Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Commissioner:

In reply to the Office Action dated February 26, 2014 (“Office Action”), Applicant submits the following Amendment and Remarks.

It is not believed extensions of time are required beyond those that may otherwise be provided for in documents accompanying this paper. However, if additional extensions of time are necessary to prevent abandonment of this application, then such extensions of time are hereby petitioned under 37 C.F.R. § 1.136(a), and any additional fees required to continue prosecution or appeal of this application (including issue fee, fees for net addition of claims or forwarding to appeal) are hereby authorized to be charged to our Deposit Account No. 19-0036.

Amendments to the Specification

1. Applicant respectfully requests ¶ [0001] of the Specification as filed on September 20, 2013 be amended as follows:

[0001] This application is a continuation of United States Patent Application No. 13/154,239, filed on June 6, 2011, now U.S. Patent No. 8,553,759, which is a continuation of United States Patent Application No. 12/123,081, filed on May 19, 2008, now U.S. Patent No. 8,073,047, which is a continuation of United States Patent Application No. 10/076,013, filed on February 13, 2002, now U.S. Patent No. 7,386,046, which claims the benefit of United States Provisional Application No. 60/268,394, filed on February 13, 2001, each of which is fully incorporated herein by reference in its entirety.

2. Applicant respectfully requests ¶ [0054] of the Specification as filed on September 20, 2013 be amended as follows:

[0054] The present invention is directed to a system and method for compressing and decompressing based on the actual or expected throughput (bandwidth) of a system employing data compression. Although one of ordinary skill in the art could readily envision various implementations for the present invention, a preferred system in which this invention is employed comprises a data storage controller that preferably utilizes a real-time data compression system to provide “accelerated” data storage and retrieval bandwidths. The concept of “accelerated” data storage and retrieval was introduced in ~~co-pending~~ U.S. Patent Application Serial No. 09/266,394, filed March 11, 1999, entitled “System and Methods For Accelerated Data Storage and Retrieval,” now U.S. Patent No. 6,601,104, and ~~co-pending~~ U.S. Patent Application Serial No. 09/481,243, filed January 11, 2000, entitled “System and Methods For Accelerated Data Storage and Retrieval,” now

U.S. Patent No. 6,604,158, both of which are commonly assigned and incorporated herein by reference.

3. Applicant respectfully requests ¶ [0079] of the Specification as filed on September 20, 2013 be amended as follows:

[0079] Further, the present invention can be implemented with a data storage controller utilizing data compression and decompression to provided accelerated data storage and retrieval from a mass storage device. Exemplary embodiments of preferred data storage controllers in which the present invention may be implemented are described, for example, in U.S. Patent Application Serial No. 09/775,905, filed on February 2, 2001, entitled “Data Storewidth Accelerator”, now U.S. Patent No. 6,748,457, which is commonly assigned and fully incorporated herein by reference.

4. Applicant respectfully requests ¶ [0083] of the Specification as filed on September 20, 2013 be amended as follows:

[0083] The storage controller 120 further comprises computer reset and power up circuitry 128 (or “boot configuration circuit”) for controlling initialization (either cold or warm boots) of the host computer system and storage controller 120. A preferred boot configuration circuit and preferred computer initialization systems and protocols are described in U.S. Patent Application Serial No. 09/775,897, filed on February 2, 2001, entitled “System and Methods For Computer Initialization,” now abandoned, which is commonly assigned and incorporated herein by reference. Preferably, the boot configuration circuit 128 is employed for controlling the initializing and programming the programmable logic device 122 during configuration of the host computer system (i.e., while the CPU of the host is held in reset). The boot configuration circuit 128 ensures that the programmable logic device 122 (and possibly other

volatile or partially volatile logic devices) is initialized and programmed before the bus 116 (such as a PCI bus) is fully reset. In particular, when power is first applied to the boot configuration circuit 128, the boot configuration circuit 28 generates a control signal to reset the local system (e.g., storage controller 120) devices such as a DSP, memory, and I/O interfaces. Once the local system is powered-up and reset, the controlling device (such as the DSP 121) will then proceed to automatically determine the system environment and configure the local system to work within that environment. By way of example, the DSP 121 of the disk storage controller 120 would sense that the data storage controller 120 is on a PCI computer bus (expansion bus) and has attached to it a hard disk on an IDE interface. The DSP 121 would then load the appropriate PCI and IDE interfaces into the programmable logic device 122 prior to completion of the host system reset. Once the programmable logic device 122 is configured for its environment, the boot device controller is reset and ready to accept commands over the computer/expansion bus 116.

