APPLICATION FOR PATENT

**Packaging Device for Semiconductor Die, Semiconductor Device Incorporating Same
and Method of Making Same**

Inventors: Kong Weng Lee
Kee Yean Ng
Yew Cheong Kuan
Cheng Why Tan
Gin Ghee Tan

Related Application

[0001] This application is related to a simultaneously-filed United States patent application serial number 10/xxx,xxx entitled *Method for Fabricating a Packaging Device for Semiconductor Die and Semiconductor Device Incorporating Same* of inventors Kong Weng Lee, Kee Yean Ng, Yew Cheong Kuan, Cheng Why Tan and Gin Ghee Tan, attorney docket number 70030260-1.

Background of the Invention

[0002] Many types of conventional semiconductor device are composed of a semiconductor die mounted in a packaging device. One type of packaging device widely used in the industry includes a metal lead frame. A metallization layer of aluminum located on the bottom surface of the semiconductor die is bonded to a conductive surface that forms part of the lead frame to attach and electrically connect the die to the lead frame. Additionally, electrical connections are made between bonding pads on the top surface of the die and other leads of the lead frame to provide additional electrical connections to the die. The lead frame and semiconductor die are then encapsulated to complete the semiconductor device. The packaging device protects the semiconductor die and provides electrical and mechanical connections to the die that are compatible with conventional printed circuit board assembly

processes.

[0003] In such conventional semiconductor devices, the bottom surface of the die is typically bonded to the conductive surface of the lead frame using a silver epoxy adhesive that cures at a relatively low temperature, typically about 120 °C. The curing temperature of the silver epoxy adhesive is compatible with the other materials of the packaging device.

[0004] The volume of the packaging device used in such conventional semiconductor devices, i.e., the lead frame and the encapsulant, is typically many times that the semiconductor die. This makes such conventional semiconductor devices unsuitable for use in applications in which a high packing density is required. A high packing density allows miniaturization and other benefits. Therefore, what is needed is a semiconductor packaging device that is comparable in volume with the semiconductor die and that is compatible with conventional printed circuit board assembly processes.

[0005] Recently, semiconductor die having a substrate surface metallization layer of a gold-tin alloy (80 % Au:20 % Sn approximately) have been introduced in light-emitting devices. Such semiconductor die typically have a substrate of sapphire, silicon carbide or a Group III-V semiconductor material, such as gallium arsenide. Semiconductor devices having substrates of the first two substrate materials have layers of Group III-V semiconductor materials, such as gallium nitride, deposited on their substrates. The die attach process for such semiconductor die uses a gold-tin eutectic, which has a melting point of about 280 °C. Temperatures as high as about 350 °C can be encountered in the die attach process for such die. Such high temperatures are incompatible with the materials of many conventional packaging devices. Thus, what is also needed is a packaging device for semiconductor die that use a high-temperature die attach process.

[0006] Many printed circuit assembly processes and assembly equipment require the use of standard semiconductor device packages. Modifying such processes to use a new semiconductor device package can be expensive and can interrupt production. Therefore, what is additionally needed is a way to mount a semiconductor die that requires a high-temperature die attach process in a conventional packaging device.

Summary of the Invention

[0007] The invention provides a packaging device for a semiconductor die. The packaging device includes a substrate, a mounting pad, a connecting pad and an interconnecting element. The substrate is substantially planar and has opposed major surfaces. The mounting pad is conductive and is located on one of the major surfaces. The connecting pad is conductive and is located on the other of the major surfaces. The conductive interconnecting element extends through the substrate and electrically interconnects the mounting pad and the connecting pad.

[0008] The packaging device has a volume that is only a few times that of the semiconductor die and can be fabricated from materials that can withstand a high-temperature die attach process. The packaging device can be configured as the only packaging device of the semiconductor device. The packaging device can alternatively be configured as a submount for a semiconductor die that requires a high-temperature die attach process. The submount with attached semiconductor die can be handled as a conventional, albeit slightly larger, semiconductor die that is then mounted in a conventional packaging device, such as a lead frame based packaging device, using a conventional semiconductor device assembly process, including conventional temperatures.

[0009] The invention also provides a semiconductor device that includes a substrate, a mounting pad, a connecting pad, an interconnecting element and a semiconductor die. The substrate is substantially planar and has opposed major surfaces. The mounting pad is conductive and is located on one of the major surfaces. The connecting pad is conductive and is located on the other of the major surfaces. The conductive interconnecting element extends through the substrate and electrically interconnects the mounting pad and the connecting pad. The semiconductor die is affixed to the mounting pad.

[0010] The semiconductor device as just described can be mounted in a conventional packaging device as described above. Alternatively, the semiconductor device may additionally include a bonding pad, an additional connecting pad, an additional interconnecting element and a bonding wire. The bonding pad is conductive and is located on the one of the major surfaces. The additional connecting pad is conductive and is located on the other of the major surfaces. The additional interconnecting

element is conductive and extends through the substrate and electrically interconnects the bonding pad and the additional connecting pad. The bonding wire extends between the semiconductor die and the bonding pad. Such a semiconductor device constitutes a stand-alone semiconductor device that has a low profile and that can be used in high packing density applications. The semiconductor device may additionally include an encapsulant that encapsulates the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located.

Brief Description of the Drawings

[0011] Figures 1A, 1B, 1C, 1D, 1E and 1F are respectively an isometric view, a side view, a front view, a top view, a bottom view and a cross-sectional view of a first embodiment of a packaging device in accordance with the invention. The cross-sectional view of Figure 1F is along the section line 1F-1F in Figure 1D.

Figures 2A, 2B, 2C, 2D, 2E and 2F are respectively an isometric view, a side view, a front view, a top view, a bottom view and a cross-sectional view of a first embodiment of a semiconductor device in accordance with the invention. The cross-sectional view of Figure 2F is along the section line 2F-2F in Figure 2D.

Figures 3A, 3B, 3C, 3D, 3E and 3F are respectively an isometric view, a side view, a front view, a top view, a bottom view and a cross-sectional view of a second embodiment of a packaging device in accordance with the invention. The cross-sectional view of Figure 3F is along the section line 3F-3F in Figure 3D.

Figures 4A, 4B, 4C, 4D, 4E and 4F are respectively an isometric view, a side view, a front view, a top view, a bottom view and a cross-sectional view of a second embodiment of a semiconductor device in accordance with the invention. The cross-sectional view of Figure 4F is along the section line 4F-4F in Figure 4D.

Figures 5A-5C are side views illustrating a method in accordance with the invention for fabricating a packaging device for a semiconductor die.

Figure 5D is a side view illustrating an optional additional process that may be included in the method illustrated in Figures 5A-5C.

Figures 6A-6D are side views illustrating a method in accordance with the invention for fabricating a semiconductor device.

Detailed Description of the Invention

- [0012] Figures 1A-1F are schematic diagrams illustrating a first exemplary embodiment 100 of a packaging device for a semiconductor die in accordance with the invention. Packaging device 100 is composed of a substrate 110, interconnecting elements 120 and 122, a mounting pad 130, a bonding pad 132 and connecting pads 140 and 142 (Figure 1E).
- [0013] Substrate 110 is substantially planar, has opposed major surfaces 112 and 114 and defines through holes 116 and 118 that extend through the substrate between major surfaces 112 and 114. Interconnecting element 120 is electrically conductive and is located in through hole 116. Interconnecting element 122 is electrically conductive and is located in through hole 118. Mounting pad 130 and bonding pad 132 are electrically conductive, are separate from one another and are located on the portions of the major surface 112 of substrate 110 in which through holes 116 and 118 are respectively located. Connecting pads 140 and 142 are electrically conductive, are separate from one another and are located on the portions of the major surface 114 of substrate 110 in which through holes 116 and 118 are respectively located.
- [0014] Mounting pad 130 and connecting pad 140 are electrically connected to opposite ends of interconnecting element 120. Thus, interconnecting element 120 extending through substrate 110 in through hole 116 electrically connects mounting pad 130 to connecting pad 140. Bonding pad 132 and connecting pad 142 are electrically connected to opposite ends of interconnecting element 122. Thus, interconnecting element 122 extending through substrate 110 in through hole 118 electrically connects bonding pad 132 to connecting pad 142.
- [0015] The material of substrate 110 is a thermally-conductive ceramic such as alumina or beryllia. In an embodiment, the material of the substrate was Kyocera® Type A440 ceramic sold by Kyocera Corp., of Kyoto, Japan. Typical dimensions of the substrate are in the range from about 0.5 mm square to about 2 mm square. Rectangular configurations are also possible. Alternative substrate materials include semiconductors, such as silicon, and epoxy laminates, such as those used in printed-circuit boards. Other materials that have a high thermal conductivity and a low electrical conductivity can be used instead of those exemplified above. The coefficient of thermal expansion of the substrate material relative to that of the semiconductor die

to be mounted on packaging device 100 should also be considered in choosing the substrate material.

[0016] As will be described in more detail below, substrate 110 is part of a wafer (not shown) from which typically several hundred packaging devices 100 are fabricated by batch processing. After fabrication of the packaging devices, the wafer is singulated into individual packaging devices. Alternatively, the packaging devices may be left in wafer form after fabrication. In this case, singulation is not performed until after at least a die attach process has been performed to attach a semiconductor die to each mounting pad 130 on the wafer. In some embodiments, wafer-scale wire bonding, encapsulation and testing are also performed prior to singulation. Full electrical testing, including light output testing, may be performed on the wafer.

[0017] The material of interconnecting elements 120, 122 is metal or another electrically-conductive material. In an embodiment, the material of the interconnecting elements is tungsten, but any electrically-conductive material capable of forming a low-resistance electrical connection with the pads, i.e., mounting pad 130, bonding pad 132 and connecting pads 140, 142, and capable of withstanding the temperature of the die-attach process may be used. As noted above, packaging device 100 may be subject to a temperature as high as about 350 °C when a gold-tin eutectic is used to attach a semiconductor die to the mounting pad 130 of the packaging device. Interconnecting elements 120, 122 may be located relative to mounting pad 130 and bonding pad 132, respectively, elsewhere than the centers shown. Moreover, more than one interconnecting element may be located within either or both of the mounting pad and the bonding pad.

[0018] The material of pads 130, 132, 140, 142 is metal or another electrically-conductive material. Important considerations in selecting the material of the pads are adhesion to substrate 110, an ability to form a durable, low-resistance electrical connection with interconnecting elements 120 and 122 and an ability to withstand the temperature of the die attach process. In an embodiment, the structure of the pads is a seed layer of tungsten covered with layer of nickel about 1.2 μm to about 8.9 μm thick that is in turn covered with a layer of gold about 0.75 μm thick. Other metals, alloys, conductive materials and multi-layer structures of such materials can be used.

[0019] Packaging device 100 is used to package a semiconductor die. A

semiconductor device in which a semiconductor die is packaged using packaging device 100 described above will be described next.

[0020] Figures 2A-2F are schematic diagrams illustrating an exemplary embodiment 200 of a semiconductor device in accordance with the invention. Semiconductor device 200 incorporates packaging device 100 in accordance with the invention. Elements of semiconductor device 200 that correspond to elements of packaging device 100 described above with reference to Figures 1A-1F are indicated using the same reference numerals and will not be described again in detail.

[0021] Semiconductor device 200 is composed of packaging device 100 described above with reference to Figures 1A-1F, a semiconductor die 250, encapsulant 252 and a bonding wire 254. In the example shown, semiconductor die 250 embodies a light-emitting diode and has anode and cathode electrodes (not shown) covering at least parts of its opposed major surfaces. Semiconductor die 250 is mounted on packaging device 100 with the metallization on its bottom major surface attached to mounting pad 130. Encapsulant 252 covers the semiconductor die and the part of the major surface 112 of substrate 100 where mounting pad 130 and bonding pad 132 are located. Bonding wire 254 extends between a bonding pad located on the top major surface of semiconductor die 250 and bonding pad 132.

[0022] The bonding pad on the top major surface of semiconductor die 250 is typically part of or connected to the anode electrode of the light-emitting diode. The metallization on the bottom major surface of semiconductor die 250 typically constitutes the cathode electrode of the light-emitting diode. Thus, the anode electrode of semiconductor die 250 is electrically connected to connecting pad 142 by bonding wire 254, bonding pad 132 and interconnecting element 122, and the cathode electrode of semiconductor die 250 is electrically connected to connecting pad 140 by mounting pad 130 and interconnecting element 120.

[0023] Encapsulant 252 has a thickness greater than the maximum height of bonding wire 254 above major surface 112. In the example shown, the encapsulant is transparent to enable semiconductor device 200 to emit the light generated by semiconductor die 250.

[0024] Semiconductor die 250 is composed of one or more layers (not shown) of any semiconductor material composed of elements from Groups II, III, IV, V and VI of

the periodic table in binary, ternary, quaternary or other form. Semiconductor die 250 may additionally include a non-semiconductor substrate material, such as sapphire, metal electrode materials and dielectric insulating materials, as is known in the art.

[0025] In an embodiment of the above-described example in which semiconductor die 250 embodies a light-emitting diode, semiconductor die 250 is composed of a substrate of silicon carbide that supports one or more layers of (indium) gallium nitride. Such a light-emitting diode generates light in a wavelength range extending from ultra-violet to green. The bottom major surface (not shown) of the substrate remote from the layers of (indium) gallium nitride is coated with a metallization layer of a gold-tin alloy. A gold-tin eutectic attaches the semiconductor die to mounting pad 130, as described above, to provide a mechanical and electrical connection between the semiconductor die and the mounting pad.

[0026] The material of bonding wire 254 is gold. A process known in the art as low-loop wire bonding is used to connect the bonding wire between the anode electrode of semiconductor die 250 and bonding pad 132. Using low-loop wire bonding minimizes the maximum height of the bonding wire above substrate 110, and, therefore, reduces the overall height of semiconductor device 200. Other processes for providing an electrical connection between a bonding pad on a semiconductor die and a bonding pad on a packaging device are known in the art and may be used instead, especially in applications in which device height is a less important consideration.

[0027] The material of encapsulant 252 is clear epoxy. Alternative encapsulant materials include silicone. Embodiments of semiconductor device 200 that neither emit nor detect light can use an opaque encapsulant.

[0028] In the example of semiconductor device 200 described above, semiconductor die 250 is embodied as a light-emitting diode. Semiconductor die 250 may alternatively embody another type of diode without modification to packaging device 100. Versions of packaging device 100 may be used to package semiconductor die other than those that embody such electrical components as diodes that have only two electrodes. Versions of packaging device 100 may be used to package semiconductor die that embody such electronic circuit elements as transistors and integrated circuits that have more than two electrodes. Such versions of packaging device 100 have a number of bonding pads, interconnecting elements and connecting pads

corresponding to the number of bonding pads located on the top major surface of the semiconductor die. For example, a version of packaging device 100 for packaging a semiconductor die that embodies a transistor having collector, base and emitter electrodes, and in which the substrate metallization provides the collector electrode, has two bonding pads, two interconnecting elements and two connecting pads. Wire bonds connect the emitter bonding pad on the semiconductor die to one of the bonding pads on the packaging device and the base bonding pad on the semiconductor die to the other of the bonding pads on the packaging device.

[0029] The connecting pads, e.g., connecting pads 140 and 142, of embodiments of packaging device 100 having multiple connecting pads may be arranged to conform with an industry standard pad layout to facilitate printed circuit layout. In such embodiments, the interconnecting elements may be offset from the centers of the respective mounting pads, bonding pads and connecting pads to allow the connecting pad layout to conform with such a standard pad layout. In some embodiments, one or more of the mounting pad, bonding pads and connecting pads may have a shape that differs from the regular shapes illustrated. Some irregular shapes include two main regions electrically connected by a narrow track. For example, an irregularly-shaped bonding pad includes a region to which the bonding wire is attached, a region connected to the interconnecting element and a narrow track interconnecting the two regions.

[0030] Some versions of packaging device may accommodate two or more semiconductor die. In such versions, mounting pad 130 is sized large enough to accommodate the two or more semiconductor die. Additionally, such versions include sufficient bonding pads, interconnecting elements and connecting pads to make the required number of electrical connections to the semiconductor die. Alternatively, the packaging device may include two or more mounting pads. The mounting pads may be electrically connected to one another and thence to a common interconnecting element and connecting pad. Alternatively, each mounting pad may be electrically connected to a corresponding connecting pad by a respective interconnecting element.

[0031] Semiconductor device 200 is used by mounting it on a printed circuit board or other substrate using conventional surface-mount techniques or other techniques known in the art. Semiconductor device 200 is placed on a surface of the printed

circuit board with connecting pads 140 and 142 aligned with respective pads on the printed circuit board. The printed circuit board is then passed across a solder wave to form a solder joint between connecting pads 140 and 142 and the respective pads on the printed circuit board. Alternatively, semiconductor device 200 may be affixed to a printed circuit board by a process known as infra-red reflow soldering in which a pattern of solder is applied to the printed circuit board using a stencil, semiconductor device 200 and, optionally, other components are loaded onto the printed circuit board and the printed circuit board assembly is irradiated with infra-red light to heat and reflow the solder. Other processes for attaching electronic components to printed circuit boards are known in the art and may alternatively be used. Packaging device 100 and semiconductor device 200 may additionally include adhesive regions on the major surface 114 of substrate 110 external to connecting pads 140 and 142 to hold the semiconductor device in place on the printed circuit board during soldering.

[0032] In semiconductor device 200, packaging device 100 and encapsulant 252 collectively have a volume that is only about 15 times the volume of semiconductor die 250. Thus, packaging device 100 is well suited for use in high packing density applications. Moreover, packaging device 100 is fabricated from materials capable of withstanding the high temperatures involved in a die attach process that uses a gold-tin eutectic. Accordingly, packaging device 100 is well suited for packaging semiconductor die, such as the die of certain light-emitting devices, that require a die attach process that uses a gold-tin eutectic.

[0033] As noted above, many printed circuit board assembly processes are designed to use standard device packages, but many standard device packages are incapable of withstanding the high temperatures involved in a die attach process that uses a gold-tin eutectic. Figures 3A-3F are schematic drawings showing a second embodiment 300 of a packaging device in accordance with the invention. Packaging device 300 takes the form of a submount that enables semiconductor die that are mounted using a gold-tin eutectic or other high-temperature die attach process to be mounted in conventional semiconductor device packages that are incapable of withstanding such high temperatures. Moreover, packaging device 300 with a semiconductor die mounted thereon can be mounted in a conventional semiconductor device package as if it were a conventional semiconductor die. This allows conventional die attach, wire

bond and encapsulation processes to be used to assemble the final semiconductor device that incorporates the submount.

[0034] Figures 3A-3F are schematic diagrams illustrating a second exemplary embodiment 300 of a packaging device for a semiconductor die in accordance with the invention. Packaging device 300 takes the form of a submount for a semiconductor die. Packaging device 300 is composed of a substrate 310, an interconnecting element 320, a mounting pad 330 and a connecting pad 340 (Figure 3E).

[0035] Substrate 310 is substantially planar, has opposed major surfaces 312 and 314 and defines a through hole 316 that extends through the substrate between major surfaces 312 and 314. Interconnecting element 320 is electrically conductive and is located in through hole 316. Mounting pad 330 is electrically conductive and is located on a portion of the major surface 312 of substrate 310 in which through hole 316 is located. Alternatively, mounting pad 330 may cover major surface 312. Connecting pad 340 is electrically conductive and is located on a portion of the major surface 314 of the substrate in which through hole 316 is located. Alternatively, connecting pad 340 may cover major surface 314.

[0036] Mounting pad 330 and connecting pad 340 are electrically connected to opposite ends of interconnecting element 320. Thus, interconnecting element 320 extending through the substrate in through hole 316 electrically connects mounting pad 330 to connecting pad 340.

[0037] Materials and other details of substrate 310, interconnecting element 320, mounting pad 330 and connecting pad 340 are the same as those of substrate 110, interconnecting element 120, mounting pad 130 and connecting pad 140, respectively, of packaging device 100 described above with reference to Figures 1A-1F and will therefore not be described again here.

[0038] A semiconductor device in which a semiconductor die is packaged using packaging device 300 described above will be described next.

[0039] Figures 4A-4F are schematic diagrams illustrating an exemplary embodiment 400 of a semiconductor device in accordance with the invention. Semiconductor device 400 incorporates packaging device 300 in accordance with the invention. Elements of semiconductor device 400 that correspond to elements of semiconductor

device 200 described above with reference to Figures 2A-2F and of packaging device 300 described above with reference to Figures 3A-3F are indicated using the same reference numerals and will not be described again in detail.

[0040] Semiconductor device 400 is composed of a semiconductor die 250 mounted on packaging device 300 described above with reference to Figures 3A-3F. In the example shown, semiconductor die 250 embodies a light-emitting diode and has anode and cathode electrodes (not shown) covering at least parts of its opposed major surfaces. Specifically, semiconductor die 250 is mounted on packaging device 300 with the metallization on its bottom major surface attached to mounting pad 330. The metallization on the bottom major surface of semiconductor die 250 typically constitutes the cathode electrode of the light-emitting diode. Thus, the cathode electrode of semiconductor die 250 is electrically connected to connecting pad 340 by mounting pad 330 and interconnecting element 320. The top major surface of semiconductor die 250 typically includes a bonding pad that is typically part of or connected to the anode electrode of the light-emitting diode. This bonding pad remains exposed for later connection to the conventional semiconductor packaging device in which semiconductor device 400 will later be mounted.

