Information Disclosure Statement

Listed on accompanying IDS Forms PTO/SB/08a equivalent and PTO/SB/08b equivalent are documents that may be considered material to the patentability of this application as defined in 37 C.F.R. §1.56, and in compliance with the duty of disclosure requirements of 37 C.F.R. §§ 1.97 and 1.98.

Applicant has listed publication dates on the attached IDS Forms based on information presently available to the undersigned. However, the listed publication dates should not be construed as an admission that the information was actually published on the date indicated.

Applicant reserves the right to establish the patentability of the claimed invention over any of the information provided herewith, and/or to prove that this information may not be prior art, and/or to prove that this information may not be enabling for the teachings purportedly offered.

This statement should not be construed as a representation that a search has been made, or that information more material to the examination of the present patent application does not exist. The Examiner is specifically requested not to rely solely on the material submitted herewith.

Filing under 37 C.F.R. § 1.97(b). This Information Disclosure Statement is being filed before the mailing date of a first Office Action on the merits. No statement or fee is required.

Concise explanations of the relevance of the non-English language documents appear below in accordance with 37 C.F.R. § 1.98(a)(3).

Document **FP1** (DE 4127518) is in the German language. An English-language abstract is as follows:

The magnetic disc storage device is connected to a host processor (5) and contains at least one magnetic disc for the storage of data with system startup data in a startup data region, a buffer memory (2) for data to be transferred from the disc/host computer and a data communication device (1). The data communication device transfers the startup data from the startup data region into the buffer memory at the time of system startup. The storage device can be used as an external memory device. **ADVANTAGE** - Enables very short startup times to be achieved for memory systems.

Document **FP12** (JP 6051989) is in the Japanese language. An English-language abstract is as follows:

PURPOSE: To perform the fast load processing of an operating system without performing the read processing of volume information for the whole device in spite of the presence/absence of a restore command in the initial load processing of the operating system.

CONSTITUTION: This system is provided with the device name instruction means 2 of a system storage file volume which instructs a volume in which a system storage file is stored in a device name by a REST command to instruct the generation of a system residence volume, the acquiring means 3 of the correspondence table of the device name with a channel number, a channel number acquiring means 4 to acquire the channel number from the device name of the volume, a restore processing means 5 which performs the generation processing of the system residence volume based on the device name and the channel number, and a device name/channel number correspondence table 6.

Document **FP13** (JP 9188009) is in the Japanese language. An English-language abstract is as follows:

PROBLEM TO BE SOLVED: To provide a printer capable of enhancing a compression ratio by electing a compression method fitted to data from a plurality of compression methods to perform compression and the data compressing method in the printer.

SOLUTION: A laser beam printer is equipped with an ROM 4 storing a plurality of preset compression methods and a CPU 3 having a data kind discriminating function analyzing the command of received data and discriminating the kind of data on the basis of the analytical result, a compression method selecting function selecting the compression method fitted to the kind of the discriminated data from a plurality of the compression methods stored in the ROM 4 and data compressing function compressing the data on the basis of the selected compression method.

Document **FP14** (JP 11149376) is in the Japanese language. An English-language abstract is as follows:

PROBLEM TO BE SOLVED: To provide a more flexible software development environment by realizing the same function with a circuit mounting an Initial Program Loader ROM in circuit constitution of a smaller scale.

SOLUTION: A BOOT loader circuit is provided with a BOOT detection part 4 for detecting whether a system becomes a BOOT mode or not, an address decoder 5 for generating a selection signal for each device, switch parts 6 and 7 for selecting ROM and the external

input interface and a CPU stop control part 8 for instructing the stop of CPU various conditions.

Document **FP18** (WO 95/29437 A1) is in the Japanese language. An English-language abstract is as follows:

A differential value and compressibility calculating means (76) of a data processing means (71) of a data transmitter calculates the actual differential value and the actual compressibility based on the data length of uncompressed data received from a data outputting source (2) through an uncompressed data receiving means (74) and the data length of compressed data from a data compressing circuit (67). When the actual differential value is equal to or larger than a set differential value alpha, at the same time, the actual compressibility is equal to or larger than a set compressibility beta, the means (76) transmits the compressed data to a destination (3) through a transfer-requested data outputting means (79), and, in the other cases, transmits the uncompressed data to the destination (3).

Therefore, such a phenomenon that the area occupied by compressed data in the memory area in the destination (3) is almost equal to the area occupied by uncompressed data in the memory area can be prevented, and useless data expansion can be avoided at the destination (3).

Document **FP27** (JP 04-241681) is in the Japanese language. An English-language abstract is as follows:

PURPOSE: To provide a means which can make optimum compression on data of any kinds of data pattern and can improve the data compressing efficiency.

CONSTITUTION: At the time of storing data, the data are compressed by means of compression circuits 11 and 12 of plural data compressing systems and counted results of the byte numbers of the compressed data are compared with each other after the byte numbers are counted. Then the compressed data of the smallest amount are selected and stored in a storing section 2 after adding a code indicating the compressing system. At the time of reading out the recorded data, the data are restored to the original data by selecting

the corresponding restoration circuit 31 or 32 in accordance with the added code indicating the compressing system.