Remarks

Reconsideration of this Application is respectfully requested.

Upon entry of the foregoing amendment, claims 1, 3-10, 12-22, and 28-37 are pending in the application, with claims 1, 3, 12, and 28 being the independent claims. Claims 1, 3-10, 12-22, and 28-30 are sought to be amended. Claims 2, 11, and 23-27 are sought to be canceled without prejudice to or disclaimer of the subject matter therein. Applicant reserves the right to prosecute similar or broader claims, with respect to the cancelled and/or amended claims, in the future. New claims 31-37 are sought to be added. These changes are believed to introduce no new matter, and their entry is respectfully requested.

Based on the above amendment and the following remarks, Applicant respectfully requests the Examiner reconsider all outstanding objections and rejections and that they be withdrawn.

Prioritized Examination

The request for prioritized examination for this Application was granted on October 13, 2013. Applicant has canceled, without prejudice to or disclaimer of the subject matter therein, claims 2, 11, and 23-27 and added claims 31-37 in this Amendment and Reply. Accordingly, this Application continues to contain four independent claims and thirty total claims. And Applicant is timely filing this Amendment and Reply without a petition for extension of time. Accordingly, this Application remains eligible for prioritized examination.

Atty. Dkt. No. 2855.0050007

Objection to the Specification

The specification stands objected to because of alleged informalities. Without acquiescing to the merits of this allegation, Applicant has amended the specification to accommodate the Examiner's objection. Accordingly, Applicant respectfully requests the objection to the specification be reconsidered and withdrawn.

Rejections under 35 U.S.C. § 112

Claims 11 and 28-30 stand rejected under 35 U.S.C. § 112, first paragraph, for allegedly failing to comply with the written description requirement. Without acquiescing to the merits of this allegation, Applicant has cancelled claim 11, without prejudice or disclaimer, and amended independent claim 28 to accommodate the Examiner's rejection. Applicant contends the canceling and/or amending of these claims does not give rise to any implication regarding whether Applicant agrees with or acquiesces to this rejection.

Rejections under 35 U.S.C. § 102

Claims 1 and 4-10

Claims 1 and 4-10 stand under 35 U.S.C. § 102(e) as allegedly being anticipated by United States Patent No. 6,374,353 to Settsu et al. ("Settsu"). Applicant respectfully traverses the rejection and provides the following arguments to support patentability.

The Office Action indicates "[c]laims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims." (Office Action, p. 8). Without acquiescing to the merits of this allegation and for the purpose of

advancing prosecution of this Application, Applicant has amended independent claim 1 to substantially incorporate most of the features that were previously recited by dependent claim 2, now cancelled. The amendments to independent claim 1 presented herewith does not give rise to any implication regarding whether Applicant agrees with or acquiesces to this rejection.

Accordingly, Applicant believes independent claim 1 should be in condition for allowance. Applicant believes dependent claims 4-10 should likewise be in condition for allowance for at least the same reasons as the independent claims from which they depend and further in view of their own respective features. Accordingly, Applicant respectfully requests the rejection of claims 1 and 4-10 under 35 U.S.C. § 102(e) be reconsidered and withdrawn.

Allowed Claims

Applicant thanks the Examiner for indicating the allowability of claims 12-22 in the Office Action. Applicant believes these claims should remain allowed even in light of the amendments to some of these claims presented herewith.

