

an envelope amplifier operative to receive an envelope signal and the boosted supply voltage and generate a second supply voltage based on the envelope signal and the boosted supply voltage.

9. (Original) The apparatus of claim 8, wherein the envelope amplifier is operative to further receive the first supply voltage and generate the second supply voltage based on the first supply voltage or the boosted supply voltage.

10. (Currently Amended) An apparatus for wireless communication, comprising:

a power amplifier operative to receive and amplify an input radio frequency (RF) signal and provide an output RF signal; and

a supply generator operative to receive an envelope signal and a first supply voltage, to generate a boosted supply voltage having a higher voltage than the first supply voltage, and to generate a second supply voltage for the power amplifier based on the envelope signal and the boosted supply voltage, wherein the supply generator incorporates an operational amplifier (op-amp) operative to receive the envelope signal and provide an amplified signal, a driver operative to receive the amplified signal and provide a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving a first control signal, a source receiving the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage, and an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the second supply voltage, and a source coupled to circuit ground.

11. (Original) The apparatus of claim 10, wherein the supply generator is operative to generate the second supply voltage based on the envelope signal and either the boosted supply voltage or the first supply voltage.

12. (Currently Amended) A method of generating supply voltages, comprising:

generating a boosted supply voltage based on a first supply voltage, the boosted supply voltage having a higher voltage than the first supply voltage; and

generating a second supply voltage based on an envelope signal and the boosted supply voltage, wherein the second supply voltage is generated by an envelope amplifier that produces the second supply voltage using an operational amplifier (op-amp) that receives the envelope signal and provides an amplified signal, a driver that receives the amplified signal and provides a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor that receives the first control signal, a source that receives the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage and an N-channel metal oxide semiconductor (NMOS) transistor that receives the second control signal at a gate and provides a second supply voltage through a drain, and a source for circuit grounding.

13. (Original) The method of claim 12, wherein the generating the second supply voltage comprises generating the second supply voltage based on the envelope signal and either the boosted supply voltage or the first supply voltage.

14. (Currently Amended) An apparatus for generating supply voltages, comprising:
means for generating a boosted supply voltage based on a first supply voltage, the boosted supply voltage having a higher voltage than the first supply voltage; and
means for generating a second supply voltage based on the envelope signal and the boosted supply voltage , wherein the means for generating the second supply voltage incorporates an envelope amplifier that produces the second supply voltage using an operational amplifier (op-amp) that receives the envelope signal and provides an amplified signal, a driver that receives the amplified signal and provides a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor that receives the first control signal, a source that receives the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage and an N-channel metal oxide semiconductor (NMOS) transistor that receives the second control signal at a gate and provides a second supply voltage through a drain, and a source for circuit grounding..

15. (Original) The apparatus of claim 14, wherein the means for generating the second supply voltage comprises means for generating the second supply voltage based on an envelope signal and either the boosted supply voltage or the first supply voltage.

16. (Canceled)

17. (Currently Amended) The apparatus of claim ~~18~~ 16, further comprising:

a boost converter operative to receive the first supply voltage and provide a boosted supply voltage having a higher voltage than the first supply voltage, wherein the envelope amplifier operates based on the first supply voltage or the boosted supply voltage.

18. (Currently Amended) ~~The apparatus of claim 16~~ An apparatus comprising:

a switcher operative to receive a first supply voltage and provide a first supply current;

an envelope amplifier operative to receive an envelope signal and provide a second supply current based on the envelope signal; and

a power amplifier operative to receive an envelope signal and provide a second supply current based on the envelope signal; and

a power amplifier operative to receive a total supply current comprising the first supply current and the second supply current, wherein the switcher comprises

a current sense amplifier operative to sense the first supply current, or the second supply current, or the total supply current and provide a sensed signal,

a driver operative to receive the sensed signal and provide a first control signal and a second control signal,

a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving the first supply voltage, and a drain providing a switching signal for an inductor providing the first supply current, and

an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the switching signal, and a source coupled to circuit ground.

19. (Currently Amended) The apparatus of claim ~~[[16]]~~ 18, wherein the first supply current comprises direct current (DC) and low frequency components, and wherein the second supply current comprises higher frequency components.

20. (Canceled)

21. (Currently Amended) The apparatus of claim ~~22~~ ~~20~~, wherein the switcher operates based on a first supply voltage, and wherein the offset is determined based on the first supply voltage.

22. (Currently Amended) ~~The apparatus of claim 20~~ An apparatus comprising:
an inductor operative to receive a switching signal and provide a supply current; and
a switcher operative to sense an input current and generate the switching signal to charge
and discharge the inductor to provide the supply current, the switcher adding an offset to the
input current to generate a larger supply current via the inductor than without the offset, wherein the switcher comprises

a summer operative to sum the input current and an offset current and provide a summed current,

a current sense amplifier operative to receive the summed current and provide a sensed signal, and

a driver operative to receive the sensed signal and provide at least one control signal used to generate the switching signal for the inductor.

23. (Original) The apparatus of claim 22, wherein the at least one control signal comprises a first control signal and a second control signal, and wherein the switcher further comprises

a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving a first supply voltage, and a drain providing the switching signal, and

an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the switching signal, and a source coupled to circuit ground.

24. (Currently Amended) The apparatus of claim ~~22~~ ~~20~~, further comprising:
an envelope amplifier operative to receive an envelope signal and provide a second supply current based on the envelope signal, wherein a total supply current comprises the supply current from the switcher and the second supply current from the envelope amplifier.
25. (Original) The apparatus of claim 24, further comprising:
a boost converter operative to receive the first supply voltage and provide a boosted supply voltage having a higher voltage than the first supply voltage, wherein the envelope amplifier operates based on the first supply voltage or the boosted supply voltage.
26. (Currently Amended) The apparatus of claim ~~22~~ ~~20~~, further comprising:
a power amplifier operative to receive the supply current from the inductor and to receive and amplify an input radio frequency (RF) signal and provide an output RF signal.

REMARKS/ARGUMENTS

The above identified patent application has been amended and reconsideration and reexamination are hereby requested.

Claims 3-15, 17-19, and 21-26 are now pending in the application. Claims 1, 2, 16, and 20 have been canceled. Claims 3, 4, 6-8, 10, 12, 14, 17-19, 21, 22, 24, and 26 have been amended. No new matter has been added, as the claim amendments and new claims have support in the application as originally filed.

