30. The method of claim 28, wherein the step of determining the first and second device types comprises determining electrical configurations of wiring harnesses attached to the interface, wherein the electrical configurations correspond to the first and second device types.

5 31. The method of claim 28, wherein the step of determining the first and second device types comprises allowing the user to specify a device type of the after-market device using the car video system.

32. A method for retrieving a song from an after-market device from a car stereo system comprising:

10 allowing a user to specify an alphanumeric character using controls of the car stereo system;

querying a database of songs in the after-market device using the alphanumeric character;

displaying a list of potentially matching songs in the after-market device on 15 a dsplay of the car stereo system; and

allowing the user to select a desired song from the list of potentially matching songs for playing the desired song on the car stereo system.

33. The method of claim 32, further comprising allowing the user to specify one or more additional alphanumeric characters using the controls of the car stereo20 system.

Daimler Exhibit 1002

34. The method of claim 33, further comprising querying the remote database using the one or more additional alphanumeric characters and displaying a second list of potentially matching songs on the display of the car stereo system.

- 35. The method of claim 32, wherein the step of allowing the user to specify
- 5 the alphanumeric character comprises providing the user with a list of alphanumeric characters on the display of the car stereo and allowing the user to select a desired character from the list of alphanumeric characters.
 - 36. A multimedia device integration system comprising:

a car audiovisual system;

10 a plurality of after-market devices external to the car audiovisual system;

an interface connected between the car audiovisual system and the plurality of after-market devices for exchanging data, audio, and video signals between the car audiovisual system and the plurality of after-market devices;

means for processing and dispatching commands for controlling the 15 plurality of after-market devices from the car audiovisual system in at least one format compatible with at least one of the plurality of after-market devices; and

means for processing and displaying data from the plurality of after-market devices on a display of the car audiovisual system in a format compatible with the car audiovisual system.

(57) Abstract: An audio device integration system is provided. One or more after-market audio devices, such as a CD player (15), CD changer, MP3 player (30), satellite receiver (25), DAB receiver (25), or the like, is integrated for use with an existing OEM or after-market car stereo system, wherein control commands can be issued at the car stereo (10) and responsive data from the audio device (15, 25, 30) can be displayed on the stereo. Control commands generated at the car stereo (10) are received, processed, converted into a format recognizable by the audio device (15, 25, 30), and dispatched to the audio device (15, 25, 30) for execution. Information from the audio device (15, 25, 30), including track, disc, song, station, time, and other information, is received, processed, converted into a format recognizable by the car stereo, and dispatched to the car stereo (10) for display thereon.

1

AUDIO DEVICE INTEGRATION SYSTEM

SPECIFICATION BACKGROUND OF THE INVENTION

FIELD OF THE INVENTION

The present invention relates to an audio device integration system. More specifically, the present invention relates to an audio device integration system for integrating after-market components such as satellite receivers, CD players, CD changers, MP3 players, Digital Audio Broadcast (DAB) receivers, auxiliary audio sources, and the like with factory-installed (OEM) or after-market car stereo systems.

RELATED ART

Automobile audio systems have continued to advance in complexity and the number of options available to automobile purchasers. Early audio systems offered a simple AM and/or FM tuner, and perhaps an analog tape deck for allowing cassettes, 8-tracks, and other types of tapes to be played while driving. Such early systems were closed, in that external devices could not be easily integrated therewith.

With advances in digital technology, CD players have been included with automobile audio systems. Original Equipment Manufacturers (OEMs) often produce car stereos having CD players and/or changers for allowing CDs to be played while driving. However, such systems often include proprietary buses and protocols that do not allow after-market audio systems, such as satellite receivers (e.g., XM satellite tuners), digital audio broadcast (DAB) receivers, MP3 players, CD changers, auxiliary input sources, and the like, to be easily integrated therewith. Thus, automobile purchasers are frequently forced to either entirely replace the OEM audio system, or use same throughout the life of the vehicle or the duration of ownership. Even if the OEM radio is replaced with an after-market radio, the after-market radio also frequently is not operable with an external device.

A particular problem with integrating after-market audio systems with existing car stereos is that signals generated by the car stereo is in a proprietary format, and is not capable of being processed by the after-market system. Additionally, signals

2

generated by the after-market system are also in a proprietary format that is not recognizable by the car stereo. Thus, in order to integrate after-market systems with car stereos, it is necessary to convert signals between such systems.

It known in the art to provide one or more expansion modules for OEM and after-market car stereos for allowing external audio products to be integrated with the car stereo. However, such expansion modules only operate with and allow integration of external audio products manufactured by the same manufacturer as the OEM / after-market car stereo. For example, a satellite receiver manufactured by PIONEER, Inc., cannot be integrated with an OEM car radio manufactured by TOYOTA or an after-market car radio manufactured by CLARION, Inc. Thus, existing expansion modules only serve the limited purpose of integrating equipment by the same manufacturer as the car stereo. Thus, it would be desirable to provide an integration system that allows any audio device of any manufacture to be integrated with any OEM or after-market radio system.

Moreover, it would be desirable to provide an integration system that not only achieves integration of various audio devices that are alien to a given OEM or aftermarket stereo system, but also allows for information to be exchanged between the after-market device and the car stereo. For example, it would be desirable to provide a system wherein station, track, time, and song information can be retrieved from the after-market device, formatted, and transmitted to the car stereo for display thereby, such as at an LCD panel of the car stereo. Such information could be transmitted and displayed on both hardwired radio systems (*e.g.*, radios installed in dashboards or at other locations within the car), or integrated for display on one or more software or graphically-driven radio systems operable with graphical display panels. Additionally, it would be desirable to provide an audio integration system that allows a user to control more than one device, such as a CD or satellite receiver and one or more auxiliary sources, and to quickly and conveniently switch between same using the existing controls of the car stereo.

Accordingly, the present invention addresses these needs by providing an audio integration system that allows a plurality of audio devices, such as CD players, CD changers, MP3 players, satellite receivers, DAB receivers, auxiliary input sources,

3

or a combination thereof, to be integrated into existing car stereos while allowing information to be displayed on, and control to be provided from, the car stereo.

SUMMARY OF THE INVENTION

The present invention relates to an audio device integration system. One or more after-market audio devices, such as a CD player, CD changer, MP3 player, satellite receiver (e.g., XM tuner), digital audio broadcast (DAB) receiver, or auxiliary input source, can be connected to and operate with an existing stereo system in an automobile, such as an OEM car stereo system or an after-market car stereo system installed in the automobile. The integration system connects to and interacts with the car stereo at any available port of the car stereo, such as a CD input port, a satellite input, or other known type of connector. If the car stereo system is an after-market car stereo system, the present invention generates a signal that is sent to the car stereo to keep same in an operational state and responsive to external data and signals. Commands generated at the control panel are received by the present invention and converted into a format recognizable by the after-market audio device. The formatted commands are executed by the audio device, and audio therefrom is channeled to the car stereo. Information from the audio device is received by the present invention, converted into a format recognizable by the car stereo, and forwarded to the car stereo for display thereby. The formatted information could include information relating to a CD or MP3 track being played, channel, song, and artist information from a satellite receiver or DAB receiver, or video information from one or more external devices connected to the present invention. The information can be presented as one or more menus, textual, or graphical prompts for display on an LCD display of the radio, allowing interaction with the user at the radio. A docking port is provided for allowing portable external audio devices to be connected to the interface of the present invention.

In an embodiment of the present invention, a dual-input device is provided for integrating both an external audio device and an auxiliary input with an OEM or aftermarket car stereo. The user can select between the external audio device and the auxiliary input using the controls of the car stereo. The invention can automatically detect the type of device connected to the auxiliary input, and integrate same with the car stereo.

In another embodiment of the present invention, an interface is provided for integrating a plurality of auxiliary input sources with an existing car stereo system. A

user can select between the auxiliary sources using the control panel of the car stereo. One or more after-market audio devices can be integrated with the auxiliary input sources, and a user can switch between the audio device and the auxiliary input sources using the car stereo. Devices connected to the auxiliary input sources are inter-operable with the car stereo, and are capable of exchanging commands and data via the interface.

BRIEF DESCRIPTION OF THE DRAWINGS

These and other important objects and features of the invention will be apparent from the following Detailed Description of the Invention, taken in connection with the accompanying drawings, in which:

FIG. 1 is a block diagram showing the audio device integration system of the present invention.

FIG. 2a is a block diagram showing an alternate embodiment of the audio device integration system of the present invention, wherein a CD player is integrated with a car radio.

FIG. 2b is a block diagram showing an alternate embodiment of the audio device integration system of the present invention, wherein a MP3 player is integrated with a car radio.

FIG. 2c is a block diagram showing an alternate embodiment of the audio device integration system of the present invention, wherein a satellite or DAB receiver is integrated with a car radio.

FIG. 2d is a block diagram showing an alternate embodiment of the audio device integration system of the present invention, wherein a plurality of auxiliary input sources are integrated with a car radio.

FIG. 2e is a block diagram showing an alternate embodiment of the audio device integration system of the present invention, wherein a CD player and a plurality of auxiliary input sources are integrated with a car radio.

FIG. 2f is a block diagram showing an alternate embodiment of the present invention, wherein a satellite or DAB receiver and a plurality of auxiliary input source are integrated with a car radio.

FIG. 2g is a block diagram showing an alternate embodiment of the present invention, wherein a MP3 player and a plurality of auxiliary input sources are integrated with a car radio.

FIG. 2h is a block diagram showing an alternate embodiment of the present invention, wherein a plurality of auxiliary interfaces and an audio device are integrated with a car stereo.

FIG. 3a is a circuit diagram showing a device according to the present invention for integrating a CD player or an auxiliary input source with a car radio.

FIG. 3b is a circuit diagram showing a device according to the present invention for integrating both a CD player and an auxiliary input source with a car radio, wherein the CD player and the auxiliary input are switchable by a user.

FIG. 3c is a circuit diagram showing a device according to the present invention for integrating a plurality of auxiliary input sources with a car radio.

FIG. 3d is a circuit diagram showing a device according to the present invention for integrating a satellite or DAB receiver with a car radio.

FIG. 4a is a flowchart showing processing logic according to the present invention for integrating a CD player with a car radio.

FIG. 4b is a flowchart showing processing logic according to the present invention for integrating a MP3 player with a car radio.

FIG. 4c is a flowchart showing processing logic according to the present invention for integrating a satellite receiver with a car radio.

FIG. 4d is a flowchart showing processing logic according to the present invention for integrating a plurality of auxiliary input sources with a car radio.

FIG. 4e is a flowchart showing processing logic according to the present invention for integrating a CD player and one or more auxiliary input sources with a car radio.

FIG. 4f is a flowchart showing processing logic according to the present invention for integrating a satellite or DAB receiver and one or more auxiliary input sources with a car radio.

FIG. 4g is a flowchart showing processing logic according to the present invention for integrating a MP3 player and one or more auxiliary input sources with a car stereo.

FIG. 5 is a flowchart showing processing logic according to the present invention for allowing a user to switch between an after-market audio device and one or more auxiliary input sources.

FIG. 6 is a flowchart showing processing logic according to the present invention for determining and handling various device types connected to the auxiliary input ports of the invention.

FIG. 7a is a perspective view of a docking station according to the present invention for retaining an audio device within a car.

FIG. 7b is an end view of the docking station of FIG. 7a.

FIGS. 8a-8b are perspective views of another embodiment of the docking station of the present invention, which includes the audio device integration system of the present invention incorporated therewith.

FIG. 9 is a block diagram showing the components of the docking station of FIGS. 8a-8b.

DETAILED DESCRIPTION OF THE INVENTION

The present invention relates to an audio device integration system. One or more after-market audio devices, such as a CD player, CD changer, MP3 player, satellite receiver, digital audio broadcast (DAB) receiver, or the like, can be integrated with an existing car radio, such as an OEM car stereo or an after-market car stereo. Control of the audio device is enabled using the car radio, and information from the audio device, such as channel, artist, track, time, and song information, is retrieved form the audio device, processed, and forwarded to the car radio for display thereon. The information channeled to the car radio can include video from the external device, as well as graphical and menu-based information. A user can review and interact with information via the car stereo. Commands from the car radio are received, processed by the present invention into a format recognizable by the audio device, and transmitted thereto for execution. One or more auxiliary input channels can be integrated by the present invention with the car radio. The user can switch between one or more audio devices and one or more auxiliary input channels using the control panel buttons of the car radio.

As used herein, the term "integration" or "integrated" is intended to mean connecting one or more external devices or inputs to an existing car radio or stereo via an interface, processing and handling signals and audio channels, allowing a user to control the devices via the car stereo, and displaying data from the devices on the radio. Thus, for example, integration of a CD player with a car stereo system allows for the CD player to be remotely controlled via the control panel of the stereo system, and data from the CD player to be sent to the display of the stereo. Of course, control of audio devices can be provided at locations other than the control panel of the radio without departing from the spirit or scope of the present invention. Further, as used herein, the term "inter-operable" is intended to mean allowing the external audio device to receive and process commands that have been formatted by the interface of the present invention, as well as allowing a car stereo to display information that is generated by the external audio device and processed by the present invention. Additionally, by the term "inter-operable," it is meant allowing a device that is alien to the environment of an existing OEM or after-market car stereo to be utilized thereby.

Also, as used herein, the terms "car stereo" and "car radio" are used interchangeably and are intended to include all presently existing car stereos and radios, such as physical devices that are present at any location within a vehicle, in addition to software and/or graphically- or display-driven receivers. An example of such a receiver is a software-driven receiver that operates on a universal LCD panel within a vehicle and is operable by a user via a graphical user interface displayed on the universal LCD panel. Further, any future receiver, whether a hardwired or a software/graphical receiver operable on one or more displays, is considered within the definition of the terms "car stereo" and "car radio," as used herein, and is within the spirit and scope of the present invention.

FIG. 1 is a block diagram showing the audio device integration (or interface) system of the present invention, generally indicated at 20. A plurality of devices and auxiliary inputs can be connected to the interface 20, and integrated with an OEM or after-market car radio 10. A CD player or changer 15 can be integrated with the radio 10 via interface 20. A satellite radio or DAB receiver 25, such as an XM radio satellite receiver or DAB receiver known in the art, could be integrated with the radio 10, via the interface 20. Further, an MP3 player could also be integrated with the radio 10 via interface 20. Moreover, a plurality of auxiliary input sources, illustratively indicated as auxiliary input sources 35 (comprising input sources 1 through n, n being any number), could also be integrated with the car radio 10 via interface 20. Optionally, a control head 12, such as that commonly used with aftermarket CD changers and other similar devices, could be integrated with the car radio 10 via interface 20, for controlling any of the car radio 10, CD player/changer 15, satellite/DAB receiver 25, MP3 player 30, and auxiliary input sources 35. Thus, as can be readily appreciated, the interface 20 of the present invention allows for the integration of a multitude of devices and inputs with an OEM or after-market car radio or stereo.

FIG. 2a is a block diagram of an alternate embodiment of the audio device interface system of the present invention, wherein a CD player/changer 15 is integrated with an OEM or after-market car radio 10. The CD player 15 is electrically connected with the interface 20, and exchanges data and audio signals therewith. The interface 20 is electrically connected with the car radio 10, and exchanges data and

audio signals therewith. In a preferred embodiment of the present invention, the car radio 10 includes a display 13 (such as an alphanumeric, electroluminescent display) for displaying information, and a plurality of control panel buttons 14 that normally operate to control the radio 10. The interface 20 allows the CD player 15 to be controlled by the control buttons 14 of the radio 10. Further, the interface 20 allows information from the CD player 15, such as track, disc, time, and song information, to be retrieved therefrom, processed and formatted by the interface 20, sent to the display 13 of the radio 10.

Importantly, the interface 20 allows for the remote control of the CD player 15 from the radio 10 (e.g., the CD player 15 could be located in the trunk of a car, while the radio 10 is mounted on the dashboard of the car). Thus, for example, one or more discs stored within the CD player 15 can be remotely selected by a user from the radio 10, and tracks on one or more of the discs can be selected therefrom. Moreover, standard CD operational commands, such as pause, play, stop, fast forward, rewind, track forward, and track reverse (among other commands) can be remotely entered at the control panel buttons 14 of the radio 10 for remotely controlling the CD player 15.

FIG. 2b is a block diagram showing an alternate embodiment of the present invention, wherein an MP3 player 30 is integrated with an OEM or after-market car radio 10 via interface 20. As mentioned earlier, the interface 20 of the present invention allows for a plurality of disparate audio devices to be integrated with an existing car radio for use therewith. Thus, as shown in FIG. 2b, remote control of the MP3 player 30 via radio 10 is provided for via interface 20. The MP3 player 30 is electronically interconnected with the interface 20, which itself is electrically interconnected with the car radio 10. The interface 20 allows data and audio signals to be exchanged between the MP3 player 30 and the car radio 10, and processes and formats signals accordingly so that instructions and data from the radio 10 are processable by the MP3 player 30, and vice versa. Operational commands, such as track selection, pause, play, stop, fast forward, rewind, and other commands, are entered via the control panel buttons 14 of car radio 10, processed by the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby,

and sent to the radio 10 for display on display 13. Audio from the MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

FIG. 2c is a block diagram showing an alternate embodiment of the present invention, wherein a satellite receiver or DAB receiver 25 is integrated with an OEM or after-market car radio 10 via the interface 20. Satellite/DAB receiver 25 can be any satellite radio receiver known in the art, such as XM or Sirius, or any DAB receiver known in the art. The satellite/DAB receiver 25 is electrically interconnected with the interface 20, which itself is electrically interconnected with the car radio 10. The satellite/DAB receiver 25 is remotely operable by the control panel buttons 14 of the radio 10. Commands from the radio 10 are received by the interface 20, processed and formatted thereby, and dispatched to the satellite/DAB receiver 25 for execution thereby. Information from the satellite/DAB receiver 25, including time, station, and song information, is received by the interface 20, processed, and transmitted to the radio 10 for display on display 13. Further, audio from the satellite/DAB receiver 25 is selectively forwarded by the interface 20 for playing by the radio 10.

FIG. 2d is a block diagram showing an alternate embodiment of the present invention, wherein one or more auxiliary input sources 35 are integrated with an OEM or after-market car radio 10. The auxiliary inputs 35 can be connected to analog sources, or can be digitally coupled with one or more audio devices, such as aftermarket CD players, CD changers, MP3 players, satellite receivers, DAB receivers, and the like, and integrated with an existing car stereo. Preferably, four auxiliary input sources are connectable with the interface 20, but any number of auxiliary input sources could be included. Audio from the auxiliary input sources 35 is selectively forwarded to the radio 10 under command of the user. As will be discussed herein in greater detail, a user can select a desired input source from the auxiliary input sources 35 by depressing one or more of the control panel buttons 14 of the radio 10. The interface 20 receives the command initiated from the control panel, processes same, and connects the corresponding input source from the auxiliary input sources 35 to allow audio therefrom to be forwarded to the radio 10 for playing. Further, the interface 20 determines the type of audio devices connected to the auxiliary input ports 35, and integrates same with the car stereo 10.

As mentioned previously, the present invention allows one or more external audio devices to be integrated with an existing OEM or after-market car stereo, along with one or more auxiliary input sources, and the user can select between these sources using the controls of the car stereo. Such "dual input" capability allows operation with devices connected to either of the inputs of the device, or both. Importantly, the device can operate in "plug and play" mode, wherein any device connected to one of the inputs is automatically detected by the present invention, its device type determined, and the device automatically integrated with an existing OEM or after-market car stereo. Thus, the present invention is not dependent any specific device type to be connected therewith to operate. For example, a user can first purchase a CD changer, plug same into a dual interface, and use same with the car stereo. At a point later in time, the user could purchase an XM tuner, plug same into the device, and the tuner will automatically be detected and integrated with the car stereo, allowing the user to select from and operate both devices from the car stereo. It should be noted that such plug and play capability is not limited to a dual input device, but is provided for in every embodiment of the present invention. The dualinput configuration of the preset invention is illustrated in FIGS. 2e-2h and described below.

FIG. 2e is a block diagram showing an alternate embodiment of the present invention, wherein an external CD player/changer 15 and one or more auxiliary input sources 35 are integrated with an OEM or after-market car stereo 10. Both the CD player 15 and one or more of the auxiliary input sources 35 are electrically interconnected with the interface 20, which, in turn, is electrically interconnected to the radio 10. Using the controls 14 of the radio 10, a user can select between the CD player 15 and one or more of the inputs 35 to selectively channel audio from these sources to the radio. The command to select from one of these sources is received by the interface 20, processed thereby, and the corresponding source is channeled to the radio 10 by the interface 20. As will be discussed later in greater detail, the interface 20 contains internal processing logic for selecting between these sources.

FIG. 2f is a block diagram of an alternate embodiment of the present invention, wherein a satellite receiver or DAB receiver and one or more auxiliary input sources are integrated by the interface 20 with an OEM or after-market car radio

10. Similar to the embodiment of the present invention illustrated in FIG. 2e and described earlier, the interface 20 allows a user to select between the satellite/DAB receiver 25 and one or more of the auxiliary input sources 35 using the controls 14 of the radio 10. The interface 20 contains processing logic, described in greater detail below, for allowing switching between the satellite/DAB receiver 25 and one or more of the auxiliary input sources 35.

FIG. 2g is a block diagram of an alternate embodiment of the present invention, wherein a MP3 player 30 and one or more auxiliary input sources 35 are integrated by the interface 20 with an OEM or after-market car radio 10. Similar to the embodiments of the present invention illustrated in FIGS. 2e and 2f and described earlier, the interface 20 allows a user to select between the MP3 player 30 and one or more of the auxiliary input sources 35 using the controls 14 of the radio 10. The interface 20 contains processing logic, as will be discussed later in greater detail, for allowing switching between the MP3 player 30 and one or more of the auxiliary input sources 35.

FIG. 2h is a block diagram showing an alternate embodiment of the present invention, wherein a plurality of auxiliary interfaces 40 and 44 and an audio device 17 are integrated with an OEM or after-market car stereo 10. Importantly, the present invention can be expanded to allow a plurality of auxiliary inputs to be connected to the car stereo 10 in a tree-like fashion. Thus, as can be seen in FIG. 2h, a first auxiliary interface 40 is connected to the interface 20, and allows data and audio from the ports 42 to be exchanged with the car radio 10. Connected to one of the ports 42 is another auxiliary interface 44, which, in turn, provides a plurality of input ports 46. Any device connected to the ports 42 or 46 can be integrated with the car radio 10. Further, any device connected to the ports 42 or 46 can be inter-operable with the car radio 10, allowing commands to be entered from the car radio 10 (*e.g.*, such as via the control panel 14) for commanding the device, and information from the device to be displayed by the car radio 10. Conceivably, by configuring the interfaces 40, 44, and successive interfaces in a tree configuration, any number of devices can be integrated using the present invention.

The various embodiments of the present invention described above and shown in **FIGS. 1** through **2h** are illustrative in nature and are not intended to limit the spirit

or scope of the present invention. Indeed, any conceivable audio device or input source, in any desired combination, can be integrated by the present invention into existing car stereo systems. Further, it is conceivable that not only can data and audio signals be exchanged between the car stereo and any external device, but also video information that can be captured by the present invention, processed thereby, and transmitted to the car stereo for display thereby and interaction with a user thereat.

Various circuit configurations can be employed to carry out the present invention. Examples of such configurations are described below and shown in **FIGS**. **3a-3d**.

FIG. 3a is an illustrative circuit diagram according to the present invention for integrating a CD player or an auxiliary input source with an existing car stereo system. A plurality of ports J1C1, J2A1, X2, RCH, and LCH are provided for allowing connection of the interface system of the present invention between an existing car radio, an after-market CD player or changer, or an auxiliary input source. Each of these ports could be embodied by any suitable electrical connector known in the art. Port J1C1 connects to the input port of an OEM car radio, such as that manufactured by TOYOTA, Inc. Conceivably, port J1C1 could be modified to allow connection to the input port of an after-market car radio. Ports J2A1, X2, RCH, and LCH connect to an after-market CD changer, such as that manufactured by PANASONIC, Inc., or to an auxiliary input source.

Microcontroller U1 is in electrical communication with each of the ports J1C1, J2A1, and X2, and provides functionality for integrating the CD player or auxiliary input source connected to the ports J2A1, X2, RCH, and LCH. For example, microcontroller U1 receives control commands, such as button or key sequences, initiated by a user at control panel of the car radio and received at the connector J1C1, processes and formats same, and dispatches the formatted commands to the CD player or auxiliary input source via connector J2A1. Additionally, the microcontroller U1 receives information provided by the CD player or auxiliary input source via connector J2A1, processes and formats same, and transmits the formatted data to the car stereo via connector J1C1 for display on the display of the car stereo. Audio signals provided at the ports J2A1, X2, RCH and LCH is selectively channeled to the

car radio at port **J1C1** under control of one or more user commands and processing logic, as will be discussed in greater detail, embedded within microcontroller **U1**.

In a preferred embodiment of the present invention, the microcontroller U1 comprises the 16F628 microcontroller manufactured by MICROCHIP, Inc. The 16F628 chip is a CMOS, flash-based, 8-bit microcontroller having an internal, 4 MHz internal oscillator, 128 bytes of EEPROM data memory, a capture/compare/PWM, a USART, 2 comparators, and a programmable voltage reference. Of course, any suitable microcontroller known in the art can be substituted for microcontroller U1 without departing from the spirit or scope of the present invention.

A plurality of discrete components, such as resistors **R1** through **R13**, diodes **D1** through **D4**, capacitors **C1** and **C2**, and oscillator **Y1**, among other components, are provided for interfacing the microcontroller **U1** with the hardware connected to the connectors **J1C1**, **J2A1**, **X2**, **RCH**, and **LCH**. These components, as will be readily appreciated to one of ordinary skill in the art, can be arranged as desired to accommodate a variety of microcontrollers, and the numbers and types of discrete components can be varied to accommodate other similar controllers. Thus, the circuit shown in **FIG. 3a** and described herein is illustrative in nature, and modifications thereof are considered to be within the spirit and scope of the present invention.

FIG. 3b is a diagram showing an illustrative circuit configuration according to the present invention, wherein one or more after-market CD changers / players and an auxiliary input source are integrated with an existing car stereo, and wherein the user can select between the CD changer/player and the auxiliary input using the controls of the car stereo. A plurality of connectors are provided, illustratively indicated as ports J4A, J4B, J3, J5L1, J5R1, J1, and J2. Ports J4A, J4B, and J3 allow the audio device interface system of the present invention to be connected to one or more existing car stereos, such as an OEM car stereo or an after-market car stereo. Each of these ports could be embodied by any suitable electrical connector known in the art. For example, ports J4A and J4B can be connected to an OEM car stereo manufactured by BMW, Inc. Port J3 can be connected to a car stereo manufactured by LANDROVER, Inc. Of course, any number of car stereos, by any manufacturer, could be provided. Ports J1 and J2 allow connection to an after-market CD changer or player, such as that manufactured by ALPINE, Inc., and an auxiliary input source. WO 2004/053722

17

Optionally, ports **J5L1** and **J5R1** allow integration of a standard analog (line-level) source. Of course, a single standalone CD player or auxiliary input source could be connected to either of ports **J1** or **J2**.

Microcontroller **DD1** is in electrical communication with each of the ports J4A, J4B, J3, J5L1, J5R1, J1, and J2, and provides functionality for integrating the CD player and auxiliary input source connected to the ports J1 and J2 with the car stereo connected to the ports J4A and J4B or J3. For example, microcontroller DD1 receives control commands, such as button or key sequences, initiated by a user at control panel of the car radio and received at the connectors J4A and J4B or J3, processes and formats same, and dispatches the formatted commands to the CD player and auxiliary input source via connectors J1 or J2. Additionally, the microcontroller DD1 receives information provided by the CD player and auxiliary input source via connectors J1 or J2, processes and formats same, and transmits the formatted data to the car stereo via connectors J4A and J4B or J3 for display on the display of the car stereo. Further, the microcontroller DD1 controls multiplexer DA3 to allow selection between the CD player/changer and the auxiliary input. Audio signals provided at the ports J1, J2, J5L1 and J5R1 is selectively channeled to the car radio at ports J4A and J4B or J3 under control of one or more user commands and processing logic, as will be discussed in greater detail, embedded within microcontroller DD1.

In a preferred embodiment of the present invention, the microcontroller **DD1** comprises the 16F872 microcontroller manufactured by MICROCHIP, Inc. The 16F872 chip is a CMOS, flash-based, 8-bit microcontroller having 64 bytes of EEPROM data memory, self-programming capability, an ICD, 5 channels of 10 bit Analog-to-Digital (A/D) converters, 2 timers, capture/compare/PWM functions, a USART, and a synchronous serial port configurable as either a 3-wire serial peripheral interface or a 2-wire inter-integrated circuit bus. Of course, any suitable microcontroller known in the art can be substituted for microcontroller **DD1** without departing from the spirit or scope of the present invention. Additionally, in a preferred embodiment of the present invention, the multiplexer **DA3** comprises the CD4053 triple, two-channel analog multiplexer/demultiplexer can be substituted for **DA3** without departing from the spirit or scope of the present invention.

A plurality of discrete components, such as resistors R1 through R18, diodes D1 through D3, capacitors C1-C11, and G1-G3, transistors Q1-Q3, transformers T1 and T2, amplifiers LCH:A and LCH:B, oscillator XTAL1, among other components, are provided for interfacing the microcontroller DD1 and the multiplexer DA3 with the hardware connected to the connectors J4A, J4B, J3, J5L1, J5R1, J1, and J2. These components, as will be readily appreciated to one of ordinary skill in the art, can be arranged as desired to accommodate a variety of microcontrollers and multiplexers, and the numbers and types of discrete components can be varied to accommodate other similar controllers and multiplexers. Thus, the circuit shown in FIG. 3b and described herein is illustrative in nature, and modifications thereof are considered to be within the spirit and scope of the present invention.

FIG. 3c is a diagram showing an illustrative circuit configuration for integrating a plurality of auxiliary inputs using the controls of the car stereo. A plurality of connectors are provided, illustratively indicated as ports J1, RCH1, LCH1, RCH2, LCH2, RCH3, LCH3, RCH4, and LCH4. Port J1 allows the audio device integration system of the present invention to be connected to one or more existing car stereos. Each of these ports could be embodied by any suitable electrical connector known in the art. For example, port J1 could be connected to an OEM car stereo manufactured by HONDA, Inc., or any other manufacturer. Ports RCH1, LCH1, RCH2, LCH2, RCH3, LCH3, RCH4, and LCH4 allow connection with the left and right channels of four auxiliary input sources. Of course, any number of auxiliary input sources and ports/connectors could be provided.

Microcontroller U1 is in electrical communication with each of the ports J1, RCH1, LCH1, RCH2, LCH2, RCH3, LCH3, RCH4, and LCH4, and provides functionality for integrating one or more auxiliary input sources connected to the ports RCH1, LCH1, RCH2, LCH2, RCH3, LCH3, RCH4, and LCH4 with the car stereo connected to the port J1. Further, the microcontroller U1 controls multiplexers DA3 and DA4 to allow selection amongst any of the auxiliary inputs using the controls of the car stereo. Audio signals provided at the ports RCH1, LCH1, RCH2, LCH2, RCH3, LCH3, RCH4, and LCH4 are selectively channeled to the car radio at port J1 under control of one or more user commands and processing logic, as will be discussed in greater detail, embedded within microcontroller U1. In a preferred

embodiment of the present invention, the microcontroller U1 comprises the 16F872 microcontroller discussed earlier. Additionally, in a preferred embodiment of the present invention, the multiplexers **DA3** and **DA4** comprises the CD4053 triple, twochannel analog multiplexer/demultiplexer, discussed earlier. Any other suitable microcontroller and multiplexers can be substituted for U1, DA3, and DA4 without departing from the spirit or scope of the present invention.

A plurality of discrete components, such as resistors **R1** through **R15**, diodes **D1** through **D3**, capacitors **C1-C5**, transistors **Q1-Q2**, amplifiers **DA1:A** and **DA1:B**, and oscillator **Y1**, among other components, are provided for interfacing the microcontroller **U1** and the multiplexers **DA3** and **DA4** with the hardware connected to the ports **J1**, **RCH1**, **LCH1**, **RCH2**, **LCH2**, **RCH3**, **LCH3**, **RCH4**, and **LCH4**. These components, as will be readily appreciated to one of ordinary skill in the art, can be arranged as desired to accommodate a variety of microcontrollers and multiplexers, and the numbers and types of discrete components can be varied to accommodate other similar controllers and multiplexers. Thus, the circuit shown in **FIG. 3c** and described herein is illustrative in nature, and modifications thereof are considered to be within the spirit and scope of the present invention.

FIG. 3d is an illustrative circuit diagram according to the present invention for integrating a satellite receiver with an existing OEM or after-market car stereo system. Ports J1 and J2 are provided for allowing connection of the integration system of the present invention between an existing car radio and a satellite receiver. These ports could be embodied by any suitable electrical connector known in the art. Port J2 connects to the input port of an existing car radio, such as that manufactured by KENWOOD, Inc. Port 1 connects to an after-market satellite receiver, such as that manufactured by PIONEER, Inc.

Microcontroller U1 is in electrical communication with each of the ports J1 and J2, and provides functionality for integrating the satellite receiver connected to the port J1 with the car stereo connected to the port J2. For example, microcontroller U1 receives control commands, such as button or key sequences, initiated by a user at control panel of the car radio and received at the connector J2, processes and formats same, and dispatches the formatted commands to the satellite receiver via connector J2. Additionally, the microcontroller U1 receives information provided by the

satellite receiver via connector J1, processes and formats same, and transmits the formatted data to the car stereo via connector J2 for display on the display of the car stereo. Audio signals provided at the port J1 is selectively channeled to the car radio at port J2 under control of one or more user commands and processing logic, as will be discussed in greater detail, embedded within microcontroller U1.

In a preferred embodiment of the present invention, the microcontroller U1 comprises the 16F873 microcontroller manufactured by MICROCHIP, Inc. The 16F873 chip is a CMOS, flash-based, 8-bit microcontroller having 128 bytes of EEPROM data memory, self-programming capability, an ICD, 5 channels of 10 bit Analog-to-Digital (A/D) converters, 2 timers, 2 capture/compare/PWM functions, a synchronous serial port that can be configured as a either a 3-wire serial peripheral interface or a 2-wire inter-integrated circuit bus, and a USART. Of course, any suitable microcontroller known in the art can be substituted for microcontroller U1 without departing from the spirit or scope of the present invention.

A plurality of discrete components, such as resistors **R1** through **R7**, capacitors **C1** and **C2**, and amplifier **A1**, among other components, are provided for interfacing the microcontroller **U1** with the hardware connected to the connectors **J1** and **J2**. These components, as will be readily appreciated to one of ordinary skill in the art, can be arranged as desired to accommodate a variety of microcontrollers, and the numbers and types of discrete components can be varied to accommodate other similar controllers. Thus, the circuit shown in **FIG. 3d** and described herein is illustrative in nature, and modifications thereof are considered to be within the spirit and scope of the present invention.

FIGS. 4a through 6 are flowcharts showing processing logic according to the present invention. Such logic can be embodied as software and/or instructions stored in a read-only memory circuit (*e.g.*, and EEPROM circuit), or other similar device. In a preferred embodiment of the present invention, the processing logic described herein is stored in one or more microcontrollers, such as the microcontrollers discussed earlier with reference to FIGS. 3a-3d. Of course, any other suitable means for storing the processing logic of the present invention can be employed.

FIG. 4a is a flowchart showing processing logic, indicated generally at 100, for integrating a CD player or changer with an existing OEM or after-market car

stereo system. Beginning in step 100, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 104 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 106 is invoked, wherein a second determination is made as to whether the car stereo is in CD player mode. If a negative determination is made, step 106 is re-invoked.

If a positive determination is made in step 106, a CD handling process, indicated as block 108, is invoked, allowing the CD player/changer to exchange data and audio signals with any existing car stereo system. Beginning in step 110, a signal is generated by the present invention indicating that a CD player/changer is present. and the signal is continuously transmitted to the car stereo. Importantly, this signal prevents the car stereo from shutting off, entering a sleep mode, or otherwise being unresponsive to signals and/or data from an external source. If the car radio is an OEM car radio, the CD player presence signal need not be generated. Concurrently with step 110, or within a short period of time before or after the execution of step 110, steps 112 and 114 are invoked. In step 112, the audio channels of the CD player/changer are connected (channeled) to the car stereo system, allowing audio from the CD player/changer to be played through the car stereo. In step 114, data is retrieved by the present invention from the CD player/changer, including track and time information, formatted, and transmitted to the car stereo for display by the car stereo. Thus, information produced by the external CD player/changer can be quickly and conveniently viewed by a driver by merely viewing the display of the car stereo. After steps 110, 112, and 114 have been executed, control passes to step 116.

In steps 116, the present invention monitors the control panel buttons of the car stereo for CD operational commands. Examples of such commands include track forward, track reverse, play, stop, fast forward, rewind, track program, random track play, and other similar commands. In step 118, if a command is not detected, step 116 is re-invoked. Otherwise, if a command is received, step 118 invokes step 120, wherein the received command is converted into a format recognizable by the CD player/changer connected to the present invention. For example, in this step, a command issued from a GM car radio is converted into a format recognizable by a CD player/changer manufactured by ALPINE, Inc. Any conceivable command from any

type of car radio can be formatted for use by a CD player/changer of any type or manufacture. Once the command has been formatted, step **122** is invoked, wherein the formatted command is transmitted to the CD player/changer and executed. Step **110** is then re-invoked, so that additional processing can occur.

FIG. 4b is a flowchart showing processing logic, indicated generally at 130, for integrating an MP3 player with an existing car stereo system. Beginning in step 132, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 134 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 136 is invoked, wherein a second determination is made as to whether the car stereo is powered on. If a positive determination is made, step 136 is invoked, wherein a second determination is made, step 136 is re-invoked.

If a positive determination is made in step 136, an MP3 handling process, indicated as block 138, is invoked, allowing the MP3 player to exchange data and audio signals with any existing car stereo system. Beginning in step 140, the CD player presence signal, described earlier, is generated by the present invention and continuously transmitted to the car stereo. If the car radio is an OEM car radio, the CD player presence signal need not be generated. In step 142, the audio channels of the MP3 player are connected (channeled) to the car stereo system, allowing audio from the MP3 player to be played through the car stereo. In step 144, data is retrieved by the present invention from the MP3 player, including track, time, title, and song information, formatted, and transmitted to the car stereo for display by the car stereo. Thus, information produced by the MP3 player can be quickly and conveniently viewed by a driver by merely viewing the display of the car stereo. After steps 140, 142, and 144 have been executed, control passes to step 146.

In steps 146, the present invention monitors the control panel buttons of the car stereo for MP3 operational commands. Examples of such commands include track forward, track reverse, play, stop, fast forward, rewind, track program, random track play, and other similar commands. In step 148, if a command is not detected, step 146 is re-invoked. Otherwise, if a command is received, step 148 invokes step 150, wherein the received command is converted into a format recognizable by the MP3 player connected to the present invention. For example, in this step, a command

issued from a HONDA car radio is converted into a format recognizable by an MP3 player manufactured by PANASONIC, Inc. Any conceivable command from any type of car radio can be formatted for use by an MP3 player of any type or manufacture. Once the command has been formatted, step 152 is invoked, wherein the formatted command is transmitted to the MP3 player and executed. Step 140 is then re-invoked, so that additional processing can occur.

FIG. 4c is a flowchart showing processing logic, indicated generally at 160, for integrating a satellite receiver or a DAB receiver with an existing car stereo system. Beginning in step 162, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 164 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 166 is invoked, wherein a second determination is made as to whether the car stereo is not determination is made as to whether the car stereo is in CD player mode. If a negative determination is made, step 166 is invoked.

If a positive determination is made in step 166, a satellite/DAB receiver handling process, indicated as block 168, is invoked, allowing the satellite/DAB receiver to exchange data and audio signals with any existing car stereo system. Beginning in step 170, the CD player presence signal, described earlier, is generated by the present invention and continuously transmitted to the car stereo. If the car radio is an OEM car radio, the CD player presence signal need not be generated. In step 172, the audio channels of the satellite/DAB receiver are connected (channeled) to the car stereo system, allowing audio from the satellite receiver or DAB receiver to be played through the car stereo. In step 174, data is retrieved by the present invention from the satellite/DAB receiver, including channel number, channel name, artist name, song time, and song title, formatted, and transmitted to the car stereo for display by the car stereo. The information could be presented in one or more menus, or via a graphical interface viewable and manipulable by the user at the car stereo. Thus, information produced by the receiver can be quickly and conveniently viewed by a driver by merely viewing the display of the car stereo. After steps 170, 172, and 174 have been executed, control passes to step 176.

In steps 176, the present invention monitors the control panel buttons of the car stereo for satellite/DAB receiver operational commands. Examples of such commands

include station up, station down, station memory program, and other similar commands. In step **178**, if a command is not detected, step **176** is re-invoked. Otherwise, if a command is received, step **178** invokes step **180**, wherein the received command is converted into a format recognizable by the satellite/DAB receiver connected to the present invention. For example, in this step, a command issued from a FORD car radio is converted into a format recognizable by a satellite receiver manufactured by PIONEER, Inc. Any conceivable command from any type of car radio can be formatted for use by a satellite/DAB receiver of any type or manufacture. Once the command has been formatted, step **182** is invoked, wherein the formatted command is transmitted to the satellite/DAB receiver and executed. Step **170** is then re-invoked, so that additional processing can occur.

FIG. 4d is a flowchart showing processing logic, indicated generally at 190, for integrating a plurality of auxiliary input sources with a car radio. Beginning in step 192, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 194 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 196 is invoked, wherein a second determination is made as to whether the car stereo is made as to whether the car stereo is made, step 196 is invoked, wherein a second determination is made, step 196 is re-invoked.

If a positive determination is made in step 196, an auxiliary input handling process, indicated as block 198, is invoked, allowing one or more auxiliary inputs to be connected (channeled) to the car stereo. Further, if a plurality of auxiliary inputs exist, the logic of block 198 allows a user to select a desired input from the plurality of inputs. Beginning in step 200, the CD player presence signal, described earlier, is generated by the present invention and continuously transmitted to the car stereo. If the car radio is an OEM car radio, the CD player presence signal need not be generated. Then, in step 202, the control panel buttons of the car stereo are monitored.

In a preferred embodiment of the present invention, each of the one or more auxiliary input sources are selectable by selecting a CD disc number on the control panel of the car radio. Thus, in step 204, a determination is made as to whether the first disc number has been selected. If a positive determination is made, step 206 is invoked, wherein the first auxiliary input source is connected (channeled) to the car

stereo. If a negative determination is made, step **208** is invoked, wherein a second determination is made as to whether the second disc number has been selected. If a positive determination is made, step **210** is invoked, wherein the second auxiliary input source is connected (channeled) to the car stereo. If a negative determination is made, step **212** is invoked, wherein a third determination is made as to whether the third disc number has been selected. If a positive determination is made, step **214** is invoked, wherein the third auxiliary input source is connected (channeled) to the car stereo. If a negative determination is made, step **214** is invoked, wherein the third auxiliary input source is connected (channeled) to the car stereo. If a negative determination is made, step **216** is invoked, wherein a fourth determination is made as to whether the fourth disc number has been selected. If a positive determination is made as to whether the fourth disc number has been selected. If a positive determination is made, step **216** is invoked, wherein a fourth determination is made as to whether the fourth disc number has been selected. If a positive determination is made, step **218** is invoked, wherein the fourth auxiliary input source is connected (channeled) to the car stereo. If a negative determination is made, step **200** is re-invoked, and the process disclosed for block **198** repeated. Further, if any of steps **206**, **210**, **214**, or **218** are executed, then step **200** is re-invoked and block **198** repeated.

The process disclosed in block **198** allows a user to select from one of four auxiliary input sources using the control buttons of the car stereo. Of course, the number of auxiliary input sources connectable with and selectable by the present invention can be expanded to any desired number. Thus, for example, 6 auxiliary input sources could be provided and switched using corresponding selection key(s) or keystroke(s) on the control panel of the radio. Moreover, any desired keystroke, selection sequence, or button(s) on the control panel of the radio, or elsewhere, can be utilized to select from the auxiliary input sources without departing from the spirit or scope of the present invention.

FIG. 4e is a flowchart showing processing logic, indicated generally at 220, for integrating a CD player and one or more auxiliary input sources with a car radio. Beginning in step 222, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 224 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 226 is invoked, wherein a second determination is made as to whether the car stereo is in CD player mode. If a negative determination is made, step 226 is invoked, wherein a second determination is made, step 226 is re-invoked.

If a positive determination is made in step 226, then step 228 is invoked, wherein the CD player presence signal, described earlier, is generated by the present invention and continuously transmitted to the car stereo. Then, in step 230, a determination is made as to whether a CD player is present (*i.e.*, whether an external CD player or changer is connected to the audio device integration system of the present invention). If a positive determination is made, steps 231 and 232 are invoked. In step 231, the logic of block 108 of FIG. 4a (the CD handling process), described earlier, is invoked, so that the CD player/changer can be integrated with the car stereo and utilized by a user. In step 232, a sensing mode is initiated, wherein the present invention monitors for a selection sequence (as will be discussed in greater detail) initiated by the user at the control panel of the car stereo for switching from the external CD player/changer to one or more auxiliary input sources. Step 234 is then invoked, wherein a determination is made as to whether such a sequence has been initiated. If a negative determination is made, step 234 re-invokes step 228, so that further processing can occur. Otherwise, if a positive determination is made (*i.e.*, the user desires to switch from the external CD player/changer to one of the auxiliary input sources), step 236 is invoked, wherein the audio channels of the CD player/changer are disconnected from the car stereo. Then, step 238 is invoked, wherein the logic of block 198 of FIG. 4d (the auxiliary input handling process), discussed earlier, is executed, allowing the user to select from one of the auxiliary input sources. In the event that a negative determination is made in step 230 (no external CD player/changer is connected to the present invention), then step 238 is invoked, and the system goes into auxiliary mode. The user can then select from one or more auxiliary input sources using the controls of the radio.

FIG. 4f is a flowchart showing processing logic, indicated generally at 240, for integrating a satellite receiver or DAB receiver and one or more auxiliary input sources with a car radio. Beginning in step 242, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 244 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 246 is invoked, wherein a second determination is made as to whether the car stereo is n CD player mode. If a negative determination is made, step 246 is re-invoked.

If a positive determination is made in step 246, then step 248 is invoked, wherein the CD player presence signal, described earlier, is generated by the present invention and continuously transmitted to the car stereo. Then, in step 250, a determination is made as to whether a satellite receiver or DAB receiver is present (*i.e.*, whether an external satellite receiver or DAB receiver is connected to the audio device integration system of the present invention). If a positive determination is made, steps 231 and 232 are invoked. In step 251, the logic of block 168 of FIG. 4c (the satellite/DAB receiver handling process), described earlier, is invoked, so that the satellite receiver can be integrated with the car stereo and utilized by a user. In step 252, a sensing mode is initiated, wherein the present invention monitors for a selection sequence (as will be discussed in greater detail) initiated by the user at the control panel of the car stereo for switching from the external satellite receiver to one or more auxiliary input sources. Step 254 is then invoked, wherein a determination is made as to whether such a sequence has been initiated. If a negative determination is made, step 254 re-invokes step 258, so that further processing can occur. Otherwise, if a positive determination is made (i.e., the user desires to switch from the external satellite/DAB receiver to one of the auxiliary input sources), step 256 is invoked, wherein the audio channels of the satellite receiver are disconnected from the car stereo. Then, step 258 is invoked, wherein the logic of block 198 of FIG. 4d (the auxiliary input handling process), discussed earlier, is executed, allowing the user to select from one of the auxiliary input sources. In the event that a negative determination is made in step 250 (no external satellite/DAB receiver is connected to the present invention), then step 258 is invoked, and the system goes into auxiliary mode. The user can then select from one or more auxiliary input sources using the controls of the radio.

FIG. 4g is a flowchart showing processing logic according to the present invention for integrating an MP3 player and one or more auxiliary input sources with a car stereo. Beginning in step 262, a determination is made as to whether the existing car stereo is powered on. If a negative determination is made, step 264 is invoked, wherein the present invention enters a standby mode and waits for the car stereo to be powered on. If a positive determination is made, step 266 is invoked, wherein a

second determination is made as to whether the car stereo is in CD player mode. If a negative determination is made, step **266** is re-invoked.

If a positive determination is made in step 266, then step 268 is invoked, wherein the CD player presence signal, described earlier, is generated by the present invention and continuously transmitted to the car stereo. Then, in step 270, a determination is made as to whether an MP3 player is present (*i.e.*, whether an external MP3 player is connected to the audio device integration system of the present invention). If a positive determination is made, steps 271 and 272 are invoked. In step 271, the logic of block 138 of FIG. 4b (the MP3 handling process), described earlier, is invoked, so that the CD player/changer can be integrated with the car stereo and utilized by a user. In step 272, a sensing mode is initiated, wherein the present invention monitors for a selection sequence (as will be discussed in greater detail) initiated by the user at the control panel of the car stereo for switching from the external CD player/changer to one or more auxiliary input sources. Step 274 is then invoked, wherein a determination is made as to whether such a sequence has been initiated. If a negative determination is made, step 274 re-invokes step 278, so that further processing can occur. Otherwise, if a positive determination is made (*i.e.*, the user desires to switch from the external MP3 player to one of the auxiliary input sources), step 276 is invoked, wherein the audio channels of the MP3 player are disconnected from the car stereo. Then, step 278 is invoked, wherein the logic of block 198 of FIG. 4d (the auxiliary input handling process), discussed earlier, is executed, allowing the user to select from one of the auxiliary input sources. In the event that a negative determination is made in step 270 (no external MP3 player is connected to the present invention), then step 278 is invoked, and the system goes into auxiliary mode. The user can then select from one or more auxiliary input sources using the controls of the radio.

As mentioned previously, to enable integration, the present invention contains logic for converting command signals issued from an after-market or OEM car stereo into a format compatible with one or more external audio devices connected to the present invention. Such logic can be applied to convert any car stereo signal for use with any external device. For purposes of illustration, a sample code portion is shown

in **Table 1**, below, for converting control signals from a BMW car stereo into a format understandable by a CD changer:

Table 1

```
;
    Radio requests changer to STOP (exit PLAY mode)
;
   Decoding 6805183801004C message
;
;
    Encode_RD_stop_msg:
     movlw 0x68
     xorwf BMW_Recv_buff,W
     skpz
     return
     movlw 0x05
     xorwf BMW_Recv_buff+1,W
     skpz
     return
     movlw 0x18
     xorwf BMW_Recv_buff+2,W
     skpz
     return
     movlw 0x38
     xorwf BMW_Recv_buff+3,W
     skpz
     return
    movlw 0x01
     xorwf BMW_Recv_buff+4,W
     skpz
    return
     tstf BMW Recv buff+5
     skpz
     return
    movlw 0x4C
    xorwf BMW_Recv_buff+6,W
     skpz
    return
    bsf
         BMW_Recv_STOP_msg
    return
```

The code portion shown in **Table 1** receives a STOP command issued by a BMW stereo, in a format proprietary to BMW stereos. Preferably, the received command is stored in a first buffer, such as BMW_Recv_buff. The procedure "Encode_RD_stop_msg" repetitively applies an XOR function to the STOP command, resulting in a new command that is in a format compatible with the after-market CD

player. The command is then stored in an output buffer for dispatching to the CD player.