[0041] Semiconductor device 400 is used by mounting it on a conventional semiconductor packaging device (not shown), such as the lead frame of a plastic package. Specifically, semiconductor device 400 is mounted on the lead frame with connecting pad 340 attached to a conductive mounting surface of the lead frame. Connecting pad 340 is attached to the mounting surface of the lead frame using a low-temperature die attach process, such as one that uses silver epoxy. Thus, semiconductor device 400 is compatible with conventional semiconductor device assembly processes. One or more bonding wires (not shown) are connected between bonding pads on the exposed major surface of semiconductor die 250 and the bonding pads of the lead frame. The lead frame with semiconductor device 400 mounted thereon is then encapsulated to complete the fabrication of the semiconductor device. Semiconductor device 400 may be mounted on or in conventional semiconductor packaging devices other than the lead frame based packaging device just exemplified.

[0042] Semiconductor device 400 is also suitable for attaching directly to a printed circuit board. A conventional die attach process can be used to attach connecting pad

340 directly to a suitably-sized pad on the printed circuit board. Such a die attach process does not subject the printed circuit board to the high temperatures that were used to attach semiconductor die 250 to the mounting pad 330 of packaging device 300.

[0043] A fabrication method in accordance with the invention will now be described. The fabrication method can be used to fabricate the packaging devices described above with reference to Figures 1A-1F and 3A-3F. In the method, a substrate is provided. The substrate is substantially planar, has opposed major surfaces, and includes a through hole extending between the major surfaces. The through hole is filled with a conductive interconnecting element. A conductive mounting pad and a conductive connecting pad are formed on different ones of the major surfaces in electrical contact with the conductive interconnecting element.

[0044] The fabrication method will now be described in further detail with reference to Figures 5A-5C, which show a highly simplified example of the method in which two packaging devices similar to packaging device 100 described above with reference to Figures 1A-1F are fabricated in a wafer. As noted above, hundreds of packaging devices are typically fabricated simultaneously in a single wafer of substrate material.

[0045] Figure 5A shows a wafer 510 of substrate material. A portion of the wafer constitutes the substrate of each of the packaging devices that will be fabricated in the wafer. Wafer 510 has opposed major surfaces 512 and 514. Portions of major surfaces 512 and 514 constitute the major surfaces of each of the packaging devices that will be fabricated in the wafer. The material of wafer 510 is one of the substrate materials described above.

[0046] Defined in wafer 510 is at least one through hole for each of the packaging devices that will be fabricated in the wafer. A packaging device similar to packaging device 300 described above with reference to Figures 3A-3F has one through hole per packaging device. In the example shown in Figure 5A, each packaging device is similar to packaging device 100 described above with reference to Figures 1A-1F and has two through holes per packaging device. Through holes 516 and 518 of one of the packaging devices and through holes 517 and 519 of the other of the packaging devices are shown.

- [0047] In an embodiment, through holes 516-519 are formed by punching. The through holes may alternatively be formed by drilling or laser ablation. Many other ways suitable for forming holes having a diameter in a range from about 100 μm to about 2mm are known in the art and may be used instead.
- [0048] Figure 5B shows interconnecting elements 520-523 being introduced into through holes 516-519, respectively, to fill the through holes. Interconnecting elements 520-523 are slugs of conductive material having a diameter smaller than the diameter of the through holes and a length larger than the thickness of wafer 510. In an embodiment, the material of the interconnecting elements is tungsten. A squeezing process is used to fill the through holes with the interconnecting elements. The squeezing process introduces the interconnecting elements into the through holes and then reduces the length and increases the diameter of the interconnecting elements. The squeezing process leaves the ends of the interconnecting elements approximately flush with respective major surfaces 512 and 514, and the interconnecting elements retained in the through holes by friction. An adhesive may additionally or alternatively be used to retain the interconnecting elements in the through holes.
- [0049] The through hole may be filled with the interconnecting element in other ways. For example, through-hole plating may be used. In other alternatives, screen printing or metal deposition are used. A through hole will be regarded as having been filled with an interconnecting element even when the interconnecting element occupies only part of the volume of the through hole.
- [0050] Figure 5C shows mounting pad 530 and connecting pad 540 formed on major surfaces 512 and 514, respectively, of wafer 510 in electrical contact with the opposite ends of interconnecting element 520. Figure 5C additionally shows mounting pad 531 and connecting pad 541 formed on major surfaces 512 and 514, respectively, in electrical contact with interconnecting element 521, bonding pad 532 and connecting pad 542 formed on major surfaces 512 and 514, respectively, in electrical contact with interconnecting element 522, and bonding pad 533 and connecting pad 543 formed on major surfaces 512 and 514, respectively, in electrical contact with interconnecting element 523.
- [0051] Conductive pads 530-533 and 540-543 are formed on wafer 510 by electroless plating using a screen printed mask. A photo mask may alternatively be used.

Examples of other selective processes that may be used to form pads 530-533 and 540-543 are electroplating, screen printing and metal deposition. In another embodiment, major surfaces 512 and 514 are each initially covered with a layer of metal using a cladding process. The layer of metal may take the form a metal foil pressed into contact with the respective major surface to cause the foil to adhere to the wafer. An adhesive may be used to increase adhesion. Portions of the layer of metal are then selectively removed to define pads 530-533 and 540-543. A mask and etch process may be used to perform the selective removal.

[0052] Packaging devices in accordance with the invention are typically supplied to users in the wafer state shown in Figure 5C so that they can be used in wafer-scale assembly processes. However, the packaging devices can alternatively be supplied singly. Figure 5D shows an optional additional element of the above-described fabrication method in which wafer 510 is singulated into individual packaging devices 100 and 101. Singulation may be performed by sawing, scribing and breaking or by another singulation process.

[0053] In a practical embodiment of the above-described method, through holes 516-519 are formed in wafer 510 (Figure 5A), the through holes are filled with interconnecting elements 520-523 (Figure 5B) and regions of tungsten, each of which constitutes a seed layer for one of the conductive pads 530-533 and 540-543, are screen printed on the wafer with the wafer in its "green", i.e., unfired state. The wafer is then fired. After the wafer has been fired, an electroless plating process is performed to deposit one or more additional layers of metal to complete the formation of conductive pads 530-533 and 540-543 (Figure 5C).

[0054] A method in accordance with the invention for fabricating a semiconductor device using the wafer-scale device packages shown in Figure 5C will now be described. The method can be used to fabricate the semiconductor devices described above with reference to Figures 2A-2F. Portions of the method can be used to fabricate the semiconductor devices illustrated in Figures 4A-4F. In the method, a semiconductor die is mounted on the mounting pad of the packaging device, a bonding wire is connected between the semiconductor die and the bonding pad of the packaging device, and the semiconductor die and at least a portion of the major surface of the packaging device on which the mounting pad is located are

encapsulated.

[0055] The fabrication method will now be described in further detail with reference Figures 6A-6D, which show a highly simplified example in which two semiconductor devices similar to semiconductor device 200 described above with reference to Figures 2A-2F are fabricated. As noted above, hundreds of semiconductor devices are typically fabricated simultaneously on a single wafer.

[0056] Figure 6A shows a wafer-scale array 600 of packaging devices supplied in wafer-scale form on wafer 510. Semiconductor device 250 is mounted on mounting pad 530 and a semiconductor device 251 is mounted on mounting pad 531. In an embodiment, a semiconductor die having a gold-tin metallization on its bottom major surface is placed on each mounting pad 530, 531 on wafer 510. The wafer is then heated to a temperature in the range from about 280 °C to about 350 °C for a time in the range from about one second to about 60 seconds. The gold-tin eutectic that forms attaches the semiconductor die to the respective mounting pad when the wafer is allowed to cool.

[0057] Other die attach processes, including die attach processes that require substantially lower peak temperatures, are known in the art and may be used instead of the die attach process just described. Not all die attach processes are suitable for use with all die metallizations, however.

[0058] Figure 6B shows a bonding wire 254 connected between a bonding pad (not shown) on the exposed major surface of semiconductor die 250 and bonding pad 532 and a bonding wire 255 connected between a bonding pad (not shown) on the exposed major surface of semiconductor die 251 and bonding pad 533.

[0059] In an embodiment, low loop wire bonding is used to connect bonding wires 254, 255 between semiconductor die 250, 251 and bonding pads 532, 533. Other ways to electrically connect a bonding pad located on the exposed surface of a semiconductor die to a bonding pad similar to bonding pads 532, 533 are known the art and can alternatively be used.

[0060] Figure 6C shows semiconductor die 250 and a portion of major surface 512 on which mounting pad 530 is located encapsulated by encapsulation 252, and semiconductor die 251 and a portion of major surface 512 on which mounting pad 531 is located encapsulated by encapsulation 253.

[0061] In an embodiment, the encapsulant is clear epoxy. Silicone is another suitable encapsulant. Other encapsulants are known in the art and may be used where appropriate. In an embodiment, the encapsulant was applied by transfer molding. Other application processes are known in the art and may be used where appropriate. Examples of other suitable application processes include injection molding, casting and dam and fill.

[0062] Figure 6D shows wafer 510 after it has been singulated into individual semiconductor devices 200 and 201. Singulation may be performed by sawing, scribing and breaking or by another suitable singulation process. The semiconductor devices fabricated on wafer 510 may be electrically tested before the wafer is singulated. The ability to test the semiconductor devices at the wafer scale level substantially reduces the cost of testing.

[0063] The processes illustrated in Figures 6B and 6C are omitted when the method illustrated in Figures 6A-6D is used to fabricate a submount semiconductor device similar to that described above with reference to Figures 4A-4F.

[0064] This disclosure describes the invention in detail using illustrative embodiments. However, it is to be understood that the invention defined by the appended claims is not limited to the precise embodiments described.

Claims

We claim:

1. A packaging device for semiconductor die, the packaging device comprising:
 - a substantially planar substrate having opposed major surfaces;
 - a conductive mounting pad located on one of the major surfaces;
 - 5 a conductive connecting pad located on the other of the major surfaces; and
 - a conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the connecting pad.
2. The packaging device of claim 1, in which the substrate comprises ceramic.
3. The packaging device of claim 1, in which the substrate comprises a material selected from epoxy laminate and silicon.
4. The packaging device of claim 1, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.
5. The packaging device of claim 1, in which the conductive interconnecting element comprises tungsten.

6. The packaging device of claim 1, additionally comprising:
a bonding pad located on the one of the major surfaces,
an additional conductive connecting pad located on the other of the
major surfaces, and
5 an additional conductive interconnecting element extending through
the substrate and electrically interconnecting the bonding pad and the
additional connecting pad.
7. The packaging device of claim 6, in which the substrate comprises
ceramic.
8. The packaging device of claim 6, in which the substrate comprises a
material selected from epoxy laminate and silicon.
9. The packaging device of claim 6, in which the mounting pad, the bonding
pad and the connecting pads each comprise at least one of copper, silver, gold, nickel
and tungsten.
10. The packaging device of claim 6, in which the interconnecting element
comprises tungsten.
11. A semiconductor device, comprising:
a substantially planar substrate having opposed major surfaces;
a conductive mounting pad located on one of the major surfaces;
a conductive connecting pad located on the other of the major surfaces;
5 a conductive interconnecting element extending through the substrate and
electrically interconnecting the mounting pad and the connecting pad; and
a semiconductor die attached to the mounting pad.

12. The semiconductor device of claim 11, in which the substrate comprises ceramic.

13. The semiconductor device of claim 11, in which the substrate comprises a material selected from epoxy laminate and silicon.

14. The semiconductor device of claim 11, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.

15. The semiconductor device of claim 11, in which the conductive interconnecting element comprises tungsten.

16. The semiconductor device of claim 11, additionally comprising:
a conductive bonding pad located on the one of the major surfaces;
an additional conductive connecting pad located on the other of the major surfaces;

5 an additional conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad, and
a bonding wire extending between the semiconductor die and the bonding pad.

17. The semiconductor device of claim 16, additionally comprising an encapsulant encapsulating the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located.

18. The semiconductor device of claim 16, in which the substrate comprises a material selected from ceramic, epoxy laminate and silicon.

19. The semiconductor device of claim 16, in which the mounting pad, the bonding pad and the connecting pads each comprise at least one of copper, silver, gold, nickel and tungsten.

20. The semiconductor device of claim 16, in which the conductive interconnecting element comprises tungsten

Abstract

[0065] The packaging device includes a substrate, a mounting pad, a connecting pad and an interconnecting element. The substrate is substantially planar and has opposed major surfaces. The mounting pad is conductive and is located on one of the major surfaces. The connecting pad is conductive and is located on the other of the major surfaces. The conductive interconnecting element extends through the substrate and electrically interconnects the mounting pad and the connecting pad. The packaging device has a volume that is only a few times that of the semiconductor die and can be fabricated from materials that can withstand high-temperature die attach processes. The packaging device can be configured as the only packaging device used in the semiconductor device or as a submount for a semiconductor die that requires a high-temperature die attach process.

DETAILED ACTION

Claim Rejections – 35 U.S.C. 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 4, 6, 7, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Wyland (US 5,986,885).

3. Regarding Claim 1, Wyland discloses a packaging device for semiconductor die, comprising:

a substantially planar substrate having opposed major surfaces (60) (Figure 6),
a conductive "mounting pad" (61) located on one of the major surfaces,
a conductive "connecting pad" (63) located on the other of the major surfaces, and
a conductive interconnecting element (62) extending through the substrate (60) and electrically interconnecting the mounting pad (61) and connecting pad (63).

4. Regarding Claims 2 and 7, Wyland discloses (Col. 7, lines 22 – 25) that the substrate comprises ceramic.

5. Regarding Claims 4 and 9, Wyland discloses (Col. 7, lines 31 – 39) that the mounting pad (61), and the connecting pad (63) are composed of copper.

6. Regarding Claim 6, Wyland discloses the packaging device of Claim 1, additionally comprising:

a bonding pad (right side, Figure 6) (31) (Col. 7, lines 19 – 21) located “on” one of the major surfaces,

an additional conductive connecting pad (63, right side) located on the other of the major surfaces, and

an additional conductive interconnecting element (62, right side) extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad.

7. Claims 11, 12, 16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Horiuchi et al. (US 6,084,295).

8. Regarding Claim 11, Horiuchi et al. disclose a semiconductor device, comprising:

a substantially planar substrate having opposed major surfaces (5) Figure 1),

a conductive “mounting pad” (upper surface) (Figures 1, 7(a) and 7(c)) (Col. 6, line 64 – Col. 7, line 2) located on one of the major surfaces,

a conductive connecting pad located on the other of the major surfaces Figures 1, 7(a) and 7(c)) (Col. 6, line 64 – Col. 7, line 2),

a conductive interconnecting element (42) extending through the substrate and electrically connecting the mounting pad and the connecting pad (Col. 6, line 64 – Col. 7, line 2), and

a semiconductor die (10) (Figure 1) attached to the mounting pad.

9. Regarding Claims 12 and 18, Horiuchi et al. discloses (Col. 6, lines 1 – 3) that the substrate is ceramic.

10. Regarding Claim 16, the three claim elements are discussed in Claim 11. Further, Horiuchi et al. disclose a bonding wire (20) (Figure 1) extending between the semiconductor die (10) and the bonding pad.

11. Regarding Claim 17, Horiuchi et al. disclose that an encapsulant (34) (Figure 1) encapsulates the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located (Col. 5, lines 34 – 37).

Claim Rejections – 35 U.S.C. 103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office Action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claims 3 and 8 are rejected under 35 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7, and 10, and further in view of Electronic Packaging and Production (“Innovative PCB Reinforcement,” (February, 1997), p. 1).

Art Unit: 2811

14. Regarding Claims 3 and 8, Wyland does not disclose a substrate material composed of epoxy laminate. However, epoxy laminate substrates are well known and widely used in the art. Electronic Packaging and Production discloses (p. 1, middle column, bottom para.) that epoxy laminate substrates have been in use for almost a decade. Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Wyland to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

15. Claims 5 and 10 are rejected under 35 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7, and 10, and further in view of Wilson et al. ("Handbook of Multilevel Metallization for Integrated Circuits," Noyes Publ., Westwood, New Jersey, (1993), p. 868 – 872).

16. Regarding Claims 5 and 10, Wyland does not disclose a conductive interconnecting element (via) comprising tungsten. Wilson et al. disclose that conductive interconnect elements (vias) composed of tungsten are well established in the art (p.868, lines 7 – 12). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Wyland to reduce costs (p. 868, lines 11 – 12) and reduce signal delays (p. 872, Figure 10).

17. Claim 9 is rejected under 35 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7, and 10, and further in view of Moyer et al. (US 6,620,720 B1).

Art Unit: 2811

18. Regarding Claim 9, Wyland discloses (Col. 7, lines 31 – 39) that the mounting pad (61), and the connecting pad (63) are composed of copper, but does not disclose that the bond pad is composed of copper. Moyer et al. disclose (Col. 2, lines 48 – 49) that a copper contact (bond) pad (13) (Figure 1) is formed on the silicon substrate for either wire bonding or solder bump bonding. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer et al. with Wyland to provide a contact (bond) pad of low cost and high conductivity (Moyer et al., Col. 1, lines 41 – 43).

18. Claims 13 and 18 are rejected under 35 103(a) as being unpatentable over Horiuchi et al., as applied to Claims 11, 12, 16, and 17, and further in view of Electronic Packaging and Production.

19. Regarding Claims 13 and 18, Horiuchi et al. do not disclose a substrate material composed of epoxy laminate. However, epoxy laminate substrates are well known and widely used in the art. Electronic Packaging and Production discloses (p. 1, middle column, bottom para.) that epoxy laminate substrates have been in use for almost a decade. Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Horiuchi et al. to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

20. Claims 15 and 20 are rejected under 35 103(a) as being unpatentable over Horiuchi et al., as applied to Claims 11, 12, 16, and 17, and further in view of Wilson et al.

21. Regarding Claims 15 and 20, Horuichi et al. do not disclose a conductive interconnecting element (via) comprising tungsten. Wilson et al. disclose that conductive interconnect elements (vias) composed of tungsten are well established in the art (p.868, lines 7 – 12). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Horuichi et al. to reduce costs (p. 868, lines 11 – 12) and reduce signal delays (p. 872, Figure 10).

22. Claim 19 is rejected under 35 103(a) as being unpatentable over Horuichi et al., as applied to Claims 11, 12, 16, and 17, and further in view of Moyer et al. and Wyland.

23. Regarding Claim 19, Horuichi et al. do not disclose that the mounting pad, bond pad, and connecting pad are composed of copper. However, Wyland discloses (Col. 7, lines 31 – 39) that the mounting pad (61), and the connecting pad (63) are composed of copper. Moyer et al. disclose (Col. 2, lines 48 – 49) that a copper contact (bond) pad (13) (Figure 1) is formed on the silicon substrate for either wire bonding or solder bump bonding. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer et al. and Wyland with Horuichi et al. to provide a metallic contact structures of low cost and high conductivity (Moyer et al., Col. 1, lines 41 – 43).

Conclusions

24. Any inquiry concerning this communication or earlier communications from the

In the Claims

The claims currently pending in the application are as follows:

1. (currently amended) A packaging device for semiconductor die, the packaging device comprising:

a substantially planar substrate having opposed major surfaces;

located on one of the major surfaces, a conductive mounting pad for attachment of the die with a major surface of the die in contact therewith; located on one of the major surfaces;

a conductive connecting pad located on the other of the major surfaces; and

a conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the connecting pad.

2. (originally presented) The packaging device of claim 1, in which the substrate comprises ceramic.

3. (originally presented) The packaging device of claim 1, in which the substrate comprises a material selected from epoxy laminate and silicon.

4. (originally presented) The packaging device of claim 1, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.

5. (originally presented) The packaging device of claim 1, in which the conductive interconnecting element comprises tungsten.

BEST AVAILABLE COPY

USSN 10/608,605

PATENT

-3-

6. (originally presented) The packaging device of claim 1, additionally comprising:
- a bonding pad located on the one of the major surfaces,
 - an additional conductive connecting pad located on the other of the major surfaces, and
 - an additional conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad.
7. (originally presented) The packaging device of claim 6, in which the substrate comprises ceramic.
8. (originally presented) The packaging device of claim 6, in which the substrate comprises a material selected from epoxy laminate and silicon.
9. (originally presented) The packaging device of claim 6, in which the mounting pad, the bonding pad and the connecting pads each comprise at least one of copper, silver, gold, nickel and tungsten.
10. (originally presented) The packaging device of claim 6, in which the interconnecting element comprises tungsten.
11. (originally presented) A semiconductor device, comprising:
- a substantially planar substrate having opposed major surfaces;
 - a conductive mounting pad located on one of the major surfaces;
 - a conductive connecting pad located on the other of the major surfaces;
 - a conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the connecting pad; and
 - a semiconductor die attached to the mounting pad.

USSN 10/608,605

PATENT

4

12. (originally presented) The semiconductor device of claim 11, in which the substrate comprises ceramic.

13. (originally presented) The semiconductor device of claim 11, in which the substrate comprises a material selected from epoxy laminate and silicon.

14. (originally presented) The semiconductor device of claim 11, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.

