages by repeatedly specifying URLs (Uniform Resource Locators) or by selecting them from bookmarks. . . .</p> <p>To reduce the operational cost of the browsing tasks, we have developed a programming by demonstration (PBD) [3] system, called Internet Scrapbook (referred to simply as "Scrapbook") in this paper, that allows users with little programming skill to automate their daily browsing tasks. In Scrapbook, a user can demonstrate which portions of Web pages he/she is interested in by creating an example personal page, that is, by copying only the necessary data from multiple pages and pasting them onto a single personal page. Once the personal page is created, the system automatically updates it by extracting the user-specified portions from the latest Web pages. The user can thus browse only the necessary information on a single page and avoid repetitive access to multiple Web pages.</p> <p>Internet Scrapbook, at 9.</p>

¹Unless noted, all citations in this chart are to "Internet Scrapbook: Automating Web Browsing Tasks by Demonstration" by Sugnira and Koseki (published in 1998). [DFNDT_0000208-0000217].

- 1 -

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Internet Scrapbook
8(a)	capturing a look and feel description associated with a host website;	<p>See also, pgs. 10-13.</p> <p>Using the generated patterns, the system updates the user's Scrapbook page. That is, it extracts portions that match the patterns from newly downloaded Web pages and reconstructs the Scrapbook page with the extracted data. However, a portion that <i>completely</i> matches the pattern cannot necessarily be found in the modified version of the Web page. In the cases of no complete match, the system performs partial matching to find possible candidates for extraction and selects the most plausible one by applying heuristics. . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p> <p>As we mentioned, Scrapbook generates a matching pattern at demonstration time and uses it to extract the user-desired portion from the future versions of the page. Therefore, it is required that patterns should be described using information that is expected to remain constant even after the page has been modified.</p> <p>Internet Scrapbook, at 10-11.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Internet Scrapbook
		extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics. <i>Id.</i> at 13.
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	In Internet Scrapbook, the link correlating the host website with a selected commerce object is a link to an article, weather forecast, or sports result. The Internet Scrapbook extracts the links from the original website.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Internet Scrapbook
		<p>Figure 4. Data extraction from a Web page.</p> <p>Generating Matching Patterns Every time the user selects and copies Web data from a Web browser, the system generates a matching pattern used for identifying the selected region in a source Web page. As we mentioned in the previous subsection, the pattern contains description of both the article headings</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Internet Scrapbook
		and positions. These descriptions are called a <i>heading pattern</i> and a <i>tag pattern</i> , respectively. Internet Scrapbook, 12. Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics. <i>Id.</i> at 13.
13	The process of claim 8, wherein the selected commerce object is a selected product.	
14	The process of claim 8, wherein the selected commerce object is a selected product category.	

Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the Travelocity/Yahoo! Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<p>The SABRE Interactive (now Travelocity) co-branded web site was an e-commerce outsourcing solution for Yahoo! so that Yahoo! had travel reservation capability under its own name with the same look and feel as its own website.</p> <p>"A. Yahoo! operates a search engine and World Wide Web directory under the brand 'Yahoo!'. B. SI operates a travel booking engine and interactive Internet travel services through its 'Travelocity' site, located at http://www.travelocity.com (the 'Travelocity Site'). C. Yahoo! and SI wish to provide Yahoo! users with travel booking services by distributing SI's booking engine on the Yahoo! Site and to advertise and promote SI's interactive Internet travel services, all in accordance with the terms and conditions of this Agreement." <i>Travel Services Advertising and Promotion Agreement</i>, June 30, 1997. See DFNDT000388-412.</p> <p>"2.1 <u>Yahoo! Travel Page</u>. Yahoo! shall provide a prominent hyperlink on the Yahoo! Travel Page to the Co-Branded Pages described in Section 2.2. Such hyperlink shall be placed above the fold on the Yahoo! Travel Page." <i>Travel Services Advertising and Promotion Agreement</i>, June 30, 1997. See DFNDT000388-412.</p> <p>"Purpose: To provide the ability to make flight, car and hotel reservations via Travelocity starting from a prominent hyperlink on the Yahoo! Travel Page." <i>Yahoo! Travel Booking Engine - High Level Requirements</i>, July 14, 1997, last modified on February 18, 1998. See DFNDT000413-422.</p>
8(a)	capturing a look and feel description associated with a host website;	Capture took place either when Yahoo! sent its look and feel elements directly to SABRE Interactive or when SABRE Interactive scraped the look and feel elements from an existing Yahoo! page.

Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		"This 'look and feel' will include the Yahoo! logo, the background color, and the toolbars." <i>See Yahoo! Travel Booking Engine - Scope Definition</i> , last modified on 8/1/1997. See DFNDT000423-428.
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object;	<p>SABRE Interactive provided Yahoo! with a hyperlink to the co-branded page; Yahoo! then provided its Yahoo! website with the hyperlink. The link was correlated with a selected commerce object such as air, hotel, or car reservation.</p> <p>"2.1 <u>Yahoo! Travel Page</u>. Yahoo! shall provide a prominent hyperlink on the Yahoo! Travel Page to the Co-Branded Pages described in Section 2.2. Such hyperlink shall be placed above the fold on the Yahoo! Travel Page." <i>Travel Services Advertising and Promotion Agreement</i>, June 30, 1997. See DFNDT000388-412.</p> <p>"Purpose: To provide the ability to make flight, car and hotel reservations via Travelocity starting from a prominent hyperlink on the Yahoo! Travel Page." <i>Yahoo! Travel Booking Engine - High Level Requirements</i>, July 14, 1997, last modified on February 18, 1998. See DFNDT000413-422.</p> <p>"Travelocity URL's and URL parameter names will be provided to Yahoo! three weeks after start of development." *** The Yahoo! travel page will include a flight express path. Modify the Travelocity entry point to accept the following parameters: - Number of passengers - Leaving from / going to cities - Departure date/ departure time - Return date / return time The Yahoo! travel page will include a cars express path. Modify the Travelocity entry point to accept the following parameters: - Pick-up city</p>

Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		<p>- Pick-up date / pick-up time - Return date / return time - Number of travelers - Type of car</p> <p>The Yahoo! travel page will include a cars express path. Modify the Travelocity entry point to accept the following parameters: - Check-in city - Check-in / check-out dates - Number of travelers - Number of rooms" <i>Yahoo! Travel Booking Engine - Scope Definition</i>, last modified on 8/1/1997 (emphasis added). See DFNDT000423-428.</p> <p><i>See also 13-14, infra.</i></p>
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>Once the hyperlink was activated, SABRE Interactive served a co-branded Yahoo! webpage corresponding to the Yahoo! look and feel in which the visitor was able to carry out travel planning using the selected commerce objects. As far as the scope of the claimed "look and feel" can be determined, the look and feel of the co-branded Yahoo! page served by SABRE Interactive included the Yahoo! logo, colors, travel menus, advertising, and toolbars.</p> <p>"2.2 <u>Co-Branded Pages</u>. SI shall create and serve a series of co-branded pages that guide Yahoo! Site users through the booking process for the Travel Services, at a minimum (the 'Co-Branded Pages'). The Co-Branded Pages shall include all pages through the first page containing a price quotation for travel-related services, but shall not include any pages in payment process." <i>Travel Services Advertising and Promotion Agreement</i>, June 30, 1997. See DFNDT000388-412.</p> <p>"1.1 '<u>Booking Engine</u>' means a database containing availability, schedule, and price information connected to a graphical user interface that allows users of the World Wide Web to make reservations for Travel Services, as a minimum, and complete payment for such Travel Services online." <i>Travel Services Advertising and Promotion Agreement</i>, June 30, 1997. See</p>

Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		DFNDT000388-412.
		<p>"(b) <u>User Interface</u>. The Co-Branded Pages shall conform to the graphical user interface utilized by Yahoo! across Yahoo!'s network of branded Internet properties as of the first date of the Exclusivity Period, and Yahoo! shall have the right reasonably to approve the final design of all Co-Branded Pages. Any material changes to the Co-Branded Pages thereafter shall be made upon the mutual agreement of the parties. Yahoo! shall assign one individual to work with SI to ensure that the Co-Branded Pages satisfy Yahoo!'s requirements. Yahoo! will use reasonable best efforts to ensure continuity of Yahoo! personnel involved in the design process. All pages displayed to Yahoo! Site users, other than the Co-Branded Pages, shall conform to the graphical interface utilized by SI, provided however Yahoo! shall have a reasonable right of approval with respect to such interface." <i>Travel Services Advertising and Promotion Agreement</i>, June 30, 1997. See DFNDT000388-412.</p> <p>"Because the Yahoo! Travel express page will be hosted on Yahoo!'s site, Yahoo! must have the ability to receive and pass the Session Identification (SID) between Travelocity in order to keep the user's Travelocity session established. This does not apply for users that have cookie browsers because the SID is stored and retrieved from the cookie." *** Modify lgbecome.pgd, vars.sub, lgmemnew.pgd, lgmemcon.pgd, lglogin.pgd, lgnewinf.pgd, and lgspflg.ct to pass the session parameters to ensure the reservation process can continue without interruption. Place the session parameters into the Parameter's Database (PDB) and remove them from the PDB once the user has completed the login process." <i>Yahoo! Travel Booking Engine - Scope Definition</i>, last modified on 8/1/1997. See DFNDT000423-428.</p> <p>"Certain pages within Travelocity will be designated as co-brand. Co-brand means that the pages will look and feel like Yahoo! pages, but will function the same as they do today in terms of required data elements, navigation and flow; except where otherwise</p>

		indicated in this document." <i>Yahoo! Travel Booking Engine - High Level Requirements</i> , July 14, 1997, last modified on February 18, 1998. See DFNDT000413-422. "Several Travelocity pages (fprqst, fpdisp1, fpdisp2, fpprice and bargain) will be designed with the Yahoo! masthead, footer and toolbar. 1. All references to Travelocity within the above pages will be modified to reflect Yahoo! Travel." <i>Yahoo! Travel Build your own itinerary</i> , last modified on March 24, 1998. See DFNDT000429-432.
13	The process of claim 8, wherein the selected commerce object is a selected product.	The visitor from the Yahoo! Travel page could purchase airline tickets and other selected products via the co-branded Yahoo! page served by SABRE Interactive. "1.1 'Booking Engine' means a database containing availability, schedule, and price information connected to a graphical user interface that allows users of the World Wide Web to make reservations for Travel Services, as a minimum, and complete payment for such Travel Services online." <i>Travel Services Advertising and Promotion Agreement</i> , June 30, 1997. See DFNDT000388-412. "2 User Interface and Site Functionality The following functionality will remain available to the Yahoo! booking engine. - 3 Best Itineraries - Flights & Prices -Cars - Hotels - Existing Reservations - Make Changes including Buy Now - Profile - Login" <i>Yahoo! Travel Booking Engine - Scope Definition</i> , last modified on 8/1/1997. See DFNDT000423-428.
14	The process of claim 8, wherein the selected commerce object is a selected product category.	The visitor from the Yahoo! Travel page could select airline tickets, car rentals, and hotel reservations via the co-branded Yahoo! page served by SABRE Interactive.

Comparison of the U.S. Patent No. 6,629,135 and Travelocity/Yahoo! Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		"2 User Interface and Site Functionality The following functionality will remain available to the Yahoo! booking engine. - 3 Best Itineraries - Flights & Prices -Cars - Hotels - Existing Reservations - Make Changes including Buy Now - Profile - Login *** The Yahoo! Travel main travel page will consist of an air, car, and hotel express user interface. In addition, the interface will have links to more comprehensive request pages (ftrqst.pgd, fprqst.pgd, htrqst.pgd, and crqst.pgd)." <i>Yahoo! Travel Booking Engine - Scope Definition</i> , last modified on 8/1/1997. See DFNDT000423-428.

Comparison of U.S. Patent No. 6,629,135 and Digital River Secure Sales System Prior Art¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the Digital River Secure Sales System ("SSS") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Digital River Secure Sales System
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	"Digital River's Secure Sales System (SSS) brings together software manufacturers and dealers enabling them to sell and deliver product via the Internet. This service will provide all digital delivery, security, collections and reporting of the sale of software. Throughout this process, it will appear to the consumer as if the transaction is being processed by the manufacturer or dealer while the Digital River SSS is handling the whole transaction "behind the scenes" [sic] <i>Digital River - Secure Encrypted Software Distribution</i> , http://web.archive.org/web/19970412160754/http://www.digitalriver.com/ ; [DR000001-2]. "Extend your selling environment Better yet, the entire transaction takes place in the selling environment you've created, surrounded by the look and feel of your identity, with your products presented the way you want them presented, with no competition. Your customers simply hit the purchase icon at your site and the whole process unfolds smoothly. There's no sensation of being suddenly hustled off to another location. Your customers won't end up at some foreign-looking page where they have to hunt to find your product." <i>Digital River - Secure Encrypted Software Distribution</i> , http://web.archive.org/web/19971221024519/digitalriver.com/Page3.html ; [DR000003-4] (emphasis original). Maintain your own identity and branding. Digital River facilitates the sale of your products to your customers. To most consumers, our services often appear as nothing more than a web site "buy" button. But behind this simple device is sophisticated electronic commerce technology which gives consumers the ability to immediately and easily purchase and download the digital products of their choice. As

¹ The Digital River SSS process was offered for sale, sold, and publicly used in connection with more than 500 client websites prior to September 17, 1998. While the referenced steps of the Digital River SSS process were consistently used with respect to these client websites, the specific elements Digital River utilized to create "transparent e-commerce support pages" for its clients varied based upon the specific look and feel of the host (client) website. The documents expressly referenced herein are provided as illustrative examples of the Digital River SSS process as utilized prior to September 17, 1998. Additional documents evidencing the offer for sale, sale and public use of the Digital River SSS process will be produced pursuant to Local Patent Rule 3-4(b).

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Digital River Secure Sales System
		consumers become more savvy, this efficiency of purchase and delivery will become one of the primary advantages of selling digital products over the Internet. When customers want to purchase, they push the "buy" button and are transferred immediately and transparently to the Digital River Central Commerce Server. This retains the "look and feel" of your own site and encourages the customer to buy - easily and quickly. Depending on your preferences and marketing initiatives, buyers can be offered additional cross-sell, up-sell, special offer and bundled products related to their purchases. Credit information is verified, the sale is transacted and the purchases are then downloaded to the buyer. <i>Digital River Information Kit</i> at 8 [DR004326]. "Digital River, Inc. proposes to maintain and develop transparent secure Internet marketing and sales services for Adobe's Web site and products. Services will be provided through Digital River's S3 commerce encryption solution which was designed to manage transactions behind the scenes . . ." <i>Internet Commerce Services Proposal for Adobe</i> , July 25, 1996; [DR000005-6]. [DR006649-86]. See also [DR074797-074937] and [DR074670-074796].
8(a)	capturing a look and feel description associated with a host website;	Flow chart depicting "The Digital River Internet Ordering System (StoryBoard Overview)" and stating "[a]ll ISV and Dealer pages are located on the Digital River Server." [DR000007-12]. Flow chart depicting "Level 1" and stating that depicted ISV and Dealer pages "will actually be built 'on-the-fly' as users arrive from various ISV and Dealer web pages using database image and content values . . . The user will be presented with a page on the Digital River Server that is similar in feel to the ISV or Dealer page." [DR000007-12]. "Vendor's Delivery Obligations. a. Initial Deliverables. . . Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions"¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,141,666 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,141,666 ("the '666 patent")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	"Although the present invention can be used in many applications which can utilize customization marketing tools unique to client/server communications across variety of communication network structures, the present invention is described in its application to PC Flowers & Gifts, an Internet site providing floral and gift services through Web site pages which are dynamically customized to the requirements of other Internet sites referring clients, i.e., consumers, to the PC Flowers & Gifts Web site pages." Column 5, lines 3-11. "The automatic tracking of the participating or referring Internet sites is crucial to transparently customizing Web site pages to take advantage of brand name recognition and customer loyalty." Column 5, lines 42-45. <i>Also see column 9, lines 5-31; FIGs. 11A-20.</i>
8(a)	capturing a look and feel description associated with a host website;	The '666 patent teaches: • a host website (http://homearts.com ; FIGs. 21A-B; and http://pathfinder.com/ ; FIGs. 11A-B). "The PC Flowers & Gifts marketing program comprising the floral and gift Web site pages are dynamically customized in accordance with the participating Internet site's requirements which may be co-branded, private label or, a program of labeling unique to the participating Web site. More specifically, the PC Flowers & Gifts Web site pages are customized in both a graphic and a content format to take advantage of the consumers [sic] familiarity with the participating Internet site's position in the marketplace, the consumer's trust in the participating Internet site's established brand name, or the consumer's existing relationship with the participating Web site." Column 5, lines 18-29.

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions"

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,141,666 ("the '666 patent")
		"[I]f a consumer were to visit one of the private label floral and gift services home page of the Internet site "Homearts", all the graphics and product categories on each of the PC Flowers & Gifts Web site pages, available through a hypertext link from a Homearts Web site, are fully customized in graphic and content format to reflect only the Homearts brand name." Column 5, lines 53-60. "Still referring to FIG. 21C, like the home page image map 101 discussed above, the home page image map 2101 herein is a grouping of the hypertext links 108-112, wherein the sever files for the linked Web site pages are dynamically created to reflect preferences of the marketing partner, which in this instance is a private label customizing for Homearts. Accordingly, all the server Web site pages accessed through the home page image map 2101 are anchored to PC Flowers & Gifts Web site pages that are dynamically created with fully customized graphic and text features according to Homearts' preferences. Such a private label customization of the Web site pages takes advantage of the client's existing relationship and familiarity with the marketing partner, Homearts. In addition, the hypertext link grouping 2103 retains the links 102-107 of the PC Flowers & Gifts Web site pages, however, like the home page image map 2101, the hypertext link grouping 2103 provides jumps to PC Flowers and Web site pages that are fully customized with the private label Homearts." Column 10, lines 8-26; FIG. 21C. <i>Also see column 9, lines 5-31; FIGs. 11A-20.</i>
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	The '666 Patent teaches: • the host website (http://homearts.com ; FIGs. 21A-B; and http://pathfinder.com/ ; FIGs. 11A-B); • a link (label 21B1 in FIG. 21B; and label 11B3 in FIG. 11B); and • a page (http://homearts.com/market/Main/ ; FIG. 21B; and http://pathfinder.com/ ; FIG. 11B). The link is correlated with a selected commerce object. For example, link 21B1 on the host website shown in FIG. 21B links to the website shown in FIG. 21C. The website shown in FIG. 21C includes the selected commerce object (e.g., an

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 5,991,740 "Data processing system for integrated tracking and management of commerce related activities on a public access network"¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 5,991,740 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 5,991,740 (hereinafter "'740 Patent")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	"The second established method of raising revenue by a Site Owner is to place banner ads on the web pages promoting a third party's goods or services." Column 4, lines 47-49; FIG. 5A.
8(a)	capturing a look and feel description associated with a host website;	"Co-branding of products/services is also efficiently accomplished in the foregoing environment. Co-branding is the marketing or sales of two products through a single promotion. The system controlling software on the Clearinghouse server includes a "merge" algorithm that takes two or more images and combines these into an aesthetically acceptable presentation. For example, the resulting banner on the Merchant site will include a "return" button to go back to the originating Site Owner." Column 9, line 64 - column 10, line 5.
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>"These promotional banners further include embedded code, creating a link to the sponsoring third party—hereinafter called the 'Merchant.'" Column 4, lines 49-52; FIG. 5B.</p> <p>"The second site of interest is the Merchant's server. At the Merchant's server, the specific goods are made available for purchase." Column 4, lines 60-62; FIG. 6B.</p>

Comparison of the U.S. Patent No. 6,629,135 and Quote.com Prior Art¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Quote.com Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Quote.com Prior Art
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<p>The Quote.com Prior Art discloses an e-commerce outsourcing process providing a host website (for example, AIG Sunamerica website) in communication with a visitor computer (for example, AIG Sunamerica website visitor) with context sensitive, transparent e-commerce support pages.² AIG Sunamerica Home website. [DFNDT0001639]; SunAmerica.com Market Summary Quotes and News web page. [DFNDT0001640-0001643]; and SunAmerica.com Market Summary Terms and Conditions web page. [DFNDT0001644-0001645]</p> <p>"Quote.com arms each participating site with numerous financial and news services which give users free access to stock quotes, four major newswire services as well as other financial market data. Visitors to the sites who request charts, portfolio updates, stock quotes or other information are immediately provided with a page that retains the brand and creative qualities of that particular site." Quote.com Provides Seven High-Profile Web Sites With Financial News And Information, PR Newswire, June 10, 1996 (hereinafter, "Quote.com PR Newswire"). [DFNDT0001634-0001635]</p> <p>"Installation of a Quick Ticker Client on a partner Web site with or without Co-branded Fulfillment Pages. When a user makes a request for information from a Partner's Web site, a page residing on Quote.com's servers is returned. Quote.com will include a Partner's graphics and navigation on these pages.</p>

¹ The AIG Sunamerica co-branded website attached hereto as [DFNDT0001639-0001645] and referred to herein is exemplary and is not meant to be limiting, as Quote.com was providing the same Quote.com Services to many partners, for example, e*Trade, Charter Media, Inc., The Hartford, BCL Online, Investors Journal, Multix Net, KickAssets, Lubbock Online, Network World Fusion, Offshore, Oregon Business Channel, Potter, Day & Associates PC, Bergerfunds, Defense Daily Network, Point, Procter, SpyNet, Stockprofiles.com, TD Waterhouse, Charles Schwab & Co., Inc., FWClient, Briefing, Freeman, JFWTrade, Greenline, Bank of America, Stock-Trak, Cigna, CMP Media, Digital Insight, JackWhite & Company, NewEdge Corp., Nando.net, Nationwide, Philadelphia Stock Exchange, OLDE, Quotetracker, Sagemarker, Wired.com, New York Times, Boston Globe, Los Angeles Times, Industry.net, Infoseek, Playboy, etc.

² The screen shots attached as [DFNDT0001639-0001645] reflect the AIG Sunamerica website and Quote.com co-branded pages as they existed in 2006. Defendants understand that the AIG website and Quote.com co-branded pages were the same in 1997, as evidenced by the copyright on the bottom of the home page and the terms and conditions page (1997-2006).

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,016,504 "Method and system for tracking the purchase of a product and services over the Internet"¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,016,504 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	<p>The '504 patent discloses an e-commerce outsourcing process wherein a host website ("virtual outlet Web site," Col. 5:25) in communication with a visitor computer ("customer computer," Col. 5:37-38) is provided with context sensitive, transparent e-commerce support pages ("merchant Web page," Col. 5:50) to facilitate purchases from customers:</p> <ul style="list-style-type: none"> • A "method... where [a] merchant, virtual outlet owner, and customer each have a computer connected through a network and where [a] purchase is conducted as a transaction over the network." Col. 4:5-7 (Summary of the invention). • "To purchase a product, a customer would first view a Web page provided by a VO... If a customer wishes to find more information about a product (e.g., cost or size information) or to purchase the product, the customer simply selects the image of the product displayed. When the image is selected, the customer computer then requests access to the merchant Web page identified by the associated URL. A merchant computer provides the merchant Web page to the customer computer." Col. 5:40-53. <p>The merchant computer dynamically creates a Web page with "a layout similar to that of the Web page for the [VO]." Col. 7:54-60.</p>
8(a)	capturing a look and feel description associated with a host website;	<p>The '504 patent discloses capturing a look and feel description associated with a host website (VO). The look and feel description is provided by the virtual outlet to the merchant.</p> <ul style="list-style-type: none"> • "The Web page of FIG. 6 inputs information concerning the appearance that the VO expects for a merchant order Web page that will be displayed when a customer hot links through the VO to the merchant site. This information

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,016,504 "Method and system for tracking the purchase of a product and services over the Internet" by Arnold, Bennett, et al. (filed Aug. 28, 1996, issued Jan. 18, 2000). [DFNDT0000077-0000114]

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,016,504 "Method and system for tracking the purchase of a product and services over the Internet"

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<p>includes a URL for a graphics file that contains the VO's logo, the desired background color, and other such information." Col. 9:14-20.</p> <ul style="list-style-type: none"> • "The example confirmation Web page repeats certain of the supplied sign-up information and displays the appearance requested by the representative for the merchant order Web page, including colors and fonts." Col. 9:46-50. • "[The Merchant Sign-up Component] prepares a confirmation Web page in the style specified by the VO for order processing Web pages, including specified logos, graphics, colors, and text fonts[.]" Col. 12:59-65. • "[Software routines] support processes by which the VO changes the appearance of order Web pages displayed by the merchant to customers." Col. 13:67-14:2. • "FIG. 16 lists example information returned by the VO to the merchant during the sign-up process." Col. 12:55-56. <p>The information in Figure 16 includes: URL of logos to display on order pages; URL for graphics for background; colors for various parts of screen; fonts for text; other characteristics for HTML display; etc.</p>
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>The '504 patent discloses providing the host website (VO) with a link (URL) for inclusion within a page on the host website for serving to a visitor computer (customer), wherein the provided link correlates the host website with a selected commerce object (product):</p> <p>"The Catalog_Browser routine allows a VO representative to browse through catalog Web pages supplied by the merchant... Items for sale are described and listed along with URLs corresponding to the order Web page that the merchant will supply to a customer linking through a VO Web page to the merchant site in order to purchase the item. The VO may incorporate items into the VO Web pages by including the URLs obtained from the merchant's catalog as hot links in the VO Web pages." Col. 10:41-50.</p>

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,016,504 "Method and system for tracking the purchase of a product and services over the Internet"

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<p>See also 13-14, <i>infra</i>.</p>
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>The '504 patent discloses, upon receiving an activation of the provided link from the visitor computer (customer selects merchant hotlink on VO Web page), serving to the visitor computer (customer computer) an e-commerce supported page (order page) with a look and feel corresponding to the captured look and feel description of the host website (VO) associated with the provided link and with content based on the commerce object (product) associated with the provided link:</p> <ul style="list-style-type: none"> • Where a request to display an order Web page corresponding to an item displayed by the VO on a VO Web page "has come to the merchant via a hotlink from the VO Web Page" the Merchant Order Processing Component "retrieves stored information supplied by the VO that allows the merchant computer to construct a description of an order Web page that appears similar to a VO Web page and uses the information to construct a description of an order Web page and send it to the customer[.] Some information, including the VO logo, may be obtained from the VO by accessing VO files using stored URLs. Other information may be stored entirely on the merchant computer." Col. 14:15-27 (emphasis added). • Claim 1 (emphasis added): <ul style="list-style-type: none"> o [...] o Displaying at the customer computer the virtual outlet Web page; o Receiving from the customer at the customer computer a selection of the product; o Sending from the customer computer to the merchant computer a request for the merchant Web page identified by the link associated with the selected product, the request including an indication of the virtual outlet; o Receiving at the merchant computer the request for the merchant Web page; o Upon receiving the request for the merchant Web page, under control of the merchant computer, modifying the merchant Web page

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,016,504 "Method and system for tracking the purchase of a product and services over the Internet"

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<p>[...]</p> <ul style="list-style-type: none"> o Sending from the merchant computer the modified merchant Web page... • Claim 2 (emphasis added): <ul style="list-style-type: none"> o The method of claim 1 wherein the merchant computer maintains a database of information describing a desired layout of the merchant Web page when the merchant Web page is accessed through the virtual outlet Web page and wherein the merchant computer customizes the merchant Web page in accordance with the information. • Claim 3: <ul style="list-style-type: none"> o The method of claim 2 wherein the information includes a name and logo of the virtual outlet. • Claim 4 <ul style="list-style-type: none"> o The method of claim 2 wherein the information includes preferred coloring of the merchant Web page. • Claim 5 <ul style="list-style-type: none"> o The method of claim 1 wherein the links are universal resource locators.
13	The process of claim 8, wherein the selected commerce object is a selected product.	<p>The '504 patent discloses the process described above wherein the selected commerce object is a selected product.</p> <ul style="list-style-type: none"> • "When a customer selects a product to purchase or to view product information, the browser accesses the Web page for the merchant that sells the product. The Web page is identified by a URL (i.e., hotlink) associated with that product." Col. 7:41-45 (emphasis added). • Claim 1 (emphasis added): <ul style="list-style-type: none"> o A method for tracking a purchase of a product... o [...] o Receiving from the customer at the customer computer a selection of

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<p>the product;</p> <p>Sending from the customer computer to the merchant computer a request for the merchant Web page identified by the link associated with the selected product, the request including an indication of the virtual outlet.</p>
14	The process of claim 8, wherein the selected commerce object is a selected product category.	<p>The '504 patent discloses the process described above wherein the selected commerce object is a selected product category.</p> <ul style="list-style-type: none"> • "FIG. 25 displays an example display Web page from a VO, including a number of items that can be ordered by a customer." Col. 14:40-42. • The "items" listed on the Figure 25 are actually product categories, including, for example, greeting cards. • "If the customer chooses to order a greeting card, then the customer will link directly to the greeting card merchant, who prepares and sends to the customer the order Web page displayed in FIG. 26." Col. 14:42-43. <p>The order Web page of Figure 26 corresponds to the "greeting cards" product category at the VO, and offers the customer a number of Card Choices to choose from.</p>

⁴ Also see Lewis Perdue, *EroticaBiz How Sex Shaped the Internet* 5-6 (IdeaWorx 2002), available at <http://www.erotica.biz.com/> ("Actual profits from an affiliate system had to wait until David Levine built SexToyFun (www.sextoyfun.com/) [sic] a substantial but decidedly quirky sex paraphernalia site. Levine said he launched his site in 1994 and began his first affiliate program in the spring of 1996. ... Levine's affiliate program was actually a virtual store service which allowed adult webmasters to set up, customize and brand their own sex toy stores with Levine's operation handling all the billing, fulfillment, shipping and customer service. Then in early 1997, Levine set up a more conventionally structured affiliate system like that used by Amazon and CDNow so webmasters could get referral commissions from the sale of products from his store.

While Levine's conventional affiliate system was launched after SporSource and CDNow, his pioneering role was the invention of "v-commerce" - an e-commerce business model halfway between traditional affiliate systems and outrightetailing.

... [T]he v-commerce operation pioneered by Levine offers ... [a] central e-supplier provid[ing] an online "catalog" from which the v-commerce affiliate can select. Each product selected by the affiliate goes into a cookie-cutter web page supplied by the mother site which offers a number of different pre-programmed and customizable styles from which to select.

When an order is placed in the affiliate's store, the mother site then works in the background, handling everything else from order taking and payments to shipping customer service and returns -- all within an e-commerce environment that looks just like the whole process is run by the affiliate.

Comparison of U.S. Patent No. 6,629,135 and Sextoy.com Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Sextoy.com Prior Art
		"We have been drop shipping sextoys from web-generated orders since February 1995. Thanks to our huge selection, user-friendly web site, great prices, quick customer service, reliable shipping, and easy secure payment options, we consistently out sell any other sextoy sites in cyberspace." <i>More information - Promote your own sextoy site,</i> http://web.archive.org/web/19980517011212/sextoy.com/cnv/moreinfo.html

Building upon the adult industry's experience, v-commerce was discovered by the non-adult market in 1998 when venture capitalists funded more than a dozen start-ups including vcommerce.com (born as Vstore) which backed by more than \$54 million in venture capital, is the non-adult patriarch in this field. ...

By early 2001, most other non-adult v-commerce operations had burned through their venture capital and were either out of business (Affinia.com, Nexchange), hanging on by a thread (Economy, Vitessa) or trying to re-invent themselves into another category that would attract more venture capital (esailer.com reborn as pop2it, a so-called "contextual commerce technology company.")

Thanks to the product affiliate sales system he invented, Levine has succeeded in making a profit from ecommerce on the Internet - something that has eluded hundreds of venture-financed retailers who have collectively poured billions of investment dollars down a very large and seemingly insatiable cyber-rathole. Significantly, Levine has been profitable from his first few months on the Web. Amazon and other are still scrambling to get out of the loss columns.⁵ (this article is referring to sextoy.com, not sextoyfun.com; David Levine began an affiliate program on sextoy.com in 1996). [DFNDT0001048-0001059]; also see WHOIS Record for sextoyfun.com, <http://www.networksolutions.com/whois/results.jsp?whoisoken=13> (last visited August 8, 2006) (sextoyfun.com was first registered on September 9, 1998) [DFNDT0001065-0001068]

⁵ Also see David Levine, <http://www.davelevine.com> (last visited on August 11, 2006) ("[O]ne idea was to take orders on the web and then forward the orders to companies who would drop ship the products to my customers. My goal was (and still is) to build a billion dollar company with no employees, no corporate office, and no inventory. I named my business Convergence, Inc. I started Wicked Cool Mall and opened stores selling lobsters, sneakers, watches, paintings, t-shirts, etc. Eventually I decided I could make more money focusing on one product niche rather than many different stores in a mall. Since SECTOY.com had the most sales, highest profit margins, and biggest traffic I decided to become the king of sex toys.

In 1996, I started the first affiliate program for adult products. An affiliate program allows anyone to sign up and get their own sextoy site for free. They can make the site look like their own, but we handle the orders and fulfillment [sic] and then send the affiliate a commission check each month for the sales in their store.⁶ [DFNDT0001078-0001079]

Comparison of U.S. Patent No. 6,629,135 and Sextoy.com Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Sextoy.com Prior Art
		(emphasis removed) (May 17, 1998 version of sextoy.com/cnv/moreinfo.html as archived by the Internet Archive ⁶). [DFNDT000947] It is well known to a person skilled in the art at the priority date of the '572 Application that drop shipping is a procedure where a manufacturer, supplier, or distributor ships the product (i.e., a sex toy) to a store's customer. One of the corporate philosophies of Convergence, Inc., the owner and operator of sextoy.com, is "[r]ather than make large investments in overhead or employees, we pay other companies to perform all jobs that are not our core business. ... Outsourcing is not only more efficient but also keeps our organization more nimble. Rather than having large investments that need to be paid off, by outsourcing, more costs become variable. If we decide to make sudden changes in business direction, we don't have to worry about liquidating any previous investments, we can just terminate a relationship we had with a company we were outsourcing to." <i>Convergence, Inc.</i> , February 4, 1998 version (emphasis removed). [DFNDT0001080-0001081] Accordingly, it is obvious to a person skilled in the art at the priority date of the '572 Application that Convergence, Inc. did not sell its own products or products it owned. Rather, Convergence, Inc. sold the products of a third party (i.e., the supplier, distributor, or manufacturer) at sextoy.com. 8(a) capturing a look and feel description associated with a host website; Capture took place when the host website operator emailed to dml@sextoy.com or faxed to (617) 666-3421 the <i>Promote your own sextoy site page</i> . "To get started as soon as possible: Please email the information below to us now dml@sextoy.com . Or you can fax it to (617) 666 3421." <i>Promote your own sextoy site</i> , May 17, 1998 version (emphasis removed). [DFNDT000945-000946] "What would you like at the top of the front page of your sextoy site? (You can submit actual HTML if you like). If you want to serve a logo or image, either forward us the image or give us the URL where it is located.

Comparison of the U.S. Patent No. 6,629,135 and IBM Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the IBM Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in IBM Prior Art
8	An e-commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e-commerce support pages, comprising the steps of:	IBM Credit Corporation provided a host website entitled, <i>Leasing & Financing Welcome to IBM Customer Leasing and Financing</i> at www.financing.hosting.ibm.com , (hereinafter " <i>Leasing & Financing website</i> ") with a link to a website of IBM Corporation with the same look and feel, entitled, <i>IBM planetwide ordering information</i> at www.ibm.com/Orders (hereinafter " <i>IBM Ordering website</i> "). ³ The merchant for the commerce object is one of IBM's business partners.

¹ WHOIS Record *ibm.com*, <http://www.networksolutions.com/whois/results.jsp?whoisoken=1> (last visited August 8, 2006) (*ibm.com* was first registered on March 19, 1986); [DFNDT0001821-0001824]

² Other examples of IBM web pages that were "host websites" in relation to the *IBM Ordering website* included: *The IBM Direct Planetwide home page*, <http://web.archive.org/web/19961219004723/http://direct.boulder.ibm.com> (December 19, 1996 version of <http://direct.boulder.ibm.com> as archived by the Internet Archive (see note 4)); [DFNDT0001802-0001807]; *IBM Planetwide help*, <http://web.archive.org/web/19961026164521/www.ibm.com/Finding> (October 26, 1996 version of www.ibm.com/Finding as archived by the Internet Archive (see note 4)); [DFNDT0001795-0001797]; and *IBM Worldwide Customer Financing*, <http://web.archive.org/web/19961104165233/www.financing.hosting.ibm.com/CFWWINTR.HTM> (November 4, 1996 version of www.financing.hosting.ibm.com/CFWWINTR.HTM as archived by the Internet Archive (see note 4)); [DFNDT0001808-0001812].

³ In another example of IBM prior art, the *IBM Ordering website* (www.ibm.com/Orders) [DFNDT0001798] was the "host website" and *The IBM Direct Planetwide home page*, December 19, 1996 version (<http://direct.boulder.ibm.com>) [DFNDT0001802-0001807] was the "second website."

8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>A link to the <i>IBM Ordering web page</i> was included in the source code for the <i>Leasing & Financing web page</i>. From the <i>IBM Ordering web page</i>, a visitor ordered products and services from IBM and its business partners.</p> <p>"Order" <i>Leasing & Financing web page</i>, December 27, 1996 version (emphasis and link removed)(hyperlink to http://www.ibm.com/Orders). [DFNDT0001799-0001801]</p> <p>"Order" Source code for <i>Leasing & Financing web page</i>, http://web.archive.org/web/19961227153901/www.financing.hosting.ibm.com (December 27, 1996 version of www.financing.hosting.ibm.com as archived by the Internet Archive.⁸); [DFNDT0001816-0001820]</p> <p>"IBM Direct: Your source for products and services from IBM and our business partners... planetwide." <i>IBM Ordering web page</i>, December 20, 1996 version. [DFNDT0001798]</p>

⁸ Internet Archive Frequently Asked Questions, *supra* note 4.

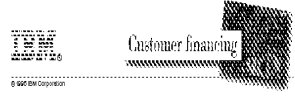

-4-

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in IBM Prior Art
		"[I]n some countries you can even order online." <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798]
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e-commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	From the <i>IBM Ordering</i> web page, a visitor ordered products and services from IBM and its business partners. "IBM Direct: Your source for products and services from IBM and our business partners... planetwide." <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798] "[I]n some countries you can even order online." <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798] As far as the scope of the claimed "look and feel" can be determined, the look and feel of the <i>IBM Ordering</i> web page was the same as the look and feel of the <i>Leasing & Financing</i> web page. ⁹ Specifically, both the <i>IBM Ordering</i> web page and the <i>Leasing & Financing</i> web page used a single column format with text in the same font, size, and black color on a white background. Unused text links were shown in blue underlined text and visited text links were shown in red underlined text on both web pages. ¹⁰ As described below, the look and feel also include using similar headers and footers. ¹¹

⁹ IBM used this same look and feel on many web pages on many different IBM websites. See e.g. *IBM Planetwide help*, October 26, 1996 version; [DFNDT0001795-0001797]; *The IBM Direct Planetwide home page*, December 19, 1996 version; [DFNDT0001802-0001807] and *IBM Worldwide Customer Financing*, November 4, 1996; [DFNDT0001808-0001812]

¹⁰ Both pages used the default colors of the web browser of the visitor computer for text colors. In the web browser that was used to view these pages, the default colors are blue, red and black for unused text links, visited text links, and regular text respectively. The actual colors of the links and text would have varied based on the default settings of the web browser of the visitor computer but the colors would have been consistent between the two web pages.

¹¹ Also see: *IBM PC ThinkPad* website,

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in IBM Prior Art
		Additionally, both web pages had headers with a similar look and feel. Both headers had the same blue IBM® logo in the top left corner with a copyright notice below the logo. The copyright notice was separated from the IBM® logo by a pink line that extended the length of the header. On the right side, both headers had a rectangular picture superposed over a portion of the pink line and a rectangular box superposed over a portion of the picture. Both rectangular boxes included text in the same font, size, and color. The text in both boxes was a short title or description of the web page. Header from <i>Leasing & Financing</i> web page:  Header from <i>IBM Ordering</i> web page:

<http://web.archive.org/web/19961219011414/http://www.pc.ibm.com/thinkpad/> (December 19, 1996 version of www.pc.ibm.com/thinkpad/ as archived by the Internet Archive; see note 4); [DFNDT0001893-0001904]; *End-user Customer Financing* website,

<http://web.archive.org/web/19961104164326/http://www.financing.hosting.ibm.com/CFCALLIE.HTM> (November 11, 1996 version of www.financing.hosting.ibm.com/CFCALLIE.HTM as archived by the Internet Archive; see note 4); [DFNDT0001905-0001917]; *Remarketer Financing* website,
<http://web.archive.org/web/19961104164859/http://www.financing.hosting.ibm.com/CFTALBOT.HTM> (November 11, 1996 version of www.financing.hosting.ibm.com/CFTALBOT.HTM as archived by the Internet Archive; see note 4); [DFNDT0001918-0001927]; *1995 Annual Report of IBM Credit Corp.*, December 19, 1996 version; [DFNDT0001879-0001882].