Allowable Subject Matter

Claims 2 and 3

Claims 2 and 3 stand objected to as allegedly “being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.” (Office Action, p. 8). Without acquiescing to the merits of this allegation, Applicant has cancelled dependent claim 2 without prejudice or disclaimer, thereby rendering moot the objection of the same.

Applicant contends the canceling of this claim does not give rise to any implication regarding whether Applicant agrees with or acquiesces to this objection. In regard to dependent claim 3, Applicant has written this claim into independent form incorporating most of the features that were previously recited by independent claim 1. The amendments to independent claim 3 presented herewith does not give rise to any implication regarding whether Applicant agrees with or acquiesces to this objection. Accordingly, Applicant respectfully requests the objection of claims 3 be reconsidered and withdrawn.

Addition of New Claims

Claims 31-37

New claims 31-37 have been added. From the discussion above, Applicant has traversed the rejections to independent claims 1 and 12. Applicant believes dependent claims 31-37 should likewise be allowable for at least the same reasons as the independent claims from which they respectively depend and further in view of their own respective features.

Withdraw of Claims 23-27

The Examiner has withdrawn claims 23-27 in the Office Action from examination in the Office Action. (Office Action, p. 3). Although the Examiner has not contacted Applicant's representatives to discuss this withdrawal of claims 23-27 or provided any reasoning for this withdrawal of claims 23-27, Applicant has cancelled claims 23-27, without prejudice or disclaimer, in this Amendment and Reply for the sole purpose of accommodating the Examiner's request. Applicant contends the canceling of

these claims does not give rise to any implication regarding whether Applicant agrees with or acquiesces to this withdrawal of claims 23-27.

Conclusion

All of the stated grounds of objection and rejection have been properly traversed, accommodated, or rendered moot. Applicant therefore respectfully requests the Examiner reconsider all presently outstanding objections and rejections and that they be withdrawn. Applicant believes a full and complete reply has been made to the outstanding Office Action and, as such, the present application is in condition for allowance. If the Examiner believes, for any reason, personal communication will expedite prosecution of this application, the Examiner is invited to telephone the undersigned at the number provided.

Prompt and favorable consideration of this Amendment and Reply is respectfully requested.

Respectfully submitted,

wherein the one or more compressors utilize at least one slow compress ~~encoders~~ encoder and at least one fast decompress ~~decoders~~ decoder, and

wherein compressing the at least the portion of the data block with the at least one slow compress ~~encoders~~ encoder takes more time than decompressing the at least the portion of the data block with the at least one fast decompress ~~decoders~~ decoder if the time were measured with the at least one slow compress ~~encoders~~ encoder and at least one fast decompress ~~decoders~~ decoder running individually on a common host system.

¹ the amendments to the claims and the remarks to claims 3, 18 and 19 are entirely based on the preliminary amendment sent by Mr. Malek to the Examiner on 7/9/2014. As to the amendments to claims 28 and 29, it is based on the proposal made by the Examiner.

Claim 18 has been amended to read as follows:

18. (Currently Amended) The method of claim 12, wherein the compressing comprises:

compressing the at least the portion of the data block with the selected one or more asymmetric compressors to create one or more portions of the one or more compressed data blocks, the at least the portion of the data block having been compressed with the one or more selected asymmetric compressors to create the one or more portions of the one or more compressed data blocks, ~~and~~ and wherein the storing comprises:

storing at least the one or more portions of the one or more compressed data blocks.

Claim 19 has been amended to read as follows:

19. (Currently Amended) The method of claim 18, further comprising:

retrieving and transmitting at least a portion of the at least one or more stored portions of the one or more compressed data blocks ~~occurs~~ in real-time; and

decompressing a portion of the at least transmitted portion of the at least one or more stored ~~the~~ portions of the one or more compressed data blocks after transmission in real-time.

Claim 28 has been amended to read as follows:

28. (Currently Amended) A method, comprising:

selecting one or more compressors based upon a number of reads of at least a portion of a compressed data block having audio or video data to identify one or more selected compressors; and

compressing at least a portion of a second data block with the one or more selected compressors using asymmetric data compression to provide a compressed data block.

