CONTENTS

1			
2		CONTENTS	i
3		Foreword.....	iii
4	I	Introduction	iv
5	I.1	Purpose	iv
6	I.2	Application	iv
7	I.3	Profiles and levels.....	iv
8	I.4	The scalable and the non-scalable syntax	v
9	1	Scope	1
10	2	Normative references.....	1
11	3	Definitions	3
12	4	Abbreviations and symbols.....	9
13	4.1	Arithmetic operators.....	9
14	4.2	Logical operators.....	9
15	4.3	Relational operators.....	9
16	4.4	Bitwise operators.....	10
17	4.5	Assignment.....	10
18	4.6	Mnemonics	10
19	4.7	Constants	10
20	5	Conventions.....	11
21	5.1	Method of describing bitstream syntax.....	11
22	5.2	Definition of functions	12
23	5.3	Reserved, forbidden and marker_bit	12
24	5.4	Arithmetic precision	12
25	6	Video bitstream syntax and semantics.....	13
26	6.1	Structure of coded video data.....	13
27	6.2	Video bitstream syntax.....	25
28	6.3	Video bitstream semantics.....	39
29	7	The video decoding process	63
30	7.1	Higher syntactic structures	63
31	7.2	Variable length decoding.....	64
32	7.3	Inverse scan	67
33	7.4	Inverse quantisation.....	68
34	7.5	Inverse DCT	73
35	7.6	Motion compensation	73
36	7.7	Spatial scalability.....	90
37	7.8	SNR scalability	103
38	7.9	Temporal scalability	109
39	7.10	Data partitioning.....	113
40	7.11	Hybrid scalability	115
41	7.12	Output of the decoding process	116
42	8	Profiles and levels.....	119
43	8.1	ISO/IEC 11172-2 compatibility.....	120
44	8.2	Relationship between defined profiles	120
45	8.3	Relationship between defined levels	122
46	8.4	Scalable layers	123
47	8.4.1	Permissible layer combinations	124
48	8.5	Parameter values for defined profiles, levels and layers	126
49		Annex A Discrete cosine transform.....	131
50		Annex B Variable length code tables	132
51	B.1	Macroblock addressing.....	132
52	B.2	Macroblock type.....	133
53	B.3	Macroblock pattern.....	138
54	B.4	Motion vectors.....	139
55	B.5	DCT coefficients	140
56		Annex C Video buffering verifier	149

1		Annex D Features supported by the algorithm	154
2	D.1	Overview.....	154
3	D.2	Video Formats	154
4	D.3	Picture Quality	155
5	D.4	Data Rate Control	155
6	D.5	Low Delay Mode	156
7	D.6	Random Access/Channel Hopping	156
8	D.7	Scalability	156
9	D.8	Compatibility	164
10	D.9	Differences between this specification and ISO/IEC 11172-2	164
11	D.10	Complexity.....	167
12	D.11	Editing Encoded Bitstreams.....	167
13	D.12	Trick modes	167
14	D.13	Error Resilience	169
15		Annex E Profile and level restrictions	178
16	E.1	Syntax element restrictions in profiles.....	178
17	E.2	Permissible layer combinations (see 8.4.1).....	189
18		Annex F Patent statements	192
19		Annex G Bibliography	194

1 Foreword

2 The ITU-T (the ITU Telecommunication Standardisation Sector) is a permanent organ of the
3 International Telecommunications Union (ITU). The ITU-T is responsible for studying technical,
4 operating and tariff questions and issuing Recommendations on them with a view to developing
5 telecommunication standards on a world-wide basis.

6 The World Telecommunication Standardisation Conference, which meets every four years, establishes
7 the program of work arising from the review of existing questions and new questions among other
8 things. The approval of new or revised Recommendations by members of the ITU-T is covered by the
9 procedure laid down in the ITU-T Resolution No. 1 (Helsinki 1993). The proposal for
10 Recommendation is accepted if 70% or more of the replies from members indicate approval.

11 ISO (the International Organisation for Standardisation) and IEC (the International Electrotechnical
12 Commission) form the specialised system for world-wide standardisation. National Bodies that are
13 members of ISO and IEC participate in the development of International Standards through technical
14 committees established by the respective organisation to deal with particular fields of technical
15 activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other
16 international organisations, governmental and non-governmental, in liaison with ISO and IEC, also
17 take part in the work.

18 In the field of information technology, ISO and IEC have established a joint technical committee,
19 ISO/IEC JTC1. Draft International Standards adopted by the joint technical committee are circulated
20 to national bodies for voting. Publication as an International Standard requires approval by at least
21 75% of the national bodies casting a vote.

22 This specification is a committee draft that is being submitted for approval to the ITU-T, ISO-
23 IEC/JTC1 SC29. It was prepared jointly by SC29/WG11, also known as MPEG (Moving Pictures
24 Expert Group), and the Experts Group for ATM Video Coding in the ITU-T SG15. MPEG was
25 formed in 1988 to establish standards for coding of moving pictures and associated audio for various
26 applications such as digital storage media, distribution and communication. The Experts Group for
27 ATM Video Coding was formed in 1990 to develop video coding standard(s) appropriate for B-ISDN
28 using ATM transport.

29 In this specification Annex A, Annex B and Annex C contain normative requirements and are an
30 integral part of this specification. Annex D, Annex E, Annex F and Annex G are informative and
31 contain no normative requirements.

32 ISO/IEC

33 This International Standard is published in four Parts.

34 13818-1 systems — specifies the system coding of the specification. It defines a multiplexed
35 structure for combining audio and video data and means of representing the
36 timing information needed to replay synchronised sequences in real-time.

37 13818-2 video — specifies the coded representation of video data and the decoding process
38 required to reconstruct pictures.

39 13818-3 audio — specifies the coded representation of audio data.

40 13818-4 conformance— specifies the procedures for determining the characteristics of coded
41 bitstreams and for testing compliance with the requirements stated in
42 13818-1, 13818-2 and 13818-3.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