¹² Both pages used the default text link colors of the visitor computer; *supra* note 10.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in IBM Prior Art
		 Both web pages also had similar footers. The footers on both pages were separated from the rest of the web page by a grey line that extended the length of the web page. Both footers were enclosed in square brackets and comprised underlined text links in a similar font, size and blue color ¹² separated by " ". Footer from <i>Leasing & Financing</i> website: [IBM home page Order Search Contact IBM Help (C) (TM)] Footer from <i>IBM Ordering</i> website: [IBM home page Order Contact IBM Legal] <i>Leasing & Financing</i> web page, December 27, 1996 version; [DFNDT0001799-0001801] and <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798]
13	The process of claim 8, wherein the selected commerce object is a selected product.	"IBM Direct: Your source for products and services from IBM and our business partners... planetwide." <i>IBM Ordering</i> web page, December 20, 1996 version. [DFNDT0001798] "[I]n some countries you can even order online." <i>IBM Ordering</i> web page, December 20, 1996 version. 691676

Comparison of the U.S. Patent No. 6,629,135 and Net.Commerce for OS/390 Prior Art^{1,2}

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Net.Commerce for OS/390 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
8	An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:	<p>"Electronic commerce is one of the answers. One benefit that we can get from the Internet is to make it a primary profit source by creating a marketplace where companies will want to invest. The time has come to turn the Internet into a major business center for your company.</p> <p>In this book we cover Net.Commerce, a product that finally makes it possible to engage millions of users, anytime, anywhere in the age-old process of buying and selling goods, thus making the Internet truly the world's biggest marketplace." Pg. 1.</p> <p>"Companies that sell products or services to wholesalers and manufacturers need strong customer relationships, which often means secure communications as well as secure transactions. After all, there is no need to let the competition know what you and your partners are up to.</p> <p>On the other hand, companies selling directly to consumers may be more concerned with a Web presence that is more open and inviting, thus making customers feel as though they are receiving more personal attention. Some companies will achieve this by duplicating the shopping experience that consumers are already familiar with, for example, by creating an online virtual mall. Yet, although the virtual mall must be openly accessible to all, the customer must ultimately have enough confidence in the retailer to engage in electronic commerce. This paradox of accessibility and security must be overcome if the Internet is to realize its full business potential. IBM has different products and services for each aspect/sector of electronic commerce, but there is one that can fit all of them, namely, Net.Commerce.</p>

¹ Unless noted, all citations in this chart are to Net.Commerce for OS/390 by Rich Conway, Simon Armiger, Nils Bergquist, Kevin Curley, and Jarmo Lepinen, published by International Business Machines Corporation ("IBM") in July 1998. [DFNT0001082-0001301]

² The Net.Commerce book is a user guide and technical manual for the IBM Net.Commerce product for OS/390. The Net.Commerce book provides an "introduction to electronic commerce [in 1998] and the [Net.Commerce] product itself. ... [and] also provides examples of Net.Commerce implementations." Pg. vii.

- 1 -

Comparison of the U.S. Patent No. 6,629,135 and Net.Commerce for OS/390

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Net.Commerce is easy-to-use software that allows you to have online stores with dynamic pages. It works with the highest standards of Internet security including the Secure Socket Layer (SSL) and Secure Electronic Transaction (SET) protocols, and works with DB2 in order to integrate existing systems. It is both flexible and scalable. It can be used for business-to-business transactions, as well as for direct consumer sales, in both cases providing state of the art transaction security.</p> <p>Net.Commerce allows you to be part of the electronic business world, from store setup or mall home page, and to secure transactions with the newest methods and techniques of security on the Internet. You can access gateways that work with companies internal systems, or gateways that work directly with financial institutions for payment methods." Pg. 2.</p>
8(a)	capturing a look and feel description associated with a host website;	See pgs. 111-122 for a description of creating a self-contained store.
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>See also 13-14, <i>infra</i>.</p> <p>The host website can be the home page of the store and e commerce supported page can be the categories page (i.e., the selected commerce object is the product categories). In different example, the categories page can be the host website and the e commerce supported page can be the subcategories page (i.e., the selected commerce object is the product subcategories). In a third example, the subcategories page can be the host website and the e commerce supported page can be the product page (i.e., the selected commerce object is the product).</p> <p>"2.4.8 Default Shopping Trip The shopping trip that is provided by Net.Commerce in the demonstration shopping mall is outlined in Figure 8. Depending on the store you are building, you may have to modify it." Pg. 24.</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Figure 4: WebCommerce Object Structure 2/9</p> <p>Pg. 24.</p> <p>"In the default shopping process, this home page is a flat HTML file. For easier maintenance, a dynamic page would be preferable for stores with frequently changing products that still want to make offers from the home page." Pg. 20.</p> <p>"When you click on one of the boxes in 4, a text dialog box will appear. From the text dialog box, click on Insert, then Link. Select Category Page from the Link to item and type OS/390 Redbooks in the Linked Text field. The Merchant Reference number should already be filled in. Leave the Category Reference number blank for now. Click OK and the text dialog box will be filled in with some HTML link text. Hit File and Close - Save Changes. If using our example, you will need to repeat this step for the AIX Redbooks link." Pg. 119.</p> <p>"Take into account the dynamic nature of the Internet and of Net.Commerce. Think about putting specials and sales offerings directly on your home page or in your html page footer." Pg. 18.</p>

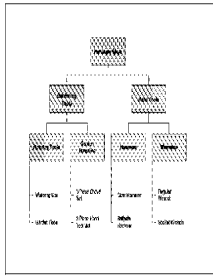

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>"If most customers do not need the information you are displaying on the product page, you may even offer a shortcut button on the category page." Pg. 18.</p> <p>"This is the first thing a shopper sees when surfing to your shopping site. Besides using graphical elements to lure the shopper into your store, you may consider putting special sales offerings on this page." Pg. 20.</p> <p>"The category pages link shoppers to the groups of products or services available in the store. You can compare them to a table of contents in a paper catalog or signs in a real store. They have to include category titles and images, descriptions, and of course hyperlinks to subcategories or product pages." Pg. 21.</p> <p>"The product pages include descriptions, attributes, images and price of the products. They might also contain a link to related products or to detailed product evaluations. Additionally, the product pages should include a link for adding the product to the shopping cart." Pg. 21.</p> <p>Pg. 21.</p>

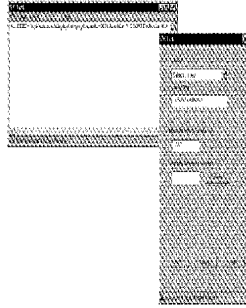

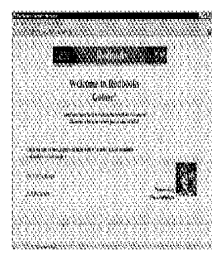

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Figure 21: Text Dialog Box 2/9/95</p> <p>Pg. 119.</p> <p>Example of a host website with provided link correlates the host website with a selected commerce object (i.e., an OS/390 Redbook and AIX Redbook).</p> <p>Figure 22: Main Web Page 2/9/95</p> <p>Pg. 121.</p>

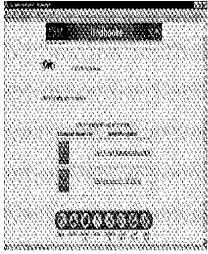

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Pg. 130. Also see pgs. 124-130.</p>
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>The host website can be the home page of the store and e commerce supported page can be the categories page (i.e., the selected commerce object is the product categories). In different example, the categories page can be the host website and the e commerce supported page can be the subcategories page (i.e., the selected commerce object is the product subcategories). In a third example, the subcategories page can be the host website and the e commerce supported page can be the product page (i.e., the selected commerce object is the product).</p> <p>The Net.Commerce book teaches the home pages, categories pages, and the product pages are all designed using templates. Furthermore, the Net.Commerce book teaches using a consistent layout for all web pages in a Store. Accordingly, as far as the scope of the claimed "look and feel" can be determined, the home page, categories pages, and the product pages in a Store would have a "look and feel corresponding to the captured look and feel description of the host website associated with the provided link."</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>"Try to use a basic and consistent layout on all your pages, one that is unique for your company. This includes headers and footers, colors, fonts, location of images, and so on.</p> <p>If you decide to design your site yourself, you can design most macros (dynamic HTML pages that interact with the Net.Commerce database) using the Template Designer, provided by Net.Commerce." Pg. 14</p> <p>"Whether the store will look like a single store or like a mall is a marketing decision. Some big stores might prefer looking like many smaller, specialized companies." Pg. 25.</p> <p>"The Template Designer is a Java applet-based, graphical object-oriented editing tool that allows you to create Web pages for an online mall or store, and to design and modify templates with a graphical HTML editor. You can use it to do the following:</p> <ul style="list-style-type: none"> · Create and update home pages, product pages, category pages, and Product Advisor pages. · Design headers and footers for the pages. · Modify the supplied sample category, product, and Product Advisor templates (if you save them with a new file name)." pg. 80. <p>"2.4.8 Default Shopping Trip The shopping trip that is provided by Net.Commerce in the demonstration shopping mall is outlined in Figure 8. Depending on the store you are building, you may have to modify it." Pg. 24.</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		 <p>Figure 7: Default Shopping Process</p> <p>Pg. 24.</p> <p>"In the default shopping process, this home page is a flat HTML file. 		 <p>Figure 11: Text and Link Dialog Box</p> <p>Pg. 119.</p> <p>An example of a host website and an e commerce supported page.</p>  <p>Figure 12: Welcome to Redbooks</p> <p>Pg. 121.</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		 <p>Pg. 130. Also see pgs. 124-130.</p> <p>"6.1.13.1 Category Template Assignment Go to Store Manager, then Product Categories. Select your store, then click the arrow beside the store name that appears below the selection list. This lists the Categories available in your store. Click the category you wish to assign a template to, then click the Template button at the bottom of the page. Enter the template name in the Category Template Assignment form which appears. Figure 81 on page 141 shows the form as we completed it. Save the form and ensure you get a confirmation message. You can view the Template after you have saved it by clicking the View Template button." Pg. 140.</p> <p>"6.1.13.2 Product Template Assignment Go to Store Manager, then Product Information. Select your store and product; the Search button at the bottom of the page will search your store database for all products if you cannot remember the product SKU. The results of the search are displayed in a window at the bottom of the page. You can select one of these and it will fill the entries in the product form for you. Next click the Templates button on the task bar on the left side of the administrator page, under Product Information. You will see a form similar to that in Figure 82 on page 142. Enter the product template macro name you created in the Product</p>

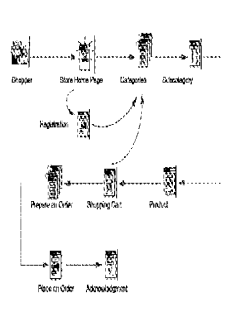

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Template section earlier in this chapter, in the Template form. Save the form, and check for the confirmation message. Fill in the template name (file name with *.d2w ending), save the form and click on View Template This should show you how the product template actually looks on the browser." Pg. 141.</p> <p>"6.1.13.3 Accessing Your Store From A Web Browser Finally, there is one last but very important link that we need to finish creating so that someone accessing your Internet shop can access the category and product template macros you have built.</p> <p>The link to a Category Page is an extremely important link, as it allows you to move from your home page in HTML that any browser can access by typing in a simple URL (for example http://www.itsoshop.com/rbgalore.html) to a macro that is not a simple URL. If you have a Self-Contained Store and you do not wish your customers to pass through an intermediate Mall frontpage, you will need a link like this in your home page.</p> <p>Go to Store Manager and open the Template Designer. Select your store (in our case it is Redbooks Galore) and hit Load. Select File, Open, then select your saved HTML image. Double-click on the box that reads OS/390 Redbooks and a text dialog box will appear. This is the same text dialog box that was built in Figure 57 on page 119. We are going to replace the HTML link logic in this text dialog box, so go ahead and erase all the text in the dialog box. After all the HTML link logic text is erased, do the following:</p> <ul style="list-style-type: none"> · Select Insert, then Link. A Link dialog box will appear. · Select Category Page from the Link to item and type OS/390 Redbooks in the Linked Text field. The Merchant Reference number should already be filled in. · Next, fill in the Category Reference number that was created in 6.1.11.1, "Enter Basic Product Information" on page 134. In our example it is 501. If you do not know what your Category Reference number is you can click on Browse and a Web browser window will display all the defined product

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>categories.</p> <ul style="list-style-type: none"> · Click OK and the text dialog box will be filled in with some HTML link text, as shown in Figure 83. Hit File and Close - Save Changes. If using our example, you will need to repeat this step for the AIX Redbooks link. <p>From Template Designer you can see what the page will look like by selecting File, then View in Browser. By clicking the link we have just created you should be taken to a page similar to that in Figure 69 on page 130.</p> <p>With this final link in place, you can now access your entire Internet shop from a Web browser. The footer file that we copied into the page allows you to access the shopping cart and other Net.Commerce functions.</p> <p>You can make the home page of your new Web site the default welcome page for your Web server by editing the Web server configuration file httpd.conf and changing the Welcome Directive to match the name of your home page. Alternatively, you can simply specify the full name for the home page in your Web browser URL. To access the site we have just created you would specify http://www.itsoshop.com/rbgalore.html." Pgs. 142-4.</p>
13	The process of claim 8, wherein the selected commerce object is a selected product.	<p>In one example, the subcategories page can be the host website and the e commerce supported page can be the product page (i.e., the selected commerce object is the product).</p> <p>"The category pages link shoppers to the groups of products or services available in the store. You can compare them to a table of contents in a paper catalog or signs in a real store. They have to include category titles and images, descriptions, and of course hyperlinks to subcategories or product pages." Pg. 21.</p> <p>"The product pages include descriptions, attributes, images and price of the products. They might also contain a link to related products or to detailed</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>product evaluations. Additionally, the product pages should include a link for adding the product to the shopping cart. Pg. 21.</p> <p>See Section 2.1 "Products and Their Classification" and section 2.1.1 "Choosing the Right Products" pgs. 21-2</p> <p>"6.1.12.1 Create a Product Template</p> <p>Start the Template Designer as before. Select File, New, Product Template. As with the Category Template, the following pages show our Product Template with the elements of interest numbered. Figure 79 on page 139 shows the Product Template, rbrpdtmp.d2w, we created.</p> <ul style="list-style-type: none"> · 1 is a text box with MERCHANT STORE NAME Database tag. · 2 is a text box with the PRODUCT SHORT DESCRIPTION tag. · 3 is an image box which has a database tag for the Product Full Sized Image. · 4 is a text box with two database field tags. The first pulls the product attribute names from the database, the second pulls the corresponding values. <p>Figure 80 on page 140 shows a screen shot of the Product Template with the Forms Palette and Form dialog box visible. These are used in the creation of an Add to Shopping Cart type button. First you click the Form Palette icon to get the Form Palette box. Next click the Insert Form Box icon. Draw out a box where you want your button. Make it slightly bigger than the actual button size you want. Double click the box and the Form dialog box appears. In here select the Add To Shopping Cart radio button and the Display Store Shopping Cart radio button. Close the dialog box. Click the Insert Submit Button icon on the Form Palette. Draw a box within the form box you have already created. This creates a submit button that will add the product information you have selected to the Shopping Cart. You can change the SUBMIT to something else within the submit button by double clicking it and the name in the subsequent dialog box." Pg. 138-9</p>

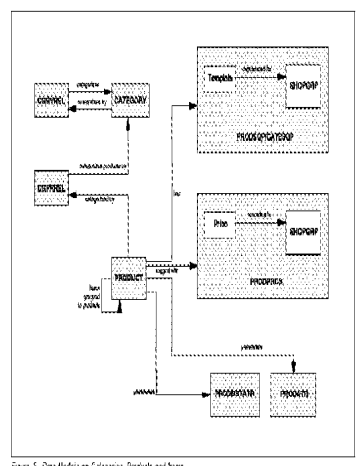

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
14	The process of claim 8, wherein the selected commerce object is a selected product category.	<p>For example, the host website can be the home page of the store and e commerce supported page can be the categories page (i.e., the selected commerce object is the product categories). In different example, the categories page can be the host website and the e commerce supported page can be the subcategories page (i.e., the selected commerce object is the product subcategories).</p> <p>"2.1.2 Product Categories</p> <p>To create a shopping environment where customers can easily feel at home, you should make sure they can find the products they need in the places they expect them. But, contrary to a real-life store, you can put products electronically in more than one place without using expensive shelf space. Use multiple "parents" if you want to include the product in multiple categories. For example, you could include milk in the cold drinks category as well as in the dairy products category. That way, you can make sure that a product (in this case milk) will be found by customers who take different paths while browsing through your online store.</p> <p>Most experienced users know what they want, and they want to get to it fast. Therefore, be sure to include a fast path for them to get to the products they have bought before, and to related products. Especially on slow connections, having to browse multiple categories is not a good idea. Depending on the products you are selling, customers accept differing shopping and order processes.</p> <p>For example, when shopping for groceries, customers do not want to browse two categories and one product page for every product they want to buy. They may just need a "grocery list" in which they can check items and specify the amount they need.</p> <p>However, for more expensive products, people are willing to invest time and effort in the process of finding the right product. In these cases, offer all</p>

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>information the shopper needs to make a decision, and build an easy but logical navigation structure around it.</p> <p>Net.Commerce provides you with great flexibility to find and implement the appropriate design for products and categories and also for multiple variations of the same product (also referred to as attributes or items). Figure 5 illustrates how such structures and relations are reflected in the Net.Commerce database:" pg. 12-3</p>  <p>Figure 5. Data Model on Categories, Products and Items</p> <p>Pg. 13.</p> <p>"The category pages link shoppers to the groups of products or services</p>

		 <p>Figure 11. Redbooks Book</p> <p>Pg. 119.</p> <p>"6.1.9.1 Create a Category Template</p> <p>Open Template Designer as described before. This time select File, New, and Category Template from the list. As with the home page creation Web page description earlier in this chapter, we will go through the individual elements. Figure 65 shows the Template Designer Category Template os390rbk.d2w that we created for the OS/390 Redbooks category.</p> <p>1 shows a Text Box with a Category Name Database tag. This corresponds to the text dialog box shown in Figure 66 on page 127.</p> <p>One difference in Template Designer between the HTML files and template files is the addition of a database pull-down menu in the menu bar of the text dialog box. This menu has a list of database entry names that correspond to entries that are made in the Net.Commerce administrator pages. By selecting one of these, a database tag is placed in the text box which is translated into an SQL command in the macro. In the case of the sample text box displayed in Figure 66 on page 127, the Category Name will be pulled from the database and</p>

Comparison of the U.S. Patent No. 6,629,135 and Net.Commerce for OS/390

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		displayed in the text box. This makes the template dynamic, in that it could be used with many different categories. The elements in the database specific to that category will be pulled out by the database tag. This Category Template Macro will be associated with a particular category in a form later on in the building process." Pg. 126. Also see pg. 127-131

Comparison of U.S. Patent No. 6,629,135 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent Application 09/995,278 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

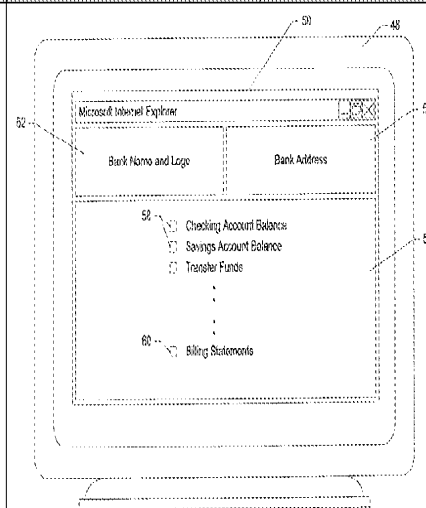

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
8	An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:	"This invention relates to electronic financial systems for the Internet. More particularly, this invention relates to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank." Saliba '278 ¶ 0002. According to one aspect of this invention, the financial institution has a Web server to support its Web site. The server presents a home page that allows its customers to select different services, such as examining a checking or savings account balance, or conducting a funds transfer. These services are supported locally at the financial institution's Web site. The home page also offers, however, an option to view customer-specific data, such as the customer's personal billing statements that are collected from a variety of different billers (e.g., phone bill, gas bill, cable TV bill, etc.). Saliba '278 ¶ 0009. At step 148 in FIG. 6, the service center server 110 offers a set of bill management and payment options to the customer. The customer may elect to examine the billing statements in detail by clicking on a particular bill in the list. The server 110 provides a new HTML page showing the billing statement framed within the bank's branding indicia, as shown in FIG. 4. The customer may further elect to pay all of the bill, part of it, or none of it. The customer may challenge part, or enter into a dialog with customer service. Saliba '278 ¶ 0065.
8(a)	capturing a look and feel description associated	"The home page 50 includes various branding indicia, such as the bank's name and logo

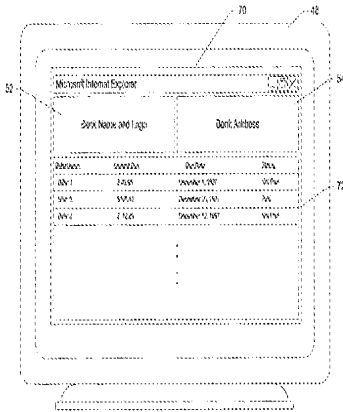

¹ Unless noted, all citations in this chart are to United States Patent Application 09/995,278 by Bassam A. Saliba, et al. (filed November 26, 2001). [DFNDT0000295-0000314]

Comparison of U.S. Patent No. 6,629,135 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
	with a host website;	52 and the bank's address 54. In addition, the branding indicia might comprise a particular format or stylistic schema, background color or texture, slogans, and so forth." Saliba '278 ¶ 0038. The service center's server 110 runs a branding software module 126, which are stored in program memory 118. The branding module 126 runs atop the operating system 124 during execution in the processing unit 112. The branding module 126 extracts the branding indicia passed from the bank and uses it to create a Web page that appears like the bank's own Web pages. It is noted that the branding module 126 may be integrated as part of the Web server software, rather than executed as a standalone application. Saliba '278 ¶ 0051. As one example, the service center server 110 has an HTML document that contains data fields for holding billing data retrieved locally from the bills database 40 and indicia fields for holding the branding indicia received remotely from the bank. The HTML document is rendered by the customer's browser program to present a UI that appears as though the bank itself presented the billing statements. This is shown in FIG. 3, for example, where the service center server 110 provides an HTML Web page 70 that contains a billing statement list 72 with data from the bills database 40, along with branding indicia 52, 54 received from the bank. Saliba '278 ¶ 0064.

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, The CompuServe Information Service ("CIS") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in CIS
8	An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:	<p>CIS is built on a multi-level client-server architecture model wherein CIS performs, in different scenarios, as a Host Site and an Outsource Provider as described in the '135 patent.</p> <p>In a first scenario, CIS incorporates links to e-commerce outsource providers into CIS content pages. For instance, CIS incorporates links to EasySABre, Travelshopper and other gateway service providers, each of which performs the role of Outsource Provider as described in the '135 patent. EasySABre, Travelshopper and other gateway services providers provide a platform for e-commerce support for a plurality of sites in a customer-transparent manner. In this scenario, visitors accessing sites operated by EasySABre, Travelshopper and other gateway service providers are presented with a look and feel similar to CIS.</p> <p>In a second (alternative) scenario, CIS provides e-commerce services to a plurality of merchants and other third parties in a customer-transparent manner wherein look and feel is adapted for each merchant site.</p> <p>See, e.g., Charles Bowen & David Peyton, <i>How to Get the Most Out of CompuServe</i> (5th ed. 1993) ("Bowen & Peyton"); Jill H. Ellsworth & Matthew V. Ellsworth, <i>Using CompuServe</i> (1994) ("Ellsworth & Ellsworth").</p>
8(a)	capturing a look and feel description associated with a host website;	<p>In the First Scenario, EasySABre, Travelshopper and other gateway service providers capture the look and feel of CompuServe (for instance, page layouts and standard navigation means) in a manner such that visitors accessing those services have the impression that the site is hosted by CIS, when in fact the content is hosted by the gateway service provider. The IQUEST gateway is another example, where CIS users connect to IQUEST servers and are served content as if they were still connected to CIS. See, e.g., Ellsworth & Ellsworth 316-29.</p> <p>In the second scenario, merchants and other content providers deliver information to</p>

Comparison of U.S. Patent No. 6,629,135 and the CompuServe Information Service ("CIS")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in CIS
		<p>visitors of CIS in a manner such that the look and feel can be adapted to the specification of that merchant. Examples of this scenario include Electronic Mall merchants and branded information content providers, such as PC Magazine, Consumer Reports, Time Magazine, The Associated Press and others.</p> <p>Various means are used to capture and deliver this look and feel. In one instance, CIS uses a patented protocol for accessing data and presenting it to the visitor computer. See US Patent 5,737,538, "System for remote microcomputer access and modification of information in a host computer" (the CompuServe "HMI" patent).</p> <p>Another means, used for Electronic Mall merchants, is the use of a store template by which all stores in the Electronic Mall have a consistent look & feel, while retaining branding unique to the merchant.</p> <p>Yet another means is the use of CIS software (BUILD and DPPGEN) to create look and feel, navigation and branding unique to a merchant or gateway service provider. See, e.g., [DFDNT0001349-65], [DFDNT_CD_0001] and Ellsworth & Ellsworth 415-25.</p> <p>See, e.g., Ellsworth & Ellsworth and [DFDNT_CD_0001]. See also U.S. Patent 5,737,538 [DFDNT0001302-42], [DFDNT0001369-428], and [DFDNT0001429-1529].</p> <p>For instance, in CIS, the BUILD/DPPGEN software accepts input files for each Mall Store or Travel Service and generates the look and feel for that store or service for the CIS environment and stores code corresponding to the look and feel description at a CompuServe server</p> <p>See, e.g., BUILD/DPPGEN source code and BUILDv2.PDF.</p>
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a	For instance, CIS provides links to the appropriate DPP code based on which service is being accessed. Links within the DPP code are used for correlating the Mall Store or Travel Service to the purchase of a selected product or service.

Comparison of U.S. Patent No. 6,629,135 and the CompuServe Information Service ("CIS")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in CIS
	selected commerce object; and	<p>See, e.g., [DFDNT_CD_0001] and Ellsworth & Ellsworth.</p> <p>In CIS, the link correlating the host site with a selected commerce object is a link to a menu of choices, an article, a catalog of orderable products, or a custom program that provides additional interaction with the visitor to locate and deliver objects.</p> <p>See, e.g., Bowen & Peyton and Ellsworth & Ellsworth 421.</p>
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>For instance, in CIS, the look and feel comes from a CIS host and content comes from the Mall Store or Travel Service host.</p> <p>See, e.g., [DFDNT_CD_0001] and Ellsworth & Ellsworth.</p> <p>In CIS, the visitor computer is served with e-commerce supported pages having the look and feel of the CIS but with content from the gateway service provider or other merchants.</p> <p>See, e.g., Ellsworth & Ellsworth 421, [DFDNT_CD_0001].</p>
13	The process of claim 8, wherein the selected commerce object is a selected product.	<p>For instance, in CIS, the selected commerce object can be a selected product, such as a digital file containing music, video, text, software, image or other structured content.</p> <p>See, e.g., [DFDNT_CD_0001] and Ellsworth & Ellsworth.</p> <p>In CIS, the selected commerce object can be a selected product, such as a digital file containing music, video, text, software, image or other structured content.</p> <p>See, e.g., Ellsworth & Ellsworth 421, [DFDNT_CD_0001].</p>
14	The process of claim 8, wherein the selected commerce object is a selected product category.	<p>In CIS, the selected commerce object may be a product category. For instance, in the case of EasySabre, the selected commerce object could be Hotels, Flights, Rental Cars, or other product categories. Or, in the case of the Electronic Mall, it could be a product category such as "Books".</p> <p>See, e.g., Ellsworth & Ellsworth 421.</p>

Comparison of U.S. Patent No. 6,629,135 and the CompuServe Information Service ("CIS")

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosure in CIS
		For instance, in CIS, the selected commerce object may be a product category. For instance, in the case of EasySabre, the selected commerce object could be Hotels, Flights, Rental Cars, or other product categories.

Invalidity Contentions for U.S. Patent No. 6,629,135
35 U.S.C. §112

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the claims of U.S. Patent No. 6,629,135 are invalid under 35 U.S.C. §112 for the reasons stated below.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Indefiniteness under Section 112
8	An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:	
8(a)	capturing a look and feel description associated with a host website;	The phrase "a look and feel description associated with a host website" is indefinite. See Defendants OurVacationStore.com, Inc and International Cruise & Excursion Gallery, Inc.'s Motion for Summary Judgment of Invalidity of U.S. Patent Nos. 6,629,135 and 6,993,572 Based on Indefiniteness, Filed July 14, 2002 [Document Number 117] (hereinafter, "Look and Feel MSJ").
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	The phrase "commerce object" is indefinite.
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	<p>The phrase "the visitor computer" is indefinite because it is not clear which visitor computer is being referenced (i.e., "a visitor computer" in the preamble or "a visitor computer" in the providing step).</p> <p>The phrase "a look and feel" is indefinite. See Look and Feel MSJ.</p> <p>The phrase "captured look and feel description of the host website" is indefinite. See Look and Feel MSJ.</p> <p>The phrase "commerce object" is indefinite.</p>
13	The process of claim 8, wherein the selected commerce object is a selected product.	The phrase "commerce object" is indefinite.

Invalidity Contentions for U.S. Patent No. 6,629,135
35 U.S.C. §112

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Indefiniteness under Section 112
14	The process of claim 8, wherein the selected commerce object is a selected product category.	The phrase "commerce object" is indefinite.

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,141,666 to Tobin ("Tobin") combined with U.S. Patent No. 7,565,308 to Bolley ("Bolley")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,141,666 to Tobin combined with U.S. Patent No. 7,565,308 to Bolley renders obvious the asserted claims as described in part below. See Defendants' Invalidity Contentions for an explanation of the reasons for combining Tobin and Bolley.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosures
1	1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	See Ex. 17C, at 1. See Ex. 3C, at 1.
1(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated; (j) wherein each of the first web pages belongs to one of a plurality of web page owners; (ii) wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and (iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one other;	See Ex. 17C, at 1(a). See Ex. 3C, at 1(a).
1(b)	automatically retrieving from a storage coupled to the server pre stored data associated with the source page; and then	See Ex. 17C, at 1(b). See Ex. 3C, at 1(b).
1(c)	automatically with the server computer generating and transmitting to the web browser a second web page that includes: (j) information associated with the commerce object associated with the link that has been activated, and (ii) a	See Ex. 17C, at 1(c). See Ex. 3C, at 1(c). See also 3-6, <i>infra</i> .

Comparison of the U.S. Patent No. 6,629,135 with U.S. Patent No. 5,870,717 "System for ordering items over computer network using an electronic catalog" combined with the Travelocity Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 5,870,717 combined with U.S. Patent No. the Travelocity Prior Art renders obvious the asserted claims as described in part below.

According to Plaintiff's Infringement Contentions regarding Travelocity, there is a motivation to combine the Travelocity's Prior Art with Wiecha because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Travelocity Prior Art brought together merchants, retailers, and customers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 8A. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. See Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Travelocity Prior Art and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Comparison of U.S. Patent No. 6,629,135 and United States Patent Application 09/995,278 by Saliba ("Saliba '278") combined with the Digital River Secure Sales System ("Digital River SSS")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent Application 09/995,278 combined with Digital River SSS renders obvious the asserted claims as described in part below.

There is motivation to combine Saliba '278 and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba '278 discloses an electronic financial system for providing financial services over the Internet has multiple billers, a service center, multiple financial institutions. See Saliba '278 at Abstract. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 9A. Both Saliba '278 and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Claim No.	Claim Language of U.S. Patent No. 6,629,135	Relevant Disclosures
8	An e commerce outsourcing process providing a host website in communication with a visitor computer with context sensitive, transparent e commerce support pages, comprising the steps of:	See Ex. 9A, at 8. See Ex. 31A, at 8.
8(a)	capturing a look and feel description associated with a host website;	See Ex. 9A, at 8(a). See Ex. 31A, at 8(a).
8(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	See Ex. 9A, at 8(b). See Ex. 31A, at 8(b).
8(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer an e commerce supported page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link.	See Ex. 9A, at 8(c). See Ex. 31A, at 8(c).
13	The process of claim 8, wherein the selected commerce object is a selected product.	See Ex. 9A, at 13. See Ex. 31A, at 13.

Comparison of the U.S. Patent No. 6,629,135 and U.S. Patent No. 6,330,575 to Moore ("Moore '575") combined with U.S. Patent No. 7,565,308 to Bollay ("Bollay")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,330,575 combined with U.S. Patent No. 7,565,308 renders obvious the asserted claims as described in part below.

There is a motivation to combine Moore with Bollay because they both are related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. See Moore at Abstract. Similarly, Bollay discloses a network configuration of a number of affiliate web sites and a number of vendor web sites designed to execute sales of vendor products featured on the affiliate websites. See Bollay at Abstract. The affiliate websites feature vendor products where a buyer can browse the various products, research information about the products, and purchase the products. Both Moore and Bollay disclose electronic commerce systems that are directed to efficiently selling commerce objects over the Internet.

Comparison of the U.S. Patent No. 6,629,135 and Digital River Secure Sales System Prior Art combined with U.S. Patent No. 5,870,717 to Wiecha ("Wiecha")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Digital River Secure Sales System Prior Art combined with U.S. Patent No. 5,870,717 renders obvious the asserted claims as described in part below.

According to Plaintiff's Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River Secure Sales System Prior Art with Wiecha because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 9A. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. See Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River Secure Sales System and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,330,575 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
1	An e-commerce outsourcing process comprising:	<p>Briefly, according to the invention a method for designing a Web page, to be hosted on a Web page server, comprises: providing an object-oriented, template-driven interface for a customer to utilize in the design of the Web page. This allows the customer, through the use of the interface, to design the Web page. The method also comprises the step of publishing the Web page at a destination of the customer's choosing.</p> <p>Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.</p> <p>Moore '575, 3:23-39.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	<p>The Development Tool is object-oriented and template-driven, and it enables its customer, which is the merchant, to design a web site in only a few minutes and does not require any special Internet knowledge from the merchant. The Development Tool breaks the design process down into four steps. The first is to select a Web site category. The second is to collect optional page header and footer information. The third is to choose the defaults for the background color or image and for the page style. The fourth is to fill in the content of each page.</p> <p>Moore '575, 10:44-53.</p>

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,330,575 by Victor S. Moore and Glen R. Walters (filed March 31, 1998, issued December 11, 2001). [DFNDT0000181-0000207]

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>The first step is to select a category. The category is selected from a list of ten industries such as automotive, dining, and education. Referring to FIG. 6, there is shown a screen 600 containing a list of possible industries to choose from in the Development Tool. Alternate embodiments could employ different industries and a different number of choices. The list 600 also illustrates the simplicity of the merchant interface. The selected category is used by the Development Tool to preselect the image libraries and page style libraries that will be used in the fourth step. The Development Tool thus simplifies for the merchant the processes of finding appropriate clip art and page styles.</p> <p>The second step is to create the default header and footer. The page header and footer are typically used for the company name and logo. An email address and a link URL are also commonly included. As with many of the features of the Development Tool, the field size may be adjusted and images may be loaded. In this case, the height of the header, for example, may need to be increased in order to accommodate a particular company logo. Referring to FIG. 7, there is shown a screen 700 in which the merchant is prompted to enter the information for the header and the footer. The screen 700 further illustrates the simplicity of the merchant interface.</p> <p>The third step is to select the default background, which may be a color or an image, and page style. The Development Tool simplifies the process of choosing by offering grids of selections. The color grid, or pallet, contains 16 different colors. This color pallet can be used or the merchant can define his own. Similarly, a grid of clip art images is available for the merchant to choose from for background images. These default conditions for each page constitute a template, and begin to illustrate the template-driven nature of the Development Tool. The default background may be separately changed by the merchant for any particular page.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>Page styles allocate certain portions of each page to text, images, multimedia, etc. The style thus provides a template for all of the different content-related objects ("style components") that will appear on a page. Although the position and sizes of the style components are defined by the style, they can be changed by the merchant for any page. Referring to FIG. 8, there is shown a screen 800 which prompts the merchant to select a background and a style for the page. Page styles are further elaborated in FIG. 9, and FIG. 10 shows one style or template in isolation.</p> <p>The fourth step is to fill in the content for each of the style components. As shown, for example, in FIG. 10, each of the style components must be filled in. To do this, the merchant clicks on the style component and the Development Tool presents a "dialog" box which steps the merchant through the choices necessary to fill in the style component. FIGS. 11-13 show dialog boxes for image, text, and multimedia style components, respectively. For images, the merchant is presented with a selection, but may use other images as well. It is common for a merchant to scan logos and images that the merchant wants to use on his Web site. Any style component can also have a URL attached to it, and the dialog box allows the merchant to select this option.</p> <p>Each page created by the merchant can, as mentioned earlier, be modified. Style components can be added, deleted, moved, resized, etc. Another feature of the Development Tool is that it presents the page just as a Web customer will see it. This feature, called WYSIWYG for "what you see is what you get" allows the merchant to see, without publishing and browsing, what the published page will look like when it is published. Additionally, the Development Tool also provides a previewing option which uploads all of the pages and allows the merchant to view the entire Web site with a Web browser.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>When the pages are all created, the Development Tool allows the merchant to upload or publish the Web pages to a site specified by the merchant.</p> <p>Moore '575, 10:59-11:64. See also Figs. 6-13.</p>
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.</p> <p>Moore '575, 3:23-39.</p>
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	<p>The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Web-site (e.g. pictures, prices, search engines, etc.). There is provided, according to the present invention, a Development Tool for designing the Web storefront 106. This tool greatly simplifies the task of creating the Web storefront initially and of modifying it and updating it. The Tool also ensures that the operation with the Transaction Server 202 is seamless for the customer 114.</p> <p>The Tool derives much of its utility from the fact that it contains a series of templates, tailored to different industries, for creating pages. The fields on these templates can be filled with text, or with images from clip art (also included with the tool) or can be tailored to suit a specific merchant's needs. The task is greatly simplified by the inclusion of a prompting mode in which the tool will actually step a user through the process. As an additional tailoring feature, the tool can be adapted to whatever "look and feel" the customer may desire. The customer may want to match the look and feel to that of other applications that the</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		customer uses, or may simply feel more comfortable with another look and feel. Moore '575, 5:27-48. The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") 506. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product. Moore '575, 6:12-22. See also Figs. 6-16.
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Web-site (e.g. pictures, prices, search engines, etc.). There is provided, according to the present invention, a Development Tool for designing the Web storefront 106. This tool greatly simplifies the task of creating the Web storefront initially and of modifying it and updating it. The Tool also ensures that the operation with the Transaction Server 202 is seamless for the customer 114. The Tool derives much of its utility from the fact that it contains a series of templates, tailored to different industries, for creating pages. The fields on these templates can be filled with text, or with images from clip art (also included with the tool) or can be tailored to suit a specific merchant's needs. The task is greatly simplified by the inclusion of a prompting mode in which the tool will actually step a user through the

23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within	The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Web site (e.g. pictures, prices, search engines, etc.). There is provided, according to the present invention, a Development Tool for designing the Web storefront 106. This tool greatly simplifies the task of creating

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
	the product categories.	<p>the Web storefront initially and of modifying it and updating it. The Tool also ensures that the operation with the Transaction Server 202 is seamless for the customer 114.</p> <p>Moore '575, 5:27-35.</p>
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	<p>The Tool, as either an applet which would run on top of a browser or as an application, would be downloaded from a Store Builder Server. Referring to FIG. 4, there is shown a distributed electronic commerce system 400 with a Store Builder Server 402. The merchant could download the Java wizard applet to build the pages for the Web storefront, which will reside on the Store Server 204. The Store Builder Server 402 would also contain Java servlets that would receive the HTML from the wizard applet for the storefront pages that the merchant designed and would build the store pages from this HTML. This, of course, would happen when the merchant initially designed the pages, or whenever the merchant updated or modified them. The servlet, on the Store Builder Server 402, would then publish the Web storefront pages wherever the merchant designates.</p> <p>Moore '575, 5:49-63.</p> <p>The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") 506. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product.</p> <p>Moore '575, 6:12-22.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>The Development Tool can be used to support a variety of electronic commerce models. The preferred embodiment uses a special URL referred to as a "price URL." A price URL is a link to the Java servlets residing, in the preferred embodiment, on the Store Builder Server and can be attached to any style component. The Web customer would then select, for example by clicking with a mouse, the style component in order to buy the product which it describes. Alternate embodiments could use the price URLs to link straight to the Transaction Server, or to another site. The price URL has attached an encrypted message that contains a text description of the item for sale, including a picture, its costs, quantity of measure, the merchant's ID, several fields used to customize the Buy Page that is created from the attached data, and a special signature from the Store Builder Server. The encoding is done with the public key of the Store Builder Server, but other encryption means are possible. The signature assures that the price URL was created by the Store Builder Server, and therefore guarantees that the price and the other data associated with the URL were originally created and sanctioned by the merchant. FIG. 15 shows the dialog page for the price URL.</p> <p>The Store Builder Server is able to decrypt the price URL data and convert it into an HTML page (a Buy Page). A typical Buy Page is shown in FIG. 16, and its purpose and operation has been explained earlier. Another Java servlet on the Store Builder Server preserves the state between HTTPd requests in the shopping basket. The shopping basket keeps track of the data portion of the price URL for all items that a shopper wants to buy from the Web pages.</p> <p>Moore '575, 12:3-32.</p>
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the	<p>The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
	second website.	<p>Builder Server by using a Uniform Resource Locator ("URL") 506. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product.</p> <p>Moore '575, 6:12-22.</p> <p>The merchant can redesign the site, change prices, decide to have a sale, add or delete products, update the site with pictures or other content, expand the number of places that offer the products for sale on-line, change hosting sites, and much more, all without even notifying the Store Builder Server or the Transaction Server. The merchant has almost complete control. The merchant can do anything the merchant wants with the site or with the information on the site. The only restriction is that the price URLs, which allow the Store Builder Server to build the Buy Pages, have to be included on the site, or elsewhere, in order for the Web customer to place an order. The merchant can even totally remove the Web storefront, and simply post the price URLs on news groups or on another web site.</p> <p>Moore '575, 8:47-61.</p>
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service.	<p>The customer leaves his shopping basket page by either making a purchase or continuing shopping. If the customer decides to make the purchase, he is hyperlinked to the Transaction Server 514. The Transaction Server, thus, is not involved until money is ready to be transferred. The Transaction Server, therefore, immediately establishes a secure link between itself and the customer's browser 516. Any security protocol could be used, but the secure sockets layer ("SSL") protocol is preferred. After establishing a secure link, the Transaction Server prompts the customer for the necessary identification, delivery, and payment information 518.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>In an alternate embodiment, the functions of establishing a secure link and getting the customer's payment information could be done in the Store Builder Server. The Transaction Server would then receive this information from the Store Builder Server, in an encrypted form, and decrypt it. This would provide an embodiment in which the Transaction Server did not need to interact in real-time with the customer, but merely provide a confirmation if desired.</p> <p>The Transaction Server may, optionally, verify the credit card information, authorize the payment amount, and transfer the funds to the merchant's account 520. The Transaction Server would do this by using a third party credit card clearinghouse such as IC Verify or Automated Transaction Services (ATS). The merchant need not request this service from the Transaction Server, however. Low-volume merchants may prefer simply to be e-mailed (securely) or faxed the entire purchase order, and perform these functions themselves, thereby saving the associated cost that the transaction service provider would have charged. Additionally, the merchant may prefer to check his inventory before charging the customer.</p> <p>In either case, the Transaction Server will notify the merchant of the status of the transaction and supply all of the product, customer, delivery, and payment information 522. If the customer provided an e-mail account, then the Transaction Server will also send a confirmation of the transaction to the customer 522.</p> <p>Moore '575, 6:44-7:15.</p>
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	See 23, <i>supra</i> .
27(a)	before serving the composite web page to the visitor computer:

See 26, <i>supra</i> .