Claim Rejections - 35 U.S.C. § 112(b)

Claim 3 was objected under 35 U.S.C. § 112(b), second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which the Applicant regards as the invention. According to the Office Action, the conditions where the envelope amplifier operated according to “first threshold” and/or “second threshold” is not seen disclosed in the specification.

The Applicant respectfully directs the Examiner’s attention to paragraphs [0034] and [0051] which disclose the envelope amplifier being operated according to a “first threshold” and/or a “second threshold” and requests that the rejection be withdrawn.

Claims Rejections - 35 U.S.C. § 102

The Examiner has rejected claims 1, 2, 6-17, 19-21, and 24-26 under 35 U.S.C. § 102(a) as being anticipated by Kim et al. (RMO3D-1 “High Efficiency and Wideband Envelope Tracking Power Amplifier with Sweet Spot Tracking,” hereinafter “Kim”). Rejections to claims 1, 2, 16, and 20 are moot, as these claims have been canceled.

Kim discloses a high efficiency and wideband envelope tracking power amplifier with sweet spot tracking. (Title) By modulating the supply voltage of a power amplifier efficiency may be increased. Linearity is also improved by envelope shaping and sweet spot tracking. The supply modulator has a combined structure of a switching amplifier and a linear amplifier to achieve high efficient and wide bandwidth. (Abstract)

Amended independent claim 1 recites “... an operational amplifier (op-amp) operative to receive the envelope signal and provide an amplified signal, a driver operative to receive the

amplified signal and provide a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage, and an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the second supply voltage, and a source coupled to circuit ground.” Amended independent claims 8, 10, 12, 14, 16, and 20 recite similar limitations. The Applicant submits that Kim does not teach the recitations of claims 1, 8, 10, 12, 14, 16, and 20.

Kim does not disclose the above recitation. Kim Kim discloses a power amplifier with high efficiency, wideband envelope tracking, and incorporating sweet spot tracking. Kim is silent regarding an operational amplifier that receives the envelope signal and provide as output an amplified signal. Kim is also silent regarding a driver that receives the amplified signal and provides a first control signal and a second control signal. In particular, Kim is silent regarding a PMOS transistor and and NMOS transistor. Therefore, Kim does not teach “an operational amplifier (op-amp) operative to receive the envelope signal and provide an amplified signal, a driver operative to receive the amplified signal and provide a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage, and an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the second supply voltage, and a source coupled to circuit ground.”

Accordingly, the Applicant submits that claims 1, 8, 10, 12, 14, 16, and 20 are not anticipated by Kim under 35 U.S.C. § 102(b).

The dependent claims are dependent on their respective base claims and therefore include all of the features of their respective base claims and additional features therein. As such, these claims are also allowable based upon their respective base claims and the additional features therein.

Application No.: 13/167,659
Amendment dated February 19, 2013
Reply to Office Action of November 23, 2012 11

Docket No.: 101005
Customer No.: 23696

Claim Objections/Allowable Subject Matter

The Examiner has objected to claim 4, 5, 18, 22, and 23 as being dependent upon a rejected base claim. The Applicant has amended the claim into independent form including all of the limitations of the base claim and any intervening claims. Accordingly, claim \diamond is now allowable.

CONCLUSION

In light of the amendments contained herein, the Applicant submits that the application is in condition for allowance, for which early action is requested.

Please charge any fees or overpayments that may be due with this response to Deposit Account No. 17-0026.

Respectfully submitted,

Dated: 2013-02-19

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these records.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Applicant QUALCOMM INCORPORATED	

1. This International Searching Authority

- (i) considers that there are 5 (number of) inventions claimed in the international application covered by the claims indicated on an extra sheet:
- (ii) therefore considers that **the international application does not comply with the requirements of unity of invention** (Rules 13.1, 13.2 and 13.3) for the reasons indicated on an extra sheet:
- (iii) has carried out a partial international search (see Annex) will establish the international search report on those parts of the international application which relate to the invention first mentioned in claims Nos.:
see extra sheet
- (iv) will establish the international search report on the other parts of the international application only if, and to the extent to which, additional fees are paid.

2. Consequently, the applicant is hereby **invited to pay**, within the time limit indicated above, the amount indicated below:

$$\frac{\text{EUR } 1.875,00}{\text{Fee per additional invention}} \times \frac{4}{\text{number of additional inventions}} = \frac{\text{EUR } 7.500,00}{\text{currency/total amount of additional fees}}$$

3. The applicant is informed that, according to Rule 40.2(c), **the payment of any additional fee may be made under protest**, i.e., a reasoned statement to the effect that the international application complies with the requirement of unity of invention or that the amount of the required additional fee is excessive, where applicable, subject to the payment of a protest fee.

Where the applicant pays additional fees under protest, the applicant is hereby invited, within the time limit indicated above, to pay a protest fee (Rule 40.2(e)) in the amount of EUR 830,00 (currency/amount)

Where the applicant has not, within the time limit indicated above, paid the required protest fee, the protest will be considered not to have been made and the International Searching Authority will so declare.

4. Claim(s) Nos. _____ have been found to be unsearchable under Article 17(2)(b) because of defects under Article 17(2)(a) and therefore have not been included with any invention.

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-15

Independent claim 1 in connection with dependent claims 2-5 and independent claim 8 in connection with dependent claim 9 define a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal, the first supply voltage, and the boosted supply voltage, and generates a second supply voltage based thereon.

1.1. claim: 6

Independent claim 1 in connection with dependent claim 6 defines a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based thereon, wherein the envelope amplifier feeds an RF power amplifier.

1.2. claim: 7

Independent claim 1 in connection with dependent claim 7 defines a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based thereon, wherein the first supply voltage is a battery voltage.

1.3. claims: 10-15

Independent claim 10 in connection with dependent claim 11 and independent claim 12 in connection with dependent claim 13 and independent claim 14 in connection with dependent claim 15 define a device or method comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based on the first supply voltage or the boosted supply voltage.

2. claims: 16, 17

Independent claim 16 in connection with dependent claim 17 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and

second supply currents; and further including a boost converter for supplies (or not) the envelope amplifier.

3. claim: 18

Independent claim 16 in connection with dependent claim 18 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; the 'switcher' further including a current sensing amplifier, a driver, and a CMOS switching stage.

4. claim: 19

Independent claim 16 in connection with dependent claim 19 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; wherein the first supply current comprises DC and low frequency components, and the second supply current comprises higher frequency components.