15. (originally presented) The semiconductor device of claim 11, in which the conductive interconnecting element comprises tungsten.

16. (originally presented) The semiconductor device of claim 11, additionally comprising:

a conductive bonding pad located on the one of the major surfaces;

an additional conductive connecting pad located on the other of the major surfaces;

an additional conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad, and a bonding wire extending between the semiconductor die and the bonding pad.

17. (originally presented) The semiconductor device of claim 16, additionally comprising an encapsulant encapsulating the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located.

18. (originally presented) The semiconductor device of claim 16, in which the substrate comprises a material selected from ceramic, epoxy laminate and silicon.

USSN 10/608,605

PATENT

-5-

19. (originally presented) The semiconductor device of claim 16, in which the mounting pad, the bonding pad and the connecting pads each comprise at least one of copper, silver, gold, nickel and tungsten.

20. (originally presented) The semiconductor device of claim 16, in which the conductive interconnecting element comprises tungsten.

PATENT

-6-

Remarks

Claims 1-20 are active in the application.

I. CLAIM REJECTIONS UNDER 35 USC § 102(b)

Claims 1, 2, 4, 6, 7 and 10 are rejected under 35 USC § 102(b) as being anticipated by United States patent no. 5,986,885 of Wyland. The applicants respectfully traverse the rejection on the grounds that Wyland does not disclose every element of claims 1, 2, 4, 6, 7 and 10 as now amended.

Wyland's Figure 6 shows die 30 attached to first circuitry metallizations 61 by flip-chip bonding. The applicants respectfully submit that Wyland's first circuitry metallizations do not constitute a mounting pad in the sense in which the term is used in the application, i.e., a pad to which a semiconductor die is attached with the major surface of the die in contact with the mounting pad. The applicants have amended claim 1 accordingly. The applicants respectfully submit that Wyland neither teaches nor suggests "a conductive mounting pad for attachment of the die with a major surface of the die in contact therewith", as recited in claim 1 as now amended. Accordingly, the applicants respectfully submit that claim 1 is allowable.

The applicants further submit that claims 2-10, which depend on claim 1, are allowable because of their dependence on claim 1.

With regard to claim 6, the official action alleges that Wyland discloses a bonding pad, citing "(right side, Figure 6) (31) (Col. 7, lines 19 - 21)." The applicants respectfully disagree. Wyland's bonding pads 31 are described at col. 6, lines 48-49, as being "on the surface of die 30" and are clearly shown that way in Figure 6. The passage of Wyland's disclosure cited in the official action additionally describes the bonding pads 31 as being attached to first circuitry metallizations 61 by conventional means such as solder 59. Wyland's bonding pads 31 are shown in Figure 6 as being separated from the major surface of substrate 60 by solder 59. Thus, the applicants respectfully submit that Wyland's bonding pads 31 are not part of the semiconductor package. The applicants further submit that Wyland's bonding pads 31 cannot accurately be described as being

USSN 10/608,605

PATENT

-7-

“on the one of the major surfaces [of the planar substrate]”. Therefore, the applicants respectfully submit that Wyland does not disclose “a bonding pad located on the one of the major surfaces” as recited in claim 6 and that claim 6 is allowable for this additional reason.

Claims 11, 12, 16 and 17 are rejected under 35 USC § 102(b) as being anticipated by United States patent no. 6,084,295 of Horiuchi et al. (*Horiuchi*). The applicants respectfully traverse the rejection on the grounds that Horiuchi does not disclose every element of claims 11, 12, 16 and 17.

The official action alleges that Horiuchi discloses “a conductive “mounting pad” (upper surface) (Figures 1, 7(a) and 7(c)) (Col. 6, line 64 Col. 7, line 2) located on one of the major surfaces ... a conductive interconnecting element (42) extending through the substrate and electrically connecting the mounting pad and the connecting pad (Col. 6, line 64 - Col. 7, line 2); and a semiconductor die (10) (Figure 1) attached to the mounting pad.”

In the embodiment shown in Horiuchi’s Figure 1, a die 10 is attached to the major surface of a substrate 5. The applicants have been unable to find anything in Horiuchi’s description of Figure 1 that teaches or suggests that the portion of the major surface of the substrate underlying the die is conducting. In Horiuchi’s Figure 1, the vias underlying the die are given a reference numeral (16) different from that (18) assigned to the vias to which bonding wires are attached. Thus, there is nothing in Horiuchi’s disclosure that teaches or suggests that vias 16 underlying the die are structured similarly to the vias 18 to which bonding wires are attached and that are shown in detail in Figure 2. Moreover, the applicants have been unable to find anything in Horiuchi’s disclosure that teaches or suggests that any conductive structure exists located on the major surface of substrate 5 to which die 10 is attached. Since none of the vias 16 extends over the major surface of substrate 5 underneath die 10, the applicants respectfully submit that the embodiment of Horiuchi’s semiconductor device does not comprise “a conductive mounting pad located on one of the major surfaces;” as recited in claim 11.

Horiuchi’s Figures 7(a) and 7(b) show variations on the circuit board structure

USSN 10/608,605

PATENT

-8-

shown in Figure 1. In particular, these Figures show different structures of the vias 18 to which the bonding wires are attached (see Figures 7(a) and 7(b) and col. 6, line 67-col. 7, line 1). The applicants have been unable to find anything in Horiuchi's disclosure that teaches or suggests that the vias 16 underlying die 10 could be structured similarly to the vias 42 shown in Figures 7(a) and 7(b). Moreover, even if the vias 16 underlying die 10 were structured similarly to the vias 42 shown in Figures 7(a) and 7(b), the resulting structure would not comprise "a conductive mounting pad located on one of the major surfaces [of a substantially planar substrate]." No part of the vias 42 extends over the major surface of substrate 5 on which the die 10 is mounted. Additionally, in the variations shown in Figures 7(a) and 7(b), the solder bumps 12 are located on the end surfaces of the vias 42 that extend through the substrate 5. No part of the vias 42 extends over the major surface of substrate 5 opposite that on which the die 10 is mounted. The variations shown in Figures 7(a) and 7(b) therefore additionally lack "a conductive connecting pad located on the other of the major surfaces," as recited in claim 11.

Accordingly, the applicants respectfully submit that Horiuchi cannot accurately be said to disclose at least "a conductive mounting pad located on one of the major surfaces [of a substantially planar substrate]", as recited in claim 11. The applicants therefore submit that Horiuchi does not disclose every element of claim 11, and that claim 11 is therefore allowable.

The applicants further submit that claims 12-20, which depend on claim 11, are also allowable because of their dependence on claim 11.

II. CLAIM REJECTIONS UNDER 35 USC § 103(a)

1. Claims 3 and 8

Claims 3 and 8 are rejected under 35 USC §103(a) as being unpatentable over Wyland as applied to claims 1, 2, 4, 6, 7 and 10 in view of *Innovative PCB Reinforcement*, ELECTRONIC PACKAGING AND PRODUCTION, 1 (February 1997) (the *Article*). The applicants traverse the rejection on the grounds that the official action does not set forth a prima facie case of obviousness that complies with the requirements of

USSN 10/608,605

PATENT

-9-

MPEP § 2143.

First, the applicants respectfully submit that Wyland's semiconductor package, modified as proposed in the official action, would still lack a mounting pad, for the reason set forth above with reference to claim 1. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 3 and 8.

Second, the official action states:

[I]t would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Wyland to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

The Article discloses mounting thin, small outline integrated circuit packages (TSOPs) on a multilayer reinforced epoxy laminate printed circuit board. The TSOPs are composed of a semiconductor die attached to a metal lead frame. The die and part of the lead frame are encapsulated. Portions of the lead frame remote from the die are attached to the printed circuit board by solder. The use of an epoxy laminate as the material of the printed circuit board was apparently motivated by the need for the printed circuit board to match the coefficient of thermal expansion of the TSOPs to increase the reliability of solder connections between the TSOPs and the printed circuit board.

The structure of Wyland's device is different: a semiconductor die 30 is flip-chip mounted on first circuitry metallizations 61 located on the surface of a substrate 60.

The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the thermal expansion considerations of Wyland's semiconductor device are so different from those of a TSOP attached to a printed circuit board that such person consider any teaching set forth in the Article with respect to the printed circuit board material as inapplicable to choosing the substrate material of Wyland's semiconductor package. Accordingly, the applicants respectfully submit that such person would lack a motivation to make the combination of references proposed in the official action.

The applicants therefore respectfully submit that the rejection of claims 3 and 8 is

USSN 10/608,605

PATENT

-10-

improper because the rationale set forth in the official action for combining the cited references does not meet the requirements set forth in MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

2. Claims 5 and 10

Claims 5 and 10 are rejected under 35 USC § 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7 and 10, in view of Wilson et al., HANDBOOK OF MULTILEVEL METALLIZATION FOR INTEGRATED CIRCUITS, 868 – 872, Noyes Publ., Westwood, New Jersey, (1993) (the *Handbook*). The applicants traverse the rejection on the grounds that the official action does not set forth a prima facie case of obviousness that complies with the requirements of MPEP § 2143.

First, the applicants respectfully submit that Wyland's device, modified as proposed in the official action, would still lack a mounting pad for the reason set forth above with reference to claim 1. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 5 and 10.

Second, the official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Wyland to reduce costs (p. 868, lines 11 - 12) and reduce signal delays (p. 872, Figure 10).

The cited passage of the *Handbook* describes the advantages of CVD tungsten in integrated circuits with three or more levels of metallization (p. 868, line 8). The substrate 60 of Wyland's semiconductor device, on the other hand, has no more than two levels of metallization. Moreover, the portion of Wyland's semiconductor device to which the official action proposes to apply the teachings of the *Handbook* is the substrate of a semiconductor package. The applicants respectfully submit that the substrate of a semiconductor package cannot accurately be referred to as an integrated circuit. Accordingly, the applicants respectfully submit that the person of ordinary skill in the art would regard the teaching set forth in the *Handbook* with respect to the material of the interlayer plugs of an integrated circuit with three or more levels of metallization

USSN 10/608,605

PATENT

-11-

inapplicable to the choice of material of the through holes 61 of Wyland's semiconductor package. Accordingly, the applicants respectfully submit that such person would lack a motivation to make the combination of references proposed in the official action.

Referring to the motivations proposed in the official action, the applicants have been unable to find any teaching in the Handbook with regard to tungsten having a cost advantage in an application other than an integrated circuit with three or more levels of metallization. Additionally, it is not clear from Figure 10 whether the data disclosed therein relates to interlayer plugs or to on-layer traces. The distance scales suggest the latter. Finally, it is not clear from Figure 10 that tungsten actually provides the advantage of reduced signal delays, as asserted in the official action.

Accordingly, the applicants respectfully submit that the motivation set forth in the official action for combining the cited references does not meet the requirements set forth in MPEP § 2143.

Therefore, the applicants respectfully submit that the rejection of claims 5 and 10 is improper because the prima facie case of obviousness set forth in the official action does not meet the requirements set forth in MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

3. Claim 9

Claim 9 is rejected under 35 USC § 103(a) as being unpatentable over Wyland as applied to Claims 1, 2, 4, 6, 7 and 10 in view of United States patent no. 6,620,720 of Moyer et al. (*Moyer*). The applicants traverse the rejection on the grounds that the official action does not set forth a prima facie case of obviousness that complies with the requirements of MPEP § 2143.

First, the applicants respectfully submit that Wyland's device, modified as proposed in the official action, would still lack a mounting pad for the reason set forth above with reference to claim 1. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claim 9.

Second, the official action states:

USSN 10/608,605

PATENT

-12-

Wyland discloses (Col. 7, lines 31 - 39) that the mounting pad (61), and the connecting pad (63) are composed of copper, but does not disclose that the bond pad is composed of copper. Moyer et al. disclose (Col. 2, lines 48 - 49) that a copper contact (bond) pad (13) (Figure 1) is formed on the silicon substrate for either wire bonding or solder bump bonding.

The applicants respectfully submit that Wyland's semiconductor package, modified as proposed in the official action, additionally lacks a copper bonding pad located on the one of the major surfaces [of the substantially planar substrate] as claimed in claim 9. As noted above in the discussion of claim 6 on which claim 9 depends, Wyland's bonding pad 31 is located on the die 30 and cannot therefore be accurately be described as being "located on the one of the major surfaces [of the substantially planar substrate]". Accordingly, the applicants respectfully submit that the facie case of obviousness set forth in the official action does not comply with the requirements of MPEP § 2143 because the proposed combination of references does not teach or suggest all the claim limitations.

Third, the official action additionally states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer et al. with Wyland to provide a contact (bond) pad of low cost and high conductivity (Moyer et al., Col. 1, lines 41 - 43).

In the lines following the passage of Moyer's disclosure cited in the official action, Moyer discloses some of the many difficulties of using copper in integrated circuits. Moyer discloses a solution to the problems of using copper to form the bonding pads of an integrated circuit. Moyer's solution involves the deposition of several additional layers over the copper bonding pad. The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the main motivation for adopting copper interconnects in integrated circuits, namely, maintaining low-resistance connections despite ever-decreasing feature sizes, does not apply to selecting the material of the bonding pads of Wyland's semiconductor package. The applicants respectfully submit that this absence of a motivation to use copper, together with Moyer's disclosure of the additional complexity of using copper, means that such person would have no motivation to adopt the teaching set forth in Moyer's disclosure with respect to the

USSN 10/608,605

PATENT

-13-

material of the bonding pads of the packaging device.

Accordingly, the applicants respectfully submit that the rejection of claim 9 is improper because the prima facie case of obviousness set forth in the official action does not comply with the requirements of MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

4. Claims 13 and 18

Claims 13 and 18 are rejected under 35 USC § 103(a) as being unpatentable over Horiuchi as applied to Claims 11, 12, 16, and 17, in view of the Article. The applicants traverse this rejection on the grounds that the prima facie case of obviousness set forth in the official action does not comply with the requirements of MPEP § 2143.

First, the applicants respectfully submit that Horiuchi's device, modified as proposed in the official action, would still lack a mounting pad for the reasons set forth above with reference to claim 11. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 13 and 18.

Second, the official action states:

[I]t would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Horiuchi et al. to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

Second, the disclosure of the Article is described above with reference to claims 3 and 8. The structure of Horiuchi's device package is different that of the TSOPs discussed in the Article: semiconductor die 10 is attached directly to the surface of substrate 5.

The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the thermal expansion considerations of Horiuchi's device package are so different from those of a TSOP attached to a printed circuit board that such person would consider any teaching set forth in the Article with respect to printed circuit board material as inapplicable to choosing the substrate material of Horiuchi's device package.

USSN 10/608,605

PATENT

-14-

Accordingly, the applicants respectfully submit that the rationale set forth in the official action for combining the cited references does not meet the requirements set forth in MPEP § 2143.

Therefore, the applicants respectfully submit that the rejection of claims 13 and 18 set forth in the official action does not comply with the requirements of MPEP § 2143 and respectfully request that the rejection be withdrawn.

5. Claims 15 and 20

Claims 15 and 20 are rejected under 35 USC § 103(a) as being unpatentable over Horiuchi as applied to Claims 11, 12, 16, and 17 in view of the Handbook. The applicants traverse the rejection on the grounds that the official action does not set forth a prima facie case of obviousness that complies with the requirements of MPEP § 2143.

First, the applicants respectfully submit that Horiuchi's device, modified as proposed in the official action, would still lack a mounting pad for the reasons set forth above with reference to claim 11. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 15 and 20.

Second, the official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Horiuchi et al. to reduce costs (p. 868, lines 11 - 12) and reduce signal delays (p. 872, Figure 10).

As noted above, the cited passage of the Handbook describes the advantages of CVD tungsten in integrated circuits with three or more levels of metallization (p.868, line 8). The substrate of Horiuchi's device package, on the other hand, has no more than two levels of metallization. Moreover, the portion of Horiuchi's device to which the official action proposes to apply the teachings of the Handbook is the substrate of a device package. The applicants respectfully submit that the substrate of a device package cannot accurately be described as an integrated circuit. Accordingly, the applicants respectfully submit that the person of ordinary skill in the art would regard the teaching set forth in the Handbook with respect to the material of the interlayer plugs of an integrated circuit

USSN 10/608,605

PATENT

-15-

with three or more levels of metallization as inapplicable to the choice of material of the vias of Horiuchi's device package. The applicants respectfully submit that such person would lack a motivation to make the combination of references proposed in the official action.

Referring to the motivations proposed in the official action, the applicants have been unable to find any teaching in the Handbook with regard to tungsten having a cost advantage in applications other than an integrated circuit with three or more levels of metallization. Finally, it is not clear from Figure 10 whether the data disclosed therein relates to interlayer plugs or to on-layer traces. The distance scales suggest the latter. Finally, it is not clear from Figure 10 that tungsten actually provides the advantage stated in the official action.

Accordingly, the applicants respectfully submit that the motivation set forth in the official action for combining the cited references does not meet the requirements set forth in MPEP § 2143.

Therefore, the applicants respectfully submit that the rejection of claims 15 and 20 is improper because the prima facie case of obviousness set forth in the official action does not meet the requirements set forth in MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

6. Claim 19

Claim 19 is rejected under 35 USC § 103(a) as being unpatentable over Horiuchi as applied to Claims 11, 12, 16, and 17 in view of Moyer and Wyland. The applicants traverse the rejection on the grounds that the official action does not set forth a prima facie case of obviousness that complies with the requirements of MPEP § 2143.

First, the applicants respectfully submit that Horiuchi's device, modified as proposed in the official action, would still lack a mounting pad for the reasons set forth above with reference to claim 11. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 15 and 20.

USSN 10/608,605

-16-

PATENT

Second, the official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer et al. and Wyland with Horiuchi et al. to provide a metallic contact structures of low cost and high conductivity (Moyer et al., Col. 1, lines 41 -43).

The applicants respectfully submit that the prima facie case of obviousness set forth in the official action does not comply with the requirements of MPEP § 2143 because it does not propose a motivation for modifying Horiuchi's device package in accordance with the teaching of Wyland.

Moreover, as noted above, in the lines following the passage of Moyer's disclosure cited in the official action, Moyer discloses some of the many difficulties of using copper in integrated circuits. Moyer discloses a solution to the problems of using copper to form the bonding pads of an integrated circuit. Moyer's solution involves the deposition of several additional layers over the copper bonding pad. The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the main motivation for adopting copper interconnects in integrated circuits, namely, maintaining low-resistance connections despite ever-decreasing feature sizes, does not apply to selecting the material of the pads of Horiuchi's device package. The applicants respectfully submit that this absence of a motivation to use copper, together with Moyer's teaching of the additional complexity of using copper, means that such person would have no motivation to adopt the teaching set forth in Moyer's disclosure with respect to the material of the pads of Horiuchi's device package.

Accordingly, the applicants respectfully submit that the rejection of claim 19 is improper because the prima facie case of obviousness set forth in the official action does not comply with the requirements of MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

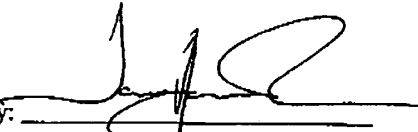

The applicants respectfully request reconsideration of the rejected claims. The applicants believe that the application as now amended is in condition for allowance, and respectfully request such favorable action. If any matters remain outstanding in the application, the Examiner is respectfully invited to telephone the applicants' attorney at (650) 485-3015 so that these matters may be resolved.

MAGEE, THOMAS J

ART UNIT PAPER NUMBER

2811

DATE MAILED: 02/09/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

| | | | |
|------------------------------|-------------------------------|----------------------------|--|
| Office Action Summary | Application No. 10/608,605 | Applicant(s) LEE ET AL. | |
| | Examiner Thomas J. Magee | Art Unit 2811 | |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 23 November 2004.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-20 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-20 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections – 35 U.S.C. 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 4, 6, 7, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Wyland (US 5,986,885).

3. Regarding Claim 1, Wyland discloses a packaging device for semiconductor die, comprising:

a substantially planar substrate having opposed major surfaces (60) (Figure 6),
a conductive "mounting pad" (61) located on one of the major surfaces,
a conductive "connecting pad" (63) located on the other of the major surfaces, and
a conductive interconnecting element (62) extending through the substrate (60) and electrically interconnecting the mounting pad (61) and connecting pad (63).

The limitation, "*for attachment of the die with a major surface of the die in contact therewith,*" represents an intended use. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. See *In re Casey*, 370 F.2d

Art Unit: 2811

576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

4. Regarding Claims 2 and 7, Wyland discloses (Col. 7, lines 22 – 25) that the substrate comprises ceramic.

5. Regarding Claims 4 and 9, Wyland discloses (Col. 7, lines 31 – 39) that the mounting pad (61), and the connecting pad (63) are composed of copper.

6. Regarding Claim 6, Wyland discloses the packaging device of Claim 1, additionally comprising:

a bonding pad (right side, Figure 6) (61) located "on" one of the major surfaces,

an additional conductive connecting pad (63, right side) located on the other of the major surfaces, and

an additional conductive interconnecting element (62, right side) extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad.