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,490,567 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
1	An e commerce outsourcing process comprising:	<p>Distributed electronic commerce is conducted over a network by substantially separating transaction functionality from merchant content. Electronic commerce transaction functionality is provided by a commerce server having a commerce database. The commerce server stores merchant and purchaser profile data and merchant content summaries on the commerce database. The purchaser browses and searches for product and merchant information using the commerce server, and is provided with more detailed information stored at a separate merchant content server system. The purchaser selects products to purchase, and a purchase order is sent to the commerce server. The commerce server initiates the settlement of accounts between the merchant and purchaser, and initiates order fulfillment for the selected product. The separation of transaction functionality and merchant content onto separate servers under the control of a commerce service provider and a merchant, respectively, provides a more efficient and effective way of carrying out electronic commerce over a network.</p> <p>Gregory '567, Abstract.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>A purchaser requests the commerce server to send shopping information. The purchaser browses or searches for products on the commerce server, and data regarding products and merchants is retrieved from the commerce database. At the purchaser's request for more information on a product or merchant, the commerce server refers the purchaser to an</p>

1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	<p>Rather than operate their own commerce servers, smaller merchants typically purchase electronic commerce services provided by a commerce service provider. In this case, the provider owns and maintains the commerce server, who distributes configuration, operation and maintenance costs across the subscriber merchants, realizing an economy of scale. However, in so doing, the provider usually enforces uniform standards for appearance and methods of doing business to reduce the amount of custom programming necessary in order to economically accommodate several different merchants. Thus, each merchant being served loses a substantial amount of control over the way he conducts business over the network. This restricts the merchant's ability to express a particular personality and to do such things as develop distinctive trade dress. This places him at a competitive disadvantage in the marketplace, especially when compared to those merchants who can operate their own servers.</p> <p>Gregory '567, 1:31-48.</p> <p>"The present invention thus advantageously provides a convenient and efficient way for a purchaser to shop over a network through simple and easy to understand interfaces. Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 7,565,308 to Bollay ("Bollay '308")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,209,007 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
1	An e-commerce outsourcing process comprising:	<p>A central hub server stands between a number of affiliate web sites and a number of vendor web sites to execute sales of vendor products featured on the affiliate web sites. Affiliate sites sign-up with the hub server and select products offered by vendors. The affiliate sites feature selected vendor products on their web sites. A buyer that browses an affiliate web site causes identifiers of the buyer, the affiliate site, and the product to be sent to the hub server. The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit information and shipping address. The hub server returns a form to the user visiting the affiliate site, including a picture of the product, its price and a submit icon superimposed on the picture. If the buyer clicks on the submit icon, the purchase information is returned to the hub server. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less commissions credited to the affiliate site and the hub. The form submitted to the vendor site includes all information necessary to make the purchase: product code, price, hub affiliate ID, and buyer shipping and billing information. The vendor site processes the sale and ships the product to the buyer's address.</p> <p>Bollay '308, Abstract.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	Refer to FIG. 4 which is a flow diagram of computer software implementing select vendor products software. A list of available vendor products obtained from the vendors during the vendor sign-up procedure is displayed 402. Alternatively, product categories may be displayed. Affiliate sites may select 404 any number of different vendor's products to sell, or product categories, suited to the nature of the affiliate's web site. A separate template is generated 406

22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	<p>Refer to FIG. 4 which is a flow diagram of computer software implementing select vendor products software. A list of available vendor products obtained from the vendors during the vendor sign-up procedure is displayed 402. Alternatively, product categories may be displayed. Affiliate sites may select 404 any number of different vendor's products to sell, or product categories, suited to the nature of the affiliate's web site. A separate template is generated 406 automatically for each product or product category. This template is then pasted into an affiliate site's web page in accordance with the preference of the affiliate.</p> <p>Bolly '308, 3:57-67.</p> <p>"The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit and shipping address." Bolly '308, 3:3-5.</p>
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	<p>A buyer 114 that browses an affiliate web site 110 and views a page containing product insert code causes identifiers of the buyer, the affiliate site, the product (or category), and optionally the vendor site to be sent to the hub server. The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit and shipping address.</p> <p>Bolly '308, 2:66-3:5. See also Fig. 1.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 7,565,308 to Bolly ("Bolly '308")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bolly '308")
		<p>"It will be understood by those skilled in the art that the product displayed can be random within a category. Also, the product displayed can be custom based on the buyer's profile, site and category." Bolly '308, 4:57-58.</p>
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	<p>Refer to FIG. 4 which is a flow diagram of computer software implementing select vendor products software. A list of available vendor products obtained from the vendors during the vendor sign-up procedure is displayed 402. Alternatively, product categories may be displayed. Affiliate sites may select 404 any number of different vendor's products to sell, or product categories, suited to the nature of the affiliate's web site. A separate template is generated 406 automatically for each product or product category. This template is then pasted into an affiliate site's web page in accordance with the preference of the affiliate.</p> <p>Bolly '308, 3:57-67.</p> <p>"The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit and shipping address." Bolly '308, 3:3-5.</p>
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	<p>At the hub server, the orders are aggregated by vendor. Then the transactions are processed. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less a commission which is credited to the affiliate site and the hub server. Alternatively, the buyer's information is forwarded to the vendor with the hub's (vendor affiliate) ID for commission/credit later.</p> <p>Bolly '308, 3:11-18.</p> <p>Once the purchase request is confirmed by the vendor 522, the hub server bills the buyer's credit card 524, credits the affiliate site with a commission 526 and confirmation from the vendor is returned to the buyer by email by the hub server 528 All purchase requests made within an hour (less any cancellations) are aggregated by the vendor and forwarded.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 7,565,308 to Bolly ("Bolly '308")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bolly '308")
		<p>Bolly '308, 4:40-45.</p>
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service.	<p>Buyer data is stored at the hub server, so it can be utilized by buyers to make purchases from all affiliate sites in the affiliate network. The first time a buyer orders a product 514, a form is sent to the user to collect the buyer's shipping address, shipping method, and credit card payment information 532. Once the completed form is received at the hub server 534, the information collected is stored 536 at the hub server. The buyer's proprietary information need not be sent to the affiliate site as it is securely stored at the hub server.</p> <p>Bolly '308, 4:48-56.</p>
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	<p>See 23, <i>supra</i>.</p>
27(a)	before serving the composite web page to the visitor computer:	
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	<p>See 25, <i>supra</i>.</p>
27(a)(ii)	storing at the second website data concerning the plurality of products or services; and	<p>See 24, <i>supra</i>.</p>
27(b)	after serving the composite web page to the visitor computer:	
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	<p>See 23, <i>supra</i>.</p>
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of	<p>See 26, <i>supra</i>.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 7,565,308 to Bolly ("Bolly '308")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bolly '308")
	the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.	

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,209,007 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
1	An e commerce outsourcing process comprising:	
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	<p>"It is another object of the present invention to provide to a user only a subset of data from a web page that a user desires, while still retaining the original structure of the web page from the original document." Kelley '007, 1:51-54.</p> <p>"Yet another object of the present invention is to provide a customized web page from one or more other web pages of documents which retains a header, footer and optionally other original structure from at least one of the web pages from the original documents." Kelley '007, 1:55-59.</p> <p>"A further object of the invention is to easily build a customized web page from a series of unrelated web pages, and to have the customized web page updated with changes as the changes take place in the original unrelated web pages." Kelley '007, 1:60-64.</p> <p>The customized web page may present to a user only a subset of data from a web page that a user desires, while still retaining the original structure of the web pages from the original documents, such as the header, footer and optionally other original structure from at least one of the web pages from the original documents. The customized web page may be constructed from a series of unrelated web pages; it may be updated with changes as the changes take place in the original unrelated web pages.</p> <p>Kelley '007, 9:40-48.</p> <p>The basic structure of the web page consists of the title, headings,</p>

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,209,007 by Edward E. Kelley, et al. (filed November 26, 1997, issued March 27, 2001). [DFNDT0000164-0000180]

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
		<p>footings, graphics, imbedded javascript code, general text and any links found in the headings, footings, graphics, imbedded javascript code and general text. The basic structure of the web page also consists of the headings, footings, graphics, general text that are produced by Java code or other language code, and any links found in the headings, footings, graphics and general text. It does not consist of the primary information the web page was created to present.</p> <p>Kelley '007, 4:66-5:8.</p> <p>300-Locate code. Locate the lines of code in the HTML source code that were selected as search items.</p> <p>310-If HTML? Check if the source code is a HTML source code file.</p> <p>320-If java? Check if a reference to Java code has been found.</p> <p>330-If javascript? Check if any search items have been found in javascript code.</p> <p>340-Extract javascript code. Extract the subset of javascript code that will generate the search items or reference to the search items.</p> <p>350-Build new code. Take the extracted javascript code and build new code that will generate the search items or references to the search items.</p> <p>360-If other language? Check if a reference to other languages have been found that are used to build the web page.</p> <p>370-If data found? Check if any HTML source code, java code, javascript, or any other language code has been found that satisfy the search items.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
		<p>FIG. 6 describes the steps taken if the located code is a HTML source code file, and the flow chart description is as follows:</p> <p>400-If lists? Check if the search items were found in lists in the HTML source code.</p> <p>405-Extract list data. Extract the HTML source code that is used to build the lists that satisfy the search items.</p> <p>410-Build new lists. Build new HTML source code that will display the lists that satisfy the search items for the web page subset.</p> <p>415-If tables? Check if the search items were found in tables in the HTML source code.</p> <p>420-Extract table data. Extract the HTML source code that is used to build the tables that satisfy the search items.</p> <p>425-Build new tables. Build new HTML source code that will display the tables that satisfy the search items for the web page subset.</p> <p>430-If text? Check if the search items were found in text in the HTML source code.</p> <p>435-Extract the text data. Extract the HTML source code that is used to build the text that satisfy the search items.</p> <p>440-Build new text. Build new HTML source code that will display the text that satisfy the search items for the web page subset.</p> <p>445-If other? Check if other type of HTML source code is used to satisfy the search items. This includes graphic files.</p>

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
		<p>450-Check table. Check a list of other types of HTML source code to see if other HTML source code found to satisfy the search items is described in a library that contains instructions for building a subset of the code for the new web page. Graphic files will be handled by reading the text either next to the graphic files or reading any text that is displayed by the graphic files.</p> <p>460-If found? Check if graphic files or other HTML source code is used to satisfy the search items.</p> <p>470-Extract other. Extract the graphic file references and or other HTML source code that satisfies the search items.</p> <p>475-Build other. Build new HTML source code including graphic files that will satisfy the search items for the web page subset.</p> <p>FIG. 7 describes the steps taken if the located code is Java source code, and the flow chart description is as follows:</p> <p>500-Attempt code retrieval. Java source code may not be available to the client. This is because sometimes it is considered propriety code and only the compiled code is passed to the client. This step in the process is used to attempt to retrieve the Java source code.</p> <p>510-If successful? Check if there was a successful retrieval of the Java source code.</p> <p>520-Search java code. Search the java source code for the code that is used to satisfy the search items.</p> <p>530-If found? Check if the code is found that is used to satisfy the search items.</p>

Comparison of U.S. Patent No. 6,993,572 and PCT Application WO 99146709 to Voorhees ("Voorhees '709")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, PCT Application WO 99146709 to Voorhees anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
1	An e-commerce outsourcing process comprising:	<p>Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 (jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.</p> <p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective</p>

¹ Unless noted, all citations in this chart are to PCT Application WO 99146709 to Voorhees, Arciere, and Blanchard (filed on March 11, 1998 and published on September 16, 1999). [DFNDT_0000240-0000294].

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
		<p>portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.</p> <p>Voorhees '709, 3:23-39.</p> <p>See also, Figs. 1-2, 4:7-12; 8:4-17.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	<p>The screen display that will be seen by the shopper in response to this inquiry is determined by the templates 13 and the particular jeweler's dataset, and may include display objects provided by manufacturers and determined by templates 12 and a manufacturer's dataset. Generally, the templates specify layouts (formats) which are filled in by content information specified in a dataset as directed by control information specified in a dataset, both found in the datasets within databases 10 and 11. The respective content information and control information may be entered by a system operator through system control unit 25, or it may be entered or modified by jewelers and manufacturers through communication software 22 and 23 respectively and forwarded through communication link 21. . . .</p> <p>To respond to a shopper's request, under control of display processor information contained in templates 13 specifies the general format of a display screen for a jeweler, and the general format is "filled in" with information unique to the particular jeweler whom the shopper has requested, according to content information found in the dataset (such as the jeweler's name and address, for example) associated with that jeweler. . . .</p> <p>The jeweler's dataset contains information about whether a particular manufacturer's boutique is to be shown and attributes specifying how the jeweler wishes it to be shown, while the manufacturer's templates 12</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ("Voorhees '709")
		<p>as filled in according to the manufacturer's dataset specify the content of the boutique. The manufacturer's dataset also includes control information which specifies such things as whether the particular jeweler is permitted to carry the boutique.</p> <p>Voorhees '709, 6:21-8:3.</p> <p>Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler 111. . . .</p> <p>Associated with each boutique in database 10 is a set of inclusion rules and a set of exclusion rules; for example, associated with boutique 1011 are inclusion rules 1012 and exclusion rules 1013. It is through these sets of rules that a manufacturer has control over which retailers may carry the boutique and which portions of the boutique they may customize. . . .</p> <p>The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference; in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>Voorhees '709, 9:13-11:6.</p> <p>Thus, the shopper is able to see the manufacturer's information without</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ("Voorhees '709")
		<p>leaving the retail jeweler's web page, including all updates made by the manufacturer. And the shopper sees the retail jeweler's customization of the manufacturer's information. These factors in conjunction facilitate a satisfying purchase for the customer, a sale for the jeweler, and a sale for the manufacturer.</p> <p>Voorhees '709, 16:8-12.</p>
1(b)	<p>providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and</p>	<p>Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference; in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page.</p> <p>Voorhees '709, 10:12-11:9.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ("Voorhees '709")
		<p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique.</p> <p>Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.</p> <p>Voorhees '709, 15:3-22.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ("Voorhees '709")
		<p>See also Figs. 3A-3C, 4A-4D.</p>
1(c)	<p>upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link; whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.</p>	<p>Replicating a boutique from the manufacturer's database 10 into a display being made up by display processor 17 largely from jeweler's database 11 requires data transmission over path 14, which, as previously mentioned may be a hard path within a single host machine or a communications link between two host machines.</p> <p>As is known to those in the art, database 11 may or may not be implemented as an object-oriented database. If it is object-oriented, it will have instructions embedded in it and will initiate on its own a request over path 14 for the requisite information from database 10, and will provide all the information necessary for a display to display processor 17. If it is not object-oriented, display processor 17 will have to initiate requests for such information over path 14, and display processor 17 will be responsible for assembling information for a complete display from database 10 and database 11.</p> <p>Display processor 17 forwards the display information through server 20 and over communication link 21 to the shopper's communication software 24 which presents the shopper with the indicated display on his monitor.</p> <p>Voorhees '709, 8:4-17.</p> <p>Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ("Voorhees '709")
		<p>1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page.</p> <p>Voorhees '709, 10:12-11:9.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ("Voorhees '709")
		<p>object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.</p> <p>Voorhees '709, 15:3-22.</p> <p>See also Figs. 3A-3C, 4A-4D.</p>
4	The process of claim 1, wherein the selected commerce object is a selected product.	<p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different. This is a result of the aforementioned customization. The prices specified by RingCo's HTML description in element 26 are wholesale prices; after applying Ima Juler's customization with his markup of 100%, the prices shown in element 26A are twice those shown in element 26. Similarly, where element 26 shows SKU numbers, element 26A shows different "stock numbers." This conversion could be specified by Ima Juler in order to prevent the shopper from learning the true SKU number which might facilitate the shopper's "shopping around" for the item, which might be detrimental to Ima Juler.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
13	An e-commerce outsourcing system comprising:	<p>Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 Jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.</p> <p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.</p> <p>Voorhees '709, 3:23-39.</p> <p>See also, Figs. 1-2, 4:7-12; 8:4-17.</p>

	service.	
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	
27(a)	before serving the composite web page to the visitor computer:	
	i) contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	
	ii) storing at the second website data concerning the plurality of products or services; and	
27(b)	after serving the composite web page to the visitor computer:	
	i) accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	
	ii) responsive to an indication received from the visitor computer of a desire to purchase one of the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.	

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717")
1	An e-commerce outsourcing process comprising:	<p>1. An employee 17 preferably accesses one or more electronic catalogs 24 stored on a shadow catalog server 22, accessed via a local area network 20 preferably by means of an employee workstation 18. These catalogs contain only those items for which a price has been negotiated between the enterprise and a particular supplier, so the verification by the enterprise's Purchasing department described above is obviated.</p> <p>2. The employee selects items from the catalogs preferably with a mouse or similar device. Catalog items may be displayed with pictures, descriptions and other information in a fashion similar to a paper catalog. Where similar items are available, a "Compare" icon can be selected on the screen, causing the items to be listed side by side, with differences highlighted. Items can be located by searching down the taxonomy tree of the catalog (much as one searches through a paper catalog by finding the appropriate general section and then looking for a particular item), or by entering a search word or phrase.</p> <p>Wiecha '717, 3:10-28.</p> <p>The client environment is shown in the lower segment of FIG. 6, defined by shadow server 106 which maintains a customized copy of the master catalog for distribution to local clients 102 and 104. Purchase orders are received by a Local buyer master server 86 from a data pathway connecting remote shadow LAN 108 with local buyer master LAN 88. The Buyer Master Server also performs the server function in the following capacities: order processing from buyer clients 90, approval.</p>

Comparison of U.S. Patent No. 6,993,572 and Internet Scrapbook¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, "Internet Scrapbook: Automating Web Browsing Tasks By Demonstration," Sugiura and Koseki, 1998 ("Internet Scrapbook") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Internet Scrapbook
1	An e-commerce outsourcing process comprising:	<p>The information that users need is usually distributed across several different pages. In cases where users need to obtain a weather forecast, cyber news and sports results from different pages, for example, they have to access all the necessary pages by repeatedly specifying URLs (Uniform Resource Locators) or by selecting them from bookmarks . . .</p> <p>To reduce the operational cost of the browsing tasks, we have developed a programming by demonstration (PBD) [3] system, called Internet Scrapbook (referred to simply as "Scrapbook") in this paper, that allows users with little programming skill to automate their daily browsing tasks. In Scrapbook, a user can demonstrate which portions of Web pages he/she is interested in by creating an example personal page, that is, by copying only the necessary data from multiple pages and pasting them onto a single personal page. Once the personal page is created, the system automatically updates it by extracting the user-specified portions from the latest Web pages. The user can thus browse only the necessary information on a single page and avoid repetitive access to multiple Web pages.</p> <p>Internet Scrapbook, at 9.</p> <p>See also, pgs. 10-13.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	In Internet Scrapbook, the host website includes web pages designed by the user and specified by URLs (Uniform Source Locators) where user computers can obtain a weather forecasts, cyber news and sports results from the second website.

¹ Unless noted, all citations in this chart are to "Internet Scrapbook: Automating Web Browsing Tasks by Demonstration" by Sugiura and Koseki (published in 1998). [DFNDT_0000208-0000217].

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Internet Scrapbook
		<p>Using the generated patterns, the system updates the user's Scrapbook page. That is, it extracts portions that match the patterns from newly downloaded Web pages and reconstructs the Scrapbook page with the extracted data. However, a portion that <i>completely</i> matches the pattern cannot necessarily be found in the modified version of the Web page. In the cases of no complete match, the system performs partial matching to find possible candidates for extraction and selects the most plausible one by applying heuristics. . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p> <p>As we mentioned, Scrapbook generates a matching pattern at demonstration time and uses it to extract the user-desired portion from the future versions of the page. Therefore, it is required that patterns should be described using information that is expected to remain constant even after the page has been modified.</p> <p>Internet Scrapbook, 10-11.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Internet Scrapbook
		<i>Id.</i> at 13.
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>In Internet Scrapbook, the link correlating the host website with a selected commerce object is a link to an article, weather forecast, or sports result. The Internet Scrapbook extracts the links from the original website.</p> <p>(a) Original Web page and its source HTML.</p> <p>(b) Matching pattern.</p> <p>(c) Modified Web page.</p> <p>(d) Extracted portions.</p> <p>Figure 4. Data extraction from a Web page.</p> <p>Generating Matching Patterns</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Internet Scrapbook
		<p>Every time the user selects and copies Web data from a Web browser, the system generates a matching pattern used for identifying the selected region in a source Web page. As we mentioned in the previous subsection, the pattern contains description of both the article headings and positions. These descriptions are called a <i>heading pattern</i> and a <i>tag pattern</i>, respectively.</p> <p>Internet Scrapbook, 12.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p><i>Id.</i> at 13.</p>
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link, whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is

		<p>respectively.</p> <p>Internet Scrapbook, 12.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p><i>Id.</i> at 13.</p>
22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	<p>In Internet Scrapbook, the second website includes a look and feel description associated with a first website that is designed by the user and specified by URLs (Uniform Source Locators) where user computers can obtain a weather forecast, cyber news and sports results from the second website. In association with the second website, the look and feel description are stored.</p> <p>Using the generated patterns, the system updates the user's Scrapbook page. That is, it extracts portions that match the patterns from newly downloaded Web pages and reconstructs the Scrapbook page with the extracted data. However, a portion that <i>completely</i> matches the pattern cannot necessarily be found in the modified version of the Web page. In the cases of no complete match, the system performs partial matching to find possible candidates for extraction and selects the most plausible one by applying heuristics. . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,872	Relevant Disclosure in Internet Scrapbook
		<p>target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p> <p>As we mentioned, Scrapbook generates a matching pattern at demonstration time and uses it to extract the user-desired portion from the future versions of the page. Therefore, it is required that patterns should be described using information that is expected to remain constant even after the page has been modified.</p> <p>Internet Scrapbook, 10-11</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. Comparison of the U.S. Patent No. 6,993,572 and Travelocity/Yahoo! Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the Travelocity/Yahoo! Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
1	An e-commerce outsourcing process comprising:	The SABRE Interactive (now Travelocity) co-branded website was an e-commerce outsourcing solution for Yahoo! so that Yahoo! had travel reservation capability under its own name with the same look and feel as its own website. "A. Yahoo! operates a search engine and World Wide Web directory under the brand "Yahoo!". B. SI operates a travel booking engine and interactive Internet travel services through its "Travelocity" site, located at http://www.travelocity.com (the "Travelocity Site"). C. Yahoo! and SI wish to provide Yahoo! users with travel booking services by distributing SI's booking engine on the Yahoo! Site and to advertise and promote SI's interactive Internet travel services, all in accordance with the terms and conditions of this Agreement." <i>Travel Services Advertising and Promotion Agreement</i> , June 30, 1997. See DFNDT000388-412
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	Capture took place either when Yahoo! sent its look and feel elements directly to SABRE Interactive or when SABRE Interactive scraped the look and feel elements from an existing Yahoo! page. As far as the scope of the claimed "look and feel" can be determined, the look and feel of the Yahoo! page on SABRE Interactive's website included the Yahoo! logo, colors, travel menus, advertising, and toolbars. "(b) User Interface. The Co-Branded Pages shall conform to the graphical user interface utilized by Yahoo! across Yahoo!'s network of branded Internet properties as of the first date of the Exclusivity Period, and Yahoo! Shall have the right reasonably to approve the final design of all Co-Branded Pages. Any material changes to the Co-Branded Pages thereafter shall be made upon the mutual agreement of the parties. Yahoo! shall assign one individual to work with SI to ensure that the Co-Branded Pages satisfy Yahoo!'s requirements. Yahoo! will use reasonable best efforts to ensure continuity of Yahoo! personnel involved in the design process. All pages displayed to Yahoo! site users, other than the Co-Branded Pages, shall conform to the graphical interface utilized by SI, provided however Yahoo! shall have a reasonable

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		right of approval with respect to such interface." <i>Travel Services Advertising and Promotion Agreement</i> , June 30, 1997. See DFNDT000388-412.
		"SABRE Interactive (SI) has been contracted by Yahoo! to provide a booking engine to Yahoo! members that has the look and feel of Yahoo! until the point of actual reservation purchase. This will require a large number of modifications to Travelocity including a flow change to a different travel menu, graphics changes, login changes, advertising changes, logging and tracking changes, and e-mail confirmation changes. *** • A mockup of the Yahoo! express page or the page field names must be provided to [SABRE Technology Solutions (STS)] by SI at start of development. • Graphics for the cobrand must be provided to STS by SI one week after start of development. • The Yahoo! ad URL's for IMG SRC and HREF must be provided to STS one week after start of development. *** Modify currency.inc and sbTools.inc for Yahoo! ad capability. The parameter in the [Parameter's Database (PDB)] used for Yahoo! cobranded pages will also be used to identify Yahoo! ads." <i>Yahoo! Travel Booking Engine - Scope Definition</i> , last modified on 8/1/1997. See DFNDT000413-422. "This 'look and feel' will include the Yahoo! logo, the background color, and the toolbars." <i>Yahoo! Travel Booking Engine - Scope Definition</i> , last modified on 8/1/1997. See DFNDT000413-422. "Certain pages within Travelocity will be designated as co-brand. Co-brand means that the pages will look and feel like Yahoo! pages, but will function the same as they do today in terms of required data elements, navigation and flow; except where otherwise indicated in this document." <i>Yahoo! Travel Booking Engine - High Level Requirements</i> , July 14, 1997, last

Comparison of U.S. Patent No. 6,993,572 and Digital River Secure Sales System Prior Art¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the Digital River Secure Sales System ("SSS") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
1	An e-commerce outsourcing process comprising:	"Digital River's Secure Sales System (SSS) brings together software manufacturers and dealers enabling them to sell and deliver product via the Internet. This service will provide all digital delivery, security, collections and reporting of the sale of software. Throughout this process, it will appear to the consumer as if the transaction is being processed by the manufacturer or dealer while the Digital River SSS is handling the whole transaction "behind the scenes" [sic] <i>Digital River - Secure Encrypted Software Distribution</i> , http://web.archive.org/web/19970412100754/http://www.digitalriver.com/ ; [DR000001-2]. "Extend your selling environment Better yet, the entire transaction takes place in the selling environment you've created, surrounded by the look and feel of your identity, with your products presented the way you want them presented, with no competition. Your customers simply hit the purchase icon at your site and the whole process unfolds smoothly. There's no sensation of being suddenly hustled off to another location. Your customers won't end up at some foreign-looking page where they have to hunt to find your product." <i>Digital River - Secure Encrypted Software Distribution</i> , http://web.archive.org/web/19971221024519/digitalriver.com/Page3.html ; [DR000003-4] (emphasis original). Maintain your own identity and branding. Digital River facilitates the sale of your products to your customers. To most consumers, our services often appear as nothing more than a web site "buy" button. But behind this simple device is sophisticated electronic commerce technology which gives consumers the ability to immediately and easily purchase and download the digital products of their choice. As

¹ The Digital River SSS process was offered for sale, sold, and publicly used in connection with more than 500 client websites prior to September 17, 1998. While the referenced steps of the Digital River SSS process were consistently used with respect to these client websites, the specific elements Digital River utilized to create "transparent e-commerce support pages" for its clients varied based upon the specific look and feel of the host (client) website. The documents expressly referenced herein are provided as illustrative examples of the Digital River SSS process as utilized prior to September 17, 1998. Additional documents evidencing the offer for sale, sale and public use of the Digital River SSS process will be produced pursuant to Local Patent Rule 3-4(b).

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
		consumers become more savvy, this efficiency of purchase and delivery will become one of the primary advantages of selling digital products over the Internet. When customers want to purchase, they push the "buy" button and are transferred immediately and transparently to the Digital River Central Commerce Server. This retains the "look and feel" of your own site and encourages the customer to buy - easily and quickly. Depending on your preferences and marketing initiatives, buyers can be offered additional cross-sell, up-sell, special offer and bundled products related to their purchases. Credit information is verified, the sale is transacted and the purchases are then downloaded to the buyer. <i>Digital River Information Kit</i> at 8 [DR004326]. "Digital River, Inc. proposes to maintain and develop transparent secure Internet marketing and sales services for Adobe's Web site and products. Services will be provided through Digital River's S3 commerce encryption solution which was designed to manage transactions behind the scenes" <i>Internet Commerce Services Proposal for Adobe</i> , July 25, 1996; [DR000005-6]. [DR004245-66]. See also [DR074797-074937] and [DR074670-074796].
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	Flow chart depicting "The Digital River Internet Ordering System (StoryBoard Overview)" and stating "[a]ll ISV and Dealer pages are located on the Digital River Server." [DR000007-12]. Flow chart depicting "Level 1" and stating that depicted ISV and Dealer pages "will actually be built 'on-the-fly' as users arrive from various ISV and Dealer web pages using database image and content values . . . The user will be presented with a page on the Digital River Server that is similar in feel to the ISV or Dealer page." [DR000007-12]. "Vendor's Delivery Obligations. a. Initial Deliverables. . . 13	An e commerce outsourcing system comprising:	See 1, <i>supra</i> .
13(a)	a data store including a look and feel description associated with a host web page having a link correlated with a commerce object; and	See also 1(b), <i>supra</i> .
13(b)	a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the link has been activated by a visitor computer in Internet communication	See also 1(c)-1(d), <i>supra</i> .

Comparison of U.S. Patent No. 6,993,572 and Digital River Secure Sales System Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
	with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the look and feel description in the data store and with content based on the commerce object associated with the link.	
17	An e commerce outsourcing process comprising the steps of:	See 1, <i>supra</i> .
17(a)	storing a look and feel description associated with a first website in a data store associated with a second website;	See 13(a), <i>supra</i> .
17(b)	including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a link correlating the web page with a commerce object; and	See 13(b), <i>supra</i> .
17(c)	upon receiving an activation of the link from a visitor computer to which the web page has been served, sewing to the visitor computer from the second website a composite web	See 13(b), <i>supra</i> .

Comparison of U.S. Patent No. 6,993,572 and Digital River Secure Sales System Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
	page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the link.	
18	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website.	<p><i>I³ Software</i>, http://www3.digitalriver.com/cgi-bin/At&UserReference=88DE7EC7E9BB083A; [DR000087-88];</p> <p><i>Welcome to Bitstream, Inc.</i>, http://web.archive.org/web/19961019044742/www2.digitalriver.com/bit/index.html; and as reconstructed inserting referenced .gif files; [DR000028-31], [DR000032];</p> <p><i>DTP Direct</i>, http://www4.digitalriver.com/cgi-bin/Tango2.cgi/dealer/dtpdirect/home.qry?1d=1020&level=-; [DR000112];</p> <p><i>Digital River Proposal Summary</i>, April 29, 1998, Figures 1, 2; [DR000066-72];</p> <p><i>Adaptec, Inc.</i>, http://www.digitalriver.com/drv2/ec_main.entry?sid=6734&sp=10007&cid=0; [DR002313];</p> <p><i>Neshbit Software Corporation</i>, http://www.digitalriver.com/drv2/ec_MAIN.Master; [DR012486-12487];</p> <p><i>Extensis PhotoTools</i>, http://www3.digitalriver.com/cgi-bin/5FAA5AEAB59B6B0&detail=phototools; [DR016261-16268, DR016300-16305];</p> <p><i>PHD Computer Consultants Ltd.</i>, https://www.digitalriver.com/drv2/ec_main.entry?sp=10007&cid=0&sid=237; [DR020584];</p> <p><i>Global Majic Software, Inc.</i>, https://www.digitalriver.com/v20/plsql/ec_MAIN.Entry9?SP=10039&PN=1&sl=-; [DR020931]</p> <p><i>Incline Software, LC</i>,</p>

22	The process of claim 17 wherein storing a look and	12. Implementation Phase 1 - Complete Linked ESD Software Store

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
		<p>feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.</p> <p>Company will develop a complete ESD software store with the look and feel of www.outpost.com. This store will operate on the Company servers and will be linked from www.outpost.com. Company will provide Electronically deliverable software products from over 1000 thousand [sic] publishers.</p> <p>This will be developed and implemented without any cost to Dealer. Company will pay Dealer on a monthly basis, under the enclosed payment schedule.</p> <p>Phase 2 - In conjunction with the Phase 1 implementation, Company will identify products that are offered in both the ESD store and in Dealer's inventory. Once these products are identified, Digital Company [sic] will provide a specific url and item detail page which can be linked directly from the product information page within www.outpost.com. This will provide Dealer with an integrated solution for offering electronically deliverable products within it's [sic] entire software product mix.</p> <p>Phase 1 margins and costs also apply to Phase 2.</p> <p>Phase 3 - Within a reasonable timeframe, Company will also offer a completely integrated solution in it's [sic] Electronic Drop-Ship program. This will enable Dealer to completely integrate the Company products into the sales process at www.outpost.com. This would allow for ESD products to be mixed with Dealer physical shipments in the same shopping basket on www.outpost.com. This option will require a development effort by Dealer, and can be launched at a later time."</p> <p><i>Cyberian Outpost, Inc. Dealer Agreement effective March 30, 1998 at 3-4</i> [DR059440- DR059447].</p> <p>We can help you from development to post-sale.</p> <p>As a Digital River client you receive end-to-end service to help your company grow. We provide assistance with software commerce site development. Digital River builds the screens to match your 'look and feel' and to create a transparent buying experience that enhances sales opportunities. Working with Digital River is easy, because you'll experience near immediate set-up. The development cycle to 'live' selling is often complete within a few</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
		<p>weeks. The seamless transaction process for your customers encourages additional sales. We deliver cross-sell and up-sell opportunities to manage your average sale size, profits, margins and return on investment.</p> <p>As a software publisher, the incremental revenue and efficiencies can quickly improve your bottom line. Or, as a Digital River online dealer, you can establish or enhance your own software store, directly from a link on your site. You can immediately expand your content, inventory and shelf space to offer the more than 110,000 software products currently available through Digital River.</p> <p><i>Digital River Information Kit at 10</i> [DR004328].</p> <p>"Digital River is a rich resource for anyone who wants to get down to business on the Internet. When you call Digital River, you tap into a group of people totally focused on digital commerce. That's why we do it so well. Selling your products has our total attention - we have no higher priority." <i>Digital River - Secure Encrypted Software Distribution</i>, http://web.archive.org/web/19971221024519/digitalriver.com/Page3.html; [DR000003-4].</p> <p>"Digital River will leverage its years of direct marketing experience to ensure that Adobe receives and excellent sales response through the S3. . . The S3 allows for the implementation of up-sell screens that can be programmed to aid in the increase of the average order size, reorder rate and number of units per order. Digital River is also interested in assisting adobe in direct marketing programs to Adobe clients promoting new Adobe product, upgrades or specials." <i>Internet Commerce Services Proposal for Adobe</i>, July 25, 1996; [DR000005-6].</p> <p>"MathSoft's closing percentage of 2% is very much below industry average. A simpler, easier-to-use system should improve this number. . . . Digital River will manage MathSoft's online store and work with MathSoft's current staff to integrate purchasing options throughout the entire web site to enable customers to purchase products more easily." <i>Digital River Proposal To Mathsoft, Inc.</i>; [DR000023-25].</p> <p>"Digital River is much more than an online commerce partner. We act much like an extension of your Marketing and Customer Service departments. In addition to providing you with a secure backend commerce solution, we provide you with services to maximize your sales and make your customer's</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
		<p>shopping experiences as pleasurable as possible. . . . Account Development Managers help you analyze the success of your store and will work with you on promotions, campaigns, bundles or other marketing activities to help you maximize your online sales. . . . An assigned Account Development Manager will work with MathSoft to improve the usability of the site and increase the closing percentage." <i>Digital River Proposal To Mathsoft, Inc.</i>; [DR000023-25].</p> <p>[DR034615-16] (look and feel data associated with source page Digital Frontiers stored on DR server).</p> <p>[DR034606-07] (look and feel data associated with source page Bitstream stored on DR server).</p> <p>[DR026733-36] (checklist detailing capture procedure).</p> <p>[DR026732] (identifying text and image files for copying and storing on DR server).</p> <p>[DR026758-66] (stating "Marketing Materials will be obtained by DR from the Vendors website").</p> <p>[DR026730-31] (asking client to upload look and feel data to help DR set up web pages).</p>
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	<p>"In addition, Digital River will develop an online store featuring all of EA's products. Like the current EA Store, users can search by product category, key words, or platform. Product specials or new products can be featured on the front page of this store to provide for greater attention. For an example of how the EA Store might look, please refer to Figure 2." <i>Digital River Proposal Summary</i>, April 29, 1998, Figure 2; [DR000066-72];</p> <p><i>Welcome to Bitstream, Inc.</i>, http://web.archive.org/web/19961019044742/www2.digitalriver.com/bit/index.html; and as reconstructed inserting referenced .gif files; [DR000028-31], [DR000032]; see also <i>Facsimile from Andrea Rizzo of Bitstream, Inc.</i>, dated January 24, 1997; [DR000080-86] (forwarding copies of individual Digital River maintained pages for Bitstream online ordering system);</p> <p><i>Seattle Support Group</i>, http://www.digitalriver.com/digitalriver/Welcome.qry?type=I+id=1001; and http://www.digitalriver.com/digitalriver/insertitem.qry?function=insert&item=CDPLV1-TOTW; [DR000039-50] (Correspondence from Yasuo Noshiro, dated August 2, 1996);</p>

Comparison of U.S. Patent No. 6,993,572 and Digital River Secure Sales System Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
		[DR026693]; and [DR026694].
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	Digital River contracts with its clients to include data concerning the commerce objects of said clients on Digital River maintained websites. <i>See, e.g.</i> , [DR000013-21] (<i>Electronic Software Distribution Agreement</i> between Digital River and Auto F/X Corp. dated July 18, 1996). <i>Cyberian Outpost, Inc. Dealer Agreement effective March 30, 1998</i> at 3-4 [DR059440-DR059447]. [DR006649-86].
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service.	"A key advantage to a partnership with Digital River is the high level of service offered by the company, including customization of Web presentation so that the SSS remains behind the scenes, rapid posting of new software and new versions, and of course timely reporting and payment on all software sales. Included in the reporting will be each customers [sic] name, address, phone number and user profile that will provide manufacturers and dealers with unprecedented marketing opportunities in the future." <i>Digital River - Secure Encrypted Software Distribution</i> , http://web.archive.org/web/19970412100754/http://www.digitalriver.com/ ; [DR000001-2]. "We'll customize your Web presentation to make sure design continuity is maintained throughout the purchase, we'll post your new software and new versions as soon as they're available, and we'll deliver the reports and payments you need on a timely basis. (You get each customer's name, address, phone number, fax number, and email address, a profile that provide unprecedented marketing opportunities)." <i>Digital River - Secure Encrypted Software Distribution</i> , http://web.archive.org/web/19971221024519/digitalriver.com/Page3.html ; [DR000003-4] (emphasis original). "The key advantage to a partnership with Digital River, Inc. is the high level of service offered by the company, including customization of Web presentation so that the S3 remains behind the scenes, rapid posting of new versions, and of course timely reporting and payment on all software sales." <i>Internet Commerce Services Proposal for Adobe</i> , July 25, 1996; [DR000005-6].