5. claims: 20-26

Independent claim 20 and dependent claims 21-26 define an apparatus involving an inductor that receives a switching signal and generates a supply current; and a 'switcher' that senses an input current, adds an offset, and accordingly generates the switching signal.

Please note that all inventions mentioned under item 1, although not necessarily linked by a common inventive concept, could be searched without effort justifying an additional fee.

The subject-matter common to the five identified groups of inventions amounts to no more than a voltage- or current supply, which is trivially not new.

Note that the first sub-invention, dependent claim 6, is included in the first group of inventions, not because it is unitary with the rest of the claims in the group, but because it is only trivially different from claim 1; the same is the case for the second and third sub-inventions (claims 7, 10-15).

Also note that a search carried out for claims 20-26 may reveal, a posteriori, further lack of unity.

**Annex to Form PCT/ISA/206
COMMUNICATION RELATING TO THE RESULTS
OF THE PARTIAL INTERNATIONAL SEARCH**

International Application No
PCT/US2012/043915

1. The present communication is an Annex to the invitation to pay additional fees (Form PCT/ISA/206). It shows the results of the international search established on the parts of the international application which relate to the invention first mentioned in claims Nos.:
- see 'Invitation to pay additional fees'
2. This communication is not the international search report which will be established according to Article 18 and Rule 43.
3. If the applicant does not pay any additional search fees, the information appearing in this communication will be considered as the result of the international search and will be included as such in the international search report.
4. If the applicant pays additional fees, the international search report will contain both the information appearing in this communication and the results of the international search on other parts of the international application for which such fees will have been paid.

Important Information

General:

- The **claims cannot be changed** at this point in the procedure, the transmitted report is **not** the international search report (see Art. 19 PCT).
- Any payment has to be made **directly** to this ISA, payments to other entities will not be accepted.
- In case of a **total of more than 2 inventions** found: when paying please **specify exactly** which claims should be searched (unless you pay for all inventions found).
- An **extension of the set time limit** can only be granted for cases that fall under the provisions of Rule 80.6 PCT.
- The **amount of the additional search fee** depends on the amount **due on the international filing date**.
- The **amount of the protest fee** depends on the amount **due on the date on which the payment is made**.

Payment or transfer to a bank account:

- The **date to be considered as the date on which the payment is made** is the date on which the amount of the payment or the transfer is **actually entered** in a bank account or Giro account held by the EPO.
- The fees shall be paid in **euros**, no equivalents in other currencies, all charges to be carried by the applicant
- For a list of accounts held by the EPO please see http://www.european-patent-office.org/epo/new/bank_euro.pdf

Payment by deposit account with the EPO:

- The **date to be considered as the date on which the payment is made** is the date that the **authorisation** to deduct fees from the deposit account is **received at the EPO**.

Note: If you don't have a deposit account with the EPO yourself you might want to consider using the account of an associate as a safe and quick way of paying.

Payments by credit card or cheque are not possible.

Payments under protest (Rule 40.2 (c) PCT):

- For general information on the protest procedure at ISA/EP, please refer to the Special Edition No. 3 of the OJ of the EPO 2007, pages 140-145, http://www.european-patent-office.org/epo/pubs/oj007/08_07/special_edition_3_epc_2000_decisions.pdf
- Any protest will **only be accepted if**, within the time limit set in the invitation, the additional fees for each invention to be searched **and** the protest fee are paid.
- The protest has to be **accompanied by a technical reasoning**, taking into account the findings of the ISA.

PATENT COOPERATION TREATY

From the INTERNATIONAL SEARCHING AUTHORITY

PCT

To:

Hooks, William M.
 QUALCOMM INCORPORATED
 5775 Morehouse Drive
 San Diego, CA 92121-1714
 ETATS-UNIS D'AMERIQUE

NOTIFICATION OF TRANSMITTAL OF
 THE INTERNATIONAL SEARCH REPORT AND
 THE WRITTEN OPINION OF THE INTERNATIONAL
 SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

Date of mailing (day/month/year)		26 November 2012 (26-11-2012)
Applicant's or agent's file reference 101005WO	FOR FURTHER ACTION	See paragraphs 1 and 4 below
International application No. PCT/US2012/043915	International filing date (day/month/year)	24 June 2012 (24-06-2012)
Applicant QUALCOMM INCORPORATED		

1. The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

Filing of amendments and statement under Article 19:

The applicant is entitled, if he so wishes, to amend the claims of the international Application (see Rule 46):

When? The time limit for filing such amendments is normally two months from the date of transmittal of the International Search Report.

Where? Directly to the International Bureau of WIPO, 34 chemin des Colombettes
 1211 Geneva 20, Switzerland, Facsimile No.: (41-22) 338 82.70

For more detailed instructions, see *PCT Applicant's Guide*, International Phase, paragraphs 9.004 - 9.011.

2. The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.
3. **With regard to any protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
- the protest together with the decision thereon has been transmitted to the International Bureau together with any request to forward the texts of both the protest and the decision thereon to the designated Offices.
- no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. Reminders

The applicant may submit comments on an informal basis on the written opinion of the International Searching Authority to the International Bureau. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established. Following the expiration of 30 months from the priority date, these comments will also be made available to the public.

Shortly after the expiration of **16 months** from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau before completion of the technical preparations for international publication (Rules 90**bis**.1 and 90**bis**.3).

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.

In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months.

For details about the applicable time limits, Office by Office, see www.wipo.int/pct/en/texts/time_limits.html and the *PCT Applicant's Guide*, National Chapters.