7. Claims 11, 12, 16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Horiuchi et al. (US 6,084,295).

8. Regarding Claim 11, Horiuchi et al. disclose a semiconductor device, comprising:

a substantially planar substrate having opposed major surfaces (5) Figure 1),

Art Unit: 2811

a conductive "mounting pad" (upper surface) (22) located on one of the major surfaces,
a conductive connecting pad located on the other of the major surfaces (24) (Figure 1)
a conductive interconnecting element (at18) extending through the substrate and
electrically connecting the mounting pad and the connecting pad (Col. 3, lines 59 – 63), and
a semiconductor die (10) (Figure 1) attached to the mounting pad.

9. Regarding Claims 12 and 18, Horiuchi et al. discloses (Col. 6, lines 1 – 3) that the substrate is ceramic.

10. Regarding Claim 16, the three claim elements are discussed in Claim 11. Further, Horiuchi et al. disclose a bonding wire (20) (Figure 1) extending between the semiconductor die (10) and the bonding pad.

11. Regarding Claim 17, Horiuchi et al. disclose that an encapsulant (34) (Figure 1) encapsulates the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located (Col. 5, lines 34 – 37).

Claim Rejections – 35 U.S.C. 103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office Action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art

Art Unit: 2811

are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claims 3 and 8 are rejected under 35 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7, and 10, and further in view of Electronic Packaging and Production ("Innovative PCB Reinforcement," (February, 1997), p. 1).

14. Regarding Claims 3 and 8, Wyland does not disclose a substrate material composed of epoxy laminate. However, epoxy laminate substrates are well known and widely used in the art. Electronic Packaging and Production discloses (p. 1, middle column, bottom para.) that epoxy laminate substrates have been in use for almost a decade. Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Wyland to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

15. Claims 5 and 10 are rejected under 35 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7, and 10, and further in view of Wilson et al. ("Handbook of Multilevel Metallization for Integrated Circuits," Noyes Publ., Westwood, New Jersey, (1993), p. 868 – 872).

16. Regarding Claims 5 and 10, Wyland does not disclose a conductive interconnecting element (via) comprising tungsten. Wilson et al. disclose that conductive interconnect elements (vias) composed of tungsten are well established in the art (p.868, lines 7 – 12). It would have

been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Wyland to reduce costs (p. 868, lines 11 – 12) and reduce signal delays (p. 872, Figure 10).

17. Claim 9 is rejected under 35 103(a) as being unpatentable over Wyland, as applied to Claims 1, 2, 4, 6, 7, and 10, and further in view of Moyer et al. (US 6,620,720 B1).

18. Regarding Claim 9, Wyland discloses (Col. 7, lines 31 – 39) that the mounting pad (61), and the connecting pad (63) are composed of copper, but does not disclose that the bond pad is composed of copper. Moyer et al. disclose (Col. 2, lines 48 – 49) that a copper contact (bond) pad (31) (Figure 1) is formed on the silicon substrate for either wire bonding or solder bump bonding. It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer et al. with Wyland to provide a contact (bond) pad of low cost and high conductivity (Moyer et al., Col. 1, lines 41 – 43).

18. Claims 13 and 18 are rejected under 35 103(a) as being unpatentable over Horiuchi et al., as applied to Claims 11, 12, 16, and 17, and further in view of Electronic Packaging and Production.

19. Regarding Claims 13 and 18, Horiuchi et al. do not disclose a substrate material composed of epoxy laminate. However, epoxy laminate substrates are well known and widely used in the art. Electronic Packaging and Production discloses (p. 1, middle column, bottom para.) that epoxy laminate substrates have been in use for almost a decade. Hence, it would have been

obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Horiuchi et al. to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

20. Claims 15 and 20 are rejected under 35 103(a) as being unpatentable over Horiuchi et al., as applied to Claims 11, 12, 16, and 17, and further in view of Wilson et al.

21. Regarding Claims 15 and 20, Horiuchi et al. do not disclose a conductive interconnecting element (via) comprising tungsten. Wilson et al. disclose that conductive interconnect elements (vias) composed of tungsten are well established in the art (p.868, lines 7 – 12). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Horiuchi et al. to reduce costs (p. 868, lines 11 – 12) and reduce signal delays (p. 872, Figure 10).

22. Claim 19 is rejected under 35 103(a) as being unpatentable over Horiuchi et al., as applied to Claims 11, 12, 16, and 17, and further in view of Moyer et al. and Wyland.

23. Regarding Claim 19, Horiuchi et al. do not disclose that the mounting pad, bond pad, and connecting pad are composed of copper. However, Wyland discloses (Col. 7, lines 31 – 39) that the mounting pad (61), and the connecting pad (63) are composed of copper. Moyer et al. disclose (Col. 2, lines 48 – 49) that a copper contact (bond) pad (13) (Figure 1) is formed on the silicon substrate for either wire bonding or solder bump bonding. It would have been obvious to

one of ordinary skill in the art at the time of the invention to combine Moyer et al. and Wyland with Horuichi et al. to provide a metallic contact structures of low cost and high conductivity (Moyer et al., Col. 1, lines 41 – 43).

Response to Arguments

24. Arguments of Applicant with respect to claim rejections have been carefully considered, but these have been found to be unpersuasive. With regard to Claim 1, the limitation recited in the amended claim represents an intended use and does not result in a structural distinction relevant to the prior art, as discussed in the Office Action.

With regard to Claim 6, Applicant is incorrect in the contention (pp. 6 – 7, Response) that the bonding pad (61) on the right side is not on one of the major surfaces. Figure 6 clearly discloses this location.

The contention that the pad 22 of Horiuchi et al. is not conducting (pp. 7 – 8, Response) is not correct. In order for the pad to be used as an electrical connection, it is essential that the pad be conducting. Further, the contention that there is no conductive pad on the “other” side is not germane, since a pad is shown (Figure 1) (24). Additionally, metal is plated inside via 18 to form an interconnecting element (Col. 3, lines 59 – 63).

In regard to the ELECTRONIC PACKAGING AND PRODUCTION reference (pp. 8 – 9, Response), contrary to allegations of Applicant, there is more than adequate rationale for combining references, as stated in the Office Action. Additionally, as stated in the Office Action, the

use of multilayer laminate boards are extremely well known in the art and widely utilized.

With regard to Claims 5 and 10, Applicant is incorrect in the allegation that the Wilson et al. textbook reference refers to a multilayer structure and does not teach the use of vias (pp. 10 – 11, Response). The reference states that tungsten vias have been used since 1983. Wilson states that *multilevel metallizations use a blanket deposition and etchback for formation*. There is no statement or implication that multilevels are required for via formation. Cost savings (p.868, lines 11 – 12) are indeed recited as a part of a selective deposition process. Reduction in signal delays are also present, as shown clearly in Figure 10, page 872 in a comparative analysis.

Allegations by Applicant that the combination of Moyer et al. and Wyland is not warranted (pp. 11 – 12, Response) are incorrect. There is more than sufficient motivation (Moyer et al., Col. 1, lines 41 – 43) to use the copper contact pad of Moyer et al. in Wyland. No probative data has been presented to suggest otherwise.

Commentary on Arguments presented for Claims 13 and 18 and Claims 15 and 20 (pp. 13 – 15) has been discussed above.

Allegations by Applicant regarding the applicability of Moyer as a secondary reference are not germane. There is adequate motivation for combining references (Moyer et al., Col. 1, lines 41 - 43). Applicant is reminded that the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference, nor is it that the claimed invention must be expressly suggested in any one or all of the references.

Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

For the reasons stated above, the rejection is maintained.

Conclusions

24. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to **Thomas Magee**, whose telephone number is **(571) 272 1658**. The Examiner can normally be reached on Monday through Friday from 8:30AM to 5:00PM (EST). If attempts to reach the Examiner by telephone are unsuccessful, the examiner's supervisor, **Eddie Lee**, can be reached on **(571) 272-1732**. The fax

AMENDMENT UNDER 37 CFR § 1.116

Commissioner for Patents
P.O. Box 1450
Alexandria
VA 22313-1450

Sir:

In response to the Official Action dated 9 February 2005, the applicants respectfully
request entry of the following amendments:

USSN 10/608,605

PATENT

-2-

In the Claims

The claims currently pending in the application are as follows:

1. (currently amended) A packaging device for a semiconductor die, the packaging device comprising:
 - a substantially planar substrate having opposed major surfaces;
 - located on one of the major surfaces; a conductive die mounting pad for
 - 5 ~~attachment of~~ dimensioned to accommodate the die with a major surface of the die in contact therewith;
 - a conductive connecting pad located on the other of the major surfaces; and
 - a conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the connecting pad.
2. (original) The packaging device of claim 1, in which the substrate comprises ceramic.
3. (original) The packaging device of claim 1, in which the substrate comprises a material selected from epoxy laminate and silicon.
4. (original) The packaging device of claim 1, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.
5. (original) The packaging device of claim 1, in which the conductive interconnecting element comprises tungsten.

Best Available Copy

USSN 10/608,605

-3-

PATENT

6. (currently amended) The packaging device of claim 1, additionally comprising:

a bonding pad smaller in area than the die mounting pad, the bonding pad located on the one of the major surfaces,

5 an additional conductive connecting pad located on the other of the major surfaces, and

an additional conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad.

7. (original) The packaging device of claim 6, in which the substrate comprises ceramic.

8. (original) The packaging device of claim 6, in which the substrate comprises a material selected from epoxy laminate and silicon.

9. (original) The packaging device of claim 6, in which the mounting pad, the bonding pad and the connecting pads each comprise at least one of copper, silver, gold, nickel and tungsten.

10. (original) The packaging device of claim 6, in which the interconnecting element comprises tungsten.

USSN 10/608,605

PATENT

-4-

11. (currently amended) A semiconductor device, comprising:
a semiconductor die;
a substantially planar substrate having opposed major surfaces;
~~a conductive mounting pad located on one of the major surfaces,~~ a conductive die
5 mounting pad dimensioned to accommodate the semiconductor die;
a conductive connecting pad located on the other of the major surfaces; and
a conductive interconnecting element extending through the substrate and
electrically interconnecting the mounting pad and the connecting pad; ~~and~~
10 in which the a-semiconductor die is mounted on attached to the die mounting pad
with a major surface thereof in contact with the mounting pad.
12. (original) The semiconductor device of claim 11, in which the substrate comprises ceramic.
13. (original) The semiconductor device of claim 11, in which the substrate comprises a material selected from epoxy laminate and silicon.
14. (original) The semiconductor device of claim 11, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.
15. (original) The semiconductor device of claim 11, in which the conductive interconnecting element comprises tungsten.

USSN 10/608,605

PATENT

-5-

16. (currently amended) The semiconductor device of claim 11, additionally comprising:

a conductive bonding pad smaller in area than the die mounting pad, the bonding pad located on the one of the major surfaces;

5 an additional conductive connecting pad located on the other of the major surfaces;

an additional conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad, and a bonding wire extending between the semiconductor die and the bonding pad.

17. (original) The semiconductor device of claim 16, additionally comprising an encapsulant encapsulating the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located.

18. (original) The semiconductor device of claim 16, in which the substrate comprises a material selected from ceramic, epoxy laminate and silicon.

19. (original) The semiconductor device of claim 16, in which the mounting pad, the bonding pad and the connecting pads each comprise at least one of copper, silver, gold, nickel and tungsten.

20. (original) The semiconductor device of claim 16, in which the conductive interconnecting element comprises tungsten.

PATENT

-6-

Remarks

This is an amendment under 37 CFR § 1.116. The purpose of this amendment is to put the claims in better form for appeal. The amendments and specific arguments in this amendment, to the extent they were not presented earlier, are now presented because they are necessitated by the new arguments of anticipation and obviousness set forth by the Examiner in the official action dated 9 February 2005. The applicants respectfully submit that these amendments do not raise new issues and do not require any further searching.

Following this amendment, claims 1-20 are active in the application.

I. CLAIM REJECTIONS UNDER 35 USC § 102(b)**A. Claims 1, 2, 4, 6, 7, and 10**

Claims 1, 2, 4, 6, 7, and 10 are rejected under 35 USC § 102(b) as being anticipated by United States patent no. 5,986,885 of Wyland. The official action alleges that the limitation, "for attachment of the die with a major surface of the die in contact therewith," represents an intended use. The applicants respectfully disagree, but to advance prosecution of the application have amended Claim 1 to recite a more explicit structural limitation.

The applicants respectfully submit that Wyland's metallization 61, alleged in the official action to correspond to the die mounting pad recited in Claim 1, cannot accurately be described as "dimensioned to accommodate the die with a major surface of the die in contact therewith" as recited in Claim 1 as now amended.

Accordingly, the applicants respectfully submit that Claim 1 as now amended, and claims 2-9 that depend on Claim 1, are all patentable.

B. Claim 6

With reference to claim 6, the official action alleges that Wyland discloses a bonding pad, citing "(right side, Figure 6) (61) located 'on' one of the major surfaces." This differs from the rejection set forth in the previous official action mailed on 23 August 2004 in which Wyland's *die bonding pad 31* was alleged to correspond to the bonding pad recited in Claim 6. In its Response to Arguments, the official action states that the applicants were incorrect and refers to

Best Available Copy

USSN 10/608,605

PATENT

-7-

"bonding pad (61)." However, the applicants respectfully submit that the previous official action referred to element 31, i.e., to die bonding pad 31, and not to element 61, i.e., metallization 61, as now alleged.

The applicants have amended Claim 6 to recite: "a bonding pad smaller in area than the die mounting pad, the bonding pad located on the one of the major surfaces." The applicants respectfully submit that Wyland's metalizations 61 to which die 30 is attached are substantially similar in area, as would be expected given that the die is attached to each metallization by means of a flip-chip connection. The applicants therefore respectfully submit that, in Wyland's semiconductor package, the metallization 61 alleged to correspond to the bonding pad recited in claim 6 cannot accurately be said to be smaller in area than the metallization 61 alleged in the rejection of Claim 1 to correspond to the die mounting pad recited in Claim 1.

Accordingly, the applicants respectfully submit that Claim 6 as now amended is patentable for this additional reason, and Claims 7-10 that depend on Claim 6 are also patentable.

C. Claims 11, 12, 16, and 17

Claims 11, 12, 16, and 17 are rejected under 35 USC § 102(b) as being anticipated by United States patent no. 6,084,295 of Horiuchi et al. (*Horiuchi*).

The official action alleges that bonding pad 22 corresponds to the mounting pad recited in claim 11. The applicants respectfully thank the Examiner for clearly identifying the element alleged to correspond to the mounting pad. The prior official action did not indicate that Horiuchi's bonding pad 22 corresponded to the mounting pad. In responding to the prior official action, the applicants took the reference to "upper surface" to refer to the upper surface of substrate 5 rather than to the upper surface of bonding pad 22. It appears that this is not what the Examiner intended.

The applicants respectfully submit that bonding pad 22 cannot accurately be said to correspond to "a conductive mounting pad located on one of the major surfaces" as recited in the original version of Claim 11. Horiuchi shows bonding pad 22 located in a region of substrate 5 outside that occupied by semiconductor chip 10. The original version of Claim 11 recites in part: "a semiconductor die attached to the mounting pad." The applicants respectfully submit that chip

USSN 10/608,605

PATENT

-8-

10 cannot accurately be described as attached to bonding pad 22.

Moreover, Horiuchi shows vias 16 underlying chip 10. Figure 1 shows the ends of vias 16 adjacent chip 10 lying flush with the surface of substrate 5. The applicants therefore respectfully submit that the ends of vias 16 therefore cannot accurately be said to be "on" the major surface of the substrate. The official action provides no indication of where may be found in Horiuchi's disclosure a teaching that bonding pads similar to bonding pads 22 exist under chip 10. The applicants have been unable to find such teaching. Figures 7(a) and 7(c) referred to the prior official action show structures of pads to which bonding wires 20 are attached, and not of the vias underlying chip 10.

Nevertheless, to advance prosecution of the application and to conform Claim 11 with Claim 1, the applicants have amended Claim 11 to recite: "located on one of the major surfaces, a conductive die mounting pad dimensioned to accommodate the semiconductor die" and "in which the semiconductor die is mounted on the die mounting pad with a major surface thereof in contact with the mounting pad." The applicants respectfully submit that Horiuchi's device lacks any element described by the quoted elements of Claim 11 as now amended.

Accordingly, the applicants respectfully submit that Claim 11 as now amended is patentable. The applicants further submit that Claims 12-19 that depend on Claim 11 are patentable due to the patentability of Claim 11.

II. CLAIM REJECTIONS UNDER 35 USC § 103(a)

A. Claims 3 and 8

Claims 3 and 8 are rejected under 35 USC § 103(a) as being unpatentable over Wyland as applied to Claims 1, 2, 4, 6, 7 and 10 in view of *Innovative PCB Reinforcement*, ELECTRONIC PACKAGING AND PRODUCTION, 1 (1997) (the *Article*).

The official action states that Wyland does not disclose a substrate material composed of epoxy laminate and looks to ELECTRONIC PACKAGING AND PRODUCTION for a disclosure of this material. The official action states:

Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Electronic Packaging and Technology with Wyland to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5 th para.).

USSN 10/608,605

PATENT

-9-

The Article discloses mounting thin, small outline integrated circuit packages (TSOPs) on a multilayer reinforced epoxy laminate printed circuit board. The TSOPs are composed of a semiconductor die attached to a metal lead frame. The die and part of the lead frame are encapsulated. Portions of the lead frame remote from the die are attached to the printed circuit board by solder. The use of an epoxy laminate as the material of the printed circuit board was apparently motivated by the need for the printed circuit board to match the coefficient of thermal expansion of the TSOPs to increase the reliability of solder connections between the TSOPs and the printed circuit board.

The structure of Wyland's device is different: a semiconductor die 30 is flip-chip mounted on first circuitry metallizations 61 located on the surface of a substrate 60.

The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the thermal expansion considerations of the semiconductor die 30 of Wyland's semiconductor device are so different from those of a TSOP attached to a printed circuit board that such person would consider any teaching set forth in the Article with respect to the printed circuit board material as inapplicable to choosing the substrate material of Wyland's semiconductor package. Accordingly, the applicants respectfully submit that the cited references lack any teaching or suggestion that could properly be regarded as providing a motivation for a person of ordinary skill in the art to combine the references in the manner proposed in the official action.

The official action states that multilayer laminate boards are extremely well known in the art and widely utilized. The applicants do not dispute this. However, the applicants respectfully remind the Examiner that the fact that multi-layer boards are known does not make it obvious to modify Wyland's semiconductor device to incorporate a multilayer board absent a teaching or suggestion in the cited references that can properly be regarded as a motivation for a person of ordinary skill in the art to make such modification. The applicants respectfully submit that the passage of the Article cited in the official action does not rise to this level. It simply describes an advantage that arises in the specific circumstance in which TSOPs are mounted on a PC11 printed circuit board. The applicants have been unable to find anything in the Article that teaches or suggests that this advantage would be obtained in the context of Wyland's semiconductor

USSN 10/608,605

PATENT

-10-

package in which a semiconductor die is flip-chip mounted on a substrate. The applicants have been unable to find anything in Wyland's disclosure that teaches or suggests that his semiconductor package has problems with solder joint reliability.

Moreover, the official action does not indicate where in the cited references may be found a teaching or suggestion that would provide a person of ordinary skill in the art with a reasonable expectation of success in the event such person were to attempt to modify Wyland's semiconductor package in the manner suggested in the official action.

Additionally, the applicants respectfully submit that Wyland's semiconductor package, modified as proposed in the official action, would still lack a die mounting pad, for the reason set forth above with reference to Claim 1. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 3 and 8.

The applicants therefore respectfully submit that the rejection of claims 3 and 8 is improper because the prima facie case of obviousness set forth in the official action does not meet the requirements set forth in MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

B. Claims 5 and 10

Claims 5 and 10 are rejected under 35 USC § 103(a) as being unpatentable over Wyland as applied to Claims 1, 2, 4, 6, 7 and 10 in view of Wilson et al. (HANDBOOK OF MULTILEVEL METALLIZATION FOR INTEGRATED CIRCUITS, 868-872 (*Wilson*)).

The official action indicates that Wyland does not disclose a conductive interconnecting element (via) comprising tungsten and looks to Wilson for a teaching of conductive interconnect elements (vias) composed of tungsten. The official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Wyland to reduce costs (p. 868, lines 11 - 12) and reduce signal delays (p. 872, Figure 10).

The cited passage of Wilson's disclosure describes the advantages of CVD tungsten contacts and via plugs in integrated circuits. The official action proposes to apply Wilson's teachings to the choice of the material to fill through holes 62 extending through the substrate 60 of Wyland's semiconductor package. The applicants respectfully submit that the substrate of a

USSN 10/608,605

PATENT

-11-

semiconductor package cannot accurately be referred to as an integrated circuit. Accordingly, the applicants respectfully submit that the person of ordinary skill in the art would regard Wilson's teaching with respect to the material of the interlayer plugs of an integrated circuit inapplicable to the choice of material to fill the through holes 62 of Wyland's semiconductor package. Accordingly, the applicants respectfully submit that the cited passage of Wilson's disclosure does not provide a sufficient motivation for a person of ordinary skill in the art to make the combination of references proposed in the official action.

Moreover, the applicants respectfully submit that Wilson is non-analogous art and hence, is not a valid reference with respect to the invention claimed in Claims 5 and 10. The invention claimed in Claims 5 and 10 relates to a packaging device for a semiconductor die. Wilson's disclosure relates to the structure of the semiconductor die itself. The *Manual of Patent Classification* classifies Horiuchi's semiconductor device, which is analogous prior art, in class 257, subclass 690, whereas integrated circuit vias appear to fall into class 438.