Comparison of U.S. Patent No. 6,993,572 and Digital River Secure Sales System Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Digital River Secure Sales System
		<i>Electronic Software Distribution Agreement</i> between Digital River and Auto F/X Corp. dated July 18, 1996; [DR000013-21] (detailing contractual obligations with respect to "Payment and Reports;" "End User Information;" and "Books and Records"). "Sales and customer information is accessed via the Digital River Reporting System, which is available to EA employees in their offices. Sales can be tracked on an immediate basis, and reports include: • Sales by product • Campaign tracking • Summary reports by site, product, source and customer • Banner click through • Source and tracking codes • Order detail." <i>Digital River Proposal Summary</i> , April 29, 1998; [DR000066-72].
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	<i>See 23, supra.</i>
27(a)	before serving the composite web page to the visitor computer:	
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	<i>See 25, supra.</i>
27(a)(ii)	storing at the second website data concerning the	<i>See 24, supra.</i>

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions"¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,141,666 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,141,666 ("the '666 patent")
1	An e-commerce outsourcing process comprising:	<p>"Although the present invention can be used in many applications which can utilize customization marketing tools unique to client/server communications across variety of communication network structures, the present invention is described in its application to PC Flowers & Gifts, an Internet site providing floral and gift services through Web site pages which are dynamically customized to the requirements of other Internet sites referring clients, e.g., consumers, to the PC Flowers & Gifts Web site pages." Column 5, lines 3-11.</p> <p>"The automatic tracking of the participating or referring Internet sites is crucial to transparently customizing Web site pages to take advantage of brand name recognition and customer loyalty." Column 5, lines 42-45.</p> <p>Also see column 9, lines 5-51; FIGs. 11A-20.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	<p>The '666 Patent teaches</p> <ul style="list-style-type: none"> • a host website (e.g., http://homearts.com; FIGs. 21A-B; and http://pathfinder.com/; FIGs. 11A-B); and • second website (e.g., http://homearts.com/market/Main/; FIG. 21B; and http://pathfinder.com/; FIG. 11B). <p>"The PC Flowers & Gifts marketing program comprising the floral and gift Web site pages are dynamically customized in accordance with the participating Internet site's requirements which may be co-branded, private label or, a program of labeling unique to the participating Web site. More specifically, the PC Flowers & Gifts Web site pages are customized in both a graphic and a content format to take advantage of the consumers [sic] familiarity with the participating Internet site's position in the</p>

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions" by William J. Tobin (filed Jan. 21, 1997, issued Oct. 31, 2000). [DFNT0000001-00000053]

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,141,666 ("the '666 patent")
		<p>marketplace, the consumer's trust in the participating Internet site's established brand name, or the consumer's existing relationship with the participating Web site." Column 5, lines 18-29.</p> <p>"[I]f a consumer were to visit one of the private label floral and gift services home page of the Internet site "Homearts", all the graphics and product categories on each of the PC Flowers & Gifts Web site pages, available through a hypertext link from a Homearts Web site, are fully customized in graphic and content format to reflect only the Homearts brand name." Column 5, lines 55-60.</p> <p>"Still referring to FIG. 21C, like the home page image map 101 discussed above, the home page image map 2101 herein is a grouping of the hypertext links 108-112, wherein the sever files for the linked Web site pages are dynamically created to reflect preferences of the marketing partner, which in this instance is a private label customizing for Homearts. Accordingly, all the server Web site pages accessed through the home page image map 2101 are anchored to PC Flowers & Gifts Web site pages that are dynamically created with fully customized graphic and text features according to Homearts' preferences. Such a private label customization of the Web site pages takes advantage of the client's existing relationship and familiarity with the marketing partner, Homearts. In addition, the hypertext link grouping 2103 retains the links 102-107 of the PC Flowers & Gifts Web site pages, however, like the home page image map 2101, the hypertext link grouping 2103 provides jumps to PC Flowers and Web site pages that are fully customized with the private label Homearts." Column 10, lines 8-26; FIG. 21C.</p> <p>Also see column 9, lines 5-51; FIGs. 11A-20.</p>
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>The '666 Patent teaches</p> <ul style="list-style-type: none"> • the host website (e.g., http://homearts.com; FIGs. 21A-B; and http://pathfinder.com/; FIGs. 11A-B); • a link (e.g., label 21B1 in FIG. 21B; and label 11B3 in FIG. 11B); and • a page (e.g., http://homearts.com/market/Main/; FIG. 21B; and http://pathfinder.com/; FIG. 11B).

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,141,666 "Method and system for customizing marketing services on networks communicating with hypertext tagging conventions"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,141,666 ("the '666 patent")
	the plurality of products or services; and	customization marketing tools unique to client/server communications across variety of communication network structures, the present invention is described in its application to PC Flowers & Gifts, an Internet site providing floral and gift services through Web site pages which are dynamically customized to the requirements of other Internet sites referring clients, e.g., consumers, to the PC Flowers & Gifts Web site pages." Column 5, lines 3-11. "[I]f a consumer were to visit one of the private label floral and gift services home page of the Internet site "Homearts", all the graphics and product categories on each of the PC Flowers & Gifts Web site pages, available through a hypertext link from a Homearts Web site, are fully customized in graphic and content format to reflect only the Homearts brand name." Column 5, lines 55-60. "This unique database format of server files accessed through the hypertext links permits a participating Internet site to host floral and gift services so as to take advantage of the consumer's familiarity with the participating Internet site." Column 5, line 66 - column 6, line 3. <i>Also see</i> column 9, lines 5-51; FIGs. 11A-20.
27(b)	after serving the composite web page to the visitor computer:	
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	FIG. 24 illustrates a web page, customized with Home Arts' look and feel, where a visitor can search for products and services. The products and services are organized into product categories. "Referring now to FIG. 4 there is shown a PC Flowers & Gifts Web site page 400, denoted as "shop by category", accessible via a hypertext link 109 from the home page Web site 100 depicted in FIG. 1. The distinguishing content on this Web site page 400 is that the category image map 401 includes hypertext links 402-408 which provide jumps to Web site pages indicated, respectively, as "flowers", "plants", "balloons", "Hickory Farms gourmet foods", "bears by Russ", and "greeting cards on-line." Column 7, lines 55-63.

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,128,655 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
1	An e commerce outsourcing process comprising:	<p>"These pieces of content are then recast into a new web page by means of an HTML template 121 that matches the look and feel of the hosting Web site. The new page includes the graphics of the hosting provider as well as the navigational features of the hosting site. This page is then sent 123 to the client 113 for presentation by the browser." Column 4, lines 57-63.</p> <p>"1. A method for recasting web content on a hosting site, comprising the steps of:</p> <p>responsive to a request from a client browser for a recast web page from a hosting web server, generating a request by the hosting web server for an original web page from a content provider web server;</p> <p>parsing the original web page for a first set of desired content elements;</p> <p>inserting the first set of desired content elements into a web page template containing a hosting web server format, thus creating the recast web page; and</p> <p>servicing the recast web page to the client browser;</p> <p>wherein the appearance of the recast page when presented by the client browser is as though all elements originated at the hosting web server." Column 17, lines 52-67.</p> <p>See File History for 10/461,997, Office Action, dated September 29, 2004.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	<p>"Next, the pass through publisher 101 retrieves the filter definitions and policies from the filter database 109 for this particular content provider web site. Using the filters and the retrieved HTML page, the pass through publisher 101 parses the HTML source</p>

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content" by Fields, Hassinger and Hurley (Filed July 10, 1998, issued Oct. 3, 2000). [DFNDT0000054-0000076]

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
		<p>for desired components of the page. Typically, this is the title of the article, the ad banner or banners and the article text itself, although other items on the page are potentially desirable. These pieces of content are then recast into a new web page by means of an HTML template 121 that matches the look and feel of the hosting Web site. The new page includes the graphics of the hosting provider as well as the navigational features of the hosting site. This page is then sent 123 to the client 113 for presentation by the browser. In a typical web interaction between browser and server, once the browser receives the HTML page, it issues additional requests for the component files such as gifs, e.g., ad banners. For the ad banners themselves, the new page preserves the call 125 back to the content provider so that the correct advertising content is presented. It is common that each request of a web page from a server can be refreshed with a different advertisement.</p> <p>In this way, the end user receives a page with graphic and navigation features from the hosting Web site that has an embedded article from the publisher and an advertisement served from the publisher's site. The final result is content viewed by the end user in host site's native Web context, with an ad banner served from the original publisher, thereby preserving their revenue stream." Column 4, line 50 through Column 5, line 11.</p> <p>"Note also that navigational features 315 and 317 native to the hosting server have been added to the page. A background border 319 giving the hosting web site a distinctive look and feel has also been added." Column 6, lines 42-45.</p> <p>"The invention allows the hosting site to extract and recast any number or type of desired content elements from the web content provider page." Column 6, lines 49-51.</p>
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>"These pieces of content are then recast into a new web page by means of an HTML template 121 that matches the look and feel of the hosting Web site. The new page includes the graphics of the hosting provider as well as the navigational features of the hosting site. This page is then sent 123 to the client 113 for presentation by the browser." Column 4, lines 57-63.</p> <p>"Note also that navigational features 315 and 317 native to the hosting server have</p>

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
		<p>been added to the page: A background border 319 giving the hosting web site a distinctive look and feel has also been added." Column 6, lines 42-45.</p> <p>"A representative system in which the present invention is implemented is illustrated in FIG. 1. A plurality of Internet client machines 10 are connectable to a computer network Internet Service Provider (ISP) 12 via a network such as a dialup telephone network 14. As is well known, the dialup telephone network usually has a given, limited number of connections 16a-16n. ISP 12 interfaces the client machines 10 to the remainder of the network 18, which includes the hosting server 19 and a plurality of web content provider server machines 20. A client machine typically includes a suite of known Internet tools, including a Web browser 13, to access the servers of the network and thus obtain certain services. These services include one-to-one messaging (e-mail), one-to-many messaging (bulletin board), on-line chat, file transfer and browsing. Various known Internet protocols are used for these services. Thus, for example, browsing is effected using the Hypertext Transfer Protocol (HTTP), which provides users access to multimedia files using Hypertext Markup Language (HTML). The collection of servers that use HTTP comprise the World Wide Web, which is the Internet's multimedia information retrieval system.</p> <p>As shown in FIG. 2, the invention is a method and system for extracting Web-based content, especially, but not limited to, Web-based news articles, from content provider or source Web sites for use by the hosting or "pass-through" Web site. These articles typically are revenue-generating content for the publisher by carrying advertising banners above and/or below the article text. Therefore, the publishers must benefit from the arrangement provided by the hosting site to be interested in licensing their content for a low or no fee. As explained below, the web content provider maintains his ad revenue as the number of "hits" on the advertisements are maintained in a transparent manner. As the articles are also posted at the hosting site, ad revenues can actually increase since the ad impressions are being solicited from two sites rather than one." Column 3, line 55 through Column 4, line 24.</p> <p>See File History for 10/461,997, Office Action, dated September 29, 2004.</p>

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
		<p>See also 4-5, <i>infra</i>.</p>
1(c)	<p>upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;</p>	<p>"By abstracting the content from any particular content provider site and reformatting the content to the hosting site's format a consistent look and feel is maintained." Column 13, lines 19-22.</p> <p>"Next, the pass through publisher 101 retrieves the filter definitions and policies from the filter database 109 for this particular content provider web site. Using the filters and the retrieved HTML page, the pass through publisher 101 parses the HTML source for desired components of the page. Typically, this is the title of the article, the ad banner or banners and the article text itself, although other items on the page are potentially desirable. These pieces of content are then recast into a new web page by means of an HTML template 121 that matches the look and feel of the hosting Web site. The new page includes the graphics of the hosting provider as well as the navigational features of the hosting site. This page is then sent 123 to the client 113 for presentation by the browser. In a typical web interaction between browser and server, once the browser receives the HTML page, it issues additional requests for the component files such as gifs, e.g., ad banners." Column 4, lines 50-66.</p> <p>"In step 413, it is determined whether there is a suitable filter definition in the account folder for the content provider for the new page. As most pages in a web site share a common format and style, it is envisioned that a relatively small set of filter definitions can be used for all of the pages from a particular site. If there is no existing filter definition suitable, in step 415, a new filter definition is created for the page. There is more discussion on the creation of filter definitions and policies below in connection with FIG. 6.</p> <p>In step 417, the page, i.e. URL is associated with the appropriate filter definition and in step 419 the appropriate changes to the account, URL and filter definition files are made. Optionally, the new page can be processed and cached as part of registration. Thus, in step 421, the filter definition is used by the pass through publisher to extract the desired portions of the page. In step 423, these portions of the page are cached for retrieval in the event of a client request. The process ends, step 425." Column 7, lines 16-33.</p>

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
		<p>"As mentioned above, the hosting site preferably caches content likely to be requested by a client to improve the speed and reliability of the hosting web site pages. In this way, if the document has not changed since the pass through publisher last polled the site, it is retrieved from the local cache after registering the "hit" on the remote server. This reduces Internet bandwidth requirements and improves performance on both the hosting web server and the web content provider server.</p> <p>However, for the process depicted in FIG. 5B, new content has been retrieved from the web content provider web server, step 451. Once the document content has been retrieved from the host provider, the filter database is searched for the appropriate filter definition, step 453, the filter definition kept for the web content provider. The information in the filter definition will help the pass through publisher parse the document structure of the web page, extracting the desired information. In step 457, a test is performed to determine whether the parsing was a success.</p> <p>If a filter definition for the page or web content provider is not found, or the first attempt using the associated filter definition was not a success, the pass through publisher can fall back to a series of default filters which will assist in parsing the data, step 459. The hosting site will still be able to present the reformatted content, however, the process will not be as efficient as through an existing filter definition. This "best guess" approach utilizes several methods, including looking for common references to advertising engines, etc. As discussed below, the publisher can also look for a set of embedded tags indicating the desired content. Any document that a filter can not be found for can be logged, allowing staff to later create appropriate filter definitions. In practice, however, hosting sites employing the pass through technique will be able to define templates appropriate to all "rehosted" content. Most content provider sites employ a standard look and feel in their documents, allowing for filters that are appropriate for large numbers of documents found on a particular web site, if not every document on the entire provider web site." Column 7, line 47 through Column 8, line 18.</p>

- 5 -

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
		<p>"The component HTML file, once extracted, separated, and post filtered is then reformatted into a new document in the style and context of the hosting web site, step 463. This is done by another component of the pass through publisher, a web publishing application that creates a "dynamic publishing template". The web publisher injects the excerpted content, titles, copyright statements and logos as received from the post filtering process. In step 465, the desired components are cached, which may include components useful in determining the version of a web page, but are not used in the recast page. In step 467, the recast page is sent to the requesting client. The process ends, step 469. Once presented by the requesting browser, the content of the hosting web site appears seamless to the user, although it may originate at a plurality of web content provider sites as well as the hosting site itself." Column 8, lines 45-60.</p> <p>"Each filter definition is stored in a filter definition database accessible by the pass through publisher. The publisher uses the filter definition to break the content into component parts: The title area, primary and secondary advertisements, and the content itself. The title area includes the title of the web page and is typically marked by HTML tags. The primary and secondary advertisements usually occur at the top and bottom of the web page, but may be located at different locations. They are typically marked in the HTML by tags or comments indicating an advertisement. Depending on various factors, such as the desired look and feel for the hosting web site, the cross-publishing agreement with the content provider, i.e. allowing for republishing certain types of web content but not others and the filter, the content may be very plain. A "bare bones" filter may strip out any extraneous links or "side bars" of information. Alternatively, the content may be a verbatim copy of a selected portion of the original web page." Column 9, line 64 through Column 10, line 14.</p> <p>See File History for 10/461,997, Office Action, dated September 29, 2004.</p>
1(d)	<p>whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.</p>	<p>"By abstracting the content from any particular content provider site and reformatting the content to the hosting site's format a consistent look and feel is maintained." Column 13, lines 19-22.</p> <p>"Next, the pass through publisher 101 retrieves the filter definitions and policies from</p>

		<p>desired content elements from the web content provider page." Column 6, lines 49-51.</p> <p>"Next, the pass through publisher 101 retrieves the filter definitions and policies from the filter database 109 for this particular content provider web site. Using the filters and the retrieved HTML page, the pass through publisher 101 parses the HTML source for desired components of the page. Typically, this is the title of the article, the ad banner or banners and the article text itself, although other items on the page are potentially desirable. These pieces of content are then recast into a new web page by means of an HTML template 121 that matches the look and feel of the hosting Web site. The new page includes the graphics of the hosting provider as well as the navigational features of the hosting site. This page is then sent 123 to the client 113 for presentation by the browser. In a typical web interaction between browser and server, once the browser receives the HTML page, it issues additional requests for the component files such as .gifs, e.g., ad banners. For the ad banners themselves, the new page preserves the call 125 back to the content provider so that the correct advertising content is presented. It is common that each request of a web page from a server can be refreshed with a different advertisement.</p> <p>In this way, the end user receives a page with graphic and navigation features from the hosting Web site that has an embedded article from the publisher and an advertisement served from the publisher's site. The final result is content viewed by the end user in host site's native Web context, with an ad banner served from the original publisher, thereby preserving their revenue stream." Column 4, line 50 through Column 5, line 11.</p> <p>See File History for 10/461,997, Office Action, dated September 29, 2004.</p> <p>See also 1(b), <i>supra</i>.</p>

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent 6,128,655 ("the '655 patent")
	communication with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the look and feel description in the data store and with content based on the commerce object associated with the link.	<p>"Note also that navigational features 315 and 317 native to the hosting server have been added to the page. A background border 319 giving the hosting web site a distinctive look and feel has also been added." Column 6, lines 42-45.</p> <p>"By abstracting the content from any particular content provider site and reformatting the content to the hosting site's format a consistent look and feel is maintained." Column 13, lines 19-22.</p> <p>"A representative system in which the present invention is implemented is illustrated in FIG. 1. A plurality of Internet client machines 10 are connectable to a computer network Internet Service Provider (ISP) 12 via a network such as a dialup telephone network 14. As is well known, the dialup telephone network usually has a given, limited number of connections 16a-16n. ISP 12 interfaces the client machines 10 to the remainder of the network 18, which includes the hosting server 19 and a plurality of web content provider server machines 20. A client machine typically includes a suite of known Internet tools, including a Web browser 13, to access the servers of the network and thus obtain certain services. These services include one-to-one messaging (e-mail), one-to-many messaging (bulletin board), on-line chat, file transfer and browsing. Various known Internet protocols are used for these services. Thus, for example, browsing is effected using the Hypertext Transfer Protocol (HTTP), which provides users access to multimedia files using Hypertext Markup Language (HTML). The collection of servers that use HTTP comprise the World Wide Web, which is the Internet's multimedia information retrieval system.</p> <p>As shown in FIG. 2, the invention is a method and system for extracting Web-based content, especially, but not limited to, Web-based news articles, from content provider or source Web sites for use by the hosting or "pass-through" Web site. These articles typically are revenue-generating content for the publisher by carrying advertising banners above and/or below the article text. Therefore, the publishers must benefit from the arrangement provided by the hosting site to be interested in licensing their content for a low or no fee. As explained below, the web content provider maintains his ad revenue as the number of "hits" on the advertisements are maintained in a</p>

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 6,128,655 "Distribution mechanism for filtering, formatting and reuse of web based content"

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 5,991,740 "Data processing system for integrated tracking and management of commerce related activities on a public access network"

Comparison of the U.S. Patent No. 6,993,572 and U.S. Patent No. 5,991,740 "Data processing system for integrated tracking and management of commerce related activities on a public access network"¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 5,991,740 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 5,991,740 (hereinafter "'740 Patent')
1	An e-commerce outsourcing process comprising:	"The second established method of raising revenue by a Site Owner is to place banner ads on the web pages promoting a third party's goods or services." Column 4, lines 47-49; FIG. 5A.
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	"Co-branding of products/services is also efficiently accomplished in the foregoing environment. Co-branding is the marketing or sales of two products through a single promotion. The system controlling software on the Clearinghouse server includes a "merge" algorithm that takes two or more images and combines these into an aesthetically acceptable presentation. For example, the resulting banner on the Merchant site will include a "return" button to go back to the originating Site Owner." Column 9, line 64 - column 10, line 5.
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	"These promotional banners further include embedded code, creating a link to the sponsoring third party—hereinafter called the 'Merchant.'" Column 4, lines 49-52; FIG. 5B. "The second site of interest is the Merchant's server. At the Merchant's

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 5,991,740 "Data processing system for integrated tracking and management of commerce related activities on a public access network"

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 5,991,740 (hereinafter "'740 Patent')
		purchase directly from the Merchant [where] ... the specific goods are made available for purchase." Column 4, lines 52-62; FIGs. 6A, 6B. "Co-branding of products/services is also efficiently accomplished in the foregoing environment. Co-branding is the marketing or sales of two products through a single promotion. The system controlling software on the Clearinghouse server includes a "merge" algorithm that takes two or more images and combines these into an aesthetically acceptable presentation. For example, the resulting banner on the Merchant site will include a "return" button to go back to the originating Site Owner." Column 9, line 64 - column 10, line 5. "Some web sites are considered "Content Providers" (or "Site Owners," i.e., those in control of one or more web sites) as they include one or more web pages having information that is of interest to USERS during a browsing session. These Site Owners currently have at least two mechanisms for generating revenues. The first involves the charging of a subscription fee to the visiting USERS somewhat akin to a magazine subscription. This mode of revenue generation is not particularly relevant to the present invention. ... The second site of interest is the Merchant's server. At the Merchant's server, the specific goods are made available for purchase. This involves the use of secured transactions, via a credit card or other payment vehicle to order the goods with delivery by any one of the available delivery services (land or air). To implement the present invention, programming is installed on the Merchant's server that is capable of tracking the number of visits by USERS that are precipitated by links with banner ads. Alternatively, the USER may be transferred back to the Clearinghouse for completion of the actual purchase transaction." Column 4, line 37 through column 5, line 3. The owner of the first web page is the Content Provider or Site Owner,

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in the Trip.com Prior Art
		search originating from the AltaVista Travel Zone." [DFNDT000942].
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent allowed the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website. <i>See also 18-21, infra.</i>
4	The process of claim 1, wherein the selected commerce object is a selected product.	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a selected commerce object being a selected product.
5	The process of claim 1, wherein the selected commerce object is a selected product category.	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a selected commerce object being a selected product category.
13	An e commerce outsourcing system comprising:	<i>See 1, supra.</i>
13(a)	a data store including a look and feel description associated with a host web page having a link correlated with a commerce object; and	On information and belief, the Trip.com systems predating the critical date of this asserted patent comprised a data store including a look and feel description associated with a host web page having a link correlated with a commerce object. <i>See also 1(b), supra.</i>
13(b)	a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the link has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the look and feel description in the data store and with content based on the commerce object associated with the link.	On information and belief, the Trip.com systems predating the critical date of this asserted patent comprised a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the link has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the look and feel description in the data store and with content based on the commerce object associated with the link. <i>See also 1(c)-1(d), supra.</i>
17	An e commerce outsourcing process comprising the steps of:	<i>See 1, supra.</i>
17(a)	storing a look and feel description associated with a first website in a data store associated	<i>See 13(a), supra.</i>

Comparison of the U.S. Patent No. 6,993,572 and Trip.com Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in the Trip.com Prior Art
	with a second website;	
17(b)	including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a link correlating the web page with a commerce object; and	<i>See 13(b), supra.</i>
17(c)	upon receiving an activation of the link from a visitor computer to which the web page has been served, serving to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the link.	<i>See 13(b), supra.</i>
18	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a "look and feel" description that comprised data defining the appearance of the top and left side of at least some of the web pages of the first website.
19	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the header and footer of at least some of the web pages of the first website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent a "look and feel" description that comprised data defining the appearance of the header and footer of at least some of the web pages of the first website.
20	The process of claim 17 wherein the look and feel description comprises data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a "look and feel" description that comprised data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.
21	The process of claim 17 wherein the look and feel description comprises data defining:	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a "look and feel" description that comprised data
21(a)	a logo associated with and displayed on at least some of the web pages of the first website;	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a logo associated with and displayed on at least some of the web pages of the first website.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in the Trip.com Prior Art
21(b)	a color scheme used on at least some of the web pages of the first website;	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a color scheme used on at least some of the web pages of the first website.
21(c)	a page layout used on at least some of the web pages of the first website; and	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a page layout used on at least some of the web pages of the first website.
21(d)	navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent included navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.
22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent stored a "look and feel" description associated with a first website in a data store associated with a second website comprising designing a first website, identified "look and feel" descriptions associated therewith, and stored the identified "look and feel" descriptions in the data store associated with the second website.
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	On information and belief, the Trip.com systems predating the critical date of this asserted patent included a commerce object being a set of product categories and further accepted search parameters through the composite web page and used said parameters to search for specific products within the product categories.
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	On information and belief, the Trip.com systems predating the critical date of this asserted patent stored at the second website data concerning a plurality of commerce objects.
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	On information and belief, the Trip.com systems predating the critical date of this asserted patent contracted with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website. See for example, DFNDT000920-943.
26	The process of claim 17 further comprising, after	On information and belief, the Trip.com systems predating the critical date of this

Comparison of the U.S. Patent No. 6,993,572 and the DBC Brand Label Quote Services Prior Art ("DBC Prior Art")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the DBC Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in DBC Prior Art
1	An e-commerce outsourcing process comprising:	The DBC Prior Art discloses an e-commerce outsourcing process providing a host website (for example, a client company of DBC) in communication with a visitor computer with context sensitive, transparent e-commerce pages. "Co-branding a web site with DBC Online provides quality, high-traffic web sites the opportunity to furnish their online users with the same comprehensive, user-friendly, and timely financial data & market news that DBC Online proudly offers its own customers. ... DBC co-brands these pages by using the logo, background and navigation bars of the company's web site, creating a BLQ that retains the look and feel of the original site design. Every page will carry both the company and the DBC logo, making it a true co-branded site. ... Creating a BLQ site with DBC Online is an easy and reliable way to supplement a company's existing website with an excellent source of the financial and market news." <i>Co-Branded Sites</i> , http://web.archive.org/web/19961115111020/http://www3.dbc.com/cgi-bin/htx.exe/core/dbc/partners.html?source=core/dbc (November 15, 1996 version of www3.dbc.com/cgi-

¹ DBC was providing the same Brand Label Services to many partners, for example, New York Stock Exchange, OTC Financial Network, John Fairfax Publications (for the Australian Financial Review), Digital Ink Co., The Harvard Crimson, eNet, USA Today, Washington Post, Baltimore Sun, Wall Street Online, U.S. News & World Report, PR Newswire, Techweb, Hoovers Online, Deloitte & Touche, Business Wire, etc. See *DBC Co-Branded Sites*, November 15, 1996 version.

Comparison of the U.S. Patent No. 6,993,572 and Quote.com Prior Art¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Quote.com Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
1	An e-commerce outsourcing process comprising:	<p>The Quote.com Prior Art discloses an e-commerce outsourcing process providing a host website (for example, AIG Sunamerica website) in communication with a visitor computer (for example, AIG Sunamerica website visitor) with context sensitive, transparent e-commerce support pages.² <i>AIG Sunamerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001644-0001645]</p> <p>"Quote.com arms each participating site with numerous financial and news services which give users free access to stock quotes, four major newswire services as well as other financial market data. Visitors to the sites who request charts, portfolio updates, stock quotes or other information are immediately provided with a page that retains the brand and creative qualities of that particular site." <i>Quote.com Provides Seven</i></p>

¹ The AIG Sunamerica co-branded website attached hereto as [DFNDT0001639-0001643] and referred to herein is exemplary and is not meant to be limiting, as Quote.com was providing the same Quote.com Services to many partners, for example, eTrade, Charter Media, Inc., The Hartford, BCL Online, Investors Journal, Multex Net, KickAssets, Lubbock Online, Network World Fusion, Offshore, Oregon Business Channel, Potter, Day & Associates PC, Bergerfunds, Defense Daily Network, Point, Procter, Sprynet, Stockprofiles.com, TD Waterhouse, Charles Schwab & Co., Inc., FWClient, Briefing, Freeman, JWITrade, Greenline, Bank of America, Stock-Trak, Cigna, CMP Media, Digital Insight, JackWhite & Company, NewEdge Corp., Nando.net, Nationwide, Philadelphia Stock Exchange, OLDE, Quotracker, Sagemarker, Wired.com, New York Times, Boston Globe, Los Angeles Times, Industry.net, Infoseek, Playboy, etc.

² The screen shots attached as [DFNDT0001639-0001643] reflect the AIG Sunamerica website and Quote.com co-branded pages as they existed in 2006. Defendants understand that the AIG website and Quote.com co-branded pages were the same in 1997, as evidenced by the copyright on the bottom of the home page and the terms and conditions page (1997-2006).

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
		0001638]
18	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website.	The Quote.com Prior Art discloses the process of claim 17 wherein the look and feel description comprises data defining the appearance of the top (#1) and left side (#2) of at least some of the web pages of the first website (for example, AIG Sunamerica website). <i>AIG SunAmerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001643-0001645]
19	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the header and footer of at least some of the web pages of the first website.	The Quote.com Prior Art discloses the process of claim 17 wherein the look and feel description comprises data defining the appearance of the header (#1) of at least some of the web pages of the first website (for example, AIG Sunamerica website). <i>AIG SunAmerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001643-0001645]
20	The process of claim 17 wherein the look and feel description comprises data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	
21	The process of claim 17 wherein the look and feel description comprises data defining:	The Quote.com Prior Art discloses a look and feel, used both on the <i>AIG SunAmerica Home</i> website and, for example, <i>AIG Sunamerica</i> website.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
21(a)	a logo associated with and displayed on at least some of the web pages of the first website;	The Quote.com Prior Art discloses a logo (for example, AIG Sunamerica (#1)) associated with and displayed on at least some of the web pages of the first website (for example, AIG Sunamerica website). <i>AIG SunAmerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001643-0001645]
21(b)	a color scheme used on at least some of the web pages of the first website;	The Quote.com Prior Art discloses a color scheme (for example, blue, yellow and white background, blue hyperlinks) used on at least some of the web pages of the first website (for example, AIG Sunamerica website). <i>AIG SunAmerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001643-0001645]
		For example, as shown in [DFNDT0001639-0001645], it appears that the co-branded webpages served by Quote.com include the color scheme of the AIG Sunamerica website.
21(c)	a page layout used on at least some of the web pages of the first website; and	The Quote.com Prior Art discloses a page layout (for example, blue frame on top of page, yellow frame on left side of page) used on at least some of the web pages of the first website (for example, AIG Sunamerica Website). <i>AIG SunAmerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001643-0001645]
		For example, as shown in DFNDT0001639-0001645 it appears the co-branded webpages served by Quote.com include a similar layout

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
		compared to the AIG Sunamerica website.
21(d)	navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	
22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	The Quote.com Prior Art discloses storing a look and feel description (#1 & #2) associated with a first website (for example, AIG Sunamerica website) in a data store associated with a second website (for example, Quote.com website) comprises designing a first website (for example, AIG Sunamerica website), identifying look and feel descriptions associated therewith (#1 & #2), and storing the identified look and feel descriptions in the data store associated with the second website (for example, Quote.com website). <i>AIG SunAmerica Home</i> website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News</i> web page. [DFNDT0001640-0001643]; and <i>SunAmerica.com Market Summary Terms and Conditions</i> web page. [DFNDT0001643-0001645]
		For example, the look and feel description associated with the AIG Sunamerica website is stored when: (1) AIG Sunamerica designed a first website, (2) AIG Sunamerica and/or Quote.com identified look and feel descriptions associated therewith, and (3) Quote.com stored the identified look and feel descriptions on its servers (data store).

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	The Quote.com Prior Art discloses the commerce object is a set of product categories (for example, quotes & news or charts & graphs) and further comprising accepting search parameters (one or more ticker symbols) through the composite web page (Quote.com co-branded web page) and using said parameters to search for specific products (for example, stock quotes) within the product categories (for example, quotes & news or charts & graphs). <i>AIG SunAmerica Home website. [DFNDT0001639]; SunAmerica.com Market Summary Quotes and News web page. [DFNDT0001640-0001643]; and SunAmerica.com Market Summary Terms and Conditions web page. [DFNDT0001643-0001645]</i>
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	The Quote.com Prior Art disclose storing at the second website (for example, Quote.com website) data concerning a plurality of commerce objects (for example, one or more ticker symbols, stock quotes, current prices and other quote content). For example, it appears that the Quote.com website is associated with a database of one or more ticker symbols, stock quotes, current prices and other quote content.
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	Quote.com contracts with merchants to offer stock tickers and other data concerning the commerce objects of such merchants at the second website. [DFNDT0001634-0001645]

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service.	
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	The Quote.com Prior Art discloses the commerce object is a set of product categories (for example, quotes & news or charts & graphs), each comprising a plurality of products or services (for example, one or more ticker symbols (#3), stock quotes, current prices and other quote content). <i>AIG SunAmerica Home website. [DFNDT0001639]; SunAmerica.com Market Summary Quotes and News web page. [DFNDT0001640-0001643]; and SunAmerica.com Market Summary Terms and Conditions web page. [DFNDT0001643-0001645]</i>
27(a)	before serving the composite web page to the visitor computer:	
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	See 25, <i>supra</i> .
27(a)(ii)	storing at the second website data concerning the plurality of products or services; and	The Quote.com Prior Art discloses storing at the second website (for example, Quote.com website) data concerning the plurality of products or services (for example, one or more ticker symbols, stock quotes, current prices and other quote content). <i>AIG SunAmerica Home</i>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Quote.com Prior Art
		website. [DFNDT0001639]; <i>SunAmerica.com Market Summary Quotes and News web page. [DFNDT0001640-0001643]; and SunAmerica.com Market Summary Terms and Conditions web page. [DFNDT0001643-0001645]</i>
27(b)	after serving the composite web page to the visitor computer:	The Quote.com Prior Art discloses after serving the composite web page to the visitor computer.
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	The Quote.com Prior Art discloses accepting search parameters through the composite web page (for example, ticker symbols) through the Quote.com co-branded web page (for example, the co-branded AIG SunAmerica web page, as shown in Appendix F) and using said parameters to search for specific ones of the plurality of products or services (for example, stock quotes) within the product categories (for example, quotes & news or charts & graphs). <i>AIG SunAmerica Home website. [DFNDT0001639]; SunAmerica.com Market Summary Quotes and News web page. [DFNDT0001640-0001643]; and SunAmerica.com Market Summary Terms and Conditions web page. [DFNDT0001643-0001645]</i>
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.	