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 101005WO	FOR FURTHER ACTION		see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US2012/043915	International filing date (day/month/year) 24/06/2012	(Earliest) Priority Date (day/month/year) 23/06/2011	
Applicant QUALCOMM INCORPORATED			
<p>This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.</p> <p>This international search report consists of a total of <u>3</u> sheets.</p> <p><input checked="" type="checkbox"/> It is also accompanied by a copy of each prior art document cited in this report.</p>			
<p>1. Basis of the report</p> <p>a. With regard to the language, the international search was carried out on the basis of:</p> <p><input checked="" type="checkbox"/> the international application in the language in which it was filed</p> <p><input type="checkbox"/> a translation of the international application into _____, which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b))</p> <p>b. <input type="checkbox"/> This international search report has been established taking into account the rectification of an obvious mistake authorized by or notified to this Authority under Rule 91 (Rule 43.6 bis(a)).</p> <p>c. <input type="checkbox"/> With regard to any nucleotide and/or amino acid sequence disclosed in the international application, see Box No. I.</p> <p>2. <input type="checkbox"/> Certain claims were found unsearchable (See Box No. II)</p> <p>3. <input checked="" type="checkbox"/> Unity of invention is lacking (see Box No III)</p> <p>4. With regard to the title,</p> <p><input checked="" type="checkbox"/> the text is approved as submitted by the applicant</p> <p><input type="checkbox"/> the text has been established by this Authority to read as follows:</p> <p>5. With regard to the abstract,</p> <p><input checked="" type="checkbox"/> the text is approved as submitted by the applicant</p> <p><input type="checkbox"/> the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority</p> <p>6. With regard to the drawings,</p> <p>a. the figure of the drawings to be published with the abstract is Figure No. <u>3</u></p> <p><input checked="" type="checkbox"/> as suggested by the applicant</p> <p><input type="checkbox"/> as selected by this Authority, because the applicant failed to suggest a figure</p> <p><input type="checkbox"/> as selected by this Authority, because this figure better characterizes the invention</p> <p>b. <input type="checkbox"/> none of the figures is to be published with the abstract</p>			

INTERNATIONAL SEARCH REPORT

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. As all searchable claims could be searched without effort justifying an additional fees, this Authority did not invite payment of additional fees.

3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.
- The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.
- No protest accompanied the payment of additional search fees.

A. CLASSIFICATION OF SUBJECT MATTER INV. H03F1/02 ADD.		
According to International Patent Classification (IPC) or to both national classification and IPC

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-15

Independent claim 1 in connection with dependent claims 2-5 and independent claim 8 in connection with dependent claim 9 define a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal, the first supply voltage, and the boosted supply voltage, and generates a second supply voltage based thereon.

1.1. claim: 6

Independent claim 1 in connection with dependent claim 6 defines a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based thereon, wherein the envelope amplifier feeds an RF power amplifier.

1.2. claim: 7

Independent claim 1 in connection with dependent claim 7 defines a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based thereon, wherein the first supply voltage is a battery voltage.

1.3. claims: 10-15

Independent claim 10 in connection with dependent claim 11 and independent claim 12 in connection with dependent claim 13 and independent claim 14 in connection with dependent claim 15 define a device or method comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based on the first supply voltage or the boosted supply voltage.

2. claims: 16, 17

Independent claim 16 in connection with dependent claim 17 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; and further including a boost

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

converter for supplies (or not) the envelope amplifier.

3. claim: 18

Independent claim 16 in connection with dependent claim 18 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; the 'switcher' further including a current sensing amplifier, a driver, and a CMOS switching stage.

4. claim: 19

Independent claim 16 in connection with dependent claim 19 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; wherein the first supply current comprises DC and low frequency components, and the second supply current comprises higher frequency components.

5. claims: 20-26

Independent claim 20 and dependent claims 21-26 define an apparatus involving an inductor that receives a switching signal and generates a supply current; and a 'switcher' that senses an input current, adds an offset, and accordingly generates the switching signal.

International application No. PCT/US2012/043915	International filing date (day/month/year) 24.06.2012	Priority date (day/month/year) 23.06.2011
International Patent Classification (IPC) or both national classification and IPC INV. H03F1/02		
Applicant QUALCOMM INCORPORATED		

1. This opinion contains indications relating to the following items:

- Box No. I Basis of the opinion
- Box No. II Priority
- Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- Box No. IV Lack of unity of invention
- Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step and industrial applicability; citations and explanations supporting such statement
- Box No. VI Certain documents cited
- Box No. VII Certain defects in the international application
- Box No. VIII Certain observations on the international application

2. FURTHER ACTION

If a demand for international preliminary examination is made, this opinion will usually be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1bis(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY**International application No.
PCT/US2012/043915

Box No. I Basis of the opinion

1. With regard to the **language**, this opinion has been established on the basis of:
 - the international application in the language in which it was filed
 - a translation of the international application into , which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1 (b)).
2. This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43bis.1(a))
3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of a sequence listing filed or furnished:
 - a. (means)
 - on paper
 - in electronic form
 - b. (time)
 - in the international application as filed
 - together with the international application in electronic form
 - subsequently to this Authority for the purposes of search
4. In addition, in the case that more than one version or copy of a sequence listing has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.
5. Additional comments:

**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY**

 International application No.
PCT/US2012/043915

Box No. IV Lack of unity of invention

1. In response to the invitation (Form PCT/ISA/206) to pay additional fees, the applicant has, within the applicable time limit:
- paid additional fees
 - paid additional fees under protest and, where applicable, the protest fee
 - paid additional fees under protest but the applicable protest fee was not paid
 - not paid additional fees
2. This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is
- complied with
 - not complied with for the following reasons:
see separate sheet
4. Consequently, this report has been established in respect of the following parts of the international application:
- all parts.
 - the parts relating to claims Nos. 1-26

Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes: Claims	<u>22, 23, 25</u>
	No: Claims	<u>1-21, 24, 26</u>
Inventive step (IS)	Yes: Claims	<u>25</u>

Re Item IV**Lack of unity of invention**

- 1 This Authority considers that the application does not meet the requirements of unity of invention and that there are five inventions covered by the claims indicated as follows:

1. Claims: 1-15

Independent claim 1 in connection with dependent claims 2-5 and independent claim 8 in connection with dependent claim 9 define a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal, the first supply voltage, and the boosted supply voltage, and generates a second supply voltage based thereon.

1.1 Claim: 6

Independent claim 1 in connection with dependent claim 6 defines a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based thereon, wherein the envelope amplifier feeds an RF power amplifier.

1.2 Claim: 7

Independent claim 1 in connection with dependent claim 7 defines a device comprising a boost converter that generates from a first supply voltage a boosted supply voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based thereon, wherein the first supply voltage is a battery voltage.

1.3 Claims: 10-15

Independent claim 10 in connection with dependent claim 11 and independent claim 12 in connection with dependent claim 13 and independent claim 14 in connection with dependent claim 15 define a device or method comprising a boost converter that generates from a first supply voltage a boosted supply

voltage, and an envelope amplifier that receives an envelope signal and the boosted supply voltage, and generates a second supply voltage based on the first supply voltage or the boosted supply voltage.

2. Claims: 16, 17

Independent claim 16 in connection with dependent claim 17 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; and further including a boost converter for supplies (or not) the envelope amplifier.

3. Claim: 18

Independent claim 16 in connection with dependent claim 18 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; the 'switcher' further including a current sensing amplifier, a driver, and a CMOS switching stage.