Additionally, the present invention contains logic for retrieving information from an after-market audio device, and converting same into a format compatible with the car stereo for display thereby. Such logic can be applied to convert any data from the external device for display on the car stereo. For purposes of illustration, a sample code portion is shown in **Table 2**, below, for converting data from a CD changer into a format understandable by a BMW car stereo:

Table .	2
---------	---

______ ; Changer replies with STOP confirmation ; Encoding 180A68390002003F0001027D message ; ______ ; Load_CD_stop msg: movlw 0x18 movwf BMW Send buff movlw 0x0A movwf BMW_Send_buff+1 movlw 0x68 movwf BMW_Send_buff+2 movlw 0x39 movwf BMW Send buff+3 movlw 0x00 ;current status_XX=00, power off movwf BMW Send buff+4 movlw 0x02 ;current status YY=02, power off movwf BMW_Send_buff+5 clrf BMW Send buff+6 ;separate field, always =0 movfw BMW_MM_stat ;current status_MM , magazine config movwf BMW Send buff+7 clrf BMW_Send_buff+8 ;separate field, always =0 movfw BMW DD stat ;current status_DD , current disc movwf BMW_Send_buff+9 movfw BMW_TT_stat ;current status_TT , current track movwf BMW Send buff+10 xorwf BMW_Send_buff+9,W ;calculate check sum xorwf BMW Send buff+8,W xorwf BMW Send buff+7,W