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,016,504 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
1	An e-commerce outsourcing process comprising:	The '504 patent discloses an e-commerce outsourcing process wherein a virtual outlet Web site outsources e-commerce requests from a customer computer to a merchant. (Summary of the Invention; Col. 5:24 - 6:65).
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	The '504 patent discloses capturing a look and feel description associated with a host website (VO). The look and feel description is provided by the virtual outlet to the merchant: <ul style="list-style-type: none"> • "The Web page of FIG. 6 inputs information concerning the appearance that the VO expects for a merchant order Web page that will be displayed when a customer hot links through the VO to the merchant site. This information includes a URL for a graphics file that contains the VO's logo, the desired background color, and other such information." Col. 9:14-20. • "The example confirmation Web page repeats certain of the supplied sign-up information and displays the appearance requested by the representative for the merchant order Web page, including colors and fonts." Col. 9:46-50. • "[The Merchant Sign-up Component] prepares a confirmation Web page in the style specified by the VO for order processing Web pages, including specified logos, graphics, colors, and text fonts[.]" Col. 12:59-65. • "[Software routines] support processes by which the VO changes the appearance of order Web pages displayed by the merchant to customers." Col. 13:67-14:2. • Claim 27 (emphasis added). A method in a computer system for establishing a relationship between a virtual outlet and a merchant so that the virtual outlet can offer to a customer over a network, a product that is for sale by the merchant; the virtual outlet, customer, and merchant each having a computer; the method comprising: <ul style="list-style-type: none"> o establishing a database of information at the merchant computer,

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,016,504 "Method and system for tracking the purchase of a product and services over the Internet" by Arnold, Bennett, et al. (filed Aug. 28, 1996, issued Jan. 18, 2000). [DFNDT0000077-0000114]

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<p>the database including an identification of the virtual outlet and representative interface aspects to be provided by the merchant computer to the customer computer; and</p> <ul style="list-style-type: none"> o supplying from the merchant computer to the virtual outlet computer a link that identifies a merchant resource associated with the merchant computer and that uniquely identifies the virtual outlet; wherein the virtual outlet computer supplies the link to the customer computer, when the customer computer uses the link to access the merchant resource, the merchant computer provides the merchant resource to the customer computer in a manner customized to the virtual outlet, such manner being based on the database of information and identifying the virtual outlet that provided the link to the customer computer. <p>The '504 patent also discloses storing HTML code corresponding to the look and feel description at a second website (Merchant):</p> <ul style="list-style-type: none"> • "FIG. 16 lists example information returned by the VO to the merchant during the sign-up process." Col. 12:55-56. The information in Figure 16 includes: URL of logos to display on order pages; URL for graphics for background; colors for various parts of screen; fonts for text; other characteristics for HTML display; etc. • "In step 1509, sign-up. Request permanently stores the sign-up information on the merchant computer and flags the stored information for review by a representative of the merchant computer." Col. 13:2-5 (emphasis added). • "Some information, including the VO logo, may be obtained from the VO by accessing VO files using stored URLs. Other information may be stored entirely on the merchant computer." Col. 14:24-27 (emphasis added). <p>The information stored, as described in Figure 16, may include a "navigation bar," "banner advertising" and "other characteristics for HTML display."</p>
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a	The '504 patent discloses providing the host website (VO) with a link (URL) for inclusion within a page on the host website for serving to a visitor computer (customer), wherein the provided link correlates the host website with a selected commerce object (product):

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
	selected commerce object; and	<ul style="list-style-type: none"> • "The Catalog_Browser routine allows a VO representative to browse through catalog Web pages supplied by the merchant... Items for sale are described and listed along with URLs corresponding to the order Web page that the merchant will supply to a customer linking through a VO Web page to the merchant site in order to purchase the item. The VO may incorporate items into the VO Web pages by including the URLs obtained from the merchant's catalog as hot links in the VO Web pages." Col. 10:41-50. • Claim 27 (emphasis added). A method in a computer system for establishing a relationship between a virtual outlet and a merchant so that the virtual outlet can offer to a customer over a network, a product that is for sale by the merchant; the virtual outlet, customer, and merchant each having a computer; the method comprising: <ul style="list-style-type: none"> o establishing a database of information at the merchant computer, the database including an identification of the virtual outlet and representative interface aspects to be provided by the merchant computer to the customer computer; and o supplying from the merchant computer to the virtual outlet computer a link that identifies a merchant resource associated with the merchant computer and that uniquely identifies the virtual outlet; wherein the virtual outlet computer supplies the link to the customer computer, when the customer computer uses the link to access the merchant resource, the merchant computer provides the merchant resource to the customer computer in a manner customized to the virtual outlet, such manner being based on the database of information and identifying the virtual outlet that provided the link to the customer computer. <p><i>See also 4-5, infra.</i></p>
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website	The '504 patent discloses, upon receiving an activation of the provided link from the visitor computer (customer selects merchant hotlink on VO Web page), serving to the visitor computer (customer computer) an e-commerce supported page (order page) with a look and feel corresponding to the captured look and feel description of the host website (VO) associated with the provided link and with content based on the

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
	associated with the provided link and with content based on the commerce object associated with the provided link;	<p>commerce object (product) associated with the provided link:</p> <ul style="list-style-type: none"> • Where a request to display an order Web page corresponding to an item displayed by the VO on a VO Web page "has come to the merchant via a hotlink from the VO Web Page" the Merchant Order Processing Component "retrieves stored information supplied by the VO that allows the merchant computer to construct a description of an order Web page that appears similar to a VO Web page and uses the information to construct a description of an order Web page and send it to the customer[.] Some information, including the VO logo, may be obtained from the VO by accessing VO files using stored URLs. Other information may be stored entirely on the merchant computer." Col. 14:15-27 (emphasis added). • Claim 1 (emphasis added): <ul style="list-style-type: none"> o [...] o Displaying at the customer computer the virtual outlet Web page; o Receiving from the customer at the customer computer a selection of the product; o Sending from the customer computer to the merchant computer a request for the merchant Web page identified by the link associated with the selected product, the request including an indication of the virtual outlet; o Receiving at the merchant computer the request for the merchant Web page; o Upon receiving the request for the merchant Web page, under control of the merchant computer, modifying the merchant Web page [...] o Sending from the merchant computer the modified merchant Web page... • Claim 2 (emphasis added): <ul style="list-style-type: none"> o The method of claim 1 wherein the merchant computer maintains a database of information describing a desired layout of the merchant Web page when the merchant Web page is accessed through the virtual outlet Web page and wherein the merchant computer customizes the merchant Web page in accordance with the information.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<ul style="list-style-type: none"> • Claim 3: <ul style="list-style-type: none"> o The method of claim 2 wherein the information includes a name and logo of the virtual outlet. • Claim 4: <ul style="list-style-type: none"> o The method of claim 2 wherein the information includes preferred coloring of the merchant Web page. • Claim 5: <ul style="list-style-type: none"> o The method of claim 1 wherein the links are universal resource locators.
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	<p>The visitor (consumer) receiving the served page (order page) at the visitor computer perceives the page as associated with the host website (VO) even though it is served from the second website (Merchant) because the page is customized to look like a VO web page and appears similar:</p> <ul style="list-style-type: none"> • "The Web page of FIG. 6 inputs information concerning the appearance that the VO expects for a merchant order Web page that will be displayed when a customer hot links through the VO to the merchant site. This information includes a URL for a graphics file that contains the VO's logo, the desired background color, and other such information." Col. 9:14-20 (emphasis added). • The Merchant Order Processing Component "retrieves stored information supplied by the VO that allows the merchant computer to construct a description of an order Web page that appears similar to a VO Web page and uses the information to construct a description of an order Web page and send it to the customer[.] Some information, including the VO logo, may be obtained from the VO by accessing VO files using stored URLs. Other information may be stored entirely on the merchant computer." Col. 14:15-27 (emphasis added). • Claim 13 (emphasis added). A method for providing a second computer with access to information provided by a third computer through a resource that is similar in appearance to a resource provided by a first computer; the first, second, and third computers being interconnected; the method comprising: <ul style="list-style-type: none"> o [...] o under control of the third computer, customizing the resource

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<p>identified by the received link based on the entity identified in the received link; and</p> <ul style="list-style-type: none"> o sending to the second computer the customized resource so that the second computer can display the customized resource, the customized resource having an overall appearance similar to the displayed resources of the first computer. <ul style="list-style-type: none"> • Claim 14. The method of claim 13 wherein the first computer is a virtual outlet computer, the second computer is a customer computer, and the third computer is a merchant computer. • Claim 15. The method of claim 14 wherein the step of customizing includes customization options provided by the virtual outlet. • Claim 16. The method of claim 15 wherein the customization option is a virtual outlet logo. • Claim 17. The method of claim 15 wherein the customization option is a color. • Claim 18. The method of claim 15 wherein the customization option is a font. <p>Claim 22. The method of claim 14 wherein the resource identified by the received link is a Web page that allows a customer to purchase a product of a merchant.</p> <p><i>See also 18-21, infra.</i></p>
4	The process of claim 1, wherein the selected commerce object is a selected product.	<p>The '504 patent discloses the process described above wherein the selected commerce object is a selected product.</p> <ul style="list-style-type: none"> • "When a customer selects a product to purchase or to view product information), the browser accesses the Web page for the merchant that sells the product. 		<ul style="list-style-type: none"> o sending from the customer computer to the merchant computer a request for the merchant Web page identified by the link associated with the selected product, the request including an indication of the virtual outlet; o receiving at the merchant computer the request for the merchant Web page; o upon receiving the request for the merchant Web page, under control of the merchant computer, modifying the merchant Web page to contain a return link based on the indication of the virtual outlet included in the request so that upon completion of the purchase, the customer computer displays the virtual outlet return Web page identified by the return link; o sending from the merchant computer to the customer computer the modified merchant Web page; o displaying at the customer computer the modified merchant Web page, wherein after the customer purchases the product from the merchant, the merchant credits the virtual outlet identified by the link; and o upon completion of the purchase, displaying at the customer computer the virtual outlet return Web page identified by the return link in the modified merchant Web page. <ul style="list-style-type: none"> • Claim 2 (emphasis added): <ul style="list-style-type: none"> o The method of claim 1 wherein the merchant computer maintains a database of information describing a desired layout of the merchant Web page when the merchant Web page is accessed through the virtual outlet Web page and wherein the merchant computer customizes the merchant Web page in accordance with the information. <p>See also 1(c)-1(d), <i>supra</i>.</p>
17	An e commerce outsourcing process comprising the steps of:	See 1, <i>supra</i> .
17(a)	storing a look and feel description associated with a first website in a data store associated with a second website;	See 13(a), <i>supra</i> .

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
17(b)	including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a link correlating the web page with a commerce object; and	See 13(b), <i>supra</i> .
17(c)	upon receiving an activation of the link from a visitor computer to which the web page has been served, sewing to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the link.	See 13(b), <i>supra</i> .
18	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website.	The '504 patent discloses the process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website (VO). The Merchant web pages may be customized by the VO. Customizable elements include: <ul style="list-style-type: none"> • Design information (e.g., color scheme) of the VO Web site (Col. 6:21-22) • A page layout that is preferably a layout similar to that of the Web page for the [VO]. For example, the layout may indicate the contents of the banner, logo, and background color of the Web page. (Col. 7:58-62) • The VO's logo, the desired background color, and other such information. (Col. 9:19-20) • Colors and fonts. (Col. 9:49) • Logos, graphics, colors and text fonts. (Col. 12:64-65)
19	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the header and footer of at least some of the web pages of the first website.	The '504 patent discloses the process of claim 17 wherein the look and feel description comprises data defining the appearance of the header and footer of at least some of the web pages of the first website (VO). The Merchant web pages may be customized by the VO. Customizable elements include: <ul style="list-style-type: none"> • Design information (e.g., color scheme) of the VO Web site (Col. 6:21-22) • A page layout that is preferably a layout similar to that of the Web page for the [VO]. For example, the layout may indicate the contents of the banner, logo, and background color of the Web page. (Col. 7:58-62)

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
		<ul style="list-style-type: none"> • The VO's logo, the desired background color, and other such information. (Col. 9:19-20) • Colors and fonts. (Col. 9:49) • Logos, graphics, colors and text fonts. (Col. 12:64-65)
20	The process of claim 17 wherein the look and feel description comprises data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	The '504 patent discloses the process of claim 17 wherein the look and feel description comprises data defining a set of navigational links (a Navigation Bar), used on at least some of the web pages of the first website (VO), each of which links link to specific web pages of the first website. Figure 25 shows an example Web page from a virtual outlet containing a logo and a navigation bar. Figure 26 shows a web page served by the Merchant containing the same logo and navigation bar.
21	The process of claim 17 wherein the look and feel description comprises data defining:	The '504 patent discloses the process of claim 17 wherein the look and feel description contains all of the elements listed in this claim. The Merchant web pages may be customized by the VO. Customizable elements include: <ul style="list-style-type: none"> • Design information (e.g., color scheme) of the VO Web site (Col. 6:21-22) • A page layout that is preferably a layout similar to that of the Web page for the [VO]. For example, the layout may indicate the contents of the banner, logo, and background color of the Web page. (Col. 7:58-62) • The VO's logo, the desired background color, and other such information. (Col. 9:19-20) • Colors and fonts. (Col. 9:49) • Logos, graphics, colors and text fonts. (Col. 12:64-65) <p>Figure 16 lists additional elements, including a navigation bar.</p>
21(a)	a logo associated with and displayed on at least some of the web pages of the first website;	Customizable elements include: The VO's logo, the desired background color, and other such information. (Col. 9:19-20)
21(b)	a color scheme used on at least some of the web	Customizable elements include:

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
	pages of the first website;	Design information (e.g., color scheme) of the VO Web site (Col. 6:21-22)
21(c)	a page layout used on at least some of the web pages of the first website; and	Customizable elements include: A page layout that is preferably a layout similar to that of the Web page for the [VO]. For example, the layout may indicate the contents of the banner, logo, and background color of the Web page. (Col. 7:58-62)
21(d)	navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	Customizable elements include: See Figure 16, "navigation bar."
22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	The '504 patent discloses the process of claim 17 wherein storing a look and feel description associated with a first website (VO) in a data store (Database) associated with a second website (Merchant) comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website. A virtual outlet owner is allowed to sign up to offer a merchant's products for sale through the virtual outlet. (See Col. 5:26-29) Upon sign up, the virtual outlet representative may supply the Merchant with design information of the VO Web site, as identified by the representative. (See Col. 6:19-22)
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	To the extent that the limitations of Claim 23 are not disclosed in the '504 patent, Claim 23 is invalid as obvious based on the '504 Arnold patent in view of, at least, the TravelNow.com prior art cited in Exhibit 4. The TravelNow.com prior art discloses accepting search parameters and using search parameters to search for specific products, such as hotels in a particular city on a particular date. Claim 23 of the '572 patent is also invalid as obvious based on the '504 Arnold patent in view of any other prior art reference cited in any part of Defendants' Joint Preliminary Invalidity Contentions that discloses accepting search parameters and using search parameters to search for specific products. The motivation to combine these references being, among other things, that each of the references is found in the affiliate marketing, e-commerce, and on-line retailing industries.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	The '504 patent discloses the process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects (Products). A merchant may offer a plurality of products, storing product information, including price, corresponding to each. For example, the merchant web page depicted Figure 26 refers to a selection of greeting card choices. "The VO home page component of the merchant portion of the VO system provides one or more Web pages to VOs that may contain general information about the merchant and the merchant's products and services ..." Col. 11:36-39.
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	The '504 patent discloses the process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website. The virtual outlet-merchant contractual relationships are formed through the sign-up process: "A virtual outlet relationship can be established and maintained with a merchant by accessing and interacting with the merchant VO set up Web page. This Web page contains links to additional Web pages that allow the prospective virtual outlet to conduct various transactions with the merchant. The prospective VO first establishes the relationship through a sign-up procedure. The VO provides the merchant with various information such as the VO's name, street address, email address, and design information (e.g., color scheme) of the VO Web site. The merchant computer accepts the information, the merchant considers whether a VO relationship should be established, and, if the merchant decides to establish the relationship, the merchant computer sends a confirmation back to the prospective VO." Col. 6:12-25.
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and	The '504 patent discloses the process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service. See, e.g., Col. 14:7-61 and Fig. 24.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
	passing captured billing information to a merchant offering the indicated product or service.	The merchant Web page may allow the representative to browse through various other Web pages to collect information (e.g., delivery address or credit card number) relating to the purchase. Col. 7:67-8:3.
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	The '504 patent discloses a commerce object that is a set of product categories, each comprising a plurality of products or services. "FIG. 25 displays an example display Web page from a VO, including a number of items that can be ordered by a customer." Col. 14:40-42. <ul style="list-style-type: none"> The "items" listed on the Figure 25 are actually product categories, including, for example, greeting cards. "If the customer chooses to order a greeting card, then the customer will link directly to the greeting card merchant, who prepares and sends to the customer the order Web page displayed in FIG. 26" Col. 14:42-43. The order Web page of Figure 26 corresponds to the "greeting cards" product category at the VO, and offers the customer a number of Card Choices to choose from. See also 23, supra.
27(a)	before serving the composite web page to the visitor computer.	The '504 discloses the following claim limitations before serving the composite web page to the visitor computer.
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	See 25, supra.
27(a)(ii)	storing at the second website data concerning the plurality of products or services; and	See 24, supra.
27(b)	after serving the composite web page to the visitor computer.	The '504 discloses the following claim limitations after serving the composite web page to the visitor.
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	See 23, supra.
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of	See 26, supra.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in U.S. Patent No. 6,016,504 ("the '504 patent")
	the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.

1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	Capture took place when the host website operator emailed to dml@sextoy.com or faxed to (617) 666-3421 the <i>Promote your own sextoy site page</i> .

⁴ Also see Lewis Perdue, *EroticaBiz How Sex Shaped the Internet* 5-6 (IdeaWorx 2002), available at <http://www.erotica.biz.com/> ("Actual profits from an affiliate system had to wait until David Levine built SexToyFun (www.sextoyfun.com) [sic] a substantial but decidedly quirky sex paraphernalia site. Levine said he launched his site in 1994 and began his first affiliate program in the spring of 1996. ... Levine's affiliate program was actually a virtual store service which allowed adult webmasters to set up, customize and brand their own sex toy stores with Levine's operation handling all the billing, fulfillment, shipping and customer service. Then in early 1997, Levine set up a more conventionally structured affiliate system like that used by Amazon and CDNow so webmasters could get referral commissions from the sale of products from their store.

While Levine's conventional affiliate system was launched after SportSource and CDNow, his pioneering role was the invention of "v-commerce" an e-commerce business model halfway between traditional affiliate systems and outright e-tailing.

... [T]he v-commerce operation pioneered by Levine offers ... [a] central e-supplier provid[ing] an online "catalog" from which the v-commerce affiliate can select. Each product selected by the affiliate goes into a cookie-cutter web page supplied by the mother site which offers a number of different pre-programmed and customizable styles from which to select.

When an order is placed in the affiliate's store, the mother site then works in the background, handling everything else from order taking and payments to shipping customer service and returns -- all within an e-commerce environment that looks just like the whole process is run by the affiliate.

Building upon the adult industry's experience, v-commerce was discovered by the non-adult market in 1998 when venture capitalists funded more than a dozen start-ups including vcommerce.com (born as Vstore) which backed by more than \$54 million in venture capital, is the non-adult patriarch in this field. ...

By early 2001, most other non-adult v-commerce operations had burned through their venture capital and were either out of business (Affinia.com, Nexchange), hanging on by a thread (Economy, Vitesse) or trying to re-invent themselves into another category that would attract more venture capital (eseller.com reborn as pop2it, a so-called "contextual commerce technology company).

Thanks to the product affiliate sales system he invented, Levine has succeeded in making a profit from e-commerce on the Internet -- something that has eluded hundreds of venture-financed e-tailers who have collectively poured billions of investment dollars down a very large and seemingly insatiable cyber-rathole. Significantly, Levine has been profitable from his first few months on the Web. Amazon and other are still scrambling to get out of the loss columns." (This article is referring to sextoy.com, not sextoyfun.com; David Levine began an affiliate program on sextoy.com in 1996). [DFNDT0001048-0001059]; also see WHOIS Record for sextoyfun.com, <http://www.networksolutions.com/whois/results.jsp?whoisoker=13> (last visited August 8, 2006) (sextoyfun.com was first registered on September 9, 1998). [DFNDT0001065-0001069]

⁵ Also see David Levine, <http://www.davelevine.com> (last visited on August 11, 2006) ("O)ne idea was to take orders on the web and then forward the orders to companies who would drop ship the products to my customers. My goal was (and still is) to build a billion dollar company with no employees, no corporate office, and no inventory. I named my business Convergence, Inc. I started Wicked Cool Mall and opened stores selling lobster, sneakers, watches, paintings, t-shirts, etc. Eventually I decided I could make more money focusing on one product niche rather than many different stores in a mall. Since SEXTOY.com had the most sales, highest profit margins, and biggest traffic I decided to become the king of sex toys.

In 1996, I started the first affiliate program for adult products. An affiliate program allows anyone to sign up and get their own sextoy site for free. They can make the site look like their own, but we handle the orders and fulfillment [sic] and then send the affiliate a commission check each month for the sales in their store." [DFNDT0001070-0001079]

Comparison of U.S. Patent No. 6,993,572 and One & Only Articles Prior Art^{1,2}

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, One & Only Internet Personals at www.one-and-only.com, anticipate and/or render obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in One & Only Articles Prior Art ("One & Only")
1	An e-commerce outsourcing process comprising:	One & Only Internet Personals at www.one-and-only.com, provided an e-commerce outsourcing process. "Consider, for instance, matchmaker site One & Only. The site, which launched in 1996, makes half of its money from an affiliate network with more than 8,000 members." Whit Andrews, <i>Partners in Affiliate Marketing Struggle With Branding Issues</i> , Internet World, April 13, 1998. ^{3,4,5} [DFNDT0001690-0001692, DFNDT0001712-0001715]
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	"The site [One & Only], which launched in 1996, makes half of its money from an affiliate network with more than 8,000 members. Each of these members has the choice of building a private-label site or a co-branded site with One & Only ... And One and Only allows affiliates to customize navigational features, such as search categories, for their sites, which makes it harder to tell users they have to switch."

¹ See also the prior art identified in the invalidity contentions for the One & Only Network Prior Art.

		One & Only Internet Personals offers a customized version of their classifieds service that integrates seamlessly with the look and feel of the owner's website." James L. Marciano, <i>Are Affiliate Programs for You?</i> . [DFNDT0001693-0001697, DFNDT0001716-0001719]
19	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the header and footer of at least some of the web pages of the first website.	<p>"The site [One & Only], which launched in 1996, makes half of its money from an affiliate network with more than 8,000 members. Each of these members has the choice of building a private-label site or a co-branded site with One & Only ... And One and Only allows affiliates to customize navigational features, such as search categories, for their sites, which makes it harder to tell users they have to switch." Whit Andrews, <i>Partners in Affiliate Marketing Struggle With Branding Issue</i>.^{35,36} [DFNDT0001690-0001692, DFNDT0001712-0001715]</p>

³⁵ Also see *Custom Features*, April 22, 1999 version ("Our unmatched leading-edge co-branding technology gives you the ability to customize and integrate our content into your site seamlessly. All content appears to be your own because we match the look and feel to your home page.

With our easy customization features, we become part of your site. You can add your logo, specify a background color or gif, design your own menu bar [sic]. You can even filter the database on search criteria such as geography and category. All our products are set up so you can create a customized service that caters to your existing audience and blends seamlessly with your own web site. No other associate program gives you the tools to tailor your content to fit your current home page.

Our UTrade product has tremendous flexibility. Let's say you have an antique web site, and you want to join our program to make some cash and get some auction content. BUT...you want to maintain your antique theme. With our unique customization technology you can build your associate site to only show antique listings. On top of that, let's say you already have your own logo and brand name you'd like to use and you've got a great background color you like. Oh, and let's say your from Pennsylvania and you want to add a "local feel to your site". Well, with UTrade, you can set up an associate site that will have your name, logo, background color, only listing antiques from Pennsylvania! Our system is flexible [sic] enough to handle your every whim! Again, we want to provide you with the tools you need to succeed.

Customizing makes it easy to maintain your sites [sic] look and feel. With our easy customization features, we become part of your site. You can add your logo and design your own menu bar.

Don't worry about losing visitors either because a link back to your main home page is prominently displayed at all times within your associate site."³⁶ (emphasis and links removed). [DFNDT0001700-0001701]

22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	As far as the scope of the claimed "look and feel" can be determined, the look and feel of the One & Only website of the associate was the same as the look and feel description of the existing website of the associate. Specifically, the associate could add or control the following on the One & Only website: add their logo, specify a background color or gif, design their own menu bar, add a link back to their existing website, and filter the classifieds databases using search criteria such as geography and category to create a customized service that corresponds to the associate's existing website. ^{49, 50}

		<i>Welcome To One&Only Network</i> , April 27, 1999 version. [DFNDT0001747-0001748]

Comparison of U.S. Patent No. 6,993,572 and IBM Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the IBM Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent N. 6,993,572	Relevant Disclosure in IBM Prior Art
1.	An e commerce outsourcing process comprising:	IBM Credit Corporation provided a host website entitled, <i>Leasing & Financing Welcome to IBM Customer Leasing and Financing</i> at www.financing.hosting.ibm.com , ¹ (hereinafter " <i>Leasing & Financing website</i> ") ² with a link to a website of IBM Corporation with the same look and feel, entitled, <i>IBM planetwide ordering information</i> at www.ibm.com/Orders (hereinafter " <i>IBM Ordering website</i> "). ³ The merchant for the commerce object is one of IBM's business partners.

¹ WHOIS Record *ibm.com*, <http://www.networksolutions.com/whois/results.jsp?whoistoken=1> (last visited August 8, 2006) (*ibm.com* was first registered on March 19, 1986); [DFNDT0001821-0001824]

² Other examples of IBM web pages that were "host websites" in relation to the *IBM Ordering website* included: *The IBM Direct Planetwide home page*, <http://web.archive.org/web/19961219004723/http://direct.boulder.ibm.com> (December 19, 1996 version of <http://direct.boulder.ibm.com> as archived by the Internet Archive. (see note 4)); [DFNDT0001802-0001807]; *IBM Planetwide help*, <http://web.archive.org/web/19961026164521/www.ibm.com/Finding> (October 26, 1996 version of [www.ibm.com/Finding](http://web.archive.org/web/19961026164521/www.ibm.com/Finding) as archived by the Internet Archive. (see note 4)); [DFNDT0001795-0001797]; and *IBM Worldwide Customer Financing*, <http://web.archive.org/web/19961104165233/www.financing.hosting.ibm.com/CFWWINTR.HTM> (November 4, 1996 version of [www.financing.hosting.ibm.com/CFWWINTR.HTM](http://web.archive.org/web/19961104165233/www.financing.hosting.ibm.com/CFWWINTR.HTM) as archived by the Internet Archive. (see note 4)); [DFNDT0001808-0001812].

³ In another example of IBM prior art, the *IBM Ordering website* (www.ibm.com/Orders) [DFNDT0001798] was the "host website" and *The IBM Direct Planetwide home page*, December 19, 1996 version (<http://direct.boulder.ibm.com>) [DFNDT0001802-0001807] was the "second website."

68950.3

Claim No.	Claim Language of U.S. Patent N. 6,993,572	Relevant Disclosure in IBM Prior Art
		<i>Leasing & Financing website</i> , http://web.archive.org/web/19961227153901/www.financing.hosting.ibm.com (December 27, 1996 version of www.financing.hosting.ibm.com as archived by the Internet Archive.); [DFNDT0001799-0001801]. <i>IBM Ordering website</i> , http://web.archive.org/web/19961220005843/www.ibm.com/Orders (December 20, 1996 version of www.ibm.com/Orders as archived by the Internet Archive. ⁴). [DFNDT0001798]. <i>1995 Annual Report Highlights</i> , http://web.archive.org/19961104164231/www.financing.hosting.ibm.com/AR95CL.HTM (November 11, 1996 version of www.financing.hosting.ibm.com/AR95CL.HTM as archived by the Internet Archive. ⁵ (hereinafter " <i>1995 Annual Report of IBM Credit Corp.</i> "). [DFNDT0001879-0001882]. "IBM Direct: Your source for products and services from IBM and our business partners... planetwide." <i>IBM Ordering website</i> , December 20, 1996 version. [DFNDT0001798]. "[I]n some countries you can even order online." <i>IBM Ordering website</i> , December 20, 1996 version. [DFNDT0001798].
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	Capture took place when the script to dynamically generate the <i>IBM Ordering website</i> was written or when the <i>IBM Ordering website</i> was dynamically generated by the script on December 20, 1996 with the look and feel of the <i>Leasing & Financing website</i> .

Claim No.	Claim Language of U.S. Patent N. 6,993,572	Relevant Disclosure in IBM Prior Art
		<p>feel of the <i>IBM Ordering</i> website was the same as the look and feel of the <i>Leasing & Financing</i> website.⁹ Specifically, both the <i>IBM Ordering</i> website and the <i>Leasing & Financing</i> website used a single column format with text in the same font, size, and black color on a white background. Unused text links were shown in blue underlined text and visited text links were shown in red underlined text on both web pages.¹⁰ As described below, the look and feel also include using similar headers and footers.¹¹</p> <p>Additionally, both web pages had headers with a similar look and feel. Both headers had the same Blue IBM® logo in the top left corner with a copyright notice below the logo. The copyright notice was separated from the Blue IBM® logo by a pink line that extended the length of the header. On the right side, both headers had a rectangular picture superposed over a portion of the pink line and a rectangular</p>

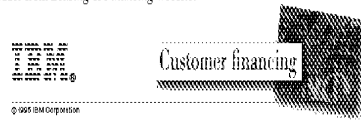

⁹ IBM used this same look and feel on many web pages on many different IBM websites. See e.g. *IBM Planetwide help*, October 26, 1996 version; [DFNDT0001795-0001797]; *The IBM Direct Planetwide home page*, December 19, 1996 version; [DFNDT0001802-0001807] and *IBM Worldwide Customer Financing*, November 4, 1996; [DFNDT0001808-0001812]

¹⁰ Both the *IBM Ordering* website and the *Leasing & Financing* website used the default colors of the web browser of the visitor computer for text colors. In the web browser that was used to print these pages, the default colors are blue, red and black for unused text links, visited text links, and regular text respectively. The actual colors of the links and text would have varied based on the default settings of the web browser of the visitor computer.

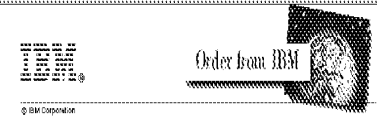

¹¹ Also see: *IBM PC ThinkPad* website, [http://www.pc.ibm.com/thinkpad/](http://web.archive.org/web/19961219011414/http://www.pc.ibm.com/thinkpad/) (December 19, 1996 version of www.pc.ibm.com/thinkpad/ as archived by the Internet Archive; see note 4); [DFNDT0001893-0001904]; *End-user Customer Financing* website, [http://www.financing.hosting.ibm.com/CFCALLIE.HTM](http://web.archive.org/web/19961104164326/http://www.financing.hosting.ibm.com/CFCALLIE.HTM) (November 11, 1996 version of www.financing.hosting.ibm.com/CFCALLIE.HTM as archived by the Internet Archive; see note 4); [DFNDT0001905-0001917]; *Remarketer Financing* website, [http://www.financing.hosting.ibm.com/CFTALBOT.HTM](http://web.archive.org/web/19961104164859/http://www.financing.hosting.ibm.com/CFTALBOT.HTM) (November 11, 1996 version of www.financing.hosting.ibm.com/CFTALBOT.HTM as archived by the Internet Archive; see note 4); [DFNDT0001918-0001927]; *1995 Annual Report of IBM Credit Corp.*, December 19, 1996 version; [DFNDT0001879-0001882].

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Lycos Prior Art
		0001961]
22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website, identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	See 1(a), <i>supra</i> . The storing includes designing, identifying, and storing, as stated in the claim.
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	The commerce object is the stock quotes of PC Quote, Inc. "StockFind Free Quotes" <i>Lycos</i> website, December 11, 1997 version (emphasis and link removed)(hyperlink to http://www.stockfind.newsalert.com). [DFNDT0001928-0001929] "DJIA 7978.79 NYSE 507.70 NASDAQ 1596.61 Russell 2000 432.81 S&P 500 969.25/32 AMEX MMI 836.57" <i>News Alert</i> website, December 11, 1997 version (emphasis removed). [DFNDT0001930-0001931] "Delayed quotes powered by PC Quotes, Inc." <i>News Alert</i> website, December 11, 1997 version (emphasis removed). [DFNDT0001930-0001931] The <i>News Alert</i> website provided a search box that allowed a user to search of quotes for specific companies by the company's stock symbol or company name.

Comparison of the U.S. Patent No. 6,993,572 and Lycos Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Lycos Prior Art
		
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	<i>News Alert</i> website, December 11, 1997 version. [DFNDT0001930-0001931] The commerce object is the stock quotes of PC Quote, Inc. "StockFind Free Quotes" <i>Lycos</i> website, December 11, 1997 version (emphasis and link removed)(hyperlink to http://www.stockfind.newsalert.com). [DFNDT0001928-0001929] "DJIA 7978.79 NYSE 507.70 NASDAQ 1596.61 Russell 2000 432.81 S&P 500 969.25/32 AMEX MMI 836.57" <i>News Alert</i> website, December 11, 1997 version (emphasis removed). [DFNDT0001930-0001931] "Delayed quotes powered by PC Quotes, Inc." <i>News Alert</i> website, December 11, 1997 version (emphasis removed). [DFNDT0001930-0001931] The <i>News Alert</i> website provided a search box that allowed a user to search of quotes for specific companies by the company's stock symbol or company name. Accordingly, the <i>News Alert</i> website servers had to store data concerning the stock quotes for various companies.  <i>News Alert</i> website, December 11, 1997 version. [DFNDT0001930-0001931] See also 1(c), <i>supra</i> .

Comparison of U.S. Patent No. 6,993,572 and REI Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the REI Prior Art anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

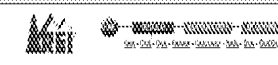

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in REI Prior Art
1	An e commerce outsourcing process comprising:	
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	
4	The process of claim 1, wherein the selected commerce object is a selected product.	
5	The process of claim 1, wherein the selected commerce object is a selected product category.	
13	An e commerce outsourcing system comprising:	REI Corporation provided a host webpage entitled, REI Product Comparison website, at rei.com/shopping/store3/CLIMBING/ROPE_CORDS/DYNAMIC_ROPE/

Comparison of the U.S. Patent No. 6,993,572 and Net.Commerce for OS/390 Prior Art^{1,2}

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Net.Commerce for OS/390 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

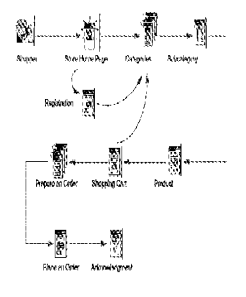

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
1	An e commerce outsourcing process comprising:	<p>"Electronic commerce is one of the answers. One benefit that we can get from the Internet is to make it a primary profit source by creating a marketplace where companies will want to invest. The time has come to turn the Internet into a major business center for your company.</p> <p>In this book we cover Net.Commerce, a product that finally makes it possible to engage millions of users, anytime, anywhere in the age-old process of buying and selling goods, thus making the Internet truly the world's biggest marketplace." Pg. 1.</p> <p>"Companies that sell products or services to wholesalers and manufacturers need strong customer relationships, which often means secure communications as well as secure transactions. After all, there is no need to let the competition know what you and your partners are up to.</p> <p>On the other hand, companies selling directly to consumers may be more concerned with a Web presence that is more open and inviting, thus making customers feel as though they are receiving more personal attention. Some companies will achieve this by duplicating the shopping experience that consumers are already familiar with, for example, by creating an online virtual mall. Yet, although the virtual mall must be openly accessible to all, the customer must ultimately have enough confidence in the retailer to engage in electronic commerce. This paradox of accessibility and security must be overcome if the Internet is to realize its full business potential. IBM has different products and services for each aspect/sector of electronic commerce, but there is one that can fit all of them, namely, Net.Commerce.</p>

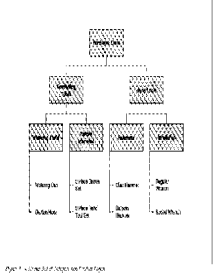

¹ Unless noted, all citations in this chart are to Net.Commerce for OS/390 by Rich Conway, Simon Armiger, Nils Bergquist, Kevin Curley, and Jarmo Lepinen, published by International Business Machines Corporation ("IBM") in July 1998. [DFNT0001082-0001301]

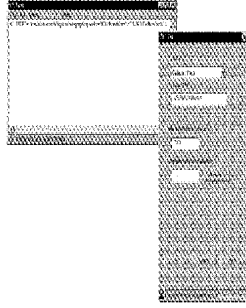

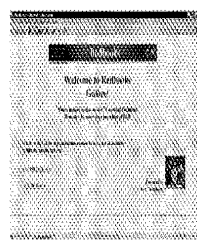

² The Net.Commerce book is a user guide and technical manual for the IBM Net.Commerce product for OS/390. The Net.Commerce book provides an "introduction to electronic commerce [in 1998] and the [Net.Commerce] product itself. ... [and] also provides examples of Net.Commerce implementations." Pg. vii.

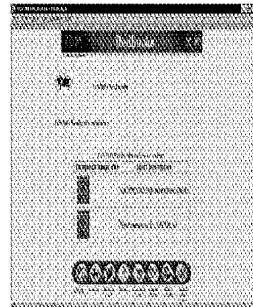

Comparison of the U.S. Patent No. 6,993,572 and Net.Commerce for OS/390 Prior Art

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Net.Commerce is easy-to-use software that allows you to have online stores with dynamic pages. It works with the highest standards of Internet security including the Secure Socket Layer (SSL) and Secure Electronic Transaction (SET) protocols, and works with DB2 in order to integrate existing systems. It is both flexible and scalable. It can be used for business-to-business transactions, as well as for direct consumer sales, in both cases providing state of the art transaction security.</p> <p>Net.Commerce allows you to be part of the electronic business world, from store setup or mall home page, and to secure transactions with the newest methods and techniques of security on the Internet. You can access gateways that work with companies internal systems, or gateways that work directly with financial institutions for payment methods." Pg. 2.</p>
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	See pgs. 111-122 for a description of creating a self-contained store.
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	<p>See also 4-5, <i>infra</i>.</p> <p>The host website can be the home page of the store and the second website can be the categories page (i.e., the selected commerce object is the product categories). In different example, the categories page can be the host website and the second website can be the subcategories page (i.e., the selected commerce object is the product subcategories). In a third example, the subcategories page can be the host website and the second website can be the product page (i.e., the selected commerce object is the product).</p> <p>"2.4.8 Default Shopping Trip The shopping trip that is provided by Net.Commerce in the demonstration shopping mall is outlined in Figure 8. Depending on the store you are building, you may have to modify it." Pg. 24.</p>

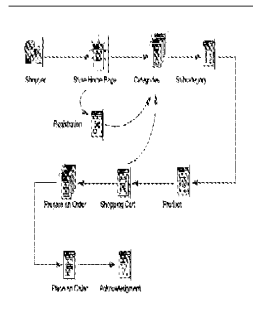

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		 <p>Figure 4: Shopping Order Summary 2/1</p> <p>Pg. 24.</p> <p>"In the default shopping process, this home page is a flat HTML file. For easier maintenance, a dynamic page would be preferable for stores with frequently changing products that still want to make offers from the home page." Pg. 20.</p> <p>"When you click on one of the boxes in 4, a text dialog box will appear. From the text dialog box, click on Insert, then Link. Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
5	The process of claim 1, wherein the selected commerce object is a selected product category.	<p>"2.1.2 Product Categories</p> <p>To create a shopping environment where customers can easily feel at home, you should make sure they can find the products they need in the places they expect them. But, contrary to a real-life store, you can put products electronically in more than one place without using expensive shelf space.</p> <p>Use multiple "parents" if you want to include the product in multiple categories. For example, you could include milk in the cold drinks category as well as in the dairy products category. That way, you can make sure that a product (in this case milk) will be found by customers who take different paths while browsing through your online store.</p> <p>Most experienced users know what they want, and they want to get to it fast. Therefore, be sure to include a fast path for them to get to the products they have bought before, and to related products. Especially on slow connections, having to browse multiple categories is not a good idea.</p> <p>Depending on the products you are selling, customers accept differing shopping and order processes.</p> <p>For example, when shopping for groceries, customers do not want to browse two categories and one product page for every product they want to buy. They may just need a "grocery list" in which they can check items and specify the amount they need.</p> <p>However, for more expensive products, people are willing to invest time and effort in the process of finding the right product. In these cases, offer all information the shopper needs to make a decision, and build an easy but logical navigation structure around it.</p> <p>Net.Commerce provides you with great flexibility to find and implement the appropriate design for products and categories and also for multiple variations of the same product (also referred to as attributes or items). Figure 5 illustrates</p>

		 <p>Figure 65. Text Box Dialog Form Pg. 119.</p> <p>"6.1.9.1 Create a Category Template Open Template Designer as described before. This time select File, New, and Category Template from the list. As with the home page creation Web page description earlier in this chapter, we will go through the individual elements. Figure 65 shows the Template Designer Category Template os390rbk.d2w that we created for the OS/390 Redbooks category.</p> <p>1 shows a Text Box with a Category Name Database tag. This corresponds to the text dialog box shown in Figure 66 on page 127. One difference in Template Designer between the HTML files and template files is the addition of a database pull-down menu in the menu bar of the text dialog box. This menu has a list of database entry names that correspond to entries that are made in the Net.Commerce administrator pages. By selecting one of these, a database tag is placed in the text box which is translated into an SQL command in the macro. In the case of the sample text box displayed in Figure 66 on page 127, the Category Name will be pulled from the database and</p>

