

An introduction to orthogonal frequency-division multiplexing

Ove Edfors Magnus Sandell Jan-Jaap van de Beek
Daniel Landström Frank Sjöberg

September 1996

Abstract

This report is an introduction to *orthogonal frequency-division multiplexing* (OFDM). The focus is on signal processing areas pursued by our research group at Luleå University of Technology. We present an historical background and some frequently used system models. Typical areas of applications are also described, both wireless and wired. In addition to the general overview, the addressed areas include synchronization, channel estimation and channel coding. Both time and frequency synchronization are described, and the effects of synchronization errors are presented. Different types of channel estimators are described, where the focus is on low-complexity algorithms, and in this context, advantages and disadvantages of coherent and differential modulation are also discussed. Channel coding is described, both for wireless and wired systems, and pointers are included to evaluation tools and bitloading algorithms. An extensive bibliography is also included.

Contents

| | | |
|----------|--|-----------|
| 1 | Introduction | 1 |
| 2 | System models | 3 |
| 2.1 | Continuous-time model | 4 |
| 2.2 | Discrete-time model | 8 |
| 2.3 | A time-frequency interpretation | 9 |
| 2.4 | Imperfections | 10 |
| 3 | System environments | 11 |
| 3.1 | Wireless systems | 11 |
| 3.1.1 | Downlink | 12 |
| 3.1.2 | Uplink | 13 |
| 3.2 | Wired systems | 13 |
| 3.2.1 | Subscriber-line transfer function | 14 |
| 3.2.2 | Noise and crosstalk | 14 |
| 4 | Synchronization | 17 |
| 4.1 | Symbol synchronization | 17 |
| 4.1.1 | Timing errors | 17 |
| 4.1.2 | Carrier phase noise | 18 |
| 4.2 | Sampling-frequency synchronization | 19 |
| 4.3 | Carrier frequency synchronization | 19 |
| 4.3.1 | Frequency errors | 19 |
| 4.3.2 | Frequency estimators | 21 |
| 5 | Channel estimation | 23 |
| 5.1 | Pilot information | 23 |
| 5.2 | Estimator design | 24 |
| 5.3 | Performance example | 25 |
| 6 | Channel coding | 27 |
| 6.1 | Wireless systems | 27 |
| 6.1.1 | Digital Audio Broadcasting | 27 |
| 6.1.2 | Trellis-coded OFDM | 28 |
| 6.1.3 | Other systems | 29 |
| 6.1.4 | Coding on fading channels | 30 |
| 6.2 | Wired systems | 30 |
| 6.2.1 | Bit loading | 30 |
| 6.2.2 | Bit-loading algorithms | 31 |
| 6.2.3 | Channel coding | 32 |
| 7 | Discussion | 33 |

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