4. Claim: 19

Independent claim 16 in connection with dependent claim 19 defines an apparatus involving a 'switcher' that generates from a first supply voltage a first supply current; an envelope amplifier that generates a second supply current based on an envelope signal; and a power amplifier that receives a total supply current comprising the first and second supply currents; wherein the first supply current comprises DC and low frequency components, and the second supply current comprises higher frequency components.

5. Claims: 20-26

Independent claim 20 and dependent claims 21-26 define an apparatus involving an inductor that receives a switching signal and generates a supply current; and a 'switcher' that senses an input current, adds an offset, and accordingly generates the switching signal.

The reasons for which the inventions are not so linked as to form a single general inventive concept, as required by Rule 13.1 PCT, are as follows:

The subject-matter common to the five identified groups of inventions amounts to no more than a voltage- or current supply, which is trivially not new.

Note that a first sub-invention, dependent claim 6, is included in the first group of inventions, not because it is unitary with the rest of the claims in the group, but because it is only trivially different from claim 1; the same is the case for the second and third sub-inventions (claims 7, 10-15).

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

First invention (claims 1-15)

- 3 The application fails to meet the requirements of Art. 33(1) PCT because claims 1-3, 6, 8-15 lack novelty, Art. 33(2) PCT, while claim 7 lacks an inventive step, Art. 33(3) PCT:
- D1 (US 2005/215209) discloses (Fig. 3) an envelope tracking power supply comprising a step-up (boost) switching converter 104 operating off a 3.3 V supply to generate a 4.7V supply voltage, a linear envelope tracking amplifier 118/119 providing an envelope tracking supply voltage to RF power amplifier 124, wherein the 3.3V supply and the boosted 4.7V supply are selectably provided to the linear amplifier as a function of the input envelope compared to a number of predetermined thresholds, corresponding to claims 1-3, 6, 8-15. The skilled person uses a battery to power the D1 amplifier system when needed, e.g., for a mobile application: claim 7 not inventive.
- 4 The application fails to meet the requirements of Art. 33(1) PCT because claims 1-15 lack novelty, Art. 33(2) PCT:
- D2 ("High efficiency and wideband envelope tracking power amplifier with sweet spot tracking", by Kim et al, IEEE 2010) discloses (Fig. 3) an envelope tracking power supply comprising a 5V boost converter operating off a 3.4V battery (Section 'Measurement results, 5th line) and feeding a linear amplifier that drives the supply voltage for the RF PA. The boost converter generates the boosted voltage if the envelope is above some value, and also if the battery voltage is below some value - in fact, it always generates the boosted voltage. A switching class D converter runs directly off the 3.4V battery and assists the linear amplifier, corresponding to claims 1-3, 6-15. The linear amplifier is shown in Fig. 4 and described on page 256, left hand column to

comprise an operational transconductance amplifier (OTA) consisting of complementary, differential long-tail pairs and a folded cascode gain stage, the OTA connected to two source followers (the FETs shown to be biased by symbolic current sources) which read as the claimed driver and which generate two drive signals for the output stage transistors which include a P-ch FET with its source connected to the positive (boosted) supply and a N-ch FET with its source connected to ground, both drains connected to the output, corresponding to claim 4. The switching amplifier of Fig. 3 is shown in detail in Fig. 5 to comprise other two P-ch FETs P1, P2 connected as per claim 5.

- Additionally, D3 ("A Multimode/Multiband Power Amplifier With a Boosted Supply Modulator", by Kang et al, IEEE 2010) discloses (Fig. 4) a similar arrangement according to claims 1-15.

5 The application fails to meet the requirements of Art. 33(1) PCT because claims 1-3, 6-15 lack novelty, Art. 33(2) PCT:

- D4 (US 2005/046474) discloses (Fig. 5) an envelope tracking power supply for an RF power amplifier in a battery powered cell phone (para. [0003-4], the supply comprising a boost converter 41 generating, from supply 7, a boosted voltage V_{s2} , which is passed via buck converter 25 to the linear part 3, 4 of an envelope tracking amplifier. A switching part 1, 24, 26 of the envelope tracking amplifier receives the supply voltage 7 directly. The boost converter generates the boosted voltage V_{s2} if the envelope is above some value, and also if the battery voltage 7 is below some value - in fact, it always generates the boosted voltage, corresponding to claims 1, 2, 6, 7-15.

- Additionally, D5 (CHOI: "Envelope tracking power amplifier robust to battery depletion", XP031714159, Fig. 5) and D6 (KANG: "LTE Power Amplifier for envelope tracking polar transmitters", XP031786114, Fig. 9) each discloses envelope tracking amplifiers according to claims 1-3, 6, 8, 10-15.

Second invention (claim 16 in combination with claim 17)

- 6 The application fails to meet the requirements of Art. 33(1) PCT because claims 16, 17 lack novelty, Art. 33(2) PCT:
- D2 ("High efficiency and wideband envelope tracking power amplifier with sweet spot tracking", by Kim et al, IEEE 2010) discloses (Fig. 3) an envelope tracking power supply comprising a 5V boost converter operating off a 3.4V battery (Section 'Measurement results, 5th line) and feeding a linear amplifier; and a switching amplifier, the two amplifiers' output currents combining to feed the RF PA load.
 - D3 ("A Multimode/Multiband Power Amplifier With a Boosted Supply Modulator", by Kang et al, IEEE 2010) discloses (Fig. 4) a composite linear/switching envelope tracking supply for an RF PA, the linear amplifier fed from a boost converter.
 - D4 (US 2005/046474) discloses (Fig. 5) a composite linear/switching envelope tracking power supply for an RF PA, the linear amplifier 3 boost converter 41 via buck converter 25.
 - D5 (CHOI: "Envelope tracking power amplifier robust to battery depletion", XP031714159, Fig. 5) and D6 (KANG: "LTE Power Amplifier for envelope tracking polar transmitters", XP031786114, Fig. 9) each discloses envelope tracking composite linear/amplifiers with boosted supplies for the linear part.