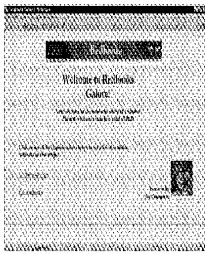

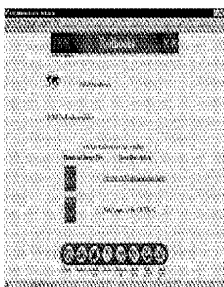

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>displayed in the text box. This makes the template dynamic, in that it could be used with many different categories.</p> <p>The elements in the database specific to that category will be pulled out by the database tag. This Category Template Macro will be associated with a particular category in a form later on in the building process." Pg. 126. Also see pg. 127-131</p>
13	An e commerce outsourcing system comprising:	<p>See 1, <i>supra</i>.</p> <p>"Electronic commerce is one of the answers. One benefit that we can get from the Internet is to make it a primary profit source by creating a marketplace where companies will want to invest. The time has come to turn the Internet into a major business center for your company.</p> <p>In this book we cover Net.Commerce, a product that finally makes it possible to engage millions of users, anytime, anywhere in the age-old process of buying and selling goods, thus making the Internet truly the world's biggest marketplace." Pg. 1.</p> <p>"Companies that sell products or services to wholesalers and manufacturers need strong customer relationships, which often means secure communications as well as secure transactions. After all, there is no need to let the competition know what you and your partners are up to.</p> <p>On the other hand, companies selling directly to consumers may be more concerned with a Web presence that is more open and inviting, thus making customers feel as though they are receiving more personal attention. Some companies will achieve this by duplicating the shopping experience that consumers are already familiar with, for example, by creating an online virtual mall. Yet, although the virtual mall must be openly accessible to all, the customer must ultimately have enough confidence in the retailer to engage in electronic commerce. This paradox of accessibility and security must be overcome if the Internet is to realize its full business potential. IBM has different products and services for each aspect/sector of electronic commerce, but there is one that can fit all of them, namely, Net.Commerce.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Net.Commerce is easy-to-use software that allows you to have online stores with dynamic pages. It works with the highest standards of Internet security including the Secure Socket Layer (SSL) and Secure Electronic Transaction (SET) protocols, and works with DB2 in order to integrate existing systems. It is both flexible and scalable. It can be used for business-to-business transactions, as well as for direct consumer sales, in both cases providing state of the art transaction security.</p> <p>Net.Commerce allows you to be part of the electronic business world, from store setup or mall home page, and to secure transactions with the newest methods and techniques of security on the Internet. You can access gateways that work with companies internal systems, or gateways that work directly with financial institutions for payment methods." Pg. 2.</p>
13(a)	a data store including a look and feel description associated with a host web page having a link correlated with a commerce object; and	<p>See also 1(b), <i>supra</i>.</p> <p>The host web page can be the home page of the store and composite web page can be the categories page (i.e., the selected commerce object is the product categories). 		<p>simple URL (for example http://www.itsoishop.com/rbgalore.html) to a macro that is not a simple URL. If you have a Self-Contained Store and you do not wish your customers to pass through an intermediate Mall frontpage, you will need a link like this in your home page.</p> <p>Go to Store Manager and open the Template Designer. Select your store (in our case it is Redbooks Galore) and hit Load. Select File, Open, then select your saved HTML image. Double-click on the box that reads OS/390 Redbooks and a text dialog box will appear. This is the same text dialog box that was built in Figure 57 on page 119. We are going to replace the HTML link logic in this text dialog box, so go ahead and erase all the text in the dialog box. After all the HTML link logic text is erased, do the following:</p> <ul style="list-style-type: none"> · Select Insert, then Link. A Link dialog box will appear. · Select Category Page from the Link to item and type OS/390 Redbooks in the Linked Text field. The Merchant Reference number should already be filled in. · Next, fill in the Category Reference number that was created in 6.1.11.1, "Enter Basic Product Information" on page 134. In our example it is 501. If you do not know what your Category Reference number is you can click on Browse and a Web browser window will display all the defined product categories. · Click OK and the text dialog box will be filled in with some HTML link text, as shown in Figure 83. Hit File and Close - Save Changes. If using our example, you will need to repeat this step for the AIX Redbooks link. <p>From Template Designer you can see what the page will look like by selecting File, then View in Browser. By clicking the link we have just created you should be taken to a page similar to that in Figure 69 on page 130.</p> <p>With this final link in place, you can now access your entire Internet shop from a Web browser. The footer file that we copied into the page allows you to access the shopping cart and other Net.Commerce functions.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>You can make the home page of your new Web site the default welcome page for your Web server by editing the Web server configuration file <code>httpd.conf</code> and changing the Welcome Directive to match the name of your home page. Alternatively, you can simply specify the full name for the home page in your Web browser URL. To access the site we have just created you would specify http://www.itsoishop.com/rbgalore.html." Pgs. 142-4.</p>
17	An e commerce outsourcing process comprising the steps of:	<p>See 1, <i>supra</i>.</p> <p>"Electronic commerce is one of the answers. One benefit that we can get from the Internet is to make it a primary profit source by creating a marketplace where companies will want to invest. The time has come to turn the Internet into a major business center for your company.</p> <p>In this book we cover Net.Commerce, a product that finally makes it possible to engage millions of users, anytime, anywhere in the age-old process of buying and selling goods, thus making the Internet truly the world's biggest marketplace." Pg. 1.</p> <p>"Companies that sell products or services to wholesalers and manufacturers need strong customer relationships, which often means secure communications as well as secure transactions. After all, there is no need to let the competition know what you and your partners are up to.</p> <p>On the other hand, companies selling directly to consumers may be more concerned with a Web presence that is more open and inviting, thus making customers feel as though they are receiving more personal attention. Some companies will achieve this by duplicating the shopping experience that consumers are already familiar with, for example, by creating an online virtual mall. Yet, although the virtual mall must be openly accessible to all, the customer must ultimately have enough confidence in the retailer to engage in electronic commerce. This paradox of accessibility and security must be overcome if the Internet is to realize its full business potential. IBM has different products and services for each aspect/sector of electronic commerce, but there is one that can fit all of them, namely, Net.Commerce.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Net.Commerce is easy-to-use software that allows you to have online stores with dynamic pages. It works with the highest standards of Internet security including the Secure Socket Layer (SSL) and Secure Electronic Transaction (SET) protocols, and works with DB2 in order to integrate existing systems. It is both flexible and scalable. It can be used for business-to-business transactions, as well as for direct consumer sales, in both cases providing state of the art transaction security.</p> <p>Net.Commerce allows you to be part of the electronic business world, from store setup or mall home page, and to secure transactions with the newest methods and techniques of security on the Internet. You can access gateways that work with companies internal systems, or gateways that work directly with financial institutions for payment methods." Pg. 2.</p>
17(a)	storing a look and feel description associated with a first website in a data store associated with a second website;	<p>See 13(a), <i>supra</i>.</p> <p>The Net.Commerce book teaches the home pages, categories pages, and the product pages are all designed using templates. Alternatively, you can simply specify the full name for the home page in your Web browser URL. To access the site we have just created you would specify <code>http://www.itsoshop.com/rbgalore.html</code>." Pgs. 142-4.</p>
17(c)	upon receiving an activation of the link from a visitor computer to which the web page has been served, serving to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the link.	<p>See 13(b), <i>supra</i>.</p> <p>The Net.Commerce book teaches the home pages, categories pages, and the product pages are all designed using templates. Furthermore, the Net.Commerce book teaches using a consistent layout for all web pages in a Store. Accordingly, as far as the scope of the claimed "look and feel" can be determined, the home page, categories pages, and the product pages in a Store would have "a look and feel substantially corresponding to the stored look and feel description."</p> <p>"Try to use a basic and consistent layout on all your pages, one that is unique for your company. This includes headers and footers, colors, fonts, location of images, and so on.</p> <p>If you decide to design your site yourself, you can design most macros (dynamic HTML pages that interact with the Net.Commerce database) using the Template Designer, provided by Net.Commerce." Pg. 14</p> <p>"Whether the store will look like a single store or like a mall is a marketing decision. Some big stores might prefer looking like many smaller, specialized companies." Pg. 25.</p> <p>"The Template Designer is a Java applet-based, graphical object-oriented editing tool that allows you to create Web pages for an online mall or store, and to design and modify templates with a graphical HTML editor. You can use it to do the following:</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Create and update home pages, product pages, category pages, and Product Advisor pages.</p> <ul style="list-style-type: none"> Design headers and footers for the pages. Modify the supplied sample category, product, and Product Advisor templates (if you save them with a new file name)." pg. 80. <p>"2.4.8 Default Shopping Trip The shopping trip that is provided by Net.Commerce in the demonstration shopping mall is outlined in Figure 8. Depending on the store you are building, you may have to modify it." Pg. 24.</p> <p>Pg. 24.</p> <p>"In the default shopping process, this home page is a flat HTML file. For easier maintenance, a dynamic page would be preferable for stores with frequently changing products that still want to make offers from the home page." Pg. 20.</p> <p>"When you click on one of the boxes in 4, a text dialog box will appear.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>From the text dialog box, click on Insert, then Link. Select Category Page from the Link to item and type OS/390 Redbooks in the Linked Text field. The Merchant Reference number should already be filled in. Leave the Category Reference number blank for now. Click OK and the text dialog box will be filled in with some HTML link text. Hit File and Close - Save Changes. If using our example, you will need to repeat this step for the AIX Redbooks link." Pg. 119.</p> <p>"Take into account the dynamic nature of the Internet and of Net.Commerce. Think about putting specials and sales offerings directly on your home page or in your html page footer." Pg. 18.</p> <p>"If most customers do not need the information you are displaying on the product page, you may even offer a shortcut button on the category page." Pg. 18.</p> <p>"This is the first thing a shopper sees when surfing to your shopping site. Besides using graphical elements to lure the shopper into your store, you may consider putting special sales offerings on this page." Pg. 20.</p> <p>"The category pages link shoppers to the groups of products or services available in the store. You can compare them to a table of contents in a paper catalog or signs in a real store. They have to include category titles and images, descriptions, and of course hyperlinks to subcategories or product pages." Pg. 21.</p> <p>"The product pages include descriptions, attributes, images and price of the products. They might also contain a link to related products or to detailed product evaluations. Additionally, the product pages should include a link for adding the product to the shopping cart." Pg. 21.</p>

		<p>Pg. 119.</p> <p>An example of a web page of the first website and composite web page.</p> <p>Pg. 121.</p> <p>Pg. 130. Also see pgs. 124-130. "6.1.13.1 Category Template Assignment</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>Go to Store Manager, then Product Categories. Select your store, then click the arrow beside the store name that appears below the selection list. This lists the Categories available in your store. Click the category you wish to assign a template to, then click the Template button at the bottom of the page. Enter the template name in the Category Template Assignment form which appears. Figure 81 on page 141 shows the form as we completed it. Save the form and ensure you get a confirmation message. You can view the Template after you have saved it by clicking the View Template button." Pg. 140.</p> <p>"6.1.13.2 Product Template Assignment Go to Store Manager, then Product Information. Select your store and product; the Search button at the bottom of the page will search your store database for all products if you cannot remember the product SKU. The results of the search are displayed in a window at the bottom of the page. You can select one of these and it will fill the entries in the product form for you. Next click the Templates button on the task bar on the left side of the administrator page, under Product Information. You will see a form similar to that in Figure 82 on page 142. Enter the product template macro name you created in the Product Template section earlier in this chapter, in the Template form. Save the form, and check for the confirmation message. Fill in the template name (file name with *.d2w ending), save the form and click on View Template This should show you how the product template actually looks on the browser." Pg. 141.</p> <p>"6.1.13.3 Accessing Your Store From A Web Browser Finally, there is one last but very important link that we need to finish creating so that someone accessing your Internet shop can access the category and product template macros you have built. The link to a Category Page is an extremely important link, as it allows you to move from your home page in HTML that any browser can access by typing in a simple URL (for example http://www.itsoshop.com/rbgalore.html) to a macro that is not a simple URL. If you have a Self-Contained Store and you do not wish</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>your customers to pass through an intermediate Mail frontpage, you will need a link like this in your home page.</p> <p>Go to Store Manager and open the Template Designer. Select your store (in our case it is Redbooks Galore) and hit Load. Select File, Open, then select your saved HTML image. Double-click on the box that reads OS/390 Redbooks and a text dialog box will appear. This is the same text dialog box that was built in Figure 57 on page 119. We are going to replace the HTML link logic in this text dialog box, so go ahead and erase all the text in the dialog box. After all the HTML link logic text is erased, do the following:</p> <ul style="list-style-type: none"> · Select Insert, then Link. A Link dialog box will appear. · Select Category Page from the Link to item and type OS/390 Redbooks in the Linked Text field. The Merchant Reference number should already be filled in. · Next, fill in the Category Reference number that was created in 6.1.11.1, "Enter Basic Product Information" on page 134. In our example it is 501. If you do not know what your Category Reference number is you can click on Browse and a Web browser window will display all the defined product categories. · Click OK and the text dialog box will be filled in with some HTML link text, as shown in Figure 83. Hit File and Close - Save Changes. If using our example, you will need to repeat this step for the AIX Redbooks link. <p>From Template Designer you can see what the page will look like by selecting File, then View in Browser. By clicking the link we have just created you should be taken to a page similar to that in Figure 69 on page 130.</p> <p>With this final link in place, you can now access your entire Internet shop from a Web browser. The footer file that we copied into the page allows you to access the shopping cart and other Net Commerce functions.</p> <p>You can make the home page of your new Web site the default welcome page for your Web server by editing the Web server configuration file httpd.conf and</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in Net.Commerce for OS/390 ("Net.Commerce book")
		<p>changing the Welcome Directive to match the name of your home page. Alternatively, you can simply specify the full name for the home page in your Web browser URL. To access the site we have just created you would specify http://www.itsoshop.com/rbgalore.html." Pgs. 142-4.</p>
18	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website.	<p>"6.1.4 Create Template Headers and Footers Use Template Designer to create headers and/or footers for your website. Open the file as HTML and save it with the Save as Footer checkbox marked. We created a header that consisted simply of an image--the Redbooks image that we used in the home page. However, it is very useful to have a footer that has links to other pages. We copied the footer file from <code>/usr/lpp/NetCommerce/html/en_US/nscsample/footer2.htm</code> and also the footer2.gif from the same directory into the <code>/usr/lpp/NetCommerce/instance/itsoinst/teditor/te_html</code> directory and renamed them to redfoot.html and redfoot.gif, respectively. Figure 61 on page 122 shows the HTML file with the changes we had to make so it pointed to redfoot.gif and to the rbgalore.html home page." Pg. 121.</p>

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")¹

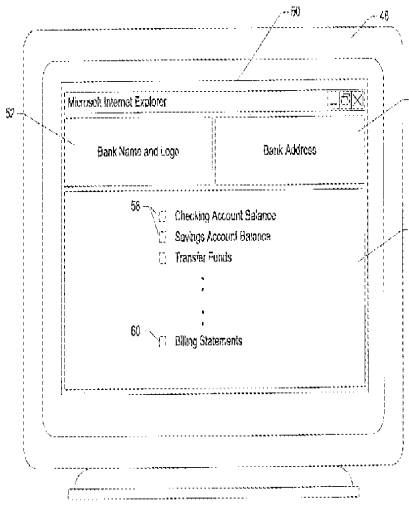

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent Application 09/995,278 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

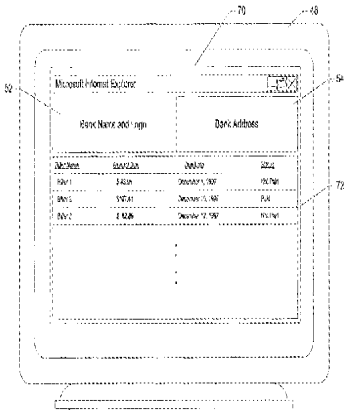

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
1	An e commerce outsourcing process comprising:	<p>"This invention relates to electronic financial systems for the Internet. More particularly, this invention relates to systems and methods for presenting electronic bills to customers of a financial institution, such as a bank." Saliba '278 ¶ 0002.</p> <p>According to one aspect of this invention, the financial institution has a Web server to support its Web site. The server presents a home page that allows its customers to select different services, such as examining a checking or savings account balance, or conducting a funds transfer. These services are supported locally at the financial institution's Web site. The home page also offers, however, an option to view customer-specific data, such as the customer's personal billing statements that are collected from a variety of different billers (e.g., phone bill, gas bill, cable TV bill, etc.).</p> <p>Saliba '278 ¶ 0009.</p> <p>At step 148 in FIG. 6, the service center server 110 offers a set of bill management and payment options to the customer. The customer may elect to examine the billing statements in detail by clicking on a particular bill in the list. The server 110 provides a new HTML page showing the billing statement framed within the bank's branding indicia, as shown in FIG. 4. The customer may further elect to pay all of the bill, part of it, or none of it. The customer may challenge part, or enter into a dialog with customer service.</p> <p>Saliba '278 ¶ 0065.</p>
1(a)	capturing a look and feel description	"The home page 50 includes various branding indicia, such as the bank's name and logo

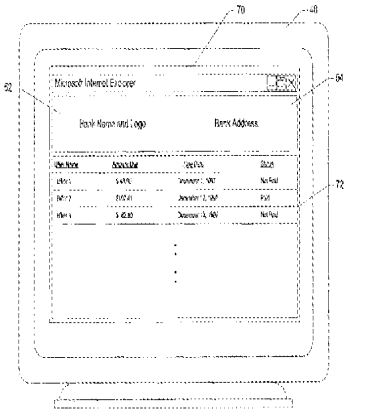

¹ Unless noted, all citations in this chart are to United States Patent Application 09/995,278 by Bassam A. Saliba, et al. (filed November 26, 2001). [DFNDT0000295-0000314]

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
	associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	<p>52 and the bank's address 54. In addition, the branding indicia might comprise a particular format or stylistic schema, background color or texture, slogans, and so forth." Saliba '278 ¶ 0038.</p> <p>The service center's server 110 runs a branding software module 126, which are stored in program memory 118. The branding module 126 runs atop the operating system 124 during execution in the processing unit 112. The branding module 126 extracts the branding indicia passed from the bank and uses it to create a Web page that appears like the bank's own Web pages. It is noted that the branding module 126 may be integrated as part of the Web server software, rather than executed as a standalone application.</p> <p>Saliba '278 ¶ 0051.</p> <p>As one example, the service center server 110 has an HTML document that contains data fields for holding billing data retrieved locally from the bills database 40 and indicia fields for holding the branding indicia received remotely from the bank. The HTML document is rendered by the customer's browser program to present a UI that appears as though the bank itself presented the billing statements. This is shown in FIG. 3, for example, where the service center server 110 provides an HTML Web page 70 that contains a billing statement list 72 with data from the bills database 40, along with branding indicia 52, 54 received from the bank.</p> <p>Saliba '278 ¶ 0064.</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	 <p style="text-align: center;">Fig. 2</p> <p>"Upon activating the 'Billing Statements' option 60, the bank's Web server links to the service center's server without exposing this transfer to the customer. The customer still believes that he/she is connected to and communicating with the bank's Web site 44. A new Web page that incorporates the customer's bills is then presented to the customer." Saliba '278 ¶ 0040.</p> <p>At step 148 in FIG. 6, the service center server 110 offers a set of bill management and payment options to the customer. The customer may elect to examine the billing statements in detail by clicking on a particular</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
		bill in the list. The server 110 provides a new HTML page showing the billing statement framed within the bank's branding indicia, as shown in FIG. 4. The customer may further elect to pay all of the bill, part of it, or none of it. The customer may challenge part, or enter into a dialog with customer service.
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	 <p style="text-align: center;">Fig. 3</p> <p>FIG. 3 shows an exemplary new Web page 70, which displays the billing data as it is rendered on a customer's home computer monitor 48. The Web page 70 presents a list 72 of the customer's bills. The page 70 also includes the bank's branding indicia, such as the bank's name and logo 52, bank's address 54, format or stylistic schema, background color or texture, slogans, and so forth. In this manner, the new Web page 70 appears to</p>

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in United States Patent Application 09/995,278 by Saliba ("Saliba '278")
		have been provided by the bank's Web site 44, while the identity of the service center 24 is veiled, to lead the customer to believe that the billing data is provided by the financial institution rather than the service center. At this point, the customer may open any particular bill, review the itemized purchases, the amount due, and due date.
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	 <p style="text-align: center;">Fig. 3</p> <p>FIG. 3 shows an exemplary new Web page 70, which displays the billing data as it is rendered on a customer's home computer monitor 48. The Web page 70 presents a list 72 of the customer's bills. The page 70 also includes the bank's branding indicia, such as the bank's name and logo 52, bank's address 54, format or stylistic schema, background color or texture, slogans, and so forth. In this manner, the new Web page 70 appears to</p>

- 15 -

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")

23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	<p>"The home page also offers an option to view personal billing statements from the billers, which are stored at the service center." Saliba '278, Abstract.</p> <p>The third party also has a server that supports its own Web site. The server stores the customer-specific data offered by the financial institution and can provide that data to a customer of the financial institution any time the customer accesses the third party's Web site. The same data is also made available to the customer through the financial institution's Web site. When the customer is logged onto the financial institution's Web site, the financial institution would like to offer this same data without having the customer feel like he/she has left the financial institution's Web site to access the third party's Web site. Accordingly, when the customer activates the option on the financial institution's home page for viewing the customer-specific data, the financial institution's Web server links to the third party's server to access the customer-specific data without exposing this transfer to the customer.</p> <p>Saliba '278 ¶ 0010.</p> <p>The service center system 24 has an electronic bill distribution system that electronically distributes the billing statements on behalf of the billers 22. The service center 24 receives the standardized files from the billers 22 and unpackages the statement template, files, and resources. The service center 24 then generates the customized billing statements for each biller 22 from the statement template and the billing information received from that biller. The billing statements are stored in a bills database 40 and electronically distributed to the customers over the Internet 32 (or other data network).</p>

- 16 -

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")

		<p>Saliba '278 ¶ 0031.</p> <p>According to an aspect of this invention, the banks 26 and the third party service center 24 cooperate to allow the bank's customers to view, on demand, their personal bills which are stored in the database 40 at the service center 24. The joint cooperation is masked to lead the customers to believe that they are accessing all of their financial information, including billing data, on the bank's Web site. When the service center serves billing data to the customers on behalf of the banks, the service center cloaks the billing data in the bank's branding indicia while veiling its own identity. This process is referred to in this disclosure as the "branding process".</p> <p>Saliba '278 ¶ 0035.</p> <p>The server center's server 110 has a processing unit 112, a volatile memory 114 (e.g., RAM), a non-volatile data memory 116 (e.g., disk drive, etc.), a non-volatile program memory 118 (e.g., ROM, disk drive, CD-ROM, etc.), a network port 120 (e.g., modem, network card, ISDN connection, etc.), and a non-volatile bills database 40. The bills database 40 stores the billing statements data 122.</p> <p>Saliba '278 ¶ 0049.</p>
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	<p>This invention concerns a system and method for enabling a financial institution, such as a bank, to present a group of financial services to its customers via a Web site, even though the financial institution may not in fact host some of the financial data that it represents on its Web site to its customers. In providing the services, including those supported by a third party provider, the financial institution would like to offer the data as if it alone were serving the data to the customer. Accordingly, the financial institution contracts with the third party to integrate its resources with the financial institution's Web site offerings.</p> <p>Saliba '278 ¶ 0008.</p>

- 17 -

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278")

		<p>This invention is directed to a system and method for enabling a financial institution, such as a bank, to present a variety of financial services to its customers, even though the financial institution may not in fact host some of the financial data that it represents to its customers. As an example, the financial institution may sponsor for its customers a Web site that offers a broad selection of financial services and data. As part of this offering, the Web site might reference certain customer-specific data that is actually located at a third party independent from the financial institution. Yet, in providing the services, the financial institution would like to offer the data as if it alone were the full service provider of the customer. Accordingly, the financial institution contracts with the third party to integrate the resources of the third party with those offered by the financial institution.</p> <p>Saliba '278 ¶ 0021.</p>
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service.	<p>According to another implementation that involves a higher level of integration, the financial institution's server establishes a secure connection with the third party's server and employs the OFX (Open Financial Exchange) protocol, and extensions to this protocol, to retrieve information from the third party's server. The OFX extensions enable the financial institution's server to request such information as billing summaries, status and type of bills, customer enrollment and logon information, and payment information. The information retrieved from the third party's server can then be presented in new Web page at the financial institution's Web site that contains the financial institution's name and branding indicia. Through integration, the third party provides extended services for the financial institution that are branded as belonging to the financial institution. From the customer's perspective, he/she only visits one location—the financial institution's Web site—to examine his/her financial records.</p> <p>Saliba '278 ¶ 0012.</p>
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	<p>See 23, <i>supra</i>.</p>
27(a)	before serving the composite web page to the

27(b)	after serving the composite web page to the visitor computer:	
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	See 23, <i>supra</i> .
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.	See 26, <i>supra</i> .

Comparison of U.S. Patent No. 6,993,572 and the CompuServe Information Service ("CIS")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, The CompuServe Information Service ("CIS") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in CIS
1	An e-commerce outsourcing process comprising:	CIS is built on a multi-level client-server architecture model wherein CIS performs, in different scenarios, as a Host Site and an Outsource Provider as described in the '135 patent. In a first scenario, CIS incorporates links to e-commerce outsource providers into CIS content pages. For instance, CIS incorporates links to EasySABre, Travelshopper and other gateway service providers, each of which performs the role of Outsource Provider as described in the '135 patent. EasySABre, Travelshopper and other gateway services providers provide a platform for e-commerce support for a plurality of sites in a customer-transparent manner. In this scenario, visitors accessing sites operated by EasySABre, Travelshopper and other gateway service providers are presented with a look and feel similar to CIS. In a second (alternative) scenario, CIS provides e-commerce services to a plurality of merchants and other third parties in a customer-transparent manner wherein look and feel is adapted for each merchant site. <i>See, e.g.,</i> Charles Bowen & David Peyton, <i>How to Get the Most Out of CompuServe</i> (5th ed. 1993) ("Bowen & Peyton"); Jill H. Ellsworth & Matthew V. Ellsworth, <i>Using CompuServe</i> (1994) ("Ellsworth & Ellsworth").
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	In the First Scenario, EasySABre, Travelshopper and other gateway service providers capture the look and feel of CompuServe (for instance, page layouts and standard navigation means) in a manner such that visitors accessing those services have the impression that the site is hosted by CIS, when in fact the content is hosted by the gateway service provider. The IQUEST gateway is another example, where CIS users connect to IQUEST servers and are served content as if they were still connected to CIS. <i>See, e.g.,</i> Ellsworth & Ellsworth 316-29. In the second scenario, merchants and other content providers deliver information to

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in CIS
		visitors of CIS in a manner such that the look and feel can be adapted to the specification of that merchant. Examples of this scenario include Electronic Mall merchants and branded information content providers, such as PC Magazine, Consumer Reports, Time Magazine, The Associated Press and others. Various means are used to capture and deliver this look and feel. In one instance, CIS uses a patented protocol for accessing data and presenting it to the visitor computer. <i>See</i> US Patent 5,737,538, "System for remote microcomputer access and modification of information in a host computer" (the CompuServe "HMI" patent). Another means, used for Electronic Mall merchants, is the use of a store template by which all stores in the Electronic Mall have a consistent look & feel, while retaining branding unique to the merchant. Yet another means is the use of CIS software (BUILD and DPPGEN) to create look and feel, navigation and branding unique to a merchant or gateway service provider. <i>See, e.g.,</i> [DFDNT0001349-65], [DFDNT_CD_0001] and Ellsworth & Ellsworth 415-25. <i>See, e.g.,</i> Ellsworth & Ellsworth, [DFDNT_CD_0001] and CS-1587B. <i>See also</i> U.S. Patent 5,737,538, HMI_01.PDF, and [DFDNT0001429-1529]. For instance, in CIS, the BUILD/DPPGEN software accepts input files for each Mall Store or Travel Service and generates the look and feel for that store or service for the CIS environment and stores code corresponding to the look and feel description at a CompuServe server. <i>See, e.g.,</i> BUILD/DPPGEN source code and [DFDNT0001349-65].
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	For instance, CIS provides links to the appropriate DPP code based on which service is being accessed. Links within the DPP code are used for correlating the Mall Store or Travel Service to the purchase of a selected product or service. <i>See, e.g.,</i> [DFDNT_CD_0001] and Ellsworth & Ellsworth.

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,330,575 to Moore

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosure in CIS
		In CIS, the link correlating the host site with a selected commerce object is a link to a menu of choices, an article, a catalog of orderable products, or a custom program that provides additional interaction with the visitor to locate and deliver objects. <i>See, e.g.,</i> Bowen & Peyton and Ellsworth & Ellsworth 421.
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	For instance, in CIS, the look and feel comes from a CIS host and content comes from the Mall Store or Travel Service host. <i>See, e.g.,</i> [DFDNT_CD_0001] and Ellsworth & Ellsworth. In CIS, the visitor computer is served with e-commerce supported pages having the look and feel of the CIS but with content from the gateway service provider or other merchants. <i>See, e.g.,</i> Ellsworth & Ellsworth 421, [DFDNT_CD_0001].
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	For instance, in CIS, the look and feel comes from a CIS host and content comes from the Mall Store or Travel Service host. <i>See, e.g.,</i> [DFDNT_CD_0001] and Ellsworth & Ellsworth.
4	The process of claim 1, wherein the selected commerce object is a selected product.	For instance, in CIS, the selected commerce object can be a selected product, such as a digital file containing music, video, text, software, image or other structured content. <i>See, e.g.,</i> [DFDNT_CD_0001] and Ellsworth & Ellsworth. In CIS, the selected commerce object can be a selected product, such as a digital file containing music, video, text, software, image or other structured content. <i>See, e.g.,</i> Ellsworth & Ellsworth 421, [DFDNT_CD_0001].
5	The process of claim 1, wherein the selected commerce object is a selected product category.	In CIS, the selected commerce object may be a product category. For instance, in the case of EasySABre, the selected commerce object could be Hotels, Flights, Rental Cars, or other product categories. Or, in the case of the Electronic Mall, it could be a

Invalidity Contentions for U.S. Patent No. 6,993,572
35 U.S.C. §112

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, the claims of U.S. Patent No. 6,993,572 are invalid under 35 U.S.C. §112 for the reasons stated below.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Indefiniteness under Section 112
1	An e commerce outsourcing process comprising:	
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	The phrase "capturing a look and feel description associated with a host website" is indefinite. See Defendants OurVacationStore.com, Inc and International Cruise & Excursion Gallery, Inc.'s Motion for Summary Judgment of Invalidity of U.S. Patent Nos. 6,629,135 and 6,993,572 Based on Indefiniteness, filed July 14, 2002[Document Number 117] (hereinafter, "Look and Feel MSJ"). The phrase "the look and feel description" is indefinite. See Look and Feel MSJ.
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	The phrase "commerce object" is indefinite.
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	The phrase "a look and feel" is indefinite. See Look and Feel MSJ. The phrase "the captured look and feel description of the host website" is indefinite. See Look and Feel MSJ. The phrase "serving to the visitor computer from the second website page" is indefinite and is not supported by the Specification. The Specification describes processors, computer systems, systems, servers, and computers "serving" web pages (see e.g., column 4, line 64 through column 6, line 14 and column 26, lines 9-14), but the Specification does not describe the second website page as "serving" anything. Furthermore, the phrase "serving to the visitor computer from the second website page" does not make sense to a person of ordinary skill in the art. The phrase "the second website page" is indefinite because "the second website page" lacks antecedent basis.

Invalidity Contentions for U.S. Patent No. 6,993,572
35 U.S.C. §112

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Indefiniteness under Section 112
		The phrase "commerce object" is indefinite.
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	The term "the visitor" is indefinite because "the visitor" lacks antecedent basis. The phrase "the served page" is indefinite because "the served page" lacks antecedent basis. It is unclear if "the served page" refers back to "the second website page" or "a page of the host website," both of which have been served to the visitor computer. The term "the page" is indefinite because it is unclear if it refers to "a page on the host website," "the second website page," or "the served page." The phrase "is served from the second website" is indefinite and is not supported by the Specification. The Specification describes processors, computer systems, systems, servers, and computers "serving" web pages (see e.g., column 4, line 64 through column 6, line 14 and column 26, lines 9-14), but the Specification does not describe the second website as "serving" anything. Furthermore, the phrase "is served from the second website" does not make sense to a person of ordinary skill in the art. The phrase "the visitor receiving the served page at the visitor computer perceives the page as associated with the host website" is indefinite. See Look and Feel MSJ.
4	The process of claim 1, wherein the selected commerce object is a selected product.	The phrase "commerce object" is indefinite.
5	The process of claim 1, wherein the selected commerce object is a selected product category.	The phrase "commerce object" is indefinite.
13	An e commerce outsourcing system comprising:	
13(a)	a data store including a look and feel description associated with a host web page having a link correlated with a commerce object; and	The phrase "a look and feel description associated with a host web page" is indefinite. See Look and Feel MSJ. The phrase "commerce object" is indefinite.
13(b)	a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon	The phrase "the look and feel description" is indefinite. See Look and Feel MSJ. The phrase "a look and feel" is indefinite. See Look and Feel MSJ.

Invalidity Contentions for U.S. Patent No. 6,993,572
35 U.S.C. §112

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Indefiniteness under Section 112
	receiving an indication that the link has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the look and feel description in the data store and with content based on the commerce object associated with the link.	The phrase "a computer processor ... in communication through the Internet with the host web page" is indefinite, is not enabled or otherwise supported by the Specification. The Specification teaches "a communication link to a visitor computer" (e.g., column 4, lines 50-51 and 62-63 and column 5, lines 1-2), but does not teach a computer processor in communication through the Internet with the host web page. The phrase "commerce object" is indefinite.
17	An e commerce outsourcing process comprising the steps of:	
17(a)	storing a look and feel description associated with a first website in a data store associated with a second website;	The phrase "a look and feel description associated with a first website" is indefinite. See Look and Feel MSJ.
17(b)	including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a link correlating the web page with a commerce object; and	The phrase "the stored look and feel description" is indefinite. See Look and Feel MSJ. The phrase "a look and feel" is indefinite. See Look and Feel MSJ. The phrase "commerce object" is indefinite.
17(c)	upon receiving an activation of the link from a visitor computer to which the web page has been served, serving to the visitor computer from the second website a composite web page having a look and feel corresponding to the stored look and feel description of the first website and having content based on the commerce object associated with the link.	The phrase "the stored look and feel description of the first website" is indefinite. See Look and Feel MSJ. The phrase "a look and feel" is indefinite. See Look and Feel MSJ. The phrase "serving to the visitor computer from the second website" is indefinite and is not supported by the Specification. The Specification describes processors, computer systems, systems, servers, and computers "serving" web pages (see e.g., column 4, line 64 through column 6, line 14 and column 26, lines 9-14), but the Specification does not describe second website as "serving" anything. Furthermore, the phrase "serving to the visitor computer from the second website" does not make sense to a person of ordinary skill in the art.

Invalidity Contentions for U.S. Patent No. 6,993,572
35 U.S.C. §112

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Indefiniteness under Section 112
		The phrase "commerce object" is indefinite.
18	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the top and left side of at least some of the web pages of the first website.	The phrase "the look and feel description" is indefinite. See Look and Feel MSJ. The term "the appearance" is indefinite.
19	The process of claim 17 wherein the look and feel description comprises data defining the appearance of the header and footer of at least some of the web pages of the first website.	The phrase "the look and feel description" is indefinite. See Look and Feel MSJ. The term "the appearance" is indefinite.
20	The process of claim 17 wherein the look and feel description comprises data defining a set of navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	The phrase "the look and feel description" is indefinite. See Look and Feel MSJ.
21	The process of claim 17 wherein the look and feel description comprises data defining:	The phrase "the look and feel description" is indefinite. See Look and Feel MSJ.
21(a)	a logo associated with and displayed on at least some of the web pages of the first website;	
21(b)	a color scheme used on at least some of the web pages of the first website;	
21(c)	a page layout used on at least some of the web pages of the first website; and	
21(d)	navigational links, used on at least some of the web pages of the first website, each of which links link to specific web pages of the first website.	
22	The process of claim 17 wherein storing a look and feel description associated with a first website in a data store associated with a second website comprises designing a first website,	The phrase "designing a first website" is not supported by the Specification. The Specification teaches designing a "Storefront" but does not teach designing a first website.

690620

- 4 -

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Indefiniteness under Section 112
	identifying look and feel descriptions associated therewith, and storing the identified look and feel descriptions in the data store associated with the second website.	The phrase "a look and feel description associated with a first website" is indefinite. See Look and Feel MSJ. The phrase "look and feel descriptions associated therewith" is indefinite. See Look and Feel MSJ. The phrase "the identified look and feel descriptions" is indefinite. See Look and Feel MSJ.
23	The process of claim 17 wherein the commerce object is a set of product categories and further comprising accepting search parameters through the composite web page and using said parameters to search for specific products within the product categories.	The phrase "commerce object" is indefinite.
24	The process of claim 17 further comprising storing at the second website data concerning a plurality of commerce objects.	The phrase "commerce objects" is indefinite.
25	The process of claim 24 further comprising contracting with merchants offering products or services for sale to include data concerning the commerce objects of said merchants at the second website.	The phrase "commerce objects" is indefinite.
26	The process of claim 17 further comprising, after part (c), responsive to an indication received from the visitor computer of a desire to purchase a product or service identified in the content based on the commerce object and served in the composite web page, capturing billing information from the visitor computer and passing captured billing information to a merchant offering the indicated product or service.	The phrase "commerce object" is indefinite.
27	The process of claim 17 wherein the commerce object is a set of product categories, each	The phrase "commerce object" is indefinite.

690620

- 5 -

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Indefiniteness under Section 112
	comprising a plurality of products or services, and further comprising:	
27(a)	before serving the composite web page to the visitor computer.	
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	The phrase "the commerce objects" is indefinite.
27(a)(ii)	storing at the second website data concerning the plurality of products or services; and	The phrase "storing at the second website data" is indefinite and is not supported by the Specification. The Specification describes data stores and databases "storing" web pages (see e.g., column 4, line 64 through column 6, line 14 and column 26, lines 9-14), but the Specification does not describe a second website as "storing" anything. Furthermore, the phrase "storing at the second website data" does not make sense to a person of ordinary skill in the art.
27(b)	after serving the composite web page to the visitor computer.	
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.

Comparison of U.S. Patent No. 6,993,572 and U.S. Patent No. 6,141,666 to Tobin ("Tobin") combined with *Internet Scrapbook: Automating Web Browsing Tasks by Demonstration* by Atsushi Sugiura ("Internet Scrapbook"), and U.S. Patent No. 7,565,308 to Bolley ("Bolley")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,141,666 to Tobin ("Tobin") combined with *Internet Scrapbook* and U.S. Patent No. 7,565,308 to Bolley renders obvious the asserted claims as described in part below. See Defendants' Invalidity Contentions for an explanation of the reasons for combining Tobin, *Internet Scrapbook*, and Bolley.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
1	An e commerce outsourcing process comprising:	See Ex. 17B, at 1. See Ex. 7B, at 1. See Ex. 3B, at 1.
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	See Ex. 17B, at 1(a). See Ex. 7B, at 1(a). See Ex. 3B, at 1(a).
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	See Ex. 17B, at 1(b). See Ex. 7B, at 1(b). See Ex. 3B, at 1(b). See also 4-5, <i>infra</i> .
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	See Ex. 17B, at 1(c). See Ex. 3B, at 1(c).
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	See Ex. 17B, at 1(d). See Ex. 7B, at 1(d). See Ex. 3B, at 1(d). See also 18-21, <i>infra</i> .

Comparison of the U.S. Patent No. 6,993,572 with U.S. Patent No. 5,870,717 "System for ordering items over computer network using an electronic catalog" combined with the Travelocity Prior Art

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 5,870,717 combined with U.S. Patent No. the Travelocity Prior Art renders obvious the asserted claims as described in part below.

According to Plaintiff's Infringement Contentions regarding Travelocity, there is a motivation to combine the Travelocity's Prior Art with Wiecha because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Travelocity Prior Art brought together merchants, retailers, and customers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 8B. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. See Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Travelocity Prior Art and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278") combined with the Digital River Secure Sales System ("Digital River SSS")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent Application 09/995,278 combined with Digital River SSS renders obvious the asserted claims as described in part below.

There is motivation to combine Saliba '278 and Digital River SSS because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba '278 discloses an electronic financial system for providing financial services over the Internet has multiple billers, a service center, multiple financial institutions. See Saliba '278 at Abstract. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 9A. Both Saliba '278 and Digital River SSS disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
1	An e-commerce outsourcing process comprising:	See Ex. 9B, at 1. See Ex. 31B, at 1.
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	See Ex. 9B, at 1(a). See Ex. 31B, at 1(a).

Comparison of the U.S. Patent No. 6,993,572 and 6,330,575 to Moore ("Moore") combined with U.S. Patent No. 5,870,717 to Bolly ("Bolly")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,330,575 combined with U.S. Patent No. 7,565,308 renders obvious the asserted claims as described in part below.

There is a motivation to combine Moore with Bolly because they both are related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Moore discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. See Moore at Abstract. Similarly, Bolly discloses a network configuration of a number of affiliate web sites and a number of vendor web sites designed to execute sales of vendor products featured on the affiliate websites. See Bolly at Abstract. The affiliate websites feature vendor products where a buyer can browse the various products, research information about the products, and purchase the products. Both Moore and Bolly disclose electronic commerce systems that are directed to efficiently selling commerce objects over the Internet.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
1	An e-commerce outsourcing process comprising:	See Ex. 1B, at 1. See Ex. 3B, at 1.
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	See Ex. 1B, at 1(a). See Ex. 3B, at 1(a).
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	See Ex. 1B, at 1(b). See Ex. 3B, at 1(b). See also 4-5, <i>infra</i> .
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	See Ex. 1B, at 1(c). See Ex. 3B, at 1(c).
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as	See Ex. 1B, at 1(d). See Ex. 3B, at 1(d).

	merchant offering the indicated product or service.	
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	See 23, <i>supra</i> .
27(a)	before serving the composite web page to the visitor computer:	See Ex. 1B, at 27(a). See Ex. 3B, at 27(a).
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	See 25, <i>supra</i> .
27(a)(ii)	storing at the second website data concerning the plurality of products or services; and	See 24, <i>supra</i> .
27(b)	after serving the composite web page to the visitor computer:	See Ex. 1B, at 27(b). See Ex. 3B, at 27(b).
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	See 23, <i>supra</i> .
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.	See 26, <i>supra</i> .

- 5 -

Comparison of the U.S. Patent No. 6,993,572 and Digital River Secure Sales System Prior Art combined with U.S. Patent No. 5,870,717 to Wiecha ("Wiecha")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. Digital River Secure Sales System Prior Art combined with U.S. Patent No. 5,870,717 renders obvious the asserted claims as described in part below.

According to Plaintiff's Infringement Contentions regarding the Digital River System, there is a motivation to combine the Digital River Secure Sales System Prior Art with Wiecha because both are related to e-commerce outsourcing processes for selling commerce items over a computer network and thus are in the same field of endeavor. The Digital River Secure Sales System brought together manufacturers and dealers enabling them to sell and deliver products via the Internet through vendor websites. See Exhibit 9B. Similarly, Wiecha discloses a corporate computer network for ordering products from numerous electronic catalogs that are accessible by employees of that corporation. See Wiecha at Abstract. The employees may research, select, and process the purchase of the products provided in the electronic catalogs. Both the Digital River Secure Sales System and Wiecha disclose electronic commerce systems that are directed to efficiently selling commerce objects through a computer network.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
1	An e-commerce outsourcing process comprising:	See Ex. 9B, at 1. See Ex. 6B, at 1.
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	See Ex. 9B, at 1(a). See Ex. 6B, at 1(a).
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	See Ex. 9B, at 1(b). See Ex. 6B, at 1(b). See also 4-5, <i>infra</i> .
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	See Ex. 9B, at 1(c). See Ex. 6B, at 1(c).
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as	See Ex. 9B, at 1(d). See Ex. 6B, at 1(d).

