## **Isolation Benefits**

- The Discovery Circuit must be isolated, regardless final determination on power isolation
- Power over signal pairs allows use of existing trans for isolation
- Power over unused pairs requires additional discovision or complete discovery circuit in the isolate voltage) domain

# Long Term Complexity/Co

- Power over signal pairs allows easier integration of discovery & power control circuitry onto the PHY
- Decreases system cost by lowering parts count
- Short term may require extra complexity until integrated solutions become available, but the integrated solution will come quickly
- Mid-Span insertion is more complex, but let's not i the long term complexity for a stop-gap measure!

RM

# Compatibility

- Compatible with existing installations
- Looking forward: we need to address any signal que concerns now anyway if we want to maintain the possibility of 1000BT future compatibility, even if the unused pairs.