Claim 29 has been amended to read as follows:

29. (Currently Amended) The method of claim 28, wherein the number of reads of the at least the portion of the compressed data block occurs within a given period of time.

Remarks:

6. The above Examiner's Amendment was to the claims was made for the following reasons:

- a. The amendment to claim 28 was to refer to the 'read data' as a compressed data. It should be noted as disclosed, it the compressed pending data used to determine for the compression of new data block (claimed second).
- b. The amendment to claim 29 was made for same reason as above to claim 28.

- c. The amendments to claims 3,18 and 19 were made to correct for matter of forms.

Reasons for Allowance

7. The following is an examiner's statement of reasons for allowance: the claimed subject matter in claims is allowable because the arts of record fail to teach or fairly suggest in combinations to the claimed:

- d. A method, comprising:
 - determining a parameter or attribute of at least a portion of a data block having audio or video data:
 - selecting an access profile from among a plurality of access profiles based the determined parameter or attribute: and
 - compressing the at least the portion of the data block with one or more compressors using asymmetric data compression and information from the selected access profile to create one or more compressed data blocks, the information being indicative of the one or more compressors to apply to the at least the portion of the data block, as in claim 1. See figures 1,2 and corresponding text for selecting asymmetric data compression routing according to the data parameter or attribute and access profile as disclosed with respect to access profile tables disclosed in ¶[0064], [0069] and as shown in figures 1-3.

- e. A method, comprising:

determining a parameter or an attribute of at least a portion of a data block;

selecting one or more asymmetric compressors from among a plurality of compressors based upon the determined parameter or attribute;

compressing the at least the portion of the data block with the selected one or more asymmetric compressors to provide one or more compressed data blocks;

and storing at least a portion of the one or more compressed data blocks, as in claim 12. See figures 1,2 and corresponding text for selecting asymmetric data compression routing according to the data parameter or attribute and access profile as disclosed with respect to access profile tables disclosed in ¶[0064], [0069] and as shown in figures 1-3.

f. A method, comprising:

selecting one or more compressors based upon a number of reads of at least a portion of a compressed data block having audio or video data to identify one or more selected compressors; and

compressing at least a portion of a second data block with the one or more selected compressors using asymmetric data compression to provide a compressed data block, as in claim 28. See figure 2, access profile tables disclosed in ¶[0064], [0069] and corresponding text in ¶[0064], [0069] and [0074], where the compression routing (see steps 22-31 in figure 2) for the pending disc access, claimed second data block, is depending on the throughput of the

system having inherently data blocks compressed to be read.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mail Stop Issue Fee

Commissioner for Patents

Alexandria, VA 22313-1450

Commissioner:

Submitted herein is an Amendment Under 37 C.F.R. § 1.312. As payment of the issue fee has not yet been made or is filed herewith, Applicant respectfully submits that filing under 37 C.F.R. § 1.312 is proper. (M.P.E.P. § 714.16.)

It is believed that extensions of time are not required beyond those that may otherwise be provided for in documents accompanying this Amendment. However, if additional extensions of time are necessary to prevent abandonment of this application, then such extensions of time are hereby petitioned under 37 C.F.R. § 1.136(a), and any fees required therefor are hereby authorized to be charged to our Deposit Account No. 19-0036.

Amendments to the Specification

1. Applicant respectfully requests ¶ [0080] of the Specification as filed on December 19, 2013 and as amended in the Amendment Under 37 C.F.R. § 1.111 that was filed on May 27, 2014 be amended as follows:

