## Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

BLAKELY SOKOLOFF TAYLOR \& ZAFMAN LLP
1279 OAKMEAD PARKWAY
SUNNYVALE, CA 94085-4040

Mail Date: 04/21/2010

| Applicant | $:$ Philippe Kahn | $:$ DECISION ON REQUEST FOR |
| :--- | :--- | :--- |
| Patent Number | $: 7653508$ | $:$ RECALCULATION Of PATENT |
| Issue Date | $: 01 / 26 / 2010$ | $:$ TERM ADJUSTMENT IN VIEW |
| Appliction No | $: 11 / 644,455$ | $:$ OF WYETH AND NOTICE OF INTENT TO |
| Filed | $: 12 / 22 / 2006$ | $:$ |
|  |  |  |

The Request for Recalculation is GRANTED to the extent indicated.
The patent term adjustment has been determined to be 556 days. The USPTO will sua sponte issue a certificate of correction reflecting the amount of PTA days determined by the recalculation.

Prior to the issuance of the certificate of correction, the USPTO will afford patentee an opportunity to be heard and request reconsideration. Accordingly, patentee has one month or thirty (30) days, whichever is longer, to file a request for reconsideration of this patent term adjustment calculation. See 35 U.S.C. $154(\mathrm{~b})(3)(\mathrm{B})(\mathrm{ii})$ and $37 \mathrm{CFR} 1.322(\mathrm{a})(4)$. No extensions of time will be granted under 37 CFR 1.136.

Patentee should use document code PET.OP if electronically filing a request for reconsideration of this patent term adjustment calculation. The patentee must also include the information required by $37 \mathrm{CFR} 1.705(\mathrm{~b})(2)$ and the fee required by 37 CFR 1.18(e). If patentee does not file a timely request for reconsideration of this patent term adjustment calculation including the information required by $37 \mathrm{CFR} 1.705(\mathrm{~b})(2)$ and the fee required by $37 \mathrm{CFR} 1.18(\mathrm{e})$, the USPTO will issue a certificate of correction reflecting the PTA determination noted above.
Patentee should be aware that in order to preserve the right to review in the United States District Court for the District of Columbia of the USPTO patent term adjustment determination, patentee must ensure that he or she also take the steps required under 35 U.S.C. 154 (b) (4) (A) in a timely manner. Nothing in the request for recalculation should be construed as providing an alternative time frame for commencing a civil action under 35 U.S.C. 154 (b) (4) (A).

Any questions ooncernirg this deoision onoudd be direoted to the offiog of Patent Legal Ahminatration at 575-272-7702.

> PATENTEE HEREBY REQUESTS RECALCULATION OF THE PATENT TERM ADJUSTMENT (PTA) UNDER 35 USC $154(\mathrm{~b})$ INDICATED ON THE ABOVE-IDENTIFIED PATENT. THE PATENTEE'S SOLE BASIS FOR REQUESTING THE RECALCULATION IS THE USPTO'S PRE-WYETH INTERPRETATION OF 35 U.S.C. $154(\mathrm{~b})(2)(\mathrm{A})$.

Note: This form is only for requesting a recalculation of PTA for patents issued before March 2, 2010, if the sole basis for requesting the recalculation is the USPTO's pre-Wyeth interpretation of 35 U.S.C. 154(b)(2)(A). See Instruction Sheet on page 2 for more information.

Patentees are reminded that to preserve the right to review in the United States District Court for the District of Columbia of the USPTO's patent term adjustment determination, a patentee must ensure that he or she also takes the steps required under 35 U.S.C. 154(b)(3) and (b)(4) and 37 CFR 1.705 in a timely manner.
*Wyeth v. Kappos, No. 2009-1120 (Fed. Cir., Jan. 7, 2010).

| Signature /Judith Szepesi/ | Date February 19, 2010 |

| Name <br> (Print/Typed) Judith A. Szepesi | Registration Number 39,393 |

Note: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required in accordance with 37 $\overline{C F R} 1.33$ and 11.18. Please see 37 CFR 1.4(d) for the form of the signature. If necessary, submit multiple forms for more than one signature, see below*.
*Total of 1 $\qquad$ forms are submitted.

The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

# Instruction Sheet for: REQUEST FOR RECALCULATION OF PATENT TERM ADJUSTMENT IN VIEW OF WYETH* <br> (Not to be Submitted to the USPTO) 

This form is only for requesting a recalculation of PTA for patents issued before March 2, 2010, if the sole basis for requesting the recalculation is the USPTO's pre-Wyeth interpretation of 35 U.S.C. 154(b)(2)(A).

This form must be filed within 180 days of the day the patent was granted, with the following exception:

Patentees who received a decision from the USPTO under the USPTO's pre-Wyeth interpretation of 35 U.S.C. 154(b)(2)(A) may file a request for reconsideration of that decision if such a request for reconsideration is filed within two months of the date of the decision (37 CFR 1.181(f)). If the patentee's sole basis for requesting reconsideration of the decision is the USPTO's pre-Wyeth interpretation of 35 U.S.C. $154(\mathrm{~b})(2)(\mathrm{A})$, the request for reconsideration need only state that reconsideration is being requested in view of Wyeth (this form may be used for this purpose if it is filed within two months of the date of the decision from the USPTO).

Do not use this form if the application has been allowed, but not yet issued as a patent.

1. For patents issued before March 2, 2010: A request for reconsideration under 37 CFR $1.705(\mathrm{~d})$ and the fee set forth in 37 CFR 1.18(e) are not required, provided that the patentee's sole basis for requesting recalculation of the PTA in the patent is the USPTO's pre-Wyeth interpretation of 35 U.S.C. 154 (b)(2)(A) and this form is filed within 180 days of the day the patent was granted.
2. For patents issued on or after March 2, 2010 (do not use this form): Patentees seeking a revised PTA in a patent issued on or after March 2, 2010, must file a request for reconsideration under 37 CFR 1.705 (d) that complies with the requirements of 37 CFR 1.705(b)(1) and (b)(2) within two months of the day the patent issued.

For more information, see "Notice Concerning Calculation of the Patent Term Adjustment With Respect to the Overlapping Delay Provision of 35 U.S.C. 154(b)(2)(A)" available on the USPTO Web site at http://www.uspto.gov/patents/law/notices/2010.jsp.
*Wyeth v. Kappos, No. 2009-1120 (Fed. Cir., Jan. 7, 2010).

## Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

| Warnings: |  |  |  |  |  |
| Information: |  |  |  |  |  |

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

## National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35
U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

## ISSUE NOTIFICATION

The projected patent number and issue date are specified above.
Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)
The Patent Term Adjustment is 556 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):
Philippe Kahn, Aptos, CA;
Arthur Kinsolving, Santa Cruz, CA;
Mark Andrew Christensen, Santa Cruz, CA;
Brian Y. Lee, Aptos, CA;
David Vogel, Santa Cruz, CA;

| Total Files Size (in bytes): |  |  | 241949 |  |  |
| This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503. |  |  |  |  |  |
| New Applications Under 35 U.S.C. 111 |  |  |  |  |  |
| If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application. |  |  |  |  |  |
| National Stage of an International Application under 35 U.S.C. 371 |  |  |  |  |  |
| If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course. |  |  |  |  |  |
| New International Application Filed with the USPTO as a Receiving Office |  |  |  |  |  |
| If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application. |  |  |  |  |  |

INSTRUCTIONS: Whis form should Be msed for transmiting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All fucher correspondenefincluding the Paten, advance orders and notification of maintenan.
 maintenance fee notificationt:-.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block I for any change of address)
Note: A certificate of mailing can only be used for domestic mailings of the
Fee(s) Transmittal. This certificate cannot be used for any other accompanying oapers. Each additional paper, such as an assignment or formal drawing, mus have its own certificate of mailing or transmission.

Certificate of Transmission
I hereby certify that this Fee(s) Transmittal is being submitted electronically via EFS Web on the date shown below.

| APPLN. TYPE | SMALL ENTITY | ISSUE FEE DUE | PUBLICATION FEE DUE | PREV. PAID ISSUE FEE | TOTAL FEE(S) DUE | DATE DUE |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| nonprovisional | NO | $\$ 1510$ | $\$ 0$ | $\$ 0$ | $\$ 1510$ | $03 / 01 / 2010$ |

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:
A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box $5 b$ on Part B Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:
A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and $1 / 2$ the ISSUE FEE shown above.
II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section " 4 b " of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.
III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

## PART B - FEE(S) TRANSMITTAL

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)
The Patent Term Adjustment to date is 556 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 556 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

3. Examiner's Comment Regarding Requirement for Deposit of Biological Material
5.Notice of Informal Patent Application
6.Interview Summary (PTO-413), Paper No./Mail Date $\qquad$ 13),
4. $\boxtimes$ Examiner's Amendment/Comment
5. Examiner's Statement of Reasons for Allowance
6. 

$\qquad$ .

Art Unit: 2863

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17 (e), was filed in this application after allowance or after an Office action under $E x$ Parte Quayle, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 09 October 2009 has been entered.

EXAMINER'S COMMENT
2.1 When preparing this Office action the examiner considers the instant application to include:
A) the Oath/Declaration filed on 02 April 2007 which is acceptable to the examiner;
B) the Abstract filed on 22 December 2006 which is acceptable to the examiner;
C) figures $1,2,3,4,5,6,7,8 \& 9$ of the set of drawings containing 9 sheets of 9 figures comprising figures $1,2,3,4,6,7,8 \& 9$ as presented in the set of drawings filed on 22 December 2006 and figure 5 as presented in the set of drawing filed on 09 October 2009 where the content of figures $1,2,3,4,5,6,7,8 \& 9$ of the above set of drawings is acceptable to the examiner;
D) the written description as filed on 22 December 2006 and amended on 09 October 2009;
E) the set of claims as filed on 22 December 2006; and
F) the Non publication request of 25 June 2007.
2.2 The examiner has approved the proposed changes to figure 5 of the drawings as filed on 09 October 2009.
3.

## RESPONSE TO APPLICANT'S ARGUMENTS

3.1 The objections and rejection that have not been repeated here in have been over come by applicant's last response.
4.

## REASONS FOR ALLOWANCE

4.1 The following is a statement of reasons for the indication of allowable subject matter:
A) the prior art, for example:
(1) Ebeling et al $(6,145,389)$ discloses a machine/process that provides the useful and beneficial function of pedometer in which the time variation of a measured acceleration, representing the steps or stride of an user, is evaluated or analyzed in order to determine if the user is running or walking. Further, the evaluation or analysis of the measured acceleration is used in order to more accurately determine a count of the user's steps or strides and to determine an accurate determination of the user's step or stride distance. Then based on the determinations of whether the user is running or walking, the step or stride count, and the distance traveled during one step or stride, the total distance traveled by the user may be determined.
(2) either Sakuria et al $(6,369,794)$ or Kubo et al $(2002 / 0089425$ or $6,700,499)$ or Ladetto et al $(2003 / 0018430$ or $6,826,477)$ disclose a machine/process that provides the useful and beneficial function of determining an user's action or motion in which the time variation of a measured acceleration, representing the user's action or motion, is evaluated or analyzed in order to determine the user's action or motion.
(3) either Tsuji (2005/0232388 or $2005 / 0238132$ or $7,169,084$ or $7,297,088)$ or Park et al $(2007 / 0067094)$ disclose a machine/process that provides the useful and beneficial function of pedometer in which the time variation of a measured acceleration, representing the steps or stride of an user, is evaluated or analyzed in order to determine if the user is running or walking. Further, the evaluation or analysis of the measured acceleration with in a time window of an expected period or interval representing a cadence or step interval or period is used in order to more accurately determine a count of the user's steps or strides. Then based on the determination of the step or stride count the total distance traveled by the user may be determined.
(4) either Seo et al $(2006 / 0020177$ or $7,334,472)$ disclose $a$ machine/process that provides the useful and beneficial function of placing an acceleration based pedometer machine/process into a sleep or low power mode in which the sampling frequency is changed, when a step is not detected with in a
predetermined period/interval of time and then wakes the pedometer up when a step is detected.
B) however, the prior art does not fairly teach or suggest in regard to claims $1 \&$ 11 a process in claim 1 and a machine in claim 11 that provides the useful and beneficial function of monitoring human activity by providing actions in claim 1 and structures in claim 11 that perform at least the functions of:
(1) continuously determining the orientation of an inertial sensor;
(2) assigning a dominate axis for the inertial axis;
(3) updating the dominate axis for the inertial axis as the orientation of the inertial sensor changes; and
(4) counting periodic human activity by using the inertial sensor to monitor accelerations relative to the dominate axis of the inertial sensor.
Claims 2-5, which depend from claim 1, and claims 12-14, which depend from claim 11, are allowable for the same reason.
C) however, the prior art does not fairly teach or suggest in regard to claims 6 \& 15 a process in claim 6 and a machine in claim 15 that provides the useful and beneficial function of monitoring human activity by providing actions in claim 6 and structures in claim 15 that perform at least the functions of:
(1) operating a device, including an inertial sensor, in a non-active mode to buffer human motions;
(2) operating the device with the inertial sensor, in an active mode after a predetermined number of human motions have been detected with in an appropriate cadence window; and
(3) monitoring human activity by counting each periodic human activity while operating the device with the inertial sensor, in the active mode.
Claims 7-10, which depend from claim 6, and claims 16-20, which depend from claim 15 , are allowable for the same reason.
5.1 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward R. Cosimano whose telephone number is 571-272-0571.