Page 983 of 1457

xorwf BMW_Send_buff+11 ;store check sum
movlw D'12' ;12 bytes total
movwf BMW_Send_cnt
bsf BMW_Send_on ;ready to send
return
```

The code portion shown in **Table 2** receives a STOP confirmation message from the CD player, in a format proprietary to the CD player. Preferably, the received command is stored in a first buffer, such as BMW_Send_buff. The procedure "Load_CD_stop_msg" retrieves status information, magazine information, current disc, and current track information from the CD changer, and constructs a response containing this information. Then, a checksum is calculated and stored in another buffer. The response and checksum are in a format compatible with the BMW stereo, and are ready for dispatching to the car stereo.

While the above code portions are shown using assembler language, it is to be expressly understood that any low or high level language known in the art, such as C or C++, could be utilized without departing from the spirit or scope of the invention. It will be appreciated that various other code portions can be developed for converting signals from any after-market or OEM car stereo for use by an after-market external audio device, and vice versa.

FIG. 5 is a flowchart showing processing logic, indicated generally at 300 for allowing a user to switch between an after-market audio device, and one or more auxiliary input sources. As was discussed earlier, the present invention allows a user to switch from one or more connected audio devices, such as an external CD player/changer, MP3 player, satellite receiver, DAB receiver, or the like, and activate one or more auxiliary input sources. A selection sequence, initiated by the user at the control panel of the car stereo, allows such switching. Beginning in step 302, the buttons of the control panel are monitored. In step 304, a determination is made as to whether a "Track Up" button or sequence has been initiated by the user. The "Track Up" button or sequence can for a CD player, MP3 player, or any other device. If a

negative determination is made, step 306 is invoked, wherein the sensed button or sequence is processed in accordance with the present invention and dispatched to the external audio device for execution. Then, step 302 is re-invoked, so that additional buttons or sequences can be monitored.

In the event that a positive determination is made in step 304, step 308 is invoked, wherein the present invention waits for a predetermined period of time while monitoring the control panel buttons for additional buttons or sequences. In a preferred embodiment of the present invention, the predetermined period of time is 750 milliseconds, but of course, other time durations are considered within the spirit and scope of the present invention. In step 310, a determination is made as to whether the user has initiated a "Track Down" button or sequence at the control panel of the car stereo within the predetermined time period. The track down button or sequence can be for a CD player, MP3 player, or any other device. If a negative determination is made, step 312 is invoked. In step 312, a determination is made as to whether a timeout has occurred (e.g., whether the predetermined period of time has expired). If a negative determination is made, step 308 is re-invoked. Otherwise, is a positive determination is made, step 312 invokes step 306, so that any buttons or key sequences initiated by the user that are not a "Track Down" command are processed in accordance with the present invention and dispatched to the audio device for execution.

In the event that a positive determination is made in step 310 (a "Track Down" button or sequence has been initiated within the predetermined time period), then step 314 is invoked. In step 314, the audio channels of the audio device are disconnected, and then step 316 is invoked. In step 316, the logic of block 198 of FIG. 4d (the auxiliary input handling process), discussed earlier, is invoked, so that the user can select from one of the auxiliary input sources in accordance with the present invention. Thus, at this point in time, the system has switched, under user control, from the audio device to a desired auxiliary input. Although the foregoing description of the process 300 has been described with reference to "Track Up" and "Track Down" buttons or commands initiated by the user, it is to be expressly understood that any desired key sequence, keystroke, button depress, or any other action, can be sensed in accordance with the present invention and utilized for switching modes.

When operating in auxiliary mode, the present invention provides an indication on the display of the car stereo corresponding to such mode. For example, the CD number could be displayed as "1", and the track number displayed as "99," thus indicating to the user that the system is operating in auxiliary mode and that audio and data is being supplied from an auxiliary input source. Of course, any other indication could be generated and displayed on the display of the car stereo, such as a graphical display (*e.g.*, an icon) or textual prompt.

FIG. 6 is a flowchart showing processing logic, indicated generally at 320, for determining and handling various device types connected to the auxiliary input ports of the invention. The present invention can sense device types connected to the auxiliary input ports, and can integrate same with the car stereo using the procedures discussed earlier. Beginning in step 322, the control panel buttons of the car stereo are monitored for a button or sequence initiated by the user corresponding to an auxiliary input selection (such as the disc number method discussed earlier with reference to FIG. 4d). In response to an auxiliary input selection, step 324 is invoked, wherein the type of device connected to the selected auxiliary input is sensed by the present invention. Then, step 326 is invoked.

In step 326, a determination is made as to whether the device connected to the auxiliary input is a CD player/changer. If a positive determination is made, step 328 is invoked, wherein the logic of block 108 of FIG. 4a (the CD handling process), discussed earlier, is executed, and the CD player is integrated with the car stereo. If a negative determination is made in step 326, then step 330 is invoked. In step 330, a determination is made as to whether the device connected to the auxiliary input is an MP3 player. If a positive determination is made, step 334 is invoked, wherein the logic of block 138 if FIG. 4b (the MP3 handling process), discussed earlier, is executed, and the MP3 player is integrated with the car stereo. If a negative determination is made in step 330, then step 336 is invoked. In step 336, a determination is made as to whether the device connected to the auxiliary input is a stellite receiver or a DAB receiver. If a positive determination is made, step 338 is invoked, wherein the logic of block 168 of FIG. 4c (the satellite/DAB receiver handling process), discussed earlier, is executed, and the satellite receiver is integrated with the car stereo. If a negative determination is made as to whether the device connected to the auxiliary input is a satellite receiver or a DAB receiver. If a positive determination is made, step 338 is invoked, wherein the logic of block 168 of FIG. 4c (the satellite/DAB receiver handling process), discussed earlier, is executed, and the satellite receiver is integrated with the car stereo. If a negative determination is made in step 326, the satellite receiver is integrated with the car stereo. If a negative determination is made in step 336, step 322 is re-

invoked, so that additional auxiliary input selections can be monitored and processed accordingly. Of course, process **320** can be expanded to allow other types of devices connected to the auxiliary inputs of the present invention to be integrated with the car stereo.

The present invention can be expanded for allowing video information generated by an external device to be integrated with the display of an existing OEM or after-market car stereo. In such a mode, the invention accepts RGB input signals from the external device, and converts same to composite signals. The composite signals are then forwarded to the car stereo for display thereby, such as on an LCD panel of the stereo. Further, information from the external device can be formatted and presented to the user in one or more graphical user interfaces or menus capable of being viewed and manipulated on the car stereo.

FIG. 7a is a perspective view of a docking station 400 according to the present invention for retaining an audio device within a car. Importantly, the present invention can be adapted to allow portable audio devices to be integrated with an existing car stereo. The docking station 400 allows such portable devices to be conveniently docked and integrated with the car stereo. The docking station 400 includes a top portion 402 hingedly connected at a rear portion 408 to a bottom portion 404, preferably in a clam-like configuration. A portable audio device 410, such as the SKYFI radio distributed by DELPHI, Inc., is physically and electrically connected with the docking portion 412, and contained within the station 100. A clasp 406 can be provided for holding the top and bottom portions in a closed position to retain the device 410. Optionally, a video device could also be docked using the docking station 400, and tabs 413 can be provided for holding the docking station 400 could take any form, such as a sleeve-like device for receiving and retaining a portable audio device and having a docking portion for electrically and mechanically mating with the audio device.

FIG. 7b is an end view showing the rear portion 408 of the docking station 400 of FIG. 7a. A hinge 414 connects the top portion and the bottom portions of the docking station 400. A data port 416 is provided for interfacing with the audio device docked within the station 400, and is in electrical communication therewith. In a preferred embodiment of the present invention, the data port 416 is an RS-232 serial or

USB data port that allows for the transmission of data with the audio device, and which connects with the audio device integration system of the present invention for integrating the audio device with an OEM or after-market car stereo. Any known bus technology can be utilized to interface with any portable audio or video device contained within the docking station **400**, such as FIREWIRE, D2B, MOST, CAN, USB/USB2, IE Bus, T Bus, I Bus, or any other bus technology known in the art.

FIGS. 8a-8b are perspective views of another embodiment of the docking station of the present invention, indicated generally at 500, which includes the audio device integration system of the present invention, indicated generally at 540, incorporated therewith. As shown in FIG. 8a, the docking station 500 includes a base portion 530, a bottom member 515 interconnected with the base portion 530 at an edge thereof, and a top member 510 hingedly interconnected at an edge to the base portion 530. The top member 510 and the bottom member 515 define a cavity for docking and storing a portable audio device 520, which could be a portable CD player, MP3 player, satellite (*e.g.*, XM, SIRIUS, or other type) tuner, or any other portable audio device. The docking station 500 would be configured to accommodate a specific device, such as an IPOD from Apple Computer, Inc., or any other portable device.

The audio device integration system 540, in the form of a circuit board, is housed within the base portion 530 and performs the integration functions discussed herein for integrating the portable audio device 520 with an existing car stereo. The integration system 540 is in communication with the portable audio device 520 via a connector 550, which is connected to a port on the audio device 520, and a cable 555 interconnected between the connector 550 and the integration system 540. The connector 550 could be any suitable connector and can vary according to the device type. For example, a MOLEX, USB, or any other connector could be used, depending on the portable device. The integration system 540 is electrically connected with a car stereo by cable 560. Alternatively, the integration system could wirelessly communicate with the car stereo. A transmitter could be used at the integration system to communicate with a receiver at the car stereo. Where automobiles include Bluetooth systems, such systems can be used to communicate with the integration system. As can be readily appreciated, the docking station 500 provides a convenient device for docking, storing, and integrating a portable audio device for use with a car

stereo. Further, the docking station **500** could be positioned at any desired location within a vehicle, including, but not limited to, the vehicle trunk.

As shown in FIG. 8b, the top member 510 can be opened in the general direction indicated by arrow A to allow for access to the portable audio device 520. In this fashion, the device 520 can be quickly accessed for any desired purpose, such as for inserting and removing the device 520 from the docking station 500, as well as for providing access to the controls of the device 520.

FIG. 9 is a block diagram showing the components of the docking station of FIGS. 8a-8b. The docking station 500 houses both a portable audio device 520 and an audio device integration system (or interface) 540. The shape and configuration of the docking station 500 can be varied as desired without departing from the spirit or scope of the present invention.

The integration system of the present invention provides for control of a portable audio device, or other device, through the controls of the car stereo system. As such, controls on the steering wheel, where present, may also be used to control the portable audio device or other device.

Having thus described the invention in detail, it is to be understood that the foregoing description is not intended to limit the spirit and scope thereof.

<u>CLAIMS</u>

What is claimed is:

1. An audio device integration system comprising:

a car stereo;

an audio device external to the car stereo;

an interface connected between the car stereo and the audio device for exchanging data and audio signals between the car stereo and the audio device;

means for processing and dispatching commands for controlling the audio device from the car stereo in a format compatible with the audio device; and

means for processing and displaying data from the audio device on a display of the car stereo in a format compatible with the car stereo.

2. The apparatus of claim 1, wherein the car stereo is an OEM car stereo.

3. The apparatus of claim 1, wherein the car stereo is an after-market car stereo.

4. The apparatus of claim 1, wherein the audio device comprises a CD player, CD changer, MP3 player, Digital Audio Broadcast (DAB) receiver, or satellite receiver.

5. The apparatus of claim 1, wherein the interface further comprises a plug-andplay mode for automatically detecting a device type of the audio device and integrating the audio device based upon the device type.

6. The apparatus of claim 1, wherein the interface generates a CD player presence signal for maintaining the car stereo in a state responsive to processed data and audio signals.

7. The apparatus of claim 1, wherein the data comprises track and time information.

8. The apparatus of claim 1, wherein the data comprises song title and artist information.

9. The apparatus of claim 1, wherein the data comprises channel number and channel name information.

10. The apparatus of claim 1, wherein the data comprises video information.

11. The apparatus of claim 1, wherein the data is displayed as a menu on the display of the car stereo.

12. The apparatus of claim 1, wherein the data is displayed in a graphical interface on a graphic panel.

13. The apparatus of claim 1, wherein the commands are input by a user using one or more control buttons or presets on the car stereo.

14. The apparatus of claim 1, further comprising one or more auxiliary input sources connected to the interface.

15. The apparatus of claim 14, wherein audio signals from the one or more auxiliary input sources are selectively channeled to the car stereo by the interface.

16. The apparatus of claim 14, wherein a user can select between the one or more auxiliary input sources by depressing keys on the car stereo.

17. The apparatus of claim 14, wherein a user can select one of the auxiliary input sources by entering a disc number at the car stereo.

18. The apparatus of claim 14, wherein a user can select one of the auxiliary input sources by entering a track number at the car stereo.

19. The apparatus of claim 14, wherein a user can select one of the auxiliary input sources by entering both disc and track numbers at the car stereo.

20. The apparatus of claim 14, wherein a user can select between the audio device and the one or more auxiliary input sources by entering a sequence at the car stereo.

21. The apparatus of claim 20, wherein the sequence comprises a track up selection followed by a track down selection.

22. The apparatus of claim 1, further comprising a second interface connected to the first interface for providing a plurality of auxiliary input sources.

23. The apparatus of claim 22, wherein both the first interface and the second interface are controllable using the car stereo.

24. An audio device integration system comprising: a car stereo;

a plurality of auxiliary input sources;

an interface connected between the car stereo and the plurality of auxiliary input sources;

means for processing and dispatching commands for controlling an audio device connected to one of the plurality of auxiliary input sources from the car stereo in a format compatible with the audio device;

means for processing and displaying data from the audio device on a display of the car stereo in a format compatible with the car stereo; and

Page 991 of 1457

means for selecting one of the plurality of auxiliary input sources from the car stereo.

25. The apparatus of claim 24, wherein the means for selecting one of the plurality of auxiliary input sources comprises a disc or track selection entered by a user using control buttons of the car stereo.

26. The apparatus of claim 24, wherein the audio device comprises a CD player, CD changer, MP3 player, satellite receiver, or DAB receiver.

27. The apparatus of claim 24, wherein a device type of the audio device is automatically detected by the interface and the audio device is automatically integrated with the car stereo based upon the device type.

28. The apparatus of claim 24, wherein the interface is switchable into an auxiliary input mode by issuing a control sequence at the car stereo.

29. The apparatus of claim 28, wherein the control sequence comprises a track up command followed by a track down command.

30. A method for integrating a device with a car stereo comprising: connecting an interface to the car stereo and the device to the interface; receiving control commands from the car stereo at the interface; processing the control commands into a format compatible with the device and

dispatching processed control commands to the device;

receiving data and audio from the device at the interface;

processing the data into a second format compatible with the car stereo and dispatching the audio and processed data to the car stereo; and

displaying the processed data on the car stereo and playing the audio through the car stereo.

31. The method of claim 30, wherein the step of receiving data from the device comprises retrieving CD track and time information from the device.

32. The method of claim 30, wherein the step of receiving data from the device comprises retrieving MP3 song, title, track, and time information from the device.

33. The method of claim 30, wherein the step of receiving data from the device comprises retrieving channel number, channel name, artist, and song information from the device.

34. The method of claim 30, wherein the step of receiving data from the device comprises retrieving video information from the device.

35. The method of claim 30, wherein the step of displaying the processed data comprises displaying the data in an LCD panel.

36. The method of claim 30, wherein the step of displaying the processed data comprises displaying the data in a graphical user interface at the car stereo.

37. The method of claim 30, wherein the step of displaying processed data comprises displaying video at the car stereo.

38. The method of claim 30, wherein the step of connecting the audio device to the interface comprises connecting a CD player, CD changer, MP3 player, satellite receiver, or DAB receiver to the interface.

39. The method of claim 30, further comprising connecting an auxiliary input source to the interface.

40. The method of claim 39, further comprising receiving a selection command from the car stereo and channeling data and audio from the auxiliary input source to the interface in response to the selection command.

41. The method of claim 40, further comprising processing the data from the auxiliary input source for display on the car stereo.

42. An apparatus for docking a portable device for integration with a car stereo comprising:

a top member interconnected with a bottom member and defining a storage area for storing the portable device;

a docking portion within the storage area for electrically communicating and physically mating with the portable device; and

a data port disposed on the top member or the bottom member and in electrical communication with the docking portion, the data port connectable with a device for integrating the portable device with the car stereo.

43. The apparatus of claim 42, further comprising a hinge for connecting the top member and bottom member at an edge thereof.

44. The apparatus of claim 42, wherein the data port comprises an RS-232 or USB port.

45. The apparatus of claim 42, wherein the top portion and the bottom portion define a sleeve for holding the portable audio device.

46. The apparatus of claim 42, further comprising a clasp for retaining the top and bottom members in a closed position.

47. A method of integrating an after-market device with an OEM or after-market car stereo comprising:

connecting the after-market device to an interface;

connecting the interface to a car stereo;

determining whether the car stereo is an OEM car stereo or an after-market car stereo;

if the car stereo is an after-market car stereo, generating and transmitting a presence signal to the car stereo to maintain the car stereo in an operational state responsive to external signals; and

selectively channeling data and audio signals from the after-market device to the car stereo using the interface.

48. The method of claim 47, further comprising receiving control commands from the car stereo at the interface.

49. The method of claim 48, further comprising converting the control commands into a format recognizable by the after-market audio device.

50. The method of claim 49, further comprising dispatching formatted commands to the after-market audio device for execution thereby.

51. The method of claim 47, further comprising converting data received at the interface from the after-market audio device into a format compatible with the car stereo.

52. The method of claim 51, further comprising displaying formatted data on the car stereo.

53. The method of claim 52, wherein the step of displaying formatted data comprises displaying channel numbers, channel names, titles, tracks, song names, or artist names on the car stereo.

54. The method of claim 52, wherein the step of displaying formatted data comprises displaying video on the car stereo.

55. A docking station for docking and integrating a portable audio device for use with a car stereo, comprising:

a base portion;

a bottom member connected to the base portion;

a top member connected to the base portion, the base portion, bottom member, and top member defining a cavity for receiving a portable device; and

an integration device positioned within the base portion for integrating the portable device with a car stereo.

56. The apparatus of claim 55, wherein the top member is hingedly connected at an edge to the base portion.

57. The apparatus of claim 55, wherein the base portion comprises a connector for connecting the integration device with the portable device.

58. The apparatus of claim 55, further comprising a cable interconnected at one end to the integration device and at an opposite end to the car stereo.

59. The apparatus of claim 55, wherein the integration device is wirelessly connected to the car stereo.

60. The apparatus of claim 59, wherein the integration device is connected to the car stereo by a Bluetooth wireless connection.

61. The apparatus of claim 55, wherein the portable device comprises a CD player, CD changer, MP3 player, Digital Audio Broadcast (DAB) receiver, or satellite receiver.

62. The apparatus of claim 61, wherein the satellite tuner comprises an XM or SIRIUS satellite tuner.

63. The apparatus of claim 55, wherein the integration device comprises a circuit board housed in the base portion.

64. The apparatus of claim 55, wherein the apparatus is mountable in a vehicle trunk.

65. The apparatus of claim 55, wherein the top member is pivotable away from the bottom member to allow access to the portable device.

66. The apparatus of claim 55, wherein the integration device is connected to the car stereo using a Firewire, D2B, MOST, CAN, USB, USB2, IE Bus, T Bus, I Bus, or serial connection.

67. The apparatus of claim 55, wherein the car stereo is an OEM or after-market car stereo.

68. The apparatus of claim 55, further comprising one or more auxiliary input ports connected to the integration device for integrating additional portable devices external to the docking station.

69. A method for docking and integrating a portable audio device for use with a car stereo, comprising:

providing a docking station having a base portion, a bottom member connected to the base portion, a top member connected to the base portion, and an integration device housed within the base portion;

inserting a portable device into the docking station and connecting the portable device to a connector on the base portion; and

integrating the portable device with the integration device for use with a car stereo.

70. The method of claim 69, further comprising opening the top member away from the bottom member prior to inserting the portable device into the docking station.

71. The method of claim 69, further comprising closing the top member to retain the portable device in the docking station.

72. The method of claim 69, further comprising interconnecting the integration device with the car stereo with a cable.

73. The method of claim 69, further comprising establishing a wireless connection between the integration device and the car stereo.

74. The method of claim 73 further comprising establishing a Bluetooth wireless connection between the integration device and the car stereo.

75. The method of claim 69, further comprising integrating a CD player, CD changer, MP3 player, Digital Audio Broadcast (DAB) receiver, or satellite receiver with the car stereo.

76. The method of claim 69, further comprising integrating an XM or SIRIUS satellite tuner with the car stereo.

77. The method of claim 69, further comprising mounting the docking station in a vehicle trunk.

78. The method of claim 69, further comprising connecting the integration device to the car stereo using a Firewire, D2B, MOST, CAN, USB, USB2, IE Bus, T Bus, I Bus, or serial connection.

79. The method of claim 69, further comprising integrating the portable device with an after-market or OEM car stereo.

80. The method of claim 69, further comprising connecting an external portable device to an auxiliary input port on the docking station and integrating the external portable device with the car stereo.

(54) CAR DIGITAL COMBINATION SYSTEM

(57) Abstract:

PURPOSE: A car digital combination system is provided to enhance performance of a car A/V system by permitting a digital data each genre, such as a learning data, a car repair guide, a data for so called singing room realization, and so on which are processed in a caption player by organically coupling a digital caption player to a car A/V system, to be displayed on a large size screen for a car A/V system or a car navigation system. CONSTITUTION: A digital caption player(100) a downloads various digital data including a caption synchronized with a digital audio, reproduce the digital

data, and digital-records a voice inputted from the outside. A docking station(200) accommodates the digital caption player(100) to fix it on a front face panel of a car and connects a digital caption character output signal and an audio output signal and a control signal for function selection/control from the digital caption layer(100) to a car A/V system(300). The car A/V system(300) receives digital data of the digital caption player (100) inputted through the docking station(200) and outputs the audio and caption data to display devices for a speaker and a monitor, respectively. The digital caption player(100) and the car A/V system(300) having a display device(306) of a large size screen are arranged in the vicinity of centerpesia of the car. The digital caption player(100) is organically coupled to the car A/V system(300) through the docking station(200) for holding the digital caption player(100). The car A/V system(300) may include a car navigation.

(54) COMPACT DISK CHANGER OPERATING SYSTEM

(57) Abstract:

PURPOSE: A compact disk changer operating system is provided to reduce inconvenience caused by installing a cable and a cost by deleting DIN cable. CONSTITUTION: An audio head unit(20) is installed in a vehicle and has a wireless transmitting apparatus to be able to transmit by a wireless. A CD changer(30) has a wireless receiving apparatus receives a signal from the wireless transmitting apparatus and is made an operating control by the audio head unit(20). The wireless transmitting apparatus of the audio head unit(20) is composed of

an infrared emitting diode(21). The wireless receiving apparatus of the CD changer(30) is composed of a photo diode(31). The infrared emitting diode(21) and the photo diode(31) are just only one example of practice and is not restricted by practice example if only transmission and reception can be possible by the wireless. In the same manner installation position of the infrared emitting diode(21) and the photo diode (31) also are not limited to a special position.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

TITLE OF INVENTION: AUDIO DEVICE INTEGRATION SYSTEM

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	\$720	\$O	\$0	\$720	10/31/2008

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. <u>PROSECUTION ON THE MERITS IS CLOSED</u>. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN <u>THREE MONTHS</u> FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. <u>THIS STATUTORY PERIOD CANNOT BE EXTENDED</u>. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:	If the SMALL ENTITY is shown as NO:
A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.	A. Pay TOTAL FEE(S) DUE shown above, or
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or	B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PTOL-85 (Rev. 08/07) Approved for use through 08/31/2010.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 820 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 820 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 21, 2008 has been entered.

Allowable Subject Matter

Claims 1-13, 15-38, 40-57, 59-65, 67-74 and 76-104 are allowed. For the purposes of allowance, the original numbering of the claims has been changed.

The following is an examiner's statement of reasons for allowance:

The general concept of interfacing auxiliary after-market devices with a car stereo was known in the art at the time of the invention as evidenced by Owens et al (US 2002/0084910 A1) and Beckert et al (US 6,175,789 B1). However, the Examiner has not found prior art that teaches or suggests an interface unit containing a pre-programmed microcontroller that allows for the communication of incompatible audio devices as presented in the independent claims 1, 24, 30, 42, 55, 63 and 72. The Examiner has not found prior art that teaches or suggests an interface unit that includes a microcontroller pre-programmed to execute a code portion for generating and transmitting a device presence signal to a car stereo to maintain the stereo in an operational state responsive to signals from an after-market device as presented in the

Page 1039 of 1457

Application/Control Number: 10/316,961 Art Unit: 2615

independent claims 47, 81, 83, 104. Other prior art has been cited herein regarding the interfacing of audio devices with car stereos, however the other prior art of record also fails to teach or provide suggestion to arrive the combination of the elements and steps presented in the independent claims, again when said elements or steps are collectively considered in regards to each claim. For at least the reasons listed above, the dependent claims are also allowed in view of their respective dependencies upon the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JASON R. KURR whose telephone number is (571)272-0552. The examiner can normally be reached on M-F 10:00am to 6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivian Chin can be reached on (571) 273-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/316,961 Art Unit: 2615

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant. ¹ Applicant's unique citation designation number (optional). ² See Kinds Codes of USPTO Patent Documents at <u>www.uspto.cov</u> or MPEP 901.04. ³ Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). ⁴ For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. ⁵Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST.16 if possible. ⁵ Applicant is to place a check mark here if English language Translation is attached.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

REQUEST UNDER 37 C.F.R. 3.81(b) FOR CORRECTION OF ASSIGNEE

MAIL STOP PETITION

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

Applicant submits this Petition under 37 C.F.R. 3.81(b) to correct the assignee information of the above-caption application.

The present application was initially assigned from the inventor Ira M. Marlowe to Blitzsafe of America, Inc., as indicated by the assignment recorded on June 18, 2003 (found on Reel 014184, Frame 0756). The application was then re-assigned back to the inventor, as indicated by the assignment recorded on September 7, 2005 (found on Reel 016502, Frame 0043). These assignments were submitted for recordation, and were recorded, well before issuance of a patent.

The Issue Fee for this application was paid on August 15, 2008. Unfortunately, the Name of Assignee section of Form PTOL-85B incorrectly listed Blitzsafe of America, Inc. as assignee. However, this section of the form should have been left blank, and no assignee should have been listed.

ME1 7640925v.1

Page 1068 of 1457

As required by 37 C.F.R. 3.81(b) and M.P.E.P. §307, Applicant herewith submits a request for a Certificate of Correction under 37 C.F.R. §1.323, as well as the fees required under 37 C.F.R. §§1.20(a) and 1.17(i). Since this request is being submitted shortly after payment of the Issue Fee, Applicant believes that the United States Patent and Trademark Office should have sufficient time to correct the ribbon copy prior to issuance so that it does <u>not</u> recite assignee information. Accordingly, Applicant requests that the ribbon copy be printed <u>without</u> assignce information.

Dated: August 19, 2008

Respectfully submitted,

Mark Erling

MICHAEL R FRISCIA MCCARTER & ENGLISH FOUR GATEWAY CENTER 100 MULBERRY STREET NEWARK NJ 07102

NOV 0 7 2008

In Application of
Ira Marlowe
Application No. 10/316,961
Filed: December 11, 2002
Attorney Docket No.9809/1

ON PETITION

This is a decision on the petition filed August 19, 2008, which is being treated as a request under 37 CFR $3.81(b)^1$ to correct assignee data on the Fee(s) Transmittal form PTOL-85(b) so that the Letter of Patent will issue without an assignee name.

The request is **DISMISSED**.

Petitioner states that the assignee data was cited incorrectly on the Fee(s) Transmittal as "Blitzsafe of America". Accordingly, petitioner requests that the issued patent reflect no assignee on the front page of the Letters of Patent.

A review of the application file history and assignment records reveals that on June 18, 2003, an assignment was recorded from Ira M. Marlowe to Blitzsafe of America. On September 7, 2005, another assignment was recorded from Blitzsafe of America to Ira Marlowe. On August 15, 2008, the issue fee was paid and Form PTOL-85B was filed noting that Blitzsafe of America should be listed as the assignee on the front page of the Letters of Patent. Petitioner now files the instant petition requesting that no assignee appear on the front page of the Letter of Patent.

37 CFR 3.81(b), effective June 25, 2004, reads:

After payment of the issue fee: Any request for issuance of an application in the name of the Assignee submitted after the date of payment of the issue fee, and any request for a patent to be corrected to state the name of the assignee, must state that the assignment was submitted for recordation as set forth in § 3.11 before issuance of the patent, and <u>must</u> include a request for a certificate of correction under § 1.323 of this chapter (accompanied by the fee set forth in § 1.20(a)) and the processing fee set forth in § 1.17(i) of this chapter.

¹ See MPEP 1309, subsection II and <u>Official Gazette</u> of June 22, 2004.

In re Application of Ira M. Marlowe 10/316,961

Accordingly, the Letters of Patent will issue with Blitzsafe of America as the assignee. After issuance of the Letter of Patent, petitioner may file a renewed request under 37 CFR 3.81(b) and Certificate of Correction requesting that Ira Marlowe be listed as the assignee for the patent.

Telephone inquiries concerning this decision may be directed to the undersigned at (571) 272-3222.

The application file is directed to the Office of Data Management for further processing.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment is 820 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (571)-272-4200.

PETITION TO WITHDRAW FROM ISSUE UNDER 37 C.F.R. 1.313(c)

Mail Stop Petition

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

Applicant respectfully requests withdrawal from issuance of the above-identified patent application, which is scheduled to issue on <u>December 9, 2008</u>, in favor of the Request for Continued Examination (RCE) and Supplemental Information Disclosure Statement (IDS) submitted herewith.

The undersigned recently became aware of an International Search Report and Written Opinion and references contained therein, in connection with Applicant's co-pending PCT patent application. Additionally, an Office Action and cited references from Applicant's co-pending application Serial No. 10/732,909, as well as two Japanese references from a companion Japanese patent application, are being disclosed in the present IDS. None of the references being disclosed in the present IDS have been considered during prosecution of the present application. As such, it is respectfully requested that the present application be withdrawn from issuance so that the references

1

ME1 7928801v.1

Page 1073 of 1457

are made of record by way of the IDS submitted herewith and considered by the USPTO.

The USPTO is hereby authorized to charge Deposit Account No. 503571 for any and all charges due in connection with this submission, including, but not limited to, the petition fee under 37 C.F.R. § 1.17(h) for this Petition, as well as the required RCE fee. The Office is also authorized to charge any other required fees or underpayment and/or credit any underpayment to Deposit Account 503571.

(54)【発明の名称】 車載用ヘッドユニット及び車載用外部機器

(57)【要約】

【課題】 車載用オーディオの外部機器を低コストでか つ利用しやすいものとすること。

【解決手段】 内部音楽ソース4からの音声信号を増幅 するアンプ8と、外部機器を接続する外部機器コネクタ 10と、この外部機器コネクタ10にケーブルを介して 接続される外部機器から入力される音声信号と前記内部 音楽ソースから入力される音声信号とを切替える切替ス イッチ18と、前記内部音楽ソース4と前記外部機器3 0との切替えを制御する制御手段6とを備えている。し かも、外部機器コネクタ31が、バス接続用の複数のバ ス用ピン12を接続するバス用ピン接続端子と、このバ ス用ピン12を接続するバス用ピン接続端子と、このバ ス用ピンに併設されコントロール信号を送受する2つの コントロール用ピン接続端子と、前記外部機器と接続さ れる前記バス用ピンおよび前記コントロールピンとを有 する1本のケーブルを係合するコネクタ本体11とを備 えた。

Page 1080 of 1457

【特許請求の範囲】

【請求項1】 内部音楽ソースからの音声信号を増幅す るアンプと、外部機器を接続する外部機器コネクタと、 この外部機器コネクタにケーブルを介して接続される外 部機器から入力される音声信号と前記内部音楽ソースか ら入力される音声信号とを切替える切替スイッチと、前 記内部音楽ソースと前記外部機器との切替えを制御する 制御手段とを備えた車載用ヘッドユニットにおいて、

前記外部機器コネクタが、バス接続用の複数のバス用ピン接続端子と、このバス用ピンに併設されコントロール 信号を送受する2つのコントロール用ピン接続端子と、 前記外部機器と接続される前記バス用ピンおよび前記コ ントロールピンとを有する1本のケーブルを係合するコ ネクタ本体とを備えたことを特徴とする車載用ヘッドユ ニット。

【請求項2】 前記制御手段が、前記始動時に前記バス 用ピンと前記コントロールピンとに接続チェック信号そ れぞれ送信すると共に当該接続チェック信号に応答があ った側のピン接続端子を有効と設定する第1の接続開始 制御部を備えたことを特徴とする請求項1記載の車載用 ヘッドユニット。

【請求項3】 前記制御手段が、前記始動時に前記2つ のコントロール用ピン接続端子のうち一方を予め定めら れた一定期間中ハイにすると共に当該一定期間経過後は 当該2つのコントロール用ピン接続端子への出力を前記 始動時前の状態に戻す第2の接続開始制御部を備えたこ とを特徴とする請求項1記載の車載用ヘッドユニット。 【請求項4】 ヘッドユニットに対して外部機器となる TV, CD又はMD等の外部音楽ソースを再生する再生 手段と、この再生手段によって再生される音声信号を前 記ヘッドユニットハケーブルを介して伝達するためのヘ ッドユニット用コネクタと、このヘッドユニット用コネ クタから入力される制御信号に応じて前記再生手段を制 御する外部機器制御手段とを備えた車載用外部機器にお いて、

前記ヘッドユニット用コネクタが、バス接続用の複数の バス用ピン接続端子と、このバス用ピンに併設されコン トロール信号を送受する2つのコントロール用ピン接続 端子と、前記外部機器と接続される前記バス用ピンおよ び前記コントロールピンとを有する1本のケーブルを係 合するコネクタ本体とを備えると共に、

前記再生手段に、前記ヘッドユニット用コネクタから入 力される接続チェック信号に応じて前記コントロール用 ピン接続端子又は前記バス用ピン接続端子の一方を選択 する接続切替手段を備えたことを特徴とする車載用外部 機器。

【請求項5】 ヘッドユニットに対して外部機器となる TV, CDXはMD等の外部音楽ソースを再生する再生 手段と、前記ヘッドユニットから入力される制御信号に 応じて前記再生手段を制御する外部機器制御手段とを備 えた車載用外部機器において、

前記外部機器制御手段に、前記ヘッドユニット又は他の 外部機器と接続する2以上の拡張コネクタを併設し、

前記拡張コネクタが、バス接続用の複数のバス用ピン接 続端子と、このバス用ピンに併設されコントロール信号 を送受する2つのコントロール用ピン接続端子と、前記 外部機器と接続される前記バス用ピンおよび前記コント ロールピンとを有する1本のケーブルを係合するコネク タ本体とを備え、

前記外部機器制御手段が、前記ヘッドユニットが接続さ れたコネクタに対して前記コントロール用ピン接続端子 を有効と設定すると共に前記他の外部機器が接続された コネクタに対して前記バス用ピン接続端子を有効に設定 する複数接続制御部を備えたことを特徴とする車載用外 部機器。

【発明の詳細な説明】

[0001]

【発明の属する技術分野】本発明は、車載用ヘッドユニ ット及び車載用外部機器に係り、特に、車載用ヘッドユ ニットに車載用外部機器を増設する際の接続方式に特徴 のある車載用ヘッドユニット及び車載用外部機器に関す る。

[0002]

【従来の技術】従来、車載用オーディオのヘッドユニットと外部機器の接続方式は、デッキ接続とバス接続の2 通がある。一般的には、ヘッドユニットは例えばFM/ AMラジオ付きカセットであり、一方、外部機器はCD プレーヤ、MDプレーヤまたはTV等である。

【0003】

【発明が解決しようとする課題】しかしながら、上記従 来例では、デッキ接続とバス接続の接続方式は互換性が ないため、CDプレーヤはデッキ接続用とバス接続用の 二種類を用意しなければならない、という不都合があっ た。このため、ユーザは、外部機器を選定する時に、自 分のヘッドユニットがデッキ接続用であるのか、それと もバス接続用であるのかを確認しなければならなかっ た。

[0004]

【発明の目的】本発明は、係る従来例の有する不都合を 改善し、特に、車載用オーディオの外部機器を低コスト でかつ利用しやすいものとすることのできる車載用ヘッ ドユニット及び車載用外部機器を提供することを、その 目的とする。

[0005]

【課題を解決するための手段】そこで、本発明による車 載用ヘッドユニットでは、内部音楽ソースからの音声信 号を増幅するアンプと、外部機器を接続する外部機器コ ネクタと、この外部機器コネクタにケーブルを介して接 続される外部機器から入力される音声信号と前記内部音 楽ソースから入力される音声信号とを切替える切替スイ

Page 1081 of 1457

ッチと、前記内部音楽ソースと前記外部機器との切替え を制御する制御手段とを備えている。そして、外部機器 コネクタが、バス接続用の複数のバス用ピン接続端子 と、このバス用ピンに併設されコントロール信号を送受 する2つのコントロール用ピン接続端子と、前記外部機 器と接続される前記バス用ピンおよび前記コントロール ピンとを有する1本のケーブルを係合するコネクタ本体 とを備えた、という構成を採っている。これにより前述 した目的を達成しようとするものである。

【0006】ここでは、外部機器コネクタが、バス接続 用のバス用ピン接続端子と、デッキ接続用のコントロー ル用ピン接続端子とを備えたため、いずれの接続形式の 外部機器であっても、同一のケーブルで接続される。こ のため、外部機器の購入に際して、ヘッドユニットのコ ネクタ形状に応じて外部機器を選択する必要がない。

【0007】

【発明の実施の形態】以下、本発明の実施の形態を図面 を参照して説明する。図1は本発明による車載用ヘッド ユニットと当該車載用ヘッドユニットに接続した車載用 外部機器との構成を示すブロック図である。図1に示す ように、車載用ヘッドユニット2は、内部音楽ソース4 からの音声信号を増幅するアンプ8と、外部機器を接続 する外部機器コネクタ10と、この外部機器コネクタ1 0にケーブルを介して接続される外部機器から入力され る音声信号と前記内部音楽ソースから入力される音声信 号とを切替える切替スイッチ18と、前記内部音楽ソー ス4と前記外部機器30との切替えを制御する制御手段 6とを備えている。

【0008】しかも、図2に示すように、外部機器コネ クタ31が、バス接続用の複数のバス用ピン12を接続 するバス用ピン接続端子(図2のピン番号1,2のBU S+と-)と、このバス用ピンに併設されコントロール信 号を送受する2つのコントロール用ピン接続端子(図2 のピン番号5,13のCONT1及び2)と、前記外部 機器と接続される前記バス用ピンおよび前記コントロー ルピンとを有する1本のケーブルを係合するコネクタ本 体11とを備えている。

【0009】図2に示すように、本実施形態ではヘッド ユニット2と外部機器30とを接続するコネクタ及び信 号ラインをデッキ接続用とバス接続用の両方を含む形態 としている。デッキ接続Dは、図3(A)に示すよう に、外部機器を1台のみ接続する方式である。その長所 は低コストで製造できる点にあり、対処は、1台のみの 接続であることと、CDチェンジャーなどをヘッドユニ ットの操作により制御することができない点にある。デ ッキ接続では、例えば、ヘッドユニットの内部音楽ソー ス(ラジオ、テープ)が動作中はCONT1を"Hi" とし、外部機器が動作中にヘッドユニットが動作すると、 CONT1を"Hi"とする。これに応じて外部機器は 再生を停止し、CONT2を"Lo"とする。

【0010】一方、バス接続は複数台の外部機器の接続 が可能であり、また、CDチェンジャッーなどの制御を ヘッドユニットで行うことができる。バス接続では、各 機器にアドレスを割り当ててバスにより接続し、動作、 停止等の要求をやりとりすることで連携する。バス接続 では、通信用ICが必要となり、マイコン処理が増える ため、コストが高くなってしまう。一般的に、デッキ接 続は廉価品に、バス接続は高級品に使用されている。

【0011】本実施形態では、図1に示すように、図2 に示した方式の13ピンを用いることで、ヘッドユニッ トがバス接続であるのかまたはデッキ接続であるのかに 関わらず、同一の外部機器を接続することができる。図 1に示す例では、外部機器は、ヘッドユニットに対して 外部機器となるTV, CD又はMD等の外部音楽ソース を再生する再生手段34と、この再生手段34によって 再生される音声信号を前記ヘッドユニットヘケーブルを 介して伝達するためのヘッドユニット用コネクタ31

トレマには定するためら、マームニット用コネクタ31から入力される 制御信号に応じて前記再生手段34を制御する外部機器 制御手段32とを備えている。そして、ヘッドユニット 用コネクタ31は、上述した外部機器コネクタと同一の 形状、構造を採っている。そして、ヘッドユニット用コ ネクタから入力される接続チェック信号に応じて再生手 段を前記コントロール用ピン接続端子又は前記バス用ピ ン接続端子の一方を選択する接続方式切替手段を備えて いる。この接続方式切替手段が、ヘッドユニットの採用 する接続方式に応じて、バス接続またはデッキ接続を選 択するため、ユーザがヘッドユニットの接続方式を確認 する必要がなくなる。これは、ヘッドユニット側がデッ キ接続またはバス接続のみに対応している場合に好適で ある。

【0012】また、ヘッドユニット側が両方の接続方式 に対応していて、外部機器が一方の接続方式にのみ対応 している場合には、図1に示したヘッドユニット2の制 御手段6が、始動時(ACC ON時)にバス用ピンと 前記コントロールピンとに接続チェック信号それぞれ送 信すると共に当該接続チェック信号に応答があった側の ピン接続端子を有効と設定する第1の接続開始制御部2 0を備えるとよい。

【0013】さらに、ヘッドユニットがデッキ接続のみ に対応している場合には、第1の接続開始制御部20に 代えて、始動時に前記2つのコントロール用ピン接続端 子のうち一方を予め定められた一定期間中ハイにすると 共に当該一定期間経過後は当該2つのコントロール用ピ ン接続端子への出力を前記始動時前の状態に戻す第2の 接続開始制御部を備えるとよい。この場合、デッキ接続 にのみ対応した外部機器や、または両方の接続方式に対 応した外部機器との間でデッキ接続を確立する。

【0014】図4は本実施形態による13ピンの接続方

Page 1082 of 1457

式を使用して複数台の外部機器を接続した例を示すブロ ック図である。図4に示す例では、ヘッドユニットを低 コストとするためにデッキ接続専用としつつ、図2に示 すコネクタを採用する。そして、外部機器として操作パ ネルを有するTVを設け、このTVから2台の他の外部 機器をバス接続する。そして、TVの操作パネルを操作 する音楽ソースを選択する。図4に示す他の外部機器3 0、38は、図2に示すコネクタを有しつつ、さらにデ ッキ接続とバス接続の両方に対応したものとすると、当 該他の外部機器を直接ヘッドユニット2に接続すること もでき、接続の形態に応じて外部機器の接続方式及びコ ネクタを選択する必要がなくなる。

【0015】図4に示す外部機器40は、ヘッドユニット又は他の外部機器と接続する2以上の拡張コネクタ4 1を備えている。そして、当該拡張コネクタは、図1に 示す外部機器コネクタと同様の形式、構造を採ってい

る。そして、この外部機器40のコントローラとなる外 部機器制御手段は、ヘッドユニット2が接続されたコネ クタ41に対して前記コントロール用ビン接続端子を有 効と設定することでデッキ接続を行い、さらに、他の外 部機器が接続されたコネクタ41に対して前記バス用ピ ン接続端子を有効に設定することでバス接続する複数接 続制御部を備えている。これにより、ヘッドユニット2 を低コストとしつつ、複数台の外部機器を接続でき、そ して、すべて同一のケーブルを利用して接続できるた め、接続及び機器の選定が容易となる。

【0016】図5は本発明による車載用ヘッドユニット の実施例の構成を示すブロック図である。図5に示す車 載用ヘッドユニットは、FM/AMラジオ付カセットで ある。図5に示すように、FM/AMラジオ付カセット (ヘッドユニット)は、車両アンテナで受信する電波に 同調するチューナー回路52と、カセットテープを再生 するテープヘッド54からの再生信号を増幅するテープ イコライザアンプ53と、外部機器30から入力される 音声信号を増幅するグランドアイソレーションアンプ5 5と、これらの音楽ソースからの音声信号を切替信号に 応じて切り替える音声信号切替スイッチ18とを備えて いる。

【0017】FM/AMラジオ付カセット2はさらに、 切替スイッチから入力される音声信号の増幅を調整する ボリウム回路7と、このボリウム回路の出力を増幅する パワーアンプ8とを備えている。また、このパワーアン プ8は、スピーカー16に接続されている。そして、外 部機器30とデッキ接続される制御手段としての制御用 マイコン6を備えている。

【0018】図6に示すように、FM/AMラジオ付カ セット2と外部機器との接続の確立は、AccON時の 接続チェック信号の送受信により行う。図6(A)はデ ッキ接続を確立するための接続チェック信号の一例を示 す波形図であり、FM/AMラジオ付カセット2は、A ccON時に500 [ms] CONT1を"Hi"とす る。これにより、FM/AMラジオ付カセット2がデッ キ接続を要求していることを外部機器に伝達する。ま た、FM/AMラジオ付カセット2がバス接続を外部機 器に要求するには、図6(B)に示すように、AccO N時直後に接続チェック信号となるパルス信号を各機器 に送信し、返事を待つ。外部機器から当該接続チェック 信号に応じた信号が入力されると、当該外部機器とバス 接続を確立する。

【0019】図7に示すように、外部機器30は、Ac cON時に、バス信号とCONT1信号とをチェックし て現在接続されているヘッドユニットがどちらの方式か を判断する。すなわち、AccONとなると、バス接続 用の接続チェック信号が入力されたか否かを確認し(ス テップS1)、図6(B)に示す信号が入力された場合 にはバス接続を確立する(ステップS2)。一方、バス 接続用の接続チェック信号が入力されない場合には、図 6(A)に示すCONT1が"Hi"であるか否かを判 定する(ステップS3)。そして、CONT1が"H i"であれば、デッキ接続を確立する(ステップS 4)。

【0020】また、AccONから2秒間バス信号、C ONT1も入力されないときには、外部機器はヘッドユ ニットに対して接続要求のバス信号を送信する。

【0021】上述したように本実施形態によると、1つ の接続コネクタの中にデッキ接続とバス接続の2つの方 式の配線を入れ、そして、外部機器は、接続されたヘッ ドユニットがどちらの方式のものであるかを識別するた め、外部機器は1機種で対応できるため、品種を少なく することができ、そして、ユーザが外部機器を選定する ときに自分のヘッドユニットがどちらの接続方式である かを考慮する必要がなくなる。

[0022]

【発明の効果】本発明は以上のように構成され機能する ので、これによると、外部機器コネクタが、バス接続用 のバス用ピン接続端子と、デッキ接続用のコントロール 用ピン接続端子とを備えたため、いずれの接続形式の外 部機器であっても、同一のケーブルで接続することがで き、従って、同一の機能の外部機器についてコネクタ形 状別に外部機器の製造を行う必要がなく、また、ユーザ は、外部機器の購入に際して、ヘッドユニットのコネク タ形状に応じて外部機器を選択する必要がなく、このた め、外部機器の増設作業を簡単に行うことができる、と いう従来にない優れた車載用ヘッドユニット及び車載用 外部機器を提供することができる。

(54) ON-VEHICLE HEAD UNIT AND ON-VEHICLE EXTERNAL DEVICE

(57)Abstract:

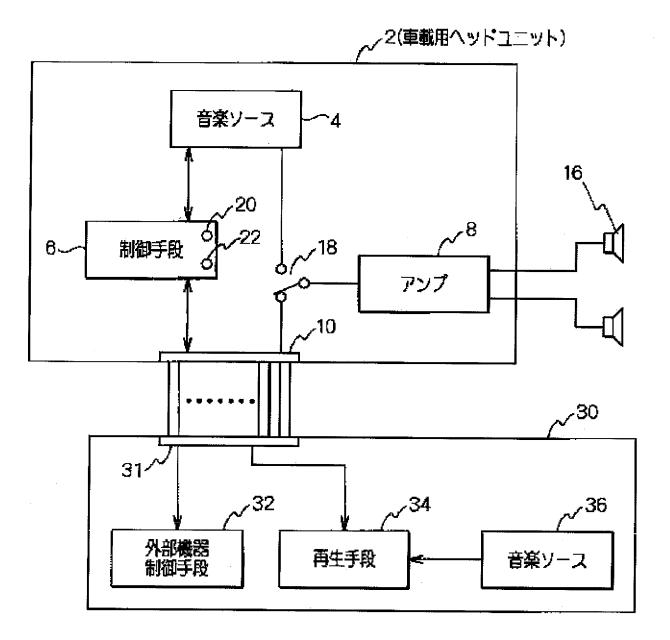

PROBLEM TO BE SOLVED: To provide an external device for an on-vehicle audio unit which device is inexpensive and easily used.

SOLUTION: An on-vehicle head unit 2 is provided with an amplifier 8 that amplifies an audio signal from an internal music source 4, an external unit connector 10 for connecting the head unit 2 to an external device, a changeover switch 18 that selects an audio signal received from the external device connected to the external unit connector 10 via a cable or the audio signal received from the internal music source, and a control means 6 that controls switching between the internal music source 4 and the external device 30. Furthermore, an external device connector 31 is provided with bus use

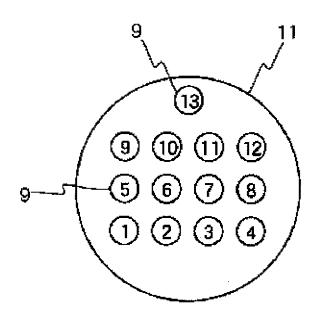

pin connection terminals connected to a plurality of bus pins for bus connection, two control pin connection terminals provided along the bus pins to send/receive a control signal, and a connector main body engaging one cable connected to the external device and having the bus pins and the control pins.

CLAIMS

[Claim(s)]

[Claim 1]Amplifier which amplifies an audio signal characterized by comprising the following from an internal music source, A changeover switch which changes an external device connector which connects an external instrument, and an audio signal inputted from an external instrument connected to this external device connector via a cable and an audio signal inputted from said internal music source, A head unit for mount provided with a control means which controls a change to said internal music source and said external instrument. A pin connection terminal for buses of plurality [external device connector / said] for bus connections.

Two pin connection terminals for control which are put side by side at this pin for buses, and send and receive a control signal.

Said pin for buses connected with said external instrument, and said control pin.

[Claim 2]Said control means, the time of said start up -- said pin for buses, and said control pin -- a connection check signal -- the head unit for mount according to claim 1 provided with the 1st starting connection control section that sets up a pin connection terminal of a side which it each transmitted and had a response in the connection check signal concerned as it is effective.

[Claim 3]Said control means, Make one side into a high in fixed time which was able to be defined beforehand between said two pin connection terminals for control at the time of said start up, and. The head unit for mount according to claim 1, wherein after the fixed time progress concerned is provided with the 2nd starting connection control section that returns an output to the two pin connection terminals for control concerned to a front state at the time of said start up.

DETAILED DESCRIPTION

[Detailed Description of the Invention] [0001]

[Field of the Invention]This invention relates to the head unit for mount, and the external instrument for mount, and relates to the head unit for mount and the external instrument for mount which have the feature in the connection type at the time of extending the external instrument for mount to the head unit for mount especially.

[0002]

[Description of the Prior Art]Conventionally, the head unit of the audio for mount and the connection type of an external instrument have two copies, deck connection and a bus connection. Generally, a head unit is for example, a cassette with FM/AM radio, and, on the other hand, an external instrument is a CD player, an MD player, or TV. [0003]

[Problem(s) to be Solved by the Invention]However, in the above-mentioned conventional example, since the connection type of deck connection and a bus connection was incompatible, there was inconvenience that the CD player had to prepare two kinds, the object for deck connection and the object for bus connections. for this reason, when a user selects an external instrument, its head unit is an object for deck connection -- or it had to be checked whether it was an object for bus connections.

[0004]

[Objects of the Invention]This invention improves the inconvenience which the starting conventional example has, and sets it as the purpose to provide the head unit for mount which shall be low cost and shall be especially easy to use the external instrument of the audio for mount, and the external instrument for mount.

[0005]

[Means for Solving the Problem]So, in a head unit for mount by this invention. Amplifier which

amplifies an audio signal from an internal music source, and an external device connector which connects an external instrument, It has a changeover switch which changes an audio signal inputted from an external instrument connected to this external device connector via a cable, and an audio signal inputted from said internal music source, and a control means which controls a change to said internal music source and said external instrument. And a pin connection terminal for buses of plurality [external device connector] for bus connections, Composition of having had a connector body engaged in one cable which has two pin connection terminals for control which are put side by side at this pin for buses, and send and receive a control signal, and said pins for buses connected with said external instrument and said control pins is taken. It is going to attain the purpose which this mentioned above. [0006]Here, since an external device connector was provided with a pin connection terminal for buses for bus connections, and a pin connection form, it is connected by the same cable. For this reason, it is not necessary when purchasing an external instrument to choose an external instrument according to connector shape of a head unit.

[0007]

[Embodiment of the Invention]Hereafter, an embodiment of the invention is described with reference to drawings. <u>Drawing 1</u> is a block diagram showing composition with the external instrument for mount linked to the head unit for mount by this invention, and the head unit for mount concerned. As shown in <u>drawing 1</u>, the head unit 2 for mount is provided with the following.

Amplifier 8 which amplifies the audio signal from the internal music source 4.

The external device connector 10 which connects an external instrument.

The changeover switch 18 which changes the audio signal inputted from the external instrument connected to this external device connector 10 via a cable, and the audio signal inputted from said internal music source.

The control means 6 which controls the change to said internal music source 4 and said external instrument 30.

[0008]And the pin connection terminal for buses (BUS+ and - of the pin numbers 1 and 2 of drawing 2) to which the external device connector 31 connects two or more pins 12 for buses for bus connections as shown in drawing 2, Two pin connection terminals for control (CONT1 of the pin numbers 5 and 13 of drawing 2, and 2) which are put side by side at this pin for buses, and send and receive a control signal, It has the connector body 11 engaged in one cable which has said pin for buses connected with said external instrument, and said control pin.

[0009]As shown in drawing 2, in this embodiment, the connector and signal line which connect

Page 1096 of 1457. http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 the head unit 2 and the external instrument 30 are made into the gestalt containing both the object for deck connection, and for bus connections. The deck connection D is a method which accepts one external instrument and connects, as shown in <u>drawing 3</u> (A). The strong point is in the point which can be manufactured by low cost, and it being only one set of connection and the point which cannot control a CD changer etc. by operation of a head unit have management. In deck connection, while the internal music source (radio, tape) of a head unit operates, CONT1 is made into "Hi", and while the external instrument operates, CONT2 is made into "Hi", for example. An external instrument will make CONT1 "Hi", if the head unit operates working. According to this, an external instrument suspends reproduction and makes CONT2 "Lo".

[0010]On the other hand, connection of two or more sets of external instruments is possible for a bus connection, and it can control CD changer y- etc. by a head unit. At a bus connection, an address is assigned to each apparatus, and it connects by bus, and cooperates by exchanging the demand of operation, a stop, etc. In a bus connection, since IC for communication is needed and microcomputer processing increases, cost will become high. Generally, deck connection is used for low-priced goods, and the bus connection is used for quality articles. [0011]a head unit is a bus connection in using 13 pins of the method shown in drawing 2 in this embodiment, as shown in drawing 1 -- or although it is deck connection, it cannot be concerned, but the same external instrument can be connected. The reproduction means 34 which plays the alien-frequencies easy sauce in which an external instrument turns into an external instrument to a head unit, such as TV, CD, or MD, in the example shown in drawing 1, The connector 31 for head units for transmitting the audio signal reproduced by this reproduction means 34 to said head unit via a cable, It has the external instrument control means 32 which controls said reproduction means 34 according to the control signal inputted from this connector 31 for head units. And the connector 31 for head units has taken the same shape as the external device connector mentioned above, and structure. And it has the connection type switching means which chooses either said pin connection terminal for control, or said pin connection terminal for buses for a reproduction means according to the connection check signal inputted from the connector for head units. In order that this connection type switching means may choose a bus connection or deck connection according to the connection type which a head unit adopts, it becomes unnecessary for a user to check the connection type of a head unit. This is preferred when the head unit side supports only deck connection or a bus connection.

[0012]When the head unit side supports both connection types and the external instrument supports only one connection type, The control means 6 of the head unit 2 shown in <u>drawing 1</u>, the time of start up (at the time of ACC ON) -- the pin for buses, and said control pin -- a connection check signal -- it each transmits and it is good to have the 1st starting connection

control section 20 that sets up the pin connection terminal of the side which had a response in the connection check signal concerned as it is effective.

[0013]When the head unit supports only deck connection, It replaces with the 1st starting connection control section 20, One side is made into the high in fixed time which was able to be defined beforehand between said two pin connection terminals for control at the time of start up, and after the fixed time progress concerned is good to have the 2nd starting connection control section that returns the output to the two pin connection terminals for control terminals for control concerned to a front state at the time of said start up. In this case, deck connection is established between the external instrument only corresponding to deck connection, or the external instrument corresponding to both connection types.

[0014]Drawing 4 is a block diagram showing the example which connected two or more sets of external instruments using the connection type of 13 pins by this embodiment. The connector shown in drawing 2 is adopted in the example shown in drawing 4, being only for deck connection, in order to make a head unit into low cost. And TV which has a navigational panel as an external instrument is formed, and the bus connection of two sets of other external instruments is carried out from this TV. And the music source which transmits to a head unit via deck connection by operating the navigational panel of TV is chosen. If other external instruments 30 and 38 shown in drawing 4 should correspond to both deck connection and a bus connection further, having a connector shown in drawing 2, being concerned -- others -- it becomes unnecessary to be also able to connect an external instrument to the head unit 2 directly, and to choose the connection type and connector of an external instrument according to the gestalt of connection

[0015]The external instrument 40 shown in <u>drawing 4</u> is provided with the two or more expansion connectors 41 linked to a head unit or other external instruments. And the expansion connector concerned has taken the same form as the external device connector shown in <u>drawing 1</u>, and structure. And the external instrument control means used as the controller of this external instrument 40, Deck connection is made by setting up said pin connection terminal for control to the connector 41 to which the head unit 2 was connected, as it is effective, It has two or more connect control part which carries out a bus connection by setting up said pin connection terminal for buses effectively to the connector 41 to which other external instruments were connected. Thereby, making the head unit 2 into low cost, two or more sets of external instruments are connectable, and since it is altogether connectable using the same cable, connection and selection of apparatus become easy.

[0016]<u>Drawing 5</u> is a block diagram showing the composition of the example of the head unit for mount by this invention. The head unit for mount shown in <u>drawing 5</u> is a cassette with FM/AM radio. As shown in <u>drawing 5</u>, the cassette with FM/AM radio (head unit) is provided with the following.

Page 1098 of 1457. http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 The tuner circuit 52 which sides with the electric wave received with a vehicular antenna. Tape equalizer amplifier 53 which amplifies the regenerative signal from the tape head 54 which plays a cassette tape.

Grand isolation amplifier 55 which amplifies the audio signal inputted from the external instrument 30.

The audio signal changeover switch 18 which changes the audio signal from these music sources according to a switching signal.

[0017]The cassette 2 with FM/AM radio is provided with the BORIUMU circuit 7 which adjusts further amplification of the audio signal inputted from a changeover switch, and the power amplification 8 which amplifies the output of this BORIUMU circuit. This power amplification 8 is connected to the speaker 16. And it has the control oriented microcomputer 6 as a control means by which deck connection is made with the external instrument 30.

[0018]As shown in drawing 6, transmission and reception of the connection check signal at the time of AccON perform establishment of connection between the cassette 2 with FM/AM radio, and an external instrument. Drawing 6 (A) is a wave form chart showing an example of the connection check signal for establishing deck connection, and the cassette 2 with FM/AM radio is 500 at the time of AccON. [ms] CONT1 is made into "Hi". This transmits to an external instrument that the cassette 2 with FM/AM radio is demanding deck connection. In order for the cassette 2 with FM/AM radio to require a bus connection of an external instrument, as shown in drawing 6 (B), he transmits the pulse signal which turns into a connection check signal immediately after at the time of AccON to each apparatus, and waits for the reply. If the signal according to the connection check signal concerned is inputted from an external instrument, the external instrument concerned and bus connection will be established. [0019]As shown in drawing 7, the head unit which the external instrument 30 checks a bus signal and CONT1 signal at the time of AccON, and is connected now judges which method it is. That is, when it comes to AccON, it checks whether the connection check signal for bus connections has been inputted (Step S1), and a bus connection is established when the signal shown in drawing 6 (B) is inputted (Step S2). On the other hand, when the connection check signal for bus connections is not inputted, it is judged whether CONT1 shown in drawing 6 (A) is "Hi" (Step S3). And deck connection will be established if CONT1 is "Hi" (step S4). [0020]When a bus signal and CONT1 are not inputted for 2 seconds from AccON, an external instrument transmits the bus signal of a connection request to a head unit. [0021]According to this embodiment, as mentioned above, put wiring of two methods, deck connection and a bus connection, in one connection connector, and and an external instrument. Variety can be lessened, and when a user selects an external instrument, it becomes unnecessary for its head unit to take into consideration which connection type it is,

Page 1099 of 1457 http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008

since the external instrument can respond by 1 model in order to identify of which method the connected head unit is a thing.

[0022]

[Effect of the Invention]Since this invention was constituted as mentioned above, and functioned and the external device connector was provided with the pin connection terminal for buses for bus connections, and the pin connection terminal for control for deck connection according to this, Even if it is an external instrument of which connection form, can connect by the same cable, therefore it is not necessary to manufacture an external instrument according to connector shape about the external instrument of the same function and, and a user faces the purchase of an external instrument, It is not necessary to choose an external instrument according to the connector shape of a head unit, and, for this reason, the outstanding head unit for mount and the external instrument for mount which are not in the former that the extension work of an external instrument can be done easily can be provided.

TECHNICAL FIELD

[Field of the Invention]This invention relates to the head unit for mount, and the external instrument for mount, and relates to the head unit for mount and the external instrument for mount which have the feature in the connection type at the time of extending the external instrument for mount to the head unit for mount especially.

JPO and INPIT are not responsible for any damages caused by the use of this translation.

1. This document has been translated by computer. So the translation may not reflect the original precisely.

2.**** shows the word which can not be translated.

3.In the drawings, any words are not translated.

PRIOR ART

[Description of the Prior Art]Conventionally, the head unit of the audio for mount and the connection type of an external instrument have two copies, deck connection and a bus connection. Generally, a head unit is for example, a cassette with FM/AM radio, and, on the other hand, an external instrument is a CD player, an MD player, or TV.

JPO and INPIT are not responsible for any damages caused by the use of this translation.

1. This document has been translated by computer. So the translation may not reflect the original precisely.

3.In the drawings, any words are not translated.

TECHNICAL PROBLEM

[Problem(s) to be Solved by the Invention]However, in the above-mentioned conventional example, since the connection type of deck connection and a bus connection was incompatible, there was inconvenience that the CD player had to prepare two kinds, the object for deck connection and the object for bus connections. for this reason, when a user selects an external instrument, its head unit is an object for deck connection -- or it had to be checked whether it was an object for bus connections.

[0004]

[Objects of the Invention]This invention improves the inconvenience which the starting conventional example has, and sets it as the purpose to provide the head unit for mount which shall be low cost and shall be especially easy to use the external instrument of the audio for mount, and the external instrument for mount.

JPO and INPIT are not responsible for any damages caused by the use of this translation.

1. This document has been translated by computer. So the translation may not reflect the original precisely.

2.**** shows the word which can not be translated.

3.In the drawings, any words are not translated.

MEANS

[Means for Solving the Problem]So, in a head unit for mount by this invention. Amplifier which amplifies an audio signal from an internal music source, and an external device connector which connects an external instrument, It has a changeover switch which changes an audio signal inputted from an external instrument connected to this external device connector via a cable, and an audio signal inputted from said internal music source, and a control means which controls a change to said internal music source and said external instrument. And a pin connection terminal for buses of plurality [external device connector] for bus connections, Composition of having had a connector body engaged in one cable which has two pin connection terminals for control which are put side by side at this pin for buses, and send and receive a control signal, and said pins for buses connected with said external instrument and said control pins is taken. It is going to attain the purpose which this mentioned above. [0006]Here, since an external device connector was provided with a pin connection terminal for buses for bus connections, and a pin connection terminal for control for deck connection, even if it is an external instrument of which connection form, it is connected by the same cable. For this reason, it is not necessary when purchasing an external instrument to choose an external instrument according to connector shape of a head unit.

[0007]

[Embodiment of the Invention]Hereafter, an embodiment of the invention is described with reference to drawings. <u>Drawing 1</u> is a block diagram showing composition with the external instrument for mount linked to the head unit for mount by this invention, and the head unit for mount concerned. As shown in <u>drawing 1</u>, the head unit 2 for mount is provided with the following.

Amplifier 8 which amplifies the audio signal from the internal music source 4.

The external device connector 10 which connects an external instrument.

The changeover switch 18 which changes the audio signal inputted from the external

instrument connected to this external device connector 10 via a cable, and the audio signal inputted from said internal music source.

The control means 6 which controls the change to said internal music source 4 and said external instrument 30.

[0008]And the pin connection terminal for buses (BUS+ and - of the pin numbers 1 and 2 of drawing 2) to which the external device connector 31 connects two or more pins 12 for buses for bus connections as shown in drawing 2, Two pin connection terminals for control (CONT1 of the pin numbers 5 and 13 of drawing 2, and 2) which are put side by side at this pin for buses, and send and receive a control signal, It has the connector body 11 engaged in one cable which has said pin for buses connected with said external instrument, and said control pin.

[0009]As shown in <u>drawing 2</u>, in this embodiment, the connector and signal line which connect the head unit 2 and the external instrument 30 are made into the gestalt containing both the object for deck connection, and for bus connections. The deck connection D is a method which accepts one external instrument and connects, as shown in <u>drawing 3</u> (A). The strong point is in the point which can be manufactured by low cost, and it being only one set of connection and the point which cannot control a CD changer etc. by operation of a head unit have management. In deck connection, while the internal music source (radio, tape) of a head unit operates, CONT1 is made into "Hi", and while the external instrument operates, CONT2 is made into "Hi", for example. An external instrument will make CONT1 "Hi", if the head unit operates working. According to this, an external instrument suspends reproduction and makes CONT2 "Lo".

[0010]On the other hand, connection of two or more sets of external instruments is possible for a bus connection, and it can control CD changer y- etc. by a head unit. At a bus connection, an address is assigned to each apparatus, and it connects by bus, and cooperates by exchanging the demand of operation, a stop, etc. In a bus connection, since IC for communication is needed and microcomputer processing increases, cost will become high. Generally, deck connection is used for low-priced goods, and the bus connection is used for quality articles. [0011]a head unit is a bus connection in using 13 pins of the method shown in <u>drawing 2</u> in this embodiment, as shown in <u>drawing 1</u> -- or although it is deck connection, it cannot be concerned, but the same external instrument can be connected. The reproduction means 34 which plays the alien-frequencies easy sauce in which an external instrument turns into an external instrument to a head unit, such as TV, CD, or MD, in the example shown in <u>drawing 1</u>, The connector 31 for head units for transmitting the audio signal reproduced by this reproduction means 34 to said head unit via a cable, It has the external instrument control means 32 which controls said reproduction means 34 according to the control signal inputted

from this connector 31 for head units. And the connector 31 for head units has taken the same shape as the external device connector mentioned above, and structure. And it has the connection type switching means which chooses either said pin connection terminal for control, or said pin connection terminal for buses for a reproduction means according to the connection check signal inputted from the connector for head units. In order that this connection type switching means may choose a bus connection or deck connection according to the connection type which a head unit adopts, it becomes unnecessary for a user to check the connection type of a head unit. This is preferred when the head unit side supports only deck connection or a bus connection.