[0080] Fig. 3 illustrates a preferred embodiment of a data storage controller 120 as described in the above-incorporated U.S. Serial No. 09/775,905, now U.S. Patent No. 6,748,457, for implementing a bandwidth sensitive data compression protocol as described herein. The data storage controller 120 comprises a DSP (digital signal processor) 121 (or any other microprocessor device) that implements a data compression/decompression routine. The DSP 121 preferably employs a plurality of symmetric and asymmetric compression/ decompression as described herein. The data storage controller 120 further comprises at least one programmable logic device 122 (or volatile logic device). The programmable logic device 122 preferably implements the logic (program code) for instantiating and driving both a disk interface 114 and a bus interface 115 and for providing full DMA (direct memory access) capability for the disk and bus interfaces 114, 115. Further, upon host computer power-up and/or assertion of a system-level “reset” (e.g., PCI Bus reset), the DSP 121 initializes and programs the programmable logic device 122 before of the completion of initialization of the host computer. This advantageously allows the data storage controller 120 to be ready to accept and process commands from the host computer (via the bus 116) and retrieve boot data from the disk (assuming the data storage controller 120 is

implemented as the boot device and the hard disk stores the boot data (e.g., operating system, etc.))

2. Applicant respectfully requests ¶ [0083] of the Specification as filed on September 20, 2013 and as amended in the Amendment Under 37 C.F.R. § 1.111 that was filed on May 27, 2014 be further amended as follows:

[0083] The storage controller 120 further comprises computer reset and power up circuitry 128 (or “boot configuration circuit”) for controlling initialization (either cold or warm boots) of the host computer system and storage controller 120. A preferred boot configuration circuit and preferred computer initialization systems and protocols are described in U.S. Patent Application Serial No. 09/775,897, filed on February 2, 2001, entitled “System and Methods For Computer Initialization,” ~~now abandoned,~~ published as U.S. Patent Publication No. US 2001-0047473 A1, which is commonly assigned and incorporated herein by reference. Preferably, the boot configuration circuit 128 is employed for controlling the initializing and programming the programmable logic device 122 during configuration of the host computer system (i.e., while the CPU of the host is held in reset). The boot configuration circuit 128 ensures that the programmable logic device 122 (and possibly other volatile or partially volatile logic devices) is initialized and programmed before the bus 116 (such as a PCI bus) is fully reset. In particular, when power is first applied to the boot configuration circuit 128, the boot configuration circuit 28 generates a control signal to reset the local system (e.g., storage

Atty. Dkt. No. 2855.0050007

controller 120) devices such as a DSP, memory, and I/O interfaces. Once the local system is powered-up and reset, the controlling device (such as the DSP 121) will then proceed to automatically determine the system environment and configure the local system to work within that environment. By way of example, the DSP 121 of the disk storage controller 120 would sense that the data storage controller 120 is on a PCI computer bus (expansion bus) and has attached to it a hard disk on an IDE interface. The DSP 121 would then load the appropriate PCI and IDE interfaces into the programmable logic device 122 prior to completion of the host system reset. Once the programmable logic device 122 is configured for its environment, the boot device controller is reset and ready to accept commands over the computer/expansion bus 116.

DENIAL OF REQUEST FOR POWER OF ATTORNEY

The request for Power of Attorney filed on 12-07-2017 is acknowledged. However, the request cannot grant at this time for the reason stated below.

- The Power of Attorney you provided did not comply with the new Power of Attorney rules that became effective on June 25, 2004. See 37 CFR 1.32.
- The revocation is not signed by the applicant, the assignee of the entire interest, or one particular principal attorney having the authority to revoke.
- The Power of Attorney is from an assignee and the Certificate required by 37 CFR 3.73(c) has not been received.
- The person signing for the assignee has omitted their empowerment to sign on behalf of the assignee.
- The inventor(s) is without authority to appoint attorneys since the assignee has intervened as provided by 37 CFR 3.71.
- The person(s) appointed in the Power of Attorney is not registered to practice before the U.S. Patent and Trademark Office.
- Only one Customer Number can be designated for the Power of Attorney in an application. The Customer Number that was captured is the first Customer Number provided on the Power of Attorney document.