The examiner can normally be reached on 571-272-0571 from 7:30am to 4:00pm (Eastern Time).
5.2 If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn, can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
5.3 Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

## REQUEST FOR CONTINUED EXAMINATION (RCE) TRANSMITTAL

Address to: Mail Stop RCE, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450

|  | Application No. 11/644,455 |
| :---: | :---: |
|  | Filing Date $\quad$ December 22, 2006 |
|  | First Named Inventor Philippe Kahn, et al. |
|  | Art Unit 2863 |
|  | Examiner Name COSIMANO, EDWARD R. |
|  | Attorney Docket No. 8689P027 |

This is a Request for Continued Examination (RCE) under 37 C.F.R. § $\mathbf{1 . 1 1 4}$ of the above-identified application. Request for Continued Examination (RCE) practice under 37 CFR 1.114 does not apply to any utility or plant application filed prior to June 8, 1995, or to any design application. See instruction sheet for RCEs (not to be submitted to the USPTO) on page 2.

1. Submission required under 37 C.F.R. $\S \mathbf{1} 114$ - Note: If the RCE is proper, any previously filed unentered amendments and amendments enclosed with the RCE will be entered in the order in which they were filed unless applicant instructs otherwise. If applicant does not wish to have any previously filed unentered amendment(s) entered, applicant must request non-entry of such amendment(s).
a. [ ] Previously submitted If a final Office action is outstanding, any amendments filed after the final Office action may be considered as a submission even if this box is not checked.
i. [ ] Consider the amendment(s)/reply under 37 C.F.R. § 1.116 previously filed on $\qquad$ (Any unentered amendment(s) referred to above will be entered. If a final Office action is outstanding, any amendments filed after the final Office action may be considered as a submission even if this box is not checked.
ii. [ ] Consider the arguments in the Appeal Brief or Reply Brief previously filed on $\qquad$
iii. [ ] Other $\qquad$
b. [ X] Enclosed
i. [ X] Amendment/Reply
ii. [ ] Affidavit(s)/Declaration(s)
iii. [ X] Information Disclosure Statement (IDS)
iv. [X] Other: Figure 5-Replacement Drawing
2. Miscellaneous
a. [ ] Suspension of action on the above-identified application is requested under 37 C.F.R. § 1.103(c)
b. [ ] Other
3. Fees The RCE fee under 37 C.F.R. $\S 1.17(\mathrm{e})$ is required by C.F.R. $\S 1.114$ when the RCE is filed.
a. [ X] The Director is hereby authorized to charge the following fees, or credit any overpayments, to Deposit Account No. 02-2666
i. [X] RCE fee required under 37 C.F.R. § 1.17(e)
ii. [ ] Extension of time fee (37 C.F.R. §§ 1.136 and 1.17)
iii. [ ] Processing fee under 37 CFR § 1.17(i) for Limited Suspension of Action
iv. [ ] Other $\qquad$
b. [ ] Check in the amount of $\$$ $\qquad$ enclosed
c. [ ] Payment by credit card (Form PTO-2038 enclosed)

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038. SIGNATURE OF APPLICANT, ATTORNEY, OR AGENT REQUIRED

Name (Print/Type) Benjamin A. Kimes
Registration No. (Attorney/Agent) $\qquad$ 50,870

Signature /Benjamin A. Kimes/

## AMENDMENT AND RESPONSE TO EX PARTE OUAYLE ACTION

Dear Sir:
In response to the Ex parte Quayle Action dated August 31, 2009 please enter this Amendment and consider the following remarks.

Amendments to the specification begin on page 2 of this document.
Amendments to the drawings begin on page 5 of this document.
Remarks begin on page 6 of this document.

## CERTIFICATE OF ELECTRONIC FILING

I hereby certify that this correspondence is being deposited with the United States Patent and Trademark Office via electronic filing through the United States Patent and Trademark Electronic Filing System on:

## IN THE SPECIFICATION

Please amend the specification to replace originally filed paragraphs [0020], [0024], [0028] and [0039] with replacement paragraphs, as indicated below. The following amendments do not add any new matter to the specification of the present application.
[0020] Filtered measurement data may be passed on to the dominant axis logic 127 and the step counting logic 130. In one embodiment, the dominant axis logic 127 includes a cadence logic 132, a rolling average logic 135, and a dominant axis setting logic 140. In an alternative embodiment, more or fewer logics may be used to determine a dominant axis. One embodiment of implementing dominant axis assignment may be found in eo-pending application U.S. Serial No. XXX, which is ineorporated herein by reference. Alternative means of identifying a dominant axis may be used in other embodiments.
[0024] Figure 2 illustrates an exemplary motion cycle graph [[201]]200 that measures time versus acceleration, in accordance with one embodiment of the present invention. The exemplary motion-cycle graph [[201]]200 shows acceleration data taken with a single tri-axis inertial senor. The acceleration at a given period of time is represented for a first axis 203 of an inertial sensor(s), a second axis 205 of the inertial sensor(s), and a third axis 207 of the inertial sensor(s). In one embodiment, the cadence logic [[135]] 132 of Figure 1 analyzes the acceleration along the first axis 203, second axis 205 and third axis 207 to detect a motion cycle. Once a motion cycle is detected, a period of the motion cycle is determined, and a cadence of the motion cycle is determined. Figure 2 shows an exemplary period of a motion cycle [[210]] 215 for the third axis 207, the period being approximately 0.6 seconds. The same period can also be seen to a lesser degree in the second axis 205 and the first axis 203. The corresponding cadence to the motion cycle is approximately one hundred motion cycles per minute.
[0028] Returning to Figure 2, cadence windows may be used to count steps until an expected step is not encountered. In one embodiment, new cadence windows are determined periodically. In one embodiment, the cadence window is a dynamic cadence window that continuously updates as a user's cadence changes. For example, using a dynamic cadence window, a new cadence window length may be set after each step. [[(.]] The cadence window minimums may be determined by subtracting a value from the stepping period, and the cadence window maximums may be determined by adding a value to the stepping period. In one embodiment, the cadence window maximums are preset, and the cadence window minimums are updated after each step is counted. In one embodiment, the cadence window minimums are preset, and the cadence window maximums are updated after each step is counted. In one embodiment, both the cadence window minimums and cadence window maximums are updated when a step is counted. In one embodiment, the current cadence window minimum is determined by subtracting 200 ms from the current stepping cadence period. In one embodiment, the cadence window minimum has a minimum value of 240 ms .
[0039] Returning to Figure 1, the step counting logic 130 may include a measurement selection logic 145 , a cadence window 150 , a measurement comparator 155 , a threshold comparator 160, a step count buffer 165, and a mode logic 190. The measurement selection logic 145 may determine which measurements from the measurement buffer [[125]] to use to determine if a step has occurred. In one embodiment, the measurement selection logic 145 may monitor accelerations relative to the dominant axis, and select only those measurements with specific relations to the dominant axis for measurement. For example, only accelerations that are approximately parallel to the dominant axis may be selected, or alternatively, only accelerations that are approximately perpendicular to the dominant axis
may be selected. In one embodiment, the measurement selection logic 145 selects only measurements of acceleration data along the dominant axis. In alternative embodiments, measurements of acceleration data along other axes may also be used. In one embodiment, measurements of acceleration along only the other axes are used.

## IN THE DRAWINGS

Please replace the as filed Figure 5 with the attached replacement Figure 5.

## REMARKS

Applicants respectfully request consideration of the subject application as amended herein. This Amendment is submitted in response to the Ex Parte Quayle Action mailed on August 31, 2009. Claims 1-20 are in condition for allowance except for formal matters. In this Amendment, no claims have been amended, added, or canceled. This amendment includes replacement paragraphs for the detailed description, as well as a replacement drawing. The replacement paragraphs and replacement drawing do not add any new matter to the specification of the present application.

## Drawings Objections - 37 CFR 1.84(p)(4,5)

The Examiner has objected to the drawings under 37 CFR 1.83(p)(4,5) because of duplicate and improper use of some reference legends. The detailed description has been amended to refer to appropriate reference legends, as suggested by the Examiner.

The Examiner has also objected to Figure 5 for confusing placement of the descriptor "YES" associated with block 524. Corrected drawing sheets in compliance with 37 CFR $1.121(\mathrm{~d})$ are being submitted with this response showing a new placement for the descriptor.

Accordingly, Applicants respectfully request that the objections to the drawings be withdrawn.

## Disclosure Objections

The specification of the present application is objected to because of minor errors and/or inconsistencies between the drawings and the written description. Paragraphs [0024], [0028] and [0039] have been amended to correct these minor errors and inconsistencies, as suggested by the Examiner. The specification is further objected to for including an incorporation by reference to an unidentified application. Paragraph [0020] has been amended to remove this informality.

Accordingly, Applicants respectfully request that the objections to the disclosure be withdrawn.

## Comments on Reasons for Allowance

Applicants thank Examiner for allowing claims 1-20.

## Conclusion

Applicants respectfully request the withdrawal of the objections and submit that all formal matters addressed by the Examiner have been corrected.

## Deposit Account Authorization

Authorization is hereby given to charge our Deposit Account No. 02-2666 for any charges that may be due. Furthermore, if an extension is required, then Applicant hereby requests such extension.

Respectfully submitted,

## INFORMATION DISCLOSURE STATEMENT

Sir:
Enclosed is a copy of Information Disclosure Citation Form PTO-1449 or PTO/SB/08 together with copies of the documents cited on that form, except for copies not required to be submitted (e.g., copies of U.S. patents and U.S. published patent applications need not be enclosed for applications filed after June 30, 2003). It is respectfully requested that the cited documents be considered and that the enclosed copy of Information Disclosure Citation Form PTO-1449 or PTO/SB/08 be initialed by the Examiner to indicate such consideration and a copy thereof returned to applicant(s).

United States Patent and Trademark Office

Please find below and/or attached an Office communication concerning this application or proceeding.
The time period for reply, if any, is set in the attached communication.

| Office Action Summary | Application No. 11/644,455 | Applicant(s) KAHN ET AL. |  |
| :---: | :---: | :---: | :---: |
|  | Examiner <br> Edward R. Cosimano | Art Unit $2863$ |  |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE $\underline{2}$ MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. <br> Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. <br> If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). |  |  |  |

Continuation of Attachment(s) 3). Information Disclosure Statement(s) (PTO/SB/08), Paper No(s)/Mail Date :8/13/07; 12/3/08; 12/11/08; 1/16/09; 6/26/09; 8/14/09.

1. When preparing this Office action the examiner considers the instant application to include:
A) the Oath/Declaration filed on 02 April 2007 which is acceptable to the examiner;
B) the Abstract filed on 22 December 2006 which is acceptable to the examiner;
C) figures $1,2,3,4,5,6,7,8 \& 9$ of the set of drawings containing 9 sheets of 9 figures comprising figures $1,2,3,4,5,6,7,8 \& 9$ as presented in the set of drawings filed on 22 December 2006 where the content of figures $1,3,4,6,7,8 \& 9$ of the above set of drawings is acceptable to the examiner;
D) the written description as filed on 22 December 2006; and
E) the set of claims as filed on 22 December 2006.
2. The drawings filed on 22 December 2006 are objected to because:
A) applicant's references to: (1) either a "motion cycle graph 210" or a "first axis 203" or a "first axis 205 " or a "first axis 207" or as "cadence logic 135 " in paragraph number 24, and (2) a "measurement buffer 125" in paragraph number 39; are confusing as well as an improper duplicate use of reference legends $135 \& 210$. These uses of reference legends are confusing and improper, because as can be seen in figures $1 \& 2$ and from the context of the written description, it is noted that the drawings lack a feature of the invention that one of ordinary skill at the time the invention was made would fairly and reasonably recognize as has been designated as "motion cycle graph 210" or as "first axis 203 " or as "first axis 205 " or as "first axis 207 " or as "cadence logic 135 ", as required by 37 CFR 1.84(p(4,5)), and as can be seen in figure 2 and from the context of the written description figure 2 does include an feature of the invention that has been designated by reference legend 215 but which has not been mentioned in the written description as required by 37 CFR $1.84(p(4,5))$. In this regard it is noted that as can be seen in figure 1 and/or figure 2 as well as from the context of the written description in at least paragraph numbers $20,22,24,25,33,34,35,37,39 \& 84$, applicant has:
(1) used reference number 132 in order to designate the feature of the invention entitled as "Cadence Logic 132" in figure 1;
(2) used reference number 135 in order to designate the feature of the invention entitled as "Rolling Average Logic 135" in figure 1;
(3) applicant has used reference number 200 in order to designate the feature of the invention that has been depicted as a graph in figure 2 ;
(4) applicant has used reference number 203 in order to designate the feature of the invention that has been depicted as a plot of a measured acceleration verses time in graph 200 of figure 2 ;
(5) applicant has used reference number 205 in order to designate the feature of the invention that has been depicted as a plot of a measured acceleration verses time in graph 200 of figure 2 ;
(6) applicant has used reference number 207 in order to designate the feature of the invention that has been depicted as a plot of a measured acceleration verses time in graph 200 of figure 2 ;
(7) applicant has not used reference number 210 in order to designate any of the features of the invention that have been depicted as part of graph 200 of figure 2 ;
(8) applicant has not used reference numbers 203, $205 \& 207$ in order to designate any of the features of the invention that one of ordinary skill at the time the invention was made would fairly and reasonably recognize as having been depicted as an "axis" in graph 200 of figure 2;
(9) applicant has used reference legend 215 in figure 2 in order to designate what appears to be an "motion cycle" in graph 200 of figure 2 ; and
(10) applicant has not used reference number 125 in order to designate any of the features of the invention depicted in figure 1 ;
and applicant should note the corresponding objections to the written description below.
B) applicant's placement of the "YES" legend for decision block 524 in figure 5 in view of the context of the written description in paragraph number 65 is confusing. It is noted that this legend should be placed closer to the flow path from block 524 to block 560.