Third invention (claim 16 in combination with claim 18)

- 7 The application fails to meet the requirements of Art. 33(1) PCT because claims 16, 18 lack novelty, Art. 33(2) PCT:
- D3 ("A Multimode/Multiband Power Amplifier With a Boosted Supply Modulator", by Kang et al, IEEE 2010) discloses (Fig. 4) a composite linear/switching envelope tracking supply for an RF PA, the output current of the linear amplifier sensed by current sense amplifier I-to-V to control the CMOS (N/P MOS) output stage V_{sw} via a hysteretic comparator and a gate driver.
 - D7 ("A Polar Transmitter With CMOS Programmable Hysteretic-Controlled Hybrid Switching Supply Modulator for Multistandard Applications", by Choi, XP011258456) discloses (Fig. 1) a tracking supply essentially identical to that of D3.

- 8 The application fails to meet the requirements of Art. 33(1) PCT because claim 16 lacks novelty, Art. 33(2) PCT, and because claim 18 lacks an inventive step, Art. 33(3) PCT:
- D8 ("High Efficiency Wide Bandwidth Power Supplies for GSM and EDGE RF Power Amplifiers", by Li, XP010815779) discloses (Fig. 4) a composite linear/switching envelope tracking supply for an RF PA, according to claim 16, and further having a comparator receiving the sensed linear amplifier output current and a gate driver for the switching CMOS output stage. D8 does not disclose a current sense amplifier as required in claim 18. The skilled person, however, when faced with task of realizing the symbolically depicted current sense function, uses, as a matter of course, a current sense amplifier for its intended purpose, e.g., to provide to the comparator a more suitable signal.
 - D9 ("Optimum Bias Calculation for Parallel Hybrid Switching-Linear Regulators", by Stauth, XP031085267) discloses (Fig. 1) a composite linear/switching envelope tracking supply for an RF PA, according to claim 16, and further having a comparator receiving the sensed linear amplifier output current and a gate driver for the switching CMOS output stage. D9 does not disclose a current sense amplifier as required in claim 18. The skilled person uses one for the same reasons given for D8.

Fourth invention (claim 16 in combination with claim 19)

- 9 The application fails to meet the requirements of Art. 33(1) PCT because claims 16, 19 lack novelty, Art. 33(2) PCT:
- Each one of documents D2-D9 discloses a composite linear/switching envelope tracking supply for an RF PA. In such an arrangement the linear amplifier generally delivers the faster signal components and the switching amplifier DC and low frequency components, as explicitly taught in D2, page 256, left column, top; in D3, 2nd page, left column, penultimate paragraph; in D4, Fig. 5 (low pass- and high pass filters 26, 4); in D7, Fig. 8; in D8, page 1315, left column, bottom; and in D9, page 569, right column, top.

Fifth invention (claims 20-26)

- 10 The application fails to meet the requirements of Art. 33(1) PCT because claims 20, 21, 24, 26 lack novelty, Art. 33(2) PCT, while claims 22, 23 lack an inventive step, Art. 33(3) PCT:
- D9 discloses (Fig. 1) a composite linear/switching tracking supply for an RF PA, wherein the linear amplifier's output current is sensed and used to control the output current of the switching supply. An offset as given in eq. (8) is added to the sensed current to increase the switching current to maximize the overall efficiency. The offset is partially based on the supply voltage V_{dd} which feeds the switching amplifier, according to claims 20, 21, 24, 26, Art. 33(2) PCT. Of the additional features of claims 22 and 23, only the current sense amplifier is not disclosed in D9; the skilled person non-inventively adds it, please refer to above point 8 (claims 22, 23 not inventive, Art. 33(3) PCT).
 - D10 ("Basic Considerations and Topologies of Switched-Mode Assisted Linear Power Amplifiers", by Ertl, XP011023224) discloses (Fig. 2) a composite linear/switching power amplifier, where a switching stage senses the current of the linear push-pull output stage. In the Fig. 9d variant of the switching stage the current source- and sink parts have been separated; the current in the sourcing part is greater (always above zero) than the normal case seen in Fig. 3, which effectively amounts to an offset having been added to the sensed current, according to claims 20, 24.
 - Claim 25 appears to meet the requirements of Art. 33(1) PCT. The cited prior art does not teach or fairly suggest feeding a boosted supply voltage to the linear amplifier in D9 or D10, nor adding an offset current in the other cited art, Art. 33(2), (3) PCT.

Possible steps after receipt of the international search report (ISR) and written opinion of the International Searching Authority (WO-ISA)

General information

For all international applications filed on or after 01/01/2004 the competent ISA will establish an ISR. It is accompanied by the WO-ISA. Unlike the former written opinion of the IPEA (Rule 66.2 PCT), the WO-ISA is not meant to be responded to, but to be taken into consideration for further procedural steps. This document explains about the possibilities.

Amending claims under Art. 19 PCT

Within 2 months after the date of mailing of the ISR and the WO-ISA the applicant may file amended claims under Art. 19 PCT directly with the International Bureau of WIPO. The PCT reform of 2004 did not change this procedure. For further information please see Rule 46 PCT as well as form PCT/ISA/220 and the corresponding Notes to form PCT/ISA/220.

Filing a demand for international preliminary examination

In principle, the WO-ISA will be considered as the written opinion of the IPEA. This should, in many cases, make it unnecessary to file a demand for international preliminary examination. If the applicant nevertheless wishes to file a demand this must be done before expiry of 3 months after the date of mailing of the ISR/ WO-ISA or 22 months after priority date, whichever expires later (Rule 54bis PCT). Amendments under Art. 34 PCT can be filed with the IPEA as before, normally at the same time as filing the demand (Rule 66.1 (b) PCT).

If a demand for international preliminary examination is filed and no comments/amendments have been received the WO-ISA will be transformed by the IPEA into an IPRP (International Preliminary Report on Patentability) which would merely reflect the content of the WO-ISA. The demand can still be withdrawn (Art. 37 PCT).

Filing informal comments

After receipt of the ISR/WO-ISA the applicant may file informal comments on the WO-ISA directly with the International Bureau of WIPO. These will be communicated to the designated Offices together with the IPRP (International Preliminary Report on Patentability) at 30 months from the priority date. Please also refer to the next box.

End of the international phase

At the end of the international phase the International Bureau of WIPO will transform the WO-ISA or, if a demand was filed, the written opinion of the IPEA into the IPRP, which will then be transmitted together with possible informal comments to the designated Offices. The IPRP replaces the former IPER (international preliminary examination report).

Total Files Size (in bytes):				44515286	

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

us-docketing@qualcomm.com

Office Action Summary	Application No. 13/167,659	Applicant(s) MATHE ET AL.	
	Examiner KHANH V. NGUYEN	Art Unit 2817	AIA (First Inventor to File) Status No

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on _____.
 A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.
- 4) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 5) Claim(s) 3-7, 10-15, 17-19 and 21-26 is/are pending in the application.
5a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 6) Claim(s) _____ is/are allowed.
- 7) Claim(s) 8 and 9 is/are rejected.
- 8) Claim(s) _____ is/are objected to.
- 9) Claim(s) _____ are subject to restriction and/or election requirement.