[0012]When the head unit side supports both connection types and the external instrument supports only one connection type, The control means 6 of the head unit 2 shown in <u>drawing 1</u>, the time of start up (at the time of ACC ON) -- the pin for buses, and said control pin -- a connection check signal -- it each transmits and it is good to have the 1st starting connection control section 20 that sets up the pin connection terminal of the side which had a response in the connection check signal concerned as it is effective.

[0013]When the head unit supports only deck connection, it replaces with the 1st starting connection control section 20, One side is made into the high in fixed time which was able to be defined beforehand between said two pin connection terminals for control at the time of start up, and after the fixed time progress concerned is good to have the 2nd starting connection control section that returns the output to the two pin connection terminals for control terminals for control concerned to a front state at the time of said start up. In this case, deck connection is established between the external instrument only corresponding to deck connection, or the external instrument corresponding to both connection types.

[0014]<u>Drawing 4</u> is a block diagram showing the example which connected two or more sets of external instruments using the connection type of 13 pins by this embodiment. The connector shown in <u>drawing 2</u> is adopted in the example shown in <u>drawing 4</u>, being only for deck connection, in order to make a head unit into low cost. And TV which has a navigational panel as an external instrument is formed, and the bus connection of two sets of other external instruments is carried out from this TV. And the music source which transmits to a head unit via deck connection by operating the navigational panel of TV is chosen. If other external instruments 30 and 38 shown in <u>drawing 4</u> should correspond to both deck connection and a bus connection further, having a connector shown in <u>drawing 2</u>, being concerned -- others -- it becomes unnecessary to be also able to connect an external instrument to the head unit 2 directly, and to choose the connection type and connector of an external instrument according to the gestalt of connection

[0015]The external instrument 40 shown in <u>drawing 4</u> is provided with the two or more expansion connectors 41 linked to a head unit or other external instruments. And the

expansion connector concerned has taken the same form as the external device connector shown in <u>drawing 1</u>, and structure. And the external instrument control means used as the controller of this external instrument 40, Deck connection is made by setting up said pin connection terminal for control to the connector 41 to which the head unit 2 was connected, as it is effective, It has two or more connect control part which carries out a bus connection by setting up said pin connection terminal for buses effectively to the connector 41 to which other external instruments were connected. Thereby, making the head unit 2 into low cost, two or more sets of external instruments are connectable, and since it is altogether connectable using the same cable, connection and selection of apparatus become easy.

[0016]Drawing 5 is a block diagram showing the composition of the example of the head unit for mount by this invention. The head unit for mount shown in <u>drawing 5</u> is a cassette with FM/AM radio. As shown in <u>drawing 5</u>, the cassette with FM/AM radio (head unit) is provided with the following.

The tuner circuit 52 which sides with the electric wave received with a vehicular antenna. Tape equalizer amplifier 53 which amplifies the regenerative signal from the tape head 54 which plays a cassette tape.

Grand isolation amplifier 55 which amplifies the audio signal inputted from the external instrument 30.

The audio signal changeover switch 18 which changes the audio signal from these music sources according to a switching signal.

[0017]The cassette 2 with FM/AM radio is provided with the BORIUMU circuit 7 which adjusts further amplification of the audio signal inputted from a changeover switch, and the power amplification 8 which amplifies the output of this BORIUMU circuit. This power amplification 8 is connected to the speaker 16. And it has the control oriented microcomputer 6 as a control means by which deck connection is made with the external instrument 30.

[0018]As shown in drawing 6, transmission and reception of the connection check signal at the time of AccON perform establishment of connection between the cassette 2 with FM/AM radio, and an external instrument. Drawing 6 (A) is a wave form chart showing an example of the connection check signal for establishing deck connection, and the cassette 2 with FM/AM radio is 500 at the time of AccON. [ms] CONT1 is made into "Hi". This transmits to an external instrument that the cassette 2 with FM/AM radio is demanding deck connection. In order for the cassette 2 with FM/AM radio to require a bus connection of an external instrument, as shown in drawing 6 (B), he transmits the pulse signal which turns into a connection check signal immediately after at the time of AccON to each apparatus, and waits for the reply. If the signal according to the connection check signal concerned is inputted from an external instrument, the external instrument concerned and bus connection will be established.

Page 1108 of 1457 http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008

[0019]As shown in <u>drawing 7</u>, the head unit which the external instrument 30 checks a bus signal and CONT1 signal at the time of AccON, and is connected now judges which method it is. That is, when it comes to AccON, it checks whether the connection check signal for bus connections has been inputted (Step S1), and a bus connection is established when the signal shown in <u>drawing 6</u> (B) is inputted (Step S2). On the other hand, when the connection check signal for bus connections is not inputted, it is judged whether CONT1 shown in <u>drawing 6</u> (A) is "Hi" (Step S3). And deck connection will be established if CONT1 is "Hi" (step S4). [0020]When a bus signal and CONT1 are not inputted for 2 seconds from AccON, an external instrument transmits the bus signal of a connection connector, and and an external instrument, Variety can be lessened, and when a user selects an external instrument, it becomes unnecessary for its head unit to take into consideration which connection type it is, since the external instrument can respond by 1 model in order to identify of which method the connected head unit is a thing.

[0002]

【従来の技術】近年、半導体の技術がめざましい進歩を とげており、いろいろな分野の電子機器が、半導体を使 うことによって小型化・高性能化している。このように 半導体を使うことで小型化・高性能化している電子機器 の1つに、パーソナルコンピュータ(以下「パソコン」 という)がある。

【0003】特に最近では、ハンドヘルド(持ち運び型)やパームトップなどと呼ばれる小型のパソコン(以下「ハンドヘルドパソコン」と総称する)も増えている。このようなハンドヘルドパソコンに適した基本ソフトウェア、すなわちオペレーティングシステム(Operating System:以下「OS」という)として、例えばWindows(マイクロソフト株式会社の登録商標)CEなどが知られている。

【0004】このような汎用的なOSは、コンピュータ

Page 1111 of 1457

の持っているCPUの処理能力やメモリなどをきめ細か く管理することで高度な処理能力を実現したり、プログ ラムに依存しない統一的で使いやすいユーザインタフェ ースを提供したり、予め決められた形式のプログラムで あれば、自由に追加変更することでコンピュータの機能 を追加変更できるといった利点を持っている。

【0005】同じように、半導体を使うことで小型化・ 高性能化している別の電子機器としては、自動車に搭載 するカーオーディオシステムやカーナビゲーションシス テムが挙げられる。このうちカーオーディオシステム は、俗にカーステレオなどと呼ばれ、CDプレーヤやA MやFMのチューナーなどを、アンプやスピーカなどと 組み合わせたものである。また、カーナビゲーションシ ステムは、方位磁石、走行距離計、GPSなどを使って 車の現在位置を特定しながら、指定された目的地まで、 地図を画面表示したり道案内をするシステムである。

【0006】なお、最近では、カーオーディオシステム に、カーナビゲーションシステム、ハンズフリーの携帯 電話、盗難防止用の警報システムなどを組み合わせるこ とも多いので、以下、これら車載用の電子機器を「カー オーディオシステム」と総称する。

[0007]

【発明が解決しようとする課題】上に述べたような、O Sを備えたハンドヘルドパソコンと、カーオーディオシ ステムとは、従来では互いに全く別々のものであった。 つまり、広い意味でのコンピュータを、制御用に備えた カーオーディオシステムは存在したが、この場合のコン ピュータは特定の目的だけのために働く組み込みシステ ムと呼ばれるものである。

【0008】この組み込みシステムは、必要最小限の能 力を持ったCPUを使い、スイッチ操作を受け付けたり ディスク再生機構を作動させる、といったハードウェア に対する必要最小限の処理を、アセンブラなどを使った 小さなプログラムで実現したものである。このため、パ ソコンのようにデータの加工や保存をしたり、プログラ ムを変更追加することで機能を変更追加するといった使 い方はできない。

【0009】一方、ハンドヘルドパソコンは、自ら音楽 を鳴らしたり、カーオーディオシステムを制御する機能 は持っていなかった。このため、ユーザは、ハンドヘル ドパソコンを事実上車内に持ち込むことはあったが、カ ーオーディオシステムと関係付けて使うことはなかっ た。

【0010】ところで、最近のカーオーディオシステム は、ラジオのチューナー、カセットテープデッキやCD プレーヤといった従来の機器だけでなく、MDプレー ヤ、CDやMDのオートチェンジャ、カーナビゲーショ ンシステム、ユーザの命令を認識する音声認識装置、ハ ンズフリーの携帯電話、盗難防止用の警報システムとい う具合に、ますます多くの機器が組み込まれるようにな ってきている。そして、このように複雑になってゆくカ ーオーディオシステムを、個々の装置に設けられたスイ ッチだけで使いこなすことは非常に難しい。

【0011】つまり、このようにカーオーディオシステ ムが複雑になると、操作キーやダイヤルといった多くの スイッチが車内のいろいろな場所にあることになる。こ のため、どれが何の操作キーなのかを覚えるのが大変で ある。

【0012】すなわち、複雑になってゆくカーオーディ オシステムを使いこなすためには、複雑なシステムを制 御する高度な処理能力、使いやすいユーザインタフェー ス、制御に関する機能を追加変更できるような柔軟性を 持った小形コンピュータ、とりわけ汎用的なOSを備え たハンドヘルドパソコンと同等の情報処理装置を制御に 使うことが望まれる。

【0013】また、ハンドヘルドパソコンの側から考え ても、現代のように自動車を使うことが多く、渋滞も多 い社会では、車内でも活用の幅を広げることが望まれ

る。特に、カーオーディオシステムと組み合わせること で、操作キーやメモリを兼用したり、ユーザが車内で知 りたい情報をコンピュータを使った合成音声で読み上げ させ、その声をカーオーディオシステムのスピーカから 聞いたり、カーオーディオシステムに組み込まれた携帯 電話の回線で外部のコンピュータネットワークにアクセ スしたり、といった使い方ができれば、今までよりも活 用の幅を広げることができる。

【0014】なお、汎用的なOSを使うような高速なC PUと、カーオーディオシステムに含まれるような機器 を組み合わせるときは、両者の動作速度の違いなどか

ら、それぞれに合った別々のバスを備えることが望まれ る。さらに、いくつもの機器を組み合わせたカーオーデ ィオシステムでは、複数の機器を、単純なすっきりした 配線で容易に接続できることが望まれる。

【0015】本発明は、上に述べたような従来技術の問 題点を解決するために提案されたもので、その目的は、 汎用的なOSを持つ小形コンピュータとカーオーディオ システムとを組み合わせることで、互いの利点を活かす ことである。また、本発明の別の目的は、複数のバスを 使うことで、高速なCPUとその他の機器の両方を、無 駄なくスムースに働かせることである。また、本発明の 別の目的は、いろいろな機器をデイジーチェイン方式で 芋づる式につなげるようにすることである。

[0016]

【課題を解決するための手段】上に述べた目的を達成す るため、請求項1の発明は、制御用のコンピュータを備 えたカーオーディオシステムにおいて、前記コンピュー タはオペレーティングシステムを備え、このオペレーテ ィングシステムは、コンピュータ上の資源を管理する手 段と、ユーザインタフェースを含む入出力を制御する手 段と、予め決められた形式のプログラムを実行する手段

Page 1112 of 1457

と、を備えたことを特徴とする。請求項6の車載用コン ピュータは、予め決められた形式のプログラムを実行す るために必要な環境を実現するオペレーティングシステ ムと、カーオーディオシステムと、前記カーオーディオ システムを制御する手段と、を備えたことを特徴とす る。請求項11の発明は、請求項1の発明を方法という 見方からとらえたもので、オペレーティングシステムを 備えたコンピュータを使ってカーオーディオシステムを 制御するカーオーディオシステムの制御方法において、 前記オペレーティングシステムが、予め決められた形式 のプログラムを実行するために必要な環境を実現するス テップと、前記プログラムが前記カーオーディオシステ ムを制御するステップと、を含むことを特徴とする。請 求項1,6,11の発明では、カーオーディオシステム を制御するコンピュータが汎用的なOSを備えていて、 この汎用的なOSは、CPUやメモリといった資源を管 理することでコンピュータの能力を最大限発揮させ、ま た、プログラムに依存しない統一的で使いやすいユーザ インタフェースを提供し、さらに、予め決められた形式 のプログラムを追加したり変更することで機能の追加や 変更を容易にする。このため、複雑なカーオーディオシ ステムの制御が容易になる。また、車内でもいろいろな プログラムを使ったり、カーオーディオシステムの機器 を利用して情報処理をすることが可能になる。

【0017】請求項2の発明は、制御用のコンピュータ を備えたカーオーディオシステムにおいて、前記コンピ ュータに含まれるCPUの形式に対応した第1のバス。 と、前記カーオーディオシステムに含まれる機器を接続 するための第2のバスと、を備えたことを特徴とする。 請求項7の発明は、カーオーディオシステムを備えた車 載用コンピュータにおいて、前記コンピュータに含まれ るCPUの形式に対応した第1のバスと、前記カーオー ディオシステムに含まれる機器を接続するための第2の バスと、を備えたことを特徴とする。請求項12の発明 は、請求項2の発明を方法という見方からとらえたもの で、コンピュータを使ってカーオーディオシステムを制 御するカーオーディオシステムの制御方法において、前 記コンピュータに含まれるCPUが、このCPUの形式 に対応した第1のバスを通してデータをやり取りするス テップと、前記カーオーディオシステムに含まれる機器 が、機器を接続するための第2のバスを通してデータを やり取りするステップと、を含むことを特徴とする。請 求項3の発明は、制御用のコンピュータを備えたカーオ ーディオシステムにおいて、前記コンピュータに含まれ るCPUの形式に対応したローカルバスと、前記カーオ ーディオシステムに含まれる機器を接続するためのPC Iバスと、を備えたことを特徴とする。請求項8の発明 は、カーオーディオシステムを備えた車載用コンピュー タにおいて、前記コンピュータに含まれるCPUの形式 に対応したローカルバスと、前記カーオーディオシステ

Page 1113 of 1457

ムに含まれる機器を接続するためのPCIバスと、を備 えたことを特徴とする。請求項4の発明は、請求項2又 は3記載のカーオーディオシステムにおいて、それぞれ の前記バスの間でデータの形式を変換する手段を備えた ことを特徴とする。請求項9の発明は、請求項7又は8 記載の車載用コンピュータにおいて、それぞれの前記バ スの間でデータの形式を変換する手段を備えたことを特 徴とする。請求項2,3,7,8,12の発明では、コ ンピュータのCPUと、カーオーディオシステムの機器 とが、互いの形式に対応した違ったバスを使ってデータ をやり取りし、データは、2つのバスの間では必要に応 じて形式を変換して受け渡される(請求項4,9)。こ のため、各機器の動作よりCPUの動作が速くても、C PUは各機器の動作サイクルに合わせる必要がなく、メ モリなどを効率よくアクセスすることで複雑な処理を高 速に行うことができる。また、CPUがやり取りするデ ータと、機器がやり取りするデータとが、同じバスの伝 達能力を奪い合うことがないので、コンピュータとカー オーディオシステムの両方の動作をスムースに行うこと ができる。また、機器を接続するためのバスを使って音 の信号を再生しながら、同時に、CPUの形式に対応し たバスを使って別の処理を行うといったマルチタスクが 容易になる。また、CPUを別の形式のものに変える場 合も、各機器と、それら機器を接続するためのバスはそ のままで、CPUの形式に対応したバスだけを新しいC PUの形式に合わせて変えればよいので、CPUの変更 にも容易に対応することができる。

【0018】請求項5の発明は、請求項1から4のいず れか1つに記載のカーオーディオシステムにおいて、前 記カーオーディオシステムに含まれる複数の機器をデイ ジーチェイン形式で接続するための第3のバスを備えた ことを特徴とする。請求項10の発明は、請求項6から 9のいずれか1つに記載の車載用コンピュータにおい て、前記カーオーディオシステムに含まれる複数の機器 をデイジーチェイン形式で接続するための第3のバスを 備えたことを特徴とする。請求項5,10の発明では、 複数の機器を芋づる式に次々と、デイジーチェイン形式 でつないでゆくことができる。このため、機器の数が増 えたり車内のあちこちに機器を分散設置するときも、ス ター方式のように長い配線が1箇所に集中することがな く、設置が容易になる。また、配線がすっきりわかりや すくなるので、構成を変えたり保守や修理をすることも 容易になる。

[0019]

【発明の実施の形態】次に、本発明の実施の形態(以下 「実施形態」という)について、図面を参照して具体的 に説明する。この実施形態は、CDプレーヤなどのいろ いろな機器を備えたカーオーディオシステムであるが、 ハンドヘルドパソコンで使うような汎用的なOSを備え たコンピュータを備えていて、カーオーディオシステム (5)

の制御もこのコンピュータで行うものである。なお、以 下の説明で使うそれぞれの図について、それより前で説 明した図と同じ部材や同じ種類の部材については同じ符 号をつけ、説明は省略する。

【0020】〔1.構成〕

〔1-1.全体の構成〕まず、図1は、この実施形態の 全体構成を示すブロック図である。この実施形態は、こ の図に示すように、メインユニット1の他に、カーオー ディオシステムを構成する各機器として、チューナーア ンプユニット2と、マイクロホン3と、GPSアンテナ 4と、セキュリティコントロールユニット5と、電話ユ ニット6と、CD-ROMオートチェンジャ7と、電源 バックアップ用の補助バッテリ9と、を備えている。

【0021】このうちメインユニット1は、制御用のコ ンピュータを内蔵していて、このコンピュータによって システム全体を制御する部分である。また、チューナー アンプユニット2は、AMとFMのアンテナ2aの他

に、図示はしないが、ラジオチューナーと、スピーカを 鳴らすためのアンプを備えた部分である。また、マイク ロホン3は、音声認識による操作ができるように、ユー ザの声を入力するためのものである。この音声認識の機 能は、上に述べたコンピュータのプログラムによって実 現される。

【0022】〔1-1-1.メインユニット〕また、メ インユニット1は、コンパクトフラッシュカード13を 差し込むためのソケット13Sと、付け外しできるフェ イスプレートユニット15と、を備えている(図1)。 コンパクトフラッシュカード13は、フラッシュメモリ を使った記憶媒体で、メインユニット1に設けられたソ ケット13Sに差し込むことで、メインユニット1から データを読み書きすることができる。このコンパクトフ ラッシュカード13は、データやプログラムなどを他の コンピュータとやり取りしたり、このカーオーディオシ ステムでのいろいろな設定データをバックアップしてお くために使う。

【0023】また、付け外しできるフェイスプレートユ ニット15は、ユーザにいろいろな情報を表示する表示 部と、ユーザがいろいろな操作をするための操作キーな どを設けた操作部と、を備えていて、DCP(Detachabl e Control Panel)とも呼ばれるものである。このフェイ スプレートユニット15の表示部は、例えば横256ド ット縦64ドットといった大型のカラーLCD(液晶表 示装置)などである。

【0024】このフェイスプレートユニット15は、車 を降りるときに取り外して持ち出せば、盗人がカーオー ディオシステムを物色しても、肝心の表示部も操作部の ないのを見て利用も転売もできないことをさとり、盗む ことをあきらめるという盗難防止効果がある。取り外し たフェイスプレートユニット15は、ケース15aに入 れて持ち歩けば、それ自体や周りのものなどを傷つける ことがない。

【0025】また、このフェイスプレートユニット15 は、図1には示さないが、ハンドヘルドパソコン8とI rDAなどの形式でデータをやり取りするための赤外線 通信ユニットを備えている。

【0026】〔1-1-2、他の機器〕また、GPSア ンテナ4は、GPS衛星から電波を受け取るためのアン テナである。このGPSアンテナ4からの信号は、GP S受信機4 aを経てメインユニット1内のGPSユニッ トに送られる。このGPSユニットは、図1には示さな いが、受信機のある地球上の位置を電波から計算するも のである。また、上に述べたコンピュータ上では、プロ グラムによってカーナビゲーションシステムの機能が実 現され、計算結果はこのカーナビゲーションシステムの 機能に渡される。

【0027】また、セキュリティコントロールユニット 5は、振動や衝撃を検出するセンサ5aで、盗難やいた ずらなどを検出すると、サイレン5bを鳴らすといった 対応をする部分である。また、電話ユニット6は、自動 車電話の機能を制御するユニットであり、電話アンテナ 6aやハンドセット6bを使った通話を実現する部分で ある。また、CD-ROMオートチェンジャ7は、予め セットされた何枚かのCDを自動的に掛け替えること で、ユーザの選んだディスクや曲を再生するユニットで ある。

【0028】〔1-1-3.デイジーチェイン接続〕こ こで、これらセキュリティコントロールユニット5、電 話ユニット6及びCD-ROMオートチェンジャ7は、 USB(Universal Serial Bus)によってメインユニット 1に接続されている。このUSBは、複数の機器をデイ ジーチェイン形式で接続するためのシリアルバス(第3 のバス)である。

【0029】この実施形態では、このようにUSBによ って接続される機器は、外部とのデータのやり取りを、 このUSBの形式で行うように構成されている。例え ば、CD-ROMオートチェンジャ7は、アップストリ ーム用とダウンストリーム用のハブ(HUB)を備え、 このCD-ROMオートチェンジャ7の内部では、音楽 CDやCD-ROMオートチェンジャ7の内部では、音楽 CDやCD-ROMからデジタルデータが一旦ATAP I形式(パラレル形式)で読み出されるが、読み出され たデータは、内蔵されているデータコンバータによっ て、シリアル形式であるUSB(Universal Serial Bus) 形式に変換されたうえでUSBに送り出される。

【0030】この様な構成により、ユニット5,6、C D-ROMオートチェンジャ7の結線がシリアル結線と なるので、それらユニット5,6,7をメインユニット 1から離れた場所に設置する場合、その設置が容易とな る。なお、図1ではユニット5、ユニット6、オートチ ェンジャ7の順で接続されているが、接続順は任意であ り、また、必要なもののみの接続としても良い。

Page 1114 of 1457

は、破線で4つに区切ってあり、左寄りがCPUモジュ ール11、中央がサポートモジュール12、右上が外部 ユニット30、右下がオプションユニット40になって いる。このうち、CPUモジュール11とサポートモジ ュール12は、メインユニット1の内部に設けられてい る。

【0032】また、外部ユニット30とオプションユニ ット40は、メインユニット1に接続されているいくつ かずつの機器をまとめて指しているものである。なお、

図2では、説明の都合で、コンパクトフラッシュカード 13はCPUモジュール11の下の方に、フェイスプレ ートユニット15は、外部ユニット30の上の方に示し ている。

【0033】このうちCPUモジュール11とサポート モジュール12は、カーオーディオシステム全体を制御 する制御用コンピュータを構成している。このうちCP Uモジュール11は、CPU111を中心とした論理的 な演算処理をする部分であり、サポートモジュール12 は、カーオーディオシステムに含まれる他の機器との入 出力を行う部分である。

【0034】CPUモジュール11でデータの主な通り 道になっているのは、CPU111を中心として形成さ れたローカルバスB1(第1のバス)である。一方、サ ポートモジュール12でデータの主な通り道になってい るのは、各機器を接続するためのPCI(Peripheral Co mponent Interconnect)バスB2(第2のバス)であ

る。

【0035】(1-2-1. CPUモジュールの構成) CPUモジュール11のローカルバスB1は、CPU1 11の形式に合わせたもので、このローカルバスB1に は、DRAM112と、フラッシュROM113と、P CIバスホストコントローラ114と、CPUホストA SIC115と、PCMCIA・ASIC116が接続 されている。このうちDRAM112は、CPU111 がカーオーディオシステムの制御などの情報処理を行う ときに、変数領域などのワークエリアを提供する部分で ある。

【0036】また、フラッシュROM113は、書き換 え可能なROMで、ここでは、OS、BIOS、アプリ ケーションプログラムといった広い意味でのソフトウェ アを格納している部分である。ここに格納されているO Sの機能は、コンピュータ上の資源を管理すること、ユ ーザインタフェースを含む入出力を制御すること、予め 決められた形式のプログラムを実行することなどであ

り、例えば、従来技術のところで述べたWindows CEをベースにしたものなどが考えられる。 【0037】また、PCIバスホストコントローラ11 4は、ローカルバスB1とPCIバスB2とを接続し、 これら2つのバスの間でやり取りするデータの形式を変 換する手段である。

【0038】また、CPUホストASIC115などの 「ASIC」は、Application Specific Integrated Ci rcuit の略で、ROMやRAM、CPUといった汎用的 な集積回路に対して、特定の用途向けに作られたICや LSIを指す。具体的には、このCPUホストASIC 115は、ローカルバスB1とPCIバスホストコント ローラ114とのインタフェース用のASICである。 つまり、このCPUホストASIC115は、PCIバ スB2とCPUモジュール11との間でやり取りされる データの窓口になる部分であり、具体的には、CPUモ ジュール11と外部との入出力をCPU1111に代わっ て行うほか、PCIバスB2から送られてきたデータに ついて、CPU111に渡す種類のものかどうかを見分 ける。

【0039】そして、CPUホストASIC115は、 CPU111に渡すべきものはローカルバスB1を通じ てCPU111に送るが、それ以外のもの、例えば送ら れてきたデータに対してCPU111が演算をするまで もなく、予め決められた反応を機械的に返せば足りるも のについては、そのような反応を返す。

【0040】また、PCMCIA・ASIC116は、 コンパクトフラッシュカード13が、いわゆるPCカー ドとしてPCMCIA(Personal Computer Memory Card International Association)の規格に基づいているの に対応したインタフェース用の部分であり、コンパクト フラッシュカード13に対するデータの読み書きを制御 する部分である。

【0041】〔1-2-2.サポートモジュールにかか わる構成〕次に、サポートモジュール12のPCIバス B2は、カーオーディオシステムを構成するいろいろな 機器との間でデータをやり取りするためのバスである。 ここで、このPCIバスB2に接続される機器として は、外部ユニット30とオプションユニット40があ り、これらはそれぞれ、いくつかの機器をまとめて指し ているものである。

【0042】つまり、外部ユニット30は、図1に示し たメインユニット1とは別のユニットになっているもの で、この例では具体的には、メインユニット1から付け 外しできるフェイスプレートユニット15、チューナー アンプユニット2内に設けられたチューナー21とアン プ22、マイクロホン3である。このうちフェイスプレ ートユニット15は、赤外線通信ユニット127を備え ている。

【0043】また、オプションユニット40は、このカ ーオーディオシステムに組み込むかどうかをオプション として選べるユニットであり、この例では具体的には、

Page 1115 of 1457

GPSユニット16とCD-ROMオートチェンジャ7 である。さらに、メインユニット1の内部にはCD-R OMユニット14があり、このCD-ROMユニット1 4もPCIバスB2に接続されている。このCD-RO Mユニット14は、1枚のCDやCD-ROMからデジ タルデータを読み出すためのプレーヤである。これらC D-ROMオートチェンジャ7とCD-ROMユニット 14はどちらも、いわゆる音楽CDからデータを読み出 す事もできるし、CD-ROMからデータを読み出す事 もできるという互換性のある(コンパチブルな)もので ある。

【0044】サポートモジュール12において、PCI バスB2がこれらの機器との間でデータをやり取りする ためには、サポートASIC121、CODEC回路1 22、DSPユニット123、バッファメモリ124、 パラレル/PCIドライバ125、シリアル/PCIド ライバ126が使われる。

【0045】このうちサポートASIC121は、サポ ートモジュール12と各機器との間で、どこから来たデ ータをどこへ送るかというデータの交通整理をする部分 である。また、CODEC回路122の「CODEC」 とは"Coder/Decoder" つまりデータの符号化復号化技術 の略語であり、このCODEC回路122は、例えば、 与えられたデジタルデータをアナログ信号に変換するD /A変換をしたり、逆に、アナログ信号をデジタルデー タに変換するA/D変換などを行う部分である。

【0046】また、DSPユニット123の「DSP」 はデジタルサウンドプロセッサ、つまりデジタル形式の 音の信号を専門に処理する回路を意味する略語で、この DSPユニット123は、音楽などを表わすデジタルデ ータを与えられると、システムに設定されている左右の バランス、ボリューム、フェイダー、サラウンド、イコ ライザといった項目が音の内容に反映されるように、デ ジタルデータを処理する部分である。

【0047】また、バッファメモリ124は、CD-R OMユニットなどの音響機器とPCIバスB2とではデ ータを読み書きするサイクルが違うことから、データを 蓄えて少しずつ取り出すことでこの違いを埋めるための バッファであり、SRAMなどで構成されている。

【0048】また、パラレル/PCIドライバ125 は、CD-ROMユニット14から送られてくるパラレ ル形式のデジタルデータを、PCIバスB2のデータ形 式に変換する部分である。また、シリアル/PCIドラ イバ126は、CD-ROMオートチェンジャ7から送 られてくるシリアル形式のデジタルデータを、PCIバ スB2のデータ形式に変換する部分である。

【0049】なお、赤外線通信ユニット127を含むフ ェイスプレートユニット15は、サポートASIC12 1に高速シリアル通信回路で接続され、GPSユニット 16はサポートASIC121に、UART(Universal Asynchronous Receiver-Transitter)などの調歩同期シ リアル通信回路で接続されている。また、CD-ROM ユニット14はパラレル/PCIドライバ125に、A TAPI(AT Attachment Packet Interface)などのパラ レル通信回路で接続されている。また、図示はしない が、赤外線通信ユニット127には、赤外線によるデー タのやり取りを司るASICが設けられている。

【0050】(2.作用)上に述べたように構成された この実施形態は次のように働く。

〔2-1.全体的な作用〕

〔2-1-1.データの入力〕この実施形態では、各機器から入力されてくるデータのうち、デジタルデータは、サポートモジュール12のサポートASIC121に直接入力される。例えば、フェイスプレートユニット15からは、どのキーが押されたかというデータが送られてくる。また、GPSユニット16からは、GPS衛星からの電波を使って計算した緯度、経度といったデジタルデータが送られてくる。また、フェイスプレートユニット15に設けられた赤外線通信ユニット127からは、ハンドヘルドパソコン8から赤外線で転送されたデジタルデータが送られてくる。

【0051】また、CD-ROMユニット14及びCD -ROMオートチェンジャ7からは、音楽CDから読み 出した音のデータ、すなわちオーディオデータや、CD -ROMから読み出したデジタルデータ、すなわちCD -ROMデータが、パラレル/PCIドライバ125や シリアル/PCIドライバ126によってPCIバスB 2のデータ形式に変換されたうえで、PCIバスB2経 由でサポートASIC121に送られてくる。

【0052】さらに、図2には示さないが、図1に示し たセキュリティコントロールユニット5からは異常の発 生を知らせるデジタルデータが送られてくる。同様に、 図1に示した電話ユニット6からは、通話の着信や発信 元の電話番号などを知らせるデジタルデータ、すなわち 文字データが送られてくるし、通話中には、相手の話し 声を伝えるデジタルデータ、すなわち音声データがサポ

ートASIC121に送られてくる。

【0053】なお、これらセキュリティコントロールユ ニット5や電話ユニット6は、シリアルバスB3にデイ ジーチェイン接続されているので、セキュリティコント ロールユニット5や電話ユニット6から送られてくる情 報は、CD-ROMオートチェンジャ7からのデジタル データと同じように、シリアル/PCIドライバ126 によってPCIバスB2経由で送られてくる。

【0054】一方、各機器から入力されてくるデータの うち、アナログ信号は、一旦CODEC回路122に入 力され、このCODEC回路122によってデジタルデ ータに変換(A/D変換)されたうえで、サポートAS IC121に渡される。例えば、マイクロホン3からは

Page 1116 of 1457

ユーザの声がアナログ信号で入力され、チューナー21 からは、チューニングの結果受信されたラジオの放送内 容がアナログ信号で入力されてくる。

【0055】〔2-1-2.入力されたデータの行き 先〕このように集まってくる情報に対して、サポートA SIC121はどの情報をどこに送るかという交通整理 の役割を果たす。すなわち、サポートASIC121 は、大まかには、音のデータはDSPユニット123で 処理したうえCODEC回路122を通してアンプ22 に送り、音以外のデータはCPUモジュール11に送 る。但し、音のデータのなかでもマイクロホン3から入 力されたデータは音声認識のためにCPUモジュール1 1に送る。

【0056】アンプ22に送られる音のデータとして は、例えば、チューナー21でチューニングされたラジ オ放送の内容、CD-ROMユニット14やCD-RO Mオートチェンジャ7で音楽CDから読み出された録音 内容、電話ユニット6から送られてきた通話相手の話し 声などが考えられる。

【0057】また、音以外のデータとしては、例えば、 フェイスプレートユニット15でどの操作キーが押され たかのデータ、赤外線通信ユニット127から送られて きたファイルなどのデータ、GPSユニット16から送 られてきた緯度、経度といったデジタルデータ、CD-ROMユニット14やCD-ROMオートチェンジャ7 で、CD-ROMから読み出されたカーナビゲーション システム用の地図の内容や地域ごとの情報の内容、セキ ュリティコントロールユニット5から送られてくる異常 発生を知らせるデータ、電話ユニット6から送られてく る通話着信や発信元の電話番号などを知らせるデータな どが考えられる。

【0058】〔2-1-3. CPUモジュールでの情報 処理〕CPUモジュール11では、サボートASIC1 21からデジタルデータが送られてくると、PCIバス ホストコントローラ114が、送られてきたデータをロ ーカルバスB1のデータ形式に変換したうえでCPUホ ストASIC115に渡す。このCPUホストASIC 115は、CPU111に代わって入出力を司り、デー タを渡されると、そのデータがCPU111に渡すべき ものかそうでないかを、データの形式などから判断す る。

【0059】つまり、CPUホストASIC115は、 機械的に一定の反応を返せば足りるデータに対しては、 予め決められた反応を、PCIバスホストコントローラ 114を通してサポートモジュール12に返すが、それ 以外のデータはCPU111に渡す。

【0060】CPU111は、フラッシュROM113 に記録されているOSやプログラムのコードにしたがっ て、渡されたデータを処理し、この処理の際に必要なワ ークエリアなどの記憶領域としてはDRAM112を利 用する。例えば、マイクロホン3から入力されたユーザ の声が送られてくると、CPU1111は、予め用意して いる命令語の特徴を表わすパラメータや波形などと、受 け取ったユーザの声とを比較し、一番似ている命令語を ユーザが言ったものと推定し、その命令語にしたがって 動作を行う。

【0061】また、コンパクトフラッシュカード13の 読み書きは、CPUモジュール11において、CPU1 11からの依頼にしたがって、CPUホストASIC1 15がPCMCIA・ASIC116を制御することに よって行われる。

【0062】そして、CPU111による情報処理の結 果は、PCIバスホストコントローラ114によってP CIバスB2のデータ形式に変換されたうえで、サポー トモジュール12に送られる。情報処理の結果としてサ ポートモジュール12に送られるデータとしては、サポ ートモジュール12の各部分や各機器に対する動作の指 令などであり、サポートモジュール12では、このよう に送られてきたデータにしたがって入出力などの処理が 行われる。

【0063】〔2-1-4.サポートモジュールでの入 出力などの処理〕例えば、CDからのデータ読み出しや ラジオのチューニングをさせる指令がCPUモジュール 11から届くと、CD-ROMユニット14、CD-R OMオートチェンジャ7やチューナー21がそれにした がった動作を行う。また、スピーカから出ている音の音 源を現在とは別の機器に切り替える指令がCPUモジュ ール11から届くと、サポートASIC121はCOD EC回路122に送り出すデジタルデータを、それまで の機器のものから、新しく指定された機器によるものに 切り替える。

【0064】なお、デジタルデータをアンプ22に出力 する場合、アンプ22はアナログ信号しか受け付けない ので、CODEC回路122は、デジタルデータをアナ ログ信号に変換(D/A変換)したうえでアンプ22に 出力する。

【0065】また、例えばユーザに対する表示データ が、CPUモジュール11やその他の機器からサポート ASIC121に送られてくると、サポートASIC1 21は、この表示データを高速シリアル通信回路を通し てフェイスプレートユニット15に転送する。この場 合、フェイスプレートユニット15では、転送されてき た表示データにしたがって、ユーザに対する情報が表示 部に表示される。

【0066】続いて、上に述べたような各部分の働きに よって、ユーザがこの実施形態のカーオーディオシステ ムをどのように使うことができるのかを具体的に説明す る。

【0067】〔2-2.操作と情報の表示〕この実施形 態のカーオーディオシステムを操作するときは、ユーザ

Page 1117 of 1457

は、フェイスプレートユニット15に設けられている操 作キーを押してもよいし、操作の内用ごとに予め決めら れている語句を発話してもよい。例えば、ユーザがCD やFMチューナーを利用したいときは、CDに切り替え る操作キーを押してもよいし、予め決められた語句とし て例えば「しーでぃー」や「えふえむ」などとマイクロ ホン3に向かって発話すればよい。

【0068】ユーザが操作キーを押したときは、そのデ ータがサポートASIC121からCPUモジュール1 1に転送され、CPU111が新たな表示データをサポ ートASIC121に送り、フェイスプレートユニット 15の表示部は、この表示データを使って、ラジオを操 作するための画面表示やCDを操作するための画面表示 などに切り替わる。

【0069】また、例えば、ユーザが「しーでぃー」と いった語句を発話すると、マイクロホン3からアナログ 信号がCODEC回路122によってデジタルデータに 変換され、このデジタルデータが、サポートASIC1 21からPCIバスホストコントローラとCPUホスト ASIC115を経てCPU1111に送られ、CPU1 11は、このデジタルデータに基づいて、ユーザがどの 言葉を言ったのかを認識し、認識結果に応じて、操作キ ーが押されたときと同じような対応をする。

【0070】なお、例えば、フェイスプレートユニット 15の表示部をタッチパネルにしておき、コンピュータ のグラフィカルユーザインタフェースとして、例えばそ の時点で使える機能をアイコンで表示部に表示し、ユー ザが使いたい機能のアイコンを指で触るとその機能が働 くようにすることもできる。さらに、例えば、そのよう なアイコンによる表示と音声認識を合わせて使えば、一 度にいくつかのアイコンが表示され、ユーザが「つぎ」 と発話すれば画面が切り替わって次のいくつかのアイコ ンが表示され、ユーザが「もどる」と発話すれば画面が 1つ前の状態に戻る、といった使い方も可能である。

【0071】〔2-3. ラジオを聞く場合〕上に述べた ような操作で、例えばユーザが「えふえむ」と発話して ラジオのFM放送を選び、CPU1111がそれを認識す ると、サポートASIC121はCPU111からの命 令にしたがってチューナー21をFMの受信状態に切り 替え、また、アンプ22に送り出すデータのソースをチ ューナー21からの音声のデータに切り替える。この場 合、チューナー21は、前回選局した周波数を受信して もよいし、また、例えば、ユーザが「シークアップ」と いった語句を発話することで、周波数を少しずつ変えな がら受信状態のよい次の周波数を自動的に探す(自動掃 引)ようにしてもよい。

【0072】このようにラジオを聞く場合は、チューナ ー21から送られてくる受信内容はアナログ信号なの で、このアナログ信号はCODEC回路122に入力さ れ、デジタルデータに変換されたうえでサポートASI

特開平11-273321

C121に送られる。サポートASIC121は、CO DEC回路122から受け取ったデジタルデータをDS Pユニット123に渡し、DSPユニット123は、予 めシステムの上で設定されているバランスやボリューム といった設定項目にしたがってこのデジタルデータを処 理し、サポートASIC121に送り返す。

【0073】そして、サポートASIC121は、この ように返ってきたデジタルデータをCODEC回路12 2に再び送り返し、CODEC回路122はこのデジタ ルデータを再びアナログ信号に変換して戻したうえで、 今度はアンプ22に送ってスピーカから流れるようにす る。

【0074】〔2-4. CDの再生〕また、ユーザは、 音楽CDを聞きたいときは、CD-ROMユニット14 やCD-ROMオートチェンジャ7に聞きたい音楽CD をセットし、「すたーと」となどと音声などで再生を指 示したり、次の曲へ飛ぶといった指示をすればよい。例 えば、CD-ROMユニット14内の音楽CDを再生す るときは、サポートASIC121からの指令によって CD-ROMユニット14が作動し、CD-ROMユニ ット14からはデジタルデータであるオーディオデータ が送られてくる。

【0075】そして、パラレル/PCIドライバ125 は、このオーディオデータをPCIバスB2のデータ形 式に変換してサポートASIC121に送り、サポート ASIC121は、PCIバスB2からオーディオデー タを受け取ると、このオーディオデータを一旦DSPユ ニット123に渡して処理させ、処理されたオーディオ データを再びDSPユニット123から受け取ると、処 理されたオーディオデータをデジタル入出力ポートから CODEC回路122に渡し、アナログ信号の形でアン プ22に出力させる。

【0076】音楽CDを再生するのがCD-ROMオー トチェンジャ7のときは、シリアルバスB3から送られ てくるシリアル形式のオーディオデータを、シリアル/ PCIドライバ126がPCIバスB2のデータ形式に 変換するが、それ以降の処理はCD-ROMユニット1 4の場合と同じように行われる。

【0077】なお、CD-ROMユニット14やCD-ROMオートチェンジャ7と、CODEC回路122や DSPユニット123とを相対的に比べると、前者は長 い時間のサイクルでまとまった量のデータを送ってくる のに対して、後者は短い時間のサイクルでデータを少し ずつ処理するため、両者の間にサイクルにずれがある。 このため、サポートASIC121は、CD-ROMユ ニット14又はCD-ROMオートチェンジャ7がまと めて送ってきたデジタルデータをバッファメモリ124 に格納し、一番古い部分から次々と取り出してはDSP ユニット123に渡して処理させることで、上に述べた ようなずれを埋めて再生が滑らかに行われるようにす

Page 1118 of 1457

З.

【0078】〔2-5. CD-ROMとカーナビゲーション ョンの利用〕また、ユーザが例えばカーナビゲーション システムの機能を使いたいときは、例えばCD-ROM ユニット14に、カーナビゲーションシステム用のデー タ(アプリケーションソフト、地図等)が記録されたC D-ROMをセットしたうえで、カーナビゲーションシ ステムの機能を起動する。このようなカーナビゲーショ ンシステムの機能は、例えばコンピュータのプログラム としてCPUモジュール11のフラッシュROM113 に記録しておき、CPU1111にこのようなプログラム を実行させることによって実現することができる。

【0079】このようなカーナビゲーションシステム が、CD-ROMに記録された地図のデータや地域ごと のいろいろな情報などを読み出そうとするときは、例え ばCD-ROMユニット14から読み出されたデジタル データがパラレル/PCIドライバ125、PCIバス ホストコントローラ114、CPUホストASIC11 5を経てCPU111に渡される。CPU111は、こ のように受け取った地図などのデータに基づいてフェイ スプレートユニット15の表示部に表示するためのビッ トマップイメージをDRAM112上に作成したうえ、 サポートモジュール12に送り出す。

【0080】また、このようにカーナビゲーションシス テムを使うときは、図1に示したGPSアンテナ4でG PS衛星からの電波を受信し、図2のGPSユニット1 6がこの電波から緯度や経度などを計算し、このデータ がCPU111に送られてくる。すると、CPU111 は、これらの緯度や経度などのデータから、このカーオ ーディオシステムを積んだ車が現在どこを走っているの かを地図上で特定する事ができる。この結果、ユーザが 入力しなくても出発地点として現在地を設定したり、現 在の地点が中心となるような大まかな地図を表示した り、次の右折や左折を指示する図形を表示したりするこ とができる。

【0081】なお、ナビゲーション用のデータは、コン パクトフラッシュカード13(又はDRAM112)、 又はフラッシュROM113に記憶しておいても良い。 【0082】また、すでに説明したような音声認識によ る操作の仕方は、このようにカーナビゲーションシステ ムの機能を使うときにも利用することができ、例えば、 曲がり角ごとに右折や左折といった指示を出すカーナビ ゲーションシステムを使う場合、1つ前の指示や1つ先 の指示をユーザが見たいときは、「つぎ」とか「もど る」といった語句を発話することで次々と表示を切り替 えることもできる。

【0083】さらに、このような道案内はアンプ22を 通して合成音声を出力することでユーザに知らせること もでき、このようにすれば、次にどこを曲がるか知るた めに表示部に視線を移す必要がなくなる。 【0084】〔2-6.電話の利用〕また、ユーザは、 電話ユニット6を使って通話するとき、次のようにコン ピュータの利点とカーオーディオシステムの利点を活か すことができる。例えば、ユーザは、コンピュータのプ ログラムを使って、自分の知っている人の電話番号と名 前をシステムの、例えばDRAM112、コンパクトフ ラッシュカード13に予め登録しておく。

【0085】電話が着信すると、図2には図示しない が、電話ユニット6からシリアルバスB3とシリアル/ PCIドライバ126を通じて、電話が着信したことを 知らせるデジタルデータと、発信元の電話番号を表わす デジタルデータがサポートASIC121に送られる。 これらのデータはさらに、CPUモジュール11のCP U111に送られ、CPU1111は、予め登録された電 話番号の中に、今かかってきている発信元の電話番号が 登録されているかどうか検索する。

【0086】予め登録された電話番号の中に、今かかっ てきている発信元の電話番号があったときは、CPU1 11はその電話番号に対応する名前をサポートモジュー ル12に送り返すことで、フェイスプレートユニット1 5に電話をかけてきている人の名前を表示させたり、合 成音声による「〇〇さんからです」といった案内を車載 スピーカから流すことで、誰が電話をかけてきているの かをユーザに知らせることができる。

【0087】このような表示や案内、また呼び出し音な どで電話がかかってきていることを知ったユーザが、予 め決められた語句を発話して電話をつなぐように指示す ると、相手の声がスピーカから流れると同時に、マイク ロホン3から入力されるユーザの声がCODEC回路1 22によってデジタルデータに変換され、サポートAS IC121、シリアル/PCIドライバ126、シリア ルバスB3を経て電話ユニット6に送られ、ユーザは手 を使わずにいわゆるハンズフリーの状態で通話を行うこ とができる。

【0088】なお、呼び出し音が一定の回数だけ鳴った ところで、例えば電話ユニット6やCPUモジュール1 1に用意された留守番電話機能などが電話に応答する。 【0089】また、ユーザの側から発信しようとすると きも、例えば、予め登録してある電話番号と名前を表示 画面の上でつぎつぎに表示させ、電話を掛けたい相手が 表示されたところで発信のアイコンなどを指でタッチす ると、その電話番号がCPUモジュール11からデジタ ルデータとして電話ユニット6に転送されて自動的に電 話がかかり、相手が出ればそのまま話すことができる。 【0090】また、ユーザが登録した名前を発話し、C PUモジュール11がこれを認識することでその名前に 対応する電話番号に自動的に発信したり、掛けたい電話 番号を1桁ずつ発話して認識させたり、ユーザが「りだ いやる」と発話したことを認識して電話を掛ける先を決 めるようにすることもできる。

Page 1119 of 1457

【0091】〔2-7. セキュリティコントロールユニ ットの利用〕また、セキュリティコントロールユニット 5は、単独で使うこともできるし、上に述べた電話ユニ ット6と連動させて使うこともできる。例えば(図

1)、ユーザは車を離れるときに、セキュリティコント ロールユニット5を作動させ、送信機5cを持って降り る。車両のユーザと何ら関係のない第三者がドアノブに 触れたり、鍵穴をいじったり、ドアやトランクをこじ開 けようとしたり、車を無断で移動させようとすると、そ れによる衝撃や振動をセンサ5 aが感じ取り、センサ5 aからの信号を受けたセキュリティコントロールユニッ ト5は、例えばサイレン5bを大音量で鳴らす。これに より車外の環境に対し警報の効果がもたらされる。

【0092】ユーザ自身は、車に戻ってきたとき、持っ ている送信機5 c を操作すれば、予め決められた暗号が セキュリティコントロールユニット5に送られ、セキュ リティコントロールユニット5の機能は解除されるの で、鍵を使ったり車を動かしてもサイレンが鳴ったりす ることはない。

【0093】このようなセキュリティコントロールユニ ット5は、電話ユニット6と連動させて使えばさらに効 果がある。つまり、センサ5 aが異常を感知したとき、 セキュリティコントロールユニット5は、サイレンを鳴 らすだけでなく、割り込み信号を送ってCPUモジュー ル11及びサポートモジュール12を含むカーオーディ オシステムを起動させる。このような起動を可能にする ためには、カーオーディオシステムの電源と起動スイッ チに接続した電子回路を用意し、割り込み信号が来てい ないかをこの電子回路に常に監視させておき、割り込み 信号が来るとただちに電源と起動スイッチをオンにして カーオーディオシステムを起動させればよい。

【0094】このように起動されたCPU1111は、セ キュリティコントロールユニット5から異常発生を知ら せるデータを受け取ると、電話ユニット6に指令を送る ことで電話を掛けさせる。このときに電話を掛ける先 は、異常時の通報先として予め設定しておけばよく、例 えば、警察、ユーザの持っている携帯電話、警備会社な どとすればよい。そして、掛けた先に電話がつながる と、合成音声や予め録音したアナウンスを相手に聞かせ ることで異常を知らせる。このようにすれば、知らせを 受けた者が現場に急行できる。

【0095】〔2-8.ユーティリティプログラムの利 用〕また、通常のハンドヘルドパソコンと同じように、 OSやアプリケーションプログラムの機能として、アド レス帳、カレンダー、スケジュール管理、音声録音、時 計、電卓、ゲームといった機能を利用すれば、車の中で もいろいろな情報処理を行うことが可能となる。さら に、これらの機能を実現するアプリケーションプログラ ムを削除したり、新しいものに入れ替えたり、追加する ことで、個々のユーザが自分にあった情報処理の環境を 特開平11-273321

整えることができる。

【0096】〔2-9. コンパクトフラッシュカードの 利用〕また、この実施形態のカーオーディオシステムで は、コンパクトフラッシュカード13を使うことで、他 のハンドヘルドパソコンや他のカーオーディオシステム などとの間で情報をやり取りすることができる。

【0097】例えば、コンパクトフラッシュカード13 から新しいアプリケーションプログラムやOSをフラッ シュROM113に読み込ませることで、新しい機能を 追加するしたりOSを更新することが容易になる。特 に、汎用のOSを使うことによって、一般のソフトウェ アメーカーがアプリケーションプログラムやOSの機能 モジュールなどを作りやすくなるので、それを記録した コンパクトフラッシュカード13も出回って手に入れや すくなり、ユーザはこのカーオーディオシステムを、コ ンピュータとしても、より便利に使えるようになる。

【0098】また、他のパソコンやハンドヘルドパソコ ンで作ったアドレス帳のような個人的なデータを、コン パクトフラッシュカード13でこのカーオーディオシス テムに持ち込めば、それまでの作業をこのカーオーディ オシステム上で続けることができる。さらに、これとは 逆に、このカーオーディオシステムで作ったデータをコ ンパクトフラッシュカード13で他のパソコンやハンド ヘルドパソコンに移して作業を続けることもできる。

【0099】また、上に述べたようなユーティリティプ ログラムを使って自分が作ったデータを、コンパクトフ ラッシュカード13にバックアップコピーしておけば、 カーオーディオシステムの不調や他人が使ったためにデ ータが消えたような場合でも、コンパクトフラッシュカ ード13からデータを再びメインユニット1に読み込ま せて情報処理を続けることができる。

【0100】また、自分に合ったカーオーディオシステ ムのいろいろな設定をコンパクトフラッシュカード13 にバックアップコピーしておけば、たとえ家族の他の誰 かが設定を変えても、自分が車を使うときは自分の持っ ていたコンパクトフラッシュカード13をメインユニッ ト1に差し込んで内容を読み込ませることで、自分にと って使い勝手のよい元通りの設定でカーオーディオシス テムを使うことができる。

【0101】〔2-10.ハンドヘルドパソコンとの通 信〕さらに、この実施形態では、赤外線通信ユニット1 27を使うことで、ハンドヘルドパソコン8との間で、 コンパクトフラッシュカード13を抜き差ししたりケー ブルなどで接続するといった手間をかけずに、容易にデ ータをやり取りすることができる。このため、ハンドヘ ルドパソコン8内に記録しておいたファイルなどを使っ てOSやアプリケーションプログラムを更新したり、カ ーオーディオシステム上で作った個人的なデータをハン ドヘルドパソコン8に直接移し替えたり、そのような個 人的なデータのバックアップを、ハンドヘルドパソコン

Page 1120 of 1457

8の持っている比較的大きな記憶領域に保存しておいた り、カーオーディオシステムの設定などをハンドヘルド パソコン8を通して他の車のカーオーディオシステムに 移し替えたり、といったいろいろな使い方も可能にな る。

【0102】〔3. 効果〕以上のように、この実施形態 では、カーオーディオシステムを制御するコンピュータ が汎用的なOSを備えていて、この汎用的なOSは、C PUやメモリといった資源を管理することでコンピュー タの能力を最大限発揮させ、また、プログラムに依存し ない統一的で使いやすいユーザインタフェースを提供

し、さらに、予め決められた形式のプログラムを追加し たり変更することで機能の追加や変更も容易にする。こ のため、複雑なカーオーディオシステムの制御が容易に なる。

【0103】また、OSの規格にあったプログラムであ れば、車内でもいろいろなプログラムを使うことが可能 になり、カーオーディオシステムの表示部や操作キー、 スピーカといった機器を利用して情報処理をすることも 可能になる。もちろん、この場合でも、ハンドヘルドパ ソコン並の大きなメモリを使ってユーザが自分の個人的 な情報を保存したり、パソコンのように情報を編集する ことができる。

【0104】また、この実施形態では、コンピュータの CPUと、カーオーディオシステムの機器とが、互いの 形式に対応した違ったバスを使ってデータをやり取り し、データは、2つのバスの間では必要に応じて形式を 変換して受け渡される。このため、各機器の動作よりC PUの動作が速くても、CPUは各機器の動作サイクル に合わせる必要がなく、メモリなどを効率よくアクセス することで複雑な処理を高速に行うことができる。ま た、CPUがやり取りするデータと、機器がやり取りす るデータとが、同じバスの伝達能力を奪い合うことがな いので、コンピュータとカーオーディオシステムの両方 がそれぞれの動作をスムースに行うことができる。

【0105】また、機器を接続するためのバスを使って 音の信号を再生しながら、同時に、CPUの形式に対応 したバスを使って別の処理を行うといったマルチタスク が容易になる。また、CPUを別の形式のものに変える 場合も、各機器と、それら機器を接続するためのバスは そのままで、CPUの形式に対応したバスだけを新しい CPUの形式に合わせて変えればよいので、CPUの変 更にも容易に対応することができる。

【0106】特に、この実施形態では、複数の機器を芋 づる式に次々と、デイジーチェイン形式でつないでゆく ことができる。このため、機器の数が増えたり車内のあ ちこちに機器を分散設置するときも、スター方式のよう に長い配線が1箇所に集中することがなく設置が容易に なる。また、配線がすっきりわかりやすくなるので、カ ーオーディオシステムの構成を変えたり保守や修理をす

ることも容易になる。

【0107】加えて、この実施形態では、オーディオデ ータであるか文字データであるかといったデータの種類 とは関係なく、どのようなデータもUSBなどを通して デジタルデータとしてやり取りされ、処理されるので、 環境変化やノイズの影響を受けにくく、オーディオ特性 も安定する。

【0108】〔4.他の実施の形態〕なお、本発明は上 に述べた実施形態に限定されるものではなく、次に例示 するような他の実施の形態も含むものである。例えば、 上に述べた実施形態では、コンピュータのOSの具体例 としてWindows CEを挙げたが、これは単なる 例示に過ぎないので、他の種類の既にあるOSを使った り、今後新しく登場するOSを使うことも本発明の範囲 に含まれる。

【0109】また、上に述べた実施形態では車載用のカ ーオーディオシステムを制御する例を示したが、本発明 は、家庭内で据え置き型ステレオなどの電気製品を制御 するのに使うことも可能で、この場合も、新しいアプリ ケーションソフトウェアを使ったり、全体が小型で済む といった本発明の利点を活かすことができる。

【0110】また、上に述べた実施形態では、いろいろ なバスや通信回路について具体的な規格を挙げたが、そ のような規格は例示に過ぎず、同じような使い方ができ るほかの規格に置き換えることもできる。また、例え ば、第1のバスや第2のバスは、CPUモジュールとサ ポートモジュールをワンチップ化することで内部バスに することもできる。

[0111]

【発明の効果】以上のように、本発明によれば、汎用的 なOSを持つコンピュータとカーオーディオシステムを 組み合わせることで互いの利点を活かし、複雑なカーオ ーディオシステムも容易に制御し、コンピュータの使い 方も広げることができる。

(54) CAR AUDIO SYSTEM, VEHICLE-MOUNTED COMPUTER, AND METHOD FOR CONTROLLING CAR AUDIO SYSTEM

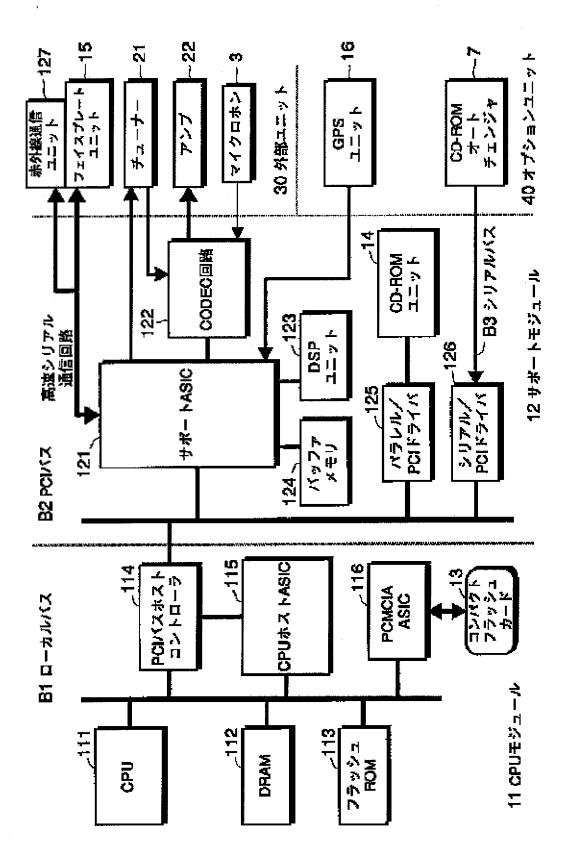

(57)Abstract:

PROBLEM TO BE SOLVED: To utilize both advantages by combining a compact computer with a universal OS and a car audio system.

SOLUTION: A local bus B1 corresponding to the form of a CPU 11 included in a computer, a PCI bus B2 for connecting equipment 15, 21, 22, 3, 16, and 7 included in a car audio system, and a PCI bus host controller 114 for converting data form between the buses B1 and B2 are provided. An OS for the CPU 111 is stored in a flash ROM 113. The CPU 111 can speedily perform complex processing by efficiently accessing a memory 112 or the like. The computer and the car audio system can be operated smoothly. A multi-task can be facilitated, where another processing can be made with another path while

an audio signal is being reproduced. Only the path corresponding to the form of the CPU 111 may be changed when the form of the CPU 111 is to be changed.

CLAIMS

[Claim(s)]

[Claim 1]A car audio system comprising provided with a computer for control:

A means by which said computer is provided with an operating system and this operating system manages resources on a computer.

A means to execute a program of form beforehand decided to be a means to control input and output containing a user interface.

[Claim 2]A car audio system comprising provided with a computer for control:

The 1st bus corresponding to form of CPU contained in said computer.

The 2nd bus for connecting apparatus contained in said car audio system.

[Claim 3]A car audio system comprising provided with a computer for control:

A local bus corresponding to form of CPU contained in said computer.

A PCI bus for connecting apparatus contained in said car audio system.

[Claim 4]The car audio system according to claim 2 or 3 provided with a means to change form of data between said each bus.

[Claim 5]A car audio system of any one statement of four from claim 1 provided with the 3rd bus for connecting two or more apparatus contained in said car audio system in daisy chain form.

[Claim 6]A computer for mount characterized by comprising the following.

An operating system which realizes environment required in order to execute a program of form decided beforehand.

A means to control a car audio system and said car audio system.

Page 1127 of 1457 http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http://www4.ipdl.inpit.go.j... 9/25/2008 [Claim 7]A computer for mount provided with a car audio system characterized by comprising the following.

The 1st bus corresponding to form of CPU contained in said computer.

The 2nd bus for connecting apparatus contained in said car audio system.

[Claim 8]A computer for mount provided with a car audio system characterized by comprising the following.

A local bus corresponding to form of CPU contained in said computer.

A PCI bus for connecting apparatus contained in said car audio system.

[Claim 9]The computer for mount according to claim 7 or 8 provided with a means to change form of data between said each bus.

[Claim 10]A computer for mount of any one statement of nine from claim 6 provided with the 3rd bus for connecting two or more apparatus contained in said car audio system in daisy chain form.

[Claim 11]A control method of a car audio system which controls a car audio system using a computer provided with an operating system characterized by comprising the following. A step which realizes environment which needs said operating system in order to execute a program of form decided beforehand.

A step by which said program controls said car audio system.

[Claim 12]A control method of a car audio system which controls a car audio system using a computer characterized by comprising the following.

A step with which CPU contained in said computer exchanges data through the 1st bus corresponding to form of this CPU.

A step which exchanges data through the 2nd bus for apparatus contained in said car audio system to connect apparatus.

DETAILED DESCRIPTION

[Detailed Description of the Invention] [0001]

[Field of the Invention]This invention is combining a small computer with general-purpose OS, and a car audio system, and relates to the art of harnessing a mutual advantage. [0002]

[Description of the Prior Art]In recent years, progress with remarkable art of a semiconductor is accomplished and the electronic equipment of various fields has become a miniaturization and highly efficient by using a semiconductor. Thus, one of the electronic equipment made a miniaturization and highly efficient by using a semiconductor has a personal computer (henceforth a "personal computer").

[0003]The small personal computers (it names generically the following "hand-held PC") called [especially] a handheld computer (carried type), a palm top, etc. these days are also increasing in number. Windows(registered trademark of Microsoft Corp.) CE etc. are known, for example as base software (it is called below Operating System: "OS") suitable for such a hand-held PC, i.e., an operating system.

[0004]Such a general-purpose OS realizes advanced throughput by managing finely throughput, a memory, etc. of CPU which the computer has, or, If it is a program of the form which provided the user interface independent of a program which it is unific and is easy to use, or was decided beforehand, it has the advantage that the current update of the function of a computer can be carried out by carrying out a current update freely.

[0005]As another electronic equipment which similarly has been made a miniaturization and highly efficient by using a semiconductor, the car audio system and car-navigation system which are carried in a car are mentioned. Among these, a car audio system is commonly called a car stereo etc., and combines the tuner of a CD player, AM, or FM, etc. with amplifier, a loudspeaker, etc. A car-navigation system is a shown system to which a screen display of the

map is carried out to the specified destination, pinpointing the current position of a car using an azimuth magnet, an odometer, GPS, etc.

[0006]These days, since a car-navigation system, a handsfree cellular phone, an anti-theft alarm system, etc. are combined with a car audio system in many cases, the electronic equipment for these mount is hereafter named a "car audio system" generically. [0007]

[Problem(s) to be Solved by the Invention]The hand-held PC provided with OS which was described above, and the car audio system were mutual completely separate in the former. That is, although the car audio system which prepared the computer in the large meaning for control existed, the computer in this case is called the embedded system which works only for the specific purpose.

[0008]CPU with necessary minimum capability is used for this embedded system, and it realizes necessary minimum processing to the hardware of receiving an operation switch or operating a disk reproduction mechanism, by the small program using an assembler etc. For this reason, usage of carrying out the change addition of the function by carrying out processing and preservation of data like a personal computer, or carrying out the change addition of the program cannot be done.

[0009]On the other hand, it did not have a function which a hand-held PC sounds music itself, or controls a car audio system. For this reason, although the user might carry the hand-held PC into in the car as a matter of fact, he did not use, having connected with the car audio system.

[0010]By the way, the latest car audio system, Not only in conventional apparatus called the tuner, cassette tape deck, and CD player of radio, Many apparatus is increasingly built into the condition of an MD player, CD, the autochanger of MD, a car-navigation system, the voice recognition equipment that recognizes a user's command, a handsfree cellular phone, and an anti-theft alarm system. And it is dramatically difficult to master the car audio system which becomes complicated in this way only with the switch in which it was provided by each device. [0011]That is, when a car audio system becomes complicated in this way, many switches, such as an operation key and a dial, will be in various places in the car. For this reason, it is serious to memorize which is what operation key.

[0012]Namely, in order to master the car audio system which becomes complicated. To use for control an information processor equivalent to the hand-held PC provided with the small computer with the pliability which can carry out the current update of the function about the advanced throughput which controls a complicated system, the user interface, and control which are easy to use, and especially general-purpose OS is desired.

[0013]Even if it thinks from the hand-held PC side, a car is used like the present age in many cases, and in the car is wanted to expand the width of practical use in society also with much

traffic congestion. By combining with a car audio system especially, make an operation key and a memory serve a double purpose, or, The information which a user wants to know in the car is made to be read out by the synthesized speech using a computer, If usage of hearing the voice from the loudspeaker of a car audio system, or accessing an external computer network by the circuit of the cellular phone built into the car audio system can be done, the width of practical use can be expanded rather than former.

[0014]When combining high-speed CPU which uses general-purpose OS, and apparatus which is contained in a car audio system, to have a separate bus suitable for each from the difference in both working speed, etc. is desired. In the car audio system which combined a lot of apparatus, two or more apparatus is wanted to be easily connectable with simple refreshed wiring.

[00,15]Proposed in order that this invention might solve the problem of conventional technology which was described above, it is combining a small computer with general-purpose OS, and a car audio system, and the purpose is to harness a mutual advantage. Another purpose of this invention is to use two or more buses, and is using both high-speed apparatus of CPU and others smoothly without futility. Another purpose of this invention is to connect various apparatus one after another with a daisy chain mode.

[0016]

[Means for Solving the Problem]In order to attain the purpose described above, an invention of claim 1 equips a car audio system provided with a computer for control with the following. A means by which said computer is provided with an operating system and this operating system manages resources on a computer.

A means to control input and output containing a user interface.

A means to execute a program of form decided beforehand.

A computer for mount of claim 6 is provided with the following.

An operating system which realizes environment required in order to execute a program of form decided beforehand.

Car audio system.

A means to control said car audio system.

An invention of claim 11 is what caught an invention of claim 1 from a view of a method, In a control method of a car audio system which controls a car audio system using a computer provided with an operating system, A step which realizes environment which needs said operating system in order to execute a program of form decided beforehand, and a step by which said program controls said car audio system are included. A computer which controls a car audio system by invention of claims 1, 6, and 11 is provided with general-purpose OS, and it this general-purpose OS, A user interface which carries out the maximum exertion of the capability of a computer by managing resources, such as CPU and a memory, and is not

Page 1131 of 1457. http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 dependent on a program and which it is unific and is easy to use is provided, and an addition and change of a function are made easy by adding a program of form decided further beforehand, or changing. For this reason, control of a complicated car audio system becomes easy. It becomes possible for in the car to use various programs, or to process information using apparatus of a car audio system.

[0017]An invention of claim 2 was provided with the 1st bus corresponding to form of CPU contained in said computer, and the 2nd bus for connecting apparatus contained in said car audio system in a car audio system provided with a computer for control. An invention of claim 7 was provided with the 1st bus corresponding to form of CPU contained in said computer, and the 2nd bus for connecting apparatus contained in said car audio system in a computer for mount provided with a car audio system. An invention of claim 12 is what caught an invention of claim 2 from a view of a method, In a control method of a car audio system which controls a car audio system using a computer, A step with which CPU contained in said computer exchanges data through the 1st bus corresponding to form of this CPU, Apparatus contained in said car audio system contains a step which exchanges data through the 2nd bus for connecting apparatus. An invention of claim 3 was provided with a PCI bus for connecting apparatus contained in said car audio system with a local bus corresponding to form of CPU contained in said computer in a car audio system provided with a computer for control. An invention of claim 8 was provided with a PCI bus for connecting apparatus contained in said car audio system with a local bus corresponding to form of CPU contained in said computer in a computer for mount provided with a car audio system. An invention of claim 4 was provided with a means to change form of data between said each bus, in the car audio system according to claim 2 or 3. An invention of claim 9 was provided with a means to change form of data between said each bus, in the computer for mount according to claim 7 or 8. In an invention of claims 2, 3, 7, 8, and 12, data is exchanged using a bus CPU of a computer and apparatus of a car audio system made the mistake in corresponding to a mutual form, and between two buses, if needed, data changes form, wins popularity and is passed (claims 4 and 9). For this reason, even if operation of CPU is quicker than operation of each apparatus, it is not necessary to double CPU with a motion cycle of each apparatus, and complicated processing can be performed at high speed by accessing a memory etc. efficiently. Since data which CPU exchanges, and data which apparatus exchanges do not scramble for communicative competence of the same bus, it can operate smoothly in both a computer and a car audio system. Multitasking of performing another processing using a bus corresponding to form of CPU becomes easy simultaneously, reproducing a signal of a sound using a bus for connecting apparatus. Also when changing CPU into a thing of another form, a bus for connecting these apparatus with each apparatus remains as it is, and since what is necessary is to change only a bus corresponding to form of CPU according to form of new CPU, it can

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1132 of 1457 respond also to change of CPU easily.

[0018]An invention of claim 5 was provided with the 3rd bus for connecting two or more apparatus contained in said car audio system in a car audio system of any one statement of four from claim 1 in daisy chain form. An invention of claim 10 was provided with the 3rd bus for connecting two or more apparatus contained in said car audio system in a computer for mount of any one statement of nine from claim 6 in daisy chain form. In an invention of claims 5 and 10, two or more apparatus can be connected in daisy chain form one after another, and it can die. For this reason, also when the number of apparatus increases or distributed installation of the apparatus is carried out here and there [in the car], long wiring is not concentrated in one place like a star method, and installation becomes easy. Since wiring becomes intelligible shapely, it also becomes easy to change composition or to carry out maintenance and repair.

[0019]

[Embodiment of the Invention]Next, an embodiment of the invention (henceforth a "embodiment") is concretely described with reference to drawings. Although this embodiment is the car audio system provided with various apparatus, such as a CD player, it is provided with the computer provided with general-purpose OS which is used for a hand-held PC, and also performs control of a car audio system by this computer. The same numerals are attached about the member same about each figure used by the following explanation as the figure explained before it, or the same kind of member, and explanation is omitted.

[0020][1. composition]

[Composition of whole 1-1.] First, <u>drawing 1</u> is a block diagram showing the entire configuration of this embodiment. As shown in this figure, this embodiment as each apparatus which constitutes a car audio system other than the main unit 1, It has the tuner amplifier unit 2, the microphone 3, the GPS antenna 4, the security control unit 5, the telephone unit 6, the CD-ROM autochanger 7, and the auxiliary battery 9 for power supply backup.

[0021]Among these, the main unit 1 is a portion which builds in the computer for control and controls the whole system by this computer. Although the tuner amplifier unit 2 does not carry out the graphic display other than the antenna 2a of AM and FM, it is the portion provided with a radio tuner and the amplifier for sounding a loudspeaker. The microphone 3 is for inputting a user's voice so that operation by speech recognition can be performed. The function of this speech recognition is realized by the program of the computer described above.

[0022][1-1-1. main unit] The main unit 1 is provided with the socket 13S for inserting CompactFlash card 13, and the face plate unit 15 removed [attach and] and made (drawing 1). CompactFlash card 13 is a storage using a flash memory, and data can be written from the main unit 1 by inserting in the socket 13S formed in the main unit 1. This CompactFlash card 13 is used in order to exchange data, a program, etc. with other computers or to back up

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1133 of 1457 various information sets in this car audio system.

[0023]The face plate unit 15 attached, removed and made, It has the indicator which displays various information on a user, and the final controlling element which provided the operation key for a user to do various operations etc., and is referred to also as DCP (Detachable Control Panel). The indicator of this face plate unit 15 is large-sized color LCD (liquid crystal display) of 64 dots by 256 dots, etc., for example.

[0024]if it removes and carries out when getting off a car, even if a thief looks for a car audio system, neither use nor resale can do this face plate unit 15, also seeing an important indicator not have a final controlling element -- there are ** and a theft preventive effect of giving up stealing. If the removed face plate unit 15 is put into the case 15a and it carries around, it will damage neither itself nor a surrounding thing.

[0025]Although this face plate unit 15 is not shown in <u>drawing 1</u>, it is provided with the infraredray-communication unit for exchanging data in the form of the hand-held PC 8, IrDA, etc. [0026][Apparatus] besides 1-1-2. The GPS antenna 4 is an antenna for receiving an electric wave from a GPS Satellite. The signal from this GPS antenna 4 is sent to the GPS unit in the main unit 1 through GPS receiver 4a. Although this GPS unit is not shown in <u>drawing 1</u>, it calculates the position on the earth with a receiver from an electric wave. On the computer described above, by a program, the function of a car-navigation system is realized and a calculation result is passed to the function of this car-navigation system.

[0027]The security control unit 5 is the sensor 5a which detects vibration and a shock, and when a theft, a mischief, etc. are detected, it is a portion which carries out correspondence of sounding the siren 5b. The telephone unit 6 is a unit which controls the function of a car telephone, and is a portion which realizes the telephone call using the telephone antenna 6a or the hand set 6b. The CD-ROM autochanger 7 is hanging automatically some CDs set beforehand again, and is a unit which plays the disk which the user chose, and music. [0028][1-1-3. daisy chain connection] Here, these security control unit 5, the telephone unit 6, and the CD-ROM autochanger 7 are connected to the main unit 1 by USB (Universal Serial Bus). This USB is a serial bus (the 3rd bus) for connecting two or more apparatus in daisy chain form.

[0029]The apparatus connected by USB in this way comprises this embodiment so that data with the exterior may be exchanged in the form of this USB. For example, the CD-ROM autochanger 7, Although it has the hub (HUB) the object for upstreams, and for downstreams and digital data is once read from an audio CD or CD-ROM according to ATAPI form (parallel form) inside this CD-ROM autochanger 7, After the read data is changed into the USB (Universal Serial Bus) form which is serial form by the data converter built in, it is sent out to USB.

[0030]The installation becomes easy when installing these units 5, 6, and 7 in the place distant

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1134 of 1457

JP,11-273321,A [DETAILED DESCRIPTION]

from the main unit 1, since connection of the units 5 and 6 and the CD-ROM autochanger 7 turns into serial connection with such composition. Although connected in order of the unit 5, the unit 6, and the autochanger 7 in <u>drawing 1</u>, connection order is good also as connection of only arbitrary and required things.

[0031][The internal configuration of a 1-2. main unit] Next, <u>drawing 2</u> is a block diagram showing the main things among each portion described above, and is especially explained focusing on the concrete composition of main unit 1 inside. This whole figure is divided into four with the dashed line, in the left, CPU module 11 and a center become the support module 12, the upper right becomes the external unit 30, and the lower right has become the option unit 40. Among these, CPU module 11 and the support module 12 are formed in the inside of the main unit 1.

[0032]The external unit 30 and the option unit 40 have pointed out collectively the apparatus of every some connected to the main unit 1. On account of explanation, CompactFlash card 13 is shown in the direction under CPU module 11, and <u>drawing 2</u> shows the face plate unit 15 to the direction on the external unit 30.

[0033]Among these, CPU module 11 and the support module 12 constitute the computer for control which controls the whole car audio system. Among these, CPU module 11 is a portion which carries out logical data processing centering on CPU111, and the support module 12 is a portion which performs input and output with other apparatus contained in a car audio system.

[0034]The local bus B1 (the 1st bus) formed considering CPU111 as a center is a way with CPU module 11 as [main] data. PCI (Peripheral Component Interconnect) for that it is a way by the support module 12 as [main] data to connect each apparatus on the other hand It is bus B-2 (the 2nd bus).

[0035][Composition of a 1-2-1. CPU module] The local bus B1 of CPU module 11, it is what was doubled with the form of CPU111, and DRAM112, the flash ROM 113, the PCI bus host controller 114, CPU host ASIC115, and PCMCIA-ASIC116 are connected to this local bus B1. Among these, DRAM112 is a portion which provides work areas, such as a variable area, when CPU111 processes information in control of a car audio system, etc.

[0036]The flash ROM 113 is rewritable ROM and is a portion which stores the software in large meanings, such as OS, BIOS, and an application program, here. The function of OS stored here manages the resources on a computer, It is controlling the input and output containing a user interface, executing the program of the form decided beforehand, etc., for example, what used as the base Windows CE which conventional technology described by the way can be considered.

[0037]The PCI bus host controller 114 is a means to change the form of the data which connects the local bus B1 and PCI bus B-2, and is exchanged between these two buses.

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1135 of 1457 [0038]"ASIC", such as CPU host ASIC115, is the abbreviation for Application Specific Integrated Circuit, and points out IC and LSI which were made for specific uses to generalpurpose integrated circuits, such as ROM, RAM, and CPU. Specifically, this CPU host ASIC115 is ASIC for the interface of the local bus B1 and the PCI bus host controller 114. This CPU host ASIC115 [that is,], Between PCI bus B-2 and CPU module 11, are a portion which becomes a window of the data exchanged and specifically, Input and output with CPU module 11 and the exterior are performed instead of CPU111, and also it is recognized whether it is a thing of the kind passed to CPU111 about the data sent from PCI bus B-2.

[0039]And although what should pass CPU host ASIC115 to CPU111 is sent to CPU111 through the local bus B1, CPU111 does not need to calculate to the other thing, for example, the sent data, and such a reaction is returned about that for which it is sufficient if the reaction for which it opted beforehand is returned mechanically.

[0040]PCMCIA-ASIC116 CompactFlash card 13, It is a portion for an interface corresponding to being based on the standard of PCMCIA (Personal Computer Memory Card International Association) as what is called a PC card, It is a portion which controls the reading and writing of data to CompactFlash card 13.

[0041][Composition in connection with a 1-2-2. support module] Next, PCI bus B-2 of the support module 12 is a bus for exchanging data among various apparatus which constitutes a car audio system. Here, as apparatus connected to this PCI bus B-2, there are the external unit 30 and the option unit 40, and these have pointed out some apparatus collectively, respectively.

[0042]That is, the external unit 30 is unit with the another main unit 1 shown in <u>drawing 1</u>, and in this example specifically, It is the tuner 21, the amplifier 22, and the microphone 3 which were formed in the face plate unit 15 attached, removed and made from the main unit 1, and the tuner amplifier unit 2. Among these, the face plate unit 15 is provided with the infrared-ray-communication unit 127.

[0043]The option unit 40 is a unit from which it can choose whether to include in this car audio system as an option, and, specifically, are GPS unit 16 and the CD-ROM autochanger 7 in this example. There is the CD-ROM unit 14 in the inside of the main unit 1, and this CD-ROM unit 14 is also connected to PCI bus B-2. This CD-ROM unit 14 is a player for reading digital data from one CD or CD-ROM. These CD-ROM autochanger 7 and the CD-ROM unit 14 have the compatibility that data can also be read from what is called an audio CD, and both can also read data from CD-ROM (it is compatible).

[0044]In the support module 12, in order for PCI bus B-2 to exchange data among these apparatus, Support ASIC121, CODEC circuit 122, DSP unit 123, the buffer memory 124, the parallel / PCI driver 125, and the serial / PCI driver 126 are used.

[0045]Among these, support ASIC121 is a portion which controls traffic in the data where to

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1136 of 1457 send the data which came from where between the support module 12 and each apparatus. "CODEC" of CODEC circuit 122 is an abbreviation of "Coder/Decoder", i.e., the coding decryption art of data, and this CODEC circuit 122, For example, it is a portion which performs the A/D conversion etc. which carry out D/A conversion which changes the given digital data into an analog signal, or change an analog signal into digital data conversely.

[0046]"DSP" of DSP unit 123 is an abbreviation to mean a digital sound processor, i.e., the circuit which processes the signal of the sound of digital format specially, and this DSP unit 123, When the digital data showing music etc. can be given, as items, such as balance of the right and left set as the system, volume, Feder, surround, and an equalizer, are reflected in the contents of the sound, it is a portion which processes digital data.

[0047]By audio equipment and PCI bus B-2s, such as a CD-ROM unit, since the buffer memory 124 differs in the cycle which write data, it is a buffer for this difference to be filled up with storing data and taking it out little by little, and comprises SRAM etc.

[0048]Parallel / PCI driver 125 is portions which change into the data format of PCI bus B-2 the digital data of parallel form sent from the CD-ROM unit 14. A serial / PCI driver 126 is portions which change into the data format of PCI bus B-2 the digital data of serial form sent from the CD-ROM autochanger 7.

[0049]The face plate unit 15 containing the infrared-ray-communication unit 127, It is connected to support ASIC121 in a high-speed serial communication circuit, and GPS unit 16 is connected to support ASIC121 in start-stop serial communication circuits, such as UART (UniversalAsynchronous Receiver-Transitter). The CD-ROM unit 14 is connected to parallel / PCI driver 125 by parallel communication circuits, such as ATAPI (AT Attachment Packet Interface). Although a graphic display is not carried out, ASIC which manages an exchange of the data based on infrared rays is provided in the infrared-ray-communication unit 127. [0050][2. operation] This embodiment constituted as stated above works as follows.

[2-1-1. entry of data] According to this embodiment, the direct entry of the digital data is carried out to support ASIC121 of the support module 12 among the data inputted from each apparatus. For example, the data which key was pressed is sent from the face plate unit 15. From GPS unit 16, digital data called the latitude and longitude which were calculated using the electric wave from a GPS Satellite is sent. From the infrared-ray-communication unit 127 provided in the face plate unit 15, the digital data transmitted with infrared rays from the handheld PC 8 is sent.

[0051]From the CD-ROM unit 14 and the CD-ROM autochanger 7. The data of the sound read from the audio CD, i.e., audio information, After the digital data read from CD-ROM, i.e., CD-ROM data, is changed into the data format of PCI bus B-2 by parallel / PCI driver 125, and the serial / PCI driver 126, it is sent to support ASIC121 via PCI bus B-2.

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1137 of 1457

[0052]Although not shown in drawing 2, the digital data which tells generating of abnormalities is sent from the security control unit 5 shown in drawing 1. Similarly, from the telephone unit 6 shown in drawing 1, the digital data which tells the telephone number of the mail arrival and dispatch origin of a telephone call, etc., i.e., alphabetic data, is sent, and the digital data which tells a partner's voice, i.e., voice data, is sent during a telephone call support ASIC121. [0053]These security control unit 5 and the telephone unit 6, Since daisy chain connection is carried out to the serial bus B3, the information sent from the security control unit 5 or the telephone unit 6, Like the digital data from the CD-ROM autochanger 7, after being changed into the data format of PCI bus B-2 by a serial / PCI driver 126, it is sent via PCI bus B-2. [0054]On the other hand, among the data inputted from each apparatus, after the analog signal was once inputted into CODEC circuit 122 and is changed into digital data by this CODEC circuit 122 (A/D conversion), it is passed to support ASIC121. For example, from the microphone 3, a user's voice is inputted with an analog signal, and the contents of broadcast of the radio received as a result of tuning are inputted with an analog signal from the tuner 21. [0055]Destination [of the data of which the [2-1-2. input was done]] The role of traffic control which information support ASIC121 sends where is played to the information for which it gathers in this way. That is, roughly, support ASIC121 was processed with DSP unit 123, and also it sends the data of a sound to the amplifier 22 through CODEC circuit 122, and data other than a sound is sent to CPU module 11. However, the data inputted from the microphone 3 also in the data of a sound is sent to CPU module 11 for speech recognition.

[0056]The contents of the radio broadcast tuned up by the tuner 21 as data of a sound sent to the amplifier 22, for example, The voice etc. of the contents of sound recording read from the audio CD with the CD-ROM unit 14 or the CD-ROM autochanger 7 and the call partner seen off from the telephone unit 6 can be considered.

[0057]The data of which operation key was pressed by the face plate unit 15 as data other than a sound, for example, With the digital data, the CD-ROM unit 14, and the CD-ROM autochanger 7 which are called the latitude and longitude which have been sent from the data of the file etc. which have been sent from the infrared-ray-communication unit 127, and GPS unit 16. The contents of the map for car-navigation systems and the contents of the information for every area which were read from CD-ROM, The data which tells the abnormal occurrence led from the security control unit 5, the data which tells the telephone number etc. of telephone call arrival [which is sent from the telephone unit 6] and dispatch origin, etc. can be considered.

[0058][Information processing with a 2-1-3. CPU module] In CPU module 11, if digital data is sent from support ASIC121, after the PCI bus host controller 114 changes the sent data into the data format of the local bus B1, CPU host ASIC115 will be passed. If this CPU host ASIC115 manages input and output instead of CPU111 and is passed data, it will judge [what

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1138 of 1457 that data should pass to CPU111, or] from the form of data, etc. whether that is right. [0059]That is, the other data is passed to CPU111 although the reaction for which it opted beforehand to the data for which it is sufficient if CPU host ASIC115 returns a fixed reaction mechanically is returned to the support module 12 through the PCI bus host controller 114. [0060]CPU111 processes the passed data according to the code of OS and the program which are recorded on the flash ROM 113, and uses DRAM112 as storage areas, such as a work area required in the case of this processing. For example, when a user's voice inputted from the microphone 3 is sent, CPU111, The parameter showing the feature of the instruction word currently prepared beforehand, a waveform, etc. are compared with the voice of the user who received, a most alike instruction word is presumed to be what the user said, and it operates according to the instruction word.

[0061]In CPU module 11, according to the request from CPU111, reading and writing of CompactFlash card 13 are performed, when CPU host ASIC115 controls PCMCIA-ASIC116. [0062]And the result of information processing by CPU111 is sent to the support module 12, after being changed into the data format of PCI bus B-2 by the PCI bus host controller 114. As data sent to the support module 12 as a result of information processing, it is instructions of the operation to each portion and each apparatus of the support module 12, etc., and processing of input and output etc. is performed in the support module 12 according to the data sent in this way.

[0063][Processing of input and output with a 2-1-4. support module etc.] For example, if the instructions which tuning of the data read from CD or radio is made arrive from CPU module 11, the CD-ROM unit 14, the CD-ROM autochanger 7, and the tuner 21 will perform operation according to it. If the instructions which change the sound source of the sound which has come out of the loudspeaker to apparatus different from the present arrive from CPU module 11, support ASIC121 will change the digital data sent out to CODEC circuit 122 from the thing of the apparatus till then to what is depended on the apparatus specified newly.

[0064]When outputting digital data to the amplifier 22, since the amplifier 22 receives only an analog signal, after CODEC circuit 122 changes digital data into an analog signal (D/A conversion), it outputs it to the amplifier 22.

[0065]If the indicative data to a user is sent to support ASIC121 from CPU module 11 or other apparatus, for example, support ASIC121 will transmit this indicative data to the face plate unit 15 through a high-speed serial communication circuit. In this case, in the face plate unit 15, the information to a user is displayed on an indicator according to the transmitted indicative data. [0066]Then, work of each portion which was described above explains concretely how a user can use the car audio system of this embodiment.

[0067][Presenting of 2-2. operation and information] When operating the car audio system of this embodiment, a user may press the operation key provided in the face plate unit 15, and

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1139 of 1457 may utter the words and phrases beforehand decided for every internal use of operation. as the words and phrases which may press the operation key changed to CD when a user wants to use CD and an FM tuner and which carried out and were decided beforehand -- for example, -- "-- carrying out - ****_" -- "-- what is necessary is to obtain, to increase and just to speak toward **" etc. and the microphone 3

[0068]When a user presses the operation key, the data is transmitted to CPU module 11 from support ASIC121, CPU111 sends a new indicative data to support ASIC121, and the indicator of the face plate unit 15 changes to a screen display for operating a screen display and CD for operating radio using this indicative data, etc.

[0069]a user -- ", if it carries out and the words and phrases - ****-" are uttered, An analog signal is changed into digital data from the microphone 3 by CODEC circuit 122, From support ASIC121, through PCI bus host controller and CPU host ASIC115, it is sent to CPU111 by this digital data and CPU111, Based on this digital data, it recognizes which language the user said, and the same correspondence as the time of the operation key being pressed is carried out according to a recognition result.

[0070]For example, use the indicator of the face plate unit 15 as the touch panel, and as a graphical user interface of a computer, For example, the function which can be used at the time is displayed on an indicator by an icon, and if the icon of the function which a user wants to use is touched with a finger, the function can work. If they use, for example, a display and speech recognition in one voice by such an icon, The usage that a screen will return to the state in front of one if a screen will change, some following icons will be displayed if some icons are displayed at once and a user speaks with the "next", and a user speaks, saying "It returns" is also possible.

[0071][When 2-3. radio is listened to] it is the operation which was described above -- a user -- ", if obtain, and increase, it speaks with **", FM broadcasting of radio is chosen and CPU111 recognizes it, Support ASIC121 changes the sauce of the data which changes the tuner 21 to the receive state of FM according to the command from CPU111, and is sent out to the amplifier 22 to the data of the sound from the tuner 21. in this case, the good next frequency of a receive state is looked for automatically, the tuner 21 being that carry out and a user utters the words and phrases "a seeking rise" which may receive the frequency tuned in last time, for example, and changing frequency little by little (automatic scanning) -- it may be made like. [0072]Thus, since the receiving contents sent from the tuner 21 are analog signals when listening to radio, this analog signal is inputted into CODEC circuit 122, and after being changed into digital data, it is sent to support ASIC121. Support ASIC121 passes the digital data received from CODEC circuit 122 to DSP unit 123, and DSP unit 123, This digital data is processed according to the setting-out item of the balance and volume which are beforehand set up on the system, and it returns to support ASIC121.

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1140 of 1457 [0073]And support ASIC121 returns again the digital data which has returned in this way to CODEC circuit 122, and after it changed this digital data into the analog signal again and CODEC circuit 122 returns it, it is sent to the amplifier 22 and it is made to flow through it from a loudspeaker shortly.

[0074][Playback of 2-4.CD] A user sets an audio CD to ask the CD-ROM unit 14 and the CD-ROM autochanger 7 and should just do directions of pointing to playback with "**** -", etc. a sound, etc., or flying to the following music to hear an audio CD. For example, when playing the audio CD in the CD-ROM unit 14, the CD-ROM unit 14 operates by the instructions from support ASIC121, and the audio information which is digital data is sent from the CD-ROM unit 14.

[0075]And parallel / PCI driver 125, Change this audio information into the data format of PCI bus B-2, send to support ASIC121 and support ASIC121, If the audio information which once passes this audio information to DSP unit 123, made process it, and was processed when audio information was received from PCI bus B-2 is again received from DSP unit 123, The processed audio information is passed to CODEC circuit 122 from a digital-input/output port, and it is made to output to the amplifier 22 in the form of an analog signal.