## Art Unit: 2863

2.1 Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR $1.121(\mathrm{~d})$. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
3. The disclosure is objected to because of the following informalities:
A) applicant must update the application data with the current status of each reference application, note the unidentified application in paragraph number 20. In this regard applicant should note that because applicant has filed to clearly and explicitly identify the referenced application, by for example title, filing date, attorney docket number, then this requirement and the incorporation of the unidentified application may constitute new matter and hence NO NEW MATTER should be entered.
B) the following errors and/or inconsistencies between the drawings filed on 22 December 2006 and the written description have been noted:
(1) applicant's references to: (1a) either a "motion cycle graph 210 " or a "first axis 203" or a "first axis 205" or a "first axis 207" or as "cadence logic 135" in paragraph number 24, and (1b) a "measurement buffer 125 " in paragraph number 39 ; are confusing as well as an improper duplicate use of reference legends $135 \& 210$. These uses of reference legends are confusing and improper, because as can be seen in figures $1 \& 2$ and from the context of the written description, it is noted that the drawings lack a feature of the invention that one of ordinary skill at the time the invention was made would fairly and reasonably
recognize as has been designated as "motion cycle graph 210 " or as "first axis 203 " or as "first axis 205 " or as "first axis 207 " or as "cadence logic 135 ", as required by 37 CFR $1.84(p(4,5))$, and as can be seen in figure 2 and from the context of the written description figure 2 does include an feature of the invention that has been designated by reference legend 215 but which has not been mentioned in the written description as required by 37 CFR 1.84(p(4,5)). In this regard it is noted that as can be seen in figure 1 and/or figure 2 as well as from the context of the written description in at least paragraph numbers $20,22,24,25,33$, $34,35,37,39 \& 84$, applicant has:
(a) used reference number 132 in order to designate the feature of the invention entitled as "Cadence Logic 132" in figure 1;
(b) used reference number 135 in order to designate the feature of the invention entitled as "Rolling Average Logic 135" in figure 1;
(c) applicant has used reference number 200 in order to designate the feature of the invention that has been depicted as a graph in figure 2;
(d) applicant has used reference number 203 in order to designate the feature of the invention that has been depicted as a plot of a measured acceleration verses time in graph 200 of figure $2 ;$
(e) applicant has used reference number 205 in order to designate the feature of the invention that has been depicted as a plot of a measured acceleration verses time in graph 200 of figure $2 ;$
(f) applicant has used reference number 207 in order to designate the feature of the invention that has been depicted as a plot of a measured acceleration verses time in graph 200 of figure 2;
(g) applicant has not used reference number 210 in order to designate any of the features of the invention that have been depicted as part of graph 200 in figure 2;
(h) applicant has not used reference numbers 203, $205 \& 207$ in order to designate any of the features of the invention that one of ordinary
skill at the time the invention was made would fairly and reasonably recognize as having been depicted as an "axis" in graph 200 of figure 2;
(i) applicant has used reference legend 215 in figure 2 in order to designate what appears to be a "motion cycle" in graph 200 of figure 2;
(j) applicant has not used reference number 125 in order to designate any of the features of the invention depicted in figure 1.
In view of the above, it is noted that in paragraph numbers $24 \& 39$ the references to:
(a) "motion cycle graph 210 " should be to -motion cycle graph 200--;
(b) "cadence logic 135 " should be to --cadence logic 132--;
(c) "first axis 203" (first occurrence) should be to -first axis 203 of an inertial sensor(s)--;
(d) "second axis 205" (first occurrence) should be to -second axis 205 of the inertial sensor(s)--;
(e) "third axis 207" (first occurrence) should be to -third axis 207 of the inertial sensor(s)--;
(f) the reference to "motion cycle 210 " should be to -motion cycle 215--; and
(g) the reference to "measurement buffer 125 " should be to a measurement buffer--;
and applicant should note the proposed amendments below.
C) applicant use of the symbol "(.", as found in paragraph number 28 is unclear and confusing and therefore should be deleted as suggested in the proposed amendment to paragraph number 28 below.
D) in view of the above objections it is suggested that the following paragraphs be amended as indicated:
(1) at paragraph number 24:
[0024] Figure 2 illustrates an exemplary motion cycle graph [[201]] 200 that measures time versus acceleration, in accordance with one embodiment of the present

## Art Unit: 2863

invention. The exemplary motion-cycle graph [[201]] $\underline{200}$ shows acceleration data taken with a single tri-axis inertial senor. The acceleration at a given period of time is represented for a first axis 203 of an inertial sensor(s), a second axis 205 of the inertial sensor(s), and a third axis 207 of the inertial sensor(s). In one embodiment, the cadence logic [[135]] 132 of Figure 1 analyzes the acceleration along the first axis 203, second axis 205 and third axis 207 to detect a motion cycle. Once a motion cycle is detected, a period of the motion cycle is determined, and a cadence of the motion cycle is determined. Figure 2 shows an exemplary period of a motion cycle [[201]] 215 for the third axis 207, the period being approximately 0.6 seconds. The same period can also be seen to a lesser degree in the second axis 205 and the first axis 203. The corresponding cadence to the motion cycle is approximately one hundred motion cycles per minute.
(2) at paragraph number 28 :
[0028] Returning to Figure 2, cadence windows may be used to count steps until an expected step is not encountered. In one embodiment, new cadence windows are determined periodically. In one embodiment, the cadence window is a dynamic cadence window that continuously updates as a user's cadence changes. For example, using a dynamic cadence window, a new cadence window length may be set after each step. [[(.]] The cadence window minimums may be determined by subtracting a value from the stepping period, and the cadence window maximums may be determined by adding a value to the stepping period. In one embodiment, the cadence window maximums are preset, and the cadence window minimums are updated after each step is counted. In one embodiment, the cadence window minimums are preset, and the cadence window maximums are updated after each step is counted. In one embodiment, both the cadence window minimums and cadence window maximums are updated when a step is counted. In one embodiment, the current cadence window minimum is determined by subtracting 200 ms from the current stepping cadence period. In one embodiment, the cadence window minimum has a minimum value of 240 ms .
(3) at paragraph number 39 :
[0039] Returning to Figure 1, the step counting logic 130 may include a measurement selection logic 145 , a cadence window 150 , a measurement comparator

155, a threshold comparator 160 , a step count buffer 165 , and a mode logic 190. The measurement selection logic 145 may determine which measurements from the measurement buffer [[125]] to use to determine if a step has occurred. In one embodiment, the measurement selection logic 145 may monitor accelerations relative to the dominant axis, and select only those measurements with specific relations to the dominant axis for measurement. For example, only accelerations that are approximately parallel to the dominant axis may be selected, or alternatively, only accelerations that are approximately perpendicular to the dominant axis may be selected. In one embodiment, the measurement selection logic 145 selects only measurements of acceleration data along the dominant axis. In alternative embodiments, measurements of acceleration data along other axes may also be used. In one embodiment, measurements of acceleration along only the other axes are used.
3.1 Appropriate correction is required.
4. This application is in condition for allowance except for the following formal matters:
A) see the above objections as set forth above in sections $2 \& 3$.
4.1 Prosecution on the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.
4.2 A shortened statutory period for reply to this action is set to expire TWO MONTHS from the mailing date of this letter.
5. The following is a statement of reasons for the indication of allowable subject matter:
A) the prior art, for example:
(1) Ebeling et al $(6,145,389)$ discloses a machine/process that provides the useful and beneficial function of pedometer in which the time variation of a measured acceleration, representing the steps or stride of an user, is evaluated or analyzed in order to determine if the user is running or walking. Further, the evaluation or analysis of the measured acceleration is used in order to more accurately determine a count of the user's steps or strides and to determine an accurate determination of the user's step or stride distance. Then based on the determinations of whether the user is running or walking, the step or stride count,
and the distance traveled during one step or stride, the total distance traveled by the user may be determined.
(2) either Sakuria et al $(6,369,794)$ or Kubo et al $(2002 / 0089425$ or $6,700,499)$ or Ladetto et al $(2003 / 0018430$ or $6,826,477)$ disclose a machine/process that provides the useful and beneficial function of determining an user's action or motion in which the time variation of a measured acceleration, representing the user's action or motion, is evaluated or analyzed in order to determine the user's action or motion.
(3) either Tsuji (2005/0232388 or $2005 / 0238132$ or $7,169,084$ or $7,297,088)$ or Park et al $(2007 / 0067094)$ disclose a machine/process that provides the useful and beneficial function of pedometer in which the time variation of a measured acceleration, representing the steps or stride of an user, is evaluated or analyzed in order to determine if the user is running or walking. Further, the evaluation or analysis of the measured acceleration with in a time window of an expected period or interval representing a cadence or step interval or period is used in order to more accurately determine a count of the user's steps or strides. Then based on the determination of the step or stride count the total distance traveled by the user may be determined.
B) however, the prior art does not fairly teach or suggest in regard to claims $1 \&$ 11 a process in claim 1 and a machine in claim 11 that provides the useful and beneficial function of monitoring human activity by providing actions in claim 1 and structures in claim 11 that perform at least the functions of:
(1) continuously determining the orientation of an inertial sensor;
(2) assigning a dominate axis for the inertial axis;
(3) updating the dominate axis for the inertial axis as the orientation of the inertial sensor changes; and
(4) counting periodic human activity by using the inertial sensor to monitor accelerations relative to the dominate axis of the inertial sensor.

Claims 2-5, which depend from claim 1, and claims 12-14, which depend from claim 11, are allowable over the prior art for the same reason.
C) however, the prior art does not fairly teach or suggest in regard to claims 6 \& 15 a process in claim 6 and a machine in claim 15 that provides the useful and beneficial function of monitoring human activity by providing actions in claim 6 and structures in claim 15 that perform at least the functions of:
(1) operating a device, including an inertial sensor, in a non-active mode to buffer human motions;
(2) operating the device with the inertial sensor, in an active mode after a predetermined number of human motions have been detected with in an appropriate cadence window; and
(3) monitoring human activity by counting each periodic human activity while operating the device with the inertial sensor, in the active mode.
Claims 7-10, which depend from claim 6, and claims 16-20, which depend from claim 15 , are allowable over the prior art for the same reason.
6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward R. Cosimano whose telephone number is 571-272-0571. The examiner can normally be reached on 571-272-0571 from 7:30am to 4:00pm (Eastern Time).
6.1 If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn, can be reached on 571-272-2312. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2863
6.2 Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

## INFORMATION DISCLOSURE STATEMENT

Sir:
Enclosed is a copy of Information Disclosure Citation Form PTO-1449 or PTO/SB/08 together with copies of the documents cited on that form, except for copies not required to be submitted (e.g., copies of U.S. patents and U.S. published patent applications need not be enclosed). It is respectfully requested that the cited documents be considered and that the enclosed copy of Information Disclosure Citation Form PTO-1449 or PTO/SB/08 be initialed by the Examiner to indicate such consideration and a copy thereof returned to applicant(s).

Pursuant to 37 C.F.R. § 1.97, the submission of this Information Disclosure Statement is not to be construed as a representation that a search has been made and is not to be construed as an admission that the information cited in this statement is material to patentability.

Pursuant to 37 C.F.R. § 1.97, this Information Disclosure Statement is being submitted under one of the following (as indicated by an " X " to the left of the appropriate paragraph):
$\underline{\mathbf{X}} \quad 37$ C.F.R. §1.97(b).
_ 37 C.F.R. §1.97(c). If so, then enclosed with this Information Disclosure Statement is one of the following:
$\qquad$ A statement pursuant to 37 C.F.R. §1.97(e) or
The Director is Authorized to charge in the amount of $\$ \underline{180.00}$ for the fee under 37 C.F.R. § 1.17(p).

37 C.F.R. §1.97(d). If so, then enclosed with this Information Disclosure Statement are the following:
(1) A statement pursuant to 37 C.F.R. §1.97(e); and
(2) A check for $\$ 180.00$ for the fee under 37 C.F.R. $\S 1.17(p)$ for submission of the Information Disclosure Statement.