The sentence that includes the passage of Wilson's disclosure cited in the official action as constituting a motivation reads: "There are also attempts to use a selective CVD tungsten because of the potential process simplification and cost savings." The applicants respectfully submit that this passage of Wilson's disclosure does not indicate whether the attempts have been successful or that the potential cost savings have been achieved. Moreover, the applicants have been unable to find any teaching in the cited passage or elsewhere in Wilson's disclosure that teaches or suggests that tungsten provides a cost advantage in an application other than in an integrated circuit. The applicants respectfully remind the Examiner that obviousness is not established if a person of ordinary skill might find it *obvious to try* to modify the teaching of one reference in accordance with the teachings of another. "[T]his is not the standard of 35 USC § 103." *In re Geiger*, 815 F2d 686, 688, 2 USPQ2d 1276, 1278 (Fed. Cir. 1987).

The official action additionally cites Wilson's Figure 10 as demonstrating that tungsten interconnects and inter-layer plugs reduce signal delays, and thus provide a motivation. The applicants respectfully submit that Figure 10 demonstrates that, with respect to signal delay in an integrated circuit, tungsten performs marginally better than aluminum but performs significantly worse than copper. The applicants therefore respectfully submit that, if anything, Wilson's

USSN 10/608,605

PATENT

-12-

Figure 10 teaches away from using tungsten.

Moreover, the applicants have been unable to find anything in Wyland's disclosure that teaches or suggests that his semiconductor package is costly to manufacture and/or suffers from problems with signal delay that would provide a person of ordinary skill in the art with a motivation to look outside Wyland's disclosure for a solution to such problems.

The official action does not indicate where in the cited references may be found a teaching or suggestion that would provide a person of ordinary skill in the art with a reasonable expectation of success in the event such person were to undertake the modification of Wyland's semiconductor package proposed in the official action.

Finally, the applicants respectfully submit that Wyland's semiconductor package, modified as proposed in the official action, lacks the die mounting pad recited in Claim 1 on which Claims 5 and 10 depend for the reasons set forth above with reference to Claim 1. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest all the claim limitations recited in Claims 5 and 10.

The applicants therefore respectfully submit that the rejection of claims 5 and 10 is improper because the prima facie case of obviousness set forth in the official action does not meet the requirements set forth in MPEP § 2143. The applicants therefore respectfully request that the rejection be withdrawn.

C. Claim 9

Claim 9 is rejected under 35 USC § 103(a) as being unpatentable over Wyland as applied to Claims 1, 2, 4, 6, 7 and 10 in view of United States patent no. 6,620,720 of Moyer et al. (*Moyer*).

The official action indicates that Wyland does not disclose that the bond pad is composed of copper and looks to Moyer at (col. 2, lines 48 - 49) for a disclosure of a copper contact (bond) pad (31) (Figure 1) formed on the silicon substrate for either wire bonding or solder bump bonding. The official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer with Wyland to provide a contact (bond) pad of low cost and high conductivity (*Moyer*, col. 1, lines 41 - 43).

USSN 10/608,605

PATENT

-13-

The applicants acknowledge that the cited passage of Moyer's disclosure describes the advantages of using copper as the material of the interconnects of an integrated circuit. However, in the lines following the cited passage of Moyer's disclosure, Moyer discloses some of the many difficulties of using copper as the material of the interconnects of an integrated circuit. Moyer discloses a solution to the problems of using copper to form the bonding pads of an integrated circuit. Moyer's solution involves the deposition of several additional layers over the copper bonding pad. The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the main motivation for adopting copper interconnects in integrated circuits, namely, maintaining low-resistance connections despite ever-decreasing feature sizes, does not apply to selecting the material of the bonding pads of Wyland's semiconductor package. The applicants respectfully submit that this absence of a motivation to use copper, together with Moyer's disclosure of the additional difficulties of using copper, means that such person would have no motivation to adopt the teaching set forth in Moyer's disclosure with respect to the material of the bonding pads of Wyland's semiconductor package.

The applicants additionally submit that Moyer is non-analogous art and, hence, is not a valid reference with respect to the invention claimed in Claim 9. The invention claimed in Claim 9 relates to the structure of a packaging device for a semiconductor die. Moyer's disclosure relates to structures for the bonding pads of an integrated circuit having copper interconnects. The *Manual of Patent Classification* classifies Horiuchi's semiconductor device, which is analogous prior art, in class 257, subclass 690, whereas it classified Moyer's disclosure in class 438, subclass 612.

The official action asserts that col. 1, lines 41-43, of Moyer's disclosure provides more than sufficient motivation to use Moyer's copper contact pad in Wyland's semiconductor package. The applicants do not dispute that the cited passage of Moyer's disclosure teaches the desirability of using copper as an interconnect material in an integrated circuit. However, the portion of Wyland's semiconductor package the Examiner is proposing to modify is metallization 61 that forms part of the semiconductor package and is not part of semiconductor die 30. The applicants have been unable to find anything in Moyer's disclosure that teaches or suggests the desirability of making an element of a semiconductor package corresponding to

USSN 10/608,605

PATENT

-14-

Wyland's metallization 61 of copper.

Moreover, the applicants respectfully submit that the portion of Moyer's disclosure cited in the official action quotes is taken out of the context of the discussion of the problems of using copper as an interconnect material in integrated circuits that immediately follows the cited passage. The applicants respectfully submit that this portion of Moyer's disclosure would discourage a person of ordinary skill in the art from using copper as the interconnect material of an integrated circuit absent the compelling reason of high-frequency performance. The applicants further submit that Moyer is silent with respect to the suitability of copper in applications such as Wyland's metallization 61, and that this would further discourage the person of ordinary skill in the art from making the modification proposed in the official action. Moreover, in view of the caveats uttered by Moyer about the problems of using copper, Moyer's disclosure as a whole cannot reasonably be regarded as providing the person of ordinary skill in the art with a reasonable expectation of success in the event such person were to attempt to perform the proposed modification of Wyland's semiconductor package. Finally, the applicants note that they have been unable to find anything in Wyland's disclosure that teaches or suggests that the performance of his semiconductor package is unsatisfactory at high frequencies. Such teaching might motivate the person of ordinary skill in the art to ignore Moyer's teaching with regard to the difficulties of using copper, but no such teaching or suggestion can be found.

The official action does not indicate where in the cited references may be found a teaching or suggestion that would provide a person of ordinary skill in the art with a reasonable expectation of success in the event such person were to undertake the modification of Wyland's semiconductor package proposed in the official action.

Additionally, the applicants submit that Wyland's semiconductor package, modified as proposed in the official action, would still lack a die mounting pad for the reason set forth above with reference to Claim 1. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claim 9.

The applicants therefore respectfully submit that the rejection of claim 9 is improper because the prima facie case of obviousness set forth in the official action does not meet the requirements set forth in MPEP § 2143. The applicants therefore respectfully request that the

USSN 10/608,605

PATENT

-15-

rejection be withdrawn.

D. Claims 13 and 18

Claims 13 and 18 are rejected under 35 USC § 103(a) as being unpatentable over Horiuchi as applied to Claims 11, 12, 16, and 17 in view of *Electronic Packaging and Production (the Article)*.

The official action indicates that Horiuchi does not disclose a substrate material composed of epoxy laminate and looks to *Electronic Packaging and Production* for a disclosure of this material. The official action states:

Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of *Electronic Packaging and Technology* with Horiuchi et al. to obtain a device with increased reliability and reduced fatigue at joints (p. 1, left column, 5th para.).

The disclosure of the Article is described above with reference to claims 3 and 8.

The applicants respectfully submit that structure of Horiuchi's device package is different that of the TSOPs discussed in the Article: in Horiuchi's device package, semiconductor die 10 is attached directly to the surface of substrate 5. The applicants respectfully submit that the person of ordinary skill in the art would appreciate that the thermal expansion considerations of Horiuchi's semiconductor device are so different from those of a TSOP attached to a printed circuit board that such person would consider any teaching set forth in the Article with respect to printed circuit board material as inapplicable to choosing the substrate material of Horiuchi's semiconductor device. Accordingly, the applicants respectfully submit that the rationale set forth in the official action for combining the cited references does not meet the requirements set forth in MPEP § 2143.

Additionally, the applicants respectfully submit that Horiuchi's semiconductor device, modified as proposed in the official action, would still lack "located on one of the major surfaces, a conductive die mounting pad dimensioned to accommodate the semiconductor die" and "in which the semiconductor die is mounted on the die mounting pad with a major surface thereof in contact with the mounting pad." for the reasons set forth above with reference to claim 11. Accordingly, the applicants respectfully submit that the proposed combination of references does not teach or suggest every element of claims 13 and 18.

USSN 10/608,605

PATENT

-16-

The official action does not indicate where in the cited references may be found a teaching or suggestion that would provide a person of ordinary skill in the art with a reasonable expectation of success in the event such person were to undertake the modification of Horiguchi's semiconductor device proposed in the official action.

Accordingly the applicants respectfully submit that the rejection of claims 13 and 18 is improper because the official action does not set forth a prima facie case of obviousness that complies with the requirements set forth in MPEP § 2143.

E. Claims 15 and 20

Claims 15 and 20 are rejected under 35 USC § 103(a) as being unpatentable over Horiuchi as applied to Claims 11, 12, 16, and 17 in view of Wilson.

The official action indicates that Horiuchi does not disclose a conductive interconnecting element (via) comprising tungsten and looks to Wilson for a disclosure of this material. The official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Wilson et al. with Horiuchi et al. to reduce costs (p. 868, lines 11-12) and reduce signal delays (p. 872, Figure 10).

For reasons corresponding to those described above with reference to Claims 5 and 10, the applicants respectfully submit that the rejection of claims 15 and 20 is improper because the prima facie case of obviousness set forth in the official action does not comply with the requirements set forth in MPEP § 2143. Specifically, the official action does not set forth a motivation that complies with the requirements set forth in MPEP § 2143, the official action does not indicate where in the cited references may be found a teaching or suggestion that would provide a person of ordinary skill in the art with a reasonable expectation of success in the event such person were to undertake the modification of Horiuchi's semiconductor device proposed in the official action and the proposed combination of references does not teach or suggest all the claim limitations.

F. Claim 19

Claim 19 is rejected under 35 USC § 103(a) as being unpatentable over Horiuchi as

USSN 10/608,605

PATENT

-17-

applied to Claims 11, 12, 16, and 17 in view of Moyer and Wyland.

The official action states that Horiuchi does not disclose that the mounting pad, bond pad, and connecting pad are composed of copper and looks to Wyland for a teaching of a mounting pad and a connecting pad (63) composed of copper and looks to Moyer for a teaching of a copper contact (bond) pad (13) (Figure 1) formed on the silicon substrate for either wire bonding or solder bump bonding. The official action states:

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine Moyer et al. and Wyland with Horiuchi et al. to provide a metallic contact structures of low cost and high conductivity (Moyer et al., col. 1, lines 41-43).

For reasons corresponding to those described above with reference to Claim 9, the applicants respectfully submit that the rejection of claim 19 is improper because the prima facie case of obviousness set forth in the official action does not comply with the requirements set forth in MPEP § 2143. Specifically, the official action does not set forth a motivation that complies with the requirements set forth in MPEP § 2143, the official action does not indicate where in the cited references may be found a teaching or suggestion that would provide a person of ordinary skill in the art with a reasonable expectation of success in the event such person were to undertake the modification of Horiuchi's semiconductor device proposed in the official action and the proposed combination of references does not teach or suggest all the claim limitations.

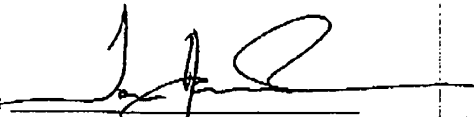

The applicants respectfully request that the amendments set forth above be entered and that Examiner reconsider the rejection of the rejected claims. The applicants believe that the application as now amended is in condition for allowance, and respectfully request such favorable action. If any matters remain outstanding in the application, the Examiner is respectfully invited to telephone the applicant attorney at (650) 485-3015 so that these matters may be resolved.

EXAMINER

MAGEE, THOMAS J

ART UNIT PAPER NUMBER

2811

DATE MAILED: 05/31/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

fm

| | | | |
|-----------------------------------------------------------------|--------------------------------------|-----------------------------------|--|
| Advisory Action Before the Filing of an Appeal Brief | Application No. 10/608,605 | Applicant(s) LEE ET AL. | |
| | Examiner Thomas J. Magee | Art Unit 2811 | |

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

THE REPLY FILED 08April 2005 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.

1. The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:

- a) The period for reply expires _____ months from the mailing date of the final rejection.
- b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.

Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).

Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

NOTICE OF APPEAL

2. The Notice of Appeal was filed on _____. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).

AMENDMENTS

3. The proposed amendment(s) filed after a final rejection, but prior to the date of filing a brief, will not be entered because

- (a) They raise new issues that would require further consideration and/or search (see NOTE below);
- (b) They raise the issue of new matter (see NOTE below);
- (c) They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or
- (d) They present additional claims without canceling a corresponding number of finally rejected claims.

NOTE: _____. (See 37 CFR 1.116 and 41.33(a)).

4. The amendments are not in compliance with 37 CFR 1.121. See attached Notice of Non-Compliant Amendment (PTOL-324).

5. Applicant's reply has overcome the following rejection(s): _____.

6. Newly proposed or amended claim(s) _____ would be allowable if submitted in a separate, timely filed amendment canceling the non-allowable claim(s).

7. For purposes of appeal, the proposed amendment(s): a) will not be entered, or b) will be entered and an explanation of how the new or amended claims would be rejected is provided below or appended.

The status of the claim(s) is (or will be) as follows:

Claim(s) allowed: _____.

Claim(s) objected to: _____.

Claim(s) rejected: 1-20.

Claim(s) withdrawn from consideration: _____.

AFFIDAVIT OR OTHER EVIDENCE

8. The affidavit or other evidence filed after a final action, but before or on the date of filing a Notice of Appeal will not be entered because applicant failed to provide a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented. See 37 CFR 1.116(e).

9. The affidavit or other evidence filed after the date of filing a Notice of Appeal, but prior to the date of filing a brief, will not be entered because the affidavit or other evidence failed to overcome all rejections under appeal and/or appellant fails to provide a showing a good and sufficient reasons why it is necessary and was not earlier presented. See 37 CFR 41.33(d)(1).

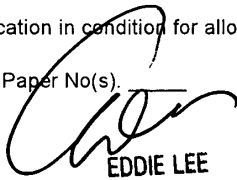

10. The affidavit or other evidence is entered. An explanation of the status of the claims after entry is below or attached.

REQUEST FOR RECONSIDERATION/OTHER

11. The request for reconsideration has been considered but does NOT place the application in condition for allowance because: (See attached sheet).

12. Note the attached Information Disclosure Statement(s). (PTO/SB/08 or PTO-1449) Paper No(s).

13. Other: _____.

EDDIE LEE
SUPERVISORY PATENT EXAMINER
TECHNOLOGY CENTER 2800

Item 3a) :

The proposed amendments to Claims 1, 6, 11, and 16 will not be entered because they raise new issues that would require further consideration and/or search.

Item 11 :

The request for reconsideration has been carefully considered, in terms of Arguments presented by Applicant relevant to Claim rejections, but these have not been found to be persuasive.

With regard to Claim 6, (pp. 6 – 7, Response) Applicant is correct in the contention that (31) is the bond pad element and (61) is an interconnecting structure. There was a mistype of numbers and (31) is correct, as stated in the earlier Non-Final action. Remaining remarks are addressed to an amendment, and as stated above, further consideration and/or search will be required.

With regard to Claim 11, (pp. 7 – 8, Response) the (unamended) claim recites, "*a bonding pad located on one of the major surfaces,*" and Figure 1 discloses (22) a bonding pad on one of the major surfaces (Col. 3, lines 41 – 47), such that the reference reads on the recited claim.

With regard to Claims 3 and 8 (pp.8 – 10, Response), it should be noted that the Office Action recites the referenced article as evidence that multilayer laminate boards are well known and widely used in the art, a fact to which Applicant concedes (p. 9). The contention by Applicant that it would not be obvious to use the multilayer laminate boards with Wyland is not correct.

Wyland discloses (Abstract) that the invention includes a thermally conductive foam to conduct heat away from the device. As such, it is both an intent and an objective in the invention of Wyland to reduce heating of the device (Col. 1, lines 16 – 29). The design and use of multilayer boards with interlayer (metal) layers has been routinely used and provides an avenue for additional dissipation (See, for example, Adam, Proc. IEEE Semi-Therm Symp., 1994) Hence, the use of multilayer boards in Wyland has more than adequate motivation for combining.

With regard to Claims 5, 10, 15, and 20, (pp.10 – 12, and 16, Response), attempts to place Wilson et al. into class 438 are not germane, since Wilson et al. is a textbook and a non-patent literature source. Further, the actual cost analysis of process steps is also not germane and beyond the purview of this Office Action. In regard to signal delay, Applicant has misread the Wilson et al. reference (p. 870). For “long” lines of increased width, as present in Wyland, the advantage is tungsten. Hence, there is both advantage and motivation for modifying Wyland and including tungsten as the interconnect.

With regard to Claim 9 (pp. 12 – 14, Response), the advantages of using copper for contact bond pads (13) (Figure 1) in Moyer et al. is conceded by Applicant (p. 13). Since a solder layer (Col. 7, lines 19 – 21) is present on bond pad 31 in Wyland, the motivation for combining Wyland and Moyer et al. is clear, i.e., to improve solder bonding to the bond pad layer (Moyer et al., Col. 2, lines 19 – 21). Prima facie obviousness is indeed established. Contentions that

Art Unit: 2811

Moyer et al. is non-analogous art (p. 13) are not germane, since Moyer et al. is clearly disclosing within the semiconductor device/packaging area and is disclosing a "layered structure" (Col. 2, line 54).

With regard to Claims 13 and 18 (pp. 15 – 16, Response), Horiuchi et al. disclose that the substrate 5 is a "resinous substrate" (epoxy) (Col. 3, lines 50 – 51), but do not disclose that it is a multilayer laminate structure. Since the Electronic Packaging and Production article is used to identify such structures as routine in the art, it is apparent that a multilayer board could be used in Horiuchi et al to improve reliability and heat flow, as discussed for Claims 3 and 8. Further, as mentioned for Item 3 above, the amended claims will require further search and consideration.

With regard to Claim 19 (pp. 16 – 17, Response), as discussed for Claim 9, the advantages of using copper for contact bond pads (13) (Figure 1) in Moyer et al. is conceded by Applicant (p. 13). Since a solder layer is present on bond pad in Horiuchi et al., the motivation for combining Wyland and Moyer et al. is clear, i.e., to improve solder bonding to the bond pad layer (Moyer et al., Col. 2, lines 19 – 21). Prima facie obviousness is indeed established.

The article by J. Adams, "New Correlations Between Electrical Current and Temperature Rise in PCB Traces," is included herein only as a reference to support the response above.

REQUEST FOR CONTINUED EXAMINATION (RCE) 37 CFR 1.114

Subsection (b) of 35 U.S.C. 132, effective on May 29, 2000, provides for continued examination of an utility or plant application filed on or after June 8, 1995.

See The American Inventors Protection Act of 1999 (AIPA).

Sir:

This is a Request for Continued Examination (RCE) under CFR 1.114 of the above-identified application.

NOTE: 37 CFR 1.114 is effective on May 20, 2000. If the above application was filed prior to May 29, 2000, applicant may wish to consider filing a continued prosecution application (CPA) under CFR 1.53(c) (PTO/SB/29) instead of a RCE to be eligible for the patent term adjustment provisions of the AIPA. See Changes to Application Examination and Provisional Application Practice, Interim Rule, 65 Fed. Reg. 14885 (Mar. 20, 2000), 1239 off. Gaz. Pat. Office 47 (Apr.11, 2000), which Established RCE practice.

Submission under 37 CFR 1.114

Previously submitted:

- Consider the amendment(s)/reply under 37 CFR 1.116 previously filed on April 6, 2005 (Any unentered amendment(s) referred to above will be entered).
- Consider the arguments in the Appeal Brief or Reply Brief previously filed on

AMENDMENT UNDER 37 CFR § 1.116

Commissioner for Patents
P.O. Box 1450
Alexandria
VA 22313-1450

Sir:

In response to the Official Action dated 9 February 2005, the applicants respectfully
request entry of the following amendments:

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

EXAMINER

OWENS, DOUGLAS W

ART UNIT PAPER NUMBER

2811

DATE MAILED: 09/27/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

87

| | | | |
|------------------------------|--------------------------------------|-----------------------------------|--|
| Office Action Summary | Application No. 10/608,605 | Applicant(s) LEE ET AL. | |
| | Examiner Douglas W. Owens | Art Unit 2811 | |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 6/21/05.
- 2a) This action is **FINAL**.
- 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-20 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date _____.
- 5) Notice of Informal Patent Application (PTO-152)
- 6) Other: _____.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 21, 2005 has been entered.

Claim Objections

2. Claims 1 – 10 are objected to because of the following informalities: in line 7 of claim 1, --of the substrate-- should be inserted after "surfaces", since a major surface of the die is also referenced in the claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, 6, 7, 11, 12, 16 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 6,268,654 to Glenn et al.