[0076]When the CD-ROM autochanger 7 reproduces an audio CD, a serial / PCI driver 126 changes into the data format of PCI bus B-2 the audio information of the serial form sent from the serial bus B3, but. Processing after it is performed like the case of the CD-ROM unit 14. [0077]The CD-ROM unit 14 and the CD-ROM autochanger 7, If CODEC circuit 122 and DSP unit 123 are compared relatively, in order that the latter may process data little by little in the cycle of short time to the former sending the data of the quantity collected in the cycle of long time, a cycle has a gap among both. For this reason, support ASIC121 stores in the buffer memory 124 the digital data which the CD-ROM unit 14 or the CD-ROM autochanger 7 has sent collectively, A gap which was described above is filled up with passing DSP unit 123 and making it process, if it takes out from the oldest portion one after another, and reproduction is made to be performed smoothly.

[0078][Use of 2-5.CD-ROM and car navigation] A user for example, to use the function of a car-navigation system. For example, after setting to the CD-ROM unit 14 CD-ROM on which the data for car-navigation systems (application software, a map, etc.) was recorded, the function of a car-navigation system is started. The function of such a car-navigation system is realizable by recording on the flash ROM 113 of CPU module 11, for example as a program of a computer, and making CPU111 execute such a program.

[0079]When such a car-navigation system tries to read the data of the map recorded on CD-ROM, various information for every area, etc., For example, the digital data read from the CD-ROM unit 14 is passed to CPU111 through parallel / PCI driver 125, PCI bus host controller 114, and CPU host ASIC115. CPU111 created on DRAM112 the bitmapped image for

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1141 of 1457 displaying on the indicator of the face plate unit 15 based on the data of the map etc. which were received in this way, and also it is sent out to the support module 12.

[0080]When using a car-navigation system in this way, the GPS antenna 4 shown in <u>drawing 1</u> receives the electric wave from a GPS Satellite, GPS unit 16 of <u>drawing 2</u> calculates latitude, longitude, etc. from this electric wave, and this data is sent to CPU111. Then, CPU111 can specify on a map where the car loading with this car audio system is running from the data of such latitude, longitude, etc. now. As a result, even if a user does not input, a its present location can be set up as a departure point, or the rough map that the present point takes the lead can be displayed, or the figure which directs next right-turn and left turn can be displayed. [0081]The data for navigation may be memorized to CompactFlash card 13 (or DRAM112) or the flash ROM 113.

[0082]The method of operation by speech recognition which was already explained, Thus, also when using the function of a car-navigation system, it can use, For example, when using the car-navigation system which issues directions, such as right-turn and left turn, for every corner of a street and a user wants to see the directions before one, and directions of one beyond, one display after another can also be changed by uttering the "next" and the words and phrases of "returning."

[0083]In order to know where it will next turn, it becomes unnecessary to turn a look to an indicator, if a user can also be told about such guidance and it does in this way with outputting synthesized speech through the amplifier 22.

[0084][Use of a 2-6. telephone] The user can harness the advantage of a computer, and the advantage of a car audio system as follows, when talking over the telephone using the telephone unit 6. For example, the user registers into DRAM112 and CompactFlash card 13 of the system beforehand people's telephone number and name which he knows using the program of a computer.

[0085]If a telephone receives a message, it will not illustrate to <u>drawing 2</u>, but the digital data which tells that the telephone received a message from the telephone unit 6 through the serial bus B3, and the serial / PCI driver 126, and the digital data showing the telephone number of a sending agency are sent to support ASIC121. These data is further sent to CPU111 of CPU module 11, and CPU111 searches whether the telephone number of the dispatch origin which is hanging now into the telephone number registered beforehand is registered.

[0086]When there is a telephone number of the dispatch origin which is hanging now into the telephone number registered beforehand, CPU111 is returning the name corresponding to the telephone number to the support module 12, A user can be told about who is telephoning by displaying the name of those who are telephoning the face plate unit 15, or pouring the guidance by synthesized speech "it is from Mr. OO" from a mounted loudspeaker. [0087]If the user who knew geting a telephone call in such a display, guidance, a calling

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1142 of 1457 sound, etc. directs to utter the words and phrases decided beforehand and to connect a telephone, A user's voice inputted from the microphone 3 is changed into digital data by CODEC circuit 122 at the same time a partner's voice flows from a loudspeaker, It is sent to the telephone unit 6 through support ASIC121, the serial / PCI driver 126, and the serial bus B3, and the user can talk over the telephone in what is called the handsfree state, without using a hand.

[0088]The answering machine function etc. which were prepared for the telephone unit 6 or CPU module 11, for example answer a telephone in the place where only the number of times with a constant calling sound sounded.

[0089]If the icon of dispatch, etc. are touched with a finger in the place which displayed the telephone number and name which have been registered beforehand one after another on the display screen, for example and where the partner who wants to telephone was displayed also when it is going to send from the user side. The telephone number is transmitted to the telephone unit 6 as digital data from CPU module 11, and a telephone call is got automatically, and if a partner comes out, it can talk as it is.

[0090]Send to the telephone number corresponding to the name automatically because utter the name which the user registered and CPU module 11 recognizes this, or, a single figure speaks at a time, and a telephone number to hang is made to recognize, or a user is "person -are and it does -- " -- the point which recognizes having spoken and telephones can be decided.

[0091][Use of a 2-7. security control unit] The security control unit 5 can also be used alone, and it can also be used for it, making it the telephone unit 6 described above interlocked with. For example, when leaving a car, (drawing 1) and a user operate the security control unit 5, and get down with the transmitter 5c. If the third party who is unrelated to the user of vehicles in any way is going to touch a doorknob, tamper with a keyhole, wrench a door and a suitcase open or is going to move a car without notice. The sensor 5a takes in the shock and vibration by it, and the security control unit 5 which received the signal from the sensor 5a sounds the siren 5b with Ryo Oto, for example. Thereby, the effect of an alarm is brought about to the environment outside a car.

[0092]Since the code decided beforehand will be sent to the security control unit 5 and the function of the security control unit 5 will be canceled if he operates the transmitter 5c which it has when the user itself has returned to the car, A key is not used, or even if it moves a car, a siren does not sound.

[0093]It is further effective if such a security control unit 5 uses making it the telephone unit 6 interlocked with. That is, when the sensor 5a has detected abnormalities, the security control unit 5 starts the car audio system which sends an interrupt signal and it not only sounds a siren, but contains CPU module 11 and the support module 12. In order to enable such

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1143 of 1457 starting, the electronic circuit linked to the power supply and start switch of the car audio system is prepared, What is necessary is to make a power supply and a start switch one immediately, and just to start a car audio system, if this electronic circuit is made to always supervise whether the interrupt signal is coming and an interrupt signal comes it. [0094]CPU111 started in this way makes it telephone by sending instructions to the telephone unit 6, when the data which tells an abnormal occurrence is received from the security control unit 5. The point which telephones at this time should just be taken as a cellular phone, a security company, etc. which what is necessary is just to set up beforehand as an information destination at the time of abnormalities, and the police and a user have. And abnormalities are told by the thing which hung and which will be told synthesized speech and against the announcement recorded beforehand if a telephone is connected previously. If it does in this way, those who received the notice can hasten at the spot.

[0095][Use of a 2-8. utility program] Like the usual hand-held PC, if functions, such as an address book, a calendar, schedule management, voice recording, a clock, a calculator, and a game, are used as a function of OS or an application program, it will become possible to perform information processing various also in a car. The environment of information program which processing which suited to itself can be improved by deleting the application program which realizes these functions, changing to a new thing, or adding.

[0096][Use of a 2-9. CompactFlash card] In the car audio system of this embodiment, information can be exchanged between other hand-held PCs, other car audio systems, etc. by using CompactFlash card 13.

[0097]For example, it becomes easy to add a new function, and it to be sufficient to make a new application program and OS read into the flash ROM 113 from CompactFlash card 13, and to update OS. Since it becomes easy for ordinary software makers to make an application program, the functional module of OS, etc. by using general-purpose OS especially, CompactFlash card 13 which recorded it also appears on the market, it becomes easy to get, and the user can use this car audio system now for convenience more also as a computer. [0098]If individual data like the address book made with other personal computers and handheld PCs is carried into this car audio system by CompactFlash card 13, the work till then can be continued on this car audio system. Contrary to this, the data made with this car audio system can be moved to other personal computers and handheld PCs by CompactFlash card 13, and work can also be continued.

[0099]If the backup copy of the data which he made using a utility program which was described above is carried out to CompactFlash card 13, Since the bad condition and others of the car audio system used, even when data disappears, data can be made to be able to read into the main unit 1 from CompactFlash card 13 again, and information processing can be continued.

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1144 of 1457 [0100]If the backup copy of various setting out of the car audio system suitable for itself is carried out to CompactFlash card 13, Even if someone of other families change setting out, inserting in the main unit 1 CompactFlash card 13 which he had, and making the contents read, when he uses a car can use a car audio system by user-friendly original setting out for itself.

[0101][Communication with a 2-10. hand-held PC] At this embodiment, data can be easily exchanged by using the infrared-ray-communication unit 127, without applying the time and effort of taking out and inserting CompactFlash card 13 or connecting by a cable etc., between the hand-held PCs 8. For this reason, update OS and an application program using the file etc. which were recorded in the hand-held PC 8, or. Move to the hand-held PC 8 directly the individual data made on the car audio system, or, Save backup of such individual data in the comparatively big storage area which the hand-held PC 8 has, or, Various usage of moving setting out of a car audio system, etc. to the car audio system of other cars through the hand-held PC 8 also becomes possible.

[0102][3. effect] As mentioned above, the computer which controls a car audio system by this embodiment is provided with general-purpose OS, and it this general-purpose OS. The user interface which carries out the maximum exertion of the capability of a computer by managing resources, such as CPU and a memory, and is not dependent on a program and which it is unific and is easy to use is provided, and an addition and change of a function are also made easy by adding the program of the form decided further beforehand, or changing. For this reason, control of a complicated car audio system becomes easy.

[0103]If it is the program which suited the standard of OS, it will become possible to use a program also with in the car [various], and it will also become possible to process information using apparatus, such as an indicator of a car audio system, an operation key, and a loudspeaker. Of course, a user can save his individual information even in this case using about the same big memory as a hand-held PC, or information can be edited like a personal computer.

[0104]In this embodiment, data is exchanged using the bus CPU of a computer and the apparatus of the car audio system made the mistake in corresponding to a mutual form, and between two buses, if needed, data changes form, wins popularity and is passed. For this reason, even if operation of CPU is quicker than operation of each apparatus, it is not necessary to double CPU with the motion cycle of each apparatus, and complicated processing can be performed at high speed by accessing a memory etc. efficiently. Since the data which CPU exchanges, and the data which apparatus exchanges do not scramble for the communicative competence of the same bus, both a computer and a car audio system can perform each operation smoothly.

[0105]Multitasking of performing another processing using the bus corresponding to the form

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1145 of 1457 of CPU becomes easy simultaneously, reproducing the signal of a sound using the bus for connecting apparatus. Also when changing CPU into the thing of another form, the bus for connecting these apparatus with each apparatus remains as it is, and since what is necessary is to change only the bus corresponding to the form of CPU according to the form of new CPU, it can respond also to change of CPU easily.

[0106]In particular, in this embodiment, two or more apparatus can be connected in daisy chain form one after another, and it can die. For this reason, also when the number of apparatus increases or distributed installation of the apparatus is carried out here and there [in the car], long wiring is not concentrated in one place like a star method, and installation becomes easy. Since wiring becomes intelligible shapely, it also becomes easy to change the composition of a car audio system or to carry out maintenance and repair.

[0107]In addition, since any data is exchanged as digital data and processed through USB etc. in this embodiment regardless of the kind of data whether to be audio information or to be alphabetic data, It is hard to be influenced by the environmental variation or a noise, and an audio characteristic is also stabilized.

[0108][An embodiment] besides 4. This invention is not limited to the embodiment described above, and contains other embodiments which are illustrated next. For example, in the embodiment described above, although Windows CE was mentioned as an example of OS of a computer, since this is only mere illustration, using OS of other kinds which already uses a certain OS or will appear newly from now on is also included in the range of this invention. [0109]Although the example which controls the car audio system for mount by the embodiment described above was shown. This invention can harness the advantage of this invention that it is also possible to use for controlling electric products, such as a non-portable stereo, new application software is used also in this case, or the whole is small and can be managed in a home.

[0110]Although the standard concrete about various buses and communication circuits was mentioned in the embodiment described above, such a standard is only illustration and can also be transposed to other standards which can do same usage. For example, the 1st bus and 2nd bus can also make a CPU module and a support module an internal bus by one-chipizing.

[0111]

[Effect of the Invention]As mentioned above, according to this invention, taking advantage of a mutual advantage, a complicated car audio system and how to use a computer by controlling easily can be extended by combining a computer with general-purpose OS, and a car audio system.

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1146 of 1457 [Translation done.]

PRIOR ART

[Description of the Prior Art]In recent years, progress with remarkable art of a semiconductor is accomplished and the electronic equipment of various fields has become a miniaturization and highly efficient by using a semiconductor. Thus, one of the electronic equipment made a miniaturization and highly efficient by using a semiconductor has a personal computer (henceforth a "personal computer").

[0003]The small personal computers (it names generically the following "hand-held PC") called [especially] a handheld computer (carried type), a palm top, etc. these days are also increasing in number. Windows(registered trademark of Microsoft Corp.) CE etc. are known, for example as base software (it is called below Operating System: "OS") suitable for such a hand-held PC, i.e., an operating system.

[0004]Such a general-purpose OS realizes advanced throughput by managing finely throughput, a memory, etc. of CPU which the computer has, or, If it is a program of the form which provided the user interface independent of a program which it is unific and is easy to use, or was decided beforehand, it has the advantage that the current update of the function of a computer can be carried out by carrying out a current update freely.

[0005]As another electronic equipment which similarly has been made a miniaturization and highly efficient by using a semiconductor, the car audio system and car-navigation system which are carried in a car are mentioned. Among these, a car audio system is commonly called a car stereo etc., and combines the tuner of a CD player, AM, or FM, etc. with amplifier, a loudspeaker, etc. A car-navigation system is a shown system to which a screen display of the map is carried out to the specified destination, pinpointing the current position of a car using an azimuth magnet, an odometer, GPS, etc.

[0006]These days, since a car-navigation system, a handsfree cellular phone, an anti-theft alarm system, etc. are combined with a car audio system in many cases, the electronic equipment for these mount is hereafter named a "car audio system" generically.

EFFECT OF THE INVENTION

[3. effect] As mentioned above, the computer which controls a car audio system by this embodiment is provided with general-purpose OS, and it this general-purpose OS, The user interface which carries out the maximum exertion of the capability of a computer by managing resources, such as CPU and a memory, and is not dependent on a program and which it is unific and is easy to use is provided, and an addition and change of a function are also made easy by adding the program of the form decided further beforehand, or changing. For this reason, control of a complicated car audio system becomes easy.

[0103]If it is the program which suited the standard of OS, it will become possible to use a program also with in the car [various], and it will also become possible to process information using apparatus, such as an indicator of a car audio system, an operation key, and a loudspeaker. Of course, a user can save his individual information even in this case using about the same big memory as a hand-held PC, or information can be edited like a personal computer.

[0104]In this embodiment, data is exchanged using the bus CPU of a computer and the apparatus of the car audio system made the mistake in corresponding to a mutual form, and between two buses, if needed, data changes form, wins popularity and is passed. For this reason, even if operation of CPU is quicker than operation of each apparatus, it is not necessary to double CPU with the motion cycle of each apparatus, and complicated processing can be performed at high speed by accessing a memory etc. efficiently. Since the data which CPU exchanges, and the data which apparatus exchanges do not scramble for the communicative competence of the same bus, both a computer and a car audio system can perform each operation smoothly.

[0105]Multitasking of performing another processing using the bus corresponding to the form of CPU becomes easy simultaneously, reproducing the signal of a sound using the bus for connecting apparatus. Also when changing CPU into the thing of another form, the bus for connecting these apparatus with each apparatus remains as it is, and since what is necessary is to change only the bus corresponding to the form of CPU according to the form of new CPU, it can respond also to change of CPU easily.

[0106]In particular, in this embodiment, two or more apparatus can be connected in daisy chain form one after another, and it can die. For this reason, also when the number of apparatus increases or distributed installation of the apparatus is carried out here and there [in the car], long wiring is not concentrated in one place like a star method, and installation becomes easy. Since wiring becomes intelligible shapely, it also becomes easy to change the composition of a car audio system or to carry out maintenance and repair.

[0107]In addition, since any data is exchanged as digital data and processed through USB etc. in this embodiment regardless of the kind of data whether to be audio information or to be alphabetic data, It is hard to be influenced by the environmental variation or a noise, and an audio characteristic is also stabilized.

[0108][An embodiment] besides 4. This invention is not limited to the embodiment described above, and contains other embodiments which are illustrated next. For example, in the embodiment described above, although Windows CE was mentioned as an example of OS of a computer, since this is only mere illustration, using OS of other kinds which already uses a certain OS or will appear newly from now on is also included in the range of this invention. [0109]Although the example which controls the car audio system for mount by the embodiment described above was shown, This invention can harness the advantage of this invention that it is also possible to use for controlling electric products, such as a non-portable stereo, new application software is used also in this case, or the whole is small and can be managed in a home.

[0110]Although the standard concrete about various buses and communication circuits was mentioned in the embodiment described above, such a standard is only illustration and can also be transposed to other standards which can do same usage. For example, the 1st bus and 2nd bus can also make a CPU module and a support module an internal bus by one-chip-izing.

TECHNICAL PROBLEM

[Problem(s) to be Solved by the Invention]The hand-held PC provided with OS which was described above, and the car audio system were mutual completely separate in the former. That is, although the car audio system which prepared the computer in the large meaning for control existed, the computer in this case is called the embedded system which works only for the specific purpose.

[0008]CPU with necessary minimum capability is used for this embedded system, and it realizes necessary minimum processing to the hardware of receiving an operation switch or operating a disk reproduction mechanism, by the small program using an assembler etc. For this reason, usage of carrying out the change addition of the function by carrying out processing and preservation of data like a personal computer, or carrying out the change addition of the program cannot be done.

[0009]On the other hand, it did not have a function which a hand-held PC sounds music itself, or controls a car audio system. For this reason, although the user might carry the hand-held PC into in the car as a matter of fact, he did not use, having connected with the car audio system.

[0010]By the way, the latest car audio system, Not only in conventional apparatus called the tuner, cassette tape deck, and CD player of radio, Many apparatus is increasingly built into the condition of an MD player, CD, the autochanger of MD, a car-navigation system, the voice recognition equipment that recognizes a user's command, a handsfree cellular phone, and an anti-theft alarm system. And it is dramatically difficult to master the car audio system which becomes complicated in this way only with the switch in which it was provided by each device. [0011]That is, when a car audio system becomes complicated in this way, many switches, such as an operation key and a dial, will be in various places in the car. For this reason, it is serious to memorize which is what operation key.

[0012]Namely, in order to master the car audio system which becomes complicated. To use for

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1153 of 1457 control an information processor equivalent to the hand-held PC provided with the small computer with the pliability which can carry out the current update of the function about the advanced throughput which controls a complicated system, the user interface, and control which are easy to use, and especially general-purpose OS is desired.

[0013]Even if it thinks from the hand-held PC side, a car is used like the present age in many cases, and in the car is wanted to expand the width of practical use in society also with much traffic congestion. By combining with a car audio system especially, make an operation key and a memory serve a double purpose, or, The information which a user wants to know in the car is made to be read out by the synthesized speech using a computer, If usage of hearing the voice from the loudspeaker of a car audio system, or accessing an external computer network by the circuit of the cellular phone built into the car audio system can be done, the width of practical use can be expanded rather than former.

[0014]When combining high-speed CPU which uses general-purpose OS, and apparatus which is contained in a car audio system, to have a separate bus suitable for each from the difference in both working speed, etc. is desired. In the car audio system which combined a lot of apparatus, two or more apparatus is wanted to be easily connectable with simple refreshed wiring.

[0015]Proposed in order that this invention might solve the problem of conventional technology which was described above, it is combining a small computer with general-purpose OS, and a car audio system, and the purpose is to harness a mutual advantage. Another purpose of this invention is to use two or more buses, and is using both high-speed apparatus of CPU and others smoothly without futility. Another purpose of this invention is to connect various apparatus one after another with a daisy chain mode.

2.**** shows the word which can not be translated.

3.In the drawings, any words are not translated.

MEANS

[Means for Solving the Problem]In order to attain the purpose described above, an invention of claim 1 equips a car audio system provided with a computer for control with the following. A means by which said computer is provided with an operating system and this operating system manages resources on a computer.

A means to control input and output containing a user interface.

A means to execute a program of form decided beforehand.

A computer for mount of claim 6 is provided with the following.

An operating system which realizes environment required in order to execute a program of form decided beforehand.

Car audio system.

A means to control said car audio system.

An invention of claim 11 is what caught an invention of claim 1 from a view of a method, In a control method of a car audio system which controls a car audio system using a computer provided with an operating system, A step which realizes environment which needs said operating system in order to execute a program of form decided beforehand, and a step by which said program controls said car audio system are included. A computer which controls a car audio system by invention of claims 1, 6, and 11 is provided with general-purpose OS, and it this general-purpose OS, A user interface which carries out the maximum exertion of the capability of a computer by managing resources, such as CPU and a memory, and is not dependent on a program and which it is unific and is easy to use is provided, and an addition and change of a function are made easy by adding a program of form decided further beforehand, or changing. For this reason, control of a complicated car audio system becomes easy. It becomes possible for in the car to use various programs, or to process information using apparatus of a car audio system.

[0017]An invention of claim 2 was provided with the 1st bus corresponding to form of CPU

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1155 of 1457 contained in said computer, and the 2nd bus for connecting apparatus contained in said car audio system in a car audio system provided with a computer for control. An invention of claim 7 was provided with the 1st bus corresponding to form of CPU contained in said computer, and the 2nd bus for connecting apparatus contained in said car audio system in a computer for mount provided with a car audio system. An invention of claim 12 is what caught an invention of claim 2 from a view of a method, In a control method of a car audio system which controls a car audio system using a computer, A step with which CPU contained in said computer exchanges data through the 1st bus corresponding to form of this CPU, Apparatus contained in said car audio system contains a step which exchanges data through the 2nd bus for connecting apparatus. An invention of claim 3 was provided with a PCI bus for connecting apparatus contained in said car audio system with a local bus corresponding to form of CPU contained in said computer in a car audio system provided with a computer for control. An invention of claim 8 was provided with a PCI bus for connecting apparatus contained in said car audio system with a local bus corresponding to form of CPU contained in said computer in a computer for mount provided with a car audio system. An invention of claim 4 was provided with a means to change form of data between said each bus, in the car audio system according to claim 2 or 3. An invention of claim 9 was provided with a means to change form of data between said each bus, in the computer for mount according to claim 7 or 8. In an invention of claims 2, 3, 7, 8, and 12, data is exchanged using a bus CPU of a computer and apparatus of a car audio system made the mistake in corresponding to a mutual form, and between two buses, if needed, data changes form, wins popularity and is passed (claims 4 and 9). For this reason, even if operation of CPU is quicker than operation of each apparatus, it is not necessary to double CPU with a motion cycle of each apparatus, and complicated processing can be performed at high speed by accessing a memory etc. efficiently. Since data which CPU exchanges, and data which apparatus exchanges do not scramble for communicative competence of the same bus, it can operate smoothly in both a computer and a car audio system. Multitasking of performing another processing using a bus corresponding to form of CPU becomes easy simultaneously, reproducing a signal of a sound using a bus for connecting apparatus. Also when changing CPU into a thing of another form, a bus for connecting these apparatus with each apparatus remains as it is, and since what is necessary is to change only a bus corresponding to form of CPU according to form of new CPU, it can respond also to change of CPU easily.

[0018]An invention of claim 5 was provided with the 3rd bus for connecting two or more apparatus contained in said car audio system in a car audio system of any one statement of four from claim 1 in daisy chain form. An invention of claim 10 was provided with the 3rd bus for connecting two or more apparatus contained in said car audio system in a computer for mount of any one statement of nine from claim 6 in daisy chain form. In an invention of claims

5 and 10, two or more apparatus can be connected in daisy chain form one after another, and it can die. For this reason, also when the number of apparatus increases or distributed installation of the apparatus is carried out here and there [in the car], long wiring is not concentrated in one place like a star method, and installation becomes easy. Since wiring becomes intelligible shapely, it also becomes easy to change composition or to carry out maintenance and repair.

[0019]

[Embodiment of the Invention]Next, an embodiment of the invention (henceforth a "embodiment") is concretely described with reference to drawings. Although this embodiment is the car audio system provided with various apparatus, such as a CD player, it is provided with the computer provided with general-purpose OS which is used for a hand-held PC, and also performs control of a car audio system by this computer. The same numerals are attached about the member same about each figure used by the following explanation as the figure explained before it, or the same kind of member, and explanation is omitted. [0020][1. composition]

[Composition of whole 1-1.] First, <u>drawing 1</u> is a block diagram showing the entire configuration of this embodiment. As shown in this figure, this embodiment as each apparatus which constitutes a car audio system other than the main unit 1, It has the tuner amplifier unit 2, the microphone 3, the GPS antenna 4, the security control unit 5, the telephone unit 6, the CD-ROM autochanger 7, and the auxiliary battery 9 for power supply backup.

[0021]Among these, the main unit 1 is a portion which builds in the computer for control and controls the whole system by this computer. Although the tuner amplifier unit 2 does not carry out the graphic display other than the antenna 2a of AM and FM, it is the portion provided with a radio tuner and the amplifier for sounding a loudspeaker. The microphone 3 is for inputting a user's voice so that operation by speech recognition can be performed. The function of this speech recognition is realized by the program of the computer described above.

[0022][1-1-1. main unit] The main unit 1 is provided with the socket 13S for inserting CompactFlash card 13, and the face plate unit 15 removed [attach and] and made (drawing <u>1</u>). CompactFlash card 13 is a storage using a flash memory, and data can be written from the main unit 1 by inserting in the socket 13S formed in the main unit 1. This CompactFlash card 13 is used in order to exchange data, a program, etc. with other computers or to back up various information sets in this car audio system.

[0023]The face plate unit 15 attached, removed and made, It has the indicator which displays various information on a user, and the final controlling element which provided the operation key for a user to do various operations etc., and is referred to also as DCP (Detachable Control Panel). The indicator of this face plate unit 15 is large-sized color LCD (liquid crystal display) of 64 dots by 256 dots, etc., for example.

[0024]if it removes and carries out when getting off a car, even if a thief looks for a car audio system, neither use nor resale can do this face plate unit 15, also seeing an important indicator not have a final controlling element -- there are ** and a theft preventive effect of giving up stealing. If the removed face plate unit 15 is put into the case 15a and it carries around, it will damage neither itself nor a surrounding thing.

[0025]Although this face plate unit 15 is not shown in <u>drawing 1</u>, it is provided with the infraredray-communication unit for exchanging data in the form of the hand-held PC 8, IrDA, etc. [0026][Apparatus] besides 1-1-2. The GPS antenna 4 is an antenna for receiving an electric wave from a GPS Satellite. The signal from this GPS antenna 4 is sent to the GPS unit in the main unit 1 through GPS receiver 4a. Although this GPS unit is not shown in <u>drawing 1</u>, it calculates the position on the earth with a receiver from an electric wave. On the computer described above, by a program, the function of a car-navigation system is realized and a calculation result is passed to the function of this car-navigation system.

[0027]The security control unit 5 is the sensor 5a which detects vibration and a shock, and when a theft, a mischief, etc. are detected, it is a portion which carries out correspondence of sounding the siren 5b. The telephone unit 6 is a unit which controls the function of a car telephone, and is a portion which realizes the telephone call using the telephone antenna 6a or the hand set 6b. The CD-ROM autochanger 7 is hanging automatically some CDs set beforehand again, and is a unit which plays the disk which the user chose, and music. [0028][1-1-3. daisy chain connection] Here, these security control unit 5, the telephone unit 6, and the CD-ROM autochanger 7 are connected to the main unit 1 by USB (Universal Serial Bus). This USB is a serial bus (the 3rd bus) for connecting two or more apparatus in daisy chain form.

[0029]The apparatus connected by USB in this way comprises this embodiment so that data with the exterior may be exchanged in the form of this USB. For example, the CD-ROM autochanger 7, Although it has the hub (HUB) the object for upstreams, and for downstreams and digital data is once read from an audio CD or CD-ROM according to ATAPI form (parallel form) inside this CD-ROM autochanger 7, After the read data is changed into the USB (Universal Serial Bus) form which is serial form by the data converter built in, it is sent out to USB.

[0030]The installation becomes easy when installing these units 5, 6, and 7 in the place distant from the main unit 1, since connection of the units 5 and 6 and the CD-ROM autochanger 7 turns into serial connection with such composition. Although connected in order of the unit 5, the unit 6, and the autochanger 7 in <u>drawing 1</u>, connection order is good also as connection of only arbitrary and required things.

[0031][The internal configuration of a 1-2. main unit] Next, <u>drawing 2 is a block diagram</u> showing the main things among each portion described above, and is especially explained

focusing on the concrete composition of main unit 1 inside. This whole figure is divided into four with the dashed line, in the left, CPU module 11 and a center become the support module 12, the upper right becomes the external unit 30, and the lower right has become the option unit 40. Among these, CPU module 11 and the support module 12 are formed in the inside of the main unit 1.

[0032]The external unit 30 and the option unit 40 have pointed out collectively the apparatus of every some connected to the main unit 1. On account of explanation, CompactFlash card 13 is shown in the direction under CPU module 11, and <u>drawing 2</u> shows the face plate unit 15 to the direction on the external unit 30.

[0033]Among these, CPU module 11 and the support module 12 constitute the computer for control which controls the whole car audio system. Among these, CPU module 11 is a portion which carries out logical data processing centering on CPU111, and the support module 12 is a portion which performs input and output with other apparatus contained in a car audio system.

[0034]The local bus B1 (the 1st bus) formed considering CPU111 as a center is a way with CPU module 11 as [main] data. PCI (Peripheral Component Interconnect) for that it is a way by the support module 12 as [main] data to connect each apparatus on the other hand It is bus B-2 (the 2nd bus).

[0035][Composition of a 1-2-1. CPU module] The local bus B1 of CPU module 11, It is what was doubled with the form of CPU111, and DRAM112, the flash ROM 113, the PCI bus host controller 114, CPU host ASIC115, and PCMCIA-ASIC116 are connected to this local bus B1. Among these, DRAM112 is a portion which provides work areas, such as a variable area, when CPU111 processes information in control of a car audio system, etc.

[0036]The flash ROM 113 is rewritable ROM and is a portion which stores the software in large meanings, such as OS, BIOS, and an application program, here. The function of OS stored here manages the resources on a computer, It is controlling the input and output containing a user interface, executing the program of the form decided beforehand, etc., for example, what used as the base Windows CE which conventional technology described by the way can be considered.

[0037]The PCI bus host controller 114 is a means to change the form of the data which connects the local bus B1 and PCI bus B-2, and is exchanged between these two buses. [0038]"ASIC", such as CPU host ASIC115, is the abbreviation for Application Specific Integrated Circuit, and points out IC and LSI which were made for specific uses to general-purpose integrated circuits, such as ROM, RAM, and CPU. Specifically, this CPU host ASIC115 is ASIC for the interface of the local bus B1 and the PCI bus host controller 114. This CPU host ASIC115 [that is,], Between PCI bus B-2 and CPU module 11, are a portion which becomes a window of the data exchanged and specifically, Input and output with CPU module

http://www4.ipdl.inpit.go.jp/cgi-bin/tran_web_cgi_ejje?atw_u=http%3A%2F%2Fwww4.i... 10/21/2008 Page 1159 of 1457 11 and the exterior are performed instead of CPU111, and also it is recognized whether it is a thing of the kind passed to CPU111 about the data sent from PCI bus B-2.

[0039]And although what should pass CPU host ASIC115 to CPU111 is sent to CPU111 through the local bus B1, CPU111 does not need to calculate to the other thing, for example, the sent data, and such a reaction is returned about that for which it is sufficient if the reaction for which it opted beforehand is returned mechanically.

[0040]PCMCIA-ASIC116 CompactFlash card 13, It is a portion for an interface corresponding to being based on the standard of PCMCIA (Personal Computer Memory Card International Association) as what is called a PC card, It is a portion which controls the reading and writing of data to CompactFlash card 13.

[0041][Composition in connection with a 1-2-2. support module] Next, PCI bus B-2 of the support module 12 is a bus for exchanging data among various apparatus which constitutes a car audio system. Here, as apparatus connected to this PCI bus B-2, there are the external unit 30 and the option unit 40, and these have pointed out some apparatus collectively, respectively.

[0042]That is, the external unit 30 is unit with the another main unit 1 shown in <u>drawing 1</u>, and in this example specifically, It is the tuner 21, the amplifier 22, and the microphone 3 which were formed in the face plate unit 15 attached, removed and made from the main unit 1, and the tuner amplifier unit 2. Among these, the face plate unit 15 is provided with the infrared-ray-communication unit 127.

[0043]The option unit 40 is a unit from which it can choose whether to include in this car audio system as an option, and, specifically, are GPS unit 16 and the CD-ROM autochanger 7 in this example. There is the CD-ROM unit 14 in the inside of the main unit 1, and this CD-ROM unit 14 is also connected to PCI bus B-2. This CD-ROM unit 14 is a player for reading digital data from one CD or CD-ROM. These CD-ROM autochanger 7 and the CD-ROM unit 14 have the compatibility that data can also be read from what is called an audio CD, and both can also read data from CD-ROM (it is compatible).

[0044]In the support module 12, in order for PCI bus B-2 to exchange data among these apparatus, Support ASIC121, CODEC circuit 122, DSP unit 123, the buffer memory 124, the parallel / PCI driver 125, and the serial / PCI driver 126 are used.

[0045]Among these, support ASIC121 is a portion which controls traffic in the data where to send the data which came from where between the support module 12 and each apparatus. "CODEC" of CODEC circuit 122 is an abbreviation of "Coder/Decoder", i.e., the coding decryption art of data, and this CODEC circuit 122, For example, it is a portion which performs the A/D conversion etc. which carry out D/A conversion which changes the given digital data into an analog signal, or change an analog signal into digital data conversely.

[0046]"DSP" of DSP unit 123 is an abbreviation to mean a digital sound processor, i.e., the

circuit which processes the signal of the sound of digital format specially, and this DSP unit 123, When the digital data showing music etc. can be given, as items, such as balance of the right and left set as the system, volume, Feder, surround, and an equalizer, are reflected in the contents of the sound, it is a portion which processes digital data.

[0047]By audio equipment and PCI bus B-2s, such as a CD-ROM unit, since the buffer memory 124 differs in the cycle which write data, it is a buffer for this difference to be filled up with storing data and taking it out little by little, and comprises SRAM etc.

[0048]Parallel / PCI driver 125 is portions which change into the data format of PCI bus B-2 the digital data of parallel form sent from the CD-ROM unit 14. A serial / PCI driver 126 is portions which change into the data format of PCI bus B-2 the digital data of serial form sent from the CD-ROM autochanger 7.

[0049]The face plate unit 15 containing the infrared-ray-communication unit 127, It is connected to support ASIC121 in a high-speed serial communication circuit, and GPS unit 16 is connected to support ASIC121 in start-stop serial communication circuits, such as UART (UniversalAsynchronous Receiver-Transitter). The CD-ROM unit 14 is connected to parallel / PCI driver 125 by parallel communication circuits, such as ATAPI (AT Attachment Packet Interface). Although a graphic display is not carried out, ASIC which manages an exchange of the data based on infrared rays is provided in the infrared-ray-communication unit 127.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503. <u>New Applications Under 35 U.S.C. 111</u> If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application. <u>National Stage of an International Application under 35 U.S.C. 371</u>						
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course. <u>New International Application Filed with the USPTO as a Receiving Office</u> If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

FORM PTO-302 -- (REV. 04-2007)

Commissioner for Patents United States Patent and Trademark Office P.O. Box 1450 Alexandria, VA 22313-1450 www.uspto.gov

Date : December 1, 2008

TO : Director, Office of Patent Publication

FROM : Office of Petitions

SUBJECT : Withdrawal from Issue of Application No. 10/316,961

Applicant(s) : Ira Marlowe Application No. : 10/316,961 Filed : December 11, 2002

The above-identified application has been assigned Patent No.7,463,741 and an issue date of December 9, 2008.

It is hereby directed that this application be withdrawn from issue at the request of the applicant. Do not refund the issue fee.

The following erratum should be published in the Official Gazette if the above-identified application is published in the OG of December 9, 2008:

"All reference to Patent No. 7,463,741 to Ira Marlowe of New Jersey for AUDIO DEVICE INTEGRATION SYSTEM appearing in the Official Gazette of December 9, 2008 should be deleted since no patent was granted."

OFFICE OF PETITIONS

In re Application of	
Ira Marlowe	:
Application No. 10/316,961	: DECISION GRANTING PETITION
Filed: December 11, 2002	: UNDER 37 CFR 1.313(c)(2)
Attorney Docket No. 9809/1	:

This is a decision on the petition under 37 CFR 1.313(c)(2), filed November 26, 2008, to withdraw the above-identified application from issue after payment of the issue fee.

The petition is **GRANTED**.

The above-identified application is withdrawn from issue for consideration of a submission under 37 CFR 1.114 (request for continued examination). See 37 CFR 1.313(c)(2).

Petitioner is advised that the issue fee paid on August 15, 2008 cannot be refunded. If, however, this application is again allowed, petitioner may request that it be applied towards the issue fee required by the new Notice of Allowance.¹

Telephone inquiries should be directed to the undersigned at (571) 272-3208.

This application is being referred to Technology Center AU 2615 for processing of the request for continued examination under 37 CFR 1.114 and for consideration of the concurrently filed IDS.

/Karen Creasy/ Karen Creasy Petitions Examiner

¹ The request to apply the issue fee to the new Notice may be satisfied by completing and returning the new Part B – Fee(s) Transmittal Form (along with any balance due at the time of submission). <u>Petitioner is advised that the Issue Fee Transmittal Form must be completed and timely submitted to avoid abandonment of the application.</u>

TITLE OF INVENTION: AUDIO DEVICE INTEGRATION SYSTEM

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	YES	\$755	\$0	\$720	\$755	03/30/2009

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. <u>PROSECUTION ON THE MERITS IS CLOSED</u>. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN <u>THREE MONTHS</u> FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. <u>THIS STATUTORY PERIOD CANNOT BE EXTENDED</u>. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:	If the SMALL ENTITY is shown as NO:
A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.	A. Pay TOTAL FEE(S) DUE shown above, or
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or	B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PTOL-85 (Rev. 08/07) Approved for use through 08/31/2010.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 820 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 820 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

COMMUNICATION

Mail Stop Issue Fee Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

Applicant previously paid an Issue Fee in the amount of \$720 on August 15, 2008, in connection with the present application. Applicant hereby requests that this payment be applied to the current Issue Fee of \$755, and herewith submits payment of the difference, i.e., \$35, due to an increase in issue fees. Applicant also submits herewith payment of \$15 for five (5) copies of the patent. Commissioner is hereby authorized to charge \$50, and any additional fees, to Deposit Account No. 503571.

Dated: December 31, 2008

Respectfully submitted,

Michael R Friscia Reg. No. 33,884 McCarter & English, LLP Four Gateway Center 100 Mulberry Street Newark, NJ 07102-4056 Tel: (973) 639-8493 Fax: (973) 297-6627

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment is 820 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (571)-272-4200.

Applicant(s): Ira Marlowe

Patent No: 7,489,786

Issued: 02/10/2009

For: Audio Device Integration System

COMMUNICATION

ATTN: CERTIFICATE OF CORRECTIONS BRANCH Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

Applicant respectfully submits a request for a Certificate of Correction for the above-referenced patent to correct typographical errors contained throughout the patent.

Additionally, Applicant notes that there should be <u>two</u> citations listed with the following title in the References Cited Section, on page 2 of the patent, under Other Publications:

"Automedia,' magazine pages from Feb. 1999 issue (2 pages)."

This citation only appears once. However, two separate articles were submitted from the same issue of this magazine, and both were listed in an Information Disclosure Statement dated May 26, 2006. Accordingly, this citation should be listed twice on the issued patent. For reference, attached hereto at Exhibit A is a copy of the Information Disclosure Citation Form, dated May 26, 2006, which lists the aforementioned articles and is signed by the Examiner.

ME1 8212189v.1

Page 1196 of 1457

Patent No. 7,489,786 March 12, 2009 Page 2

These changes are indicated on the enclosed Certificate of Correction.

The Commissioner is authorized to charge \$100.00 to Deposit Account No. **503571** to cover the government filing fee for filing the Request for Certificate of Correction under 37 C.F.R. § 1.323. If there are any additional fees due in connection with this matter, the Commissioner is authorized to charge them to Deposit Account No. **503571**.

UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE OF CORRECTION

Page 1 of 1

PATENT NO. : 7,489,786

APPLICATION NO.: 10/316,961

ISSUE DATE : 02/10/2009

INVENTOR(S) : Ira Marlowe

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

In the References Cited Section, on Page 2 of the patent, in the first column, the spelling of the Inventor's name of U.S. Patent No. 6,005,488 should read "Symanow, et al." instead of "Symanov, et al."

In the References Cited Section, on Page 2 of the patent under Other Publications, in second column, the fourth reference listed, the website should read "www.venturatechnology.net" instead of "www.venturatechnoogy.net."

In the References Cited Section, on Page 2 of the patent under Other Publications, please include the following reference: ""Automedia," magazine pages from Feb. 1999 issue (2 pages)."

In the References Cited Section, on Page 2 of the patent under Other Publications, in second column, the nineteenth reference listed should read "3 pages" submitted instead of "2 pages."

Column 9, line 3, "USART" should be deleted and replaced with "UART."

Column 10, line 7, "USART" should be deleted and replaced with "UART."

Column 11, line 56, "USART" should be deleted and replaced with "UART."

Column 19, line 39, the second instance of the word "is" should be deleted and replaced with the word "if."

Column 23, line 54, "24" should be deleted and replaced with "25."

Column 27, line 25, "63" should be deleted and replaced with "66."

Column 30, line 9, the word "comprises" and the word "comprising" should be deleted and replaced with "comprises."

MAILING ADDRESS OF SENDER (Please do not use customer number below):

Mark E. Nikolsky, McCarter & English, LLP Four Gateway Center 100 Mulberry Street Newark, NJ 07102

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Paper No. 12 Filed: July 6, 2016

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

TOYOTA MOTOR CORPORATION, Petitioner,

v.

BLITZSAFE TEXAS, LLC, Patent Owner.

> Case IPR2016-00422 Patent 7,489,786 B2

Before JAMESON LEE, THOMAS L. GIANNETTI, and HUNG H. BUI, *Administrative Patent Judges*.

LEE, Administrative Patent Judge.

DECISION Denying Institution of *Inter Partes* Review 37 C.F.R. § 42.108

Page 1217 of 1457

I. INTRODUCTION

A. Background

On December 30, 2015, Petitioner filed a Petition (Paper 1, "Pet.") to institute *inter partes* review of claims 1, 2, 4–8, 10, 13, 14, 23, 24, 44, 47, 57, 58, 60–65, 86, 88–92, 94, 97, and 98 of U.S. Patent No. 7,489,786 B2 (Ex. 1001, "the '786 patent"). On April 11, 2016, Patent Owner filed a Preliminary Response (Paper 9, "Prelim. Resp.").

To institute an *inter partes* review, we must determine that the information presented in the Petition shows "that there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition." 35 U.S.C. § 314(a). Having considered both the Petition and the Preliminary Response, we determine that Petitioner has *not* demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of any claim. Thus, we do not institute an *inter partes* review of any claim of the '786 patent.

B. Related Matters

The parties indicate that the '786 patent was asserted in five infringement actions before the United States District Court of the Eastern District of Texas and two infringement actions before the United States District Court for the District of New Jersey. Pet. 1–2, Paper 5, 1–2. The '786 patent also is involved in IPR2016-00421. Related Patent 8,155,342 B2 is involved in IPR2016-00118, IPR2016-00418, and IPR2016-00419.

C. The '786 Patent

The '786 patent is titled "AUDIO DEVICE INTEGRATION SYSTEM." Ex. 1001 (54). "One or more after-market audio devices, such as a CD player, CD changer, MP3 player, satellite receiver, DAB receiver,

2

Page 1218 of 1457

or the like, is integrated for use with an existing OEM or after-market car stereo system, wherein control commands can be issued at the car stereo and responsive data from the audio device can be displayed on the stereo." *Id.* at Abstr. The '786 patent describes:

Control commands generated at the car stereo are received, processed, converted into a format recognizable by the audio device, and dispatched to the audio device for execution. Information from the audio device, including track, disc, song, station, time, and other information, is received, processed, converted into a format recognizable by the car stereo, and dispatched to the car stereo for display thereon.

Id. Additional auxiliary sources also may be integrated together, and "a user can select between the [audio] device or the one or more auxiliary input sources by issuing selection commands through the car stereo." *Id.* A docking station is provided for docking a portable audio or video device for integration with the car stereo. *Id.* Figures 2A–2C are reproduced below:

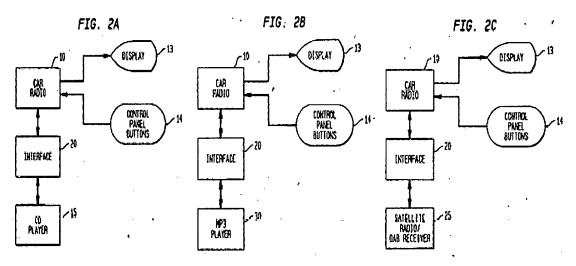

Figure 2A illustrates an embodiment integrating a CD player with the car stereo; Figure 2B illustrates an embodiment integrating a MP3 player with a car stereo; and Figure 2C illustrates an embodiment integrating a satellite or

DAB receiver with a car stereo. *Id.* at 3:14–23. A more versatile embodiment is shown in Figure 1:

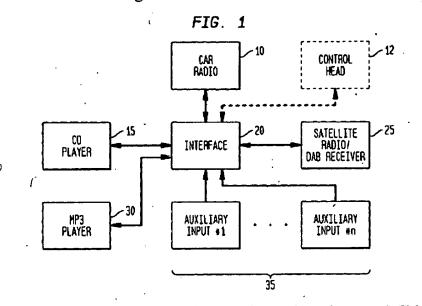

Figure 1 illustrates an embodiment integrating a CD player, a MP3 player, a satellite radio or DAB receiver, and a number of auxiliary input sources with a car stereo. *Id.* at 3:12–13. As shown in the above figures, central to the '786 patent is an "interface" positioned between the car stereo and the audio `device(s) and auxiliary input(s) being integrated.

With regard to Figure 2B, the '786 patent describes:

The interface 20 allows data and audio signals to be exchanged between the MP3 player 30 and the car radio 10, and processes and formats signals accordingly so that instructions and data from the radio 10 are processable by the MP3 player 30, and vice versa. Operational commands, such as track selection, pause, play, stop, fast forward, rewind, and other commands, are entered via the control panel buttons 14 of car radio 10, processed by the interface 20, and formatted for execution by the MP3 player 30. Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for display on display 13. Audio from MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:11–24 (emphasis omitted). Similar description is provided with \checkmark respect to Figures 2A and 2C. *Id.* at 5:49–55, 6:35–43.

Claims 1, 44, 57, 86, and 92 are independent. Claim 1 is directed to a system that connects an after-market audio device as well as one or more auxiliary input sources to a car stereo. In particular, it recites a first connector electrically connectable to a car stereo, a second connector electrically connectable to an after-market device, and a third connector electrically connectable to one or more auxiliary input sources. *Id.* at 21:33–38. Claim 1 also recites an interface connected between the first and second electrical connectors, and that the interface includes a microcontroller preprogrammed to execute:

a first pre-programmed code portion for remotely controlling the after-market audio device using the car stereo by receiving a control command from the car stereo through said first connector in a format incompatible with the after-market
audio device, processing the received control command into a formatted command compatible with the after-market audio device, and transmitting the formatted command to the after-market audio device through said second connector for execution by the after-market audio device;

a second pre-programmed code portion for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo; and

a third pre-programmed code portion for switching to one or more auxiliary input sources connected to said third electrical connector.

5

Id. at 21:44–64.

Claim 57 is directed to a system including an interface that connects a portable MP3 player to a car stereo. Claim 86 is directed to a system including an interface that connects an after-market video device to a car stereo. Claim 92 is directed to a system including an interface that connects a portable audio device with a car stereo. Claims 57, 86, and 92 are reproduced below:

57. An audio device integration system comprising:

a first electrical connector connectable to a car stereo;

a second electrical connector connectable to a portable MP3 player external to the car stereo

an interface connected between said first and second electrical connectors for transmitting audio from a portable MP3 player to a car stereo, said interface including a microcontroller in electrical communication with said first and second electrical connectors,

said microcontroller pre-programmed to execute:

a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state; and

a second pre-programmed code portion for remotely controlling the MP3 player using the car stereo by receiving a control command from the car stereo through said first electrical connector in a format incompatible with the MP3 player, processing the control command into a formatted control command compatible with the MP3 player, and transmitting the formatted control command to the MP3 player through said second electrical connector for execution by the MP3 player.

Id. at 26:13–37.

86. A device for integrating video information for use with a car stereo, comprising:

a first electrical connector connectable to a car stereo;

- a second electrical connector connectable to an after-market video device external to the car stereo;
- an interface connected between said first and second electrical connectors for transmitting video information from the aftermarket video device to the car stereo, the interface including a microcontroller in electrical communication with said first and second electrical connectors, said microcontroller preprogrammed to execute:
 - a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo through said first electrical connector to maintain the car stereo in an operational state responsive to signals generated by the after-market video device.

Id. at 28:40–56.

92. An audio device integration system comprising:

a car steréo;

a portable audio device external to the car stereo;

- an interface connected between the car stereo and the portable audio device, the interface including a microcontroller pre-programmed to execute:
 - first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state;
 - second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing the control command into a formatted control command compatible with the portable audio device, and transmitting the formatted control command to the portable audio device for execution thereby; and

means for transmitting audio from the portable audio device to the car stereo.

*

Id. at 29:11–31.

Claim 44 is directed to an apparatus for docking a portable device for integration with a car stereo. *Id.* at 25:1–2. A docking portion is recited as physically mating with the portable device. *Id.* at 25:5–6. A data port is recited as being in communication with the docking portion. *Id.* at 25:7–8. An interface is recited as "connected to said data port and to the car stereo" and "channeling audio from the portable device to the car stereo." *Id.* at 25:10–12. Claim 44 recites that the interface includes a microcontroller in electrical communication with the car stereo, and with the portable device through the data port. *Id.* at 5:12–14. Claim 44 further recites that the microcontroller is:

pre-programmed to execute first program code for remotely controlling the portable device using the car stereo by processing control commands generated by the car stereo in a format incompatible with the portable device into formatted control commands compatible with the portable device, and dispatching formatted control commands to the portable device for execution thereby.

Id. at 25:14–22.

D. Evidence Relied Upon

Petitioner relies on the following references:¹

¹ For certain alleged grounds of unpatentability, Petitioner also relies on what it refers to as "known bus technology." Hereinafter, we refer to that material as "KBT." We understand Petitioner to have presented KBT as common knowledge and routine skill within the level of ordinary skill in the art that does not require citation of any particular reference.

Reference		Date	Exhibit	
Lau	International Pub. No. WO 01/67266 A1	Sept. 13, 2001	Ex. 1003	
XR-C5120	SONY [®] 3-865-814-11(1) Operating Instructions, Model No. XR-C5120 /4890	1999	Ex. 1005	
XA-C30	SONY [®] 9-923-535-11 Source Selector Service Manual XA-C30	March, 1996	Ex. 1006	
Bhogal	U.S. Patent No. 6,629,197 B1	Sept. 30, 2003	Ex. 1008	

Petitioner also relies on the Declaration of Thomas G. Matheson,

Ph.D. Ex. 1015.

C. The Asserted Grounds

Petitioner asserts the following grounds of unpatentability:

Claim(s) Challenged	Basis	References
44, 57, 58, 60, 63, 64, 86, 88, 90, and 91	§ 102(b)	Lau .
92, 94, and 97	§ 103(a)	Lau
1, 2, 4–8, 10, 13, 14, 23, 24, 61, and 62	§ 103(a)	Lau, XR-C5120, and XA- C30

44, 57, and 92	§ 103(a)	Lau and Bhogal

II. ANALYSIS

To establish anticipation, each and every element in a claim, arranged as recited in the claim, must be found in a single prior art reference. *Net MoneyIN, Inc. v. VeriSign, Inc.*, 545 F.3d 1359, 1369 (Fed. Cir. 2008); *Karsten Mfg. Corp. v. Cleveland Golf Co.*, 242 F.3d 1376, 1383 (Fed. Cir. 2001). The question of obviousness is resolved on the basis of underlying factual determinations including: (1) the scope and content of the prior art; (2) any differences between the claimed subject matter and the prior art; (3) the level of ordinary skill in the art; and (4) objective evidence of nonobviousness. *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966). One seeking to establish obviousness based on more than one reference also must articulate sufficient reasoning with rational underpinnings to combine teachings. *See KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 418 (2007).

With regard to the level of ordinary skill in the art, we determine that no express finding is necessary, on this record, and that the level of ordinary skill in the art is reflected by the prior art of record. *See Okajima v. Bourdeau*, 261 F.3d 1350, 1355 (Fed. Cir. 2001); *In re GPAC Inc.*, 57 F.3d 1573, 1579 (Fed. Cir. 1995); *In re Oelrich*, 579 F.2d 86, 91 (CCPA 1978).

A. Claim Construction

In an *inter partes* review, claim terms in an unexpired patent are interpreted according to their broadest reasonable construction in light of the specification of the patent in which they appear. *See* 37 C.F.R. § 42.100(b); *Cuozzo Speed Techs.*, *LLC v. Lee*, No. 15–446, 2016 WL 3369425, at *12 (U.S. June 20, 2016) (upholding the use of the broadest reasonable interpretation standard as the claim construction standard to be applied in an *inter partes* review proceeding). Consistent with the rule of broadest

reasonable interpretation, claim terms also are given their ordinary and customary meaning, as would be understood by one of ordinary skill in the art in the context of the disclosure. *See In re Translogic Tech., Inc.,* 504 F.3d 1249, 1257 (Fed. Cir. 2007).

"Claims are not interpreted in a vacuum, but are part of and are read in light of the specification." *Slimfold Mfg. Co. v. Kinkead Indus., Inc.*, 810 F.2d 1113, 1116 (Fed. Cir. 1987). Although it is improper to read a limitation from the specification into the claims, *In re Van Geuns*, 988 F.2d 1181, 1184 (Fed. Cir. 1993), the claims still must be read in view of the specification of which they are a part. *Microsoft Corp. v. Multi-Tech Sys., Inc.*, 357 F.3d 1340, 1347 (Fed. Cir. 2004).

If a limitation of an embodiment described in the specification is not necessary to give meaning to a claim term, it would be "extraneous" and should not be read into the claim. See Hoganas AB v. Dresser Indus., Inc., 9 F.3d 948, 950 (Fed. Cir. 1993); E.I. du Pont de Nemours & Co. v. Phillips Petroleum Co., 849 F.2d 1430, 1433 (Fed. Cir. 1988). If the applicants for a patent desire to be their own lexicographer, the purported definition must be set forth in either the specification or prosecution history. See CCS Fitness, Inc. v. Brunswick Corp., 288 F.3d 1359, 1366 (Fed. Cir. 2002). Such a definition must be set forth with reasonable clarity, deliberateness, and precision. See Renishaw PLC v. Marposs Societa' per Azioni, 158 F.3d 1243, 1249 (Fed. Cir. 1998); In re Paulsen, 30 F.3d 1475, 1480 (Fed. Cir. 1994). However, only terms which are in controversy need to be construed, and only to the extent necessary to resolve the controversy. See Wellman, Inc. v. Eastman Chem. Co., 642 F.3d 1355, 1361 (Fed. Cir. 2011); Vivid Techs., Inc. v. Am. Sci. & Eng'g, Inc., 200 F.3d 795, 803 (Fed. Cir. 1999).

. 1. "interface"

Of all challenged claims, claims 1, 44, 57, 86, and 92 are independent, and each recites an "interface."

Claims 1, 57, and 86 require the interface to be connected between a first electrical connector and a second electrical connector, where the first connector is connectable to a car stereo and the second connector is connectable to an after-market audio device (claim 1), a portable MP3 player (claim 57), or an after-market video device (claim 86). Claim 92 requires the interface to be connected between the car stereo and a portable audio device. Claim 44 recites a docking portion that mates with a portable device, and an interface that is connected to the car stereo as well as to a data port that communicates with the docking portion.

Also, claim 57 recites that the interface is "for transmitting audio from a portable MP3 player to a car stereo"; claim 86 recites that the interface is "for transmitting video information from the after-market video device to the car stereo"; claim 1 recites that the interface is "for channeling audio signals to the car stereo from the after-market audio device"; claim 44 recites an interface for "channeling audio from the portable device to the car stereo"; and claim 92 recites that the interface includes a microcontroller preprogrammed to execute "means for transmitting audio from the portable audio device to the car stereo."

Petitioner proposes the proper construction of "interface" is "a microcontroller that is functionally and structurally separate component from the car stereo, which integrates an after-market device with a car stereo," and notes that that is the construction determined by the district

Page 1228 of 1457

·12

court in related action involving the '786 patent. Pet. 12–13. For several reasons, the proposal is unpersuasive.

First, as is noted by Patent Owner, even if the interface is deemed "functionally and structurally separate" from the car stereo, the proposed construction is incomplete in that it omits any requirement of separation or distinctness of the interface from the portable or after-market device connected thereto. Prelim. Resp. 6–7. Second, the proposed construction is too narrow by specifying that the interface "integrates an after-market device with a car stereo." We note that the Specification of the '786 patent provides a special definition for "integration" or "integrated." Ex. 1001, 4:47–52. We discern no reason to import limitations into a claim if they are unnecessary to accord meaning to the claim.

Third, the proposed construction is too narrow by requiring the interface to be a microcontroller. In the Specification of the '786 patent, the term "interface" is described as including not only a microcontroller but also several discrete components, such as resistors, diodes, capacitors, transistors, oscillators, amplifiers, and multiplexers, shown in various embodiments of Figures 3A, 3B1–3B2, 3C1–3C2, and 3D. Ex. 1101, 9:8–20, 10:19–33, 11:4–18, 11:59–67. As such, the term "interface" itself is not limited to a microcontroller. In that regard, note that if the interface itself is construed as a microcontroller, as Petitioner proposes, then the additional claim language reciting that the interface includes a microcontroller would serve no meaningful purpose.

With regard to an "interface," the Specification states:

Thus, as can be readily appreciated, the interface 20 of the present invention allows for the integration of a multitude of

devices and inputs with an OEM or after-market car radio or stereo.

Ex. 1001, 5:33–36 (emphasis omitted).

As mentioned earlier, the interface 20 of the present invention allows for a plurality of disparate audio devices to be integrated with an existing car radio for use therewith.

Id. at 6:4–7 (emphasis omitted).

Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for displaying on display 13. Audio from the MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:19–24 (emphasis omitted). Thus, the Specification refers to the interface receiving information from an audio device and forwarding information to the car stereo, and to the interface allowing integration of a plurality of disparate audio devices with a car radio.