If there are any additional charges, please charge Deposit Account No. 02-2666.
Respectfully submitted,
BLAKELY, SOKOLOFF, TAYLOR \& ZAFMAN LLP

| If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course. |  |  |  |  |  |
| If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application. |  |  |  |  |  |

## PATENT COOPERATION TREATY

DI 2 26月
From the INTERNATONAL SEARCHNG AUTHORITY

| To: LESTER VINCENT <br> BLAKELY, SOKOLOFF, TAYLOR \& ZAFMAN LLP <br> 1279 OAKMEAD PARKWAY <br>  <br> OCT 282008 <br> ELAKELY SOMChUY farld a $2 A \neq$ | PCT <br> NOTIFICATION OF TRANSMITTAL OF <br> THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION <br> (PCT Rule 44.1) <br> Pate of mailing <br> (daymonthyear) |
| :---: | :---: |
| Applicant's ar agent's file reference 7538P044PCT | FOR FURTHERACTION See paragraphs I and 4 below |
| Intemational application No. PCT/US2008/072537 | International fifing date (daymonthyear) <br> 07 August 2008 |
| Applicant FULLPOWER TECHNOLOGIES, INC. |  |

1. $\triangle$ The applicant is hereby notified that the international search report and the written opinion of the lnternational Searching Auhority have been established and are transmited herewith.

Filing of ancodments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Ruie 46):
When? The time limit for filing such amendments is normally two months from the date of transmittal of the intemational search report.
Where? Directly to the Intemational Bureau of WIPO, 34 chemin des Colombetes 1211 Geneva 20, Switzerland, Facsimile No.: +41227401435
For more detailed instractions, see the notes of the accompanying sheet.
2. The applicant is hereby notified that no intemational search report will be established and that the declaration under Article i 7(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.
3. With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
$\square$ the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of beth the protest and the decision thereon to the designated Officesno decision has been made yei on the protest; the applicant will be notified as soon as a decision is made.
4. Reminders

Shorly after the expiration of 18 monthe from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the prionty claim, must reach the Entemational Bureat as provided in Rujes $90 b i s .1$ and $90 b i s 3$, respectively, before the completion of the technical preparations for international publication.
The applicant may submit comments on an informal basis on the writen opinion of the Intemational Searching Authority to the Intemational Bureau. The micmational Bureau will send a copy of such comments to all designated Offices unless an intermational pretiminary examination report has been or is to be established. These comments would also be made available to the public but not before the expiration of 30 months from the priority date.
Within 19 months from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later); otherwise, the applicant must, within 20 mon ths from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.
In respect of other designated Offices, the time limit of 30 months (or later) will apply even if no demand is fled within 19 months.
See the Amex to Form PCTMB/301 and, for deails about the applicable time limits, Offce by Office, see the PCT Applicant's Guide, Volume If, National Chapters and the WIPO Intermet site.

| Applicant FULLPOWER TECHNOLOGIES, INC. |  |

1. The applicant is hereby notified that the international search repon and the witten opinion of the Intemational Searching Authority have been established and are transmitted herewith.
Filing of amendments and statement under Article 19:
The applicant is entitted, if he so wishes, to amend the claims of the international application (see Rule 46):
When? The time limit for fling stach amondments is nomally two months from the date of transmittal of the international search report.
Where? Ditectly to the Intemational Bureau of WIPO, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41227401435
For more detaled instructions, see the notes on the accompanying sheet.
2.The applicant is hereby notified that no intemational seatch report will be cstablished and that the declaration under Article $17(2)(a)$ to that effect and the writen opinion of the International Searching Authority are transmitted berewith.
3.With regard to the protest against paymen of (an) additional fee(s) under Rule 40.2 , the applicant is notified that: $\square$
the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.ne decision has been made yet on the protest; the applicant will be notified as soon as a decision is mode.

## 4. Reminders

Shortly after the expination of 18 months from the priority date, the intemational application will be published by the Intemational Bureat. If the applicant wishes to avold or postrone publication, a notice of withdrawal of the intemational application, or of the priority claim, must reach the Intemational Bureau as provided in Rufes $90 b i s .1$ and 90bis.3, respectively, before the completion of the technical preparations for international publication.
The applicant may submit comments on an informal basis on the written opinion of the Intemational Searching Authority to the Intemational Bureau. The Intemational Bureau will send a copy of such comments to all designated Offices unless an intemational preliminary examination repon has been or is to be established. These comments would also be made available to the public but mot before the expiration of 30 months from the priority date
Within 19 menths from the priority date, but onty in respect of some designated Offices, a demand for international preliminary examination must be filee if the appicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later), otherwise, the applicanmast, within 20 months from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.
In respect of other desienated Offees, the the limit of 30 months (or later) will apply even if no demand is fied within 19 months.
See the Amex to Fom PCTIBB01 and for details abou the applicable time timits, Office by Oflce, see the PCT Applean's Guide, Volume II, National Chapters and the WIPO memet site.

## PATENT COOPERATION TREATY PCT

## INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

| Applicant's or agent's he reference 7538 P044FCT | FOR FURTHER <br> ACTION | see Fom PCTISA/220 as well as, where applicable, item 5 below. |
| :---: | :---: | :---: |
| Intemational application No. PCT/US2008/072537 | Intemational fling date (daymonhyear) 07 August 2008 | (Earliest) Prionity Date (day/monthyear) 0e August 2007 |
| Applicant FULLPOWER TECFNOLOGIES, INC |  |  |

This international search reper has been prepared by this Intemational Searobing Authority and is transmitted to the applicant according to Article 18. A copy is being transmited to the International Bureau.

This international search teport consists of a total of 2 sheets.
$\square$ It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report
a. With regard to the fanguage, the international search was carried out on the basis of:

X the intemational application in the language in which it was fled
$\square$ a translation of the international application into $\qquad$ which is the language of a translation farmished for the purposes of international search (Rules 12.3(a) and 23.1(b))
b.With regard to any nucleotide and/or amino acid sequence disclosed in the international application, see Box No. I.
2. $\square$ Certain claims were found unsearchable (see Box No. II)
3.Unity of invention is lacking (see Box No. III)
4. With regard to the title,
( ) The text is approved as submitted by the applicant
$\square$ the sext has been established by this Authority to read as foltows:
5. With regard to the abstract,

X the text is approved as submitted by the applicant
$\square$ the text has been established, according to Rule 38.2 (b), by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority
6. With regard to ine drawings,
a. the Ggare of the drawings to be published with the abstract is Figure No. 1 $\qquad$
$\square$ as suggested by the applicant
$X$ as selected by this Authority, because the applicant failed to suggest a figure
$\square$ as selected by this Authority, because this fate better characterizes the invention
b.none of the figures is to be published with the abstract

[^1]
## INTERNATIONAL SEARCH REPORT

Intermational applicaion No. PCT/US2008/072537
A. CLASSIFICATION OF SUBJECT MATTER
IPC(8) - GO1P $5 / 00(2008.04)$
USPC - $702 / 142$
According to Intemational Patent Classification (IPC) or to both mational classification and IPC
B. FIELDS SEARCHED
Minimum documentation searched (classification system followed by classification symiols)
PC(8) - GO1P $5 / 00$ (2008.04) 1PC(8)-G01P 5/00 (2008.04)
USPC. 702141,142

Documentation sarched other than minmum documentation to the extent that such documents are incheded in the felds searched

Flectronic data base consthed during the international search (name of data base and, where practicable, search terms used)
MicroPatent, Google Patent
C. DOCUMENTS CONSIDERED TO BE RELEVANT

## WRITTEN OPINION OFTHE <br> Internatienal application No. INTERNATIONAL SEARCHING ALTMORITY

## Box No. 1

Basis of this opinion

1. With regard to the langatage, this opinion has been established on the basis of:
$X$ the intenational application in the language in which it was filed.
$\square$ a translation of the international application into $\qquad$ which is the language of a translation furnished for the purposes of intematonal search (Rules 12.3 (a) and 23.1(b)).
2.This opinion has been established taking into account the rectifieation of an obvious mistake authorized by or notified to this Authority under Rule 91 (Rule 43bis. 1(a))
2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, this opinion has been established on the basis of:
a. fype of material
$\square$ a sequence listing
$\square$ table(s) related to the sequance listing
b. format of material
$\square$ on paper
$\square$ in electronic form
c. time of filing/furnishing
$\square$ contained in the international application as filed
$\square$ filed together with the intemational application in electronic formfurnished subsequently to this Authority for the purposes of search
4.In adcition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the infomation in the subsequentor addional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were fumished.
3. Additional comments:

Form PCTISA/237 (Box No. I) (April 2007)

## WRITTEN OPINION OF THE NTERNATIONAL SEARCHINGAUTHORITY

## Supplemental Box

## In case the space in any of the preceding boxes is not sifficient.

Continuation of:
Clams 4, 5, 15, 23, and 24 back an inventive step under FCT Articie 33 (3) as being obvous ever Soehren 266 in vew of Soenten et al. (US 2005,0033200 A f), heremafter referred to as Soehren 200.

Regarding Claims 4, 15, and 23, Soehren 266 discloses that the data structure includes a pluraity of entries, each of the pirality of entries associating a distinct stride fength with one of mole distinct gat characteristics (col. 6, Jines 20-28; atso col. 14, lines 42-57; fig. 6), but lecks the teaching of determining one or more user attributes; and modifying the data stucture based on the one or more user atributes to callbrate the stride length by changing one or more of the plurality of entries.
Soehren ' 200 teaches a method of monitoring human activity (cisssifying and measuring human motion, abstract), comprising:
montoring accelerations using an inertial sensor (IMU 24. fig. 2 , para. 0033) in order to provioe a distance estimate (28, para. 0041) and further teaches determining one or more user atributes ( 52 , information on the state of the person monitored, para. oo41); and modifying the cata structure based on the one or more user attibutes 52 to 50 to Kaman fiter 4 ) to calibrate the stride length by changing one or more of the plurelity of entries (kaman fiter feeds back to motion classification umit 28 , where the stride length is intially calculated, para. 0012, 0041).
It would have been obvous to one of ordnary skill in the art at the time of the Invention to provide the user attributes of Soehren '200 to the data structure and analysis of Soenren '266 in otcet to monitor persons with heath problems so that help can be sent should they becofne ificapaciteted (Soehren '200, para. 0004).

Regarding Clams 5 and 24 , Soehten 266 lacks the teaching of receiving a user input of one or more user atributes; and generating the data structure using the one or more user attributes.
Soenten 200 teaches a method of montoring human activity tolassifying and measuring human motion, abstract), comprising monitoring acceterations using an hertial sensor (ML 24, fg. 2, para. 0033) in order to provide a distance estimate (28, para op41) and further teaches receiving a user input of one or mote user attibutes ( 52 , information on the state of the person monlored, para. ond1); and generating the data stucture using the one or more user attributes ( 52 to 50 to Kalman fiter 41).
It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the user attributes of Soenren '200 to the data structure and enalysis of Soehren ' 266 in order to montor persons with health problems so that hefp can be sent should they become incapacitated (Soehren 200, para. 0004).

Clams 8, $9,16,17,27$, and 28 lack an inventive step under PCT Aticle $33(3)$ as being obvious over Soehren 266 in view of Qakley et al, hereinafter referred to as Oakley.

Regerdig clams 8, 16, and 27. Soehren '266 teaches the use of a stide length to detemine a distance travelled as previously described with respect to claim 1 , but lacks the teaching of receiving a heart rate from a heart rate sensor, and determining information about the distance traveled based on the heart rate.
Oakley teaches a movement sensor system (ebstract) in which heart rate is monitored by a heart rate sensof (col. 1 , fines $8-10$ ) and is used to determine information about the stride fength based on the heart rate fheart-rate measurement used to determine user's stride length or number of strides, col. 3, lines 19*24).
If would have been obvious to one of ordinary skill in the art at the time of the invention to use the heart rate finformation as taugh by Oakley to determine the distance travelled of Soehren " 266 in ofder to aid in determining the energy expenditure of the user over distance in order to define a weight loss fegimen (Oakey, col. 1, lines 48-55).

Regarding clams 9 and 17 , Soehren 266 discloses that determining information comprises determining an incline (col 3 , lines 8 - 14 ), and adjusting a stride length to gat characteristic based on the incline (230, fig. 2),

Regarding clam 28, Soehren ' 266 discloses that determining information comprises determining an incline (col. 3, lines 8 -14), and adjusting a stride fength to cadence correlation based on the hocline (230, fg. 2).

Claims 10.12, 18, 19, and 29-31 lack an inventive step uncier PCT Article 33(3) as being obvious over Soehren 266 in view of vock et ai, hereinafter referred to as Vock.

Regarding claims 10, 18, and 29, Seehren 266 lacks the teaching of using a competition logic to compare the distance traveled and the speed of travel to stored race data to generate a comparison result; and presenting a real time performance indication that includes the comparison resuft.
Vock teaches the use of mertal sensors in a distance (para. D074) and speed (para. O050) measuring systam and further teaches the use of a competition logic (controter subsystem 12, fig. 1A) to compare the distance traveleo and the speed of travel to stored race deta to generate a comparison result (ctaim 1; para. 0081); and
presenting a real time performance indication that includes the comparison result (para. 01g1).
It would have been obvious to one of erdinary skill in the art at the time of the invertion to the the comparson data of Vock in the fathod of Soehrem in orger to provide a quantification of a users actwity in refation to ethers (Vock, para. Ooz2) so as to guide him in improving his skills.

