

## COMING ATTRACTIONS

### Fly Like the Pros

This spring, Saitek will take flight sim and other PC games to the next level with the **Saitek X52** joystick and throttle control system. The throttle module includes an informative LCD screen to show flight time, destination time, and more. The joystick has a two-stage metal trigger, four fire buttons, and toggle switches for up to six programmable flight commands. Both have a solid, precise feel to add to the realism of not just flight-sim programs, but also aerial combat and even tank-simulation titles. —*Jamie M. Besales*

\$329.95 direct. Saitek, [www.saitek.com](http://www.saitek.com)

### Nokia's Latest Camera Phone

The **Nokia 6682** smartphone is designed to be appealing to shutterbugs and business users alike. The handsome phone has a large screen and a 1.3-megapixel camera with a flash. But what makes the 6682 special is its smartphone capabilities. The phone comes with picture- and video-editing software (yes, editing), and it can print directly to Bluetooth and some USB printers without the need for a PC. Since the 6682 uses the Symbian Series 60 open OS, it can also play MP3s, as well as run Microsoft Office document readers and a slew of other useful apps. The 6682 is the first phone to support the new release of Nokia's Lifelog, so you can post pictures, videos, and text messages to an online timeline that you can either keep private or publish for your friends. —*Sascha Segan*

### Take It on the Road

Producers of *Pimp My Ride*, take note: The new **Clarion N.I.C.E. Transportable Navigation System** combines an in-car GPS navigation system and entertainment console in one. Use the 7-inch LCD touchscreen to access point-to-point visual directions (along with turn-by-turn voice guidance) to any destination. Along the way, use the system to watch video (thanks to the built-in A/V ports) or to play back your stored MP3 files (a built-in FM transmitter sends tracks to your car's existing audio system). And the N.I.C.E. can be easily transferred between cars. —*JMB*

\$1,399.99 list. Clarion Corp. of America, [www.clarion.com](http://www.clarion.com)

### Creative Improves the Audigy

Looking for a better sound card for music creation, games, and PC entertainment? The **Creative Labs Sound Blaster Audigy 4 Pro** has the best signal-to-noise ratio (113db) of any consumer sound card. With the included Creative Smart Recorder software, you can schedule recordings from Internet radio and digitize music from analog sources, such as vinyl records and cassette tapes.

The Audio Clean-Up tool can remove scratches, pops, and hisses. —*JMB*

\$299.99 list. Creative Technology Ltd., [www.soundblaster.com](http://www.soundblaster.com)

### Phone Your Music

The online storage experts at Xdrive are offering a new music service, **Xdrive Music**, that lets you store your digital music files on the company's servers and then access them via your Treo phone or any Palm, Tungsten, or Sony Clie PDA. Simply install a music player (such as Pocket Tunes Deluxe) on your device and upload music files to Xdrive. The music

### Visualize Salesforce

Salesforce.com is a powerful CRM tool, but few salespeople exploit its full potential. **MindManager Accelerator for Salesforce.com** hopes to change that. The plug-in pulls information from 30 separate program screens into one visually oriented Dashboard that gives a big-