During prosecution, the Applicants of the '786 patent distinguished U.S. Patent 6,993,615 B2 ("Falcon"),² in part by arguing that the reference failed to disclose an interface connected between a car stereo and an externalaudio source. Ex. 1002, 0267. Specifically, in distinguishing the invention from Falcon, Applicants stated: "[Falcon's graphical user interface] is an entirely different concept than the interface of the present invention, which includes a physical interface device connected between a car stereo system and an external audio source (e.g., a plurality of auxiliary input sources)."

Id.

² Falcon discloses a portable computing device connectable to a car stereo through an interface configurable within the portable computing device. Ex. 3001, Abstr.

Construing the term "interface" in light of the Specification, other language in the claims, as well as the prosecution history noted by Petitioner, we determine that—*interface is a physical unit that connects one device to another and that has a functional and structural identity separate from that of both connected devices.*

In the specific context of claims 1 and 86, the connected devices are the car stereo and an after-market device. In the specific context of claims 44, 57, and 92, the connected devices are the car stereo and a portable device. Each of claims 1, 44, 57, 86, and 92 further requires the interface to include a microcontroller.

B. Alleged Anticipation of Claims 44, 57, 58, 60, 63, 64, 86, 88, 90, and 91 over Lau

We have reviewed the Petition and the Preliminary Response, and determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing that any of claims 44, 57, 58, 60, 63, 64, 86, 88, 90, and 91 is anticipated by Lau.

1. Lau

Lau is titled "VEHICLE SOUND SYSTEM," and states that "there is a need for an improved automobile audio system that does not require cassettes or compact discs, can be used with reusable media and can play music downloaded from a computer or other device." Ex. 1003 (54), 2:24– 26. Lau indicates that pre-existing portable solid state music players that store music downloadable from a computer are unsatisfactory for use with an automobile audio system, i.e., a car stereo. *Id.* at 3:1–11. For instance, it is explained that all of the controls are on the portable player, and thus a driver is unable to use the controls of the car stereo to control the music player. *Id.* at 3:12–16.

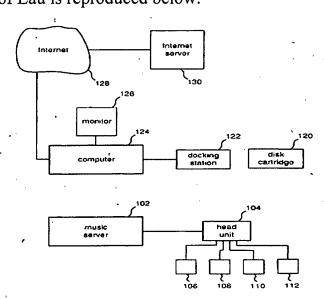

Figure 1 of Lau is reproduced below:

Figure 1 illustrates an embodiment of Lau's vehicle sound system. *Id.* at 5:18. Head unit 104 is a standard automobile head unit and is connected to speakers 106, 108, 110, and 112. *Id.* at 7:17–20. Music server 102 is an audio/visual server and emulates a disc changer. *Id.* at 7:12–14. Lau explains that music server 102 is not an actual disc changer but only acts like a disc changer would act, based on communications to and from head unit 104. *Id.* at 7:14–17. Music server 102 communicates with head unit 104. *Id.* at 7:19. Lau describes that music server 102 may be mounted in the trunk of a car and head unit 104 is mounted in the dash board. *Id.* at 8:21–24.

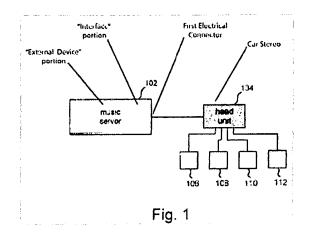

Disk cartridge 120 can be inserted by a user either into music server 102 or docking station 122 connected to computer 124. *Id.* at 8:16–21. Computer 124 is a standard personal computer and is connected to Internet server 130, via Internet 128, for downloading tracks and information about tracks, and in one embodiment, tracks are songs. *Id.* at 8:4–15. After a user

.16

downloads tracks onto disk cartridge 120, disk cartridge 120 is removed from docking station 122 and inserted into music server 102, and then the user can use head unit 104 to access and play tracks on disk cartridge 120. *Id.* at 8:20–26.

2. Claims 57 and 86

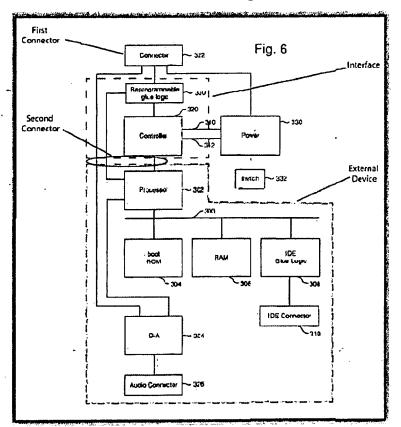

Determinative of our conclusion with respect to the alleged anticipation of claims 57 and 86 by Lau is our construction of the term "interface"—*interface is a physical unit that connects one device to another and that has a functional and structural identity separate from that of both connected devices.* In the context of claim 57, the two devices connected by the interface is the car stereo and a portable MP3 player. In the context of claim 86, the two devices connected by the interface is the car stereo and an after-market video device. Petitioner relies on different internal parts of Lau's music server 102 to meet the interface of claims 57 and 86, the portable MP3 player of claim 57, and the after-market video device of claim 86. Figure 1 of Lau, as annotated by Petitioner, is reproduced below:

The annotated figure appears on page 22 of the Petition and illustrates the car stereo and interface of claims 57 and 86, the portable MP3 player of

claim 57, and the after-market video device of claim 86. Petitioner asserts: "Lau's 'head unit 104' includes a car stereo. See, Lau, Abstract, 2:51-53; Ex. 1015 at \P 87. In Lau, the 'interface' (identified as microcontroller 320 and glue logic 330) is located within Lau's music server 102." Pet. 22. Petitioner further asserts: "This 'interface' is connected to circuitry dedicated to processing stored content for playback (processor 302 and associated components) that corresponds to the claimed external device (or 'after-market device,' as recited in claim 86)." *Id*.

Figure 6 of Lau, as annotated by Petitioner, illustrates the internal structure of Lau's music server 102, and is reproduced below:

The annotated figure appears on page 22 of the Petition and illustrates the parts regarded by Petitioner as the "interface" in blue and surrounded by

dashed lines, and the parts regarded by Petitioner as the portable or aftermarket device in green and surrounded by dashed lines. We are unpersuaded by Petitioner's identification of the part colored blue in the above-reproduced illustration to meet the requirement of the interface in claims 57 and 86.

First, there is insufficient showing of *separate structural identity* between the alleged "interface" and the portion colored green by Petitioner in the same illustration and alleged as by Petitioner as the external device. Both blue and green portions are component parts within Lau's music server 102. It would be incorrect to regard them as having separate structural identities. Petitioner has not adequately explained what accords these portions separate structural identities, e.g., separate supporting frames, independent housing, etc. Also, Petitioner has not identified any description within Lau that refers to the combination of parts labeled in blue as collectively constituting a unit of any kind, or that refers to the combination of parts labeled in green as collectively constituting a unit of any kind. Thus, the separate structural identity requirement between the alleged interface and a portable MP3 player (claim 57) or an after-market video device (claim 86) is not met.

Sccond, there also is insufficient showing of *separate functional identity* between the alleged "interface" colored in blue and the portion colored green by Petitioner and alleged as the external device. Portions of Lau are reproduced below, which refute any assertion that controller 320 and glue logic 330 colored in blue, and processor 302 colored in green, have separate functional identities:

Glue logic 330 is reprogrammable. For example, glue logic 330 can be an FPGA or a PLD (as well as other suitable reprogrammable logic devices). Glue logic 330 is connected to and programmed by processor 302. Glue logic 330 provides latches, inverters and other glue logic that is specific for each head unit and used to make communication from controller 320 compatible with the particular head unit.

Ex. 1003, 13:5–9.

The flash memory internal to controller 320 stores firmware to program controller 320 to interface with the appropriate head unit. If music server 102 is initially set up to communicate with a first head unit and the user subsequently installs music server 102 into a different automobile with a different head unit, controller 320 can be reprogrammed to communicate with the new head unit by changing the firmware in the internal flash memory of controller 320.

Id. at 14:13–18.

As discussed above, a portion of the internal flash memory of controller [320] is used to store the firmware (interface program code) for programming controller 320 to communicate with head unit 104. In step 548, controller 320 requests that processor 302 access hard disk drive 178 and read the firmware version number stored in the /microcontroller config directory. In step 550, controller 320 receives the firmware version number from processor 302.

Id. at 15:13–18.

If in step 552 controller 320 determines that there is a firmware update on hard disk drive 178, then the method loops to step 554. In step 554, controller 320 sends a request to processor 302 to load new firmware. In step 556, the new firmware is received by controller 320.

Id. at 16:16–20.

If a firmware update is requested, the method of Figure 10 loops to step 740. In step 740, processor 302 accesses and reads new firmware from the /microcontroller config directory of hard disk drive 178. Step 740 also includes accessing and reading new

code to program glue logic 330. In step 742, the firmware is sent to controller 320. In step 744, processor 302 programs glue logic 330 according to the code read in step 740. The code used in step 744 may vary by head unit and/or firmware version.

Id. at 17:11–17.

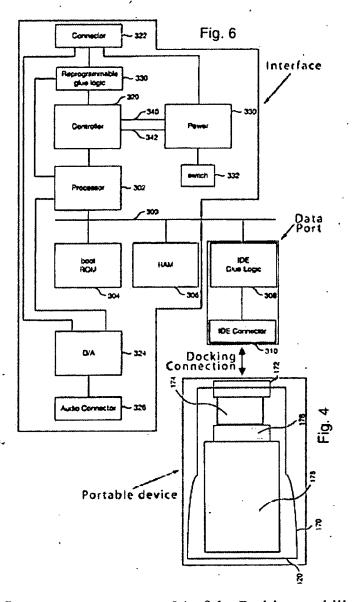

It is evident from the above-quoted descriptions in Lau that processor 302 controls what firmware is used to program controller 320 and also programs the configuration of glue logic 330. Thus, the separate functional identity requirement between the alleged interface (colored in blue) and the portable or after-market device (colored in green) is not met.

3. Claims 58, 60, 63, 64, 88, 90, and 91

Each of claims 58, 60, 63, 64, 88, 90, and 91 depends directly or indirectly from either claim 57 or 86. The deficiency noted above with regard to claims 57 and 86 carries through to the claims depending therefrom. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing that any of claims 58, 60, 63, 64, 88, 90, and 91 is anticipated by Lau.

4. Claim 44

For claim 44, Petitioner draws anew the annotated borders it provided above in connection with its arguments directed to claims 57 and 86. Now, Petitioner regards most of the portions previously colored blue, green, and orange, together with the previously uncolored parts, but sans IDE Glue Logic 208 and IDE Connector 310, as the alleged interface, and regards disk cartridge 120, connectable to IDE Connector 310, as the portable device. Pet. 34–35. Lau's Figure 6, re-annotated by Petitioner to provide different borders and different coloring for the same parts, is reproduced below:

The annotated figure appears on page 34 of the Petition and illustrates the parts regarded by Petitioner as the "interface" colored in green, and the part regarded by Petitioner as the portable device colored in yellow. Pet. 34. Petitioner asserts that Lau's disk cartridge 120 is the portable device colored in yellow. *Id.* For reasons discussed below, we are unpersuaded by Petitioner's identification of the part colored in green above to satisfy the

requirement of the interface in claim 44, relative to Lau's disk cartridge 120 as the portable device.

As construed above, "interface" *is a physical unit that connects one device to another and that has a functional and structural identity separate from that of both connected devices*. Thus, what Petitioner identifies as the interface in Lau must have a functional and structural identity separate from those of what Petitioner identifies as the portable device.

With regard to separate structural identity, that indeed is the case, because Lau's disk cartridge 120 is removable from music server 102 and can be reinserted into music server 102 by a user. Ex. 1003, 8:16–21. The same, however, cannot be said as to separate functional identity relative to the alleged interface. In that regard, we note that disk cartridge 120 includes shell 170, connectors 172 and 176, and hard disk drive 178. Id. at 9:22-10:4. Hard disk drive 178 stores the firmware that processor 302 uses to reprogram controller 320 and the code that processor 302 uses to program glue logic 330 for communication with the car stereo. Id. at 16:16–20; 17:11–17. Furthermore, Lau describes that hard disk drive 178 stores the operating system for music server 102 as well as drivers including IDE driver, audio drivers, and a driver for the serial interface between processor 302 and controller 320. Id. at 11:17-21. Lau also describes that "music server 102 will not operate unless disk cartridge 120 is properly inserted in music server 102." Id. at 13:24–25. Based on all of these characteristics, disk cartridge 120 does not have separate functional identity relative to the alleged interface that includes processor 302 and controller 320. Rather, it is very much intertwined with and essential to the operation of the alleged interface.

Additionally, we determine that Lau's disk cartridge 120 is insufficient to constitute the portable device of claim 44. That is because disk cartridge 120, as described in Lau, includes only a shell casing, connectors, simple elements like capacitors and resistors for decoupling signals, and a hard disk drive. *Id.* at 9:22–10:4. As described in Lau, disk cartridge 120 is without any processing logic with which to execute control commands from the car stereo. Yet, such capability is implicit in claim 44, which recites that the microcontroller is pre-programmed to execute program code for remotely controlling the portable device "by processing control commands generated by the car stereo in a format incompatible with the portable device into formatted control commands compatible with the portable device, and dispatching formatted control commands to the portable device for execution thereby." Id. at 25:17–22 (emphasis added). Accordingly, the portable device of claim 44 must include processing logic capable of executing control commands. Petitioner has not sufficiently shown that disk cartridge 120 includes such processing logic.

Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing that claim 44 is anticipated by Lau.

C. Alleged Obviousness of Claims 92, 94, and 97 over Lau

For reasons discussed below, we determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of claims 92, 94, and 97 as obvious over Lau.

Claim 92, as reproduced above, includes several elements in the format of a "means":

first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state;

second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing the control command into a formatted control command compatible with the portable audio device, and transmitting the formatted control command to the portable audio device for execution thereby; and

means for transmitting audio from the portable audio device to the car stereo.

Claim 94 depends from claim 92 and claim 97 depends from claim 94.

Paragraph 6 of 35 U.S.C. § 112 states:³

An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof.

The above-quoted recitations of claim 92 presumptively set forth elements under 35 U.S.C. § 112, ¶ 6, and are construed to cover the corresponding structure, material, or acts described in the specification and equivalents

³ Paragraphs 1 through 6 of § 112 were renamed as paragraphs (a) through (f) when § 4(c) of the Leahy-Smith America Invents Act, Pub. L. No. 112–29, 125 Stat. 284, 329 (2011) ("AIA") took effect on September 16, 2012. Because the patent application resulting in the '786 patent was filed before the effective date of the AIA, we refer to the pre-AIA version of § 112.

thereof. Williamson v. Citrix Online, LLC, 792 F.3d 1339, 1348 (Fed. Cir. 2015) (en banc).

For a means-plus-function element under 35 U.S.C. § 112, ¶ 6, the Board's trial rules require the Petition to identify the corresponding structure, material, or acts corresponding to each claimed function. Specifically, 37 C.F.R. § 42.104(b)(3) governs the content of a petition with respect to claim construction and provides: "[w]here the claim to be construed contains a means-plus-function or step-plus-function limitation as permitted under 35 U.S.C. § 112 [, ¶ 6], the construction of the claim must identify the specific portions of the specification that describe the structure, material, or acts corresponding to each claimed function."⁴ 37 C.F.R. § 42.104(b)(3).

The "construction" referred to by 37 C.F.R. § 42.104(b)(3) is the construction proposed by the Petitioner, one that Petitioner believes is the correct construction under applicable law and should apply in the involved proceeding. Here, Petitioner did not comply with 37 C.F.R. § 42.104(b)(3).

For each means-plus-function recitation in claim 92, Petitioner provided the construction of the United States District Court for the District of New Jersey. Pet. 16–20. However, Petitioner does not take ownership of the district court's constructions by indicating, in some way, that it agrees with, proposes, or adopts the construction of this district court. Indeed, for two means-plus-function elements, i.e., (1) first pre-programmed means for

⁴ Structure disclosed in the specification is corresponding structure only if the specification or prosecution history clearly links or associates that structure to the function recited in the claim. *Golight, Inc. v. Wal-Mart Stores, Inc.*, 355 F.3d 1327, 1334 (Fed. Cir. 2004); *Cardiac Pacemakers, Inc. v. St. Jude Med., Inc.*, 296 F.3d 1106, 1113 (Fed. Cir. 2002).

· 26

generating a device presence signal ("generating means"), and (2) first preprogrammed means for . . . transmitting the [device presence] signal to the car stereo to maintain the car stereo in an operational state ("transmitting means"), Petitioner asserts that the district court's constructions are incorrect. Pet. 17–18. For the transmitting means, Petitioner does offer its own construction as is required by 37 C.F.R. § 42.104(b)(3). Pet. 18–19. But for the generating means, Petitioner does not offer its construction by identifying corresponding structure, material, or acts in the Specification. Instead, for the transmitting means, Petitioner asserts that there is no corresponding structure, material, or acts in the Specification of the '786 patent, and characterizes the means-plus-function element as indefinite. Pet. 17.

Without expressly identifying a ground of unpatentability based on indefiniteness under 35 U.S.C. § 112, ¶ 2, Petitioner nonetheless has mounted, effectively, a challenge of claims 92, 94, and 97 as indefinite under 35 U.S.C. § 112, ¶ 2. We note that if there is no corresponding structure, material, or acts in the specification for a means-plus-function claim element, the claim is indefinite under 35 U.S.C. § 112, ¶ 2. *See In re Dossel*, 115 F.3d 942, 946 (Fed. Cir. 1997). Except for a narrow exception explained in *In re Katz*, 639 F.3d 1303, 1316 (Fcd. Cir. 2011), concerning generic functions performed by a general purpose computer, such as "processing," "receiving" and "storing," a computer-implemented meansplus-function element is indefinite unless the specification discloses the specific algorithm used by the computer to perform the recited function. *Eon Corp. IP Holdings LLC v. AT&T Mobility LLC*, 785 F.3d 616, 621–23 (Fed. Cir. 2015); *Function Media, LLC. v. Google, Inc.*, 708 F.3d 1310,

1318 (Fed. Cir. 2013); Blackboard, Inc. v. Desire2Learn, Inc., 574 F.3d
1371, 1385 (Fed. Cir. 2009); Net MoneyIN, Inc. v. VeriSign, Inc., 545 F.3d
1359, 1367 (Fed. Cir. 2008); Finisar Corp. v. DirectTV Group, Inc.,
523 F.3d 1323, 1340 (Fed. Cir. 2008); and Aristocrat Technologies Australia
Pty Ltd. v. Int'l Game Techs. Inc., 521 F.3d 1328, 1333 (Fed. Cir. 2008).
Petitioner may not, however, in an inter partes review, assert a ground of
unpatentability based on indefiniteness under 35 U.S.C. § 112, ¶ 2. See 35
U.S.C. § 311(b).

In any event, with regard to alleged obviousness of claims over prior art, Petitioner has not identified structure, material, and acts in the Specification of the '786 patent that correspond to the generating means of claim 92. Therefore, Petitioner has not accounted for how such unidentified structure, material, and acts would have been met by the prior art.

Furthermore, claim 92 requires an interface connected between a car stereo and a portable audio device. Petitioner relies on its arguments presented for claim 57 to explain how Lau discloses an interface connected between a car stereo and a portable audio device. Pet. 38, 43. We already rejected those arguments in the context of claim 57, as discussed above in Section II(B)(2). The arguments are no more persuasive for claim 92.

For the foregoing reasons, we determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of claims 92, 94, and 97 as obvious over Lau.

D. Alleged Obviousness of Claims 44, 57, and 92 over Lau and Bhogal

This alleged ground of unpatentability combines Bhogal's teachings with those of Lau. Specifically, Bhogal is added to buttress the teachings of Lau with respect to the claim limitations requiring a device that is "portable"

to be connected to the interface. Thus, as applied by Petitioner, Bhogal does not cure the deficiencies of the Petition, already addressed above, with regard to claims 44, 57, and 92. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 44, 57, and 92 as obvious over Lau and Bhogal.

E. Alleged Obviousness of Claims 47, 65, 89, and 98 over Lau and KBT

Claim 47 depends from claim 44. Claim 65 depends from claim 64 which depends from claim 57. Claim 89 depends from claim 88 which depends from claim 86. Claim 98 depends from claim 97 which depends from claim 92. The deficiencies of Petitioner's assertions with respect to claims 44, 57, and 86, as discussed above, are not cured by Petitioner's application of KBT. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 47, 65, 89, and 98, as obvious over Lau and KBT.

F. Alleged Obviousness of Claims 1, 2, 4–8, 10, 13, 14, 23, 24, 61, and 62 over Lau, XR-C5120, and XA-C30

We have reviewed the Petition and the Preliminary Response, and determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 2, 4–8, 10, 13, 14, 23, 24, 61, and 62 as obvious over Lau, XR-C5120, and XA-C30.

Claim 1

Claim 1, like claim 57, recites an interface connected between the first and second electrical connectors and for channeling audio signals to the car stereo from another device, where the first connector is connectable to the car stereo and the second connector is connectable to an audio device. In

claim 57, that audio device is a portable MP3 player. In claim 1, that audio device is an after-market audio device.

Further as compared to claim 57, claim 1 (a) adds a third connector that is electrically connectable to one or more auxiliary input sources external to the car stereo and the after-market audio device, (b) adds a code portion in the microcontroller within the interface, that is "for switching to one or more auxiliary input sources connected to said third electrical connector," and (c) adds a code portion in the microcontroller within the interface, that is "for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo."

For the addition of the third connector and the code portion for switching to one or more auxiliary input sources, Petitioner relies on XR-C5120 and XA-C30. Pet. 45–48. XR-C5120 is the Operating Instructions for Sony's model XR-C5120 car stereo. Ex. 1005. It lists as optional equipment: "Source selector XA-C30." *Id.* at 18. As noted above, for this decision we use the identification "XA-C30" to refer to the service manual of Sony's Source Selector XA-C30 (Exhibit 1006). The service manual discloses how the source selector may be connected between a car stereo and multiple input sources. Ex. 1006, 2–3.

A diagram of the Sony Source Selector XA-C30 is reproduced below:

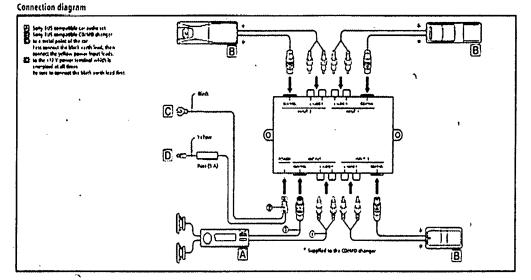

Page 1246 of 1457

Ex. 1006, 2. The above figure illustrates a connection diagram for Sony's Source Selector XA-C30.

Petitioner illustrates its combination of Sony's Source Selector XA-C30 with the car audio system of Lau as follows:

Page 1247 of 1457

This annotated figure appears on page 46 of the Petition and illustrates the parts regarded by Petitioner as the "interface" in yellow, the part regarded by Petitioner as the after-market audio device in grey, and the car stereo colored in blue. Pet. 45–46. For reasons discussed below, we are unpersuaded that

32

Page 1248 of 1457

Petitioner's combination of Lau, XR-C5120, and XA-C30, as illustrated above, meets all requirements of claim 1.

Based on our construction of "interface," the interface in claim 1 has to have separate functional and structural identity relative to the after-market audio device of claim 1, just as the interface in claim 57 has to have separate functional and structural identity relative to the portable MP3 player of claim 57. For the same reasons that the interface Petitioner identified in Lau for claim 57 does not have separate functional or structural identity with respect to what Petitioner identifies in Lau as the portable MP3 player of claim 57, the interface Petitioner identified in Lau for claim 1 does not have separate functional or structural identity with respect to what Petitioner identifies in Lau as the after-market audio device of claim 1.

With respect to claim 1's requirement of a microcontroller having a code portion "for remotely controlling the after-market audio device," Petitioner points to controller 320 as the microcontroller. Pet. 29, 33, 51. With respect to claim 1's requirement of a microcontroller having a code portion "for switching to one or more auxiliary input sources connected to said third electrical connector," Petitioner quotes this description in Lau: "The directory / microcontroller config [in disk cartridge 120] includes a series of files for configuring controller 320 (see Figure 6) to communicate with head unit 104. One file is a text file with a set of flags which indicate any of the following: disk cartridge change, *other devices connected*, head unit text on/off, time elapsed to be displayed up or down, etc." Pet. 52. (citing Ex. 1003, 10:25–11:2).

However, the fact that disk cartridge 120 contains a flag indicating "other devices connected" appears unrelated to the Sony Source Selector

XA-C30 (that part of the yellow portion above the car stereo in the above illustration) that connects the car stereo to controller 320 and a plurality of auxiliary input source as Petitioner has shown in the above illustration. Petitioner has not provided adequate explanation in that regard. There is insufficient basis to conclude that microcontroller 320 includes a code portion for switching to one or more auxiliary input sources connected to the third electrical connector, especially where, as here, the Sony Source Selector XA-C30 includes its own microprocessor controller IC1 (Ex. 1006, 8). Petitioner makes no explanation as to why it is not the controller within the Sony Source Selector XA-C30 that is "for switching to one or more auxiliary input sources."

2. Claims 2, 4–8, 10, 13, 14, 23, 24, 61, and 62

Each of claims 2, 4–8, 10, 13, 14, and 23 depends from claim 1. Claim 24 depends from claim 23. Each of claims 61 and 62 depends from claim 60, which depends from claim 57. The deficiencies discussed above with regard to claim 1 carry through to claims 2, 4–8, 10, 13, 14, 23, and 24. Also, the deficiencies discussed above with regard to claim 57, in the context of alleged anticipation of claim 57 by Lau, carry through to claims 61 and 62 and are not cured by Petitioner's application of XR-C5120 and XA-C30. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of any of claims 2, 4–8, 10, 13, 14, 23, 24, 61, and 62 as obvious over Lau, XR-C5120, and XA-C30.

G. Alleged Obviousness of Claim 24 over Lau, XR-C5120, XA-C30, and KBT

Claim 24 depends from claim 23, which depends from claim 1. The deficiencies of Petitioner's assertions with respect to claim 1, as discussed above, are not cured by Petitioner's application of KBT to the combined

1

teachings of Lau, XR-C5120, and XA-C30. Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of claim 24 as obvious over Lau, XR-C5120, XA-C30, and KBT.

III. CONCLUSION

Petitioner has *not* demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 2, 4–8, 10, 13, 14, 23, 24, 44, 47, 57, 58, 60–65, 86, 88–92, 94, 97, and 98 of the '786 patent.

III. ORDER

It is

ORDERED that the Petition is *denied* and no *inter partes* review is instituted for any claim on any alleged ground of unpatentability.

DECISION Institution of *Inter Partes* Review 37 C.F.R. § 42.108

Page 1253 of 1457

I. INTRODUCTION

· A. Background

On December 30, 2015, Petitioner filed a Corrected Petition (Paper 3, "Pet.") to institute *inter partes* review of claims 1, 2, 4–8, 10, 13, 14, 23, 24, 44, 47, 57, 58, 60–65, 86, 88–92, 94, 97, and 98 of U.S. Patent No. 7,489,786 (Ex. 1101, "the '786 patent"). On April 22, 2016, Patent Owner filed a Preliminary Response (Paper 10, "Prelim. Resp.").

To institute an *inter partes* review, we must determine that the information presented in the Petition shows "that there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition." 35 U.S.C. § 314(a). Having considered both the Petition and the Preliminary Response, we determine that Petitioner has demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of claims 44 and 47. Petitioner has not, however, shown a reasonable likelihood that it would prevail in establishing the unpatentability any other claim. We institute an *inter partes* review of claims 44 and 47 of the '786 patent.

B. Related Matters

The parties indicate that the '786 patent was asserted in five infringement actions before the United States District Court of the Eastern District of Texas and two infringement actions before the United States District Court for the District of New Jersey. Pet. 1–2, Paper 5, 1–2. The '786 patent also is involved in IPR2016-00422. Related Patent 8,155,342 B2 is involved in IPR2016-00118, IPR2016-00418, and IPR2016-00419.

C. The '786 Patent

The '786 patent is titled "Audio Device Integration System." Ex. 1001 (54). "One or more after-market audio devices, such as a CD player, CD changer, MP3 player, satellite receiver, DAB receiver, or the like, is integrated for use with an existing OEM or after-market car stereo system, wherein control commands can be issued at the car stereo and responsive data from the audio device can be displayed on the stereo." *Id.* at Abstr. The '786 patent describes:

Control commands generated at the car stereo are received, processed, converted into a format recognizable by the audio device, and dispatched to the audio device for execution. Information from the audio device, including track, disc, song, station, time, and other information, is received, processed, converted into a format recognizable by the car stereo, and dispatched to the car stereo for display thereon.

Id. Additional auxiliary sources also may be integrated together, and "a user can select between the [audio] device or the one or more auxiliary input sources by issuing selection commands through the car stereo." *Id.* A docking station for docking a portable audio or video device for integration with the car stereo. *Id.* Figures 2A–2C are reproduced below:

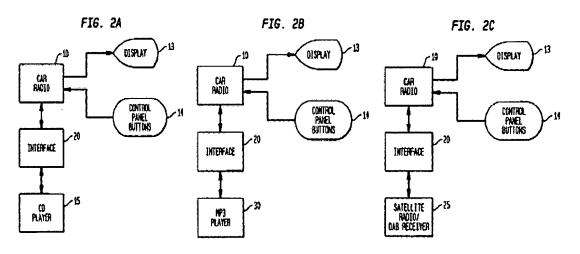

Figure 2A illustrates an embodiment integrating a CD player with the car stereo; Figure 2B illustrates an embodiment integrating a MP3 player with a car stereo; and Figure 2C illustrates an embodiment integrating a satellite or DAB receiver with a car stereo. *Id.* at 3:14–23. A more versatile embodiment is shown in Figure 1:

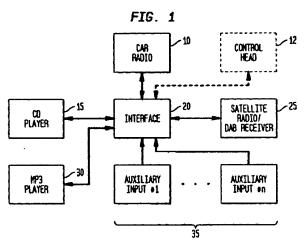

Figure 1 illustrates an embodiment integrating a CD player, a MP3 player, a satellite radio or DAB receiver, and a number of auxiliary input sources with a car stereo. *Id.* at 3:12–13. As shown in the above Figures, central to the '786 patent is an "interface" positioned between the car stereo and the audio device(s) and auxiliary input(s) being integrated.

With regard to Figure 2B, the '786 patent describes:

The interface 20 allows data and audio signals to be exchanged between the MP3 player 30 and the car radio 10, and processes and formats signals accordingly so that instructions and data from the radio 10 are processable by the MP3 player 30, and vice versa. Operational commands, such as track selection, pause, play, stop, fast forward, rewind, and other commands, are entered via the control panel buttons 14 of car radio 10, processed by the interface 20, and formatted for execution by the MP3 player 30. Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for display on display 13. Audio from MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:11–24. Similar description is provided with respect to Figures 2A and 2C. *Id.* at 5:49–55, 6:35–43.

Claims 1, 44, 57, 86, and 92 are independent. Claim 1 is directed to a system that connects an after-market audio device as well as one or more auxiliary input sources to a car stereo. In particular, claim 1 recites a first connector electrically connectable to a car stereo, a second connector electrically connectable to an after-market device, and a third connector electrically connectable to one or more auxiliary input sources. *Id.* at 21:33–38. Claim 1 also recites an interface connected between the first and second electrical connectors, and that the interface includes a microcontroller preprogrammed to execute:

- a first pre-programmed code portion for remotely controlling the after-market audio device using the car stereo by receiving a control command from the car stereo through said first connector in a format incompatible with the after-market audio device, processing the received control command into a formatted command compatible with the after-market audio device, and transmitting the formatted command to the aftermarket audio device through said second connector for execution by the after-market audio device;
- a second pre-programmed code portion for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo; and
- a third pre-programmed code portion for switching to one or more auxiliary input sources connected to said third electrical connector.

Id. at 21:44-64.

Claim 57 is directed to a system including an interface that connects a portable MP3 player to a car stereo. Claim 86 is directed to a system including an interface that connects an after-market video device to a car stereo. Claim 92 is directed to a system including an interface that connects a portable audio device with a car stereo. Claims 57, 86, and 92 each require the generation, within an interface, of a device presence signal that is transmitted to the car stereo to maintain the car stereo in an operational state. Claims 57, 86, and 92 are reproduced below:

- 57. An audio device integration system comprising:
- a first electrical connector connectable to a car stereo;
- a second electrical connector connectable to a portable MP3 player external to the car stereo
- an interface connected between said first and second electrical connectors for transmitting audio from a portable MP3 player to a car stereo, said interface including a microcontroller in electrical communication with said first and second electrical connectors,

said microcontroller pre-programmed to execute:

- a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state; and
- a second pre-programmed code portion for remotely controlling the MP3 player using the car stereo by receiving a control command from the car stereo through said first electrical connector in a format incompatible with the MP3 player, processing the control command into a formatted control command compatible with the MP3 player, and transmitting the formatted control command to the MP3 player through said second electrical connector for execution by the MP3 player.

Id. at 26:13–37.

86. A device for integrating video information for use with a car stereo, comprising:

a first electrical connector connectable to a car stereo;

- a second electrical connector connectable to an after-market video device external to the car stereo;
- an interface connected between said first and second electrical connectors for transmitting video information from the aftermarket video device to the car stereo, the interface including a microcontroller in electrical communication with said first and second electrical connectors, said microcontroller preprogrammed to execute:
 - a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo through said first electrical connector to maintain the car stereo in an operational state responsive to signals generated by the after-market video device.

Id. 28:40-56.

92. An audio device integration system comprising:

a car stereo;

- a portable audio device external to the car stereo;
- an interface connected between the car stereo and the portable audio device, the interface including a microcontroller pre-programmed to execute:
 - first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state;
 - second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing the control command into a formatted control command compatible with the portable audio device, and

transmitting the formatted control command to the portable audio device for execution thereby; and

means for transmitting audio from the portable audio device to the car stereo.

Id. at 29:11-31.

Claim 44 is directed to an apparatus for docking a portable device for integration with a car stereo. We reproduce claim 44 in the portion of our analysis below specifically discussing claim 44.

D. Evidence Relied Upon

Petitioner relies on the following references:¹

Reference		Date	Exhibit
Lau	International Pub. No. WO 01/67266 A1	Sept. 13, 2001	Ex. 1103
JP '954 ²	Jap. Pub. App. No. H7-6954	Jan. 31, 1995	Ex. 1106
XR-C5120	SONY [®] 3-865-814-11(1) Operating Instructions, Model No. XR-C5120 /1890	1999	Ex. 1108
XA-C30	SONY [®] 9-923-535-11 Source Selector Service Manual XA-C30	March, 1996	Ex. 1109
Bhogal	U.S. Patent No. 6,629,197 B1	Sept. 30, 2003	Ex. 1110

¹ For certain alleged grounds of unpatentability, Petitioner also relies on what it refers to as "known bus technology." Hereinafter, we refer to that material as "KBT." We understand Petitioner to have presented KBT as common knowledge and routine skill within the level of ordinary skill in the art that does not require citation of any particular reference.

² All citations to specific content of JP'954 refer to its English Translation (Ex. 1107).

Petitioner also relies on the Declaration of Thomas G. Matheson,

Ph.D. Ex. 1115.

E. The Asserted Grounds

Petitioner asserts the following grounds of unpatentability:

Claim(s) Challenged	Basis	References	
57, 58, 60, 64, 86, 88, 90, 91, 92, 94, and 97	§ 103(a)	JP '954 and Lau	
61, 62, and 63	§ 103(a)	JP '954, Lau, and XR- C5120	
65, 89, and 98	§ 103(a)	JP '954, Lau, and KBT	
1, 2, 4, 7, 8, 13, 14, and 23	§ 103(a)	JP '954, XR-C5120, and XA-C30	
5 and 24	§ 103(a)	JP '954, XR-C5120, XA- C30, and KBT	
6 and 10	§ 103(a)	JP '954, XR-C5120, XA- C30, and Lau	
44 and 47	§ 103(a)	JP '954, Lau, and Bhogal	
57, 86, and 92	§ 103(a)	JP '954, Lau, and Bhogal ³	

II. ANALYSIS

The question of obviousness is resolved on the basis of underlying factual determinations including: (1) the scope and content of the prior art;

³ Petitioner identifies this alleged ground of unpatentability simply as "obvious in view of Bhogal." Pet. 57. However, a plain reading of Petitioner's analysis on pages 57–59 of the Petition reveals that the alleged ground actually is that of obviousness over JP '954, Lau, and Bhogal. Also, although Petitioner labels this ground as directed to claims 57 and 86, a plain reading of the Petitioner's analysis reveals that it is intended to apply to claims 57 and 92. We have restated the applicable claims as 57, 86, and 92.

(2) any differences between the claimed subject matter and the prior art;
(3) the level of ordinary skill in the art; and (4) objective evidence of nonobviousness. *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966). One seeking to establish obviousness based on more than one reference also must articulate sufficient reasoning with rational underpinnings to combine teachings. *See KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 418 (2007).

With regard to the level of ordinary skill in the art, we determine that no express finding is necessary, on this record, and that the level of ordinary skill in the art is reflected by the prior art of record. *See Okajima v. Bourdeau*, 261 F.3d 1350, 1355 (Fed. Cir. 2001); *In re GPAC Inc.*, 57 F.3d 1573, 1579 (Fed. Cir. 1995); *In re Oelrich*, 579 F.2d 86, 91 (CCPA 1978).

A. Claim Construction

In an *inter partes* review, claim terms in an unexpired patent are interpreted according to their broadest reasonable construction in light of the specification of the patent in which they appear. *See* 37 C.F.R. § 42.100(b); *Cuozzo Speed Techs., LLC v. Lee*, No. 15–446, 2016 WL 3369425, at *12 (U.S. June 20, 2016) (upholding the use of the broadest reasonable interpretation standard as the claim construction standard to be applied in an *inter partes* review proceeding). Consistent with the rule of broadest reasonable interpretation, claim terms also are given their ordinary and customary meaning, as would be understood by one of ordinary skill in the art in the context of the entire disclosure. *See In re Translogic Tech., Inc.*, 504 F.3d 1249, 1257 (Fed. Cir. 2007).

"Claims are not interpreted in a vacuum, but are part of and are read in light of the specification." *Slimfold Mfg. Co. v. Kinkead Indus., Inc.*, 810 F.2d 1113, 1116 (Fed. Cir. 1987). Although it is improper to read a

limitation from the specification into the claims, *In re Van Geuns*, 988 F.2d 1181, 1184 (Fed. Cir. 1993), the claims still must be read in view of the specification of which they are a part. *Microsoft Corp. v. Multi-Tech Sys.*, *Inc.*, 357 F.3d 1340, 1347 (Fed. Cir. 2004).

If a limitation of an embodiment described in the specification is not necessary to give meaning to a claim term, it would be "extraneous" and should not be read into the claim. *See Hoganas AB v. Dresser Indus., Inc.*, 9 F.3d 948, 950 (Fed. Cir. 1993); *E.I. du Pont de Nemours & Co. v. Phillips Petroleum Co.*, 849 F.2d 1430, 1433 (Fed. Cir. 1988). If the applicants for a patent desire to be their own lexicographer, the purported definition must be set forth in either the specification or prosecution history. *See CCS Fitness, Inc. v. Brunswick Corp.*, 288 F.3d 1359, 1366 (Fed. Cir. 2002). Such a definition must be set forth with reasonable clarity, deliberateness, and precision. *See Renishaw PLC v. Marposs Societa' per Azioni*, 158 F.3d 1243, 1249 (Fed. Cir. 1998); *In re Paulsen*, 30 F.3d 1475, 1480 (Fed. Cir. 1994). However, only terms which are in controversy need to be construed, ' and only to the extent necessary to resolve the controversy. *See Wellman, Inc. v. Eastman Chem. Co.*, 642 F.3d 1355, 1361 (Fed. Cir. 2011); *Vivid Techs., Inc. v. Am. Sci. & Eng'g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999).

1. "portable"

Independent claim 44 recites a portable device. Independent claim 57 recites a portable MP3 player. Independent claim 92 recites a portable audio device. Petitioner proposes that the term "portable" be construed the way it has been construed by the district court in related actions involving the '786 patent, i.e., "capable of being moved about." Pet. 13–14 (citing Ex. 1112). Patent Owner argues that Petitioner's proposed construction is unreasonably

broad because it "improperly broadens the plain meaning of the term to include anything which can be moved, no matter how large or unwieldy." Prelim. Resp. 9. Patent Owner asserts that one with ordinary skill in the art could readily understand the plain meaning of the term "portable," and that no further construction is necessary. *Id.*

We agree with Patent Owner that Petitioner's proposed construction is unreasonably broad. In the Specification of the '786 patent, the term "portable" is used to modify devices that can be integrated with a car stereo through an interface. In that context, not every device that is capable of being moved is reasonably deemed portable. Few items, if any, simply cannot be moved, given appropriate tools and persistent effort. Thus, the term must be read in context within its application environment. In that regard, we note that certain objects, although heavy and large, may be deemed portable, such as freight containers and emergency generators.

It may be that the term requires no express construction, and simply would be understood by one with ordinary skill in the art. We note that even the '786 patent itself and Bhogal, both using the term "portable" in their written description, do not provide a definition therefor. Nevertheless, an express construction is helpful to this proceeding. We construe "portable," in the context of the '786 patent, as meaning *capable of being carried by a user*.

2. "interface"

Of all challenged claims, claims 1, 44, 57, 86, and 92 are independent, and each recites an "interface."

Claims 1, 57, and 86 require the interface to be connected between a first electrical connector and a second electrical connector, where the first

connector is connectable to a car stereo and the second connector is connectable to an after-market audio device (claim 1), a portable MP3 player (claim 57), or an after-market video device (claim 86). Claim 92 requires the interface to be connected between the car stereo and a portable audio device. Claim 44 recites a docking portion that mates with a portable device, and an interface that is connected to the car stereo as well as to a data port that communicates with the docking portion.

Also, claim 57 recites that the interface is "for transmitting audio from a portable MP3 player to a car stereo"; claim 86 recites that the interface is "for transmitting video information from the after-market video device to the car stereo"; claim 1 recites that the interface is "for channeling audio signals to the car stereo from the after-market audio device"; claim 44 recites an interface for "channeling audio from the portable device to the car stereo"; and claim 92 recites that the interface includes a microcontroller preprogrammed to execute "means for transmitting audio from the portable audio device to the car stereo."

Petitioner proposes the proper construction of "interface" is "a microcontroller that is functionally and structurally separate component from the car stereo, which integrates an after-market device with a car stereo," and notes that that is the construction determined by the district court in related actions involving the '786 patent. Pet. 12–14. For several reasons, the proposal is unpersuasive. First, as is noted by Patent Owner, even if the interface is deemed "functionally and structurally separate" from the car stereo, the proposed construction is incomplete in that it omits any requirement of separation or distinctness of the interface from the portable or after-market device connected thereto. Prelim. Resp. 8–9. Second, the

proposed construction is too narrow by specifying that the interface "integrates an after-market device with a car stereo." We note that the Specification of the '786 patent provides a special definition for "integration" or "integrated." Ex. 1101, 4:47–52. We discern no reason to import limitations into a claim if they are unnecessary to accord meaning to the claim.

Third, the proposed construction is too narrow by requiring the interface to be a microcontroller. In the Specification of the '786 patent, the term "interface" is described as including not only a microcontroller but also several discrete components, such as resistors, diodes, capacitors, transistors, oscillators, amplifiers, and multiplexers, shown in various embodiments of Figures 3A, 3B1–3B2, 3C1–3C2, and 3D. Ex. 1101, 9:8–20, 10:19–33, 11:4–18, 11:59–67. Thus, the term "interface" itself is not limited to a microcontroller. In that regard, we note that if the interface itself is construed as a microcontroller, as Petitioner proposes, then the additional claim language reciting that the interface includes a microcontroller would serve no meaningful purpose.

With regard to an "interface," the Specification states:

Thus, as can be readily appreciated, the interface 20 of the present invention allows for the integration of a multitude of devices and inputs with an OEM or after-market car radio or stereo.

Ex. 1101, 5:33-36.

As mentioned earlier, the interface 20 of the present invention allows for a plurality of disparate audio devices to be integrated with an existing car radio for use therewith.

Id. at 6:4–7.

Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for displaying on display 13. Audio from the MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:19–24. Thus, the Specification refers to the interface receiving information from an audio device and forwarding information to the car stereo, and to the interface allowing integration of a plurality of disparate audio devices with a car radio.

During prosecution, the Applicants of the '786 patent distinguished U.S. Patent 6,993,615 B2 ("Falcon"),⁴ in part by arguing that the reference failed to disclose an interface connected between a car stereo and an external audio source. Ex. 1102, 0267. Specifically, in distinguishing the invention from Falcon, Applicants stated: "[Falcon's graphical user interface] is an entirely different concept than the interface of the present invention, which includes a physical interface device connected between a car stereo system and an external audio source (e.g., a plurality of auxiliary input sources)." *Id.*

Construing the term "interface" in light of the Specification, other language in the claims, as well as the prosecution history noted by Petitioner, we determine that—*interface is a physical unit that connects one device to another and that has a functional and structural identity separate from that of both connected devices.*

⁴ Falcon discloses a portable computing device connectable to a car stereo through an interface configurable within the portable computing device. Ex. 3001, Abstr.

In the specific context of claims 1 and 86, the connected devices are the car stereo and an after-market device. In the specific context of claims 44, 57, and 92, the connected devices are the car stereo and a portable device. Each of claims 1, 44, 57, 86, and 92 further requires the interface to include a microcontroller.

3. "device presence signal"

Each of claims 57 and 86 requires within the interface a microcontroller having a first pre-programmed code portion "for generating a *device presence signal* and transmitting the signal to the car stereo to maintain the car stereo in an operational state." (Emphasis added). Claim 92 requires within the interface a microcontroller pre-programmed to execute "first pre-programmed means for generating a *device presence signal* and transmitting the signal to the car stereo to maintain the car stereo in an operational state." (Emphasis added). A description of "device presence signal" is contained in the Specification in the discussion of an embodiment that is for connecting a CD player to the car stereo:

Beginning in step 110, a signal is generated by the present invention indicating that a CD player/changer is present, and the signal is continuously transmitted to the car stereo. Importantly, this signal prevents the car stereo from shutting off, entering a sleep mode, or otherwise being unresponsive to signals and/or data from an external source.

Ex. 1001, 12:29–35. All other disclosed embodiments, whether they are for connecting an MP3 player or an auxiliary device to the car stereo, refer back to the above-quoted description of the device presence signal. *Id.* at 13:15–18, 13:62–65, 14:48–51, 15:35–38, 16:12–15, 16:57–60.

Petitioner proposes that the term "device presence signal" be construed the way it has been construed by the district court in related

actions involving the '786 patent, i.e., "transmission of a continuous signal indicating an audio device is present." Pet. 13 (citing Ex. 1112). Patent Owner has not proposed a construction. For two reasons, we do not adopt Petitioner's proposed construction.

First, the proposed construction is too narrow because continuous transmission is not necessary to accord meaning to the term. The manner of transmission simply reflects how the signal is transmitted and does not change what the signal was generated and intended to accomplish and actually accomplishes. The Specification also does not put continuous transmission in the same category of importance as the requirements in the italicized portion of the above-quoted text.

Second, in claims 57 and 86, the device presence signal is generated and transmitted by the interface that is connected between the first and second electrical connector, where the first electrical connector is connectable to a car stereo and the second electrical connector is connectable to a portable MP3 player (claim 57) or an after-market video device (claim 86). Claim 57 recites that the interface is for transmitting audio from the portable MP3 player to the car stereo, and claim 86 recites that the interface is for transmitting video information from the after-market video device to the car stereo. In claim 92, the device presence signal is generated and transmitted by the interface that is connected between the car stereo and the portable audio device. Claim 92 further includes, within the interface, a means for transmitting audio from the portable audio device to the car stereo. In the context of these claims, the device the presence of which is signaled by the interface is that device which connects to the interface to

communicate with the car stereo. Petitioner's proposed construction does not make that clear.

On the record before us, we construe "device presence signal," as a signal indicating that an audio device (claim 57) or video device (claim 86) or portable audio device (claim 92), other than the car stereo, is connected to the interface.

B. Alleged Obviousness of Claims 57, 58, 60, 64, 86, 88, 90, 91, 92, 94, and 97 over JP '954 and Lau

We have reviewed the Petition and the Preliminary Response, and determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of claims 57, 58, 60, 64, 86, 88, 90, 91, 92, 94, and 97 as obvious over JP '954 and Lau.

1 .IP '954

JP '954 is directed to solving the problem of equipment incompatibility, in the environment of automotive audio equipment, between a main unit made by one company and a CD changer made by another company. Ex. 1101, Abstr. Specifically, JP '954 describes the disadvantages associated with prior art systems as follows:

When installing an audio device in a vehicle on the occasion of a vehicle purchase, it is common for a so-called "basic" main unit to be installed. If one were to subsequently attempt to add a CD changer capable of automatically changing and playing a plurality of loaded CDs, prior to now it would have been necessary to purchase and install a model produced by the same manufacturer ass the "basic" main unit, as the format of signals connecting the respective devices vary from manufacturer to manufacturer. Furthermore, if a user had installed both of these devices produced by the same manufacturer, and at a later point wished to upgrade the main unit to, for example, a model produced by company A, it would have been necessary for the

same reason to also purchase a new CD changer made by company A.

Id. (0002). JP '954 describes its objective as: "to make it possible to add a CD changer made by company B to a main unit made by company A, as well as to add a CD changer made by company A to a main unit made by company B." *Id.* (0003). JP '954 achieves that objective by providing an interface unit as noted below:

(PROBLEM) Provide an interface unit for automotive audio equipment that renders possible the addition of a CD changer made by company B to a main unit made by company A as well as the addition of a CD changer made by company A to a main unit made by company B.

Id. Abstr. JP '954 summarizes its interface unit as follows:

(MEANS FOR SOLVING) The [interface] unit is constituted by splitting signals into three systems, namely a control system, audio system and power system, and providing a conversion circuit for each of these systems.

Id. Figure 1 of JP '954 is reproduced below:

(Fig. 1)

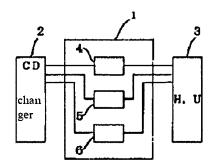

Figure 1 illustrates a block diagram of the structure of the audio system according to JP '954. *Id.* (0006). Interface unit 1 "converts the format of the signal that links the CD changer 2 and the main unit 3, etc." *Id.*

Interface unit 1 links main unit 3 and CD changer 2, and is provided with control system conversion portion 4, audio system conversion portion 5, and power conversion portion 6. *Id.* at Abstr. Control conversion portion 4 is for the bus line, clock control signal, etc.; audio conversion portion 5 is for the audio signal; and power conversion portion 6 is for the power supply. *Id.* (0006).

Figure 2 of JP '954 is reproduced below:

(Fig. 2)

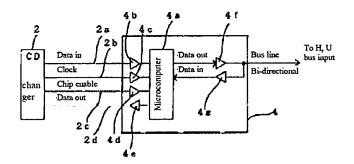

Figure 2 illustrates control system conversion portion 4. *Id.* (0007). Microcomputer 4a is provided to convert and unify different signal formats between the CD changer and the main unit. *Id.*

Figure 4 is reproduced below:

(Fig. 4)

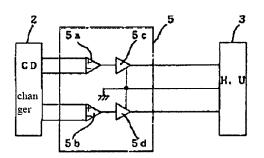

Figure 4 illustrates audio system conversion portion 5. *Id.* (0011). It includes differential amplifiers 5a and 5b and amplifiers 5c and 5d. *Id.*

JP '954 states: "[a]lthough one embodiment example was described above, to expand the range of available inter-company format conversions, a switch can be provided on the microcomputer 4a to enable application to various models using a connection adapter between the CD changer and main unit. *Id.* (0010).

2. Lau

Lau is titled "Vehicle Sound System," and states that "there is a need for an improved automobile audio system that does not require cassettes or compact discs, can be used with reusable media and can play music downloaded from a computer or other device." Ex. 1103 (54), 2:24–26. Lau indicates that pre-existing portable solid state music players that store music downloadable from a computer are unsatisfactory for use with an automobile stereo. *Id.* at 3:1–11. For instance, it is explained that all of the controls are on the portable player, and thus, a driver is unable to use the controls of the car stereo to control the music player. *Id.* at 3:12–16.

Figure 1 of Lau is reproduced below:

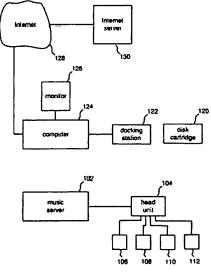

Fig. 1

Figure 1 illustrates an embodiment of Lau's vehicle sound system. *Id.* at 5:18. Head unit 104 is a standard automobile head unit and is connected to speakers 106, 108, 110, and 112. *Id.* at 7:17–20. Music server 102 is an audio/visual server and emulates a disc changer. *Id.* at 7:12–14. Lau explains that music server 102 is not an actual disc changer but only acts like a disc changer would act, based on communications to and from the unit. *Id.* at 7:14–17. Music server 102 communicates with head unit 102. *Id.* at 7:19. Lau describes that music server 102 may be mounted in the trunk of a car and head unit 104 is mounted in the dash board. *Id.* at 8:21–24.

Disk cartridge 120 can be inserted by a user either into music server 102 or docking station 122 connected to computer 124. *Id.* at 8:16–21. Computer 124 is a standard personal computer and is connected to Internet 128. *Id.* at 8:4–11. Internet server 130 is available through the Internet for downloading tracks and information about tracks, and in one embodiment, tracks are songs. *Id.* at 8:11–15. After a user downloads tracks onto disk cartridge 120, the cartridge is removed from docking station 122 and inserted into music server 102, and then the user can use head unit 104 to access and play tracks on the cartridge. *Id.* at 8:20–26.

3. Claims 92, 94, and 97

Claim 92, as reproduced above, includes several elements in the format of a "means":

- first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state;
- second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing the control

> command into a formatted control command compatible with the portable audio device, and transmitting the formatted control command to the portable audio device for execution thereby; and

means for transmitting audio from the portable audio device to the car stereo.

Claim 94 depends from claim 92 and claim 97 depends from claim 94.

Paragraph 6 of 35 U.S.C. § 112 states:⁵

An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof.

The above-quoted recitations of claim 92 presumptively set forth elements under 35 U.S.C. § 112, ¶ 6, and are construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof. *Williamson v. Citrix Online, LLC*, 792 F.3d 1339, 1348 (Fed. Cir. 2015) (en banc).

The Board's trial rules require the Petition to identify the corresponding structure, material, or acts corresponding to each claimed function. Specifically, 37 C.F.R. § 42.104(b)(3) governs the content of a petition with respect to claim construction and provides: "[w]here the claim to be construed contains a means-plus-function or step-plus-function limitation as permitted under 35 U.S.C. § 112 [¶ 6], the construction of the

⁵ Paragraphs 1 through 6 of § 112 were renamed as paragraphs (a) through (f) when § 4(c) of the Leahy-Smith America Invents Act, Pub. L. No. 112–29, 125 Stat. 284, 329 (2011) ("AIA") took effect on September 16, 2012. Because the patent application resulting in the '786 patent was filed before the effective date of the AIA, we refer to the pre-AIA version of § 112.

claim must identify the specific portions of the specification that describe the structure, material, or acts corresponding to each claimed function."⁶ 37 C.F.R. § 42.104(b)(3).

The "construction" referred to by 37 C.F.R. § 42.104(b)(3) is the construction proposed by the Petitioner, one that Petitioner believes is the correct construction under applicable law and should apply in the involved proceeding. Here, Petitioner did not comply with 37 C.F.R. § 42.104(b)(3).

For each means-plus-function recitation in claim 92, Petitioner provided the construction of the United States District Court for the District of New Jersey. Pet. 15–19. However, Petitioner does not take ownership of the district court's constructions by indicating, in some way, that it agrees with, proposes, or adopts the construction of this district court. Indeed, for two means-plus-function elements, i.e., (1) first pre-programmed means for generating a device presence signal ("generating means"), and (2) first preprogrammed means for . . . transmitting the [device presence] signal to the car stereo to maintain the car stereo in an operational state ("transmitting means"), Petitioner asserts that the district court's constructions are incorrect. Pet. 16–17. For the transmitting means, Petitioner does offer its own construction as is required by 37 C.F.R. § 42.104(b)(3). Pet. 17. But for the generating means, Petitioner does not offer its construction by identifying corresponding structure, material, or acts in the Specification. Instead, for the transmitting means, Petitioner asserts that there is no

⁶ Structure disclosed in the specification is corresponding structure only if the specification or prosecution history clearly links or associates that structure to the function recited in the claim. *Golight, Inc. v. Wal-Mart Stores, Inc.*, 355 F.3d 1327, 1334 (Fed. Cir. 2004); *Cardiac Pacemakers, Inc. v. St. Jude Med.*, 296 F.3d 1106, 1113 (Fed. Cir. 2002).

corresponding structure, material, or acts in the Specification of the '786 patent, and characterizes the means-plus-function element as indefinite. Pet. 15.

Without expressly identifying a ground of unpatentability based on indefiniteness under 35 U.S.C. § 112, ¶ 2, Petitioner nonetheless has mounted, effectively, a challenge of claims 92, 94, and 97 as indefinite under 35 U.S.C. § 112, \P 2. We note that if there is no corresponding structure, material, or acts in the specification for a means-plus-function claim element, the claim is indefinite under 35 U.S.C. § 112, ¶ 2. See In re Dossel, 115 F.3d 942, 946 (Fed. Cir. 1997). Except for a narrow exception explained in In re Katz, 639 F.3d 1303, 1316 (Fed. Cir. 2011), concerning generic functions performed by a general purpose computer, such as "processing," "receiving" and "storing," a computer-implemented meansplus-function element is indefinite unless the specification discloses the specific algorithm used by the computer to perform the recited function. Eon Corp. IP Holdings LLC v. AT&T Mobility LLC, 785 F.3d 616, 621–23 (Fed. Cir. 2015); Function Media, LLC. v. Google, Inc., 708 F.3d 1310, 1318 (Fed. Cir. 2013); Blackboard, Inc. v. Desire2Learn, Inc., 574 F.3d 1371, 1385 (Fed. Cir. 2009); Net MoneyIN, Inc. v. Verisign, Inc., 545 F.3d 1359 (Fed. Cir. 2008); Finisar Corp. v. DirectTV Group, Inc., 523 F.3d 1323, 1340 (Fed. Cir. 2008); Aristocrat Technologies Australia Pty Ltd. v. Int'l Game Tech., 521 F.3d 1328 (Fed. Cir. 2008). Petitioner may not, however, in an inter partes review, assert a ground of unpatentability based on indefiniteness under 35 U.S.C. § 112, ¶ 2. See 35 U.S.C. § 311(b).

In any event, with regard to alleged obviousness of claims over prior art, because Petitioner has not identified structure, material, and acts in the

1

Specification of the '786 patent that correspond to the generating means of claim 92. Therefore, Petitioner has not accounted for how such unidentified structure, material, and acts would have been met by the prior art. Accordingly, we determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of claims 92, 94, and 97 as obvious over JP '954 and Lau.

4. Claims 57 and 86

Each of claims 57 and 86 requires the microcontroller within the interface to execute a first pre-programmed code portion "for generating a device presence signal and transmitting the signal to the car stereo." We have construed "device presence signal" as *a signal indicating that an audio device (claim 57) or video device (claim 86) or portable audio device (claim 92), other than the car stereo, is connected to the interface.*

Petitioner identifies head unit 3 in Figure 1 of JP '954 as the car stereo recited in claims 57 and 86, interface unit 1 in Figure 1 of JP '954 as the interface recited in claims 57 and 86, and microcomputer 4a in Figure 2 of JP '954 as the microcontroller recited in claims 57 and 86. Pet. 20, 26, 29. However, Petitioner does not contend that microcomputer 4a of JP '954 generates a device presence signal, much less transmit such a signal to the head unit. Instead, Petitioner identifies Lau as providing an interface including a microcontroller that generates a device presence signal and sends it to a car stereo, and asserts that in light of Lau's disclosure, it would have been obvious to one with ordinary skill in the art to do the same with the microcontroller of JP '954. Pet. 22–24. For reasons discussed below, we are not sufficiently persuaded that Lau discloses generation of a "device presence signal" within what Petitioner regards as the "interface" in Lau or

transmission of such a "device presence signal" to a car stereo.

Lau's music server 102 is not the same kind of device as interface unit 1 of JP '954. In Lau, what Petitioner regards as the portable MP3 device of claim 57 and the after-market video device of claim 86 is processor 302 (Pet. 26), and it is located in music server 102 and part and parcel with controller 320 which Petitioner regards as the interface (Pet. 26). Processor 302, as the purported portable or after-market device, is not just "connectable" to the interface through a connector as is recited in claims 57 and 86. Rather, it is always connected to controller 320. Ex. 1103, 21:18–22:4. This fixed configuration is illustrated in Lau's Figure 6:

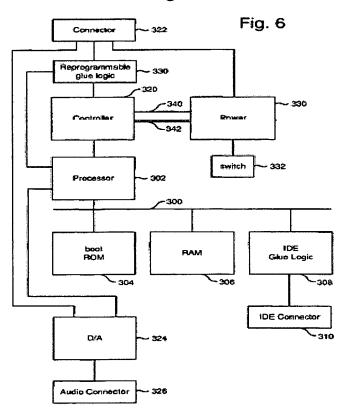

Figure 6 is a block diagram of one embodiment of the components within music server 102 shown in Figure 1. Ex. 1103, 5:23–24. Controller 320's generating a signal to convey to a car stereo that processor 302 is connected

to it has little meaning, if any, and Petitioner has not sufficiently shown that that task is performed in Lau.

Petitioner explains that in Lau, it is disclosed that if music server 102 is connected to a car stereo that is Sony Model XR-C5120, then certain signals are required for normal operation, citing the testimony of Dr. Matheson (Ex. 1115 ¶¶ 89–90). Pet. 22–23. Petitioner further explains:

Lau teaches that controller 320 is programmed to perform a state machine in order to emulate a CD changer connected to a particular type of head unit (e.g., Sony Model XR-C 5120). In the "dormant state" when the music server is not in a "play state," controller 320 is programmed to respond to packets sent by head unit 104 with corresponding response packets (*i.e.*, packet 7 in response to receiving packet 5, and packet 8 in response to receiving packet 6). See Lau at Fig. 11.

Pet. 23. Figure 11 of Lau is reproduced below:

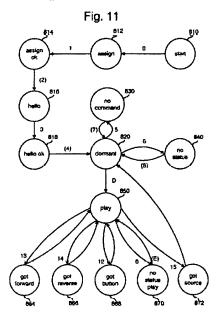

Figure 11 illustrates a state diagram for controller 320 within music server 102. Ex. 1103, 6:4.

Nothing in the above-noted explanations indicates that packet 7 or packet 8 sent by controller 320 conveys the message that a portable or aftermarket device is connected to controller 320. Petitioner asserts that the purpose of the response packets is to inform the car stereo of the presence of the CD changer while playback is not occurring, and that the response packets indicate an audio device is present. Pet. 24. Dr. Matheson's testimony is the same. Ex. 1115 ¶ 92. These assertions, however, are not accompanied by citation to the disclosure of Lau and are not adequately supported by the portions of Lau Petitioner does discuss, which we have addressed above.

Importantly, it is the connection of a separate portable or after-market device to the interface that must be conveyed by a device presence signal and not just the presence of any audio device such as the entirety of music server 102 itself or processor 302 which is fixedly configured with controller 320. As discussed above, processor 302 is not a portable or after-market device that is connected to controller 320 as the claimed interface. In that regard, Petitioner's explanations are deficient and the cited testimony of Dr. Matheson adds no meaningful explanation. Accordingly, Petitioner has not sufficiently shown that Lau discloses generating a device presence signal and transmitting it to the car stereo.

For the foregoing reasons, Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of either claim 57 or claim 86 as obvious over JP '954 and Lau.

29

5. Claims 58, 60, 64, 88, 90, and 91

Each of claims 58, 60, 64, 88, 90, and 91 depends directly or indirectly from either claim 57 or 86. The deficiencies noted above with regard to claims 57 and 86 carry through to the claims depending therefrom. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of claims 58, 60, 64, 88, 90, and 91 as obvious over JP '954 and Lau.

C. Alleged Obviousness of Claims 57, 86, and 92 over JP '954, Lau, and Bhogal

This alleged ground of unpatentability adds Bhogal to the combined teachings of JP '954 and Lau which we have already discussed above. Bhogal is added to buttress the combined teachings of JP '954 and Lau with respect to the claim limitations requiring a "portable" device, and does not cure the deficiencies of the Petition, already addressed above, with regard to claims 57, 86, and 92. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 57, 86, and 92 as obvious over JP '954, Lau, and Bhogal.

D. Alleged Obviousness of Claims 61–63 over JP '954, Lau, and XR-C5120

Each of claims 61, 62, and 63 depends from claim 60. Claim 60 depends from claim 57. The deficiencies of Petitioner's assertions with respect to claims 57 and 60, discussed above, are not cured by Petitioner's application of the disclosure of XR-C5120 to the combined teachings of JP '954 and Lau. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 61, 62, and 63 as obvious over JP '954, Lau, and XR-C5120.

E. Alleged Obviousness of Claims 65, 89, and 98 over JP '954, Lau, and KBT

Claim 65 depends from claim 64 which depends from claim 57. Claim 89 depends from claim 88 which depends from claim 86. Claim 98 depends from claim 97 which depends from claim 92. The deficiencies of Petitioner's assertions with respect to claims 57, 64, 86, 88, 92, and 97, discussed above, are not cured by Petitioner's application of KBT to the combined teachings of JP '954 and Lau. Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 65, 89, and 98 as obvious over JP '954, Lau, KBT.

F. Alleged Obviousness of Claims 1, 2, 4, 7, 8, 13, 14, and 23 over JP '954, XR-C5120 and XA-C30

We have reviewed the Petition and the Preliminary Response, and determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 2, 4, 7, 8, 13, 14, and 23 over JP '954, XR-C5120, and XA-C30.

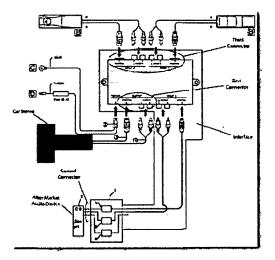

1. Claim 1

As compared to claim 57, claim 1 (a) recites an after-market audio device rather than a portable MP3 player, (b) does not require the generation or transmission of a device presence signal, (c) adds a third connector that is electrically connectable to one or more auxiliary input sources external to the car stereo and the after-market audio device, (d) adds a code portion in the microcontroller within the interface, that is "for switching to one or more auxiliary input sources connected to the third electrical connector," and (f) adds a code portion in the microcontroller within the interface, that is "for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the