Regarding chams 11 and 30 , Sochren 266 bek the teaching of recening stored race data from one of a servef and a mobite device. Vock teaches recelvifg stored race deta from one of a server and a moblie device (82, fig. 1B).
It would heve been obviols to one of ownary shit in the art at the time of the huention to use the server of Vock to downoad the race cata in order to altow the user to compgre his statistics to a phendty of statistics from other users (Vock, para. 0022).

## Supplemental Box

In case the space in any of the preceding boxes is not sufficient.
Continuation of:
Regarding claims 12 and 31, modfed Scehren 266 fiscloses comparing data as shown above, and Soehren '266 further teaches normalizing at least one of the distance traveled, the speed of travel, the stored distance traveled, and the stored speed of travel accelerometer signals ate divided into 2.56 second signal segments, further processing determines the human motion, col. 15. Iines 25 32; the human motion is used to determine the distance travelled, col. 16, lines 2-4).

Regarding caim 19, Soetren 266 tacks the teaching of a competion logic to enable users to set up time shifted faces.
Vock teaches a compettion logic which can enable users to set up time shitied races (comparing scores with other players across the world, para. 0404).
It would have been obvious to one of ordhary skill in the art at the tme of the invention use the competition logic of Vock in the apparatus af Soehren 266 in order to allow players to impreve their abilities by comparison with their own previous score or with other players (Vock, para. 0404).
Clams $1-31$ meet the criteria set out in PCT Article $33(4)$, and thus have industrial applicabity because the subject matter claimed can be made or used in industry.

Fom PCT/SA/237 (Suppiemental Box) (Aprii 200

## NOTES TO FORM PCT/LSA/220 <br> NOTES TO FORM PCT/SA

These Notes are mended to give the basic instructions concemmg the filing of amendments under Artucle 19 . ## NOTICE REGARDING NONPUBLICATION REQUEST

The receipt of a nonpublication request filed under 35 U.S.C. $122(b)(2)(B)(i)$ with the above-identified application is acknowledged. The application will not be scheduled for publication.

Applicant may rescind the nonpublication request at any time. If applicant subsequently rescinds the nonpublication request, the above-identified application will be scheduled for publication at the later of eighteen (18) months from the earliest filing date claimed or fourteen (14) weeks from the date that the Office recognizes the rescission.

If applicant subsequently files an application directed to the invention disclosed in the above-identified application in another country, or under a multilateral international agreement, that requires publication of applications eighteen months after filing, the applicant must notify the Office of such filing within forty-five (45) days after the date of the filing of such foreign or international application. Failure to do so will result in abandonment of this application (35 U.S.C. 122(b)(2)(B)(iii)).

Any response to this notice must be directed to the Pre-Grant Publication Division via facsimile at (703) 305-8568. Questions regarding this notice may be directed to the Pre-Grant Publication Division at (703) 605-4283.

## REQUEST FOR CORRECTED FILING RECEIPT

Sir:
On April 27, 2007, we received the Updated Filing Receipt in connection with the above-identified patent application (copy enclosed).

However, the following information needs to be corrected due to a PTO error. Please change:

FROM:
Non-Publication Request: No

TO:
Non-Publication Request: Yes

Also attached are the stamped postcard receipt for the original filing indicating that the Non-Publication Request was submitted, and the copy of the signed Non-Publication Request Under 35 U.S.C. 122(b)(2)(B)(i) submitted with the original application.

If any additional fee is required, please charge Deposit Account No. 022666.

Respectfully submitted, BLAKELY, SOKOLOFF, TAYLOR \& ZAFMAN LLP

Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please mail to the Commissioner for Patents P.O. Box 1450 Alexandria Va 22313-1450. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

## PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process simplifies the filing of patent applications on the same invention in member countries, but does not result in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at $\mathrm{http}: / / \mathrm{www} . \mathrm{uspto} . \mathrm{gov} / \mathrm{web} / \mathrm{offices/pac/doc/general/index.html}$.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

## LICENSE FOR FOREIGN FILING UNDER

## Title 35, United States Code, Section 184

## Title 37, Code of Federal Regulations, 5.11 \& 5.15

## GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15 (b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR $1.53(\mathrm{~d})$. This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury ( 31 CFR Parts 500+) and the Department of Energy.

## NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12 , if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

## NONPUBLICATION REQUEST UNDER 35 U.S.C. 122(b)(2)(B)(i)

```
First Named Inventor Philippe Kahn
```

Title HUMAN ACTIVITY MONITORING DEVICE
Attorney Docket No. 7538.P027

I hereby certify that the invention disclosed in the attached application has not and will not be the subject of an application filed in another country, or under a multilateral agreement, that requires publication at eighteen months after filing.

I hereby request that the attached application not be published under 35 U.S.C. 122(b).

This request must be signed in compliance with 37 CFR 1.33 (b) and submitted with the application upon filing.

Applicant may rescind this nonpublication request at any time. If applicant rescinds a request that an application not be published under 35 U.S.C. 122(b), the application will be scheduled for publication at eighteen months from the earliest claimed filing date for which a benefit is claimed.

If applicant subsequently files an application directed to the invention disclosed in the attached application in another country, or under a multilateral international agreement, that requires publication of applications eighteen months after filing, the applicant must notify the United States Patent and Trademark Office of such filing within forty-five (45) days after the date of the filing of such foreign or international application. Failure to do so will result in abandonment of this application (35 U.S.C. 122(b)(2)(B)(iii)).

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111
If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371
If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office
If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please mail to the Commissioner for Patents P.O. Box 1450 Alexandria Va 22313-1450. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

## PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process simplifies the filing of patent applications on the same invention in member countries, but does not result in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

## LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 \& 5.15

## GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the
subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

## NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

Date Mailed: 01/29/2007

# NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION 

## FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

## Items Required To Avoid Abandonment:

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The oath or declaration is unsigned.

The applicant needs to satisfy supplemental fees problems indicated below.
The required item(s) identified below must be timely submitted to avoid abandonment:

- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.16 (f) of $\$ 130$ for a non-small entity, must be submitted with the missing items identified in this letter.

## SUMMARY OF FEES DUE:

Total additional fee(s) required for this application is $\$ 130$ for a non-small entity

- \$130 Surcharge.

Replies should be mailed to: Mail Stop Missing Parts

## RESPONSE TO NOTICE TO FILE MISSING PARTS OF APPLICATION

 (FILING DATE GRANTED)Sir:
In response to the Notice to File Missing parts of Application (Filing Date Granted) mailed January 29, 2006, please find enclosed:
(1) a duly executed Declaration and Power of Attorney with respect to the above-referenced patent application;
(2) a check in the amount of $\$ 130.00$ in payment of the surcharge of

37 C.F.R. § 1.16(e); and
(3) a copy of the Notice to File Missing Parts of Application.

If any additional fee is required, please charge Deposit Account No. 02-2666. A duplicate of the Fee Transmittal is enclosed for deposit account charging purposes.

Dated: 3/24/47

## DECLARATION AND POWER OF ATTORNEY EOR UTLLTY OR DESIGN PATENT APPLICATION

## I hereby declare that:

Each inventor's residence, mailing address, and citizenship are as stated below next to their name.
I believe the inventor(s) named below to be the original and first inventor(s) of the subject matter which is claimed and for which a patent is sought on the invention entitled:
HUMAN ACTIVITY MONITORING DEVICE
(Title of the Invention)
the specification of which
$\qquad$ is attached hereto OR
X $X$ was filed on (12/26/2006)
as United States Application Number 11/644,455
or PCT Intemational Application Number $\qquad$ and was amended on (MM/DDNYM) (if applicable)

I hereby state that I have reviewed and understand the contents of the above-identified specification. including the claim(s), as amended by any amendment specifically referred to above.

I do not know and do not believe that the claimed invention was ever known or used in the United States of America before my invention thereof, or patented or described in any printed publication in any country before my invention thereof or mors than one year prior to this application. I do not know and do not believe that the claimed invention was in public use or on sale in the United States of America more than one year prior to this application, nor do I know or belleve that the invention has been patented or made the subject of an inventor's certificate issued before the date of this application in any country foreign to the United States of America on an application filed by me or my legal representatives or assigns more than twelve months (for a utility patent application) or six months (for a design patent application) prior to this application.
I acknowledge the duty to disclose information which is material to patentability as defined in 37 C.F.R. 1.56, including for continuation-in-part applications, material information which became available between the fillng date of the prior application and the national or PCT international filing date of the BSTZ ONLY (LONG FORM)

FILING RECEIPT

Date Mailed: 01/29/2007
Receipt is acknowledged of this regular Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please mail to the Commissioner for Patents P.O. Box 1450 Alexandria Va 22313-1450. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

## Applicant(s)

Phillippe Kahn, Aptos, CA;
Arthur Kinsolving, Santa Cruz, CA;
Mark Andrew Christensen, Santa Cruz, CA;
Brian Y. Lee, Aptos, CA;
David Vogel, Santa Cruz, CA;
Power of Attorney: None
Domestic Priority data as claimed by applicant

## Foreign Applications

If Required, Foreign Filing License Granted: 01/27/2007
The country code and number of your priority application, to be used for filing abroad under the Paris Convention, is US11/644,455

Projected Publication Date: To Be Determined - pending completion of Missing Parts
Non-Publication Request: No
Early Publication Request: No
Title
Human activity monitoring device

## Preliminary Class

073

## PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process simplifies the filing of patent applications on the same invention in member countries, but does not result in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

## LICENSE FOR FOREIGN FILING UNDER

Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 \& 5.15

## GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the
subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

## NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

## NOTICE TO FILE MISSING PARTS OF NONPROVISIONAL APPLICATION

## FILED UNDER 37 CFR 1.53(b)

Filing Date Granted

## Items Required To Avoid Abandonment:

An application number and filing date have been accorded to this application. The item(s) indicated below, however, are missing. Applicant is given TWO MONTHS from the date of this Notice within which to file all required items and pay any fees required below to avoid abandonment. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

- The oath or declaration is unsigned.

The applicant needs to satisfy supplemental fees problems indicated below.
The required item(s) identified below must be timely submitted to avoid abandonment:

- To avoid abandonment, a surcharge (for late submission of filing fee, search fee, examination fee or oath or declaration) as set forth in 37 CFR 1.16 (f) of $\$ 130$ for a non-small entity, must be submitted with the missing items identified in this letter.

## SUMMARY OF FEES DUE:

Total additional fee(s) required for this application is $\$ 130$ for a non-small entity

- $\$ 130$ Surcharge.

Replies should be mailed to: Mail Stop Missing Parts
Commissioner for Patents
P.O. Box 1450

Alexandria VA 22313-1450

Registered users of EFS-Web may alternatively submit their reply to this notice via EFS-Web. https://sportal. uspto.gov/authenticate/AuthenticateUserLocalEPF.html

For more information about EFS-Web please call the USPTO Electronic Business Center at 1-866-217-9197 or visit our website at http://www.uspto.gov/ebc.

If you are not using EFS-Web to submit your reply, you must include a copy of this notice.

## RESPONSE TO REQUEST FOR CORRECTED FILING RECEIPT

## Publication and General Rules Issues

In response to your request for a corrected Filing Receipt, the Office is unable to comply with the request because:

The articles such as "a", "an", and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.The words "new", "improved", "improvement of", "improvement in", or "improvement relating to" are not included as the first words in the title of an application because a patent application is, by nature, a new idea or improvement. See MPEP 606.The title appears on the filing receipt in sentence case for publication in the Annual Index of Patents.Amendments are not accepted in provisional applications. See 37 CFR 1.53(c).An amendment or Application Data Sheet is needed to make this change.The inventor's residence will only include the city and state for U.S. residences or city and country for residences outside the U.S. (See MPEP 605.02.)

Continuity claimed under 35 USC 120 cannot be added to the Filing Receipt without the applicant supplying the relationship (continuation, divisional, or continuation-in-part) in an Application Data Sheet or amendment to the first page of the specification.

- Small entity status was previously claimed in this application. To notify the Office of a loss of entitlement to small entity status, see 37 CFR $1.27(\mathrm{~g})$. To have a good faith error in claiming small entity status excused, see 37 CFR 1.28(c).

The request for non-publication was not timely filed. A request for non-publication must be submitted upon filing of an application. The application is scheduled to be published on the date specified on the filing receipt. See 37 CFR 1.213(a)(1)
$\square \quad$ The request for non-publication has not been recognized because it is not conspicuous as required by 37 CFR 1.213(a)(2)

The request for non-publication has not been recognized because it does not contain the certification as required by 37 CFR 1.213(a)(3).

The request for non-publication has not been recognized because it is not signed in compliance with 37 CFR 1.33(b) as required by 37 CFR 1.213(a)(4).
$\square$ There was no prior request for non-publication in this application. The request to rescind the nonpublication request will not be processed.
$\square$ Your request for non-publication will not be acknowledged because this application is not eligible for publication. Only utility and plant applications filed on or after November 29, 2000 are eligible for publication.

The "Non-Publication Request" indicator is correct. If there was a proper request submitted at the time of filing, the notation on the filing receipt will be "Yes". If no such request was made, the notation will be "No".