UNITED STATES DEPARTMENT OF COMMERCE

- A request under 37 CFR 1.48 to add an inventor was granted in this application, however, no power of attorney consistent with the power of attorney granted by the originally named inventive entity has been received. Thus, the addition of the inventor has resulted in the loss of power of attorney in the application. See 37 CFR 1.32(e).
- The power of attorney has not been accepted because the party who is giving power of attorney has not been identified. Power of attorney may only be signed by the applicant for patent (37 CFR 1.42) or the patent owner. A patent owner who was not the applicant must appoint any power of attorney in compliance with 37 CFR 3.71 and 3.73. See 37 CFR 1.32(b)(4).
- The power of attorney from the inventors has not been accepted because it is a copy from a prior national application for which benefit is claimed and the continuing application names an inventor who was not named as an inventor in the prior application.
- The power of attorney from the inventors has not been accepted because the power of attorney must be signed by the applicant for patent. See 37 CFR 1.32(b)(4).
- Any request to correct or update the name of the applicant must include an application data sheet (ADS) in compliance with 37 CFR 1.76 specifying the correct or updated name of the applicant in the applicant information section. Any request to change the applicant after an original applicant has been specified under 37 CFR 1.46(b) must include a new ADS in compliance with 37 CFR 1.76 specifying the applicant in the applicant information section and comply with 37 CFR 3.71 and 3.73. See 37 CFR 1.46(c).

Authorization or Opt-Out of Authorization to Permit Access:

When this Application Data Sheet is properly signed and filed with the application, applicant has provided written authority to permit a participating foreign intellectual property (IP) office access to the instant application-as-filed (see paragraph A in subsection 1 below) and the European Patent Office (EPO) access to any search results from the instant application (see paragraph B in subsection 1 below).

Should applicant choose not to provide an authorization identified in subsection 1 below, applicant **must opt-out** of the authorization by checking the corresponding box A or B or both in subsection 2 below.

NOTE: This section of the Application Data Sheet is **ONLY** reviewed and processed with the **INITIAL** filing of an application. After the initial filing of an application, an Application Data Sheet cannot be used to provide or rescind authorization for access by a foreign IP office(s). Instead, Form PTO/SB/39 or PTO/SB/69 must be used as appropriate.

1. Authorization to Permit Access by a Foreign Intellectual Property Office(s)

A. Priority Document Exchange (PDX) - Unless box A in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the European Patent Office (EPO), the Japan Patent Office (JPO), the Korean Intellectual Property Office (KIPO), the State Intellectual Property Office of the People's Republic of China (SIPO), the World Intellectual Property Organization (WIPO), and any other foreign intellectual property office participating with the USPTO in a bilateral or multilateral priority document exchange agreement in which a foreign application claiming priority to the instant patent application is filed, access to: (1) the instant patent application-as-filed and its related bibliographic data, (2) any foreign or domestic application to which priority or benefit is claimed by the instant application and its related bibliographic data, and (3) the date of filing of this Authorization. See 37 CFR 1.14(h)(1).

B. Search Results from U.S. Application to EPO - Unless box B in subsection 2 (opt-out of authorization) is checked, the undersigned hereby **grants the USPTO authority** to provide the EPO access to the bibliographic data and search results from the instant patent application when a European patent application claiming priority to the instant patent application is filed. See 37 CFR 1.14(h)(2).

The applicant is reminded that the EPO's Rule 141(1) EPC (European Patent Convention) requires applicants to submit a copy of search results from the instant application without delay in a European patent application that claims priority to the instant application.

2. Opt-Out of Authorizations to Permit Access by a Foreign Intellectual Property Office(s)

A. Applicant **DOES NOT** authorize the USPTO to permit a participating foreign IP office access to the instant application-as-filed. If this box is checked, the USPTO will not be providing a participating foreign IP office with any documents and information identified in subsection 1A above.

B. Applicant **DOES NOT** authorize the USPTO to transmit to the EPO any search results from the instant patent application. If this box is checked, the USPTO will not be providing the EPO with search results from the instant application.

NOTE: Once the application has published or is otherwise publicly available, the USPTO may provide access to the application in accordance with 37 CFR 1.14.