received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo."

For the addition of the third connector and the code portion for switching to one or more auxiliary input sources, Petitioner relies on XR-C5120 and XA-C30. Pet. 42–46. XR-C5120 is the Operating Instructions for Sony's model XR-C5120 car stereo. Ex. 1108. It lists as optional equipment: "Source selector XA-C30." *Id.* at 18. As noted above, for this decision we use the identification "XA-C30" to refer to the service manual of Sony's Source Selector XA-C30 (Exhibit 1109). The service manual discloses how the source selector may be connected between a car stereo and multiple input sources. Ex. 1109, 2–3.

Petitioner illustrates its combination of Sony's Source Selector XA-C30 with the car audio system of JP '954 as follows:

Composite of Sony XA-C30 and JP '954 Figure 1

Pet. 44. The Figure is a block diagram of the audio system of JP '954 with the addition of the source selector disclosed in XR-C30. Each of first,

32

second, and third connectors as recited in claim 1 is illustrated in the abovereproduced Figure, together with the parts to which they are connected.

With respect to claim 1's requirement of a microcontroller having a code portion "for remotely controlling the after-market audio device," Petitioner points to microcomputer 4a within control conversion portion 4 of interface unit 1. Pet. 45. With respect to claim 1's requirement of a microcontroller having a code portion "for switching to one or more auxiliary input sources connected to said third electrical connector," Petitioner asserts: "The Sony XA-C30 Source Selector's microcontroller contains 4K Bytes of program ROM that inherently must be pre-programmed in order for the microcontroller to function." Pet. 45–46.

The analysis is incomplete because Petitioner has not shown that microcomputer 4a within control conversion portion 4 of interface unit 1 of JP '954 is the same microcontroller as the microcontroller within the Sony Source Selector XA-C30. Claim 1 requires the same microcontroller to include a code portion "for remotely controlling the after-market audio device," and another code portion "for switching to one or more auxiliary input sources connected to said third electrical connector." The Sony Source Selector XA-C30 is separate from and does not include interface unit 1 of JP '954. A block diagram of the Sony Source Selector XA-C30, as shown in XA-C30, is reproduced below:

33

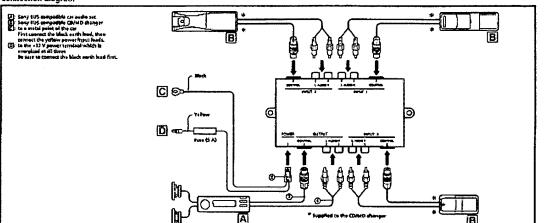

Connections

Precautions e car beltery to evold shoet ch ment the yellow pawer inpu store circuits. or input leads only after all other

· Berss ntick

Ex. 1109, 2. The above Figure illustrates a connection diagram for Sony's Source Selector XA-C30.

With respect to claim 1's requirement of a microcontroller having a code portion "for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo," Petitioner points to microcomputer 4a within control conversion portion 4 of interface unit 1. Pet. 45. We are unpersuaded, because, as we discussed above, control conversion portion 4 in interface unit 1 is for communicating and converting control signals, not any data for display on a car stereo, such as song title and artist information.

2. Claims 2, 4, 7, 8, 13, 14, and 23

Each of claims 2, 4, 7, 8, 13, 14, and 23 depends directly form claim 1. The deficiencies discussed above with regard to claim 1 carry through to

these dependent claims. Petitioner has not shown a reasonable likelihood that it would prevail in establishing unpatentability of any of claims 2, 4, 7, 8, 13, 14, and 23 as obvious over JP '954, XR-C5120, and XA-C30.

G. Alleged Obviousness of Claims 5 and 24 over JP '954, XR-C5120, XA-C30, and KBT

Claim 5 depends from claim 1. Claim 24 depends from claim 23 which depends from claim 1. The deficiencies of Petitioner's assertions with respect to claims 1 and 23, discussed above, are not cured by Petitioner's application of KBT to the combined teachings of JP '954, XR-C5120, and XA-C30. Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of either claim 5 or claim 24 as obvious over JP '954, XR-C5120, XA-C30, and KBT.

H. Alleged Obviousness of Claims 6 and 10 over JP '954, XR-C5120, XA-C30, and Lau

Claims 6 and 10 each depends from claim 1. The deficiencies of Petitioner's assertions with respect to claim 1 are not cured by Petitioner's application of Lau to the combined teachings of JP '954, XR-C5120, and XA-C30. Thus, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of either claim 6 or claim 10 as obvious over JP '954, XR-C5120, XA-C30, and Lau.

- I. Alleged Unpatentability of Claims 44 and 47 as Obvious over JP '954, Lau, and Bhogal
 - 1. Bhogal

Bhogal is titled "Method and System for Storing Digital Audio Data and Emulating Multiple CD-Changer Units." Ex. 1110 (54). It relates to a method and apparatus for enhancing storage and playback of digital audio

data. *Id.* at 1:9–11. With regard a problem that it addresses, Bhogal describes:

Typically, CD-changer units and car stereo units are designed so that they are compatible only if they are made by the same manufacturer. In other words, CD-changers and car stereos usually have a proprietary interface, and no industry standard currently exists for interfacing different makes of CD-changers and car stereos.

Id. at 4:57-62. To solve that problem, Bhogal provides a digital audio unit

that can emulate the operation of multiple CD-changers. Id. at 3:10-13.

Regarding which one of many CD-changer to emulate, Bhogal describes:

In one case, the digital audio unit can detect a control signal for a CD-changer unit and then automatically select the type of CDchanger unit to be emulated based on the detected control signal. In a second case, the digital audio unit can receive a user selection for selecting a type of CD-changer unit to be emulated. The softcopy digital audio files stored within the digital audio unit are thereby accessed through the controls and commands for a CD-changer unit.

;

Id. at 3:13–20. Figure 2 of Bhogal is reproduced below:

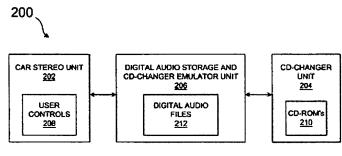

FIG. 2

Figure 2 illustrates an embodiment of Bhogal's audio system. *Id.* at 3:31–33. Emulator 206 is connected between car stereo 202 and actual CD-changer 204. *Id.* at 5:11–16. Emulator 206 contains digital audio files 212, organized as virtual CD-ROMs, that may be accessed by a user through the car stereo. *Id.* at 5:39–42. Bhogal describes that, in one embodiment, "the

emulator unit may be positioned in an independent *docking station* that accepts portable electronics, possibly in a standard manner such that the docking station also accepts other types of MP3 players." *Id.* at 5:61–64 (emphasis added). When the emulator is not in the docking station, the car stereo and the actual CD-exchanger may operate together. *Id.* at 5:65–67.

Bhogal describes that, in a preferred embodiment, emulator 206 is a portable device. *Id.* at 6:18–21. Bhogal also describes that the emulator may connect to a personal computer in many different ways, including by use of "serial, Universal Serial Bus (USB), or parallel I/O connections, in a manner similar to that found on other types of commercially available portable digital audio devices." *Id.* at 6:32–40.

2. Claim 44

Claim 44 is reproduced below:

44. An apparatus for docking a portable device for integration with a car stereo comprising:

- a storage area remote from a car stereo for storing the portable device;
- a docking portion within the storage area for communicating and physically mating with the portable device;
- a data port in communication with the docking portion, the data port connectable with a device for integrating the portable device with the car stereo; and
- an interface connected to said data port and to the car stereo, said interface channeling from the portable device to the car stereo said interface including a microcontroller in electrical communication with the portable device through said data port and the car stereo, said microcontroller pre-programmed to execute first program code for remotely controlling the portable device using the car stereo by processing control commands generated by the car stereo in a format

incompatible with the portable device into formatted control commands compatible with the portable device, and dispatching formatted control commands to the portable device for execution thereby.

Ex. 1101, 25:1–22.

Petitioner relies on Bhogal for its teaching about the use of a docking station that accepts portable electronics, with the rest of the claim elements being met by "JP '954 (as combined with Lau)" or "JP '954 in view of Lau." Pet. 37, 39. Petitioner, however, does not explain within the section of the Petition discussing claim 44, how JP '954 is modified in view of Lau or combined with Lau in the context of the obviousness assertion of claim 44. In that regard, Patent Owner asserts: "it is impossible to determine how Petitioner would modify the JP '954 and Lau references to achieve the portable device and interface of the claim." Prelim. Resp. 28.

We determine that because the discussion in the Petition of claim 44 immediately follows the discussion of the ground of unpatentability against other claims based on the combination of JP '954 and Lau, Petitioner reasonably has conveyed, for claim 44, how JP '954 would be modified in view of Lau, i.e., the same way JP '954 and Lau are combined in the ground of unpatentability based on JP '954 and Lau. Specifically, Petitioner asserts that in view of Lau it would have been obvious to one with ordinary skill in the art to substitute, in the system of JP '954, a portable MP3 player for CD changer 2. Pet. 21.

In short, Petitioner proposes that it would have been obvious to one with ordinary skill in the art to substitute a portable MP3 player for CD changer 2 in JP '954, and to connect that portable MP3 player to Interface Unit 1 of JP '954 through a docking station. According to Petitioner, the

resulting combination meets the subject matter of claim 44. We are sufficiently persuaded by Petitioner's contentions.

Petitioner asserts that one with ordinary skill in the art would have used Bhogal's docking station in JP '954 because "the addition of a docking station would provide predictable ease of use in an automotive AV system." Pet. 39. That assertion is supported by the testimony of Dr. Matheson. Ex. 1115 ¶¶ 119, 123. We note that in the combined system of JP '954 and Lau, as noted above, a portable MP3 player has been substituted in for CD changer 2, and that Bhogal describes its emulator unit as a portable device (Ex. 1110, 6:18–21). Thus, the portable MP3 player in JP '954 would benefit from the convenience and ease of use provided by being removably placed in a docking station the same way Bhogal's emulator 206 would benefit from the convenience and ease of use provided by being removably placed in a docking station.

We also are sufficiently persuaded that one with ordinary skill in the art would have known to substitute a portable MP3 player for CD changer 2 of JP '954. Petitioner persuasively notes that Lau's music server 102 provides songs in MP3 format to head unit 104 (car stereo), and thus, is a MP3 player being emulated as a CD changer. Pet. 21 (citing Ex. 1103, 21:18–22:4). Specifically, Lau describes: "The music player is software for playing the particular music under consideration. For example, if the music is stored in MP3 format, the music player is a MP3 music player that can read, decode, and play MP3 files." *Id.* at 21:25–22:1. Thus, Lau discloses the desirability of connecting MP3 players to a car stereo, at least no less than that of connecting a CD changer to a car stereo. As for the portable aspect of an MP3 player, Petitioner accounts for that through the testimony

39

of Dr. Matheson, who testifies that "portable MP3 players were commonly available in the market." Ex. 1115 ¶ 86.

We are sufficiently persuaded that the combined structure of JP '954, Lau, and Bhogal, as discussed above, satisfies all limitations of claim 44. For instance, the portable MP3 player would be the portable device recited in the claim; Bhogal's docking station would be the docking portion recited in the claim; and the MP3 player would be physically mating with the docking station as is required in the claim. Also, interface unit 1 of JP '954 would be the interface recited in the claim, and the docking station as the claimed docking portion would be electrically connected to interface unit 1 of JP '954 through a data port. We agree with Petitioner that "data port" is sufficiently broad to cover "electronic contact" through which data passes from one device to another. Pet. 38 (citing Ex. 1115 ¶ 120). The docking station necessarily would be in a storage area remote from the car stereo. As shown in Figure 1 of JP '954, interface unit 1 also would be connected to head unit 3 which is the car stereo.

According to claim 44, the interface must include a microcontroller that communicates with the portable device as well as the car stereo. That is the case with interface unit 1 of JP '954 in the system according to the combined teachings of JP '954, Lau, and Bhogal. As shown in Figure 2 of JP '954, microcontroller 4a within control system conversion portion 4 of if interface unit 1 of JP '954 is in electrical communication with CD changer 2 (now replaced by portable MP3 player), as well as with the head unit.

Claim 44 requires the microcontroller to be pre-programmed to execute first program code portion for remotely controlling the portable device using the car stereo by (1) processing control commands generated by

the car stereo in a format incompatible with the portable device into formatted control commands compatible with the portable device, and (2) dispatching formatted control commands to the portable device for execution thereby. Petitioner identifies microcomputer 4a in JP '954 as such a microcontroller. Pet. 39. Petitioner explains that microcomputer 4a is preprogrammed for remotely controlling CD changer 2 (replaced by portable MP3 player in the combined teachings of JP '954, Lau, and Bhogal) using the car stereo by converting control commands sent from head unit 3 into a format compatible with the portable MP3 player and transmitting them to the portable MP3 player for execution thereby. *Id.* The argument is supported by the testimony of Dr. Matheson. Ex. 1115 ¶ 124.

Figure 2 of JP '954 is reproduced below:

(Fig. 2)

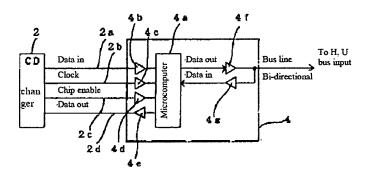

Figure 2 illustrates control system conversion portion 4 of interface unit 1 of JP '954. Ex. 1107 (0007). Microcomputer 4a is provided to convert and unify different signal formats between the CD changer and the main unit. *Id.* JP '954 summarizes its interface unit 1 as follows:

(MEANS FOR SOLVING) The [interface] unit is constituted by splitting signals into three systems, namely a control system, audio system and power system, and providing a conversion circuit for each of these systems. *Id.* Abstr. JP '954 describes its objective as: "to make it possible to add a CD changer made by company B to a main unit made by company A, as well as to add a CD changer made by company A to a main unit made by company B." *Id.* (0003).

Patent Owner asserts that Petitioner does not explain how control system conversion portion disclosed in JP '954 "could possibly convert data from an MP3 player or remotely control the MP3 player." Prelim. Resp. 19. In that regard, Petitioner asserts: "to the extent that JP '954 discloses anything, that disclosure only relates to CD-changer technology." *Id.* These arguments are unpersuasive. A patent disclosure need not expressly describe, specifically, what would have been known to one with ordinary skill in the art, insofar as the making and using of the claimed invention is concerned. *See Lindemann Maschinenfabrik GMBH v. American Hoist and Derrick Co.*, 730 F.2d 1452, 1463 (Fed. Cir. 1984). Moreover, on this record, the evidence does not establish that technology relating to control of CD changers is very much different from that relating to control of portable MP3 digital audio devices. Patent Owner may, after institution of trial, explore such issues by submitting evidence in that regard.

On this record, we determine that Petitioner has shown a reasonable likelihood that it would prevail in establishing the unpatentability of claim 44 as obvious over JP '954, Lau, and Bhogal.

3. Claim 47

Claim 47 depends from claim 44 and further recites: "wherein the data port comprises an RS-232 or Universal Serial Bus (USB) port." Petitioner asserts that Bhogal describes its emulator unit as being coupled to the docking station in a "standard manner." Pet. 55 (see Ex. 1110, 5:61–64).

Petitioner further asserts that Bhogal describes the emulator unit as being connectable to a personal computer, identifies various possibilities for the manner of connection, and refers to such manner as "similar to that found on other types of commercially available portable digital audio devices." *Id.* (citing Ex. 1110, 6:32–37). In particular, Bhogal identifies such connections on commercially available portable digital audio devices as including "serial, universal Serial Bus (USB), or parallel I/O." Ex. 1110, 6:34–37. It is also undisputed that "RS-232" refers to a serial bus. As such, we are sufficiently persuaded that one with ordinary skill in the art, in light of Bhogal, would have known to use a RS-232 or USB connection as a data port connecting to the docking station.

Petitioner has shown a reasonable likelihood that it would prevail in establishing the unpatentability of claim 47 as obvious over JP '954, Lau, and Bhogal.

III. CONCLUSION

Petitioner has not demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 2, 4–8, 10, 13, 14, 23, 24, 57, 58, 60–65, 86, 88–92, 94, 97, and 98 of the '786 patent. Petitioner has, however, demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of claims 44 and 47 as obvious over JP '954, Lau, and Bhogal. We have not made a final determination with respect to the patentability of any claim or the construction of claim.

III. ORDER

It is

ORDERED that, pursuant to 35 U.S.C. § 314(a), an *inter partes* review is instituted as to claims 44 and 47 of the '786 patent on the ground of obviousness over JP '954, Lau, and Bhogal;

FURTHER ORDERED that no other ground of unpatentability, with respect to any claim, is instituted for trial; and

FURTHER ORDERED that pursuant to 35 U.S.C. § 314(c) and 37 C.F.R. § 42.4, notice is hereby given of the institution of a trial, which commences on the entry date of this decision.

DECISION Denying Institution of Inter Partes Review 37 C.F.R. § 42.108(b)

Page 1297 of 1457

I. INTRODUCTION

A. Background

On July 20, 2016, Petitioner filed a Petition (Paper 2, "Pet.") to institute *inter partes* review of claims 1, 2, 4–8, 13, 14, 23, 24, 44, 47, 57, 58, 60–65, 86, 88–92, 94, 97, and 98 of U.S. Patent No. 7,489,786 B2 (Ex. 1001, "the '786 patent"). On November 10, 2016, Patent Owner filed a Preliminary Response (Paper 6, "Prelim. Resp.").

To institute an *inter partes* review, we must determine that the information presented in the petition shows "that there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition." 35 U.S.C. § 314(a). Having considered both the Petition and the Preliminary Response, we determine that Petitioner has *not* demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of any challenged claim. Thus, we do not institute an *inter partes* review of any claim of the '786 patent.

B. Related Matters

The parties indicate that the '786 patent was asserted in five infringement actions before the United States District Court for the Eastern District of Texas and two infringement actions before the United States District Court for the District of New Jersey. Pet. 1; Paper 5, 1–2. The '786 patent also is involved in IPR2016-00421, IPR2016-00422, IPR2016-01472, and IPR2016-01477. Paper 5, 2. Related U.S. Patent No. 8,155,342 B2 is involved in IPR2016-00118, IPR2016-00418, IPR2016-00419, IPR2016-01445, IPR2016-01449, IPR2016-01473, IPR2016-01476, IPR2016-01533, IPR2016-01557, and IPR2016-01560. Pet. 1; Paper 5, 1–2.

2

C. The '786 Patent

The '786 patent is titled "Audio Device Integration System."

Ex. 1001, at [54]. It states:

One or more after-market audio devices, such as a CD player, CD changer, MP3 player, satellite receiver, DAB receiver, or the like, is integrated for use with an existing OEM or after-market car stereo system, wherein control commands can be issued at the car stereo and responsive data from the audio device can be displayed on the stereo.

Id. at Abstr. The '786 patent also states:

Control commands generated at the car stereo are received, processed, converted into a format recognizable by the audio device, and dispatched to the audio device for execution. Information from the audio device, including track, disc, song, station, time, and other information, is received, processed, converted into a format recognizable by the car stereo, and dispatched to the car stereo for display thereon.

Id. Additional auxiliary sources also may be integrated together, and "a user can select between the [audio] device or the one or more auxiliary input sources by issuing selection commands through the car stereo." *Id.* A docking station is provided for docking a portable audio or video device for integration with the car stereo. *Id.* Figures 2A–2C are reproduced below:

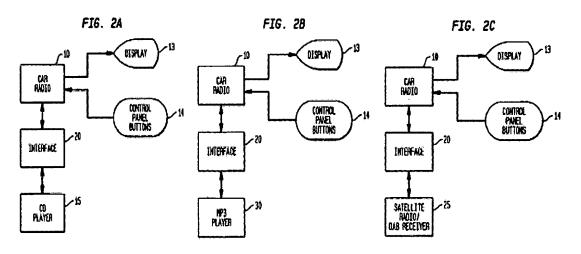

Figure 2A illustrates an embodiment integrating a CD player with the car stereo; Figure 2B illustrates an embodiment integrating a MP3 player with a car stereo; and Figure 2C illustrates an embodiment integrating a satellite or DAB receiver with a car stereo. *Id.* at 3:14–23. A more versatile embodiment is shown in Figure 1:

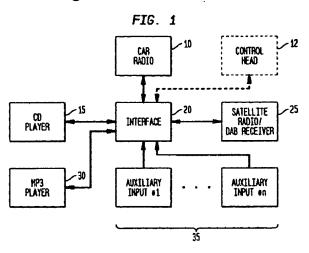

Figure 1 illustrates an embodiment integrating a CD player, a MP3 player, a satellite radio, or DAB receiver, and a number of auxiliary input sources with a car stereo. *Id.* at 3:12–13. As shown in the above Figures, central to the '786 patent is an "interface" positioned between the car stereo and the audio device(s) and auxiliary input(s) being integrated.

With regard to Figure 2B, the '786 patent describes:

The interface 20 allows data and audio signals to be exchanged between the MP3 player 30 and the car radio 10, and processes and formats signals accordingly so that instructions and data from the radio 10 are processable by the MP3 player 30, and vice versa. Operational commands, such as track selection, pause, play, stop, fast forward, rewind, and other commands, are entered via the control panel buttons 14 of car radio 10, processed by the interface 20, and formatted for execution by the MP3 player 30. Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for display on display 13. Audio from MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:11–24. Similar description is provided with respect to Figures 2A and 2C. *Id.* at 5:49–55, 6:35–43.

Of the challenged claims, claims 1, 44, 57, 86, and 92 are independent. Claim 1 is directed to a system that connects an after-market audio device as well as one or more auxiliary input sources to a car stereo. In particular, claim 1 recites a first connector electrically connectable to a car stereo, a second connector electrically connectable to an after-market device, and a third connector electrically connectable to one or more auxiliary input sources. *Id.* at 21:33–38. Claim 1 also recites an interface that is connected between the first and second electrical connectors, and includes a "microcontroller pre-programmed to execute":

- a first pre-programmed code portion for remotely controlling the after-market audio device using the car stereo by receiving a control command from the car stereo through said first connector in a format incompatible with the after-market audio device, processing the received control command into a formatted command compatible with the after-market audio device, and transmitting the formatted command to the after-market audio device through said second connector for execution by the after-market audio device;
- a second pre-programmed code portion for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo; and
- a third pre-programmed code portion for switching to one or more auxiliary input sources connected to said third electrical connector.

Id. at 21:44-64.

Claim 57 is directed to a system including an interface between a first electrical connector connectable to a car stereo and a second electrical connector connectable to a portable MP3 player. Claim 86 is directed to a system including an interface between a first electrical connector connectable to a car stereo and a second electrical connector connectable to an after-market video device. Claim 92 is directed to a system including an interface between a car stereo and a portable audio device. Claims 57, 86, and 92 each require the generation, within the interface, of a device presence signal that is transmitted to the car stereo to maintain the car stereo in an operational state. Claims 57, 86, and 92 are reproduced below:

- 57. An audio device integration system comprising:
- a first electrical connector connectable to a car stereo;
- a second electrical connector connectable to a portable MP3 player external to the car stereo
- an interface connected between said first and second electrical connectors for transmitting audio from a portable MP3 player to a car stereo, said interface including a microcontroller in electrical communication with said first and second electrical connectors,

said microcontroller pre-programmed to execute:

- a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state; and
- a second pre-programmed code portion for remotely controlling the MP3 player using the car stereo by receiving a control command from the car stereo through said first electrical connector in a format incompatible with the MP3 player, processing the control command into a formatted control command compatible with the MP3 player, and transmitting the formatted control command to the MP3 player

through said second electrical connector for execution by the MP3 player.

Id. at 26:13-37.

86. A device for integrating video information for use with a car stereo, comprising:

a first electrical connector connectable to a car stereo;

- a second electrical connector connectable to an after-market video device external to the car stereo;
- an interface connected between said first and second electrical connectors for transmitting video information from the after-market video device to the car stereo, the interface including a microcontroller in electrical communication with said first and second electrical connectors, said microcontroller pre-programmed to execute:
 - a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo through said first electrical connector to maintain the car stereo in an operational state responsive to signals generated by the after-market video device.

Id. 28:40–56.

92. An audio device integration system comprising:

a car stereo;

a portable audio device external to the car stereo;

- an interface connected between the car stereo and the portable audio device, the interface including a microcontroller pre-programmed to execute:
 - first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state;
 - second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing

the control command into a formatted control command compatible with the portable audio device, and transmitting the formatted control command to the portable audio device for execution thereby; and

means for transmitting audio from the portable audio device to the car stereo.

Id. at 29:11-31.

Claim 44 is directed to an apparatus for docking a portable device for

integration with a car stereo. It includes an interface connected between the

data port and the car stereo, and is reproduced below:

44. An apparatus for docking a portable device for integration with a car stereo comprising:

- a storage area remote from a car stereo for storing the portable device;
- a docking portion within the storage area for communicating and physically mating with the portable device;
- a data port in communication with the docking portion, the data port connectable with a device for integrating the portable device with the car stereo; and
- an interface connected to said data port and to the car stereo, said interface channeling from the portable device to the car stereo said interface including a microcontroller in electrical communication with the portable device through said data port and the car stereo, said microcontroller pre-programmed to execute first program code for remotely controlling the portable device using the car stereo by processing control commands generated by the car stereo in a format incompatible with the portable device into formatted control commands compatible with the portable device, and dispatching formatted control commands to the portable device for execution thereby.

Id. at 25:1–22.

D. Evidence Relied Upon

Petitioner relies on the following references:

Reference		Pub. Date	Exhibit
Owens	U.S. Pub. No. 2002/0084910 A1	July 4, 2002	Ex. 1003
Beckert	U.S. Patent No. 6,175,789 B1	Jan. 16, 2001	Ex. 1004
Cooper	U.S. Patent No. 5,774,793	June 30, 1998	Ex. 1005
Ohmura	U.S. Pub. No. 2001/0028717 A1	Oct. 11, 2001	Ex. 1006
Berry	U.S. Patent No. 6,559,773 B1	May 6, 2003	Ex. 1007

Petitioner also relies on the Declaration of Scott Andrews. Ex. 1002.

E. The Asserted Grounds

Petitioner asserts the following grounds of unpatentability:

Claims Challenged	Basis	References	
1, 2, 13, 14, 23, 24, 44, and 47	§ 103(a)	Owens, Beckert, and Cooper	
7 and 8	§ 103(a)	Owens, Beckert, Cooper, and Ohmura	
4, 5, 6, 57, 58, 60, 63, 64, 65, 86, 88, 89, 90, 91, 92, 94, 97, and 98	§ 103(a)	Owens, Beckert, Cooper, and Berry	
61 and 62	§ 103(a)	Owens, Beckert, Cooper, Berry, and Ohmura	

II. ANALYSIS

The question of obviousness is resolved on the basis of underlying factual determinations including: (1) the scope and content of the prior art; (2) any differences between the claimed subject matter and the prior art; (3) the level of ordinary skill in the art; and (4) objective evidence of

nonobviousness. *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966). One seeking to establish obviousness based on more than one reference also must articulate sufficient reasoning with rational underpinnings to combine teachings. *See KSR Int'l Co. v. Teleflex, Inc.*, 550 U.S. 398, 418 (2007).

Neither Petitioner nor Patent Owner proposes anything specific to reflect the level of ordinary skill in the art. We determine, however, that in this case no express articulation in that regard is necessary and that the level of ordinary skill in the art is reflected by the prior art of record. *See Okajima v. Bourdeau*, 261 F.3d 1350, 1355 (Fed. Cir. 2001); *In re GPAC Inc.*, 57 F.3d 1573, 1579 (Fed. Cir. 1995); *In re Oelrich*, 579 F.2d 86, 91 (CCPA 1978).

A. Claim Construction

In an *inter partes* review, claim terms in an unexpired patent are interpreted according to their broadest reasonable construction in light of the specification of the patent in which they appear. 37 C.F.R. § 42.100(b); *Cuozzo Speed Techs., LLC v. Lee*, 136 S. Ct. 2131, 2142–46 (2016). Consistent with that standard, claim terms also are given their ordinary and customary meaning, as would be understood by one of ordinary skill in the art in the context of the entire disclosure. *See In re Translogic Tech., Inc.,* 504 F.3d 1249, 1257 (Fed. Cir. 2007). There are, however, two exceptions to that rule: "1) when a patentee sets out a definition and acts as his own lexicographer," and "2) when the patentee disavows the full scope of a claim term either in the specification or during prosecution." *Thorner v. Sony Computer Entm't Am. LLC*, 669 F.3d 1362, 1365 (Fed. Cir. 2012).

If an inventor acts as his or her own lexicographer, the definition must be set forth in the specification with reasonable clarity, deliberateness, and

precision. *Renishaw PLC v. Marposs Societa' per Azioni*, 158 F.3d 1243, 1249 (Fed. Cir. 1998). It is improper to add into a claim an extraneous limitation, i.e., one that is added wholly apart from any need for the addition. *See, e.g., Hoganas AB v. Dresser Indus., Inc.*, 9 F.3d 948, 950 (Fed. Cir. 1993); *E.I. du Pont de Nemours & Co. v. Phillips Petroleum Co.*, 849 F.2d 1430, 1433 (Fed. Cir. 1988). Although it is improper to read a limitation from the specification into the claims, *In re Van Geuns*, 988 F.2d 1181, 1184 (Fed. Cir. 1993), claims still must be read in view of the specification of which they are a part. *Microsoft Corp. v. Multi-Tech Sys., Inc.*, 357 F.3d 1340, 1347 (Fed. Cir. 2004).

Only terms which are in controversy need to be construed, and only to the extent necessary to resolve the controversy. *See Wellman, Inc. v. Eastman Chem. Co.*, 642 F.3d 1355, 1361 (Fed. Cir. 2011); *Vivid Techs., Inc. v. Am. Sci. & Eng'g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999).

1. "interface"

Of all challenged claims, claims 1, 44, 57, 86, and 92 are independent, and each recites an "interface."

Claims 1, 57, and 86 require the interface to be connected between a first electrical connector and a second electrical connector, where the first connector is connectable to a car stereo and the second connector is connectable to an after-market audio device (claim 1), a portable MP3 player (claim 57), or an after-market video device (claim 86). Claim 92 requires the interface to be connected between the car stereo and a portable audio device. Claim 44 recites a docking portion that mates with a portable device, and an interface that is connected to the car stereo as well as to a data port that communicates with the docking portion.

Also, claim 57 recites that the interface is "for transmitting audio from a portable MP3 player to a car stereo"; claim 86 recites that the interface is "for transmitting video information from the after-market video device to the car stereo"; claim 1 recites that the interface is "for channeling audio signals to the car stereo from the after-market audio device"; claim 44 recites an interface for "channeling audio from the portable device to the car stereo"; and claim 92 recites that the interface includes a microcontroller pre-programmed to execute "means for transmitting audio from the portable audio device to the car stereo."

Neither party proposes a construction for the term "interface." With regard to an "interface," the Specification states:

Thus, as can be readily appreciated, the interface 20 of the present invention allows for the integration of a multitude of devices and inputs with an OEM or after-market car radio or stereo.

Ex. 1001, 5:33–36.

As mentioned earlier, the interface 20 of the present invention allows for a plurality of disparate audio devices to be integrated with an existing car radio for use therewith.

Id. at 6:4–7.

Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for display on display 13. Audio from the MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:19–24. Thus, the Specification refers to the interface receiving information from an audio device and forwarding information to the car stereo, and to the interface allowing integration of a plurality of disparate audio devices with a car radio.

In the decision instituting *inter partes* review in related IPR2016-00421, we noted that during prosecution, the applicants of the '786 patent distinguished U.S. Patent No. 6,993,615 B2 ("Falcon") in part by arguing that the reference failed to disclose an interface connected between a car stereo and an external audio source. Ex. 2003, 15. We further noted that in distinguishing the invention from Falcon, the applicants stated: "[Falcon's graphical user interface] is an entirely different concept than the interface of the present invention, which includes a physical interface device connected between a car stereo system and an external audio source (e.g., a plurality of auxiliary input sources)." *Id.* (citing Ex. 1102, 0267 (IPR2016-00421)).

Construing the term "interface" in light of the Specification, other language in the claims, as well as the prosecution history, we determine that—*interface is a physical unit that connects one device to another and that has a functional and structural identity separate from that of both connected devices.* This is the same construction as that we articulated in IPR2016-00421. *Id.*

In the specific context of claims 1 and 86, the connected devices are the car stereo and an after-market device. In the specific context of claims 44, 57, and 92, the connected devices are the car stereo and a portable device. Each of claims 1, 44, 57, 86, and 92 further requires the interface to include a microcontroller.

2. "integration" and "integrated"

Petitioner states:

The '786 patent states that "the term 'integration' or 'integrated' is intended to mean connecting one or more external devices or inputs to an existing car radio or stereo via an interface, processing and handling signals and audio channels, allowing a user to control the devices via the car stereo, and displaying data from the devices on the radio. Ex. 1001 at 4:47–52.

Pet. 8. An express construction of either "integration" or "integrated" is unnecessary, beyond noting, as Petitioner has, what the Specification states about those terms, and that the statement explicitly requires an "interface," which we have construed above.

B. Alleged Obviousness of Claims 1, 2, 13, 14, 23,

24, 44, and 47 over Owens, Beckert, and Cooper

We have reviewed the Petition and the Preliminary Response, and determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 2, 13, 14, 23, 24, 44, and 47 as obvious over Owens, Beckert, and Cooper.

Petitioner has failed to articulate, with reasonable clarity (1) what element of which prior art reference is relied on to meet which element of each claim, and (2) what element from which reference is combined with what element of which other reference or references, and in what manner, to meet what element of each claim. Petitioner has not sufficiently identified differences between the claimed invention and the prior art, as well as the manner in which the prior art teachings are combined to account for such differences.

1. Claims 1, 2, 13, 14, 23, and 24

With regard to the recitation in claim 1 of "[a]n audio device integration system comprising a first connector electrically connectable to a car stereo," Petitioner states:

Owens describes "an expandable system" for "serial additional of modules" such as A/V sources, and further

describes a "bus cable" connecting the head unit to the modules, including to an A/V interface module. Ex. 1003, Abstract, $\P\P$ [0006], [0025]; Ex. 1002, \P 10. Beckert describes a vehicle computer system that is capable of integrating diverse and separate systems and can serve as, e.g., a multimedia entertainment system. Ex. 1004, 2:8–11, 5:36; Ex. 1002, \P 10. Cooper describes a system for connecting a plurality of cellular telephones to an automotive electronics and communication system; a cable (no. 44 in Fig. 2) connects the interface unit to a bus connector of the electronics and communications system. Ex. 1005, Abstract, 3:42–45, Figs. 1, 2; Ex. 1002, \P 10.

Pet. 14. The first sentence appears to identify the bus cable of Owens as the claimed first connector. If so, the significance of the cited disclosures from Beckert and Cooper is not explained. It is unclear whether Petitioner also asserts that each of Beckert and Cooper also discloses such a first connector connectable to a car stereo, and if so, which element of Beckert and Cooper constitutes such a first connector. For instance, the cited disclosure of Cooper refers to a cable, an interface unit, and a bus connector. It is further unclear whether Petitioner is combining multiple elements from the disclosures of Owens, Beckert, and Cooper to meet the recited first connector, and if so, then in what manner. We note that the cited disclosure of Cooper does not refer to any car stereo. With respect to this claim limitation pertaining to a first connector connectable to a car stereo, the claim chart provided by Petitioner on page 25 of the Petition does not provide further clarity. Indeed, the assertions are made even more unclear, because the claim chart no longer identifies any disclosure from Beckert for the "first connector" limitation.

With regard to the recitation in claim 1 of "a second connector electrically connectable to an after-market audio device external to the car stereo," Petitioner states:

Owens describes that A/V devices (e.g., after-market audio devices), such as TV monitors, VCRs, tuners, game stations, etc., may be connected to a "source selector" which is connected to the A/V interface module. Ex. 1003, ¶ [0026]; Ex. 1002, ¶ 11. Beckert describes that the "support module" is connected to a USB hub, which provides connections to peripheral devices, such as CD-ROM changers, TV tuners, etc. Ex. 1004, 5:28–38; Ex. 1002, ¶ 11. Cooper describes a cable (no. 40 in Fig. 2) connecting the interface unit with a cellular phone. Ex. 1005, 3:29–41, Fig. 2; Ex. 1002, ¶ 11.

Pet. 15. The above-quoted text identifies two elements from Owens (source selector and A/V interface module), two elements from Beckert (support module and USB hub), and two elements from Cooper (cable and interface unit). It is unclear which one of those elements Petitioner relies on as the claimed second connector, and what is the significance of all the other identified elements in the mix. It is unclear whether Petitioner is relying on a combination of elements from multiple references to meet the claimed second connector, and if so, then in what manner. With respect to this claim limitation pertaining to a second connector connectable to a car stereo, the claim chart provided by Petitioner on page 26 of the Petition does not provide further clarity, and shares the same uncertainties.

With regard to the recitation in claim 1 of "a third connector electrically connectable to one or more auxiliary input sources external to the car stereo and the after-market audio device," Petitioner states:

Owens describes "auxiliary plugs" (no. 12 in Fig. 1) for connection of an auxiliary audio source (no. 13 in Fig. 1), such as a cassette tape deck or an MP3 player, to the head unit. Ex. 1003, ¶ [0025], Fig. 1; Ex. 1002, ¶ 12. Beckert's system is connectable to multiple external devices. For example, Beckert describes that "[t]he USB hub 70 provides connections to many peripheral devices (e.g., 128 devices)." Ex. 1004, 5:28–38; Ex. 1002, ¶ 12. Cooper describes that multiple cell phones may

be separately connected to the interface unit through multiple "cradle members." Ex. 1005, claim 4, Fig. 1; Ex. 1002, ¶ 12. Pet. 15. The first sentence appears to identify the auxiliary plugs of Owens as the claimed third connector. If so, the significance of the cited disclosure from Beckert and Cooper is not explained. It is unclear whether Petitioner also asserts that each of Beckert and Cooper also discloses such a third connector, and if so, which element of Beckert and Cooper constitutes such a third connector. For instance, the cited disclosure of Cooper refers to an interface unit and multiple cradle members. The cited disclosure of Beckert refers to a USB hub, but the USB hub already has been identified by Petitioner in connection with the second connector of claim 1. It is further unclear whether Petitioner is combining multiple elements from the disclosures of Owens, Beckert, and Cooper to meet the recited third connector, and if so, then in what manner. With respect to this claim limitation pertaining to a third connector connectable to one or more auxiliary input sources, the claim chart provided by Petitioner on page 26-27 of the Petition does not provide further clarity. Actually, Petitioner's assertions are made even more unclear, because in the claim chart Petitioner identifies still a further element from Cooper, the docking station.

With regard to the recitation in claim 1 of "an interface connected between said first and second electrical connectors for channeling audio signals to the car stereo from the after-market audio device, said interface including a microcontroller in electrical communication with said first and second electrical connectors," Petitioner states:

Owens describes an A/V interface module connected between the bus and the "source selector," which in turn is connected to A/V sources; Owens further describes a "master microprocessor" that performs all of the system selection functions (such as choosing between different A/V sources). Ex. 1003, \P [0009]-[0010], [0034]; Ex. 1002, \P 13.

Beckert describes a support module (the interface) connected to a computer module (first electrical connection) and a USB hub (second electrical connection), for connection to peripheral devices such as a CD-ROM changer; the support module contains a logic unit that can be implemented as a microprocessor, and "is responsible for facilitation communication among the peripheral devices . . . and coordinating the functionality of the entertainment system." Ex. 1004, 5:28–38, 5:40–55; Fig. 2; Ex. 1002, ¶ 13.

Cooper describes an interface unit (no. 36 in Fig. 2) connected via cables (nos. 40 and 44 in Fig. 2) to the audio and communications system of the vehicle and one or more cell phones; the system enables audio output of the connected cellular phones to be output on the audio/communication system of the vehicle. Ex. 1005, 3:29-45, 4:11-20, Figs. 1, 2; Ex. 1002, ¶ 13. The interface device includes a microcontroller that "contains, in its non-volatile memory, a data control program having a plurality of firmware drivers;" these drivers "have the operating circuitry and commands necessary for controlling the selected cellular telephone." Ex. 1005, 3:12-22; 4:34-39; Ex. 1002, ¶ 13.

Pet. 16–17. The first sentence appears to identify the A/V interface module of Owens as the claimed interface. If so, the significance of the cited disclosures from Beckert and Cooper is not explained. It is unclear whether Petitioner is combining multiple elements from the disclosures of Owens, Beckert, and Cooper to meet the recited interface, and if so, then in what manner. We note also that none of the cited disclosures refers to channeling audio signals to the car stereo from the after-market audio device, which is a part of the limitation at issue. With respect to this claim limitation pertaining to an interface, the claim chart provided by Petitioner on page 27– 29 of the Petition does not provide further clarity.

18

Additionally, assuming that Petitioner has relied on Owen's A/V interface module as the claimed interface, the limitation at issue still is not met. That is because the claim limitation requires a microprocessor in the interface. Petitioner has cited to the presence of a master microprocessor. But that master microprocessor is located within the car stereo and not in the A/V interface module. Ex. 1003 ¶¶ 33–34, Fig. 9.

On pages 23–24, the Petition includes a discussion of the reasoning to combine teachings from the various references. However, the reasoning provided is excessively generic and does not make a meaningful clarification of what specific elements of which reference are combined with what specific elements of what other reference or references, and in what manner.

For instance, Petitioner states: "It would have been mere routine adaptation to include the compatibility processing feature of Beckert in the integration system of Owens." Pet. 23. In that regard, however, Petitioner (1) does not identify what elements are referred to as the "compatibility processing feature" of Beckert, (2) does not identify which elements of Owens and Beckert correspond to which claim elements, respectively, and (3) does not explain the particular manner of combining teachings on the level of the specific elements claimed. Also, Petitioner states:

pre-programming the system "for the communication of incompatible audio devices," as described, for example, in Cooper, allows the user to "just plug the [device] into the interface system, and have the device work without the user having to manually change switch settings or load or unload software into the device for operation with the specific [device]."

Id. at 24 (citing Ex. 1005, 1:43–47). Petitioner does not explain which specific element of Cooper corresponds to what claim limitation and would be used in combination with what specific elements of either Owens or

Beckert, and in what manner. As presented by Petitioner, there is not a sufficiently specific blueprint on what elements of which reference are combined with what elements from other references, in an articulated manner, to satisfy each claim limitation.

Claims 2, 13, 14, 23, and 24 each depend, directly or indirectly, from claim 1. For the reasons discussed above, Petitioner has not shown a reasonable likelihood that it would prevail in establishing obviousness of claims 1, 2, 13, 14, 23, and 24 as obvious over Owens, Beckert, and Cooper.

2. Claims 44 and 47

Claim 44 is independent. The Petition's deficiencies with respect to claim 44 are similar to those discussed above with respect to claim 1. Petitioner has failed to articulate, with reasonable clarity (1) what element of which prior art reference is relied on to meet which element of claim 44, and (2) what element from which reference is combined with what element of which other reference or references, in what manner, to meet what element of claim 44. Petitioner has not sufficiently identified differences between the claimed invention and the prior art, as well as the manner in which the prior art is combined to account for the differences.

With regard to the recitation in claim 44 of "[a]n apparatus for docking a portable device for integration with a car stereo comprising: a storage area remote from a car stereo for storing the portable device," Petitioner states:

As discussed above, Owens and Beckert describe systems for integrating audio devices with a car stereo. See Section IV(A)(1)(i). One example of a connectable device in Owens is a game station (a portable device). Cooper describes a docking station that has a "cradle member," remote from the car's head unit, for storing cell phones; a cradle member may hold more than one cell phone, and more than one cradle member may be provided. Ex. 1005, 3:5–11, Fig. 2; Ex. 1002, ¶ 22.

Pet. 21–22. The above-quoted statement does not identify anything specific in Owens or Beckert. Although it identifies in Cooper a docking station that includes one or more cradle members, and refers to a car's "head unit," i.e., a stereo, the cited text of Cooper does not support the reference to a car's head unit. We find no reference to a car's head unit in Cooper, at the location cited by Petitioner. And if Cooper discloses the limitation at hand, then the significance of Owens and Beckert is still unexplained. It is unclear whether Petitioner also asserts that each of Owen and Beckert also discloses the claimed storage area, and what is identified in Owens and Beckert as the claimed storage area. It is further unclear whether Petitioner is combining multiple elements from the disclosures of Owens, Beckert, and Cooper to meet the recited limitation, and if so, then in what manner. With respect to this claim limitation, the claim chart provided by Petitioner on page 39 of the Petition does not provide further clarity.

With regard to the recitation in claim 44 of "a docking portion within the storage area for communicating and physically mating with the portable device," Petitioner states: "Cooper describes that the interface unit, which transfers data to the cell phone, may be either separate or incorporated into the cradle member. Ex. 1005, 3:5–15; Ex. 1002, ¶ 23." Pet. 22. There no longer is any mention of Owens or Beckert, which means the significance of any teaching from Owens and Beckert with regard to the claimed storage area remains unclear. With regard to Cooper, there is no longer any mention of the docking station previously referenced in connection with the storage area. And if the cradle member is the storage area and the interface unit is the docking portion, that still does not change the fact that Cooper makes no

mention of a car stereo. With respect to this claim limitation, the claim chart provided by Petitioner on pages 39–40 of the Petition does not provide further clarity. Actually, Petitioner's assertions are made even more unclear, because in the claim chart Petitioner identifies still a further element from Cooper into the mix, i.e., the docking station.

With regard to the recitation in claim 44 of "a data port in communication with the docking portion, the data port connectable with a device for integrating the portable device with the car stereo," Petitioner states:

Cooper describes that external cables with compatible jacks (data ports) may attach the interface unit to the cellular phone for connecting the cellular phone to the car stereo. Ex. 1005, 4:52–59; Ex. 1002, ¶ 24. Further, Owens describes various "plugs" and an "adaptor harness" for connecting external devices to the car stereo (see nos. 18, 33, and 35 in Fig. 1). Ex. 1003, ¶¶ [0025], [0026], Figs. 1, 7; Ex. 1002, ¶ 24. Beckert describes a USB connection for connecting peripheral devices to the support module, and thus integrating the devices into a car's automotive system. Ex, 1004, 5:28–38; Ex. 1002, ¶ 24.

Pet. 22. With respect to Owens, it is unclear what Petitioner identifies as the data port, the docking portion, and the "a device" that is recited in the limitation at issue. The same is true with respect to Beckert. As for Cooper, Petitioner does not specifically identify what constitutes the "a device" that is in the limitation at issue, and the cited portion of Cooper makes no mention of a car stereo. It is unclear whether Petitioner argues that each of Owens, Beckert, and Cooper by itself meets the limitation. And if not, it is unclear what element of each reference is combined with what element or elements of which other reference or references, and in what manner, to meet the limitation at hand. With respect to this limitation, the claim chart

provided by Petitioner on pages 40–41 of the Petition does not provide further clarity.

Claim 44 recites:

an interface connected to said data port and to the car stereo, said interface channeling audio from the portable device to the car stereo, said interface including a microcontroller in electrical communication with the portable device through said data port and the car stereo, said microcontroller pre-programmed to execute first program code for remotely controlling the portable device using the car stereo by processing control commands generated by the car stereo in a format incompatible with the portable device into formatted control commands compatible with the portable device, and dispatching formatted control commands to the portable device for execution thereby.

With regard to the above-quoted recitation of claim 44, Petitioner states: "This limitation corresponds to the 'interface'- and 'first pre-programmed code portion'-[]limitations of claim 1 and is described by Owen[s], Beckert, and Cooper, as discussed in Sections IV(A)(1)(iv) and (v). *See* Ex. 1002, ¶¶ 13, 14, 25." Pet. 23.

We have explained above the deficiency of Petitioner's accounting of the claimed "interface" in the context of claim 1. In particular, Petitioner relies on the master microprocessor of Owens to meet the claimed microcontroller, but the master microprocessor of Owens is not a part of the "interface" as claim 1 and claim 44 require of the microcontroller. Also, the cited portions of Beckert do not describe remote controlling any portable device by use of control commands generated by a car stereo, and the cited portions of Cooper identify no car stereo. It is unclear whether Petitioner argues that each of Owens, Beckert, and Cooper by itself meets the limitation. And if not, it is unclear what element of each reference is combined with what element or elements of which other reference or

references, and in what manner, to meet the limitation at hand. With respect to this limitation, the claim chart provided by Petitioner on pages 41–42 of the Petition does not provide further clarity.

With regard to the reasoning provided on pages 23–24 of the Petition, with regard to combining teachings from prior art references, the deficiencies are already discussed above in the context of claims 1, 2, 13, 14, 23, and 24, and need not be reiterated here.

Claim 47 depends from claim 44. For the reasons discussed above with regard to claim 44, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of claims 44 and 47 as obvious over Owens, Beckert, and Cooper.

C. Alleged Obviousness of Claims 7 and 8 over Owens, Beckert, Cooper, and Ohmura

Claims 7 and 8 each depends from claim 1. Petitioner relies on Ohmura to account for the limitations added by claims 7 and 8 relative to base claim 1. Pet. 42–43. For the reasons discussed above in connection with claim 1, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of claim 7 or 8 as obvious over Owens, Beckert, Cooper, and Ohmura.

D. Alleged Obviousness of Claims 4–6, 57, 58, 60, 63–65, 86, 88– 92, 94, 97, and 98 over Owens, Beckert, Cooper, and Berry

We have reviewed the Petition and the Preliminary Response, and determine that Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 4–6, 57, 58, 60, 63–65, 86, 88–92, 94, 97, and 98 as obvious over Owens, Beckert, Cooper, and Berry.

Petitioner has failed to articulate, with reasonable clarity (1) what element of which prior art reference is relied on to meet which element of each claim, and (2) what element from which reference is combined with what element of which other reference or references, in what manner, to meet what element of each claim. Petitioner has not sufficiently identified differences between the claimed invention and the prior art, as well as the manner in which the prior art teachings are combined to account for such differences.

1. Claims 4–6

Each of claims 4–6 depends from claim 1. The deficiencies discussed above with respect to claim 1 are not cured by the additional citation of Berry in the combination of prior art. Furthermore, Petitioner's specific discussion of the limitation additionally recited in each of claims 4-6, relative to base independent claim 1, compounds the confusion by relying on multiple references without clarification as to the role each reference plays in meeting the additional limitation. Pet. 46–47. For instance, for the limitation added by claim 4, Petitioner cites to the disclosure of Owens, Beckert, and Berry. Id. at 46. For the limitation added by claim 5, Petitioner cites to the disclosures of Owens, Cooper, and Berry. Id. at 46-47. For the limitation added by claim 6, Petitioner cites to the disclosures of Owens, Cooper, and Berry. Id. at 47. It is unclear how the claimed subject matter as a whole is met by the prior art. The claim chart provided by the Petitioner on pages 57-60 does not provide clarification. Regarding reasoning to combine as stated on pages 56–57 of the Petition, it is unclear for the same reasons explained above with respect to the combination of Owens, Beckert, and Cooper.

Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of claims 4–6.

2. Claims 57 and 86

Each of claims 57 and 86 recites: "a first electrical connector connectable to a car stereo." Petitioner states: "These claim limitations mirror the first limitation of claim 1 and is described by Owens, Beckert and Cooper, as discussed in detail in Section IV(A)(1)(i)." Pet. 48. Thus, the deficiencies discussed above with respect to the first electrical connector limitation of claim 1 carry through to claims 57 and 86. Also, Petitioner's accounting of this first connector limitation creates even more confusion by adding this statement: "Berry describes an audio/video integration system with an HMI that includes a plurality of shortcut buttons (first electrical connection) to create shortcuts to menu screens for device functionality, embedded in subsystems such as a CD player or AM/FM radio." Id. It is unclear how the cited disclosures of Berry add to Petitioner's accounting, already based on Owens, Beckert, and Cooper, with regard to this limitation of claims 57 and 86 regarding a first electrical connector. The significance of Berry's disclosure in the mix is uncertain. Furthermore, it is unclear how a general "electrical connection" meets the limitation of an "electrical connector," and what Petitioner regards as the first electrical connector in Berry. The claim chart on page 60 and 63 of the Petition provides no further clarification.

Claim 57 recites: "a second electrical connector connectable to a portable MP3 player external to the car stereo." Claim 86 recites: "a second electrical connector connectable to an after-market video device external to

the car stereo." With regard to these second connector limitations of claims 57 and 86, Petitioner asserts:

Owens describes that the auxiliary cable may connect to an MP3 player, and that the A/V interface module (which is connected to the head unit via a bus cable) may connect, through the source selector, to, e.g., a TV monitor, VCR, etc. Ex. 1003, at ¶¶ [0025], [0026]; Ex. 1002, ¶ 37. Beckert describes that a TV tuner may be connected to the support module. Ex. 1004, 5:28– 38; Ex. 1002, ¶ 37. Further, Berry describes that electronic accessories, such as MP3 players, palm-sized PCs, or personal digital assistants (PDAs), may be connected to the system. Ex. 1007, 3:40–57; Ex. 1002, ¶ 37. See further Section IV(A)(1)(ii).

Pet. 48. The above-reproduced discussion is without reasonable clarity. It is unclear whether Petitioner asserts that each of Owens, Becket, and Berry discloses the second electrical connector of claims 57 and 86, or that some combination of Owens, Beckert, and Berry, in some manner, accounts for the second electrical connector limitation of claim 57 and/or 86. The significance of each prior art reference in the mix is unclear. On a separate level, it also is unclear which component within each of Owens, Beckert, and Berry Petitioner regards as the claimed second electrical connector. For instance, in Owens, it could be the auxiliary cable, bus cable, A/V interface module, or the source selector, because Petitioner's use of "e.g." and "etc." in the above-quoted text indicates that a portable MP3 player may be connectable to the source selector. With regard to Beckert, Petitioner states merely that a TV tuner may be connected to the support module. With regard to Berry, Petitioner indicates only that electronic accessories such as MP3 players, PCs, and PDAs may be connected "to the system." The claim chart on pages 60–61 and 63–64 of the Petition provides no further clarification.

Each of claims 57 and 86 recites: "an interface connected between said first and second electrical connectors." Claim 57 further recites that the interface is for transmitting audio from a portable MP3 player to a car stereo. Claim 86 further recites that the interface is for transmitting video information from an after-market video device to the car stereo. Both claims 57 and 86 recite that the interface includes a microcontroller.

Petitioner states: "This [interface] limitation mirrors the 'interface'– limitation of claim 1 and is described in Owens, Beckert, and Cooper, as discussed in detail in Section IV(A)(1)(iv)." Pet. 49. Thus, the deficiencies discussed above with respect to the interface limitation of claim 1 carry through to each of claims 57 and 86. Also, Petitioner's accounting of the limitations of claims 57 and 86 creates even more confusion by adding this statement about Berry:

Berry describes a control panel/display subsystem which can be used as a device portal that "interfaces with devices on the dynamic local network;" the subsystem includes a controller that can "communicate with the various electronic accessory devices on dynamic local network." Ex. 1007, 3:19–31; Ex. 1002, ¶ 38. As discussed above, MP3 players, palm-sized PCs, or PDAs may be connected as an electronic accessory to the system. Ex. 1002, ¶ 38. See further Section IV(A)(1)(iv).

Pet. 49. It is unclear what significance the above-quoted discussion of Berry has in the accounting Petitioner already provided for the claimed interface by reliance on Owens, Beckert, and Cooper. It is unclear what is supposedly missing from Owens, Beckert, and Cooper that Petitioner is relying on Berry to satisfy. With regard to the foregoing, the claim chart on page 61 and 64 of the Petition provides no clarification. Accordingly, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of either claim 57 or claim 86 over Owens, Beckert, Cooper, and Berry.

3. Claims 58, 60, 63–65, and 88–91

Claims 58, 60, and 63–65 each depend directly or indirectly from claim 57. Claims 88–91 each depend directly from claim 86. The deficiencies of the Petition as discussed above with respect to claim 57 carry through to claims 58, 60, and 63–65, and the deficiencies of the Petition as discussed above with respect to claim 86 carry through to claims 88–91. Petitioner's specific arguments directed to the limitations added by claims 58, 60, 63–65, and 88–91, relative to their base claims, do not cure the deficiencies of the arguments for independent claims 57 and 86. Thus, Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 58, 60, 63–65, and 88–91 over Owens, Beckert, Cooper, and Berry.

4. Claims 92, 94, 97, and 98

Claim 92

Claim 92 recites: "an interface connected between the car stereo and the portable audio device, the interface including a microcontroller pre-programmed to execute." In that regard, Petitioner states: "This claim limitation mirrors the 'interface'-limitations of claim 1 and 57, and is described by Owens, Beckert, Cooper, and Berry, as discussed in detail in Section IV(A)(1)(iv) and IV(C)(1)(vi)." Pet. 54. The deficiencies of Petitioner's accounting of the interface limitation of claims 1 and 57 have been discussed above in the context of claims 1 and 57. The same deficiencies apply to claim 92.

Claim 92 also recites three elements as follows:

first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state; second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing the control command into a formatted control command compatible with the portable audio device, and transmitting the formatted control command to the portable audio device for execution thereby;

means for transmitting audio from the portable audio device to the car stereo.

Ex. 1001, 29:17–31. The sixth paragraph of 35 U.S.C. § 112 provides:¹

An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof.

The above-quoted recitations of claim 92 presumptively set forth elements

under 35 U.S.C. § 112 ¶ 6, and are construed to cover the corresponding

structure, material, or acts described in the specification and equivalents

thereof. See Williamson v. Citrix Online, LLC, 792 F.3d 1339, 1348 (Fed.

Cir. 2015) (en banc); In re Donaldson Co., Inc., 16 F.3d 1189, 1193 (Fed.

Cir. 1994) (en banc).

Per 37 C.F.R. § 42.104(b)(3), the Petition must identify the structure, material, or acts described in the specification that correspond to each recited function. For a multitude of reasons discussed below, Petitioner has

¹ Paragraphs 1 through 6 of § 112 were renamed as paragraphs (a) through (f) when § 4(c) of the Leahy-Smith America Invents Act, Pub. L. No. 112–29, 125 Stat. 284, 329 (2011) ("AIA") took effect on September 16, 2012. Because the patent application resulting in the '786 patent was filed before the effective date of the AIA, we refer to the pre-AIA version of § 112.

not adequately identified corresponding structure in the Specification for these means-plus-function limitations of claim 92.

At the outset, and equally important, we determine that whatever Petitioner has identified as the corresponding structure, material, or acts for these means-plus-function limitations, Petitioner has failed to account for an expressly recited limitation pertaining to such elements. Specifically, claim 92 recites that the interface includes a microcontroller that is preprogrammed "to execute" each of the means-plus-function elements. Ex. 1001, 29:15–16. Petitioner has not explained, anywhere in the Petition, how a particular structure or its equivalent can be executed and how the applied prior art meets this "to execute" limitation. Petitioner has not addressed, or accounted for this requirement of the claim. This matter alone is sufficient to keep Petitioner from showing a reasonable likelihood that it would prevail in establishing the unpatentability of claim 92 over Owens, Beckert, Cooper, and Berry. Nonetheless, hereinafter, we discuss how Petitioner has not adequately identified corresponding structure, material, or acts in the Specification for these means-plus-function elements of claim 92.

First, Petitioner broke the "first pre-programmed means for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state" into two: (1) first pre-programmed means for generating a device presence signal; and (2) first pre-programmed means for transmitting the signal to the car stereo to maintain the car stereo in an operational state. Pet. 9. Petitioner has provided no justification for doing such division to create two separate means-plus-function elements and has essentially changed the claim.

Second, in identifying the corresponding disclosed structure for item (1), Petitioner identified "a microcontroller (U1) with hardware components such as resistors, diodes, capacitors, and oscillators." Id. The identification, by using "such as" and without expressing how the components are connected, is insufficiently specific. No particular structural circuit arrangement is identified. Rather, Petitioner has identified common hardware components and noted that other hardware components are also covered. Petitioner further has not identified any disclosed algorithm for the microcontroller to perform the recited function. For a computer implemented means-plus-function element, the algorithm is a part of the corresponding structure. "In a means-plus-function claim in which the disclosed structure is a computer, or microprocessor, programmed to carry out an algorithm, the disclosed structure is not the general purpose computer, but rather the special purpose computer programmed to perform the disclosed algorithm." WMS Gaming, Inc. v. Int'l Game Tech., 184 F.3d 1339, 1349 (Fed. Cir. 1999). Although some exceptions may apply, see *In re Katz*, 639 F.3d 1303, 1316 (Fed. Cir. 2011), Petitioner has not explained the applicability of any exception.

Third, in identifying the corresponding disclosed structure for item (2), Petitioner identifies "the 'resistors, diodes, capacitors, transistors, transformers, amplifiers, oscillator' of FIG. 3B." Pet. 9. Such identification is insufficiently specific. Petitioner has merely identified a bucket of common electrical components without indicating how these components are connected to each other to form a structure. Notably, Petitioner does not assert that the corresponding structure is the exact circuit shown in Figure 3B of the '786 patent. In summary, a bucket of basic and common

electrical components does not adequately identify corresponding structure. Moreover, there is no Figure 3B in the '786 patent, only Figure 3B1 and Figure 3B2. Additionally, Petitioner has not identified any corresponding algorithm for implementing the recited function.

Fourth, Petitioner broke the "second pre-programmed means for remotely controlling the portable audio device using the car stereo by receiving a control command from the car stereo in a format incompatible with the portable audio device, processing the control command into a formatted control command compatible with the portable audio device, and transmitting the formatted control command to the portable audio device for execution thereby" into three: (3) means for remotely controlling the portable audio device using the car stereo, by receiving a control command from the car stereo in a format incompatible with the portable audio device; (4) means for remotely controlling the portable audio device using the car stereo by processing the control command into a formatted control command compatible with the portable audio device; and (5) means for remotely controlling the portable audio device using the car stereo by transmitting the formatted control command to the portable audio device for execution thereby. Pet. 9–10. Petitioner has provided no justification for doing such a division to create three separate means-plus-function elements, and has essentially changed the claim.

Fifth, in identifying the corresponding disclosed structure for item (3) noted above, Petitioner identifies a microcontroller "and a plurality of resistors (R1-R7), capacitors (C1-C2), and amplifier (A1)." *Id.* at 9. Petitioner does not indicate how many resistors, how many capacitors, or how the resistors, capacitors, and amplifier are connected to each other and

to the microcontroller to form a circuit structure capable of performing the recited function. No particular structural circuit arrangement is identified. Such a purported identification of corresponding structure is insufficiently specific. A multitude of different structures may be assembled from a plurality of resistors, capacitors, an amplifier, and a microcontroller. Additionally, Petitioner has not identified any corresponding disclosed algorithm for performing the recited function.