Copies of documents **NPL874**, **NPL920-NPL922**, and **NPL948-NPL958** are submitted. However, in accordance with 37 C.F.R. § 1.98(a)(2)(ii), no copies of the U.S. patents and patent application publications cited as documents **US1-US624** on the attached IDS Forms are submitted.

Additionally, copies of unpublished U.S. applications **NPL959-NPL962**, cited on the attached IDS Forms, are not provided in accordance with the U.S. Patent and Trademark Office Official Gazette notice of October 19, 2004, which states: "the requirement in 37 C.F.R. § 1.98(a)(2)(iii) for a legible copy of the specification, including the claims, and drawings of each cited pending unpublished U.S. patent application (or portion of the application which caused it to be listed) is sua sponte waived where the cited pending application is stored in the USPTO's IFW system."

DETAILED ACTION

1. The present application is being examined under the pre-AIA first to invent provisions.
2. This office action (First Action on the Merit) is in response to the application as originally filed on 10/06/2015 and the preliminary amendment filed on 12/11/2015. The pending claims 1-30 are fully examined as shown in the detail action below.

Information Disclosure Statement

3. The information disclosure statements (IDSs) submitted on 10/30/2015 (four different communications filed separately on the same date), 12/11/2015 (two different communications filed separately on the same date) and 01/11/2016 (two different communications filed separately on the same date) are in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Attached with this correspondence are the initialed copies of the IDSs and the noted correspondences regarding the IDSs.

Drawings

4. The drawings were received on 08/08/2015. These drawings are accepted by the Examiner .

Specification

5. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. ***The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.***

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

It seems the disclosure is describing the claimed subject matter of the parent application not the claimed and disclosed invention of the instant application, therefore, should be corrected to reflect to the current disclosed invention.

6. The disclosure is objected to because of the following informalities: the parent application S/N 14/577,286 disclosed in ¶ [0001], line 2, should be updated as--- now abandoned---

Appropriate correction is required.

Claim Objections

7. Claims 1-30 are objected to because of the following informalities: Is the claimed "video data" in claim 1, line 9 and claim 19, line 13, the same as the "video data" claimed in the preamble of the claims? If so, the once in lines 9 and 13 of claims 1 and 19 respectively should be amended to read as---said video data---. Otherwise as

claimed, it reads that there two deferent videos, the once in the preamble and the once in lines 9 and 13 of claims 1 and 19 respectively. Appropriate correction is required.

Claims 2-18 and 20-30 are inherently objected as being dependent on the objected base claims 1 and 19.

Claim Rejections - 35 USC § 112

8. The following is a quotation of 35 U.S.C. 112(b):
(b) CONCLUSION.—The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the inventor or a joint inventor regards as the invention.

The following is a quotation of 35 U.S.C. 112 (pre-AIA), second paragraph:
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

9. Claims 1-30 are rejected under 35 U.S.C. 112(b) or 35 U.S.C. 112 (pre-AIA), second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which the inventor or a joint inventor, or for pre-AIA the applicant regards as the invention.

Claims 1 and 19 are incomplete such that the claimed limitations in both claims calls for selecting one or more data compression algorithms without using the selected algorithm to compress the video data. Examiner suggest to add “compressing the video data using the selected algorithm” or any similar limitation as appropriate.

Claims 2-18 and 20-30 are inherently rejected as being dependent on the rejected base claims.

Allowable Subject Matter

10. Claims 1 and 19 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112(b) or 35 U.S.C. 112 (pre-AIA), 2nd paragraph, set forth in this Office action.

11. Claims 2-18 and 20-30 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112(b) or 35 U.S.C. 112 (pre-AIA), 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

input interface and a CPU stop control part 8 for instructing the stop of CPU various conditions.

Document **FP18** (WO 95/29437 A1) is in the Japanese language. An English-language abstract is as follows:

A differential value and compressibility calculating means (76) of a data processing means (71) of a data transmitter calculates the actual differential value and the actual compressibility based on the data length of uncompressed data received from a data outputting source (2) through an uncompressed data receiving means (74) and the data length of compressed data from a data compressing circuit (67). When the actual differential value is equal to or larger than a set differential value alpha, at the same time, the actual compressibility is equal to or larger than a set compressibility beta, the means (76) transmits the compressed data to a destination (3) through a transfert-requested data outputting means (79), and, in the other cases, transmits the uncompressed data to the destination (3). Therefore, such a phenomenon that the area occupied by compressed data in the memory area in the destination (3) is almost equal to the area occupied by uncompressed data in the memory area can be prevented, and useless data expansion can be avoided at the destination (3).

Document **FP27** (JP 04-241681) is in the Japanese language. An English-language abstract is as follows:

PURPOSE: To provide a means which can make optimum compression on data of any kinds of data pattern and can improve the data compressing efficiency.

CONSTITUTION: At the time of storing data, the data are compressed by means of compression circuits 11 and 12 of plural data compressing systems and counted results of the byte numbers of the compressed data are compared with each other after the byte numbers are counted. Then the compressed data of the smallest amount are selected and stored in a storing section 2 after adding a code indicating the compressing system. At the time of reading out the recorded data, the data are restored to the original data by selecting