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278") combined with United States Patent Number 6,330,575 to Moore ("Moore '575")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent Application 09/995,278 combined with United States Patent Number 6,330,575 renders obvious the asserted claims as described in part below.

There is motivation to combine Saliba '278 and Moore '575 because they are both related to e-commerce outsourcing processes for selling products over the Internet and thus are in the same field of endeavor. Saliba '278 discloses an electronic financial system for providing financial services over the Internet has multiple billers, a service center, multiple financial institutions. See Saliba '278 at Abstract. Moore '575 discloses development applications for a merchant to utilize in the design of its Web page or Web site that allow the merchant to become part of a distributed Internet commerce system for selling its products. See Moore '575 at Abstract. Both Saliba '278 and Moore '575 disclose electronic commerce systems that are directed to offering commerce objects over the Internet.

Comparison of U.S. Patent No. 6,993,572 and United States Patent Application 09/995,278 by Saliba ("Saliba '278") combined with United States Patent Number 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
	and passing captured billing information to a merchant offering the indicated product or service.	
27	The process of claim 17 wherein the commerce object is a set of product categories, each comprising a plurality of products or services, and further comprising:	See 23, <i>supra</i> .
27(a)	before serving the composite web page to the visitor computer:	
27(a)(i)	contracting with merchants offering the products or services for sale to include data concerning the commerce objects of said merchants at the second website, and	See 25, <i>supra</i> .
27(a)(ii)	storing at the second website data concerning the plurality of products or services; and	See 24, <i>supra</i> .
27(b)	after serving the composite web page to the visitor computer:	
27(b)(i)	accepting search parameters through the composite web page and using said parameters to search for specific ones of the plurality of products or services within the product categories, and	See 23, <i>supra</i> .
27(b)(ii)	responsive to an indication received from the visitor computer of a desire to purchase one of the plurality of products or services identified through the search, capturing billing information from the visitor computer and passing captured billing information to the merchant offering the indicated product or service.	See 26, <i>supra</i> .

- 5 -

Comparison of U.S. Patent No. 6,993,572 and Sextoys.com Prior Art ("Sextoys") combined with U.S. Patent No. 7,565,308 to Bolly ("Bolly") and U.S. Patent No. 6,128,655 to Fields ("Fields")

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Sextoys combined with U.S. Patent No. 7,565,308 to Bolly and U.S. Patent No. 6,128,655 to Fields renders obvious the asserted claims as described in part below. See Defendants' Invalidity Contentions for an explanation of the reasons for combining Sextoys, Bolly, and Fields.

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
1	An e-commerce outsourcing process comprising:	See Ex. 24B, at 1. See Ex. 3B, at 1. See Ex. 18B, at 1.
1(a)	capturing a look and feel description associated with a host website and storing HTML code corresponding to the look and feel description at a second website;	See Ex. 24B, at 1(a). See Ex. 3B, at 1(a). See Ex. 18B, at 1(a).
1(b)	providing the host website with a link for inclusion within a page on the host website for serving to a visitor computer, wherein the provided link correlates the host website with a selected commerce object; and	See Ex. 24B, at 1(b). See Ex. 3B, at 1(b). See Ex. 18B, at 1(b). See also 4-5, <i>infra</i> .
1(c)	upon receiving an activation of the provided link from the visitor computer, serving to the visitor computer from the second website page with a look and feel corresponding to the captured look and feel description of the host website associated with the provided link and with content based on the commerce object associated with the provided link;	See Ex. 24B, at 1(c). See Ex. 3B, at 1(c). See Ex. 18B, at 1(c).
1(d)	whereby the visitor receiving the served page at the visitor computer perceives the page as associated with the host website even though it is served from the second website.	See Ex. 24B, at 1(d). See Ex. 3B, at 1(d). See Ex. 18B, at 1(d). See also 18-21, <i>infra</i> .
4	The process of claim 1, wherein the selected commerce object is a selected product.	See Ex. 24B, at 4. See Ex. 3B, at 4.

Comparison of U.S. Patent No. 6,993,572, Sextoys, Bolly, and Fields

Claim No.	Claim Language of U.S. Patent No. 6,993,572	Relevant Disclosures
5	The process of claim 1, wherein the selected commerce object is a selected product category.	See Ex. 24B, at 5. See Ex. 3B, at 5.
13	An e-commerce outsourcing system comprising:	See Ex. 24B, at 13. See 1, <i>supra</i> .
13(a)	a data store including a look and feel description associated with a host web page having a link correlated with a commerce object; and	See Ex. 24B, at 13(a). See Ex. 3B, at 13(a). See Ex. 18B, at 13(a). See also 1(b), <i>supra</i> .
13(b)	a computer processor coupled to the data store and in communication through the Internet with the host web page and programmed, upon receiving an indication that the link has been activated by a visitor computer in Internet communication with the host web page, to serve a composite web page to the visitor computer with a look and feel based on the look and feel description in the data store and with content based on the commerce object associated with the link.	See Ex. 24B, at 13(b). See Ex. 3B, at 13(b). See Ex. 18B, at 13(b). See also 1(c)-1(d), <i>supra</i> .
17	An e-commerce outsourcing process comprising the steps of:	See Ex. 24B, at 17. See 1, <i>supra</i> .
17(a)	storing a look and feel description associated with a first website in a data store associated with a second website;	See Ex. 24B, at 17(a). See 13(a), <i>supra</i> .
17(b)	including within a web page of the first website, which web page has a look and feel substantially corresponding to the stored look and feel description, a link correlating the web page with a commerce object; and	See Ex. 24B, at 17(b). See 13(b), <i>supra</i> .

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,330,575 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
1	1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	<p>Briefly, according to the invention a method for designing a Web page, to be hosted on a Web page server, comprises: providing an object-oriented, template-driven interface for a customer to utilize in the design of the Web page. This allows the customer, through the use of the interface, to design the Web page. The method also comprises the step of publishing the Web page at a destination of the customer's choosing.</p> <p>Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.</p> <p>Moore '575, 3:23-39.</p>
1(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated;	<p>Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page.</p>

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,330,575 by Victor S. Moore and Glen R. Walters (filed March 31, 1998, issued December 11, 2001). [DFNDT0000181-0000207]

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>Moore '575, 3:31-39.</p> <p>The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") 506. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product.</p> <p>Moore '575, 6:12-22.</p> <p>"The Transaction Server could also perform, in alternate embodiments, the functions of the Store Builder Server. In such an embodiment, the price URL would hyperlink to the Transaction Server which would contain the Java servlet that builds the Buy Page, and the Java servlet that maintains the shopping basket." Moore '575, 7:16-21.</p> <p>Also of importance is the fact that the Transaction Server, like the Store Builder Server, need not know where the Store Server is located. That is, the Transaction Server does not require that the Store Server, or even the Store Builder Server, be at any particular Internet address. Even in an embodiment in which the Transaction Server also performed the functions of the Store Builder Server, the Transaction Server would not need to know where the Store Server was located. In such a case, the Transaction Server would receive the price URL with the product information. It is evident, however, that once the price URL is sent, the location of the Store Server (or rather, the location from which the price URL was sent) is, and needs to be, known. Knowing where the price URL was sent from (typically a page from the Store Server) allows the Transaction Server or the Store Builder Server to hyperlink the Web customer back there to continue shopping.</p>

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>Moore '575, 8:10-26.</p> <p>The Development Tool can be used to support a variety of electronic commerce models. The preferred embodiment uses a special URL referred to as a "price URL." A price URL is a link to the Java servlets residing, in the preferred embodiment, on the Store Builder Server and can be attached to any style component. The Web customer would then select, for example by clicking with a mouse, the style component in order to buy the product which it describes. Alternate embodiments could use the price URLs to link straight to the Transaction Server, or to another site. The price URL has attached an encrypted message that contains a text description of the item for sale, including a picture, its costs, quantity of measure, the merchant's ID, several fields used to customize the Buy Page that is created from the attached data, and a special signature from the Store Builder Server. The encoding is done with the public key of the Store Builder Server, but other encryption means are possible. The signature assures that the price URL was created by the Store Builder Server, and therefore guarantees that the price and the other data associated with the URL were originally created and sanctioned by the merchant. FIG. 15 shows the dialog page for the price URL.</p> <p>The Store Builder Server is able to decrypt the price URL data and convert it into an HTML page (a Buy Page). A typical Buy Page is shown in FIG. 16, and its purpose and operation has been explained earlier. Another Java servlet on the Store Builder Server preserves the state between HTTPd requests in the shopping basket. The shopping basket keeps track of the data portion of the price URL for all items that a shopper wants to buy from the Web pages.</p> <p>Moore '575, 12:3-32.</p>
1(a)(i)	wherein each of the first web pages belongs to	One method of distributing the electronic commerce functions is to

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
	one of a plurality of web page owners;	<p>separate out the function of the Transaction Server from the Web storefront and the inventory and financial database. Referring to FIG. 2, there is shown a system 200 containing a Transaction Processor 102 on one server (the Transaction Server 202), and a Web storefront 106 and inventory and financial database 104 both on a second server (the Store Server 204). This may be desirable, for instance, when the Web merchant desires to maintain its own Web storefront, whether due to the merchant's expertise, physical distance from the transaction service provider, or otherwise. Such a merchant could use any of the many hosting service providers such as CyberGate, MaggNet, and UUNet.</p> <p>Moore '575, 4:43-56.</p> <p>"The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Web-site (e.g. pictures, prices, search engines, etc.)." Moore '575, 5:27-30.</p> <p>The merchant can redesign the site, change prices, decide to have a sale, add or delete products, update the site with pictures or other content, expand the number of places that offer the products for sale on-line, change hosting sites, and much more, all without even notifying the Store Builder Server or the Transaction Server. The merchant has almost complete control. The merchant can do anything the merchant wants with the site or with the information on the site. The only restriction is that the price URLs, which allow the Store Builder Server to build the Buy Pages, have to be included on the site, or elsewhere, in order for the Web customer to place an order. The merchant can even totally remove the Web storefront, and simply post the price URLs on news groups or on another web site.</p> <p>Moore '575, 8:47-61.</p>
1(a)(ii)	wherein each of the first web pages displays at least one active link associated with a commerce	The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502.

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>Moore '575, 5:27-48.</p> <p>See also Figs. 6-16.</p>
3	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a set of navigational links on the source page.	<p>The second step is to create the default header and footer. The page header and footer are typically used for the company name and logo. An email address and a link URL are also commonly included. As with many of the features of the Development Tool, the field size may be adjusted and images may be loaded. In this case, the height of the header, for example, may need to be increased in order to accommodate a particular company logo. Referring to FIG. 7, there is shown a screen 700 in which the merchant is prompted to enter the information for the header and the footer. The screen 700 further illustrates the simplicity of the merchant interface.</p> <p>Moore '575, 11:4-15. See also Fig. 7.</p>
4	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes the appearance of the top and left side of the source page.	<p>Page styles allocate certain portions of each page to text, images, multimedia, etc. The style thus provides a template for all of the different content-related objects ("style components") that will appear on a page. Although the position and sizes of the style components are defined by the style, they can be changed by the merchant for any page. Referring to FIG. 8, there is shown a screen 800 which prompts the merchant to select a background and a style for the page. Page styles are further elaborated in FIG. 9, and FIG. 10 shows one style or template in isolation.</p> <p>Moore '575, 11:27-36. See also Figs. 8-10.</p>
5	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes the appearance of the header and footer of the source page.	<p>The second step is to create the default header and footer. The page header and footer are typically used for the company name and logo. An email address and a link URL are also commonly included. As with many of the features of the Development Tool, the field size may be adjusted and images may be loaded. In this case, the height of the header, for example, may need to be increased in order to accommodate a particular company logo. Referring to FIG. 7, there is</p>

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		shown a screen 700 in which the merchant is prompted to enter the information for the header and the footer. The screen 700 further illustrates the simplicity of the merchant interface. Moore '575, 11:4-15. See also Fig. 7.
6	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a logo associated with the owner of the source page.	The second step is to create the default header and footer. The page header and footer are typically used for the company name and logo. An email address and a link URL are also commonly included. As with many of the features of the Development Tool, the field size may be adjusted and images may be loaded. In this case, the height of the header, for example, may need to be increased in order to accommodate a particular company logo. Referring to FIG. 7, there is shown a screen 700 in which the merchant is prompted to enter the information for the header and the footer. The screen 700 further illustrates the simplicity of the merchant interface. Moore '575, 11:4-15. See also Fig. 7.
7	The method of claim 1 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the second web page contains one or more selectable navigation links connecting a hierarchical set of additional second web pages, each pertaining to a subset of the offerings in the catalog.	The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") 506. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product. Moore '575, 6:12-22.
8	The method of claim 1 wherein the second web page is generated dynamically.	The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502. When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") 506.

- 13 -

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product. Moore '575, 6:12-22. "The Transaction Server could also perform, in alternate embodiments, the functions of the Store Builder Server. In such an embodiment, the price URL would hyperlink to the Transaction Server which would contain the Java servlet that builds the Buy Page, and the Java servlet that maintains the shopping basket." Moore '575, 7:16-21.
9	The method of claim 1 wherein the owner of the source page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source page.	In the Distributed Commerce System Patent, which is incorporated herein by reference, there is disclosed a distributed electronic commerce system. One method of distributing the electronic commerce functions is to separate out the function of the Transaction Server from the Web storefront and the inventory and financial database. Referring to FIG. 2, there is shown a system 200 containing a Transaction Processor 102 on one server (the Transaction Server 202), and a Web storefront 106 and inventory and financial database 104 both on a second server (the Store Server 204). This may be desirable, for instance, when the Web merchant desires to maintain its own Web storefront, whether due to the merchant's expertise, physical distance from the transaction service provider, or otherwise. Moore '575, 4:41-54.
10	The method of claim 9 further comprising computer-facilitating automatic payment to the owner of the source page, once the transaction is completed.	"In either case, the Transaction Server will notify the merchant of the status of the transaction and supply all of the product, customer, delivery, and payment information 522. If the customer provided an e-mail account, then the Transaction Server will also send a confirmation of the transaction to the customer 522." Moore '575, 7:10-15.
11	The method of claim 1, wherein the second web page appears to the computer user to be generated by a server associated with the source page.	The Web storefront 106 acts as the virtual store for the customer 114, and contains whatever information the merchant has built into the Web-site (e.g. pictures, prices, search engines, etc.). There is provided, according to the present invention, a Development Tool for designing

- 14 -

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		the Web storefront 106. This tool greatly simplifies the task of creating the Web storefront initially and of modifying it and updating it. The Tool also ensures that the operation with the Transaction Server 202 is seamless for the customer 114. The Tool derives much of its utility from the fact that it contains a series of templates, tailored to different industries, for creating pages. The fields on these templates can be filled with text, or with images from clip art (also included with the tool) or can be tailored to suit a specific merchant's needs. The task is greatly simplified by the inclusion of a prompting mode in which the tool will actually step a user through the process. As an additional tailoring feature, the tool can be adapted to whatever "look and feel" the customer may desire. The customer may want to match the look and feel to that of other applications that the customer uses, or may simply feel more comfortable with another look and feel. Moore '575, 5:27-48.
12	The method of claim 1, wherein the link activated by the web browser is stored in a database associated with the source page.	Briefly, in accordance with another aspect of the invention, a method for designing a Web page for use in a distributed electronic commerce system is provided. The commerce system comprises a Web page server and a second server which are electrically coupled to each other, and the Web page server hosts the Web page. The method comprises: creating a link to the second server; designing the Web page such that the link can be embedded into the Web page; and embedding the link into the Web page. Moore '575, 3:23-39.
13	The method of claim 1, wherein the second web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser,	The Store-Builder Server receives the price URL, which is encrypted, and a Java "Buy Page" servlet builds a Buy Page from the received HTML 508. The customer can now either accept by selecting the option that puts the product in the customer's "shopping basket," or cancel the buy 510. If the buy operation is canceled, then the customer

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
	places data representing the commerce object into a virtual shopping cart.	is returned to the Store Server and can continue shopping. If the buy operation is accepted the Store Builder Server then presents the customer with his entire shopping basket up to that point, which the Store Builder Server creates and maintains. The customer can now delete items from the basket, change the quantities, "purchase" the entire basket, or return to the Store Server to continue shopping 512. It should be clear that the previous buy operation was equivalent to dropping the product in the shopping basket, and the purchase operation is equivalent to going to the check-out counter. The Java servlet that maintains the shopping basket could use any of a variety of means, including without limitation tracking the Web customer's browser address or prompting the customer for a name, for keeping track of which customer belongs to which basket. Moore '575, 6:23-43.
14	The method of claim 13, wherein the second web page contains a checkout link which, when activated by the web browser, facilitates completion of a transaction associated with the commerce object in the shopping cart.	The Store-Builder Server receives the price URL, which is encrypted, and a Java "Buy Page" servlet builds a Buy Page from the received HTML 508. The customer can now either accept by selecting the option that puts the product in the customer's "shopping basket," or cancel the buy 510. If the buy operation is canceled, then the customer is returned to the Store Server and can continue shopping. If the buy operation is accepted the Store Builder Server then presents the customer with his entire shopping basket up to that point, which the Store Builder Server creates and maintains. The customer can now delete items from the basket, change the quantities, "purchase" the entire basket, or return to the Store Server to continue shopping 512. It should be clear that the previous buy operation was equivalent to dropping the product in the shopping basket, and the purchase operation is equivalent to going to the check-out counter. The Java servlet that maintains the shopping basket could use any of a variety of means, including without limitation tracking the Web customer's browser address or prompting the customer for a name, for keeping track of which customer belongs to which basket.

- 16 -

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
15	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment from the computer user to the merchant associated with the activated link.	<p>Moore '575, 6:23-43.</p> <p>The customer leaves his shopping basket page by either making a purchase or continuing shopping. If the customer decides to make the purchase, he is hyperlinked to the Transaction Server 514. The Transaction Server, thus, is not involved until money is ready to be transferred. The Transaction Server, therefore, immediately establishes a secure link between itself and the customer's browser 516. Any security protocol could be used, but the secure sockets layer ("SSL") protocol is preferred. After establishing a secure link, the Transaction Server prompts the customer for the necessary identification, delivery, and payment information 518.</p> <p>In an alternate embodiment, the functions of establishing a secure link and getting the customer's payment information could be done in the Store Builder Server. The Transaction Server would then receive this information from the Store Builder Server, in an encrypted form, and decrypt it. This would provide an embodiment in which the Transaction Server did not need to interact in real-time with the customer, but merely provide a confirmation if desired.</p> <p>The Transaction Server may, optionally, verify the credit card information, authorize the payment amount, and transfer the funds to the merchant's account 520. The Transaction Server would do this by using a third party credit card clearinghouse such as IC Verify or Automated Transaction Services (ATS). The merchant need not request this service from the Transaction Server, however. Low-volume merchants may prefer simply to be e-mailed (securely) or faxed the entire purchase order, and perform these functions themselves, thereby saving the associated cost that the transaction service provider would have charged. Additionally, the merchant may prefer to check his inventory before charging the customer.</p>

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>In either case, the Transaction Server will notify the merchant of the status of the transaction and supply all of the product, customer, delivery, and payment information 522. If the customer provided an e-mail account, then the Transaction Server will also send a confirmation of the transaction to the customer 522.</p> <p>Moore '575, 6:44-7:15.</p>
16	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment of a commission to the owner of the source page.	<p>See 10, <i>supra</i>.</p>
17	The method of claim 13, further comprising displaying the second web page again, after the commerce object is placed into the shopping cart.	<p>The Store Builder Server receives the price URL, which is encrypted, and a Java "Buy Page" servlet builds a Buy Page from the received HTML 508. The customer can now either accept by selecting the option that puts the product in the customer's "shopping basket," or cancel the buy 510. If the buy operation is canceled, then the customer is returned to the Store Server and can continue shopping. If the buy operation is accepted the Store Builder Server then presents the customer with his entire shopping basket up to that point, which the Store Builder Server creates and maintains. The customer can now delete items from the basket, change the quantities, "purchase" the entire basket, or return to the Store Server to continue shopping 512. It should be clear that the previous buy operation was equivalent to dropping the product in the shopping basket, and the purchase operation is equivalent to going to the check-out counter. The Java servlet that maintains the shopping basket could use any of a variety of means, including without limitation tracking the Web customer's browser address or prompting the customer for a name, for keeping track of which customer belongs to which basket.</p> <p>Moore '575, 6:23-43.</p> <p>Also of importance is the fact that the Transaction Server, like the Store</p>

- 18 -

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>Builder Server, need not know where the Store Server is located. That is, the Transaction Server does not require that the Store Server, or even the Store Builder Server, be at any particular Internet address. Even in an embodiment in which the Transaction Server also performed the functions of the Store Builder Server, the Transaction Server would not need to know where the Store Server was located. In such a case, the Transaction Server would receive the price URL with the product information. It is evident, however, that once the price URL is sent, the location of the Store Server (or rather, the location from which the price URL was sent) is, and needs to be, known. Knowing where the price URL was sent from (typically a page from the Store Server) allows the Transaction Server or the Store Builder Server to hyperlink the Web customer back there to continue shopping.</p> <p>Moore '575, 8:10-26.</p>
18	The method of claim 1, wherein the visually perceptible elements displayed on the second web page are retrieved from a database storing data associated with visually perceptible elements for each of the first web pages.	<p>The Tool, as either an applet which would run on top of a browser or as an application, would be downloaded from a Store Builder Server. Referring to FIG. 4, there is shown a distributed electronic commerce system 400 with a Store Builder Server 402. The merchant could download the Java wizard applet to build the pages for the Web storefront, which will reside on the Store Server 204. The Store Builder Server 402 would also contain Java servlets that would receive the HTML from the wizard applet for the storefront pages that the merchant designed and would build the store pages from this HTML. This, of course, would happen when the merchant initially designed the pages, or whenever the merchant updated or modified them. The servlet, on the Store Builder Server 402, would then publish the Web storefront pages wherever the merchant designates.</p> <p>Moore '575, 5:49-63.</p> <p>The customer, using a browser, goes to the Store Server and begins shopping, that is, browsing the content of the Web storefront 502.</p>

- 19 -

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,330,575 ("Moore '575")
		<p>When the customer finds a product that the customer would like to buy, he selects that product 504. The Store Server then jumps to the Store Builder Server by using a Uniform Resource Locator ("URL") 506. The URL, called a price URL, contains all of the relevant information on the product, and all the information necessary to build a "Buy Page." The relevant product information includes a picture of the product, the product's price, and a description of the product.</p> <p>Moore '575, 6:12-22.</p> <p>The Development Tool can be used to support a variety of electronic commerce models. The preferred embodiment uses a special URL referred to as a "price URL." A price URL is a link to the Java servlets residing, in the preferred embodiment, on the Store Builder Server and can be attached to any style component. The Web customer would then select, for example by clicking with a mouse, the style component in order to buy the product which it describes. Alternate embodiments could use the price URLs to link straight to the Transaction Server, or to another site. The price URL has attached an encrypted message that contains a text description of the item for sale, including a picture, its costs, quantity of measure, the merchant's ID, several fields used to customize the Buy Page that is created from the attached data, and a special signature from the Store Builder Server. The encoding is done with the public key of the Store Builder Server, but other encryption means are possible. The signature assures that the price URL was created by the Store Builder Server, and therefore guarantees that the price and the other data associated with the URL were originally created and sanctioned by the merchant. FIG. 15 shows the dialog page for the price URL.</p> <p>The Store Builder Server is able to decrypt the price URL data and convert it into an HTML page (a Buy Page). A typical Buy Page is shown in FIG. 16, and its purpose and operation has been explained</p>

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,490,567 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
1	1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	Distributed electronic commerce is conducted over a network by substantially separating transaction functionality from merchant content. Electronic commerce transaction functionality is provided by a commerce server having a commerce database. The commerce server stores merchant and purchaser profile data and merchant content summaries on the commerce database. The purchaser browses and searches for product and merchant information using the commerce server, and is provided with more detailed information stored at a separate merchant content server system. The purchaser selects products to purchase, and a purchase order is sent to the commerce server. The commerce server initiates the settlement of accounts between the merchant and purchaser, and initiates order fulfillment for the selected product. The separation of transaction functionality and merchant content onto separate servers under the control of a commerce service provider and a merchant, respectively, provides a more efficient and effective way of carrying out electronic commerce over a network. Gregory '567, Abstract.
1(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated;	A purchaser requests the commerce server to send shopping information. The purchaser browses or searches for products on the commerce server, and data regarding products and merchants is retrieved from the commerce database. At the purchaser's request for more information on a product or merchant, the commerce server refers the purchaser to an appropriate merchant content server, which contains much more detailed information about the product and merchant than is available from the commerce database.

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,490,567 by James McKanna Gregory (filed January 15, 1997, issued December 3, 2002). [DFNDT0000145-0000163]

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
		While browsing or searching the merchant content server, the purchaser may select one or more products for purchase. When the purchaser indicates he is ready to effectuate such a transaction, data concerning the selected product or products are sent to the commerce server. The data include information sufficient to identify the product, purchaser and selling merchant. The commerce server communicates with an external payment system to debit the purchaser's account and credit the merchant's account, effectuating the sale. The commerce server also generates a fulfillment message that ensures product delivery to the purchaser. Gregory '567, 2:48-67.
1(a)(i)	wherein each of the first web pages belongs to one of a plurality of web page owners;	In accordance with the present invention, an embodiment of which is shown in FIG. 2, electronic commerce is carried out over a network 21 with a purchaser 25, where content is distributed through the network on merchant content servers 22, and transaction functionality is provided by an electronic commerce server 23 having an electronic commerce database 24. Network 21 is a data network, an example of which is the Internet. Gregory '567, 3:57-64. See also Fig. 2.
1(a)(ii)	wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and	A purchaser requests the commerce server to send shopping information. The purchaser browses or searches for products on the commerce server, and data regarding products and merchants is retrieved from the commerce database. At the purchaser's request for more information on a product or merchant, the commerce server refers the purchaser to an appropriate merchant content server, which contains much more detailed information about the product and merchant than is available from the commerce database. While browsing or searching the merchant content server, the purchaser may select one or more products for purchase. When the purchaser indicates he is ready to effectuate such a transaction, data concerning the

		payment system to debit the purchaser's account and credit the merchant's account, effectuating the sale. The commerce server also generates a fulfillment message that ensures product delivery to the purchaser. Gregory '567, 2:48-67. The content servers 22 are controlled by merchants, and contain detailed merchant data. This merchant data comprises information on the products offered by the merchant, including product names, manufacturers, colors, sizes, and prices. It also includes multimedia information about the product, comprising at least one type of text, audio, graphic, animation and video data. Merchant data also comprises detailed information regarding warranty, guarantee, and merchandise return information, as well as background information regarding the merchant. Merchant content data includes information that comprises an electronic catalog of the merchant's products.
		Gregory '567, 3:65-4:9. Commerce server data comprises summary data on the products offered by those merchants that have content servers that subscribe to the electronic commerce service. In one embodiment, this includes product numbers, product categories, sizes, colors, prices, and a link to the appropriate merchant content server where more product information can be found. Commerce server data may also include merchant profile data, including summaries of the forms of payment accepted by a merchant, merchant policies, and merchant background information. Merchant profile data is added to the commerce database when the merchant initially registers for the service, and may be updated at any time by the merchant. Gregory '567, 4:53-65.

		presentation and analysis.
		Gregory '567, 4:38-52.
		The commerce server interacts with external payment systems (e.g., a bank) to cause purchaser's payment vehicle (such as a credit or debit card account) to be debited, and the merchant's account to be credited. In one embodiment, the merchant's bank account is directly credited with the appropriate amount. In another embodiment, the merchant's account with the commerce service is credited, and actual payment to the merchant's bank account is made at a later date in accordance with a predetermined commerce service policy.
		Gregory '567, 9:40-49.
11	The method of claim 1, wherein the second web page appears to the computer user to be generated by a server associated with the source page.	<p>Rather than operate their own commerce servers, smaller merchants typically purchase electronic commerce services provided by a commerce service provider. In this case, the provider owns and maintains the commerce server, who distributes configuration, operation and maintenance costs across the subscriber merchants, realizing an economy of scale. However, in so doing, the provider usually enforces uniform standards for appearance and methods of doing business to reduce the amount of custom programming necessary in order to economically accommodate several different merchants. Thus, each merchant being served loses a substantial amount of control over the way he conducts business over the network. This restricts the merchant's ability to express a particular personality and to do such things as develop distinctive trade dress. This places him at a competitive disadvantage in the marketplace, especially when compared to those merchants who can operate their own servers.</p> <p>Gregory '567, 1:31-48.</p> <p>"The present invention thus advantageously provides a convenient and efficient way</p>

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
		for a purchaser to shop over a network through simple and easy to understand interfaces. An embodiment of such an interface is shown in FIG. 11." Gregory '567, 7:54-57.
12	The method of claim 1, wherein the link activated by the web browser is stored in a database associated with the source page.	Upon selecting a merchant from the screen shown in FIG. 12, the purchaser is referred by the commerce server to the content server on which the selected merchant has placed his merchant content. In one embodiment in which the present invention is implemented on the Internet, the URL of the merchant is contained in a table in the commerce database that cross-references it to the merchant identifier in the product data structure. In another embodiment, the network address of the content server is included in the product data structure as an additional field. Gregory '567, 8:26-35.
13	The method of claim 1, wherein the second web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart.	Upon accessing the content server, the purchaser is presented with an electronic version of the merchant's store. Such stores are well known in the art as websites on the World Wide Web (WWW). The purchaser is able to search and browse among products offered by the merchant; learn detailed information regarding the merchant's return policy; learn about forms of payment accepted by the merchant; and order products. An example of a product screen at a content server is shown in FIG. 13. The picture of the boot 131 may be animated, and the boot could be slowly turned so all sides may be viewed. Audio accompanies the picture, describing the advantageous features of the boot. This is supplemented with textual information 132, as well as information about the boot's available sizes 133, weight 134, suggested retail price 135, offer price 136, and offer expiration date 137. If the purchaser wants to select the boot for purchase, the purchaser selects the Buy This button 138 at the bottom of the screen. Gregory '567, 8:36-52.
14	The method of claim 13, wherein the second web page contains a checkout link which, when	Every screen of this embodiment of the content server also can have a Make Purchases button 139. The purchaser selects this button when he is

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
	activated by the web browser, facilitates completion of a transaction associated with the commerce object in the shopping cart.	ready to effectuate an electronic transaction whereby the selected products are purchased. When the purchaser has finished shopping and he selects the Make Purchases button 139, order information for his selected products is transmitted to the commerce server. In a preferred embodiment, this order information comprises the purchaser identification number, merchant identification number, SKU number, quantity, payment information, and special information (e.g., size, color) that may include attribute/value pairs. Gregory '567, 8:53-65.
15	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment from the computer user to the merchant associated with the activated link.	While browsing or searching the merchant content server, the purchaser may select one or more products for purchase. When the purchaser indicates he is ready to effectuate such a transaction, data concerning the selected product or products are sent to the commerce server. The data include information sufficient to identify the product, purchaser and selling merchant. The commerce server communicates with an external payment system to debit the purchaser's account and credit the merchant's account, effectuating the sale. The commerce server also generates a fulfillment message that ensures product delivery to the purchaser. Gregory '567, 2:57-67. Transaction functionality refers to the capability to carry out actions needed to effectuate a purchase and sale over the network 21. For example, in one embodiment, the transaction server accepts a credit card number from a purchaser and contacts the credit card vendor to verify that the account has a sufficient line of credit to complete the purchase of a product or products having a given price. Once authorization is received, the commerce server sends messages to a banking institution that debits the purchaser's account and credits that of the merchant,

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
		effectuating a purchase. Other transaction functionality can include: arranging to have the selected product shipped; and/or other order fulfillment functions, such as implementing a customer satisfaction survey along with product delivery, and storing the results for presentation and analysis. Gregory '567, 4:38-52. The commerce server interacts with external payment systems (e.g., a bank) to cause purchaser's payment vehicle (such as a credit or debit card account) to be debited, and the merchant's account to be credited. In one embodiment, the merchant's bank account is directly credited with the appropriate amount. In another embodiment, the merchant's account with the commerce service is credited, and actual payment to the merchant's bank account is made at a later date in accordance with a predetermined commerce service policy. Gregory '567, 9:40-49.
16	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment of a commission to the owner of the source page.	See 10, <i>supra</i> .
17	The method of claim 13, further comprising displaying the second web page again, after the commerce object is placed into the shopping cart.	
18	The method of claim 1, wherein the visually perceptible elements displayed on the second web page are retrieved from a database storing data associated with visually perceptible elements for each of the first web pages.	"The present invention advantageously provides a simple and uniform interface to the merchant whereby the merchant adds merchant content summary data to the commerce database 24. An embodiment of such an interface is shown in FIG. 6." Gregory '567, 5:22-26. When the merchant is finished entering the new product data, he selects the submit button 723, and the commerce database is then updated,

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,490,567 to Gregory ("Gregory '567")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,490,567 ("Gregory '567")
		associating the newly submitted data with the merchant's identification number and a time stamp indicating when it was added. The collection of product information stored in the commerce database is called a merchant content abstract. Gregory '567, 5:46-53. As shown in FIG. 10, the list is a summary presentation of the product name 101, product category 102, SKU 103 and the date on which the product information was entered into the commerce database. A highlight bar 105 that covers one product at a time may be moved up and down the list by movement arrows 106 and 107, respectively. The merchant selects an item to edit from the list by moving the highlight bar over the item and then selecting the Select button 108. When the merchant selects an item from the list to edit, a screen such as that shown in FIG. 9 is presented to the merchant. Alternatively, the merchant may expediently delete product data for the highlighted product from the commerce database by selecting the delete button 109. Thus, the merchant may add, edit and delete his product data summaries in the commerce database according to a simple and uniform interface. Gregory '567, 6:55-7:3.

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 7,565,308 to Bollay ("Bollay '308")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 7,565,308 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
1	1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	A central hub server stands between a number of affiliate web sites and a number of vendor web sites to execute sales of vendor products featured on the affiliate web sites. Affiliate sites sign-up with the hub server and select products offered by vendors. The affiliate sites feature selected vendor products on their web sites. A buyer that browses an affiliate web site causes identifiers of the buyer, the affiliate site, and the product to be sent to the hub server. The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit information and shipping address. The hub server returns a form to the user visiting the affiliate site, including a picture of the product, its price and a submit icon superimposed on the picture. If the buyer clicks on the submit icon, the purchase information is returned to the hub server. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less commissions credited to the affiliate site and the hub. The form submitted to the vendor site includes all information necessary to make the purchase: product code, price, hub affiliate ID, and buyer shipping and billing information. The vendor site processes the sale and ships the product to the buyer's address. Bollay '308, Abstract.
1(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been	"A buyer 114 that browses an affiliate web site 110 and views a page containing product insert code causes identifiers of the buyer, the affiliate site, the product (or category), and optionally the vendor site to be sent to the hub server." Bollay '308, 2:66-3:3. See also Fig. 1.

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
	object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the second web page contains one or more selectable navigation links connecting a hierarchical set of additional second web pages, each pertaining to a subset of the offerings in the catalog.	product insert code causes identifiers of the buyer, the affiliate site, the product (or category), and optionally the vendor site to be sent to the hub server." Bollay '308, 2:66-3:3. See also Fig. 1. Refer to FIG. 4 which is a flow diagram of computer software implementing select vendor products software. A list of available vendor products obtained from the vendors during the vendor sign-up procedure is displayed 402. Alternatively, product categories may be displayed. Affiliate sites may select 404 any number of different vendor's products to sell, or product categories, suited to the nature of the affiliate's web site. A separate template is generated 406 automatically for each product or product category. This template is then pasted into an affiliate site's web page in accordance with the preference of the affiliate. Bollay '308, 3:57-67. "It will be understood by those skilled in the art that the product displayed can be random within a category. Also, the product displayed can be custom based on the buyer's profile, site and category." Bollay '308, 4:57-58.
8	The method of claim 1 wherein the second web page is generated dynamically.	"In accordance with an aspect of the invention, the hub server dynamically creates HTML code and/or JavaScript needed to submit a purchase request if the user clicks on an icon/button. This HTML and JavaScript is dynamically inserted into the page with an <IFRAME>, JavaScript, or similar tag." Bollay '308, 2:30-35.
9	The method of claim 1 wherein the owner of the source page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source page.	At the hub server, the orders are aggregated by vendor. Then the transactions are processed. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less a commission which is credited to the affiliate site and the hub server. Alternatively, the buyer's information is forwarded to the vendor with the hub's (vendor affiliate) ID for commission/credit later. Bollay '308, 3:11-18.

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
		Once the purchase request is confirmed by the vendor 522, the hub server bills the buyer's credit card 524, credits the affiliate site with a commission 526 and confirmation from the vendor is returned to the buyer by email by the hub server 528 All purchase requests made within an hour (less any cancellations) are aggregated by the vendor and forwarded. Bollay '308, 4:40-45.
10	The method of claim 9 further comprising computer-facilitating automatic payment to the owner of the source page, once the transaction is completed.	At the hub server, the orders are aggregated by vendor. Then the transactions are processed. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less a commission which is credited to the affiliate site and the hub server. Alternatively, the buyer's information is forwarded to the vendor with the hub's (vendor affiliate) ID for commission/credit later. Bollay '308, 3:11-18. Once the purchase request is confirmed by the vendor 522, the hub server bills the buyer's credit card 524, credits the affiliate site with a commission 526 and confirmation from the vendor is returned to the buyer by email by the hub server 528 All purchase requests made within an hour (less any cancellations) are aggregated by the vendor and forwarded. Bollay '308, 4:40-45.
11	The method of claim 1, wherein the second web page appears to the computer user to be generated by a server associated with the source page.	The hub server returns an HTML <FORM> to the user, including a picture of the product, its price, affiliate ID, product ID, and buyer ID with a submit icon superimposed on the picture. The picture and submit icon are displayed on the affiliate's web page. If the buyer clicks on the submit icon, the purchase request form data is returned to the hub server. Bollay '308, 3:5-11.

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
		Refer to FIG. 4 which is a flow diagram of computer software implementing select vendor products software. A list of available vendor products obtained from the vendors during the vendor sign-up procedure is displayed 402. Alternatively, product categories may be displayed. Affiliate sites may select 404 any number of different vendor's products to sell, or product categories, suited to the nature of the affiliate's web site. A separate template is generated 406 automatically for each product or product category. This template is then pasted into an affiliate site's web page in accordance with the preference of the affiliate. Bollay '308, 3:57-67. Refer to FIG. 5a which comprises a flow diagram of computer software implementing display product to buyer software. A prospective Buyer browses a web page on an affiliate site that has a product displayed with a submit icon on it. The product and submit icon are placed on the web page by an <IFRAME> or <JAVASCRIPT> tag (or similar tag). Bollay '308, 4:2-7.
12	The method of claim 1, wherein the link activated by the web browser is stored in a database associated with the source page.	A buyer 114 that browses an affiliate web site 110 and views a page containing product insert code causes identifiers of the buyer, the affiliate site, the product (or category), and optionally the vendor site to be sent to the hub server. The hub server searches a database to find a picture of the product, its current price and the buyer's previously stored credit and shipping address. Bollay '308, 2:66-3:5. See also Fig. 1.
13	The method of claim 1, wherein the second web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated,	Refer to FIG. 5b which comprises a flow diagram of computer software implementing execute buyer's order software. If the user clicks on the "submit" button, a purchase request for the product is made. When the purchase request is received at the hub server 512, and a vendor is

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
	which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart.	specified 516, the purchase request is sent to the vendor site 520 for shipment by the vendor to the buyer. If a vendor is not specified 516, a vendor is selected based on the best price and/or aggregate efficiency criteria such as shipping agent, geographical location, etc. Bollay '308, 4:30-39. See also Fig. 5b.
14	The method of claim 13, wherein the second web page contains a checkout link which, when activated by the web browser, facilitates completion of a transaction associated with the commerce object in the shopping cart.	Buyer data is stored at the hub server, so it can be utilized by buyers to make purchases from all affiliate sites in the affiliate network. The first time a buyer orders a product 514, a form is sent to the user to collect the buyer's shipping address, shipping method, and credit card payment information 532. Once the completed form is received at the hub server 534, the information collected is stored 536 at the hub server. The buyer's proprietary information need not be sent to the affiliate site as it is securely stored at the hub server. Bollay '308, 4:48-56.
15	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment from the computer user to the merchant associated with the activated link.	At the hub server, the orders are aggregated by vendor. Then the transactions are processed. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less a commission which is credited to the affiliate site and the hub server. Alternatively, the buyer's information is forwarded to the vendor with the hub's (vendor affiliate) ID for commission/credit later. Bollay '308, 3:11-18.
16	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment of a commission to the owner of the source page.	See 10, <i>supra</i> .
17	The method of claim 13, further comprising displaying the second web page again, after the commerce object is placed into the shopping cart.	Also of importance is the fact that the Transaction Server, like the Store Builder Server, need not know where the Store Server is located. That is, the Transaction Server does not require that the Store Server, or even the Store Builder Server, be at any particular Internet address. Even in an embodiment in which the Transaction Server also

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,330,575 to Moore ("Moore '575")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 7,565,308 ("Bollay '308")
		performed the functions of the Store Builder Server, the Transaction Server would not need to know where the Store Server was located. In such a case, the Transaction Server would receive the price URL with the product information. It is evident, however, that once the price URL is sent, the location of the Store Server (or rather, the location from which the price URL was sent) is, and needs to be, known. Knowing where the price URL was sent from (typically a page from the Store Server) allows the Transaction Server or the Store Builder Server to hyperlink the Web customer back there to continue shopping. Moore '575, 8:10-26.
18	The method of claim 1, wherein the visually perceptible elements displayed on the second web page are retrieved from a database storing data associated with visually perceptible elements for each of the first web pages.	At the hub server, the orders are aggregated by vendor. Then the transactions are processed. The buyer's credit card is debited with the purchase price and the vendor site is credited with the sale less a commission which is credited to the affiliate site and the hub server. Alternatively, the buyer's information is forwarded to the vendor with the hub's (vendor affiliate) ID for commission/credit later. Bollay '308, 3:11-18.
19	A system useful in an outsource provider serving web pages offering commercial opportunities, the system comprising:	See 1, <i>supra</i> .
19(a)	(a) a computer store containing data, for each of a plurality of first web pages, defining a plurality of visually perceptible elements, which visually perceptible elements correspond to the plurality of first web pages; (i) wherein each of the first web pages belongs to one of a plurality of web page owners; (ii) wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and (iii) wherein the selected	See 1(a)-1(b), <i>supra</i> .