Sixth, in identifying the corresponding disclosed structure for item (4) above, Petitioner states: "the code or algorithm illustrated in Tables 1 and 2 of '786 Patent." Pet. 10. Petitioner, however, has not identified any disclosed computer or processor that executes the identified code or algorithm. It is uncertain what Petitioner regards as such a computer or processor.

Seventh, in identifying the corresponding disclosed structure for item (5) above, Petitioner states:

circuit in Figure 3B ... having a plurality of resistors, diodes, capacitors, transistors, transformers, amplifiers, oscillator[s], among other structural components that provide the hardware framework, for the microcontroller to act as an interface in integrating an after-market device with a car stereo.

Id. We note that there is no Figure 3B in the '786 patent, only Figure 3B1 and Figure 3B2. It is also unclear what the ". . ." means in the above-quoted text. It is uncertain whether Petitioner has referred to the entirety of the schematics shown in Figure 3B1 and Figure 3B2, in combination. And if so, we are not sufficiently persuaded that the entirety of the circuit shown in Figure 3B1 and Figure 3B2 is the corresponding structure involved in transmitting formatted control command to the portable audio device.

With regard to means-plus-function limitations and what must be shown by Petitioner at trial, if trial is instituted, structure disclosed in the specification is corresponding structure only if the specification or prosecution history clearly links or associates that structure to the function recited in the claim. *Noah Sys., Inc. v. Intuit Inc.*, 675 F.3d 1302, 1311 (Fed. Cir. 2012); *Golight, Inc. v. Wal-Mart Stores, Inc.*, 355 F.3d 1327, 1334 (Fed. Cir. 2004); *Cardiac Pacemakers, Inc. v. St. Jude Med.*, 296 F.3d 1106, 1113 (Fed. Cir. 2002). Petitioner has not offered an explanation for the required linkage between the combined schematics of Figure 3B1 and Figure 3B2 and the recited function for the means-plus-function limitation at issue.

Eighth, claim 92 recites: "means for transmitting audio from the portable audio device to the car stereo." With regard to identifying the corresponding structure for this means-plus-function limitation, Petitioner makes the same assertion as it presented for item (5) above. Pet. 10. The deficiencies of the assertion are the same as those discussed above with regard to item (5).

Claims 94, 97, and 98

Each of claims 94 and 97 depends from claim 92. Claim 98 depends from claim 97. The deficiencies of the Petition as discussed above with regard to claim 92 carry through to claims 94, 97, and 98 by way of their dependency on claim 92. Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 94, 97, and 98 over Owens, Beckert, Cooper, and Berry.

E. Alleged Obviousness of Claims 61 and 62 over Owens, Beckert, Cooper, Berry, and Ohmura

Claims 61 and 62 each depend from claim 60. The deficiencies of the Petition as discussed above with regard to claim 60 carry through to claims 61 and 62 by way of the dependency of claims 61 and 62 on claim 60. Petitioner has not shown a reasonable likelihood that it would prevail in establishing the unpatentability of either claim 61 or claim 62 over Owens, Beckert, Cooper, Berry, and Ohmura.

III. CONCLUSION

Petitioner has not demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 2, 4–8, 13, 14, 23, 24, 44, 47, 57, 58, 60–65, 86, 88–92, 94, 97, and 98 of the '786 patent.

IV. ORDER

It is

ORDERED that the Petition is *denied*, and no trial is instituted with respect to any claim of U.S. Patent No. 7,489,786 B2.

COUNSEL FOR PETITIONER:

v.

BLITZSAFE TEXAS, LLC, Patent Owner.

> Case IPR2016-01477 Patent 7,489,786 B2

Before JAMESON LEE, MIRIAM L. QUINN, and KERRY BEGLEY, *Administrative Patent Judges*.

BEGLEY, Administrative Patent Judge.

DECISION Denying Institution of *Inter Partes* Review 35 U.S.C. § 314(a), 37 C.F.R. § 42.108

Hyundai Motor Company, Hyundai Motor America, Hyundai Motor

Manufacturing Alabama, LLC, Kia Motors Corporation, Kia Motors

America, Inc., and Kia Motors Manufacturing Georgia, Inc. (collectively,

Page 1334 of 1457

Patent 7,489,786 B2

"Petitioner") filed a Petition requesting *inter partes* review of claims 1, 5–8, 10, 14, 23, 24, 57, 60–62, 64, and 65 ("challenged claims") of U.S. Patent No. 7,489,786 B2 (Ex. 1001, "the '786 patent"). Paper 1 ("Pet."). Blitzsafe Texas, LLC ("Patent Owner") filed a Preliminary Response to the Petition. Paper 11 ("Prelim. Resp.").

Pursuant to 35 U.S.C. § 314(a), an *inter partes* review may not be instituted unless "the information presented in the petition . . . and any response . . . shows that there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition." Having considered the Petition and the Preliminary Response, we determine that the information presented does not show that there is a reasonable likelihood that Petitioner would prevail in establishing the unpatentability of any of the challenged claims of the '786 patent. Accordingly, we deny institution of an *inter partes* review.

I. BACKGROUND

A. RELATED MATTERS

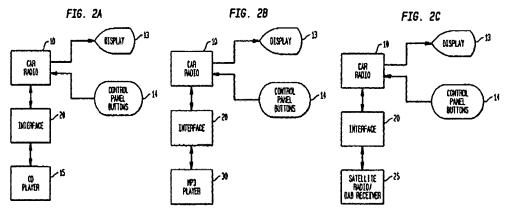

The parties represent that the '786 patent is the subject of five ongoing infringement actions before the U.S. District Court for the Eastern District of Texas and was previously the subject of two infringement actions before the U.S. District Court for the District of New Jersey. Paper 8, 1–2; Pet. 2. In addition, the '786 patent is or was previously the subject of several *inter partes* review proceedings before the Office, namely IPR2016-00421, IPR2016-00422, IPR2016-01448, and IPR2016-01472. Paper 8, 2; *see* Pet. 2. Related U.S. Patent No. 8,155,342 B2 is or was previously involved in IPR2016-00118, IPR2016-00418, IPR2016-00419, IPR2016-01445, IPR2016-01449, IPR2016-01473, IPR2016-01476, IPR2016-01533, IPR2016-01557, and IPR2016-01560. *See* Paper 8, 2.

1

B. THE '786 PATENT

The '786 patent explains that integrating an after-market audio system with an existing car stereo, such as a stereo from an original equipment manufacturer ("OEM"), presents a problem because signals generated by both systems are in a "proprietary format" and "are not capable of being processed" or recognized by the other system. Ex. 1001, 1:36–42; *see id.* at 2:26–29. Thus, "in order to integrate after-market systems with car stereos, it is necessary to convert signals between such systems." *Id.* at 1:42–44.

The '786 patent is directed to an audio device integration system that allows after-market audio devices to be integrated for use with an existing car stereo system, such that control commands can be issued at the car stereo for execution by the audio device and data from the audio device can be displayed on the car stereo. *Id.* at [57], 2:12–42. More specifically, control commands generated at the car stereo are received, converted into a format recognizable by the after-market audio device, and dispatched to the device for execution. *Id.* at [57], 2:35–40. In addition, information from the audio device, such as track, channel, song, and artist information, is received, processed, converted into a format recognizable by the stereo for display. *Id.* at [57], 2:40–47. The audio device could, for example, comprise a "CD player, CD changer, MP3 player, satellite receiver, [or] digital audio broadcast (DAB) receiver." *Id.* at 4:28–30; *see id.* at [57], 2:23–26. Figures 2A–2C are reproduced below:

Figures 2A–C illustrate embodiments in which a car stereo is integrated with a CD player (Figure 2A), an MP3 player (Figure 2B), and a satellite radio or DAB receiver (Figure 2C). *Id.* at 3:14–23.

In addition, an audio device as well as auxiliary input sources may be integrated with a car stereo. *Id.* at [57], 2:53–56. A user then "can select between the external audio device and the auxiliary input using the controls of the car stereo." *Id.* at 2:56–57. Figure 1 is reproduced below:

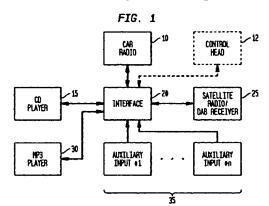

Figure 1 illustrates an embodiment integrating a car stereo with a CD player, a MP3 player, and a satellite radio or DAB receiver, as well as a number of auxiliary input sources. *Id.* at 3:12–13, 5:14–27.

As shown in the above figures, central to the '786 patent is an "interface" positioned between the car stereo and the audio device(s) and auxiliary input(s). *See, e.g., id.* at Fig. 1, 2A–C, 5:33–36. The interface

Patent 7,489,786 B2

allows for the integration of the audio devices and auxiliary inputs with the OEM or after-market car stereo. *Id.* at 5:33–36.

C. ILLUSTRATIVE CLAIM

Of the challenged claims, claims 1 and 57 of the '786 patent are independent. Claim 1, reproduced below, is illustrative:

- 1. An audio device integration system comprising:
- a first connector electrically connectable to a car stereo;
- a second connector electrically connectable to an after-market audio device external to the car stereo;
- a third connector electrically connectable to one or more auxiliary input sources external to the car stereo and the after-market audio device;
- an interface connected between said first and second electrical connectors for channeling audio signals to the car stereo from the after-market audio device, said interface including a microcontroller in electrical communication with said first and second electrical connectors, said microcontroller pre-programmed to execute:
 - a first pre-programmed code portion for remotely controlling the after-market audio device using the car stereo by receiving a control command from the car stereo through said first connector in a format incompatible with the after-market audio device, processing the received control command into a formatted command compatible with the after-market audio device, and transmitting the formatted command to the after-market audio device through said second connector for execution by the after-market audio device;
 - a second pre-programmed code portion for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo; and

a third pre-programmed code portion for switching to one or more auxiliary input sources connected to said third electrical connector.

Ex. 1001, 21:31–64.

D. ASSERTED PRIOR ART

The Petition relies upon the following asserted prior art references:

- U.S. Patent No. 5,794,164 (issued Aug. 11, 1998) (Ex. 1007, "Beckert '164");
- U.S. Patent No. 6,009,363 (issued Dec. 28, 1999) (Ex. 1008, "Beckert '363");
- U.S. Patent No. 7,085,710 B1 (filed Jan. 7, 1998) (issued Aug. 1, 2006) (Ex. 1006, "Beckert '710");
- Clarion AutoPC 310C Owner's Manual (1998) (Ex. 1009, "AutoPC Manual");
- Universal Serial Bus Device Class Definition for Audio Data Formats (Release 1.0 1998) (Ex. 1011, "USB ADF");
- Sony Corporation, FM/MW/LW Cassette Car Stereo (1999) (Ex. 1012, "Sony XR-C5120R Manual"); and

Universal Serial Bus Specification (Rev. 2.0 2000) (Ex. 1010, "USB 2.0").

In addition to these references, the Petition supports its contentions with the

Declaration of Chris Kyriakakis, Ph.D. (Ex. 1003).

E. Asserted Grounds of Unpatentability

Petitioner asserts the following grounds of unpatentability. Pet. 8-9.

Challenged Claim(s)	Basis	References
1, 10, 14, 23, and 24	§ 103 ¹	Beckert '710 and Beckert '164

¹ The Leahy-Smith America Invents Act ("AIA"), Pub. L. No. 112–29, 125 Stat. 284, 287–88 (2011), revised 35 U.S.C. § 103, effective March 16, 2013. Because the patent application resulting in the '786 patent was filed before the effective date of the AIA, we refer to the pre-AIA version of § 103 throughout this Decision.

II. ANALYSIS

A. LEVEL OF ORDINARY SKILL IN THE ART

We begin our analysis by addressing the level of ordinary skill in the art. We determine that in this case, no express articulation of the level of ordinary skill is necessary and that the level of ordinary skill in the art is reflected by the prior art of record. *See Okajima v. Bourdeau*, 261 F.3d 1350, 1355 (Fed. Cir. 2001); *In re GPAC Inc.*, 57 F.3d 1573, 1579 (Fed. Cir. 1995); *In re Oelrich*, 579 F.2d 86, 91 (CCPA 1978).

B. CLAIM CONSTRUCTION

The Board interprets claims terms of an unexpired patent using the "broadest reasonable construction in light of the specification of the patent." 37 C.F.R. § 42.100(b); *Cuozzo Speed Techs., LLC v. Lee*, 136 S. Ct. 2131, 2144–46 (2016). Under this standard, we presume a claim term carries its "ordinary and customary meaning," which "is the meaning that the term would have to a person of ordinary skill in the art" at the time of the invention. *In re Translogic Tech., Inc.*, 504 F.3d 1249, 1257 (Fed. Cir. 2007). A claim term will be interpreted more narrowly than its ordinary and

Patent 7,489,786 B2

customary meaning only where: (1) the "patentee sets out a definition and acts as [its] own lexicographer," or (2) the "patentee disavows the full scope of a claim term either in the specification or during prosecution." *Aventis Pharma S.A. v. Hospira, Inc.*, 675 F.3d 1324, 1330 (Fed. Cir. 2012).

1. "device presence signal"

Independent claim 57 and dependent claim 6 each recite a "device presence signal." Ex. 1001, 22:13–15, 26:23–27. Specifically, claim 57 requires that a microcontroller within an interface be pre-programmed to execute "a first pre-programmed code portion for generating a *device presence signal* and transmitting the signal to the car stereo to maintain the car stereo in an operational state." *Id.* at 26:17–27 (emphasis added). Similarly, claim 6, which depends directly from independent claim 1, requires that the "interface generates a *device presence signal* for maintaining the car stereo in a state responsive to processed data and audio signals." *Id.* at 22:13–15 (emphasis added).

Petitioner states that in a prior Institution Decision in IPR2016-00421, the Board construed the term "device presence signal" as: "a signal indicating that an audio device (claim 57) or video device (claim 86) or portable audio device (claim 92), other than the car stereo, is connected to the interface." Pet. 17–18 (quoting *Toyota Motor Corp. v. Blitzsafe Texas, LLC*, Case IPR2016-00421, slip op. at 18 (PTAB July 7, 2016) (Paper 13) ("IPR2016-00421 Inst. Dec.")) (emphasis omitted). Petitioner represents that it adopts and applies this construction in the Petition. *Id.* at 18. Patent Owner also adopts this construction of the term. Prelim. Resp. 3.

Having reconsidered the issue, we maintain our construction of the term "device presence signal" from the Institution Decision in

Patent 7,489,786 B2

IPR2016-00421 for the reasons given in that decision. IPR2016-00421 Inst.

Dec. 16–18. We repeat the relevant analysis below.

A description of a "device presence signal" is contained in the specification of the '786 patent in the discussion of an embodiment that is for connecting a CD player to the car stereo:

Beginning in step 110, a signal is generated by the present invention indicating that a CD player/changer is present, and the signal is continuously transmitted to the car stereo. Importantly, this signal prevents the car stereo from shutting off, entering a sleep mode, or otherwise being unresponsive to signals and/or data from an external source.

Ex. 1001, 12:29–35 (emphasis added). All other disclosed embodiments, whether they are for connecting an MP3 player or an auxiliary device to the car stereo, refer back to this description of the device presence signal. *Id.* at 13:15–18, 13:62–65, 14:48–51, 15:35–38, 16:12–15, 16:57–60.

As we explained in IPR2016-00421, continuous transmission of a signal is not necessary to accord meaning to "device presence signal." IPR2016-00421 Inst. Dec. 17. The manner of transmission simply reflects how the signal is transmitted and does not change what the signal was generated and intended to accomplish, and actually accomplishes. *Id.* The specification also does not put continuous transmission in the same category of importance as the requirements in the italicized portion of the above-quoted text. *Id.*

Moreover, in claims 6 and 57, the device presence signal is generated and transmitted by the interface that is connected between the first and second electrical connector, where the first electrical connector is connectable to a car stereo and the second electrical connector is connectable to an after-market audio device (claim 6) or portable MP3 player (claim 57).

Patent 7,489,786 B2

See Ex. 1001, 21:30–44, 22:13–15, 26:13–27; IPR2016-00421 Inst.

Dec. 17–18. Claim 6, based on its dependency from claim 1, recites that the interface is for "channeling audio signals to the car stereo from the after-market audio device." Ex. 1001, 21:38–44. Claim 57 recites that the interface is for "transmitting audio from a portable MP3 player to a car stereo." *Id.* at 26:17–22. In the context of these claims, the device the presence of which is signaled by the interface is the device that connects to the interface to communicate with the car stereo.

Accordingly, for purposes of this Decision, we adopt our previous construction of "device presence signal" from IPR2016-00421 and adjust this construction to reflect the relevant challenged claims in this proceeding: *a signal indicating that an audio device (claim 6) or portable MP3 player (claim 57), other than the car stereo, is connected to the interface.*

2. Other Claim Terms

Based on our review of the record and the dispositive issues in our determination of whether to institute *inter partes* review on the asserted grounds of unpatentability, we need not address the construction of any other claim terms. *See Vivid Techs., Inc. v. Am. Sci. & Eng'g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999) (holding that only claim terms that "are in controversy" need to be construed and "only to the extent necessary to resolve the controversy"); Pet. 14–18; Prelim. Resp. 3–5.

C. ALLEGED OBVIOUSNESS OVER BECKERT '710 AND BECKERT '164

Petitioner argues claims 1, 10, 14, 23, and 24 of the '786 patent are unpatentable as obvious over Beckert '710 and Beckert '164. Pet. 8, 18–45.

1. Beckert '710

Beckert '710 discloses a vehicle computer system, implementing an audio entertainment system, that is designed to support multiple audio

Patent 7,489,786 B2

sources, such as radio, CD, and auxiliary inputs. Ex. 1006, [57], 1:5–9, 1:60–63, 12:57–61. The disclosed vehicle computer system 20 includes three modules: (1) faceplate module 80, (2) support module 82, and (3) computer module 84. *Id.* at 1:63–65, 5:34–37, Fig. 3. Beckert '710 explains that support module 82 and computer module 84 typically reside in a stationary base unit that is mounted in the dashboard of a vehicle, whereas faceplate module 80 resides on a faceplate to the base unit. *Id.* at 5:55–58, 6:48–49, 6:62–63, Fig. 1. Figure 3 is reproduced below.

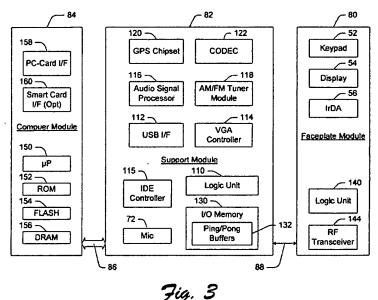

Figure 3 depicts one implementation of the vehicle computer system disclosed in Beckert '710. *Id.* at 3:34–36.

Beckert '710 explains that support module 82 includes logic unit 110, which "performs many of the functions for the audio entertainment system." *Id.* at 1:65–67, 5:55–58, 7:49–54. Logic unit 110 can be implemented as a "field programmable gate array (FPGA), application specific integrated circuit (ASIC), customized processor, or the like." *Id.* at 1:67–2:3; *see id.* at 5:64–6:4. Support module 82 also features hardware interfaces, including universal serial bus ("USB") interface 112, which connects support

Patent 7,489,786 B2

module 82 to various USB peripheral devices, such as a CD-ROM changer and a TV tuner. *Id.* at 5:44–54, 6:5–11.

Beckert '710 discloses that computer module 84 features microprocessor 150, which runs an operating system. *Id.* at 2:6–9, 6:62–65. According to Beckert '710, "computer module 84 is operatively connected to the support module 82 via a multi-bit bus 86," which is preferably a peripheral component interconnect ("PCI") bus. *Id.* at 5:37–40; *see id.* at 2:9–11. In addition, faceplate module 88 is attached to support module 82 through a "detachable connector." *Id.* at 6:48–53.

Beckert '710 explains that "[a] more detailed explanation of the three modules in the vehicle computer system is provided in" the patent application that resulted in Beckert '164 and "[a] detailed description of one implementation of the logic unit 110 is provided in" the patent application that resulted in Beckert '363. *Id.* at 7:19–25, 7:37–47; Ex. 1007, [21]; Ex. 1008, [21]. Beckert '710 "incorporate[s]" these applications "by reference." Ex. 1006, 7:19–25, 7:37–47.

In addition, Beckert '710 discloses that "computer system 20 implements an audio manager API (application program interface) to enable applications running on the computer to control the various audio sources without knowing the hardware and implementation details of the underlying sound system." *Id.* at 12:65–13:2; *see id.* at [54], 2:64–3:1. Figure 8 of Beckert '710 is reproduced below.

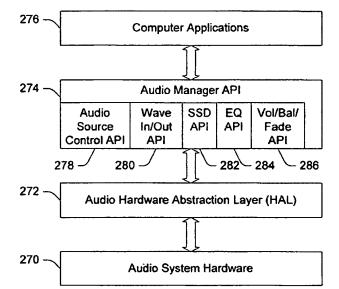

Figure 8 illustrates the "application-to-hardware architecture" discussed in Beckert '710. *Id.* at 13:7; *see id.* at 3:44–45. Audio hardware 270 forms the lowest level of the architecture. *Id.* at 13:8–9. Audio hardware abstraction layer ("HAL") 272, in turn, "defines a basic interface layer between the audio related drivers for the hardware 270 and the audio manager API layer 274." *Id.* at 13:9–12. Next, audio manager API 274—which has five core components, audio source control API 278, wave-in and wave-out API 280, surround sound decoder API 282, equalization API 284, and volume/balance/fade API 286—"defines the APIs to access and control the underlying audio system." *Id.* at 13:14–18. "[A]udio manager API 274 communicates with the audio device drivers for specific devices via the audio HAL interface 272" and "transfers calls made by the applications to the appropriate device driver(s)." *Id.* at [57], 3:4–6, 13:5–6, 14:38–40. Finally, "[a]top the audio manager API 274 are the applications 276." *Id.* at 13:13–14.

Beckert '710 further explains that "[d]ifferent APIs control different aspects of the audio system." *Id.* at 13:19–20. For example, wave-out

Patent 7,489,786 B2

API 280 controls foreground audio sources, whereas audio source control API 278 "control[s]" and "is used to select" background audio sources, including the "AM/FM tuner, CD player, auxiliary inputs, and other sources from the USB." *Id.* at 13:22–32, 13:39–47.

2. Beckert '164

Similar to Beckert '710, Beckert '164 discloses a vehicle computer system with three modules, namely a computer module, support module, and faceplate module. Ex. 1007, [57], 1:4–5, 1:65, 2:22–42. Computer module 64 includes a processor that runs the operating system "to support the vehicle-related applications," including "navigation, security, diagnostics, communications, and entertainment systems." *Id.* at [57], 2:21– 30, 3:14–17, 8:34–39.

3. Discussion

A patent claim is unpatentable as obvious under 35 U.S.C. § 103(a) if "the differences between" the claimed subject matter "and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains." 35 U.S.C. § 103(a). As the Supreme Court explained in *KSR International Co. v. Teleflex Inc.*, 550 U.S. 398 (2007), an invention "composed of several elements is not proved obvious merely by demonstrating that each of its elements was, independently, known in the prior art." *Id.* at 418. Rather, "it can be important to identify a reason that would have prompted a person of ordinary skill in the relevant field to combine the elements in the way the claimed new invention does." *Id.* In other words, "there must be some articulated reasoning with some rational underpinning to support the legal conclusion of obviousness." *Id.* (quoting *In re Kahn*, 441 F.3d 977, 988 (Fed. Cir. 2006)). Accordingly, the U.S.

Patent 7,489,786 B2

Court of Appeals for the Federal Circuit has made clear that a petitioner in an *inter partes* review proceeding cannot "satisfy its burden of proving obviousness" by "employ[ing] mere conclusory statements" and "must instead articulate specific reasoning, based on evidence of record" to support an obviousness determination. *In re Magnum Oil Tools Int'l, Ltd.*, 829 F.3d 1364, 1380–81 (Fed. Cir. 2016).

a. Independent Claim 1 .

Independent claim 1 of the '786 patent recites that the "microcontroller," included in the "interface," is "pre-programmed to

execute: a first pre-programmed code portion for:"

- remotely controlling the after-market audio device using the car stereo by receiving a control command from the car stereo through said first connector in a format incompatible with the after-market audio device,
- processing the received control command into a formatted command compatible with the after-market audio device, and
- transmitting the formatted command to the after-market audio device through said second connector for execution by the after-market audio device.

Ex. 1001, 21:38–54 (line breaks added). Accordingly, the claim requires that the recited microcontroller perform a format conversion of a control command received from the car stereo, specifically converting the command from a format incompatible with the after-market audio device to one compatible with the after-market audio device.

Relevant to this claim requirement, Petitioner identifies support module 82 of Beckert '710 as the recited "interface," a customized processor implementing logic unit 110 of Beckert '710 as the recited "microcontroller," and computer module 84 of Beckert '710 and corresponding computer module 64 of Beckert '164 as the recited "car

Patent 7,489,786 B2

stereo." See Pet. 22–24, 29–31. Specifically regarding the recited "first pre-programmed code portion for . . . processing the received control command into a formatted command compatible with the after-market audio device," the Petition argues, and Dr. Kyriakakis opines, that audio manager API 274 and hardware abstraction layer 272 of Beckert '710 perform the required format conversion. Id. at 32-35; Ex. 1003, 40-43; see Pet. 31-32; Ex. 1003, 39-40. The Petition and Dr. Kyriakakis's declaration represent that in Beckert '710, "commands issued by the car stereo (e.g., from the Computer Applications 276) . . . are converted through the Audio Manager API and the hardware abstraction layer to be able to communicate with a connected USB audio hardware device." Pet. 35; Ex. 1003, 43. According to Petitioner, Beckert '710 describes using the hardware abstraction layer "to process received commands from the car stereo into formatted commands for transfer to the audio system hardware." Pet. 33; Ex. 1003, 41. Petitioner relies exclusively on these alleged teachings of Beckert '710 and does not refer to Beckert '164 for the "first pre-programmed code portion" limitation. See Pet. 31-35; Ex. 1003, 39-43.

Patent Owner contests Petitioner's arguments that Beckert '710 teaches the "first pre-programmed code portion" limitation, asserting that Petitioner merely "make[s] general allegations regarding an 'API,'" but the API of Beckert '710 "does not receive commands in an incompatible format, or translate commands." Prelim. Resp. 12–13. Patent Owner argues that Beckert '710 instead refers to "several other components involved in the command structure including device 'drivers' as well as the hardware itself." *Id.* at 13. According to Patent Owner, Beckert '710 expressly states only that the API "'transfers calls made by the applications to the appropriate device drivers'" and does not "describe the format that commands are

Patent 7,489,786 B2

relayed from an API to a device driver and then subsequently to the devices." *Id.* (quoting Ex. 1006, 2:64–3:6). Moreover, Patent Owner faults Petitioner for failing to "allege the location of the API with any further specificity" than Beckert '710 itself, which states merely that the API is within the "vehicle computer system." *Id.* Therefore, according to Patent Owner, Petitioner's allegations are insufficient to demonstrate that Beckert '710's teaches the claim limitation because the vehicle computer system contains not only the component Petitioner identifies as the alleged "interface" but also the components Petitioner identifies as the alleged "car stereo" and "after-market audio device." *Id.* Moreover, with regard to the hardware abstraction layer to the conversion limitations" and does "not explain where the ... [l]ayer is located or how it represents 'pre-programmed' code." *Id.*

We agree with Patent Owner that Petitioner has not sufficiently explained and supported its position that Beckert '710 teaches or suggests claim 1's requirement that a microcontroller "process[] the received control command into a formatted command compatible the after-market audio device." *See id.* Nor has Petitioner adequately supported and explained its supporting assertion that this recitation is performed by audio manager API 274 and hardware abstraction layer 272, as opposed to, for example, the device drivers for specific audio devices. Moreover, even if this functionality is covered by audio manager API 274 and hardware abstraction layer 272, it is not explained adequately why or how either one maps to a "microcontroller" performing those functions.

With regard to hardware abstraction layer 272, Petitioner's citation to Figure 8 and the accompanying general disclosure that "audio hardware

Patent 7,489,786 B2

abstraction layer . . . 272 defines a basic interface layer between the audio related drivers for the hardware 270 and the audio manager API layer 274" fails to specify and show adequately that the hardware abstraction layer, rather than the device drivers of the audio devices, perform the format conversion of control commands required by claim 1. Ex. 1006, 13:9–12, Fig. 8; *see* Pet. 33–34 (citing Ex. 1006, 13:7–15, Fig. 8); Ex. 1003, 41–42 (citing Ex. 1006, 13:7–15, Fig. 8).

The relevant citations to Beckert '710 regarding audio manager API 274 fare no better. Although Petitioner proffers citations to disclosures of Beckert '710 that audio manager API 274 "enable[s] applications running on the computer to control the various audio sources without knowing the hardware and implementation details of the underlying sound system" and similarly, "defines the APIs to access and control the underlying audio system," these general statements regarding "control" of audio sources do not show that audio manager API 274, in particular, converts a command into a format compatible with the relevant audio source device. Ex. 1006, [57], 2:64-3:1, 12:65-13:2, 13:14-15; see Pet. 32-34 (citing Ex. 1006, 2:64-3:6, 13:7-15); Ex. 1003, 40-42 (citing Ex. 1006, 2:64-3:6, 13:7-15). Moreover, the cited discussion in Beckert '710 explaining that audio source control 278, a component of audio manager API 274, "control[s]" and "is used to select" background audio sources, such as "sources from the USB," similarly lacks detail sufficient to demonstrate that audio manager API 274 performs the recited format conversion. Ex. 1006, 13:16–18, 13:28–31, 13:39-41, Fig. 9; see Pet. 32, 34-35 (citing Ex. 1006, 13:22-31, 13:37-42, Fig. 9); Ex. 1003, 40, 42–43 (citing Ex. 1006, 13:22–31, 13:37–42, Fig. 9).

In more particularly addressing the function of audio manager API 274, Beckert '710 explains that its role is to "*communicate[] with the*

audio device drivers for specific devices via the audio HAL interface 272" and "*transfer[] calls* made by the applications *to the appropriate device driver(s)*." Ex. 1006, [57], 3:2–6, 13:2–6, 14:37–40 (emphases added); *see* Pet. 32–34 (citing Ex. 1006, 2:64–3:6); Ex. 1003, 40–42 (citing Ex. 1006, 2:64–3:6). Petitioner has not explained or demonstrated sufficiently, with adequate record support, that a person of ordinary skill in the art would have understood the function of audio manager API 274, including transferring calls to device drivers for audio devices through the hardware abstraction layer, to involve the recited format conversion of control commands.

Petitioner also fails to address or provide explanation as to why it is not the device driver(s) for each specific audio device that perform such a conversion of a control command into a format compatible with the particular device. We find Petitioner's failure in this regard particularly problematic given that device drivers were known in the art at the relevant time period to perform functionality consistent with the required format conversion. *See* Ex. 3001 (MICROSOFT COMPUTER DICTIONARY (5th ed. 2002)), 155 (explaining that a "device driver" is "[a] software component that permits a computer system to communicate with a device" and performs "data translation"); Ex. 1001, [22]. Moreover, it is unclear why the individual device drivers for particular audio devices in Beckert '710 would be necessary, and what function they would perform, if audio manager API 274 or hardware abstraction layer 272 converts control commands into a format compatible with the relevant audio device before the drivers receive the command.

In addition, Petitioner has not addressed or shown that the device drivers in Beckert '710 are part of the customized processor implementing logic unit 110 in support module 82, which Petitioner identifies as the

Patent 7,489,786 B2

"microcontroller" of the "interface" recited in claim 1. See Pet. 29–35; Ex. 1003, 37–43; see also, e.g., Ex. 1006, [57], 3:2–3, 13:2–3 ("Different audio devices and their drivers control different functionality of the audio system"); *id.* at 13:10–12 ("audio related drivers for the hardware 270"); *id.* at 14:37–41 ("audio device drivers for specific devices"). Therefore, we are not persuaded that there is adequate basis in the record to conclude that Beckert '710 teaches, suggests, or otherwise would have conveyed a "microcontroller," within an "interface," "pre-programmed to execute: a first pre-programmed code portion for . . . processing the received control command into a formatted command compatible the after-market audio device," as claim 1 requires.

With specific regard to Dr. Kyriakakis's stated opinion in his declaration that one of ordinary skill in the art would have understood that in Beckert '710, commands issued by computer applications are "converted through the Audio Manager API and the hardware abstraction layer to be able to communicate with" an "audio hardware device," and that "command translation is at the core of HAL functionality," these representations lack sufficient explanation and evidentiary support. Ex. 1003, 41, 43; see Prelim. Resp. 18 (arguing Dr. Kyriakakis's declaration should be afforded no weight because it "fails to disclose the underlying facts [on] which it bases its obviousness conclusions . . . ; neglects to show how a person of ordinary skill in the art would understand . . . the references; and merely amounts to broad conclusory statements"). In particular, for the reasons explained above, Dr. Kyriakakis's representations that hardware abstraction layer 272 and audio manager API 274 perform the recited format conversion of control commands are not supported adequately by the disclosures in the cited passages of Beckert '710. Dr. Kyriakakis does not address or offer any

Patent 7,489,786 B2

explanation as to why one of ordinary skill in the art would not have understood the device drivers in Beckert '710 to perform the format conversion of control commands. In addition, Dr. Kyriakakis's representations are particularly unconvincing and of minimal probative weight given that they generally repeat verbatim the precise statements in the claim chart of the Petition, with the mere addition of phrases like "it is my opinion that" and a single new sentence. Compare Pet. 32-35, with Ex. 1003, 40–43. Therefore, we are not persuaded by and do not credit these conclusory and unexplained representations as to what the cited disclosures of Beckert '710 would have conveyed to a person of ordinary skill. See 37 C.F.R. § 42.65(a); In re Am. Acad. of Sci. Tech Ctr., 367 F.3d 1359, 1368 (Fed. Cir. 2004) (explaining that "the Board has broad discretion" to weigh declarations and "conclude that the lack of factual corroboration warrants discounting the opinions expressed"); Rohm & Haas Co. v. Brotech Corp., 127 F.3d 1089, 1092 (Fed. Cir. 1997) ("Nothing in the [federal] rules [of evidence] or in our jurisprudence requires the fact finder to credit the unsupported assertions of an expert witness."); Ashland Oil, Inc. v. Delta Resins & Refractories, Inc., 776 F.2d 281, 294 (Fed. Cir. 1985) ("Lack of factual support for expert opinion going to factual determinations . . . may render the testimony of little probative value").

Accordingly, for the reasons given above, Petitioner has not supported sufficiently its argument that Beckert '710 teaches or suggests claim 1's requirement that a microcontroller "process[] the received control command into a formatted command compatible the after-market audio device," and Petitioner's supporting representation that this recitation is performed by audio manager API 274 and hardware abstraction layer 272, rather than the device drivers. In addition, even if we assume Petitioner had shown

Patent 7,489,786 B2

sufficiently that audio manager API 274 and hardware abstraction layer 272 of Beckert '710 perform the recited format conversion of control commands, as it contends, Petitioner still would not have demonstrated adequately that Beckert '710 teaches or suggests that this functionality is performed by a "microcontroller," within an "interface," as claim 1 requires. In particular, we agree with Patent Owner that the Petition, as well as Dr. Kyriakakis's supporting declaration, has not alleged or shown adequately where within the disclosed computer system any relevant code of audio manager API 274 and hardware abstraction layer 272 is executed, particularly whether any such code is executed by the processor within logic unit 110 of support module 82, which Petitioner identifies as the "microcontroller." See Prelim. Resp. 13; Pet. 31–35; Ex. 1003, 39–43. The closest Petitioner comes to addressing this location is providing, without any supporting analysis or argument, a block quotation of Beckert '710's statement that "logic unit 110 in support module 82 performs *many* of the functions for the audio entertainment system." Ex. 1006, 7:50-52 (emphasis added); see Pet. 32-33 (quoting Ex. 1006, 7:49–54); Ex. 1003, 40–41 (quoting Ex. 1006, 7:49–54). Many functions, however, are not all. Petitioner has not provided sufficient argument or explanation to support that a person of ordinary skill in the art would have understood that customized processor of logic unit 110 performs the particular relevant functionality, specifically executing any code for format conversion of control commands for audio manager API 274 and hardware abstraction layer 272. For example, we note that computer module 84, which Petitioner identifies as the recited "car stereo," also contains a processor, processor 150, which runs the computer system's operating system and supports all vehicle applications. See Ex. 1006, 2:6-9,

Patent 7,489,786 B2

7:1–5. Petitioner, however, fails to address why this other processor would not have executed any such code.

Nor do the cited disclosures of Beckert '710 specify the precise location of code for audio manager API 274 and hardware abstraction layer 272. Rather, as Patent Owner argues, Beckert '710, in addressing the location of the API, states only that "computer system 20 implements an audio manager API." Id. at 12:65-66; see id. at [57], 2:64-65; Prelim. Resp. 13. Yet Beckert '710's vehicle computer system 20 includes computer 22, featuring both computer module 84 ("car stereo") and support module 82 ("interface"), as well as peripheral devices. See Ex. 1006, 1:60-64, 3:59–65, 5:34–37, Fig. 1; Pet. 22–23, 29–30. As to hardware abstraction layer 272, Beckert '710, as noted above, explains only that this layer "defines a basic interface layer between the audio related drivers for the hardware 270 and the audio manager API layer 274." Ex. 1006, 13:9–12, Fig. 8; see id. at 14:37-40; Pet. 34 (quoting Ex. 1006, 13:7-15). Thus, Beckert '710 describes audio manager API 274 and hardware abstraction layer 272 as abstractions and does not limit their functionalities to a specific location within the disclosed computer system or more particularly, to logic unit 110 of support module 82. Accordingly, for the additional reason that Petitioner has not shown sufficiently that the processor within logic unit 110 ("microcontroller") executes any relevant code of audio manager API 274 and hardware abstraction layer 272-which Petitioner contends performs the recited format conversion-Petitioner's assertions and evidence are inadequate to show that Beckert '710 teaches or suggests claim 1's requirement that a "microcontroller," within an interface, is "pre-programmed to execute" a format conversion of a control command.

For the reasons given, Petitioner has not made a sufficient showing, with adequate record support, that Beckert '710 and Beckert '164 teach, suggest, or otherwise would have conveyed to one of ordinary skill "said microcontroller pre-programmed to execute: a first pre-programmed code portion for . . . processing the received control command into a formatted command compatible the after-market audio device," as recited in claim 1 of the '786 patent.

b. Dependent Claims 10, 14, 23, and 24

Claims 10, 14, 23, and 24 of the '786 patent depend, directly or indirectly, from independent claim 1. *See* Ex. 1001, 22:28–67. Accordingly, the deficiencies discussed above with respect to Petitioner's showing regarding the "first pre-programmed code portion" limitation of independent claim 1 carry through to these claims. Petitioner's specific arguments directed to the additional limitations of these dependent claims do not cure the deficiencies. *See* Pet. 39–45.

c. Conclusion

For the reasons given, we determine that the Petition does not show a reasonable likelihood that Petitioner would prevail in showing that Beckert '710 and Beckert '164 render obvious claims 1, 10, 14, 23, and 24 of the '786 patent.

D. Alleged Obviousness over Beckert '710, Beckert '164, and USB ADF

Petitioner contends claims 57, 60, 64, and 65 of the '786 patent are unpatentable as obvious over Beckert '710, Beckert '164, and USB ADF. Pet. 9, 60–66.

1. Independent Claim 57

a. "second pre-programmed code portion"

Independent claim 57 includes a "second pre-programmed code portion" limitation that is very similar to the "first pre-programmed code portion" limitation of independent claim 1, with the main difference being that the "second pre-programmed code portion" limitation of claim 57 recites an "MP3 player" rather than the more general "after-market audio device" recited in claim 1. See Ex. 1001, 22:44-54, 26:27-38. In this asserted ground, the Petition's analysis of the "second pre-programmed code portion" limitation of claim 57 consists only of an internal cross-reference to the claim charts for the corresponding limitations of claim 1 in the asserted ground of obviousness over Beckert '710 and Beckert '164. See Pet. 63-64; see also id. at 31–35. Accordingly, for substantially the same reasons given above in our analysis of the asserted ground challenging claim 1 as obvious over Beckert '710 and Beckert '164 that the Petition fails to show sufficiently that these references teach, suggest, or otherwise would have conveyed to a person of ordinary skill in the art the "first pre-programmed code portion" limitation of claim 1, we likewise are not persuaded that Petitioner has demonstrated adequately that these references teach, suggest, or otherwise would have conveyed to one of ordinary skill the "second pre-programmed code portion" limitation of claim 57.

b. "first pre-programmed code portion"

Claim 57 recites "a first pre-programmed code portion for generating a *device presence signal* and transmitting the signal to the car stereo to maintain the car stereo in an operational state." Ex. 1001, 26:23–27 (emphasis added). The Petition's analysis of this limitation features only an internal cross-reference to its discussion of a limitation of claim 1 in the

Patent 7,489,786 B2

asserted ground of obviousness over Beckert '710 and Beckert '164. *See* Pet. 62–63 ("*See* discussion of claim limitation 1[f] in Ground 1."); *id.* at 30–31 (analysis of limitation that the Petition refers to as limitation 1[f]).

Independent claim 1, however, does not recite a "device presence signal." Ex. 1001, 21:31–64. Thus, the Petition's analysis of claim 1, including the particular cross-referenced limitation, does not address or explain how Beckert '710 and Beckert '164 teach, suggest, or otherwise would have conveyed to one of ordinary skill in the art a "device presence signal"—i.e., a signal indicating that a portable MP3 player, other than the car stereo, is connected to the interface—and a code portion for generating and transmitting such a signal, as claim 57 requires. *See* Pet. 22–39. Moreover, based on our review of the portions of Beckert '710 and Beckert '164 cited in the Petition's analysis of claim 1, they are insufficient to demonstrate that these references would have conveyed such a teaching or suggestion to a person of ordinary skill in the art.

Therefore, the Petition does not make a sufficient showing that Beckert '710, Beckert '164, and USB ADF would have rendered obvious a "a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state," as recited in claim 57.

2. Dependent Claims 60, 64, and 65

Claims 60, 64, and 65 of the '786 patent depend, directly or indirectly, from independent claim 57. *See* Ex. 1001, 26:43–63. Accordingly, the deficiencies discussed above with respect to Petitioner's showing regarding the "first pre-programmed code portion" and "second pre-programmed code portion" limitations of independent claim 57 also apply to these claims.

Petitioner's specific arguments directed to the additional limitations of these dependent claims do not cure the deficiencies. *See* Pet. 64–66.

3. Conclusion

Based on our analysis above, we determine that the Petition does not demonstrate a reasonable likelihood that Petitioner would prevail in showing that claims 57, 60, 64, and 65 of the '786 patent would have been obvious over Beckert '710, Beckert '164, and USB ADF.

E. OTHER ASSERTED GROUNDS

In addition to the asserted grounds of obviousness relying on Beckert '710 and Beckert '164 as well as Beckert '710, Beckert '164, and USB ADF, addressed above, Petitioner asserts six other obviousness grounds challenging dependent claims 5–8, 61, and 62 of the '786 patent. See Pet. 8–9, 45–59, 66–69.

Dependent claims 5–8 each depend directly from independent claim 1. Ex. 1001, 22:8–23. As addressed above, Petitioner challenges independent claim 1 as obvious over Beckert '710 and Beckert '164. Petitioner argues that dependent claims 5–8 would have been obvious over these two references in addition to the AutoPC Manual and USB 2.0 for claim 5; Beckert '363 for claim 6; the AutoPC Manual for claim 7; and the Sony XR-C5120R Manual for claim 8. *See* Pet. 8–9, 45–59. The Petition's analysis of dependent claims 5–8 and specific arguments directed to the additional limitations of these claims do not cure the deficiencies outlined above in Petitioner's showing that Beckert '710 and Beckert '164 teach, suggest, or otherwise would have conveyed the "first pre-programmed code portion" limitation of independent claim 1, from which these claims depend. *See id.* at 45–49. The Petition does not rely on the additional asserted references—AutoPC Manual, USB 2.0, Beckert '363, and Sony XR-C5120R

Patent 7,489,786 B2

Manual—to address this limitation. *See id.* Accordingly, for the reasons given above in our analysis of independent claim 1, we determine that the Petition does not show a reasonable likelihood that Petitioner would prevail in showing that dependent claims 5–8 of the '786 patent are unpatentable.

In addition, dependent claims 61 and 62 each depend indirectly from independent claim 57. Ex. 1001, 26:44-55. Petitioner asserts that claim 57 would have been obvious over Beckert '710, Beckert '164, and USB ADF, as addressed in our analysis above. Petitioner argues that dependent claims 61 and 62 would have been obvious over these three references in addition to the AutoPC Manual for claim 61 and the Sony XR-C5120R Manual for claim 62. See Pet. 9, 66-69. The Petition does not rely on the additional asserted references, AutoPC Manual and Sony XR-C5120R Manual, to address the "first pre-programmed code portion" and "second pre-programmed code portion" limitations of independent claim 57, from which claims 61 and 62 depend. See id. at 66-69. Moreover, the specific arguments directed to the additional limitations of claims 61 and 62 do not cure the deficiencies outlined above in Petitioner's showing that Beckert '710, Beckert '164, and USB ADF teach, suggest, or otherwise would have conveyed to one of ordinary skill in the art these limitations of independent claim 57. See id. Therefore, for the reasons given above in our analysis of independent claim 57, we determine that the Petition does not show a reasonable likelihood that Petitioner would prevail in showing that dependent claims 61 and 62 of the '786 patent are unpatentable.

III. CONCLUSION

For the reasons given, we determine that the information presented in the Petition does not establish a reasonable likelihood that Petitioner would prevail in showing that any of the challenged claims of the '786 patent,

Patent 7,489,786 B2

claims 1, 5–8, 10, 14, 23, 24, 57, 60–62, 64, and 65, are unpatentable.

Therefore, we do not institute an *inter partes* review of any of the challenged claims on any of the asserted grounds.

IV. ORDER

For the reasons given, it is:

ORDERED that pursuant to 35 U.S.C. § 314(a), the Petition is *denied*, and no trial is instituted with respect to any claim of U.S. Patent No. 7,489,786 B2.

IPR2016-01477 Patent 7,489,786 B2 PETITIONER:

DECISION Denying Institution of Inter Partes Review 37 C.F.R. § 42.108

Page 1364 of 1457

I. INTRODUCTION

A. Background

On July 21, 2016, Petitioner filed a Petition (Paper 1, "Pet.") to institute *inter partes* review of claims 1, 5–8, 10, 14, 57, 60–62, 64, and 65 of U.S. Patent No. 7,489,786 B2 (Ex. 1001, "the '786 patent"). On November 15, 2016, Patent Owner filed a Preliminary Response (Paper 6, "Prelim. Resp.").

To institute an *inter partes* review, we must determine that the information presented in the Petition shows "that there is a reasonable likelihood that the petitioner would prevail with respect to at least 1 of the claims challenged in the petition." 35 U.S.C. § 314(a). Having considered both the Petition and the Preliminary Response, we determine that Petitioner has not demonstrated a reasonable likelihood that it would prevail in establishing the unpatentability of any of claims 1, 5–8, 10, 14, 57, 60–62, 64, and 65. We do not institute an *inter partes* review of any claim of the '786 patent.

B. Related Matters

Petitioner indicates that the '786 patent was asserted by Patent Owner against Petitioner in *Blitzsafe Texas, LLC v. Honda Motor Co., Ltd. et al.*, No. 2:15-cv-1274 (E.D. Tex.). Pet. 2. The parties indicate that the '786 patent is the subject of four other actions in the Eastern District of Texas. Pet. 58–59; Paper 3, 1. The parties further indicate that the '786 patent is the subject of two concluded matters in the District of New Jersey. Pet. 59; Paper 3, 2. The '786 patent also is the subject patent in these *inter partes* review proceedings: IPR2016-00421, IPR2016-00422, IPR2016-01448, and IPR2016-01477. U.S. Patent No. 8,155,342 B2 is a

related patent, and that related patent is involved in IPR2016-00118,

IPR2016-00418, IPR2016-00419, IPR2016-01445, IPR2016-01449, IPR2016-01473, IPR2016-01476, IPR2016-01533, IPR2016-01557, and IPR2016-01560.

C. The '786 Patent

The '786 patent is titled "Audio Device Integration System."

Ex. 1001, (54). The Abstract portion of the Specification explains:

[O]ne or more after-market audio devices, such as a CD player, CD changer, MP3 player, satellite receiver, DAB receiver, or the like, is integrated for use with an existing OEM or after-market car stereo system, wherein control commands can be issued at the car stereo and responsive data from the audio device can be displayed on the stereo.

Id. at Abstr.

In the Background of the Invention portion of the Specification, a

problem with which the '786 patent is concerned is described as follows:

A particular problem with integrating after-market audio systems with existing car stereos is that signals generated by the car stereo is in a proprietary format, and is not capable of being processed by the after-market system. Additionally, signals generated by the after-market system are also in a proprietary format that is not recognizable by the car stereo. Thus, in order to integrate after-market systems with car stereos, it is necessary to convert signals between such systems.

Id. at 1:36-44. In the Summary of the Invention portion of the

Specification, it is stated:

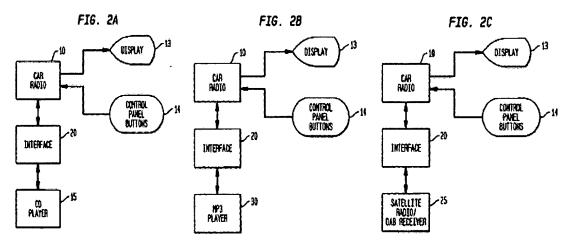

The commands generated at the control panel [of a car stereo] are received by the present invention and converted into a format recognizable by the after-market audio device. The formatted commands are executed by the audio device, and audio therefrom is channeled to the car stereo. Information from the audio device is received by the present invention, converted into a format recognizable by the car stereo, and forwarded to the car stereo for display thereby.

Ex. 1001, 2:35–42.

The '786 patent describes:

Control commands generated at the car stereo are received, processed, converted into a format recognizable by the audio device, and dispatched to the audio device for execution. Information from the audio device, including track, disc, song, station, time, and other information, is received, processed, converted into a format recognizable by the car stereo, and dispatched to the car stereo for display thereon.

Id. Additional auxiliary sources also may be integrated together, and "a user can select between the [audio] device or the one or more auxiliary input sources by issuing selection commands through the car stereo." *Id.*

Figures 2A–2C are reproduced below:

Figure 2A illustrates an embodiment integrating a CD player with the car stereo; Figure 2B illustrates an embodiment integrating a MP3 player with a car stereo; and Figure 2C illustrates an embodiment integrating a satellite or DAB receiver with a car stereo. *Id.* at 3:14–23. A more versatile embodiment is shown in Figure 1:

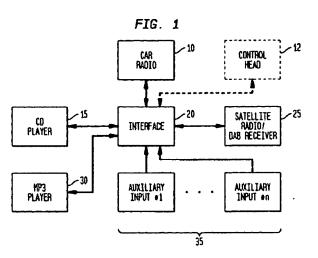

Figure 1 illustrates an embodiment integrating a CD player, a MP3 player, and a satellite radio or DAB receiver, and a number of auxiliary input sources with a car stereo. Ex. 1001, 3:12–13. As shown in the above figures, central to the '786 patent is an "interface" positioned between the car stereo and the audio device(s) and auxiliary input(s) being integrated.

With specific regard to Figure 2B, the '786 patent describes:

The interface 20 allows data and audio signals to be exchanged between the MP3 player 30 and the car radio 10, and processes and formats signals accordingly so that instructions and data from the radio 10 are processable by the MP3 player 30, and vice versa. Operational commands, such as track selection, pause, play, stop, fast forward, rewind, and other commands, are entered via the control panel buttons 14 of car radio 10, processed by the interface 20, and formatted for execution by the MP3 player 30. Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for display on display 13. Audio from MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:11–24. Similar description is provided with respect to Figures 2A and 2C. *Id.* at 5:49–55, 6:35–43.

Of all of the challenged claims, claims 1 and 57 are the only independent claims. Claim 1 is directed to a system that connects an after-market audio device as well as one or more auxiliary input sources to a car stereo. Claim 1 recites a first connector electrically connectable to a car stereo, a second connector electrically connectable to an after-market device, and a third connector electrically connectable to one or more auxiliary input sources. Ex. 1001, 21:33–38. Claim 1 also recites an interface connected between the first and second electrical connectors, and that the interface includes a microcontroller pre-programmed to execute:

- a first pre-programmed code portion for remotely controlling the after-market audio device using the car stereo by receiving a control command from the car stereo through said first connector in a format incompatible with the after-market audio device, processing the received control command into a formatted command compatible with the after-market audio device, and transmitting the formatted command to the after-market audio device through said second connector for execution by the after-market audio device;
- a second pre-programmed code portion for receiving data from the after-market audio device through said second connector in a format incompatible with the car stereo, processing the received data into formatted data compatible with the car stereo, and transmitting the formatted data to the car stereo through said first connector for display by the car stereo; and
- a third pre-programmed code portion for switching to one or more auxiliary input sources connected to said third electrical connector.

Id. at 21:44-64.

Claim 57 is directed to a system including an interface that connects a portable MP3 player to a car stereo. Unlike claim 1, claim 57 does not require the additional connection of the car stereo to one or more auxiliary

input sources. Claim 57 also does not require conversion of data from a format incompatible with the car stereo to a format compatible with the car stereo. But claim 57 requires the generation, within the interface, of a device presence signal that is transmitted to the car stereo to maintain the car stereo in an operational state. Claim 57 is reproduced below:

57. An audio device integration system comprising:

a first electrical connector connectable to a car stereo;

- a second electrical connector connectable to a portable MP3 player external to the car stereo
- an interface connected between said first and second electrical connectors for transmitting audio from a portable MP3 player to a car stereo, said interface including a microcontroller in electrical communication with said first and second electrical connectors,

said microcontroller pre-programmed to execute:

- a first pre-programmed code portion for generating a device presence signal and transmitting the signal to the car stereo to maintain the car stereo in an operational state; and
- a second pre-programmed code portion for remotely controlling the MP3 player using the car stereo by receiving a control command from the car stereo through said first electrical connector in a format incompatible with the MP3 player, processing the control command into a formatted control command compatible with the MP3 player, and transmitting the formatted control command to the MP3 player through said second electrical connector for execution by the MP3 player.

Ex. 1001, 26:13-37.

D. Evidence Relied Upon

Petitioner relies on the following references:

Reference		Date	Exhibit
Bhogal	U.S. Patent No. 6,629,197 B1	Sept. 30, 2001, filed Nov. 3, 2000	Ex. 1004

5	§ 103(a)	JP '954, Onishi, Owens, and Berry
8 and 62	§ 103(a)	JP '954, Onishi, Owens, and Ohmura
64 and 65	§ 103(a)	JP '954, Onishi, Owens, and Okagaki

II. ANALYSIS

The question of obviousness is resolved on the basis of underlying factual determinations including: (1) the scope and content of the prior art; (2) any differences between the claimed subject matter and the prior art; (3) the level of ordinary skill in the art; and (4) objective evidence of nonobviousness. *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966). One seeking to establish obviousness based on more than one reference also

must articulate sufficient reasoning with rational underpinning to combine teachings. See KSR Int'l Co. v. Teleflex, Inc., 550 U.S. 398, 418 (2007).

With regard to the level of ordinary skill in the art, we determine that no express finding is necessary, on this record, and that the level of ordinary skill in the art is reflected by the prior art of record. *See Okajima v. Bourdeau*, 261 F.3d 1350, 1355 (Fed. Cir. 2001); *In re GPAC Inc.*, 57 F.3d 1573, 1579 (Fed. Cir. 1995); *In re Oelrich*, 579 F.2d 86, 91 (CCPA 1978).

A. Claim Construction

In an *inter partes* review, claim terms in an unexpired patent are interpreted according to their broadest reasonable construction in light of the specification of the patent in which they appear. 37 C.F.R. § 42.100(b); *Cuozzo Speed Techs., LLC v. Lee*, 136 S. Ct. 2131, 2142–46 (2016). Consistent with that standard, claim terms also are given their ordinary and customary meaning, as would be understood by one of ordinary skill in the art in the context of the entire disclosure. *See In re Translogic Tech., Inc.,* 504 F.3d 1249, 1257 (Fed. Cir. 2007). There are, however, two exceptions to that rule: "1) when a patentee sets out a definition and acts as his own lexicographer," and "2) when the patentee disavows the full scope of a claim term either in the specification or during prosecution." *Thorner v. Sony Computer Entm't Am. LLC*, 669 F.3d 1362, 1365 (Fed. Cir. 2012).

If an inventor acts as his or her own lexicographer, the definition must be set forth in the specification with reasonable clarity, deliberateness, and precision. *Renishaw PLC v. Marposs Societa' per Azioni*, 158 F.3d 1243, 1249 (Fed. Cir. 1998). It is improper to add into a claim an extraneous limitation, i.e., one that is added wholly apart from any need for the addition. *See, e.g., Hoganas AB v. Dresser Indus., Inc.*, 9 F.3d 948, 950 (Fed. Cir. 1993); E.I. du Pont de Nemours & Co. v. Phillips Petroleum Co., 849 F.2d 1430, 1433 (Fed. Cir. 1988). Although it is improper to read a limitation from the specification into the claims, *In re Van Geuns*, 988 F.2d 1181, 1184 (Fed. Cir. 1993), claims still must be read in view of the specification of which they are a part. *Microsoft Corp. v. Multi-Tech Sys., Inc.*, 357 F.3d 1340, 1347 (Fed. Cir. 2004).

Only terms which are in controversy need to be construed, and only to the extent necessary to resolve the controversy. *See Wellman, Inc. v. Eastman Chem. Co.*, 642 F.3d 1355, 1361 (Fed. Cir. 2011); *Vivid Techs., Inc. v. Am. Sci. & Eng'g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999).

1. "portable"

Independent claim 57 recites a portable MP3 player. It may be that the term requires no express construction, and simply would be understood by one with ordinary skill in the art. We note that even the '786 patent itself and Bhogal, both using the term "portable" in their written description, do not provide a definition therefor. Nevertheless, an express construction is helpful to this proceeding. We construe "portable," in the context of the '786 patent, as meaning *capable of being carried by a user*.³

2. "interface"

Each of independent claims 1 and 57 recites an "interface." Claims 1 and 57 each require the interface to be connected between a first electrical

³ This is the same construction provided by the Board in IPR2015-00421 when instituting trial in that proceeding. Both Petitioner and Patent Owner have urged that that construction be adopted in this proceeding. Pet. 9; Prelim. Resp. 3.

connector and a second electrical connector, where the first connector is connectable to a car stereo and the second connector is connectable to an after-market audio device (claim 1), or a portable MP3 player (claim 57).

Also, claim 57 recites that the interface is "for transmitting audio from a portable MP3 player to a car stereo"; and claim 1 recites that the interface is "for channeling audio signals to the car stereo from the after-market audio device." With regard to an "interface," the Specification states: "Thus, as can be readily appreciated, the interface 20 of the present invention allows for the integration of a multitude of devices and inputs with an OEM or after-market car radio or stereo." Ex. 1001, 5:33–36. "As mentioned earlier, the interface 20 of the present invention allows for a plurality of disparate audio devices to be integrated with an existing car radio for use therewith." *Id.* at 6:4–7.

Data from the MP3 player, such as track, time, and song information, is received by the interface 20, processed thereby, and sent to the radio 10 for displaying on display 13. Audio from the MP3 player 30 is selectively forwarded by the interface 20 to the radio 10 for playing.

Id. at 6:19–24. Thus, the Specification refers to the interface receiving information from an audio device and forwarding information to the car stereo, and to the interface allowing integration of a plurality of disparate audio devices with a car radio.

During prosecution, the Applicants of the '786 patent distinguished U.S. Patent 6,993,615 B2 ("Falcon")⁴ in part by arguing that the reference

⁴ Falcon discloses a portable computing device connectable to a car stereo through an interface configurable within the portable computing device. Ex. 3001, Abstr.

failed to disclose an interface connected between a car stereo system and an external audio source. Ex. 1002, 267. Specifically, in distinguishing the invention from Falcon, Applicants stated: "[Falcon's graphical user interface] is an entirely different concept than the interface of the present invention, which includes a physical interface device connected between a car stereo system and an external audio source (e.g., a plurality of auxiliary input sources)." *Id.*

Construing the term "interface" in light of the Specification, other language in the claims, as well as the prosecution history of the '786 patent, we determine that—*interface is a physical unit that connects one device to another and that has a functional and structural identity separate from that of both connected devices.*⁵

In the specific context of claim 1, the connected devices are the car stereo and an after-market device. In the specific context of claim 57, the connected devices are the car stereo and a portable device. Each of claims 1 and 57 further requires the interface to include a microcontroller.

3. "device presence signal"

Claim 57 requires within the interface a microcontroller having a first pre-programmed code portion "for generating a *device presence signal* and transmitting the signal to the car stereo to maintain the car stereo in an operational state." (Emphasis added). Claim 6 depends from claim 1 and further recites: "wherein said interface generates a device presence signal

⁵ This is the same construction provided by the Board in IPR2015-00421 when instituting trial in that proceeding. Both Petitioner and Patent Owner have urged that that construction be adopted in this proceeding. Pet. 9, Prelim. Resp. 3.

for maintaining the car stereo in a state responsive to processed data and audio signals." A description of "device presence signal" is contained in the Specification in the discussion of an embodiment that is for connecting a CD player to the car stereo:

Beginning in step 110, a signal is generated by the present invention indicating that a CD player/changer is present, and the signal is continuously transmitted to the car stereo. Importantly, this signal prevents the car stereo from shutting off, entering a sleep mode, or otherwise being unresponsive to signals and/or data from an external source.

Ex. 1001, 12:29–35. All other disclosed embodiments, whether they are for connecting an MP3 player or an auxiliary device to the car stereo, refer back to the above-quoted description of the device presence signal. *Id.* at 13:15–18, 13:62–65, 14:48–51, 15:35–38, 16:12–15, 16:57–60.

We construe "device presence signal," as a signal indicating that an audio device, other than the car stereo, is connected to the interface.⁶

B. Alleged Obviousness of Claims 1, 5–8, 10, 14, 57, 60–62, 64, and 65 over Prior Art Including Bhogal

Seven of Petitioner's eleven alleged grounds of unpatentability rely in part on Bhogal. Because these seven grounds share a common deficiency with respect to Petitioner's application of Bhogal to meet a limitation regarding the "interface" recited in independent claims 1 and 57,⁷ we group them for discussion purposes. We determine that Petitioner has not shown a

⁶ This is essentially the same construction as that provided by the Board in IPR2015-00421 when instituting trial in that proceeding. Both Petitioner and Patent Owner have urged that that construction be adopted in this proceeding. Pet. 9, Prelim. Resp. 3.

⁷ Claims 5–8, 10, and 14 depend, directly or indirectly, from claim1, and claims 60–62, 64, and 65 depend, directly or indirectly, from claim 57.

reasonable likelihood that it would prevail in establishing unpatentability of any claim on the basis of any alleged ground of patentability relying in part on Bhogal.

1. Bhogal

Bhogal is titled "Method and System for Storing Digital Audio Data and Emulating Multiple CD-Changer Units." Ex. 1004, (54). With regard to a problem that it addresses, Bhogal describes:

Typically, CD-changer units and car stereo units are designed so that they are compatible only if they are made by the same manufacturer. In other words, CD-changers and car stereos usually have a proprietary interface, and no industry standard currently exists for interfacing different makes of CD-changers and car stereos.

Id. at 4:57-62. To solve that problem, Bhogal provides a digital audio unit

that is capable of emulating the operation of multiple CD-changers. Id.

at 3:10–13. Regarding which one of many CD-changers to emulate, Bhogal describes:

In one case, the digital audio unit can detect a control signal [from a car stereo] for a CD-changer unit and then automatically select the type of CD-changer unit to be emulated based on the detected control signal. In a second case, the digital audio unit can receive a user selection for selecting a type of CD-changer unit to be emulated. The *softcopy digital audio files stored within the digital audio unit are thereby accessed* through the controls and commands for a CD-changer unit.

Ex. 1004, 3:13–20 (emphasis added). Bhogal describes that by emulating the operations of multiple types of CD-changer units, a single digital audio unit can be inserted in many different digital audio systems, "thereby extending the functionality of a digital audio system to include storage of

softcopy digital audio files that may be accessed through controls and commands for a CD-changer unit." *Id.* at Abstr.

Figure 2 of Bhogal is reproduced below:

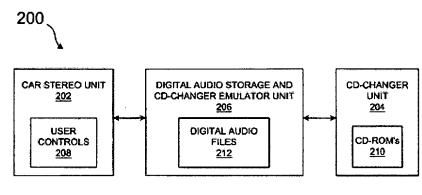

FIG. 2

Figure 2 illustrates an embodiment of Bhogal's audio system. *Id.* at 3:31–33. Emulator 206 is connected between car stereo 202 and actual CD-changer 204. *Id.* at 5:11–16. Emulator 206 contains digital audio files 212, organized as virtual CD-ROMs, that may be accessed by a user through the car stereo. *Id.* at 5:39–42. Bhogal describes that, in one embodiment, "the emulator unit may be positioned in an independent *docking station* that accepts portable electronics, possibly in a standard manner such that the docking station also accepts other types of MP3 players." *Id.* at 5:61–64 (emphasis added). When the emulator is not in the docking station, the car stereo and the actual CD-exchanger may operate together. *Id.* at 5:65–67.

Bhogal describes that, in a preferred embodiment, emulator 206 is a portable device. *Id.* at 6:18–21. Bhogal also describes that the emulator may connect to a personal computer in many different ways, including by use of "serial, Universal Serial Bus (USB), or parallel I/O connections, in a manner similar to that found on other types of commercially available

,

portable digital audio devices." *Id.* at 6:32–40. Music files may be downloaded from any external source and stored within a digital audio file database within the emulator. *Id.* at 6:40–45. Bhogal thus provides access to softcopy digital audio files. In that regard, Bhogal states:

By recognizing the demand for softcopy digital audio files and the issue of backward compatibility, the present invention takes advantage of the interface between stereo units and CD-changer units to implement a methodology for providing access to softcopy digital files. The present invention emulates the CD-changer interface, which is usually a hardware interface for providing access to hardcopy digital audio files stored on CDs that are stored within the CD-changer, so that a stereo unit using the CD-changer interface can access softcopy digital audio files through its CD-changer interface.

Id. at 4:63–5:6. The softcopy digital audio files are organized as virtual CD-ROMs. *Id.* at 5:39–43. Additionally, the existing functionality of the actual CD-changer is not eliminated. In that connection, Bhogal states: "In addition, the present invention enables a CD-changer to 'piggyback' on a digital audio device containing the present invention so that the current jukebox functionality of storing and accessing CDs within a CD-changer is still available." *Id.* at 5:6–10. In summary, Bhogal states:

By emulating the operations of multiple types of CD-changer units, the present invention enables a single digital audio device to be inserted in many different configurations of digital audio systems. The present invention thereby extends the functionality of a digital audio system to include storage of softcopy digital audio files that may be accessed through controls and commands for a CD-changer unit.

Id. at 9:65-10:5.