Regarding claims 1 and 11, Glenn et al. teach a packaging device for a semiconductor die, (Fig. 5) comprising:

a substantially planar substrate (200) having opposed major surfaces;

a conductive die mounting pad (222) dimensioned to accommodate the die (100), the pad being located on one of the major surfaces, and in contact with a major surface of the die;

a conductive connecting pad (221) located on the other of the major surfaces of the substrate; and

a conductive interconnecting element (220) extending through the substrate and electrically interconnecting the mounting pad and the connecting pad.

Regarding claims 2, 7, 12 and 18, Glenn et al. teach a device, in which the substrate comprises ceramic (Col. 5, lines 19 – 27).

Regarding claims 6 and 16, Glenn et al. teach a device, further comprising:

a bonding pad (204) smaller in area than the die mounting pad, the bonding pad located on the one of the major surfaces;

an additional conductive connecting pad (209) located on the other of the major surfaces; and

an additional conductive interconnecting element (203) extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4, 5, 9, 14, 15, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al.

Regarding claims 4, 9, 14 and 19, Glenn et al. teach a device, wherein the mounting pad comprises one of copper and gold (Col. 12, lines 40 – 44). Glenn et al. do not teach forming the connecting pad and the bonding pad to comprise copper, silver, gold, nickel or tungsten. Copper, silver, gold, nickel and tungsten are well known materials that are well suited for the intended use. It would have been obvious to one of ordinary skill in the art to use the cited materials, since it is desirable to use materials that are known and suited for the intended use. The selection of a known material based on its suitability for its intended use supported a *prima facie* obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945).

Regarding claims 5, 10, 15 and 20, Glenn et al. do not teach that the conductive interconnecting element comprises tungsten. Tungsten is a known material that is well suited for use in an interconnecting element. It would have been obvious to one of ordinary skill in the art to use tungsten for the interconnect since it is a known material that is well suited for the intended use.

7. Claims 3, 8 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al. as applied to claims 1, 6 and 11 above, and further in view of US Patent No. 6,191,477 to Hashemi.

Glenn et al. do not teach a device, wherein the substrate is an epoxy laminate or silicon. Hashemi teaches a device, wherein the substrate is an epoxy laminate (Col. 3,

lines 1 – 7). It would have been obvious to one of ordinary skill in the art at the time the invention was made, to incorporate the teaching of Hashemi into the device taught by Glenn et al., since it is desirable to use materials that known and well suited for the intended use.

8. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al. as applied to claim 16 above, and further in view of US Patent No. 6,084,295 to Horiuchi et al.

Glenn et al. do not teach a device further comprising an encapsulant encapsulating the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located. Horiuchi et al. teach an encapsulant encapsulating the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located. It would have been obvious to one of ordinary skill in the art to incorporate the teaching of Horiuchi et al. into the device taught by Glenn et al. since it desirable to protect the device from the elements.

Response to Arguments

9. Applicant's arguments with respect to claims 1 – 20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas W. Owens whose telephone number is 571-272-1662. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven H. Loke can be reached on 571-272-1657. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

AMENDMENT AND RESPONSE

Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Sir:

The outstanding non-final Office Action mailed September 27, 2005 has been carefully considered. In response thereto, please enter the following amendments and consider the following remarks.

AUTHORIZATION TO DEBIT ACCOUNT

It is not believed that extensions of time or fees for net addition of claims are required, beyond those that may otherwise be provided for in documents accompanying this paper. However, in the event that additional extensions of time are necessary to allow consideration of this paper, such extensions are hereby petitioned under 37 C.F.R. § 1.136(a), and any fees required therefor (including fees for net addition of claims) are hereby authorized to be charged to Avago deposit account no. 50-3718.

01/23/2006 JBALINAN 00000011 503718 10608605
01 FC:1202 50.00 DA

AMENDMENTS TO THE CLAIMS

Please amend the present application as follows:

Claims

1. (Currently amended) A packaging device for a semiconductor die, the packaging device comprising:
 - a substantially planar substrate having opposed major surfaces;
 - ~~located on one of the major surfaces;~~ a an electrically conductive die mounting pad located on one of the major surfaces of the substrate, the conductive die mounting pad dimensioned to accommodate the die with a major surface of the die in contact therewith;
 - a first electrically conductive connecting pad located on the other of the major surfaces of the substrate, the first electrically conductive connecting pad dimensioned to conform to an industry standard pad layout of a printed circuit board; ~~and~~
 - a first electrically conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the first electrically conductive connecting pad;
 - an electrically conductive bonding pad located on the one of the major surfaces of the substrate;
 - a second electrically conductive connecting pad located on the other of the major surfaces of the substrate; and
 - a second electrically conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the second electrically conducting connecting pad.

2. (Currently amended) The packaging device of claim 1, in which the substrate comprises one of a ceramic material and a material selected from epoxy laminate and silicon.

3. (Canceled)

4. (Currently amended) The packaging device of claim 1, in which the mounting pad and the first electrically conductive connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.

5. (Currently amended) The packaging device of claim 1, in which the first electrically conductive interconnecting element comprises tungsten.

6- 10. (Canceled)

11. (Currently amended) A semiconductor device, comprising:

a semiconductor die comprising metallization on at least a portion of a bottom surface of the die;

a substantially planar substrate having opposed major surfaces;

located on one of the major surfaces, a conductive die mounting pad dimensioned to accommodate the semiconductor die;

a conductive connecting pad located on the other of the major surfaces; and

a conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the connecting pad;

in which the semiconductor die is mounted on the die mounting pad whereby an electrical connection is formed between the metallization on the at least a portion of the bottom surface of the die and with a major surface thereof in contact with the mounting pad.

12. (Original) The semiconductor device of claim 11, in which the substrate comprises ceramic.

13. (Original) The semiconductor device of claim 11, in which the substrate comprises a material selected from epoxy laminate and silicon.

14. (Original) The semiconductor device of claim 11, in which the mounting pad and the connecting pad each comprise at least one of copper, silver, gold, nickel and tungsten.

15. (Original) The semiconductor device of claim 11, in which the conductive interconnecting element comprises tungsten.

16. (Currently amended) The semiconductor device of claim 11, additionally comprising:

a conductive bonding pad smaller in area than the die mounting pad, the bonding pad

located on the one of the major surfaces;

an additional conductive connecting pad located on the other of the major surfaces;

an additional conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad, ~~and~~;

the semiconductor die additionally comprising metallization on at least a portion of a top surface of the die; and

a bonding wire extending between the metallization on the at least a portion of the top surface of the semiconductor die and the bonding pad.

17. (Original) The semiconductor device of claim 16, additionally comprising an encapsulant encapsulating the semiconductor die and at least a portion of the major surface of the substrate on which the mounting pad is located.

18. (Original) The semiconductor device of claim 16, in which the substrate comprises a material selected from ceramic, epoxy laminate and silicon.

19. (Original) The semiconductor device of claim 16, in which the mounting pad, the bonding pad and the connecting pads each comprise at least one of copper, silver, gold, nickel and tungsten.

20. (Original) The semiconductor device of claim 16, in which the conductive interconnecting element comprises tungsten.

21. (New) A semiconductor device, comprising:

a substantially planar substrate having opposed major surfaces;

an electrically conductive mounting pad located on one of the major surfaces of the substrate;

a semiconductor die having a metallized bottom major surface that is mounted on the electrically conductive mounting pad;

a first electrically conductive connecting pad located on the other of the major surfaces of the substrate; and

a first electrically conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the first electrically conductive connecting pad.

22. (New) The semiconductor device of claim 21 wherein the semiconductor die comprises a light emitting diode (LED) and the metallized bottom major surface comprises one of an anode and a cathode of the LED.

23. (New) The semiconductor device of claim 21, further comprising:
an electrically conductive bonding pad located on the one of the major surfaces of the substrate;
a bonding wire extending between a metallized top major surface of the semiconductor die and the electrically conductive bonding pad;
a second electrically conductive connecting pad located on the other of the major surfaces of the substrate; and
a second electrically conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the second connecting pad.

24. (New) The semiconductor device of claim 23 wherein the semiconductor die comprises a light emitting diode (LED), the metallized top major surface comprises a first electrode of the LED and the metallized bottom major surface comprises a second electrode of the LED.

25. (New) The semiconductor device of claim 21 wherein the first electrically conductive interconnecting element is selected to withstand an operating temperature when the semiconductor die is mounted on the electrically conductive mounting pad and to provide a low-resistance electrical connection between the mounting pad and the first electrically conductive connecting pad.

26. (New) The semiconductor device of claim 25, wherein the first electrically conductive interconnecting element comprises tungsten.

27. (New) The semiconductor device of claim 25, wherein the first electrically conductive interconnecting element comprises a slug of electrically conductive material, the slug having a diameter selected to press-fit the slug into a through hole located in the substrate between the mounting pad and the first electrically conductive connecting pad.

REMARKS

This is a full and timely response to the non-final Office Action mailed September 27, 2005. Reconsideration and allowance of the application and presently pending claims are respectfully requested.

Present Status of Patent Application

Upon entry of the amendments in this response, claims 1-2, 4-5, and 11-27 remain pending in the present application. More specifically, claims 21-27 have been newly submitted with no new material being added; claims 1, 2, 4, 5, 11, and 16 have been currently amended with no introduction of new matter; and claims 3 and 6-10 have been canceled. Applicants have canceled these claims merely to reduce the number of disputed issues and to facilitate early allowance and issuance of other claims in the present application. Applicants reserve the right to pursue the subject matter of these claims in a continuing application, if Applicants so choose, and do not intend to dedicate the canceled subject matter to the public. Reconsideration and allowance of the application and presently pending claims are respectfully requested.

A. Claim Objections

Statement of the Objection

Claims 1-10 are objected to because of the following informalities: in line 7 of claim 1, - of the substrate -- should be inserted after "surfaces", since a major surface of the die is also referenced in the claim. Appropriate correction is required.

Response to the Objection

Claim 1 has been appropriately amended as per the Office Action recommendation. Since the objection has been overcome, Applicants respectfully request allowance of claim 1 as well as the corresponding dependent Claims 2, 4, and 5 that are currently pending. Claims 3 and 6-10 have been canceled.

B. Claim Rejections under 35 U.S.C. §102(b)

Statement of the Rejection

Claims 1, 2, 6, 7, 11, 12, 16 and 18 are rejected under 35 U.S.C. §102(b) as being anticipated by US Patent No. 6,268,654 to Glenn et al.

Response to the Rejection

A proper rejection under 35 U.S.C. §102(b) requires that a single prior art reference

disclose each element of the claim. Furthermore, anticipation requires that each and every element of the claimed invention be disclosed in a single prior art reference.

Applicants respectfully assert that claims 1, 2, 6, 7, 11, 12, 16 and 18 are now in condition for allowance. Further remarks elaborating on Applicant's assertion have been provided below for each of the rejected claims.

Claim 1

The Office Action asserts that Glenn et al. anticipates Applicant's Claim 1. However, in doing so, the Office Action has improperly asserted that certain elements of Glenn et al. anticipate allegedly equivalent elements of Applicants' Claim 1. Specifically, attention is drawn to page 3, lines 6-7 of the Office Action ("a conductive interconnecting element (220) extending through the substrate and electrically interconnecting the mounting pad and the connecting pad"), which alleges that Glenn's *thermal* via 220 anticipates Applicants' conductive interconnecting element 120 that *electrically* interconnects Applicants' mounting pad 130 and connecting pad 140 (FIG. 1B to be used for Applicants' reference designators).

To the contrary, Applicants respectfully assert that Glenn's mounting pad and connecting pad are *not* electrically interconnected by thermal via 220. Applicants' assertion is based on Glenn's col. 12 lines 63-67, reproduced below for easy reference:

Substrate 200 includes *thermal vias 220*, which extend through substrate 200 and *conduct heat* from upper surface 201 to lower surface 202 of substrate 200. *By contrast, conductive vias 203* of substrate 200 *conduct electrical* signals to and from die 100. (Emphasis added)

This aspect is described further in Glenn's col. 13, lines 7-27 reproduced below for easy reference:

Heat sink metallization 221 is formed on lower surface 202 of substrate 200. Thermal vias 220 connect metal die pad 222 to heat sink metallization 221. Accordingly, *heat generated by die 100 is conducted from lower surface 102 of die 100 to die pad 222 to thermal vias 220 and thereby to heat sink metallization 221.* Heat sink metallization 221 may be formed on lower surface 202 of substrate 200 by the same conventional masking and etching process used to form metallizations 204 and 209, as described above. The size and shape of heat sink metallization 221 may vary, depending on the application. For example, heat sink metallization 221 may be square or rectangular in shape and may be the same area as die 100. As is conventionally known, metal solder may be used to thermally connect heat sink metallization 221 to a printed circuit board to dissipate heat from package 12.

Package 12 includes electrical conductors formed on upper surface 201 and lower surface 202 of substrate 200. These electrical conductors include metallizations 204 formed on upper surface 201 and metallizations 209 formed on lower surface 202 of substrate 200. *Metalizations 204 and 209 are electrically connected to vias 203.* Although not shown in FIG. 5, conductive contacts similar to contacts 207 and 209 of

FIG. 1 are formed on the ends of metalization 204 and 209, respectively. (Emphasis added)

As described above and illustrated in his FIG. 5, Glenn has made a clear distinction between a *thermal via 220* and an *electrically conductive via 203* and does not provide any indication or suggestion that the thermal via 220 may be used for electrical conduction.

However, in the interests of further clarifying the scope of the invention, Applicants have currently amended Claim 1 to include language that explicitly describes certain aspects related to connecting pad 140. This language includes the “electrically conductive connecting pad dimensioned to conform to an industry standard pad layout of a printed circuit board.” Glenn does not disclose such an industry standard pad layout for his heat sink metallization 221 (the alleged equivalent to Applicants’ connecting pad 140) because the primary purpose of his heat sink metallization 221 is to dissipate heat rather than to provide electrical conduction.

Applicants have further amended Claim 1 to include certain other elements, such as bonding pad 132, second connecting pad 142 and second interconnecting element 122, in addition to die mounting pad 130.

For at least the reasons described above, Applicants respectfully assert that the rejection of Claim 1 under 35 U.S.C. 102(b) is improper and hereby request withdrawal of the rejection followed by allowance of Claim 1.

Claim 2

Because Claim 1 is allowable, Claim 2 that depends directly or indirectly on Claim 1 is also allowable as a matter of law. *In re Fine*, 837 F.2d 1071 (Fed. Cir. 1988).

Applicants respectfully request withdrawal of the rejection, followed by allowance of Claim 2.

Claims 6-7

Claims 6 and 7 have been canceled thereby rendering moot the rejection of these claims.

Claim 11

Applicants’ currently amended Claim 11 includes a semiconductor device “in which the semiconductor die is mounted on the die mounting pad whereby an electrical connection is formed between the metallization on the at least a portion of the bottom surface of the die and the mounting pad.” The die mounting pad uses an interconnecting element that “electrically” interconnects the die mounting pad to a connecting pad located on the underside of the substrate.

The cited prior art of Glenn discloses “thermal vias 220 that extend through substrate 200 and conduct heat from upper surface 201 to lower surface 202 of substrate 200,” but fails to

disclose an electrical connection as described in Applicants' currently amended Claim 11. Consequently, Applicants respectfully assert that Claim 11 is allowable and hereby request withdrawal of the rejection followed by allowance of Claim 11.

Claims 12, 16 and 18

Because Claim 11 is allowable, Claims 12, 16 and 18 that depend directly or indirectly on Claim 11 is also allowable as a matter of law. *In re Fine*, 837 F.2d 1071 (Fed. Cir. 1988).

Applicants respectfully request withdrawal of the rejection, followed by allowance of Claim 12, 16 and 18.

C. Claim Rejections under 35 U.S.C. §103(a)

Statement of the Rejection

Claims 4, 5, 9, 14, 15, 19 and 20 have been rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al.

Response to the Rejection

Applicants respectfully request withdrawal of the rejection of claims 4, 5, 9, 14, 15, 19 and 20 for at least the reason that the rejection does not satisfy the requirements of MPEP § 2143.03, which states in pertinent part: "If an independent claim is nonobvious under 35 U.S.C. 103, then any claim depending therefrom is nonobvious. *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)."

Specifically, claims 4, 5, 9, 14, 15, 19 and 20 are nonobvious as each of them is a dependent claim. Each of the corresponding independent claims have not been rejected under 35 U.S.C. 103(a). Hence, Applicants respectfully assert that claims 4, 5, 9, 14, 15, 19 and 20 cannot be properly rejected under 35 U.S.C. 103(a), and hereby request withdrawal of the rejection followed by allowance of claims 4, 5, 9, 14, 15, 19 and 20.

Additionally, the MPEP provides several guidelines for rejecting a claim under 35 U.S.C. 103(a). Specifically, reference is made to MPEP 706.2(j) *Contents of a 35 U.S.C. 103 Rejection*, which states in pertinent part:

To establish a *prima facie* case of obviousness, three basic criteria must be met. First, there must be some suggestion or motivation, either in the references themselves or in the knowledge generally available to one of ordinary skill in the art, to modify the reference or to combine reference teachings. Second, there must be a reasonable expectation of success. Finally, the prior art reference (or references when combined) must teach or suggest all the claim limitations. The teaching or suggestion to make the claimed combination and the reasonable expectation of success must both be found in the prior art and not based on applicant's disclosure. *In re Vaeck*, 947

F.2d 488, 20 USPQ2d 1438 (Fed. Cir. 1991). See MPEP § 2143 - § 2143.03 for decisions pertinent to each of these criteria.
(Emphasis added)

Comments related to MPEP 706.2(j) are presented below.

Claims 4 and 5

Claims 4 and 5 are each directly dependent on Claim 1 and therefore all the elements of Claim 1 are included in Claims 4 and 5 via the dependency. The cited prior art reference, Glenn et al, does not teach or suggest all the claim limitations of each of Applicants' Claims 4 and 5 at least because of the dependency of these claims to independent Claim 1. Glenn et al does not at least teach or suggest "a first *electrically conductive interconnecting element* extending through the substrate and *electrically interconnecting the mounting pad and the first electrically conductive connecting pad,*" which is a part of Applicants' Claim 1.

Consequently, Applicants respectfully assert that a rejection under 35 U.S.C 103(a) would be improper because a *prima facie* case of obviousness cannot be established for at least the reason mentioned above.

Applicants respectfully request withdrawal of the rejection followed by allowance of Claims 4 and 5.

Claim 9

Claim 9 has been canceled thereby rendering moot the rejection of Claim 9.

Claims 14, 15, 19 and 20

Claims 14, 15, 19 and 20 are each dependent, directly or indirectly, on Claim 11 and therefore all the elements of Claim 11 are included in Claims 14, 15, 19 and 20 via the dependency. The cited prior art reference, Glenn et al, does not teach or suggest all the claim limitations of each of Applicants' Claims 14, 15, 19 and 20. Glenn et al does not at least teach or suggest a semiconductor device "in which the semiconductor die is mounted on the die mounting pad whereby *an electrical connection* is formed between the metallization on the at least a portion of the bottom surface of the die and the mounting pad," which is a part of Applicants' Claim 11.

Consequently, Applicants respectfully assert that a rejection under 35 U.S.C 103(a) would be improper because a *prima facie* case of obviousness cannot be established for at least the reason mentioned above.

Applicants respectfully request withdrawal of the rejection followed by allowance of Claims 14, 15, 19 and 20.

D. Claim Rejections under 35 U.S.C. §103(a)

Statement of the Rejection

Claims 3, 8 and 13 have been rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al. as applied to claims 1, 6 and 11 above, and further in view of US Patent No. 6,191,477 to Hashemi.

Response to the Rejection

In light of MPEP § 2143.03 described above, Applicants respectfully assert that dependent claims 3, 8 and 13 cannot be properly rejected under 35 U.S.C. 103(a), and hereby request withdrawal of the rejection followed by allowance of claims 3, 8 and 13. Additional arguments with reference to MPEP 706.2(j) *Contents of a 35 U.S.C. 103 Rejection* are presented below.

Claims 3 and 8

Claims 3 and 8 have been canceled thereby rendering moot the rejection of these claims.

Claim 13

Claim 13 depends directly on Claim 11 and therefore all the elements of Claim 11 are included in Claim 13 via the dependency. The cited prior art combination of Glenn et al. and Hashemi, does not teach or suggest all the claim limitations of Applicants' Claim 13. The combination does not at least teach or suggest "a first *electrically conductive interconnecting element* extending through the substrate and *electrically interconnecting the mounting pad and the first electrically conductive connecting pad*," which is a part of Applicants' Claim 11.

Consequently, for at least this reason, Applicants respectfully assert that a rejection of Claim 13 under 35 U.S.C. 103(a) would be improper and hereby request withdrawal of the rejection followed by allowance of Claim 13.

E. Claim Rejections under 35 U.S.C. §103(a)

Statement of the Rejection

Claim 17 has been rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al. as applied to claim 16 above, and further in view of US Patent No. 6,084,295 to Horiuchi et al.

Response to the Rejection

In light of MPEP § 2143.03 described above, Applicants respectfully assert that dependent claim 17 cannot be properly rejected under 35 U.S.C. 103(a) and hereby request withdrawal of the rejection followed by allowance of claim 17. Additional arguments with reference to MPEP 706.2(j) *Contents of a 35 U.S.C. 103 Rejection* are presented below.