Assignment information will only be included for applications that are eligible for publication.

## human Activity Monitoring Device

## FIELD OF THE INVENTION

[0001] This invention relates to a method of monitoring human activity, and more particularly to counting periodic human motions such as steps.

## BACKGROUND

[0002] The development of Micro-Electro-Mechanical Systems (MEMS) technology has enabled manufacturers to produce inertial sensors (e.g., accelerometers) of sufficient size, cost, and power consumption to fit into portable electronic devices. Such inertial sensors can be found in a limited number of commercial electronic devices such as cellular phones, portable music players, pedometers, game controllers, and portable computers.
[0003] Step counting devices are used to monitor an individual's daily activity by keeping track of the number of steps that he or she takes. Generally, step counting devices that utilize an inertial sensor to measure motion to detect steps require the user to first position the device in a limited set of orientations. In some devices, the required orientations are dictated to the user by the device. In other devices, the beginning orientation is not critical, so long as this orientation can be maintained.
[0004] Step counting devices are often confused by motion noise experienced by the device throughout a user's daily routine. This noise causes false steps to be measured and actual steps to be missed in conventional step counting devices. Conventional step counting devices also fail to accurately measure steps for individuals
who walk at a slow pace. Such step counting devices can fail to operate for seniors and others walking at a slow pace.

## BRIEF DESCRIPTION OF THE DRAWINGS

[0005] The present invention is illustrated by way of example, and not by way of limitation, and can be more fully understood with reference to the following detailed description when considered in connection with the following figures:
[0006] Figure 1 is a block diagram illustrating one embodiment of an electronic device;
[0007] Figure 2 illustrates an exemplary cadence of motion graph that measures time versus acceleration, in accordance with one embodiment of the present invention;
[0008] Figure 3 shows a state diagram for the behavior of a system of monitoring human activity using an inertial sensor, in accordance with one embodiment of the present invention;
[0009] Figure 4 illustrates a flow diagram for a method of operating an electronic device in sleep mode, in accordance with one embodiment of the present invention;
[0010] Figure 5 illustrates a flow diagram for a method of operating an electronic device in entry mode, in accordance with one embodiment of the present invention;
[0011] Figure 6 illustrates a flow diagram for a method of operating an electronic device in stepping mode, in accordance with one embodiment of the present invention;
[0012] Figure 7 illustrates a flow diagram for a method of operating an electronic device in exit mode, in accordance with one embodiment of the present invention;
[0013] Figure 8 illustrates a flow diagram for a method of recognizing a step in accordance with one embodiment of the present invention, in accordance with one embodiment of the present invention; and
[0014] Figure 9 illustrates a flow diagram for a method of orienting an inertial sensor, in accordance with one embodiment of the present invention.

## DETAILED DESCRIPTION

[0015] Embodiments of the present invention are designed to monitor human activity using an inertial sensor. In one embodiment, a dominant axis is assigned after determining an orientation of an inertial sensor. The orientation of the inertial sensor is continuously determined, and the dominant axis is updated as the orientation of the inertial sensor changes. In one embodiment, periodic human motions are counted by monitoring accelerations relative to the dominant axis.
[0016] Figure 1 is a block diagram illustrating an electronic device 100, in accordance with one embodiment of the present invention. The electronic device 100 in one embodiment comprises an acceleration measuring logic 105, a filter 120, a dominant axis logic 127, a step counting logic 130, a timer 170, and a final step count 175. In one embodiment, the electronic device 100 is a portable electronic device that includes one or more inertial sensors. The inertial sensors may measure accelerations along a single axis or multiple axes. The inertial sensors may measure linear as well as rotational (angular) accelerations. The electronic device 100 may be used to count steps or other periodic human motions. Steps may be accurately counted regardless of the placement and/or orientation of the device on a user. Steps may be accurately counted whether the electronic device 100 maintains a fixed orientation or changes orientation during operation. The electronic device 100 may be carried in a backpack, pocket, purse, hand, or elsewhere, and accurate steps may still be counted.
[0017] The acceleration measuring logic 105 measures acceleration data at a sampling rate. The sampling rate may be fixed or variable. In one embodiment, the acceleration measuring logic 105 receives a timing signal from the timer 170 in order to
take measurements at the sampling rate. The acceleration measuring logic 105 may be an inertial sensor.
[0018] In one embodiment, measurement data is processed by the filter 120 to remove noise. The filter 120 may be implemented in hardware, software, or both hardware and software. The filter 120 may include a high pass filter, a low pass filter, a bandpass filter, a bandstop filter and/or additional filters. The filter 120 may include a digital filter and/or an analog filter. In one embodiment, a hardware digital filter includes at least one of a finite impulse response (FIR) filter and an infinite impulse response (IIR) filter. In one embodiment, an N-tap hardware digital FIR filter is used. The use of a hardware FIR filter may reduce power consumption by reducing and/or eliminating software digital filtering.
[0019] In one embodiment, the filter 120 includes multiple filters, and a determination of which filters to apply to the measurement data is made based upon an operating mode of the electronic device 100. In one embodiment, the selection of which filters to use is determined by the type of user activity detected. For example, a low pass filter may be used to remove high frequency noise that would interfere with step counting when a user is walking. In contrast, a high pass filter may be used when quick motions are to be monitored.
[0020] Filtered measurement data may be passed on to the dominant axis logic 127 and the step counting logic 130. In one embodiment, the dominant axis logic 127 includes a cadence logic 132, a rolling average logic 135, and a dominant axis setting logic 140. In an alternative embodiment, more or fewer logics may be used to determine a dominant axis. One embodiment of implementing dominant axis assignment may be found in co-pending application U.S. Serial No. XXX, which is
incorporated herein by reference. Alternative means of identifying a dominant axis may be used in other embodiments.
[0021] In one embodiment, the dominant axis logic 127 is used to determine an orientation of the electronic device 100 and/or an inertial sensor within the electronic device 100. In alternative embodiments, other logics may be used to determine an orientation of the electronic device 100.
[0022] Referring to Figure 1, the cadence logic 132 may determine one or more sample periods to be used by the rolling average logic 135, and may determine a cadence window 150 to be used by the step counting logic 130. In one embodiment, the cadence logic 135 detects a period and/or cadence of a motion cycle. The period and/or cadence of the motion cycle may be based upon user activity (e.g. rollerblading, biking, running, walking, etc).
[0023] Many types of motions that are useful to keep track of have a periodic set of movements. Specific periodic human motions may be characteristic of different types of user activity. For example, to walk, an individual must lift a first leg, move it forward, plant it, then repeat the same series of motions with a second leg. In contrast, a person rollerblading performs a repeated sequence of pushing, coasting and liftoff for each leg. For a particular individual, the series of walking motions will usually occur in about the same amount of time, and the series of rollerblading motions will usually occur in the same amount of time. The repeated set of motions can be considered a unit, and defines the motion cycle. The amount of time that it takes to complete one motion cycle defines the motion cycle's period, and the number of motion cycles that occur in a given unit of time define the motion cycle's cadence. For simplicity, the term "step" is used in this application to describe the user activity being evaluated. However,
in the context of this application, the term "step" should be taken to mean any user activity having a periodic set of repeated movements.
[0024] Figure 2 illustrates an exemplary motion cycle graph 201 that measures time versus acceleration, in accordance with one embodiment of the present invention. The exemplary motion-cycle graph 201 shows acceleration data taken with a single tri-axis inertial senor. The acceleration at a given period of time is represented for a first axis 203, a second axis 205, and a third axis 207. In one embodiment, the cadence logic 135 of Figure 1 analyzes the acceleration along the first axis 203, second axis 205 and third axis 207 to detect a motion cycle. Once a motion cycle is detected, a period of the motion cycle is determined, and a cadence of the motion cycle is determined. Figure 2 shows an exemplary period of a motion cycle 210 for the third axis 207 , the period being approximately 0.6 seconds. The same period can also be seen to a lesser degree in the second axis 205 and the first axis 203. The corresponding cadence to the motion cycle is approximately one hundred motion cycles per minute.
[0025] In one embodiment, once a stepping period (or other motion cycle period) is determined, that period may be used to set the cadence window (the allowable time window for steps to occur). In one embodiment, the period is updated after each step. The current stepping period may be a rolling average of the stepping periods over previous steps, as discussed in more detail with reference to the rolling average logic 135 of Figure 1.
[0026] A cadence window may be used to facilitate accurate measurement of a step, or other periodic human motion. A cadence window is a window of time since a last step was counted that is looked at to detect a new step. A cadence window may be
set based on the period and/or cadence of the actual motion cycle (e.g., a stepping period), on set limits, and/or on other determiners.
[0027] Referring to Figure 2, an exemplary first cadence window 240 and second cadence window 255 are shown. The first cadence window 240 may be defined by a first cadence window minimum 230 and a first cadence window maximum 235. The second cadence window 255 may be defined by a second cadence window minimum 245 and a second cadence window maximum 250 . In one embodiment, the cadence window minimums 230 and 245 and cadence window maximums 235 and 250 are determined by measuring lengths of time since the most recent step was counted. In one embodiment, this length of time is measured via the timer 170 of Figure 1. In other embodiments, other variables may be used to set the cadence window. For example, cadence windows may be determined by measuring cumulative amounts of acceleration that have been measured since the previous step was counted.
[0028] Returning to Figure 2, cadence windows may be used to count steps until an expected step is not encountered. In one embodiment, new cadence windows are determined periodically. In one embodiment, the cadence window is a dynamic cadence window that continuously updates as a user's cadence changes. For example, using a dynamic cadence window, a new cadence window length may be set after each step. (. The cadence window minimums may be determined by subtracting a value from the stepping period, and the cadence window maximums may be determined by adding a value to the stepping period. In one embodiment, the cadence window maximums are preset, and the cadence window minimums are updated after each step is counted. In one embodiment, the cadence window minimums are preset, and the cadence window maximums are updated after each step is counted. In one
embodiment, both the cadence window minimums and cadence window maximums are updated when a step is counted. In one embodiment, the current cadence window minimum is determined by subtracting 200 ms from the current stepping cadence period. In one embodiment, the cadence window minimum has a minimum value of 240 ms.
[0029] In the illustrated embodiment of Figure 2, a first step 217 is counted at 0.65 seconds, and a second step 232 is counted at approximately 1.15 seconds. The first cadence window 240 opens at approximately 0.4 seconds from the first step 217, and closes at approximately 0.8 seconds from the first step 217 . As shown, the second step 232 falls within the first dynamic cadence window 240. A third step 233 falls within the second dynamic cadence window 255 , which may have a second cadence window minimum 245 and second cadence window maximum 250 that are different from the first cadence window minimum 230 and first cadence window maximum 235. The illustrated second cadence window minimum is about 0.35 seconds from the second step 232 , and the second cadence window maximum 250 is about 0.75 seconds from the second step 232. Other cadence window minimums and maximums are also possible. When motion criteria (e.g., threshold conditions) are met within a cadence window, a step is detected, whereas when motion criteria are met outside of the cadence windows no step is detected.
[0030] If no previous steps have been detected, there is no cadence minimum, and a step may be detected at any time that motion criteria are met. If fewer than the required number of steps to determine a dynamic cadence window have been detected, then the cadence window may have a default minimum and maximum value. In one embodiment, the cadence window has a default minimum of around 325 ms and
a default maximum of around 1000 ms . Once enough steps have been detected to determine a dynamic stepping cadence or period, the cadence window may be set to the determined stepping period plus or minus an error factor. In one embodiment, a count of between about two to about ten periodic human motions is sufficient to set a dynamic cadence window.
[0031] The cadence of any periodic human motion will generally not change more than a certain amount in a given time period. In one embodiment, the cadence window may be sufficiently wide to continue counting periodic human motions even when a stepping cadence changes. In one embodiment, the cadence window is narrower, and steps may not be counted when a stepping cadence changes. So as not to miss steps, once a new stepping cadence is detected, previous measurements may be examined to determine whether they register as steps under the new stepping cadence and a new cadence window. Therefore, steps may be counted even if they did not occur in the original cadence window. The cadence window may update dynamically to a user's actual cadence. Human cadences change within a known window of rates, and so steps can be differentiated from other noise. This may ameliorate and/or eliminate missed step counts due to changes in cadence.
[0032] In one embodiment, when steps repeatedly occur at a time different from the current stepping period, a new stepping period and a new cadence window are set. For example, when the stepping period is 0.7 seconds, and a step occurs about every 0.6 seconds enough times in a row, then the stepping period is changed to 0.6 seconds and a new cadence window is set based on the changed stepping period.
[0033] Returning to Figure 1, once the stepping period is detected, the cadence logic 132 may set one or more sample periods for the rolling average logic 135
to use based upon the stepping period. In one embodiment, the sample period(s) are set such that at least one sample period is approximately the length of, or longer than, the stepping period. In one embodiment, a sample period is set such that it is a multiple of the stepping period.
[0034] The rolling average logic 135 creates one or more rolling averages of accelerations as measured by the inertial sensor(s) over the sample period(s) set by the cadence logic 132. The rolling averages of accelerations may be used for determining an orientation of the electronic device, for determining thresholds to compare acceleration measurements against, and/or for other purposes. In one embodiment, the rolling average logic 135 creates a rolling average of accelerations for determining an orientation of the electronic device 100 , the rolling average having a period that is at least the stepping period. In one embodiment, the rolling average logic creates a rolling average of accelerations for determining a lower threshold to compare acceleration measurements against, the rolling average having a sample period that is at least twice the stepping period.
[0035] The rolling average logic 135 may create one or more rolling averages of data other than accelerations. In one embodiment, the rolling average logic 135 creates a rolling average of stepping periods, where the rolling average is the rolling average time between steps. In one embodiment, the rolling average of stepping periods is calculated over the past four counted steps. The rolling average of the stepping periods may be used by the cadence logic 132 to determine a cadence window and a current stepping cadence.
[0036] In one embodiment, rolling averages may be maintained in registries that keep track of rolling average values and the number of samples that were used to
calculate current rolling average values. When a new measurement is taken, it can be incorporated into the previous rolling average value, and the registry can than be updated with a new rolling average value. Alternatively, the rolling averages may be maintained by buffering the measurements used to calculate the rolling averages. As the buffers fill, oldest measurement data can be discarded and replaced by new measurement data. The measurements in the buffer can be averaged after each measurement to determine a new rolling average.
[0037] In one embodiment, the dominant axis setting logic 140 determines an orientation of the electronic device 100 and/or the inertial sensor(s) within the electronic device 100. The orientation may be determined based upon the rolling averages of accelerations created by the rolling average logic 135. In one embodiment, once the orientation is determined, a dominant axis is assigned based upon the orientation. Determining an orientation of the electronic device 100 may include identifying a gravitational influence. The axis with the largest absolute rolling average may be the axis most influenced by gravity, which may change over time (e.g. as the electronic device is rotated). Therefore, a new dominant axis may be assigned when the orientation of the electronic device 100 and/or the inertial sensor(s) attached to or embedded in the electronic device 100 changes.
[0038] In one embodiment, the actual axis with the largest absolute rolling average over the sample period is assigned as the dominant axis. In alternative embodiments, the dominant axis does not correspond to one of the actual axes of the inertial sensor(s) in a current orientation, but rather to an axis that is defined as approximately aligned to gravity. In one embodiment, the dominant axis corresponds to a virtual axis that is a component of a virtual coordinate system. In one embodiment,
the dominant axis setting logic 140 assigns the dominant axis by performing a true gravity assessment, such as by doing trigonometric calculations on the actual axes based on the gravitational influence. In one embodiment, the dominant axis setting logic 140 assigns the dominant axis by comparing the gravitational influence to a data structure such as a lookup table, associative array, hash table, adjacency matrix, etc.
[0039] Returning to Figure 1, the step counting logic 130 may include a measurement selection logic 145, a cadence window 150, a measurement comparator 155, a threshold comparator 160, a step count buffer 165, and a mode logic 190. The measurement selection logic 145 may determine which measurements from the measurement buffer 125 to use to determine if a step has occurred. In one embodiment, the measurement selection logic 145 may monitor accelerations relative to the dominant axis, and select only those measurements with specific relations to the dominant axis for measurement. For example, only accelerations that are approximately parallel to the dominant axis may be selected, or alternatively, only accelerations that are approximately perpendicular to the dominant axis may be selected. In one embodiment, the measurement selection logic 145 selects only measurements of acceleration data along the dominant axis. In alternative embodiments, measurements of acceleration data along other axes may also be used. In one embodiment, measurements of acceleration along only the other axes are used.
[0040] Selected measurements may be forwarded to the measurement comparator 155 and the threshold comparator 160 to determine whether a step has occurred. The measurement comparator 155 may compare a current measurement to previous measurements. Based on this comparison, a current measurement may
qualify as a step if it has met certain comparison criteria, as discussed in more detail with reference to Figure 8.
[0041] In one embodiment, a motion cycle graph is maintained, and the current measurement is compared to the motion cycle graph. If the motion cycle graph indicates that the current measurement in relation to preceding measurements fits the profile of a step, then a step may be counted. Otherwise a step may not be counted.
[0042] Returning to Figure 1, the threshold comparator 160 disqualifies measurements from being counted as steps for failure to meet certain thresholds. In one embodiment, measurements must be larger than a lower threshold to qualify as a step. In one embodiment, the threshold comparator 160 compares measurements to an upper threshold. In one embodiment, only a measurement having a smaller absolute value of acceleration than the upper threshold and a higher absolute value than the lower threshold is counted as a step. The upper threshold and the lower threshold are discussed in more detail below with reference to Figure 8.
[0043] In one embodiment, the threshold comparator 160 and the measurement comparator 155 are combined into a single comparator. In one embodiment, other comparators may be used, such as a curve fitting comparator or a slope comparator.
[0044] The step count buffer 165 keeps track of probable steps. The exact behavior of the step count buffer 165 depends on which operating mode the electronic device 100 is in. In one embodiment, the operating mode that the electronic device is in is determined by the mode logic 190. In the illustrated embodiment, the mode logic 190 is a component of the step counting logic 130. In an alternative embodiment, the mode logic 190 is a separate logic from the step counting logic 130. In one
embodiment, operating modes include a non-active mode, in which periodic human motions are buffered, and an active mode, in which periodic human motions are counted. In one embodiment, operating modes include a sleep mode, a step counting mode, an entry mode, and an exit mode. Operating modes are discussed in greater detail below in reference to Figure 3.
[0045] Returning to Figure 1, when the threshold comparator 160 and measurement comparator 155 both indicate that a measurement is a step, then the step count buffer 165 is incremented by one. Depending on the mode, when the step count buffer 165 reaches a certain amount, the step count buffer 165 is emptied and the final count 175 is incremented by the amount of steps that were in the step count buffer 165. The number of steps that must be counted by the step count buffer 165 before they register as actual steps may vary from one to ten or more, depending on the current operating mode. The final step count 175 keeps track of the total number of steps that have occurred. In one embodiment, this data is transmitted to a server or remote database.
[0046] Figure 3 shows a state diagram for the behavior 300 of a system for monitoring human activity, in accordance with one embodiment of the present invention. The system may have multiple operating modes (states) that are navigated between by processing logic that may comprise hardware (e.g., circuitry, dedicated logic, programmable logic, microcode, etc.), software (such as instructions run on a processing device), or a combination thereof. In one embodiment, behavior 300 is the behavior of the electronic device 100 of Figure 1.
[0047] The behavior 300 may include four operating modes for monitoring human activity: a sleep mode, an entry mode, a stepping mode, and an exit mode. In
alternative embodiments, a different number of modes may be used. In one embodiment, only two modes are used: active mode and non-active mode. The active mode is entered once continuous steps within the cadence window have been identified, while the non-active mode is used for all other states. In alternative embodiments, multiple inactive modes and/or active modes are used. To navigate between modes, certain conditions must be met. The conditions may include exit conditions for terminating an active mode and entry conditions for initiating inactive modes. Each mode may have different exit and entry conditions.
[0048] Use of different conditions for different operating modes increases the reliability of the device that is monitoring the human activity. For example, once an object (e.g., a person) is moving, they are more likely to remain moving than to stop. Likewise, if a person is not moving, they are more likely not to move than to begin moving. These principles can be applied by requiring more stringent conditions to be met for a device to initiate a walking (stepping) mode than to continue the walking mode. The different modes may each have rules that reflect what is more likely to happen for subsequent measurements. This may reduce or eliminate the number of uncounted steps and/or false step counts.
[0049] Referring to Figure 3, modes 300 in one embodiment include a sleep mode 305 , an entry mode 315 , a stepping mode 325 , and an exit mode 335 . In one embodiment, the power level of the system or device is linked to these modes.
[0050] The first mode initiated is the sleep mode 305. When no activity (acceleration) is detected, the system remains in sleep mode 305. When acceleration is detected, an entry mode 315 is initiated.
[0051] Once in entry mode 315, acceleration may be monitored to detect steps. When N steps are detected in appropriate cadence windows, a stepping mode 325 is initiated. If $\mathbf{N}$ steps are not detected within a period of time, sleep mode is reinitiated. In one embodiment, sleep mode is only initiated if no motion is detected.
[0052] Once in stepping mode 325, acceleration data is monitored to count steps according to a predefined set of rules or motion criteria. According to one of these criteria, steps are expected to occur within a set interval (e.g., within a cadence window). When a step is counted within the set interval, then the stepping mode 325 is continued. When a step is not detected within the set interval, an expected step has not occurred, and an exit mode 335 is initiated.
[0053] In exit mode 335, processing logic determines whether a predetermined number of steps $(X)$ are detected at a particular cadence. The predetermined number of steps X may be the same as, or different from, the number of steps $N$. When $X$ steps are detected in a cadence, stepping mode 325 is reinitiated. When X steps are not detected within a period of time, entry mode 315 is reinitiated.
[0054] Figure 4 illustrates a flow diagram for a method 400 of operating an electronic device in sleep mode, in accordance with one embodiment of the present invention. In one embodiment, method 400 corresponds to the sleep mode 305 of Figure 3. In one embodiment, the method 400 may begin when no relevant acceleration has been detected for a predetermined time interval, or when no steps have been detected for a predetermined time interval. In one embodiment, when no acceleration above a threshold value is detected for a set period of time, the sleep function is initiated. In another embodiment, when a motion signature indicative of an activity that does not need to be monitored is detected, the sleep function is initiated.