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to PPHfeedback@uspto.gov.

Application Papers

- 10) The specification is objected to by the Examiner.
- 11) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

- a) All b) Some * c) None of the:
1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Interim copies:

- a) All b) Some c) None of the: Interim copies of the priority documents have been received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 2/22/13.
- 3) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 4) Other: _____.

DETAILED ACTION

Claim Objections

Claim 8 is objected to because of the following informalities:

Claim 8, “wherein the envelope amplifier is operative to further receive the first supply voltage and generate the second supply voltage based on the first supply voltage and generate the second supply voltage based on the first supply voltage or the boosted supply voltage, and further” should correctly be -- **wherein the envelope amplifier is operative to further receive the first supply voltage and generate the second supply voltage based on the first supply voltage or the boosted supply voltage.** – Note, the original limitations of claim 8 should be deleted since similar claimed subject matters are disclosed.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of 35 U.S.C. 112(b):

(B) CONCLUSION.—The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the inventor or a joint inventor regards as the invention.

The following is a quotation of 35 U.S.C. 112 (pre-AIA), second paragraph:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8 and 9 are rejected under 35 U.S.C. 112(b) or 35 U.S.C. 112 (pre-AIA), second paragraph, as being indefinite for failing to particularly point out and distinctly

claim the subject matter which the inventor or a joint inventor, or for pre-AIA the applicant regards as the invention.

Regarding claim 8, newly amended claim 8 disclosed similar claimed subject matters, see the last two limitations of the claim.

Regarding claim 9, it should be canceled since the claimed subject matters already disclosed in amended claim 8.

Allowable Subject Matter

Claims 3-8, 10-15, 17-19, 21-26 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh V. Nguyen whose telephone number is 571-272-1767. The examiner can normally be reached on 8:00 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on 571-272-1769. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Appln. No.: 13/167,659

Applicant: Lennart K. Mathe et al.

Filed: June 23, 2011

Examiner: Khanh V. Nguyen

Art Unit: 2817

Customer No.: 23696

Confirm. No.: 8529

Docket No.: 101005

Certificate of Transmission/Mailing

I hereby certify that this correspondence is being transmitted to the USPTO, transmitted via the Office electronic filing system addressed to: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on the date shown below:

July 20, 2013 /Sheryl Schoen/

AMENDMENT AFTER FINAL

Sir:

In response to the Office Action dated May 10, 2013, please amend the above-identified application as follows:

Amendments to the Claims are reflected in the listing of claims which begins on page 2 of this paper.

Remarks/Arguments begin on page 9 of this paper.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Canceled)
2. (Canceled)
3. (Previously Presented) The apparatus of claim 4, wherein the envelope amplifier is operative to generate the second supply voltage based on the boosted supply voltage if the envelope signal exceeds a first threshold, or if the first supply voltage is below a second threshold, or both.
4. (Previously Presented) An apparatus comprising:
 - a boost converter operative to receive a first supply voltage and generate a boosted supply voltage having a higher voltage than the first supply voltage; and
 - an envelope amplifier operative to receive an envelope signal and the boosted supply voltage and generate a second supply voltage based on the envelope signal and the boosted supply voltage, wherein the envelope amplifier is operative to further receive the first supply voltage and generate the second supply voltage based on the first supply voltage and generate the second supply voltage based on the first supply voltage or the boosted supply voltage, and further wherein the envelope amplifier comprises
 - an operational amplifier (op-amp) operative to receive the envelope signal and provide an amplified signal,
 - a driver operative to receive the amplified signal and provide a first control signal and a second control signal,
 - a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage, and

an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the second supply voltage, and a source coupled to circuit ground.

5. (Original) The apparatus of claim 4, wherein the envelope amplifier further comprises

a second PMOS transistor having a gate receiving a third control signal, a source receiving the boosted supply voltage, and a drain coupled to the source of the PMOS transistor, and

a third PMOS transistor having a gate receiving a fourth control signal, a source receiving the first supply voltage, and a drain coupled to the source of the PMOS transistor.

6. (Previously Presented) The apparatus of claim 4, further comprising:

a power amplifier operative to receive the second supply voltage from the envelope amplifier and to receive and amplify an input radio frequency (RF) signal and provide an output RF signal.

7. (Previously Presented) The apparatus of claim 4, wherein the first supply voltage is a battery voltage for the apparatus.

8. (Currently Amended) An integrated circuit comprising:

a boost converter operative to receive a first supply voltage and generate a boosted supply voltage having a higher voltage than the first supply voltage; and

an envelope amplifier operative to receive an envelope signal and the boosted supply voltage and generate a second supply voltage based on the envelope signal and the boosted supply voltage, wherein the envelope amplifier is operative to further receive the first supply voltage and generate the second supply voltage based on the first supply voltage ~~and generate the second supply voltage based on the first supply voltage~~ or the boosted supply voltage, and further

~~a boost converter operative to receive a first supply voltage and generate a boosted supply voltage having a higher voltage than the first supply voltage; and~~

~~an envelope amplifier operative to receive an envelope signal and the boosted supply voltage and generate a second supply voltage based on the envelope signal and the boosted supply voltage.~~

9. (Canceled)

10. (Previously Presented) An apparatus for wireless communication, comprising:

a power amplifier operative to receive and amplify an input radio frequency (RF) signal and provide an output RF signal; and

a supply generator operative to receive an envelope signal and a first supply voltage, to generate a boosted supply voltage having a higher voltage than the first supply voltage, and to generate a second supply voltage for the power amplifier based on the envelope signal and the boosted supply voltage, wherein the supply generator incorporates an operational amplifier (op-amp) operative to receive the envelope signal and provide an amplified signal, a driver operative to receive the amplified signal and provide a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving a first control signal, a source receiving the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage, and an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the second supply voltage, and a source coupled to circuit ground.

11. (Original) The apparatus of claim 10, wherein the supply generator is operative to generate the second supply voltage based on the envelope signal and either the boosted supply voltage or the first supply voltage.