Claim 17

Claim 17 depends indirectly on Claim 11 and therefore all the elements of Claim 11 are included in Claim 17 via the dependency. The cited prior art combination of Glenn et al. and Horiuchi et al, does not teach or suggest all the claim limitations of Applicants' Claim 17. The combination does not at least teach or suggest "a first *electrically conductive interconnecting element* extending through the substrate and *electrically interconnecting the mounting pad and the first electrically conductive connecting pad*," which is a part of Applicants' Claim 11.

Consequently, for at least this reason, Applicants respectfully assert that a rejection of Claim 17 under 35 U.S.C. 103(a) would be improper and hereby request withdrawal of the rejection followed by allowance of Claim 17.

Prior Art Made of Record

The prior art made of record has been considered, but is not believed to affect the patentability of the presently pending claims.

CONCLUSION

In light of the foregoing amendments and for at least the reasons set forth above, Applicant respectfully submits that all objections and/or rejections have been traversed, rendered moot, and/or accommodated, and that claims 1-2, 4-5, and 11-27 are in condition for allowance. Favorable reconsideration and allowance of the present application and all pending claims are hereby courteously requested. If, in the opinion of the Examiner, a telephonic conference would expedite the examination of this matter, the Examiner is invited to call the undersigned representative at (404) 610-5689.

Respectfully submitted,

P. S. Dara

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 27 December 2005.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1,2,4,5 and 11-27 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1,2,4,5, 11-21,23 and 25-27 is/are rejected.
- 7) Claim(s) 22,24 is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
 * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)

 Paper No(s)/Mail Date _____.
- 5) Notice of Informal Patent Application (PTO-152)
- 6) Other: _____.

DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: in line 16 of the claim "susbtrate" should be replaced with --substrate--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 5,640,048 to Selna.

Regarding claim 1, Selna teaches a packaging device for a semiconductor die (Fig. 1), the packaging device comprising:

a substantially planar substrate (4) with opposed major surfaces;

an electrically conductive die mounting pad (8C) located on one of the major surfaces of the substrate, the conductive die mounting pad dimensioned to accommodate the die (12) with a major surface of the die in contact therewith;

a first electrically conductive connecting pad (10C) on the other of the major surfaces of the substrate, the first electrically conductive connecting pad dimensioned to conform to an industry standard pad layout of a printed circuit board;

a first electrically conductive interconnecting element (6C) extending through the substrate and electrically interconnecting the mounting pad and the first electrically conductive connecting pad;

an electrically conductive bonding pad (8A) located on the one of the major surfaces of the substrate;

a second electrically conductive pad (10A) located on the other of the major surfaces of the substrate; and

a second electrically conductive interconnecting element (6A) extending through the substrate and electrically interconnecting the bonding pad and the second electrically conducting connecting pad.

Regarding claim 2, Selna teaches a packaging device, wherein the substrate comprises an epoxy laminate (Col 2, lines 38 – 42).

Regarding claim 4, Selna teaches a packaging device, wherein the mounting pad and the first electrically conductive connecting pad comprise copper (Col. 1, lines 37 – 42).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 5 and 11 – 21, 23, 25 – 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Selna.

Regarding claim 5, Selna does not teach using tungsten for the first conductive interconnecting element. Tungsten is a known material that is well suited for use in interconnecting elements. It would have been obvious to one having ordinary skill in the art to select tungsten, since it is a known metal that is well suited for the intended use.

Regarding claims 11 and 21, Selna teaches a semiconductor device, comprising:
semiconductor die including pinouts (Col. 1, lines 17 – 20) on a portion of a bottom surface of the die;

a substantially planar substrate (4) having opposed major surfaces;

a conductive die mounting pad (8C) located on one of the major surfaces, wherein the conductive die mounting pad is dimensioned to accommodate the semiconductor die;

a conductive connecting pad (10C) located on the other of the major surfaces;

a conductive interconnecting element (6C) extending through the substrate and electrically interconnecting the mounting pad and the connecting pad; and

wherein the semiconductor die is mounted on the die mounting pad and an electrical connection is formed between the die pads and the mounting pad.

Selna does not teach that the pinouts on the die comprise a metal. Selna is silent with respect to the pinout material. It would have been obvious to one of ordinary skill in the art to select metal for the pinout material (metallization on a bottom portion), since metal is a known material that is well suited for the intended use. The selection of a known material based on its suitability for its intended use supported a *prima facie*

Art Unit: 2811

obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945).

Regarding claims 13 and 18, Selna teaches a packaging device, wherein the substrate comprises an epoxy laminate (Col 2, lines 38 – 42).

Regarding claim 14, Selna teaches a packaging device, wherein the mounting pad and the first electrically conductive connecting pad comprise copper (Col. 1, lines 37 – 42).

Regarding claims 15, 20 and 26, Selna does not teach using tungsten for the conductive interconnecting element. Tungsten is a known material that is well suited for use in interconnecting elements. It would have been obvious to one having ordinary skill in the art to select tungsten, since it is a known metal that is well suited for the intended use.

Regarding claims 16 and 23, Selna teaches a semiconductor device, further comprising:

a conductive bonding pad (8A) smaller in area than the die mounting pad, the bonding pad located on the one of the major surfaces;

an additional conductive connecting pad (10A) located on the other of the major surfaces;

an additional conductive interconnecting element (6A) extending through the substrate and electrically interconnecting the bonding pad and the additional connecting pad;

the semiconductor die additionally comprising pads on the die (Col. 2, lines 3 – 6); and

a bonding wire (22) extending between the die pad and the bonding pad.

Selna does not teach that the die pads on the die comprise a metal. Selna is silent with respect to the die pad material. It would have been obvious to one of ordinary skill in the art to select metal for the die pad material (metallization on a bottom portion), since metal is a known material that is well suited for the intended use. The selection of a known material based on its suitability for its intended use supported a *prima facie* obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945).

Regarding claim 17, Selna teaches a semiconductor device, further comprising an encapsulant (16) encapsulating the semiconductor die and a portion of the major surface of the substrate on which the mounting pad is located.

Regarding claim 19, Selna teaches a semiconductor device, wherein the mounting pad, the bonding pad and the connecting pads each comprise copper.

Regarding claim 25, Selna teaches a semiconductor device, wherein the first electrically conductive interconnecting element is selected to withstand an operating temperature when the semiconductor die is mounted on the electrically conductive mounting pad and to provide a low-resistance electrical connection between the mounting pad and the first electrically conductive connecting pad.

Regarding claim 27, Selna teaches a semiconductor device, wherein the first electrically conductive interconnecting element comprises a slug of electrically

conductive material, the slug having a diameter selected to fit into a through hole in the substrate between the mounting pad and the first electrically conductive connecting pad. Selna does not teach that the slug is selected to press-fit into the through hole. This is considered a product-by-process limitation. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

6. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Selna as applied to claim 11 above, and further in view of US Patent No. 6,268,654 to Glenn et al.

Selna does not teach a semiconductor device, wherein the substrate comprises ceramic. Glenn et al. teaches a semiconductor device, wherein the substrate comprises ceramic (Col. 5, lines 19 – 27). It would have been obvious to one of ordinary skill in the art to incorporate the teaching of Glenn et al. into the device taught by Selna, since it is desirable to use materials that are known and well suited for the intended use.

Allowable Subject Matter

7. Claims 22 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

8. Applicant's arguments with respect to claims 1, 2, 4, 5 and 11 – 21 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

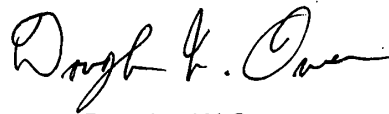

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas W. Owens whose telephone number is 571-272-1662. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie C. Lee can be reached on 571-272-1732. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

AMENDMENT AND RESPONSE

Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Sir:

The outstanding final Office Action mailed April 6, 2006 has been carefully considered. In response thereto, please enter the following amendments and consider the following remarks.

AUTHORIZATION TO DEBIT ACCOUNT

It is not believed that extensions of time or fees for net addition of claims are required, beyond those that may otherwise be provided for in documents accompanying this paper. However, in the event that additional extensions of time are necessary to allow consideration of this paper, such extensions are hereby petitioned under 37 C.F.R. § 1.136(a), and any fees required therefor (including fees for net addition of claims) are hereby authorized to be charged to Avago deposit account no. 50-3718.

AMENDMENTS TO THE CLAIMS

Please amend the present application as follows:

Claims

1- 4. (Canceled)

5. (Currently amended) A packaging device for a semiconductor die, the packaging device comprising:

a substantially planar substrate having opposed major surfaces;

an electrically conductive die mounting pad located on one of the major surfaces of the substrate, the conductive die mounting pad dimensioned to accommodate the die with a major surface of the die in contact therewith;

a first electrically conductive connecting pad located on the other of the major surfaces of the substrate, the first electrically conductive connecting pad dimensioned to conform to an industry standard pad layout of a printed circuit board;

a The packaging device of claim 1, in which the first electrically conductive interconnecting element comprises tungsten interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the connecting pad.

6- 21. (Canceled)

22. (Currently amended) A semiconductor device, comprising:

a substantially planar substrate having opposed major surfaces;

an electrically conductive mounting pad located on one of the major surfaces of the substrate;

The semiconductor device of claim 21 wherein the semiconductor die comprises a light emitting diode (LED) having a metallized bottom major surface that is mounted on the electrically conductive mounting pad, and the metallized bottom major surface comprises comprising one of an anode and a cathode of the LED;

a first electrically conductive connecting pad located on the other of the major surfaces of the substrate; and

a first electrically conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the first electrically

conductive connecting pad.

23. (Currently amended) The semiconductor device of claim ~~21~~ 22, further comprising:
an electrically conductive bonding pad located on the one of the major surfaces of the substrate;
a bonding wire extending between a metallized top major surface of the ~~semiconductor die~~ LED and the electrically conductive bonding pad;
a second electrically conductive connecting pad located on the other of the major surfaces of the substrate; and
a second electrically conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the second connecting pad.

24. (Currently amended) The semiconductor device of claim 23 wherein ~~the semiconductor die comprises a light emitting diode (LED)~~, the metallized top major surface comprises a first electrode of the LED and the metallized bottom major surface comprises a second electrode of the LED.

25. (Currently amended) The semiconductor device of claim ~~21~~ 22 wherein the first electrically conductive interconnecting element is selected to withstand an operating temperature when the ~~semiconductor die~~ LED is mounted on the electrically conductive mounting pad and to provide a low-resistance electrical connection between the mounting pad and the first electrically conductive connecting pad.

26. (Previously presented) The semiconductor device of claim 25, wherein the first electrically conductive interconnecting element comprises tungsten.

27. (Previously presented) The semiconductor device of claim 25, wherein the first electrically conductive interconnecting element comprises a slug of electrically conductive material, the slug having a diameter selected to press-fit the slug into a through hole located in the substrate between the mounting pad and the first electrically conductive connecting pad.

REMARKS

This is a full and timely response to the final Office Action mailed April 6, 2006. Reconsideration and allowance of the application and presently pending claims are respectfully requested.

Present Status of Patent Application

Upon entry of the amendments in this response, claims 5 and 22-27 remain pending in the present application. More specifically, claims 5 and 22-25 have been currently amended with no introduction of new matter; and claims 1-4 and 6-21 have been canceled. Applicants have canceled these claims merely to reduce the number of disputed issues and to facilitate early allowance and issuance of other claims in the present application. Applicants reserve the right to pursue the subject matter of these claims in a continuing application, if Applicants so choose, and do not intend to dedicate the canceled subject matter to the public. Reconsideration and allowance of the application and presently pending claims are respectfully requested.

A. Allowable Subject Matter

Examiner's Statement

Claims 22 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Examiner's Statement

Applicants wish to place on record their gratitude for Examiner's indication that claims 22 and 24 would be allowable if rewritten in independent form. Applicants have currently rewritten claim 22 in independent form including all of the limitations of base claim 21 from which it depended directly. Consequently, Applicants respectfully request allowance of rewritten claim 22.

Claim 24 has been rewritten to depend indirectly on claim 22. Because claim 22 is currently allowable, dependent claim 24 is also allowable as a matter of law. *In re Fine*, 837 F.2d 1071 (Fed. Cir. 1988). Consequently, Applicants respectfully request allowance of rewritten claim 24.

B. Claim Objections

Statement of the Objection

Claim 1 is objected to because of the following informalities: in line 16 of the claim “susbtrate” should be replaced with --substrate--. Appropriate correction is required.

Response to the Objection

Claim 1 has been currently canceled. Hence, Applicants respectfully assert that the objection has been rendered moot.

C. Claim Rejections under 35 U.S.C. §102(b)

Statement of the Rejection

Claims 1, 2 and 4 are rejected under 35 U.S.C. §102(b) as being anticipated by US Patent No. 5,640,048 to Selna.

Response to the Rejection

Claims 1, 2 and 4 have been canceled without prejudice, waiver or disclaimer. Consequently, Applicants respectfully assert that the rejection of these claims has been rendered moot.

D. Claim Rejections under 35 U.S.C. §103(a)

Statement of the Rejection

Claims 5 and 11-21, 23, 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Selna.

Response to the Rejection

Claim 5

In rejecting Applicants’ claim 5, the Office Action states: “*Regarding claim 5, Selna does not teach using tungsten for the first conductive interconnecting element. Tungsten is a known material that is well suited for use in interconnecting elements. It would have been obvious to one having ordinary skill in the art to select tungsten, since it is a known metal that is well suited for the intended uses.*”

The third of the three criteria cited in MPEP 706.2(j) “Contents of a 35 U.S.C. 103 Rejection”, for establishing a *prima facie* case of obviousness, states that the prior art reference must teach or suggest all the claim limitations. In light of the above-mentioned

admission on the part of the Office Action, Applicants respectfully assert that the rejection fails to satisfy the requirements for a proper rejection under 35 U.S.C. 103(a).

Furthermore, it may be pertinent to point out that MPEP 2144.08 “Obviousness of Species When Prior Art Teaches Genus – 2100 Patentability” is not applicable in this case, because the “genus-species” relationship does not apply.

Referring back to the Office Action admission that Selna does not teach using tungsten, Applicants respectfully traverse the assertion that “*Tungsten is a known material that is well suited for use in interconnecting elements. It would have been obvious to one having ordinary skill in the art to select tungsten, since it is a known metal that is well suited for the intended uses.*” Because reference documents have not been provided to substantiate the assertion that tungsten is well suited for use in interconnecting elements, Applicants conclude that this statement is based on facts within the personal knowledge of the Examiner.

Consequently, Applicants cite *37 CFR 1.104 Nature of examination, paragraph (d) (2)*, reproduced below for easy reference:

(2) When a rejection in an application is based on facts within the personal knowledge of an employee of the Office, the data shall be as specific as possible, and the reference must be supported, when called for by the applicant, by the affidavit of such employee, and such affidavit shall be subject to contradiction or explanation by the affidavits of the applicant and other persons.

Applicants hereby request an affidavit from Examiner supporting the assertion that tungsten is “well suited for interconnecting elements.”

If such an affidavit is not provideable, Applicants respectfully assert that the rejection of claim 5 under 35 U.S.C. 103(a) is improper and request withdrawal of the rejection followed by allowance of claim 5.

Claims 11-21

Claims 11-21 have been currently canceled with no prejudice, waiver or disclaimer. Consequently, Applicants respectfully assert that the rejection of claims 11-21 has been rendered moot.

Claims 23, 25-27

Because claim 22 is allowable, claims 23 and 25-27 that depend directly or indirectly on claim 22 are also allowable as a matter of law. *In re Fine*, 837 F.2d 1071 (Fed. Cir. 1988).

Applicants respectfully request withdrawal of the rejection, followed by allowance of Claim 23 and 25-27.

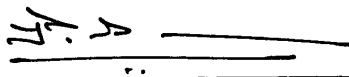

Prior Art Made of Record

The prior art made of record has been considered, but is not believed to affect the patentability of the presently pending claims.

CONCLUSION

In light of the foregoing amendments and for at least the reasons set forth above, Applicant respectfully submits that all objections and/or rejections have been traversed, rendered moot, and/or accommodated, and that claims 5 and 22-27 are in condition for allowance. Favorable reconsideration and allowance of the present application and all pending claims are hereby courteously requested. If, in the opinion of the Examiner, a telephonic conference would expedite the examination of this matter, the Examiner is invited to call the undersigned representative at (404) 610-5689.

Respectfully submitted,

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

THE REPLY FILED 07 June 2006 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.

1. The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:

- a) The period for reply expires 3 months from the mailing date of the final rejection.
- b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.

Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).

Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

NOTICE OF APPEAL

2. The Notice of Appeal was filed on _____. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).

AMENDMENTS

- 3. The proposed amendment(s) filed after a final rejection, but prior to the date of filing a brief, will not be entered because
 - (a) They raise new issues that would require further consideration and/or search (see NOTE below);
 - (b) They raise the issue of new matter (see NOTE below);
 - (c) They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or
 - (d) They present additional claims without canceling a corresponding number of finally rejected claims.

NOTE: See Continuation Sheet. (See 37 CFR 1.116 and 41.33(a)).

4. The amendments are not in compliance with 37 CFR 1.121. See attached Notice of Non-Compliant Amendment (PTOL-324).

5. Applicant's reply has overcome the following rejection(s): _____.

6. Newly proposed or amended claim(s) 22-27 would be allowable if submitted in a separate, timely filed amendment canceling the non-allowable claim(s).

7. For purposes of appeal, the proposed amendment(s): a) will not be entered, or b) will be entered and an explanation of how the new or amended claims would be rejected is provided below or appended.

The status of the claim(s) is (or will be) as follows:

Claim(s) allowed: _____.

Claim(s) objected to: 22,24.

Claim(s) rejected: 1,2,4,5,11-21,23 and 25-27.

Claim(s) withdrawn from consideration: _____.

AFFIDAVIT OR OTHER EVIDENCE

8. The affidavit or other evidence filed after a final action, but before or on the date of filing a Notice of Appeal will not be entered because applicant failed to provide a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented. See 37 CFR 1.116(e).

9. The affidavit or other evidence filed after the date of filing a Notice of Appeal, but prior to the date of filing a brief, will not be entered because the affidavit or other evidence failed to overcome all rejections under appeal and/or appellant fails to provide a showing a good and sufficient reasons why it is necessary and was not earlier presented. See 37 CFR 41.33(d)(1).

10. The affidavit or other evidence is entered. An explanation of the status of the claims after entry is below or attached.

REQUEST FOR RECONSIDERATION/OTHER

11. The request for reconsideration has been considered but does NOT place the application in condition for allowance because: See Continuation Sheet.

12. Note the attached Information Disclosure Statement(s). (PTO/SB/08 or PTO-1449) Paper No(s). _____

13. Other: _____.

Douglas W Owens
Primary Examiner
Art Unit: 2811

Continuation of 3. NOTE: The proposed amendment to claim 5 is a change of scope that will require additional search and consideration.

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments with respect to claim 5 are not convincing. Applicant argues that the assertion that "tungsten is a known material that is well-suited for use in interconnecting elements" is based on the personal knowledge of the Examiner. In fact, using tungsten in interconnecting elements is notoriously well-known in the art and capable of instant and unquestionable demonstration as being well-known. Examiner has constructively taken official notice of that fact, which has been asserted merely to "fill in the-gaps". To adequately traverse such a finding, an applicant must specifically point out the supposed errors in the examiner's action, which would include stating why the noticed fact is not considered to be common knowledge or well-known in the art. See 37 CFR 1.111(b). See also *Chevenard*, 139 F.2d at 713, 60 USPQ at 241 ("[I]n the absence of any demand by appellant for the examiner to produce authority for his statement, we will not consider this contention."). A general allegation that the claims define a patentable invention without any reference to the examiner's assertion of official notice would be inadequate. If applicant adequately traverses the examiner's assertion of official notice, the examiner must provide documentary evidence in the next Office action if the rejection is to be maintained. See 37 CFR 1.104(c)(2). Applicant has failed to properly traverse the official notice taken in the final rejection, since

AMENDMENT AND RESPONSE TO ADVISORY ACTION

Mail Stop – RCE
Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Sir:

Applicants respectfully request entry of the following amendments and remarks contained herein in response to the outstanding Advisory Action mailed June 23, 2006. Applicants respectfully submit that the amendment and remarks contained herein place the instant application in condition for allowance. A Request for Continued Examination under 37 U.S.C. §1.114, together with a one-month extension of time, is being filed concurrently with this response to the Advisory Action. Consequently, Applicants respectfully submit that the final Office Action mailed April 6, 2006 is effectively made non-final.

AUTHORIZATION TO DEBIT ACCOUNT

It is not believed that extensions of time or fees for net addition of claims are required, beyond those that may otherwise be provided for in documents accompanying this paper. However, in the event that additional extensions of time are necessary to allow consideration of this paper, such extensions are hereby petitioned under 37 C.F.R. § 1.136(a), and any fees required therefor (including fees for net addition of claims) are hereby authorized to be charged to Avago deposit account no. 50-3718.