For example, when the motion signature of driving is detected, the sleep function may be initiated. The time period that elapses before the sleep mode is initiated may be a fixed value, or it may be adjusted automatically by processing logic or based on user input (e.g. in response to a user selection of desired battery longevity verses desired performance, or based on the last measured cadence window).
[0055] Referring to Figure 4, method 400 begins with setting a sleep mode sampling rate (block 405). In one embodiment, a low sampling rate is set. This reduces power consumption and prolongs battery life. In one embodiment, the sleep mode sampling rate is a fixed value. In alternative embodiments, the sleep mode sampling rate can be modified automatically by processing logic based on certain criteria such as time of day, user behavior patterns, etc., or based on user input.
[0056] In one embodiment, a sampling function is periodically executed in sleep mode, wherein the sampling function samples acceleration data at a set sampling rate for a set time period. For example, the sampling function may be executed every ten seconds for a duration of one second, and a sampling rate of fifty measurements per second may be set for that one second of operation. In one embodiment, the sampling function repeats at a relatively slow rate (e.g., once every 10 seconds), and the sampling rate within the sampling function is relatively high (e.g., 50 Hz ). The sampling function may be used to detect unwanted motion signatures, or to maintain a device in low power sleep mode, for example, while a user is driving in a car. .
[0057] In one embodiment, the sleep mode sampling rate is set to zero. The sleep mode may be set to zero, for example, when an inertial sensor has 'inertial wakeup' functionality. Inertial wakeup functionality enables processing logic to switch from sleep mode to entry mode when an acceleration exceeding a set threshold is
detected. The inertial wakeup may be used to simultaneously exit sleep mode and power-up additional functionality.
[0058] At block 410, measurements of acceleration data are taken. At block 415 , processing logic determines whether or not relevant acceleration is detected. Relevant acceleration includes acceleration that meets certain relevancy criteria. In one embodiment, the relevancy criteria include a lower threshold and an upper threshold. In alternative embodiments, other relevancy criteria may also be used, such as a requirement that acceleration be continuously measured for a preset time period.
[0059] When no relevant acceleration is detected, or when the 'inertial wakeup' pin has not triggered (for inertial sensors having 'inertial wakeup functionality'), sleep mode continues, and further measurements of acceleration data are taken at the set sleep mode sampling rate (block 410). When acceleration is detected, sleep mode is terminated and entry mode is initiated (block 420). In one embodiment, the acceleration that is detected and its rate of change must meet certain criteria to terminate sleep mode.
[0060] Figure 5 illustrates a flow diagram for a method 500 of operating an electronic device in entry mode, in accordance with one embodiment of the present invention. In one embodiment, method 500 corresponds to the entry mode 315 of Figure 3. The entry mode may be initiated when a user first begins an activity in which steps may be detected. In one embodiment, the method 500 begins when any relevant acceleration is detected. In one embodiment, entry mode is initiated when a measurement of acceleration that meets certain criteria has been detected. In one embodiment, method 500 is initiated when a sleep mode is terminated.
[0061] Referring to Figure 5, method 500 begins by setting the sampling rate to a stepping sampling rate (block 504). The stepping sampling rate is set to facilitate accurate measurements of steps, and may be a fixed or a dynamically variable rate. A variable sampling rate may automatically adjust depending on a period of a detected stepping cadence, may be user adjusted, may adjust based on applications being run by processing logic, or by other means. The stepping sampling rate may be set to anywhere between about 10 and about 200 Hz . In one embodiment, the stepping sampling rate is set to about 15 to 40 Hz .
[0062] At block 510, a first step is recognized. Since no previous steps have been measured, and there is no cadence window, the first step may be recognized at any time. Once a first step is recognized, a default cadence window is set (block 514). The default cadence window may have a minimum and maximum such that steps will be counted for most or all possible stepping cadences, whether a user is walking slowly or sprinting. In one embodiment, the default cadence window has a minimum of around 325 ms and a maximum of around 1000 ms .
[0063] In one embodiment, an initial default value is set wide enough to accommodate all users, and is then dynamically adjusted to match the specific user in question. Processing logic may 'learn' (adapt to) a particular user, and may become more accurate as steps are counted. Processing logic that has the ability to learn or adapt to different users may create an individualized profile for each user. Multiple profiles may also be created for each user, the different profiles reflecting different user activity. For example, a first profile might be created for a user's running and a second profile may be created for a user's walking. Processing logic may switch between different profiles automatically, or manually based on user input. In one embodiment,
processing logic compares a current cadence and/or motion cycle pattern to stored profiles. When a current cadence or motion cycle pattern matches that of a stored profile, that profile is activated.
[0064] At block 520, a buffered step count is set to one. At block 524, processing logic determines whether an additional step is recognized. An additional step may be recognized if a particular measurement of acceleration meets all the necessary criteria. One embodiment of these criteria is discussed below with reference to Figure 8.
[0065] Returning to Figure 5, if an additional step is recognized, method 500 continues to block 560. If no additional steps are recognized, then processing logic determines whether the time is still within the cadence window (block 530 ). If there is still time within the cadence window, the process returns to block 524. If the cadence window has closed, then the buffered step count is reset to zero (block 534). The process then continues to block 540 .
[0066] At block 540, processing logic determines whether any relevant acceleration is detected. If no relevant acceleration is detected, then sleep mode is initiated (block 544). If some relevant acceleration is detected, then processing logic returns to block 510 to await recognition of another first step. If at block 540 an additional step was recognized, the process continues to block 560 .
[0067] At block 560, an additional step is added to the buffered step count. Processing logic then checks whether there are $M$ counts in the buffered step count (block 564). In one embodiment, $M$ is an integer value between about 4 and 10. If there are not at least $M$ steps in the buffered step count, then the process returns to block 524.
[0068] If the buffered step count is equal to or greater than $M$, then the processing logic checks whether the cadence window is set to the default (block 570). If the cadence window is still set to the default, then a new cadence window is set (block 574) based on a stepping cadence of the $M$ steps measured. The process then returns to block 524. If the cadence window is not set to the default, then processing logic continues to block 580. In an alternative embodiment, once there are M steps in the buffered step count, the cadence window may be adjusted for each additional step that is recognized.
[0069] At block 580, processing logic checks whether there are N steps in the buffered step count (block 580), where N may be an integer value greater than M . When there are not yet N steps in the buffered step count, the process returns to block 524 to continue in entry mode. When the number of steps in the buffered step count reaches $N$, the buffered steps are added to an actual or final step count, and a stepping mode is entered into (block 584).
[0070] Figure 6 illustrates a flow diagram for a method 600 of operating an electronic device in stepping mode, in accordance with one embodiment of the present invention. In one embodiment, method 600 corresponds to the stepping mode 325 of Figure 3. The stepping mode may be initiated when a user has been walking long enough for a buffered step count to fill. In one embodiment, method 600 is initiated when an entry mode is terminated, and/or when an exit mode is terminated.
[0071] Referring to Figure 6, method 600 begins by setting a cadence window (block 610). The cadence window may be set based on previous measurement data. In one embodiment, the cadence window is set based on a rolling average of stepping periods. In one embodiment, the cadence window may be identical to the
cadence window used during entry mode. Once the cadence window is set, measurement data is checked to determine whether an additional step is recognized (block 615). If an additional step is recognized, then it is added to the final or actual step count (block 620). If no additional step is recognized, then processing logic determines whether the current measurement was taken within the cadence window (block 625). If the cadence window has not elapsed, the process returns to block 615. If the cadence window has elapsed, then an expected step was not counted, and an exit mode is initiated (block 630).
[0072] Figure 7 illustrates a flow diagram for a method 700 of operating an electronic device in exit mode, in accordance with one embodiment of the present invention. In one embodiment, method 700 corresponds to the exit mode 335 of Figure 3. The exit mode may be entered into when an expected step is not identified in stepping mode.
[0073] In one embodiment, the requirement(s) for changing from exit mode to stepping mode are less strict than the requirement(s) for switching from entry mode to stepping mode. Processing logic may assume that when a user has recently taken a step, the user is most likely to take another step. Processing logic may also assume that if a user has not just taken a step, it is most likely that they will not take one. These assumptions may be implemented by imposing more stringent requirements to switch from entry mode to stepping mode than to change from exit mode to stepping mode.
[0074] An expected step may not be identified, for example, when a user stops walking, when extraneous movements such as gestures are made that interfere with the step count, or when a device orientation is changed as a step occurs. In one
embodiment, the exit mode assumes that a step has been missed, so that if the exit mode determines that a user is still walking, the originally uncounted step is not missed.
[0075] The process begins by initiating a step timer (block 705). The step timer measures the amount of time that has passed since a step has been identified. In one embodiment, the step timer is a countdown timer that terminates exit mode when the timer reaches zero. In one embodiment, the step timer starts counting when a cadence window minimum is reached, and stops counting when a cadence window maximum is reached. In an alternative embodiment, the step timer starts counting as soon as the exit mode is initiated, and stops counting when a cadence window maximum is reached. In one embodiment, the step timer starts counting at 240 ms from the time that the expected step should have occurred.
[0076] At block 710, a step is added to a buffered step count. At block 715, processing logic determines whether the buffered step count is equal to $X$, where $X$ of the number of identified steps in exit mode. In one embodiment, $X$ is between 3 and 8 . If the buffered step count is equal to X , then the buffered steps are added to the actual step count and stepping mode is reinitiated (block 720). If the buffered step count is not equal to $X$, then processing logic proceeds to block 725 .
[0077] At block 725, processing logic determines whether the step timer has timed out (allotted time has elapsed). In one embodiment, the step timer times out when no steps are counted within a cadence window. In one embodiment, the step timer times out when no steps are counted in two or more cadence windows. If the allotted time has elapsed, then the buffered step count is cleared, and entry mode is initiated (block 730). If the allotted time has not elapsed, then processing logic determines whether an additional step is recognized (block 735). If a step is
recognized, then the step timer is reset (block 705), the buffered step count is incremented by one (block 710), and on the process continues to block 715. If a step is not recognized, then processing logic returns to block 725 to determine whether the step timer has elapsed. In an alternative embodiment, the step timer is not reset when an additional step is recognized, and the buffered step count must reach X in the time initially allotted by the step timer. In that instance, the step timer is set at greater than X times the cadence window.
[0078] Figure 8 illustrates a flow diagram for a method 800 of recognizing a step, in accordance with one embodiment of the present invention. In one embodiment, method 800 may be executed by blocks 510 and 524 of Figure 5, block 615 of Figure 6 and block 735 of Figure 7. In one embodiment, method 800 is performed by electronic device 100 of Figure 1.
[0079] Referring to Figure 8, method 800 begins with measurements of acceleration data being taken (block 805). Measurements are taken according to a sampling rate, which may vary from about one measurement per second to many measurements a second, depending on the operating mode being used.
[0080] At processing block 810, in one embodiment measurements are filtered. Measurements can be filtered to remove high frequency data and/or low frequency data. In one embodiment, what data to filter depends on the type of user activity detected. At processing block 812, in one embodiment the inertial sensor is oriented by assigning a dominant axis. Assigning a dominant axis may include calculating rolling averages of acceleration and assigning the dominant axis based on the rolling averages of acceleration.
[0081] At block 815, processing logic determines whether a measurement is within a cadence window. If the measurement is not within a cadence window, then no step may be recognized or counted for that measurement (block 840). If the measurement is within the cadence window, the process continues to block 820 .
[0082] At block 820, processing logic determines whether acceleration along the dominant axis is greater than a lower threshold. If the measurement is not greater than the lower threshold, no step may be recognized or counted for that measurement (block 840). If the measurement is greater than the lower threshold, the processing logic continues to block 825.
[0083] In one embodiment, the measurement may qualify as a step if it is the first measurement that crosses the lower threshold. In an alternative embodiment, the measurement with the greatest acceleration within a cadence window (e.g. a peak) may be counted as a step.
[0084] The lower threshold may be based on a rolling average of accelerations as determined by the rolling average logic 135 of Figure 1. In one embodiment, the rolling average of accelerations that is used to set the lower threshold has a sample period that is about twice the stepping period. In alternative embodiments, other sample periods are used for the rolling average.
[0085] In one embodiment, the lower threshold is set such that an absolute value of a measurement must exceed an absolute value of the rolling average to be counted as a step. Multiple lower thresholds may be set, and a current measurement may be compared to one or more of the lower thresholds depending on operating conditions. For example, a negative lower threshold may be used if acceleration is detected in a negative direction (e.g., when device is upside down), and a positive lower
threshold may be used if acceleration is detected in a positive direction (e.g., device is right-side up). In one embodiment, absolute values may be used.
[0086] In one embodiment, the measurement must exceed the rolling average by a set margin. The margin may be set automatically by processing logic, or it may vary based on the orientation of the electronic device or inertial sensor(s), user input, and/or other criteria.
[0087] In one embodiment, the lower threshold is adjusted based on an orientation of the electronic device and/or an orientation of the inertial sensor(s) within the electronic device. If an axis is closely aligned with gravity, a first threshold may be used. If no axes are closely aligned to gravity, other thresholds may be used. In one embodiment, a variable threshold is used, the variable threshold having a larger value when an axis is closely aligned to gravity, and progressively lower values as an axis most closely aligned with gravity is moved out of line with gravity. The variable threshold can be implemented using a data structure (e.g., a lookup table, hash table, adjacency matrix, etc.), comparison to a virtual axis, or by performing trigonometric calculations.
[0088] At block 825, processing logic determines whether acceleration along the dominant axis is greater than previous measurements. In one embodiment, acceleration along the dominant axis for a present measurement is compared to the previous 1 to 4 measurements.
[0089] In one embodiment, the absolute value of the present measurement is compared to the absolute value of the previous measurement or measurements. By comparing the absolute value of acceleration along the dominant axis to previous absolute value(s) of acceleration, processing logic may determine whether the
acceleration of a user is moving away from the influence of gravity (e.g. whether a person is lifting a foot from the ground rather than planting it on the ground). In one embodiment, a measurement qualifies as a step when it reflects that the acceleration of a user is moving away from gravity. Alternatively, a current measurement may qualify as a step if it has an absolute value that is less than absolute values of the previous measurements, indicating that the acceleration of a user is moving towards gravity.
[0090] If the absolute value of the current measurement is not greater than the absolute values of the measurements compared to, then no step may be recognized or counted for that measurement (block 840). If the absolute value of the measurement is greater than the absolute values of previous measurements, then the process continues to block 830.
[0091] At block 830, processing logic determines whether acceleration for a particular measurement is lower than an upper threshold. In one embodiment, only acceleration along the dominant axis is compared to the upper threshold. In one embodiment, accelerations along all axes are compared to the upper threshold. If the current measurement is not lower than the upper threshold, then no step may be recognized or counted for that measurement (block 840). If the measurement is lower than the upper threshold, then a step may be counted (block 835). The upper threshold may be set to prevent sudden accelerations such as taps from being counted as steps.
[0092] Blocks 815, 820, 825 and 830 show four criteria that may be used to accurately determine whether user has walked or run one step. These criteria may be dynamic motion criteria that are updated continuously as current conditions change (e.g., as an inertial sensor changes orientation, as a user changes cadence, etc.).

