(57) **ABSTRACT**

A wireless communication method for secure transmission of data between mobile computing devices. The method includes the step of transmitting a line of sight beam from a first device to a second device to mutually identify the first device and the second device out of a plurality of devices. Once identified, the first and second devices establish an RF communications link between the identified first device and the identified second device. Using the RF communications link, the data transfer is then performed between the first device and the second device. The line of sight beam to select a secure transmission method for the RF communications link can be an IR communications beam. The RF communications link can be a secure RF communications link recognizable only by the first and second devices output of the plurality of devices. The RF communications link can be compatible with a version of the Bluetooth specification. The secure transmission method can be an encryption method for the RF communications link. At least one of the first and second mobile computing device can be a PID (personal information device). At least one of the first and second mobile computing devices can be a cellular telephone. Upon completion of the data transfer, a confirmation can be presented to the user.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