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, U.S. Patent No. 6,209,007 anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
1	1. A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	
1(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated;	"FIGS. 3-10 are block diagram flow charts of the preferred steps employed in practicing the present invention, wherein circled numerals indicate links between the steps." Kelley '007, 3:53-55. See also Figs. 3-10.
1(a)(i)	wherein each of the first web pages belongs to one of a plurality of web page owners;	"A further object of the invention is to easily build a customized web page from a series of unrelated web pages, and to have the customized web page updated with changes as the changes take place in the original unrelated web pages." Kelley '007, 1:60-64. "The desired information may be retrieved from a plurality of original web pages, in which case the customized web page includes 1) the desired information retrieved in the search from the plurality of original web pages and 2) other structure, not retrieved in the search, of one of the original web pages. Kelley '007, 2:53-58.
1(a)(ii)	wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and	
1(a)(iii)	wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one other;	"A further object of the invention is to easily build a customized web page from a series of unrelated web pages, and to have the customized web page updated with changes as the changes take place in the original unrelated web pages." Kelley '007,

¹ Unless noted, all citations in this chart are to U.S. Patent No. 6,209,007 by Edward E. Kelley, et al. (filed November 26, 1997, issued March 27, 2001). [DFNDT0000164-0000180]

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
		1:60-64.
1(b)	automatically retrieving from a storage coupled to the server pre stored data associated with the source page; and then	"The customized web page is then created, for example, on a program storage device accessible by the client computer, and contains: 1) the desired information retrieved in the search and 2) other structure, not retrieved in the search, of at least one original web page." Kelley '007, 2:16-20. Normally, the original web page on the network from which the desired information was retrieved in the search is accessed through a network server. The process also may include providing in a program storage device of the network server a database listing of the original web pages containing information retrieved in the search and, for each such original web page in the database listing, a corresponding listing of customized web pages containing the information retrieved in the search from the original web page. Kelley '007, 2:29-42. "Client computer 10 has a microprocessor for executing stored programs and has access to first and second databases 14, 16, respectively, on its program storage device for storage of addresses of HTML web pages and other files which may be downloaded from a network service provider." Kelley '007, 4:28-33.
1(c)	automatically with the server computer generating and transmitting to the web browser a second web page that includes:	"720—Create new customized web page. Create the new customized web page from the basic web page of the web page where the web page subset originated and the web page subset." Kelley '007, 8:64-67. See also Fig. 9.
1(c)(i)	(i) information associated with the commerce object associated with the link that has been activated, and	
1(c)(ii)	(ii) a plurality of visually perceptible elements derived from the retrieved pre stored data and visually corresponding to the source page.	The present invention provides the ability to create a customized web page based on a Boolean search for the information of interest found on another, original web page while preserving the basic structure of the original web page. The invention also contains the logic to select a subset of data from the HTML source file which includes HTML source code, the Java code referenced by the HTML source file, the javascript

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 6,209,007 to Kelley ("Kelley '007")

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 6,209,007 ("Kelley '007")
		code found in the HTML source file and any other code that is available to reference data on a web browser. The invention also permits interactive customization that is invoked whenever the customized web page is accessed to update it with retrieved information that is changed in the original web page. Kelley '007, 3:65-4:10. The basic structure of the web page consists of the title, headings, footings, graphics, imbedded javascript code, general text and any links found in the headings, footings, graphics, imbedded javascript code and general text. The basic structure of the web page also consists of the headings, footings, graphics, general text that are produced by Java code or other language code, and any links found in the headings, footings, graphics and general text. It does not consist of the primary information the web page was created to present. Kelley '007, 4:66-5:8.
3	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a set of navigational links on the source page.	The basic structure of the web page consists of the title, headings, footings, graphics, imbedded javascript code, general text and any links found in the headings, footings, graphics, imbedded javascript code and general text. The basic structure of the web page also consists of the headings, footings, graphics, general text that are produced by Java code or other language code, and any links found in the headings, footings, graphics and general text. It does not consist of the primary information the web page was created to present. Kelley '007, 4:66-5:8.
4	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes the appearance of the top and left side of the source page.	The basic structure of the web page consists of the title, headings, footings, graphics, imbedded javascript code, general text and any links found in the headings, footings, graphics, imbedded javascript code and general text. The basic structure of the web page also consists of the headings, footings, graphics, general text that are produced by Java code

Comparison of U.S. Patent No. 7,818,399 and PCT Application WO 99146709 to Voorhees ("Voorhees '709")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, PCT Application WO 99146709 to Voorhees anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
1	A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	<p>Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 (Jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.</p> <p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
		<p>contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.</p> <p>Voorhees '709, 3:23-39.</p> <p>See also, Figs. 1-2, 4:7-12; 8:4-17.</p>
1(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing as the source page the one of the first web pages on which the link has been activated;	<p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for used in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The path 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>Voorhees '709, 5:21 - 6:4.</p> <p>Replicating a boutique from the manufacturer's database 10 into a display being made up by display processor 17 largely from jeweler's database 11 requires data transmission over path 14, which, as previously mentioned may be a hard path within a single host machine or a communications link between two host machines.</p> <p>As is known to those in the art, database 11 may or may not be implemented as an object-oriented database. If it is object-oriented, it will have instructions embedded in it and will initiate on its own a request over path 14 for the requisite information from database 10, and will provide all the information necessary for a display to display processor 17. If it is not object-oriented, display processor 17 will have to initiate requests for such information over path 14, and display processor 17 will be responsible for assembling information for a complete display from database 10 and database 11.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
		<p>Display processor 17 forwards the display information through server 20 and over communication link 21 to the shopper's communication software 24 which presents the shopper with the indicated display on his monitor.</p> <p>Voorhees '709, 8:4-17.</p> <p>Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page</p> <p>Voorhees '709, 10:12-11:9.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ("Voorhees '709")
		<p>of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique.</p> <p>Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.</p> <p>Voorhees '709, 15:3-22.</p> <p>See also Figs. 1, 3A-3C, 4A-4D.</p>
	(i) wherein each of the first web pages belongs to one of a plurality of web page owners;	<p>Jeweler 111 may carry or offer a number of boutiques on his web page, and in the present example is carrying three, with a reference to each in his dataset (1112, 1114, and 1116). These references are to boutiques</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
		<p>1011 and 1014 associated with manufacturer 101, and boutique 1021 associated with manufacturer 102, now to be discussed in connection with database 10.</p> <p>Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler 111.</p> <p>Voorhees '709, 9:9-18.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 1112. . . .</p> <p>Showboutique then, either internally or through the invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p> <p>A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it.</p> <p>Voorhees '709, 15:3-22.</p> <p>See also, Figs. 2, 3C, 4C.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
		internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. Voorhees '709, 15:3-22. <i>See also</i> Figs. 3A-3C, 4A-4D.
	(ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.	Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique

- 13 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
		reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different. This is a result of the aforementioned customization. Voorhees '709, 15:3 - 16:1. <i>See also</i> Figs. 3A-3C, 4A-4D.
2	The method of claim 1 wherein the commerce object associated with the link that has been activated is a dynamic selection indicator.	Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail

		jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. Voorhees '709, 15:3-22. <i>See also</i> , Figs. 4A-4D.
3	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a set of navigational links on the source page.	For example, Figs. 4C and 4D provide navigational links for boutiques on the source page. Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. . . . The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
		internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different. Voorhees '709, 15:3-22. <i>See also</i> , Figs. 4B - 4D.
4	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes the appearance of the top and left side of the source page.	For example, Figs. 4B through 4D have the same appearance of the top and left side of the source page. Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different.

		Voorhees '709, 15:3-22. See also, Figs. 4B-4D.
5	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes the appearance of the header and footer of the source page.	For example, Figs. 4B through 4D have the same appearance of the header and footer of the web pages. Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. . . . A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different. Voorhees '709, 15:3-16.1. See also, Figs. 4B-4D.
6	The method of claim 1 wherein at least one of the plurality of visually perceptible elements includes a logo associated with the owner of the source page.	See Figs. 4B-4D (Ima Juler logo). Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. . . .

- 17 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('Voorhees '709)
		A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different. Voorhees '709, 15:3-16.1.
7	The method of claim 1 wherein the commerce object associated with the link that has been activated comprises information defining an electronic catalog having a multitude of merchant offerings, and wherein the second web page contains one or more selectable navigation links connecting a hierarchical set of additional second web pages, each pertaining to a subset of the offerings in the catalog.	
8	The method of claim 1 wherein the second web page is generated dynamically.	Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to

- 18 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('Voorhees '709)
		information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. Voorhees '709, 15:3-22. See also, Figs. 4A-4D.
9	The method of claim 1 wherein the owner of the source page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source page.	
10	The method of claim 9 further comprising computer-facilitating automatic payment to the owner of the source page, once the transaction is completed.	
11	The method of claim 1, wherein the second web page appears to the computer user to be generated by a server associated with the source page.	In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.

- 19 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('Voorhees '709)
		The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively. Voorhees '709, 3:23-39. Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique

- 20 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
		reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object. A web page is assembled including the requested display object (boutique) and returned via communication link 21 to the shopper's communication software 24, which causes it to be displayed to the shopper who now views it. Voorhees '709, 15:3-22. See also Figs. 4A-4D.
12	The method of claim 1, wherein the link activated by the web browser is stored in a database associated with the source page.	Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler 111. . . . Associated with each boutique in database 10 is a set of inclusion rules and a set of exclusion rules; for example, associated with boutique 1011 are inclusion rules 1012 and exclusion rules 1013. It is through these sets of rules that a manufacturer has control over which retailers may carry the boutique and which portions of the boutique they may customize. . . . The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . . Voorhees '709, 9:13-11:6.

- 21 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
		Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . . After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page. Voorhees '709, 10:12-11:9.
13	The method of claim 1, wherein the second web page contains a further link associated with the information associated with the commerce object associated with the link that has been activated, which link, when activated by the web browser, places data representing the commerce object into a virtual shopping cart.	

- 22 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
14	The method of claim 13, wherein the second web page contains a checkout link which, when activated by the web browser, facilitates completion of a transaction associated with the commerce object in the shopping cart.	
15	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment from the computer user to the merchant associated with the activated link.	
16	The method of claim 14, further comprising after the transaction is completed, computer-facilitating payment of a commission to the owner of the source page.	
17	The method of claim 13, further comprising displaying the second web page again, after the commerce object is placed into the shopping cart.	
18	The method of claim 1, wherein the visually perceptible elements displayed on the second web page are retrieved from a database storing data associated with visually perceptible elements for each of the first web pages.	The screen display that will be seen by the shopper in response to this inquiry is determined by the templates 13 and the particular jeweler's dataset, and may include display objects provided by manufacturers and determined by templates 12 and a manufacturer's dataset. Generally, the templates specify layouts (formats) which are filled in by content information specified in a dataset as directed by control information specified in a dataset, both found in the datasets within databases 10 and 11. The respective content information and control information may be entered by a system operator through system control unit 25, or it may be entered or modified by jewelers and manufacturers through communication software 22 and 23 respectively and forwarded through communication link 21. . . . The jeweler's dataset contains information about whether a particular manufacturer's boutique is to be shown and attributes specifying how the jeweler wishes it to be shown, while the manufacturer's templates 12 as filled in according to the manufacturer's dataset specify the content of the boutique. The manufacturer's dataset also includes control information which specifies such things as whether the particular jeweler is permitted

Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page.</p> <p>Voorhees '709, 10:12-11:9.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program showboutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
20	A computer-readable memory adapted for use by an outsource provider in serving web pages offering commercial opportunities, the computer-readable memory used to direct a computer of the outsource provider to perform the steps of:	<p>Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 Jewelers, 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.</p> <p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.</p> <p>Voorhees '709, 3:23-39. See also, Figs. 1-2, 4:7-12; 8:4-17.</p>
20(a)	in response to activation, by a web browser of a computer user, of a link displayed by one of a	<p>Replicating a boutique from the manufacturer's database 10 into a display being made up by display processor 17 largely from jeweler's</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
	plurality of first web pages, automatically recognizing as the source page the one of the first web pages on which the link has been activated;	<p>database 11 requires data transmission over path 14, which, as previously mentioned may be a hard path within a single host machine or a communications link between two host machines.</p> <p>As is known to those in the art, database 11 may or may not be implemented as an object-oriented database. If it is object-oriented, it will have instructions embedded in it and will initiate on its own a request over path 14 for the requisite information from database 10, and will provide all the information necessary for a display to display processor 17. If it is not object-oriented, display processor 17 will have to initiate requests for such information over path 14, and display processor 17 will be responsible for assembling information for a complete display from database 10 and database 11.</p> <p>Display processor 17 forwards the display information through server 20 and over communication link 21 to the shopper's communication software 24 which presents the shopper with the indicated display on his monitor.</p> <p>Voorhees '709, 8:4-17.</p> <p>Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some</p>

- 44 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/146709 to Voorhees ('709)
		<p>of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page</p> <p>Voorhees '709, 10:12-11:9.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization</p>

		Voorhees '709, 15:3-22. <i>See also Figs. 3A-3C, 4A-4D.</i>
	(iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one another,	In Voorhees '709, the system owner or controller represents the outsource provider, the retail jeweler is the owner of the first web page, and the selected merchant is the manufacturer. Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 Jewelers, 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21. . . . The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively. Voorhees '709, 5:15 - 6:10. <i>See also, Figs. 1, 2, 3A-3C, 4A-4D.</i>
20(b)	automatically retrieving from a storage coupled to the computer of the outsource provider pre-stored data associated with the source page; and then	Replicating a boutique from the manufacturer's database 10 into a display being made up by display processor 17 largely from jeweler's database 11 requires data transmission over path 14, which, as previously mentioned may be a hard path within a single host machine or a communications link between two host machines.

- 49 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ('709)
		As is known to those in the art, database 11 may or may not be implemented as an object-oriented database. If it is object-oriented, it will have instructions embedded in it and will initiate on its own a request over path 14 for the requisite information from database 10, and will provide all the information necessary for a display to display processor 17. If it is not object-oriented, display processor 17 will have to initiate requests for such information over path 14, and display processor 17 will be responsible for assembling information for a complete display from database 10 and database 11. Display processor 17 forwards the display information through server 20 and over communication link 21 to the shopper's communication software 24 which presents the shopper with the indicated display on his monitor. Voorhees '709, 8:4-17. Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique

- 50 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ('709)
		reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . . After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page Voorhees '709, 10:12-11:9. Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112. The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization information 1113 associated with boutique reference 1112) and incorporates the customization information into the display object.

- 51 -

A typical example is shown as element 26A in Fig. 4D. Although element 26A has the same general layout as element 26 in Fig. 4A, some items in it are seen to be different. This is a result of the aforementioned customization.</p> <p>Voorhees '709, 15:3 - 16:1.</p> <p>See also Figs. 3A-3C, 4A-4D.</p>
21	The computer-readable memory of claim 20 wherein the commerce object associated with the link that has been activated is a dynamic selection indicator.	
22	The computer-readable memory of claim 20 wherein the commerce object associated with the link that has been activated comprises information	

- 55 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99146709 to Voorhees ('709)
	defining an electronic catalog having a multitude of merchant offerings, and wherein the second web page contains one or more selectable navigation links connecting a hierarchical set of additional second web pages, each pertaining to a subset of the offerings in the catalog.	
23	The computer-readable memory of claim 20 wherein the computer-readable memory is used to direct the computer of the outsource provider to perform the further step of computer-facilitating automatic payment to the owner of the source page, once the transaction is completed.	
24	The computer-readable memory of claim 20, (i) wherein the second web page contains a further link associated with the information associated with the commerce object, which, when activated by the web browser, places data representing the commerce object into a virtual shopping cart, and a checkout link which, when activated by the web browser, facilitates completion of a transaction associated with the commerce object in the shopping cart; and	
	(ii) wherein the computer-readable memory is used to direct the computer of the outsource provider to perform the further steps of, after the transaction is completed, computer-facilitating payment from the computer user to the merchant associated with the activated link and computer-facilitating payment of a commission to the owner of the source page.	Voorhees '709 teaches that the computer-readable memory is used to direct the computer of the outsource provider to perform the further steps of, after the transaction is completed, computer-facilitating payment from the computer user to the merchant associated with the activated link and computer-facilitating payment of a commission to the owner of the source page.
25	The computer-readable memory of claim 20, wherein the visually perceptible elements displayed on the second web page are retrieved from a database storing data associated with visually perceptible elements for each of the first web pages.	The screen display that will be seen by the shopper in response to this inquiry is determined by the templates 13 and the particular jeweler's dataset, and may include display objects provided by manufacturers and determined by templates 12 and a manufacturer's dataset. Generally, the templates specify layouts (formats) which are filled in by content information specified in a dataset as directed by control information

- 56 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ('709)
		<p>specified in a dataset, both found in the datasets within databases 10 and 11. The respective content information and control information may be entered by a system operator through system control unit 25, or it may be entered or modified by jewelers and manufacturers through communication software 22 and 23 respectively and forwarded through communication link 21. . . .</p> <p>The jeweler's dataset contains information about whether a particular manufacturer's boutique is to be shown and attributes specifying how the jeweler wishes it to be shown, while the manufacturer's templates 12 as filled in according to the manufacturer's dataset specify the content of the boutique. The manufacturer's dataset also includes control information which specifies such things as whether the particular jeweler is permitted to carry the boutique.</p> <p>Voorhees '709, 6:21 - 8:3.</p> <p>Database 10 has a dataset for each manufacturer 101, 102, 103, 104, etc. who may provide display objects (boutiques) to be replicated into retail jewelers' web pages. The number of manufacturers is virtually unlimited; Fig. 2 shows detail of datasets for but two of them, 101 and 102. Boutiques (e.g., 1011) are shown for each of these manufacturers; although each manufacturer may have any number of boutiques, Fig. 2 only depicts those carried by jeweler 111. . . .</p> <p>Associated with each boutique in database 10 is a set of inclusion rules and a set of exclusion rules; for example, associated with boutique 1011 are inclusion rules 1012 and exclusion rules 1013. It is through these sets of rules that a manufacturer has control over which retailers may carry the boutique and which portions of the boutique they may customize. . . .</p> <p>Voorhees '709, 9:13-10:2.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ('709)
26	A computerized system for an outsource provider serving web pages offering commercial opportunities, the system comprising:	<p>Fig. 1 illustrates the system of the present invention. A plurality of shoppers can access the system to view information provided by a plurality of retail jewelers acting in concert with a plurality of jewelry manufacturers. Each shopper, jeweler, or manufacturer has a personal computer (PC) (well known in the art and not shown) each equipped with communication software 22 (jewelers), 23 (manufacturers), and 24 (shoppers) for interfacing the PCs with the communication link 21.</p> <p>In a present embodiment, communication link 21 is the Internet, but many other communication media may be contemplated for use in the present invention. Communication link 21 enables communication with servers 18, 19, and 20. In keeping with the trends prevalent and well known in the communication arts to generate distributed systems, the servers 18, 19, and 20 may be associated with the same host computer or with different host computers. The 14 may thus be internal to one host machine, or it may itself include a communications path among a number of host machines.</p> <p>The information that is accessible to a shopper is determined jointly by templates 13 and database 11, associated with retail jewelers, and templates 12 and database 10, associated with jewelry manufacturers, and typically includes information in electronic form, including electronic advertising. The templates specify formats for respective portions of the information while the databases determine availability and content of the respective portions. The templates and database contents may be entered through system control unit 25, or by the jewelers and manufacturers from their PCs through their communication software 22 and 23 respectively.</p> <p>Voorhees '709, 3:23-39.</p> <p>See also, Figs. 1-2, 4:7-12; 8:4-17.</p>
26(a)	means, at a server of the outsource provider, in response to activation, by a web browser of a	<p>Replicating a boutique from the manufacturer's database 10 into a display being made up by display processor 17 largely from jeweler's</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ('709)
	computer user, of a link displayed by one of a plurality of first web pages, for automatically recognizing as the source page the one of the first web pages on which the link has been activated;	<p>database 11 requires data transmission over path 14, which, as previously mentioned may be a hard path within a single host machine or a communications link between two host machines.</p> <p>As is known to those in the art, database 11 may or may not be implemented as an object-oriented database. If it is object-oriented, it will have instructions embedded in it and will initiate on its own a request over path 14 for the requisite information from database 10, and will provide all the information necessary for a display to display processor 17. If it is not object-oriented, display processor 17 will have to initiate requests for such information over path 14, and display processor 17 will be responsible for assembling information for a complete display from database 10 and database 11.</p> <p>Display processor 17 forwards the display information through server 20 and over communication link 21 to the shopper's communication software 24 which presents the shopper with the indicated display on his monitor.</p> <p>Voorhees '709, 8:4-17.</p> <p>Since jeweler 111's dataset contains boutique reference 112 to boutique 1011, and since in the present example inclusion rules 1012 grant permission for jeweler 111 to carry the boutique and exclusion rules 1013 do not prohibit jeweler 111 from carrying the boutique, when a potential purchaser visiting jeweler 111's web page requests to see boutique 1011 (typically by clicking an icon or legend) an HTML description of the boutique is retrieved over path 14 by display processor 17 (reference should now be made to Figs. 1 and 2 in conjunction) from templates 12 and HTML content information contained in boutique 1011. The HTML description is passed by path 14 to display processor 17. Display processor has already assembled and sent to shopper 24 the basic web page for jeweler 111, and will now assemble and replicate into that web page the boutique specified by 1011. The HTML description received over path 14 may contain specifications that some</p>

- 59 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in PCT Application WO 99/46709 to Voorhees ('709)
		<p>of the information in the display object is subject to modification by the retail jeweler. The modification will be performed according to criteria specified in the customization list associated with the boutique reference, in this case 1113. Typically, an identification of the boutique will appear in the display object and will not be specified as modifiable by the retail jeweler. . . .</p> <p>After making these modifications in the manufacturer's display object, the object is forwarded through server 20 and communication link 21 to shopper 24 where it appears incorporated in the retailer's web page.</p> <p>Voorhees '709, 10:12-11:9.</p> <p>Referring now to Fig. 3C, the shopper requests to view a particular one of the available boutiques. He does so typically by clicking on the name of a desired boutique. Since he is contemplating the purchase of a ring, he selects the boutique "Magnificent rings from RingCo" (Fig. 4C). Transparently to the shopper, his request is transmitted with a program name invocation of "showboutique" and a parameter indicating the boutique reference, such as 112.</p> <p>The request reaches display processor 17 which runs its constituent program showboutique, which finds in templates 13 the appropriate template for the page, and also finds the boutique reference 1112, from which it can be determined that the requested boutique is 1011. Constituent subprograms of display processor 17 as named in the retrieved template are called with an argument specifying boutique 1011. Over path 14, they find information 1011 specifying the display object (boutique), and they find the template from templates 12 specifying the form or layout of the boutique. The template is filled in according to information 1011, thus producing a copy of the requested display object, which is returned to program show boutique. Showboutique then, either internally or through invocation of other subprograms, finds the retail jeweler's customization information associated with the boutique reference (in this case customization</p>

Comparison of U.S. Patent No. 7,818,399 and U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717")¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, Wiecha (5,870,717) anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717")
1	A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	<p>1. An employee 17 preferably accesses one or more electronic catalogs 24 stored on a shadow catalog server 22, accessed via a local area network 20 preferably by means of an employee workstation 18. These catalogs contain only those items for which a price has been negotiated between the enterprise and a particular supplier, so the verification by the enterprise's Purchasing department described above is obviated.</p> <p>2. The employee selects items from the catalogs preferably with a mouse or similar device. Catalog items may be displayed with pictures, descriptions and other information in a fashion similar to a paper catalog. Where similar items are available, a "Compare" icon can be selected on the screen, causing the items to be listed side by side, with differences highlighted. Items can be located by searching down the taxonomy tree of the catalog (much as one searches through a paper catalog by finding the appropriate general section and then looking for a particular item), or by entering a search word or phrase.</p> <p>Wiecha '717, 3:10-28.</p> <p>The client environment is shown in the lower segment of FIG. 6, defined by shadow server 106 which maintains a customized copy of the master catalog for distribution to local clients 102 and 104. Purchase orders are received by a Local buyer master server 86 from a data pathway connecting remote shadow LAN 108 with local buyer master LAN 88. The Buyer Master Server also performs the server function in the following capacities: order processing from buyer clients 90, approval</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in U.S. Patent No. 5,870,717 to Wiecha ("Wiecha '717'")
		Two separate image files are kept for OS/2 and Windows. See also "FotoFarm," supra. Text the Browser may select zero, one, or more ordered sets of descriptive phrases. Prices. Wiecha '717, 8:24-53.
9	The method of claim 1 wherein the owner of the source page is party to a contract providing for receipt of a commission as a result of a transaction involving the commerce object displayed on the source page.	The owner of the source page (corporation) receives a commission in the form of a price discount for the commerce object. 1. An employee 17 preferably accesses one or more electronic catalogs 24 stored on a shadow catalog server 22, accessed via a local area network 20 preferably by means of an employee workstation 18. These catalogs contain only those items for which a price has been negotiated between the enterprise and a particular supplier, so the verification by the enterprise's Purchasing department described above is obviated. Wiecha '717, 3:10-17.
10	The method of claim 9 further comprising computer-facilitating automatic payment to the owner of the source page, once the transaction is completed.	It is inherent that the owner is paid through the discount that the corporation negotiates on the items from the catalog. 1. An employee 17 preferably accesses one or more electronic catalogs 24 stored on a shadow catalog server 22, accessed via a local area network 20 preferably by means of an employee workstation 18. These catalogs contain only those items for which a price has been negotiated between the enterprise and a particular supplier, so the verification by the enterprise's Purchasing department described above is obviated. Wiecha '717, 3:10-17.
11	The method of claim 1, wherein the second web page appears to the computer user to be generated by a server associated with the source page.	The catalog web pages controlled by the outsource provider at the Catalog Maintenance Environment appear to be associated with the corporation.

Comparison of U.S. Patent No. 7,818,399 and Internet Scrapbook¹

Based upon the claim interpretations Plaintiff appears to be asserting and the alleged applications of those interpretations to one or more products of Defendants' products in Plaintiff's Infringement Contentions served April 15, 2011, "Internet Scrapbook: Automating Web Browsing Tasks By Demonstration," Sugnira and Koseki, 1998 ("Internet Scrapbook") anticipates and/or renders obvious, alone or in combination with other prior art identified in Defendants' Amended Invalidity Contentions, the asserted claims as described in part below.

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
1	A method of an outsource provider serving web pages offering commercial opportunities, the method comprising:	<p>The information that users need is usually distributed across several different pages. In cases where users need to obtain a weather forecast, cyber news and sports results from different pages, for example, they have to access all the necessary pages by repeatedly specifying URLs (Uniform Resource Locators) or by selecting them from bookmarks. . . .</p> <p>To reduce the operational cost of the browsing tasks, we have developed a programming by demonstration (PBD) [3] system, called Internet Scrapbook (referred to simply as "Scrapbook") in this paper, that allows users with little programming skill to automate their daily browsing tasks. In Scrapbook, a user can demonstrate which portions of Web pages he/she is interested in by creating an example personal page, that is, by copying only the necessary data from multiple pages and pasting them onto a single personal page. Once the personal page is created, the system automatically updates it by extracting the user-specified portions from the latest Web pages. The user can thus browse only the necessary information on a single page and avoid repetitive access to multiple Web pages.</p> <p>Internet Scrapbook, at 9.</p> <p>See also, pgs. 10-13.</p>
I(a)	automatically at a server of the outsource provider, in response to activation, by a web browser of a computer user, of a link displayed by one of a plurality of first web pages, recognizing	

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
	as the source page the one of the first web pages on which the link has been activated;	
	(i) wherein each of the first web pages belongs to one of a plurality of web page owners;	<p>The first web pages belong to a plurality of web page owners.</p> <p>The information that users need is usually distributed across several different pages. In cases where users need to obtain a weather forecast, cyber news and sports results from different pages, for example, they have to access all the necessary pages by repeatedly specifying URLs (Uniform Resource Locators) or by selecting them from bookmarks. . . .</p> <p>To reduce the operational cost of the browsing tasks, we have developed a programming by demonstration (PBD) [3] system, called Internet Scrapbook (referred to simply as "Scrapbook") in this paper, that allows users with little programming skill to automate their daily browsing tasks. In Scrapbook, a user can demonstrate which portions of Web pages he/she is interested in by creating an example personal page, that is, by copying only the necessary data from multiple pages and pasting them onto a single personal page. Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>Figure 1: Overview of System usage.</p> <p>Internet Scrapbook, 10.</p>
	(ii) wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and	
	(iii) wherein the selected merchant, the outsourcing provider, and the owner of the first web page are each third parties with respect to one other;	
1(b)	automatically retrieving from a storage coupled to the server pre-stored data associated with the source page; and then	Using the generated patterns, the system updates the user's Scrapbook page. That is, it extracts portions that match the patterns from newly downloaded Web pages and reconstructs the Scrapbook page with the extracted data. However, a portion that <i>completely</i> matches the pattern cannot necessarily be found in the modified version of the Web page. In the cases of no complete match, the system performs partial matching to find possible candidates for extraction and selects the most plausible one

- 3 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>by applying heuristics . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p> <p>As we mentioned, Scrapbook generates a matching pattern at demonstration time and uses it to extract the user-desired portion from the future versions of the page. Therefore, it is required that patterns should be described using information that is expected to remain constant even after the page has been modified.</p> <p>Internet Scrapbook, 10-11.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p><i>Id.</i> at 13.</p>
1(c)	(c) automatically with the server computer-generating and transmitting to the web browser a second web page that includes:	Internet Scrapbook generates and transmits the second web page that is extracted from the source page.

- 4 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>Figure 4: Data extraction from a Web page.</p> <p>Generating Matching Patterns Every time the user selects and copies Web data from a Web browser, the system generates a matching pattern used for identifying the selected region in a source Web page. As we mentioned in the previous subsection, the pattern contains description of both the article headings and positions. These descriptions are called a <i>heading pattern</i> and a <i>tag</i></p>
	(i) information associated with the commerce object associated with the link that has been activated, and	
	(ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.	Internet Scrapbook teaches a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page within the meaning of plaintiff's apparent claim construction, as set forth in plaintiff's infringement contentions, including without limitation the following:

- 5 -

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p><i>pattern</i>, respectively.</p> <p>Internet Scrapbook, 12.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p><i>Id.</i> at 13.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>by applying heuristics. . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p> <p>As we mentioned, Scrapbook generates a matching pattern at demonstration time and uses it to extract the user-desired portion from the future versions of the page. Therefore, it is required that patterns should be described using information that is expected to remain constant even after the page has been modified.</p> <p>Internet Scrapbook, 10-11.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p><i>Id.</i> at 13.</p>
2	The method of claim 1 wherein the commerce object associated with the link that has been activated is a dynamic selection indicator.	Internet Scrapbook discloses dynamic selection indicators.

		<p>To reduce the operational cost of the browsing tasks, we have developed a programming by demonstration (PBD) [3] system, called Internet Scrapbook (referred to simply as "Scrapbook") in this paper, that allows users with little programming skill to automate their daily browsing tasks. In Scrapbook, a user can demonstrate which portions of Web pages he/she is interested in by creating an example personal page, that is, by copying only the necessary data from multiple pages and pasting them onto a single personal page. Once the personal page is created, the system automatically updates it by extracting the user-specified portions from the latest Web pages. The user can thus browse only the necessary information on a single page and avoid repetitive access to multiple Web pages.</p> <p>Internet Scrapbook, at 9.</p> <p>(a) User selects in Web browser. (b) Scrapbook page created by the user. (c) Page retrieved by the system.</p> <p>Figure 1: Overview of System Usage.</p> <p>Internet Scrapbook, 10.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
	(ii) wherein each of the first web pages displays at least one active link associated with a commerce object associated with a buying opportunity of a selected one of a plurality of merchants; and	
	(iii) wherein the selected merchant, the outsource provider, and the owner of the first web page are each third parties with respect to one another;	
20(b)	automatically retrieving from a storage coupled to the computer of the outsource provider pre-stored data associated with the source page; and then	<p>Using the generated patterns, the system updates the user's Scrapbook page. That is, it extracts portions that match the patterns from newly downloaded Web pages and reconstructs the Scrapbook page with the extracted data. However, a portion that completely matches the pattern cannot necessarily be found in the modified version of the Web page. In the cases of no complete match, the system performs partial matching to find possible candidates for extraction and selects the most plausible one by applying heuristics. . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p> <p>As we mentioned, Scrapbook generates a matching pattern at demonstration time and uses it to extract the user-desired portion from the future versions of the page. Therefore, it is required that patterns should be described using information that is expected to remain constant even after the page has been modified.</p> <p>Internet Scrapbook, 10-11.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p>Id. at 13.</p>
20(c)	automatically computer-generating and transmitting to the web browser a second web page that includes:	<p>Internet Scrapbook generates and transmits the second web page that is extracted from the source page.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>(a) Original Web page and its source HTML</p> <p>(b) Matching pattern</p> <p>(c) Modified Web page</p> <p>(d) Candidate portions</p> <p>(e) Extracted section</p> <p>Figure 4. Data extraction from a Web page.</p> <p>Generating Matching Patterns Every time the user selects and copies Web data from a Web browser, the system generates a matching pattern used for identifying the selected region in a source Web page. As we mentioned in the previous subsection, the pattern contains description of both the article headings and positions. These descriptions are called a <i>heading pattern</i> and a <i>tag</i></p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook
		<p>pattern, respectively.</p> <p>Internet Scrapbook, 12.</p> <p>Data Extraction from Web Pages Scrapbook extracts the user's target portions from the latest Web pages by using a matching pattern described by the headings and positions of a user-specified article. However, there is no guarantee that both the headings and the positions remain unchanged, and the pattern might not completely match any portion of the page. For example, if the Web page in Figure 4a is modified to Figure 4c, the pattern in Figure 4b does not completely match any portion of the page because the position of the "Soccer" section moved up.</p> <p>To deal with various modifications of Web pages, the data extraction process consists of two steps: (1) finding candidate portions of the extraction result by partial matching, and (2) choosing the correct one among a number of possible candidates by applying heuristics.</p> <p><i>Id.</i> at 13.</p> <p>(i) information associated with the commerce object associated with the link that has been activated, and</p> <p>(ii) a plurality of visually perceptible elements derived from the retrieved pre-stored data and visually corresponding to the source page.</p> <p>Using the generated patterns, the system updates the user's Scrapbook page. That is, it extracts portions that match the patterns from newly downloaded Web pages and reconstructs the Scrapbook page with the extracted data. However, a portion that <i>completely</i> matches the pattern cannot necessarily be found in the modified version of the Web page. In the cases of no complete match, the system performs partial matching to find possible candidates for extraction and selects the most plausible one by applying heuristics. . . .</p> <p>The key to success for Scrapbook is to be able to correctly extract user's target portions from the latest versions of source Web pages. One of the difficulties is in predicting the future modification that will be done to the pages.</p>

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in Internet Scrapbook

Invalidity Contentions for U.S. Patent No. 7,818,399
Travelocity/Yahoo! Prior Art

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		<p>LGLOGIN4, as done today. Ensure that the existing logic to convert easySABRE profiles to Travelocity profiles is functional, and that all required data elements are passed through so that booking can continue without interruption. Use table in section 1.4 below to determine if the Login Name is to be passed to Yahoo!</p> <p>See also DFNDT000388-412, at p. 36-37:</p> <p>2.1 It is imagined that there will be a Main Menu that will reside on the Yahoo! Travel Page. This Main Menu will take the place of the Travel Reservations Main Menu and the Flights Sub Main Menu. The Yahoo! Main Menu will offer links into the request pages of Flights, Cars, Hotels and Existing Reservations, or could possibly provide a template similar to the Travelocity template used within the Netscape Guide by Yahoo!. However, the template would vary according to the needs of the request.</p> <p>2.1.1 Login is required to access Existing Reservations. Provide a means to inform the user that login is required when Existing Reservations is selected from the Yahoo! Main Menu, or only offer the Existing Reservation option when the user is already logged in.</p> <p>2.1.2 Login is required to access a user's Profile. The Profile is typically made available to users after login from TRTOOL or GRTOOL2. This logic will not change, however, placement of the profile access button may change.</p> <p>2.2 Within Travelocity today, the function behind the Main Menu button, or similar buttons is an ignore and then return to the Travel Reservation Main Menu. The function of ignore will remain as it is today, as the SABRE session must be cleared at various points; however, we will not return the user to the Travel Reservations Main Menu (GLTRMAIN). Instead, the user would be returned to the Yahoo! Main Menu (this is a temporary naming convention).</p> <p>2.3 Toolbars will need to be modified. The rainbow toolbar (BAR.GIF) will not be displayed on any page. GRTOOL1 and GRTOOL2 will need to be modified so that the available options are Customer Service, Help and Profile (when applicable, as today).</p>

- 43 -

Invalidity Contentions for U.S. Patent No. 7,818,399
Travelocity/Yahoo! Prior Art

Claim No.	Claim Language of U.S. Patent No. 7,818,399	Relevant Disclosure in the Travelocity/Yahoo! Prior Art
		<p>TRTOOL will also need to be modified so that the available options are Customer Service, Help and Profile (when applicable, as today). Access to the Travelocity Home Page and to Worldview should not be permitted.</p> <p>2.4 Modify Reservation Complete pages (BUREVIEW, MCREVIEW and EXREVIEW) to include a new button that will take the place of "Main Menu". This new button will allow users to get back to Yahoo!</p> <p>2.5 Yahoo! users will only be allowed to choose ticketing through the Customer Service Center - Tickets By Mail (CSC). Modify BUTKTOPT so that the only option available for Yahoo! users for ticketing is CSC. We should be able to accomplish this with our new Global table.</p> <p>See also DFNDT000388-412, at p. 47:</p> <p>3 <i>Cobranded Pages</i> All pages (including error pages and help pages, but not including side paths such as SABRE atlas, rules, etc.) in the main path (page names provided in section 3.0 of the requirements) prior to forcing the guest users to proceed as members will be modified to have the Yahoo! "look and feel". This "look and feel" will include the Yahoo! logo, the background color, and the toolbars. The pages will not be cobranding when a user has selected the "Make Changes" option anywhere in the application. In addition, when a user reaches glchoice.pgd, exreview.pgd, or bureview.pgd, and selects the "Flights", "Cars", or "Hotels" icon, the user will return to cobranding pages. In order to determine if the page requires cobranding, a global parameter will be stored in the PDB. This parameter will be referred to in shTools.inc in the pageHeader and pageFooter pros to determine if the page is to be cobranding or not. The parameter will be set at the entry point of the Yahoo! user into Travelocity. In addition, it may be set at any entry into the hotel, car, or flight request pages as long as it is not the "Make Changes" path. The parameter will be deleted beyond any point that membership is required (lgbecome, buprofil, cprrofil, hprofil).</p>
