V.	CONCLUSION	15

I. INTRODUCTION

Petitioner's Reply introduces unpersuasive arguments that cannot salvage the shortcomings of its Petition. To support its flawed claim construction for the claim 13 limitation of an envelope amplifier that "operates based on the first supply voltage or the boosted supply voltage," Petitioner mischaracterizes the opinion of District Court Judge Sabraw, twists the testimony of its own expert, Dr. Apsel, and ignores fundamental Federal Circuit case law. The broadest reasonable interpretation of this claim limitation, when properly read in the context of the respective claim as a whole, requires a selective boost. Because Ground III is based only on Petitioner's incorrect construction, the Board should dismiss Ground III.

The Board should also dismiss Grounds III and IV because Petitioner fails to establish a sufficient motivation to combine Chu and Choi 2010 (Ground III) and Chu, Choi 2010, and Myers (Ground IV). First, as detailed in the Patent Owner's Response ("POR") (Paper 16 at 25-32), the Petition failed to explain how a person of ordinary skill in the art ("POSA") would combine Chu and Choi 2010 without destroying the benefits of one or the other. Petitioner's Reply, for the first time, relies on examples and testimony relating to switching between power sources as support for how a POSA would allegedly combine Chu and Choi 2010. But no such argument was included in the Petition, and the Board should therefore disregard Petitioner's attempt to belatedly back-fill its Petition with a new motivation to

combine argument. *See Ariosa Diagnostics v. Verinata Health*, 805 F.3d 1359, 1367 (Fed. Cir. 2015) (“challenger obliged to make an adequate case in its Petition and the Reply limited to a true rebuttal role”).

Second, Petitioner is unable to articulate any legitimate reason why a POSA would modify the constant boosted supply voltage of Choi 2010 based on Myers. Instead, Petitioner improperly relies on teachings from the ’558 Patent itself as a roadmap for arriving at the claimed invention, and in doing so ignores Choi 2010’s disclosure that it *must* always operate using a constant boosted voltage. This is a classic instance of impermissible hindsight reconstruction and cannot give rise to a motivation to combine.

For at least these reasons, the Board should confirm the patentability of claim 13 of the ’558 Patent.

II. GROUND III SHOULD BE DISMISSED BECAUSE CLAIM 13 REQUIRES A SELECTIVE BOOST

As Patent Owner explained in its Patent Owner Response, the claim 13 limitation of an envelope amplifier that “operates based on the first supply voltage or the boosted supply voltage” is properly interpreted to require a selective boost. In its Reply, Petitioner ignores Patent Owner’s arguments and instead focuses on claim 6, a different claim with different limitations. As explained below, the District Court’s Order with respect to claims 6-7 has no bearing on claim 13, and Petitioner’s proposed constructions for claim 6 and claim 13 suffer from the same legal error –

they improperly render other claim limitations meaningless. Accordingly, the Board should find that the broadest reasonable interpretation of the claim 13 limitation quoted above requires a selective boost.

A. Petitioner’s Reliance On Judge Sabraw’s Order Is Misguided

Petitioner relies on Judge Sabraw’s Markman Order to support its proposed construction that claim 13 does not require a selective boost. Petitioner’s reliance on Judge Sabraw’s Order is misguided. The Court was presented with proposed constructions for the term “based on,” as it appears in claim 7, which depends from claim 6. Claims 6 and 7 contain numerous claim limitations relevant to Judge Sabraw’s Order that are different than in claim 13. Moreover, footnote 2 of the Order makes clear that the Court’s Order applied only to the context of claim 7, and therefore does not apply to any other claims.

Furthermore, Petitioner mischaracterizes Judge Sabraw’s Order as reaching a conclusion that it plainly does not reach. Contrary to Petitioner’s assertion, Judge Sabraw did not “hold[] the limitation ‘a source receiving the boosted supply voltage or the first supply voltage’ in claim 6 does not require ‘selective boost.’” Paper 20 at 4. Judge Sabraw’s Order says nothing of the sort. Instead, Judge Sabraw incorrectly concluded that claim 7 was indefinite based on a misunderstanding that

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