AMENDMENTS TO THE CLAIMS

Please amend the present application as follows:

Claims

1- 21. (Canceled)

22. (Currently amended) A semiconductor device, comprising:

a substantially planar substrate having opposed major surfaces;

an electrically conductive mounting pad located on one of the major surfaces of the substrate;

~~The semiconductor device of claim 21 wherein the semiconductor die comprises a light emitting diode (LED) having a metallized bottom major surface that is mounted on the electrically conductive mounting pad, and the metallized bottom major surface comprises~~ comprising one of an anode and a cathode of the LED;

a first electrically conductive connecting pad located on the other of the major surfaces of the substrate; and

a first electrically conductive interconnecting element extending through the substrate and electrically interconnecting the mounting pad and the first electrically conductive connecting pad.

23. (Currently amended) The semiconductor device of claim ~~21~~ 22, further comprising:

an electrically conductive bonding pad located on the one of the major surfaces of the substrate;

a bonding wire extending between a metallized top major surface of the ~~semiconductor die~~ LED and the electrically conductive bonding pad;

a second electrically conductive connecting pad located on the other of the major surfaces of the substrate; and

a second electrically conductive interconnecting element extending through the substrate and electrically interconnecting the bonding pad and the second connecting pad.

24. (Currently amended) The semiconductor device of claim 23 wherein ~~the semiconductor die comprises a light emitting diode (LED)~~, the metallized top major surface comprises a first electrode of the LED and the metallized bottom major surface comprises a second electrode of the LED.

25. (Currently amended) The semiconductor device of claim ~~21~~ 22 wherein the first electrically conductive interconnecting element is selected to withstand an operating temperature when the ~~semiconductor die~~ LED is mounted on the electrically conductive mounting pad and to provide a low-resistance electrical connection between the mounting pad and the first electrically conductive connecting pad.

26. (Previously presented) The semiconductor device of claim 25, wherein the first electrically conductive interconnecting element comprises tungsten.

27. (Previously presented) The semiconductor device of claim 25, wherein the first electrically conductive interconnecting element comprises a slug of electrically conductive material, the slug having a diameter selected to press-fit the slug into a through hole located in the substrate between the mounting pad and the first electrically conductive connecting pad.

REMARKS

This is a response to the Advisory action mailed June 23, 2006. Reconsideration and allowance of the application and presently pending claims are respectfully requested.

Present Status of Patent Application

The Advisory action mailed June 23, 2006 indicates that the claim amendments submitted earlier by Applicants have not been entered. Consequently, Applicants are hereby re-submitting the amended claims and additionally canceling previously submitted amended claim 5.

Upon entry of the amendments in this response, claims 22-27 remain pending in the present application. More specifically, claims 22-25 have been currently amended with no introduction of new matter; and claims 1-21 have been canceled. Applicants have canceled these claims merely to reduce the number of disputed issues and to facilitate early allowance and issuance of other claims in the present application. Applicants reserve the right to pursue the subject matter of these claims in a continuing application, if Applicants so choose, and do not intend to dedicate the canceled subject matter to the public. Reconsideration and allowance of the application and presently pending claims are respectfully requested.

A. Allowable Subject Matter

Examiner's Statement

Examiner has indicated in the final Office action dated April 6, 2006 that claims 22 and 24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Examiner's Statement

Applicants wish to place on record their gratitude for Examiner's indication that claims 22 and 24 would be allowable if rewritten in independent form. Applicants have currently rewritten claim 22 in independent form including all of the limitations of base claim 21 from which it depended directly. Consequently, Applicants respectfully request allowance of rewritten claim 22.

Claim 24 has been rewritten to depend indirectly on claim 22. Because claim 22 is currently allowable, dependent claim 24 is also allowable as a matter of law. *In re Fine*, 837 F.2d 1071 (Fed. Cir. 1988). Consequently, Applicants respectfully request allowance of rewritten claim 24.

B. Claim Objections

Statement of the Objection

Claim 1 is objected to because of the following informalities: in line 16 of the claim “substrate” should be replaced with --substrate--. Appropriate correction is required.

Response to the Objection

Claim 1 has been currently canceled. Hence, Applicants respectfully assert that the objection has been rendered moot.

C. Claim Rejections under 35 U.S.C. §102(b)

Statement of the Rejection

Claims 1, 2 and 4 are rejected under 35 U.S.C. §102(b) as being anticipated by US Patent No. 5,640,048 to Selna.

Response to the Rejection

Claims 1, 2 and 4 have been canceled without prejudice, waiver or disclaimer. Consequently, Applicants respectfully assert that the rejection of these claims has been rendered moot.

D. Claim Rejections under 35 U.S.C. §103(a)

Statement of the Rejection

Claims 5 and 11-21, 23, 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Selna.

Response to the Rejection

Claims 5 and 11-21

Claims 5 and 11-21 have been currently canceled with no prejudice, waiver or disclaimer. Consequently, Applicants respectfully assert that the rejection of claims 5 and 11-21 has been rendered moot.

Claims 23, 25-27

Because claim 22 is allowable, claims 23 and 25-27 that depend directly or indirectly on claim 22 are also allowable as a matter of law. *In re Fine*, 837 F.2d 1071 (Fed. Cir. 1988).

Applicants respectfully request withdrawal of the rejection, followed by allowance of Claim 23 and 25-27.

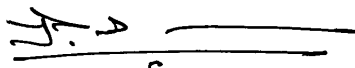

Prior Art Made of Record

The prior art made of record has been considered, but is not believed to affect the patentability of the presently pending claims.

CONCLUSION

In light of the foregoing amendments and for at least the reasons set forth above, Applicant respectfully submits that all objections and/or rejections have been traversed, rendered moot, and/or accommodated, and that claims 22-27 are in condition for allowance. Favorable reconsideration and allowance of the present application and all pending claims are hereby courteously requested. If, in the opinion of the Examiner, a telephonic conference would expedite the examination of this matter, the Examiner is invited to call the undersigned representative at (404) 610-5689.

Respectfully submitted,

REQUEST FOR CONTINUED EXAMINATION (RCE) 37 CFR 1.114

Subsection (b) of 35 U.S.C. 132, effective on May 29, 2000, provides for continued examination of an utility or plant application filed on or after June 8, 1995.

See The American Inventors Protection Act of 1999 (AIPA).

Sir:

This is a Request for Continued Examination (RCE) under CFR 1.114 of the above-identified application.

NOTE: 37 CFR 1.114 is effective on May 20, 2000. If the above application was filed prior to May 29, 2000, applicant may wish to consider filing a continued prosecution application (CPA) under CFR 1.53(d) (PTO/SB/29) instead of a RCE to be eligible for the patent term adjustment provisions of the AIPA. See Changes to Application Examination and Provisional Application Practice, Interim Rule, 65 Fed. Reg. 14865 (Mar. 20, 2000), 1233 off. Gaz. Pat. Office 47 (Apr. 11, 2000), which Established RCE practice.

Submission under 37 CFR 1.114

AVAGO TECHNOLOGIES, LTD.
P.O. BOX 1920
DENVER, CO 80201-1920

EXAMINER
OWENS, DOUGLAS W
ART UNIT PAPER NUMBER
2811
DATE MAILED: 08/25/2006

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.
10/608,605 06/27/2003 Kong Weng Lee 70030259-1 2253

TITLE OF INVENTION: PACKAGING DEVICE FOR SEMICONDUCTOR DIE, SEMICONDUCTOR DEVICE INCORPORATING SAME AND METHOD OF MAKING SAME

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE
nonprovisional NO \$1400 \$300 \$0 \$1700 11/27/2006

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

- A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

- A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

57299 7590 08/25/2006
AVAGO TECHNOLOGIES, LTD.
P.O. BOX 1920
DENVER, CO 80201-1920

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
 Change of correspondence address (or Change of Correspondence Address Form PTO/SB/122) attached.
 "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list
 (1) the names of up to 3 registered patent attorneys or agents OR, alternatively, 1 _____
 (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed. 2 _____
 3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)
 PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.
 (A) NAME OF ASSIGNEE _____ (B) RESIDENCE: (CITY and STATE OR COUNTRY) _____

Please check the appropriate assignee category or categories (will not be printed on the patent) : Individual Corporation or other private group entity Government

4a. The following fee(s) are submitted:
 Issue Fee
 Publication Fee (No small entity discount permitted)
 Advance Order - # of Copies _____

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)
 A check is enclosed.
 Payment by credit card. Form PTO-2038 is attached.
 The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)
 a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature _____ Date _____
 Typed or printed name _____ Registration No. _____

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

ART UNIT 2811 PAPER NUMBER
DATE MAILED: 08/25/2006

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--
 All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. This communication is responsive to the amendment filed on August 8, 2006.
2. The allowed claim(s) is/are 22-27.
3. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some* c) None of the:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - (a) including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
 - 1) hereto or 2) to Paper No./Mail Date _____.
 - (b) including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

DETAILED ACTION
EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In paragraph [0001] of the specification, delete "10/xxx,xxx" and insert --
10/608,606--.

Allowable Subject Matter

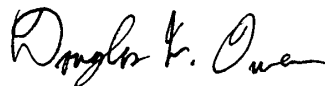

2. Claims 22 – 27 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas W. Owens whose telephone number is 571-272-1662. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie C. Lee can be reached on 571-272-1732. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Serial No.: 10/608,605

Examiner: Owens, Douglas W

Filing Date: June 27, 2003

Group Art Unit: 2253

Title: PACKAGING DEVICE FOR SEMICONDUCTOR DIE, SEMICONDUCTOR DEVICE
INCORPORATING SAME AND METHOD OF MAKING SAME

COMMISSIONER FOR PATENTS
P.O. Box 1450
Alexandria VA 22313-1450

REQUEST FOR CONTINUED EXAMINATION (RCE) 37 CFR 1.114

Subsection (b) of 35 U.S.C. 132, effective on May 29, 2000, provides for continued examination of an utility or plant application filed on or after June 8, 1995.

See The American Inventors Protection Act of 1999 (AIPA).

Sir:

This is a Request for Continued Examination (RCE) under CFR 1.114 of the above-identified application.

NOTE: 37 CFR 1.114 is effective on May 20, 2000. If the above application was filed prior to May 29, 2000, applicant may wish to consider filing a continued prosecution application (CPA) under CFR 1.63(d) (PTO/SB/29) instead of a RCE to be eligible for the patent term adjustment provisions of the AIPA. See Changes to Application Examination and Provisional Application Practice, Interim Rule, 65 Fed. Reg. 14865 (Mar. 20, 2000), 1233 off. Gaz. Pat. Office 47 (Apr. 11, 2000), which Established RCE practice.

Submission under 37 CFR 1.114

- Previously submitted:
- Consider the amendment(s)/reply under 37 CFR 1.116 previously filed on
(Any unentered amendment(s) referred to above will be entered).
 - Consider the arguments in the Appeal Brief or Reply Brief previously filed on
 - Other: Information Disclosure Statement
- Enclosed:
- Amendment/Reply
 - Affidavit(s)/Declarations(s)
 - Information Disclosure Statement (IDS)
 - Other: PTO Form 1449

Miscellaneous

- Suspension of action is requested under 37 CFR 1.103(c) for a period of _____ months.
The fee for this Suspension is (37 CFR 1.17(l)) \$130.00.
- Other:

PAGE 1/8 * RCVD AT 11/7/2006 5:44:27 PM [Eastern Standard Time] * SVR:USPTO-EFXRF-1/1 * DNIS:2738300 * CSID:303 297 2266 * DURATION (mm-ss):02-30 1 of 2

INFORMATION DISCLOSURE STATEMENT

Sir:

This Information Disclosure Statement is submitted:

- (a) Under 37 CFR 1.97(b).
(Within three months of filing national application; or date of entry of national application; or before mailing date of first Office action on the merits; whichever occurs last).
- (b) Under 37 CFR 1.97(c) together with *either* a:
 Statement under CFR 1.97(e), or
 \$180.00 fee under 37 CFR 1.17(p).
(After the CFR 1.97(b) time period, but before a final action or notice of allowance, whichever occurs first).
- (c) Under 37 CFR 1.97(d) together with: a
Statement under 37 CFR 1.97(e), *and*
\$180.00 fee as set forth in 37 CFR 1.17(p).
(After a final action or notice of allowance, whichever occurs first, but before payment of the issue fee).

STATEMENT UNDER 37 CFR 1.97(e)

The undersigned certifies that:

- Each item of information contained in the Information Disclosure Statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the statement, or
- No item of information contained in the Information Disclosure Statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the undersigned after making reasonable inquiry, was known to any individual designated in 37 CFR § 1.56(c) more than three months prior to the filing of the Information Disclosure Statement.

PRIOR APPLICATIONS

References identified with an asterisk (*) in the enclosed PTO Form 1449, were disclosed in prior Patent Application No. , filed , now U.S. Patent No. , and, as such, copies thereof are not included pursuant to the provisions of 37 CFR 1.98(d).

FOREIGN LANGUAGE DOCUMENTS

A concise explanation of the relevance of foreign language patents, foreign language publications and other foreign language information listed on PTO form 1449, as presently understood by the individual(s) designated in 37 CFR 1.56(c) most knowledgeable about the content is given on the attached sheet, or where a foreign language patent is cited in a search report or other action by a foreign patent office in a counterpart foreign application, an English language version of the search report or action which indicates the degree of relevance found by the foreign office is listed on form PTO 1449 and is enclosed herewith.

NOTICE OF ALLOWANCE AND FEE(S) DUE

57299 7590 12/04/2006
AVAGO TECHNOLOGIES, LTD.
P.O. BOX 1920
DENVER, CO 80201-1920

EXAMINER
OWENS, DOUGLAS W.
ART UNIT PAPER NUMBER
2811
DATE MAILED: 12/04/2006

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.
10/608,605 06/27/2003 Kong Weng Lee 70030259-1 2253

TITLE OF INVENTION: PACKAGING DEVICE FOR SEMICONDUCTOR DIE, SEMICONDUCTOR DEVICE INCORPORATING SAME AND METHOD OF MAKING SAME

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE
nonprovisional NO \$1400 \$300 \$0 \$1700 03/05/2007

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

- A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

- A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

57299 7590 12/04/2006
AVAGO TECHNOLOGIES, LTD.
P.O. BOX 1920
DENVER, CO 80201-1920

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
 I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).
 Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.
 "Fee Address" indication (or "Fee Address" Indication form PTO/SB/47; Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent front page, list
 (1) the names of up to 3 registered patent attorneys or agents OR, alternatively, 1 _____
 (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed. 2 _____
 3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)
 PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.
 (A) NAME OF ASSIGNEE _____ (B) RESIDENCE: (CITY and STATE OR COUNTRY) _____

Please check the appropriate assignee category or categories (will not be printed on the patent): Individual Corporation or other private group entity Government

4a. The following fee(s) are submitted:
 Issue Fee
 Publication Fee (No small entity discount permitted)
 Advance Order - # of Copies _____

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)
 A check is enclosed.
 Payment by credit card. Form PTO-2038 is attached.
 The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number _____ (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)
 a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27. b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant; a registered attorney or agent; or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature _____ Date _____
 Typed or printed name _____ Registration No. _____

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--
 All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. This communication is responsive to the amendment filed on August 8, 2006.
2. The allowed claim(s) is/are 22-27.
3. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some* c) None of the:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

* Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - (a) including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
 - 1) hereto or 2) to Paper No./Mail Date _____.
 - (b) including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

REQUEST FOR CONTINUED EXAMINATION (RCE) 37 CFR 1.114

Subsection (b) of 35 U.S.C. 132, effective on May 29, 2000, provides for continued examination of an utility or plant application filed on or after June 8, 1995.

See The American Inventors Protection Act of 1999 (AIPA).

Sir:

This is a Request for Continued Examination (RCE) under CFR 1.114 of the above-identified application.

NOTE: 37 CFR 1.114 is effective on May 20, 2000. If the above application was filed prior to May 29, 2000, applicant may wish to consider filing a continued prosecution application (CPA) under CFR 1.53(d) (PTO/SB/29) instead of a RCE to be eligible for the patent term adjustment provisions of the AIPA. See Changes to Application Examination and Provisional Application Practice, Interim Rule, 65 Fed. Reg. 14865 (Mar. 20, 2000), 1233 off. Gaz. Pat. Office 47 (Apr. 11, 2000), which Established RCE practice.

Submission under 37 CFR 1.114

- Previously submitted:
- Consider the amendment(s)/reply under 37 CFR 1.116 previously filed on (Any unentered amendment(s) referred to above will be entered).
 - Consider the arguments in the Appeal Brief or Reply Brief previously filed on
 - Other: Information Disclosure Statement

- Enclosed:
- Amendment/Reply
 - Affidavit(s)/Declarations(s)
 - Information Disclosure Statement (IDS)
 - Other:

Miscellaneous

- Suspension of action is requested under 37 CFR 1.103(c) for a period of _____ months.
The fee for this Suspension is (37 CFR 1.17(i)) **\$130.00**.
- Other:

- A Petition for Extension of Time

CRANE, SARA W

ART UNIT PAPER NUMBER

2811

DATE MAILED: 04/04/2007

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.

TITLE OF INVENTION: PACKAGING DEVICE FOR SEMICONDUCTOR DIE, SEMICONDUCTOR DEVICE INCORPORATING SAME AND METHOD OF MAKING SAME

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

- A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

- A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

**Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

57299 7590 04/04/2007
AVAGO TECHNOLOGIES, LTD.
P.O. BOX 1920
DENVER, CO 80201-1920

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

 - 1) hereto or 2) to Paper No./Mail Date _____.
 - (b) including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The device structure as set forth in the claims is not taught or suggested in the prior art, including more specifically the light emitting diode having metallized bottom surface, mounted on a mounting pad, and having the relationship to the interconnecting element and conductive connecting pad as set forth in claim 1.

The references cited on form PTO 892 are similar in some ways to references already of record, showing LEDs having interconnecting elements extending through the underlying substrate to contact back surface electrodes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Crane, whose telephone number is (571) 272-1652.

The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
 or **Fax** **(571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

57199 7590 04/04/2007

AVAGO TECHNOLOGIES, LTD.
 P.O. BOX 1920
 DENVER, CO 80201-1920

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.363).

Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

"Fee Address" indication (or "Fee Address" indication form PTO/SB/47, Rev 03-02 or more recent) attached. Use of a Customer Number is required.

2. For printing on the patent form page, list

(1) the names of up to 3 registered patent attorneys or agents OR, alternatively, 1 _____

(2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed. 2 _____

3 _____

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. If an assignee is identified below, the document has been filed for recordation as set forth in 37 CFR 3.11. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE *Avago Technologies ECBU IP (Singapore) Pte. Ltd.* (B) RESIDENCE: (CITY and STATE OR COUNTRY) *Singapore*

Please check the appropriate assignee category or categories (will not be printed on the patent): Individual Corporation or other private group entity Government

4a. The following fee(s) are submitted:

Issue Fee

Publication Fee (No small entity discount permitted)

Advance Order - # of Copies _____

4b. Payment of Fee(s): (Please first reapply any previously paid issue fee shown above)

A check is enclosed.

Payment by credit card. Form PTO-2038 is attached.

The Director is hereby authorized to charge the required fee(s), any deficiency, or credit any overpayment, to Deposit Account Number *563718* (enclose an extra copy of this form).

5. Change in Entity Status (from status indicated above)

a. Applicant claims SMALL ENTITY status. See 37 CFR 1.27.

b. Applicant is no longer claiming SMALL ENTITY status. See 37 CFR 1.27(g)(2).

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant, a registered attorney or agent, or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

Authorized Signature *Scott Waitzel* Date *07/05/2007*

Typed or printed name *Scott Waitzel* Registration No. *54534*

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment is 0 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

- Kong Weng Lee, Penang, MALAYSIA;
Kee Yean Ng, Penang, MALAYSIA;
Yew Cheong Kuan, Penang, MALAYSIA;
Gin Ghee Tan, Penang, MALAYSIA;
Cheng Why Tan, Penang, MALAYSIA;

NOTICE OF CHANGE OF STATUS TO SMALL ENTITY

Notice is hereby given under 37 C.F.R. § 1.27(g)(1) that effective at least as early as November 10, 2016, large entity status is no longer claimed by the assignee of the above-identified patent. The assignee asserts small entity status, and is entitled to claim small entity status for the purpose of calculating maintenance fees. To the extent any undiscounted fees were paid after the above-listed date, the assignee or a representative of the assignee will retroactively seek to pay the next maintenance fee at the small entity rate by requesting a refund of overpayment.

The practitioner signing below is authorized by the assignee to act in representative capacity under 37 C.F.R. 1.34 for purposes of filing this request only. Should the Office have any questions, the Office is invited to call the undersigned at (312) 913-3341.

NOTIFICATION OF LOSS OF ENTITLEMENT TO SMALL ENTITY STATUS

Notice is hereby given under 37 C.F.R. § 1.27(g)(2) that small entity status is no longer claimed by the applicant for the above-identified patent. Applicant believed Applicant was entitled to small entity status when the previous change to small entity status was made. However, Applicant has now become aware of facts that make Applicant unsure as to whether Applicant is eligible for small entity status. Accordingly, large entity status is now claimed by the Applicant for the above-identified patent.

The practitioner signing below is authorized by the assignee to act in representative capacity under 37 C.F.R. 1.34 for purposes of filing this request only. Should the Office have any questions related to this request, the Office is invited to call the undersigned at (312) 913-3341.