12. (Previously Presented) A method of generating supply voltages, comprising:

generating a boosted supply voltage based on a first supply voltage, the boosted supply voltage having a higher voltage than the first supply voltage; and

generating a second supply voltage based on an envelope signal and the boosted supply voltage, wherein the second supply voltage is generated by an envelope amplifier that produces the second supply voltage using an operational amplifier (op-amp) that receives the envelope

signal and provides an amplified signal, a driver that receives the amplified signal and provides a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor that receives the first control signal, a source that receives the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage and an N-channel metal oxide semiconductor (NMOS) transistor that receives the second control signal at a gate and provides a second supply voltage through a drain, and a source for circuit grounding.

13. (Original) The method of claim 12, wherein the generating the second supply voltage comprises generating the second supply voltage based on the envelope signal and either the boosted supply voltage or the first supply voltage.

14. (Currently Amended) An apparatus for generating supply voltages, comprising:
means for generating a boosted supply voltage based on a first supply voltage, the boosted supply voltage having a higher voltage than the first supply voltage; and
means for generating a second supply voltage based on the envelope signal and the boosted supply voltage[], wherein the means for generating the second supply voltage incorporates an envelope amplifier that produces the second supply voltage using an operational amplifier (op-amp) that receives the envelope signal and provides an amplified signal, a driver that receives the amplified signal and provides a first control signal and a second control signal, a P-channel metal oxide semiconductor (PMOS) transistor that receives the first control signal, a source that receives the boosted supply voltage or the first supply voltage, and a drain providing the second supply voltage and an N-channel metal oxide semiconductor (NMOS) transistor that receives the second control signal at a gate and provides a second supply voltage through a drain, and a source for circuit grounding[.].

15. (Original) The apparatus of claim 14, wherein the means for generating the second supply voltage comprises means for generating the second supply voltage based on an envelope signal and either the boosted supply voltage or the first supply voltage.

16. (Canceled)

17. (Previously Presented) The apparatus of claim 18, further comprising:
a boost converter operative to receive the first supply voltage and provide a boosted supply voltage having a higher voltage than the first supply voltage, wherein the envelope amplifier operates based on the first supply voltage or the boosted supply voltage.
18. (Previously Presented) An apparatus comprising:
a switcher operative to receive a first supply voltage and provide a first supply current;
an envelope amplifier operative to receive an envelope signal and provide a second supply current based on the envelope signal; and
a power amplifier operative to receive an envelope signal and provide a second supply current based on the envelope signal; and
a power amplifier operative to receive a total supply current comprising the first supply current and the second supply current, wherein the switcher comprises
a current sense amplifier operative to sense the first supply current, or the second supply current, or the total supply current and provide a sensed signal,
a driver operative to receive the sensed signal and provide a first control signal and a second control signal,
a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving the first supply voltage, and a drain providing a switching signal for an inductor providing the first supply current, and
an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the switching signal, and a source coupled to circuit ground.
19. (Previously Presented) The apparatus of claim 18, wherein the first supply current comprises direct current (DC) and low frequency components, and wherein the second supply current comprises higher frequency components.
20. (Canceled)

21. (Previously Presented) The apparatus of claim 22, wherein the switcher operates based on a first supply voltage, and wherein the offset is determined based on the first supply voltage.
22. (Previously Presented) An apparatus comprising:
an inductor operative to receive a switching signal and provide a supply current; and
a switcher operative to sense an input current and generate the switching signal to charge and discharge the inductor to provide the supply current, the switcher adding an offset to the input current to generate a larger supply current via the inductor than without the offset, wherein the switcher comprises
a summer operative to sum the input current and an offset current and provide a summed current,
a current sense amplifier operative to receive the summed current and provide a sensed signal, and
a driver operative to receive the sensed signal and provide at least one control signal used to generate the switching signal for the inductor.
23. (Original) The apparatus of claim 22, wherein the at least one control signal comprises a first control signal and a second control signal, and wherein the switcher further comprises
a P-channel metal oxide semiconductor (PMOS) transistor having a gate receiving the first control signal, a source receiving a first supply voltage, and a drain providing the switching signal, and
an N-channel metal oxide semiconductor (NMOS) transistor having a gate receiving the second control signal, a drain providing the switching signal, and a source coupled to circuit ground.
24. (Previously Presented) The apparatus of claim 22, further comprising:
an envelope amplifier operative to receive an envelope signal and provide a second supply current based on the envelope signal, wherein a total supply current comprises the supply current from the switcher and the second supply current from the envelope amplifier.

25. (Original) The apparatus of claim 24, further comprising:

a boost converter operative to receive the first supply voltage and provide a boosted supply voltage having a higher voltage than the first supply voltage, wherein the envelope amplifier operates based on the first supply voltage or the boosted supply voltage.

26. (Previously Presented) The apparatus of claim 22, further comprising:

a power amplifier operative to receive the supply current from the inductor and to receive and amplify an input radio frequency (RF) signal and provide an output RF signal.

REMARKS/ARGUMENTS

The above identified patent application has been amended and reconsideration and reexamination are hereby requested.

Claims 3-8, 10-15, 17-19, and 21-26 are now pending in the application. Claims 1, 2, 16, and 20 have been previously canceled. Claim 8 and 14 have been amended. Claim 9 has been canceled. No new matter has been added, as the claim amendments and new claims have support in the application as originally filed.

Claim Objections

The Examiner has objected to claim 8 because of an informality. The Applicant has amended claim 8. In view of the above amendments, the Applicant respectfully requests that the above objection be withdrawn.

Claim Rejections - 35 U.S.C. § 112(b)

Claims 8 and 9 were objected under 35 U.S.C. § 112(b), second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which the Applicant regards as the invention. According to the Office Action, newly amended 8 disclosed similar claimed subject matters; claim 9 should be canceled since the claimed subject matters are already disclosed in amended claim 8.

The Applicant has amended claim 8 and submits that claim 8 particularly points out and distinctly claims the subject matter which the Applicant regards as the invention. Claim 9 has been cancelled.

Claim Objections/Allowable Subject Matter

The Applicant thanks the Examiner for allowing claims 3-8, 10-15, 17-19, and 21-26.

Application No.: 13/167,659
Amendment dated July 10, 2013
Reply to Office Action of May 10, 2013

Docket No.: 101005
Customer No.: 23696

10

CONCLUSION

In light of the amendments contained herein, the Applicant submits that the application is in condition for allowance, for which early action is requested.

Please charge any fees or overpayments that may be due with this response to Deposit Account No. 17-0026.

Respectfully submitted,

Dated: 2013-07-10

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.