Alternatively, these criteria may be static criteria that are preset, or criteria that may be changed through user input.
[0093] As noted above, though embodiments of the present invention are described in reference to steps, the present invention equally applies to other periodic human motions. Other criteria may also be used in addition to, or in place of, those listed above. These criteria may reduce or eliminate the number of false steps counted and/or the number of missed steps. Examples of other criteria include specific rates of change in acceleration between measurements, specific shapes and/or sharpness of acceleration peaks for motion cycles, particular amplitudes of periodic human motions, etc. These and other criteria may be applied to embodiments of the present invention.
[0094] Figure 9 illustrates a flow diagram for one embodiment of a method 900 of orienting an inertial sensor. In one embodiment, the method 900 is executed by block 812 of Figure 8.
[0095] Referring to Figure 9, method 900 begins with detecting a stepping period (block 910). In one embodiment, the method 900 may begin by detecting a stepping cadence. At block 915 , rolling averages of accelerations are created. The rolling averages of accelerations may be created based on the stepping period (or stepping cadence). In one embodiment, multiple rolling averages of accelerations are created.
[0096] At block 920, a dominant axis is assigned. In one embodiment, the dominant axis is assigned after identifying a gravitational influence. The gravitational influence may be identified by calculating total acceleration based upon the acceleration on each axis. In one embodiment, the percentage of the total acceleration
can then be assigned to each axis and an approximate device orientation can be determined.
[0097] In the foregoing description, numerous specific details have been set forth such as examples of specific systems, languages, components, etc. in order to provide a thorough understanding of the present invention. It will be apparent, however, to one skilled in the art that these specific details need not be employed to practice the present invention. In other instances, well known materials or methods have not been described in detail in order to avoid unnecessarily obscuring the present invention.
[0098] The present invention may be performed by hardware components or may be embodied in machine-executable instructions, which may be used to cause a general-purpose or special-purpose processor programmed with the instructions to perform the method described above. Alternatively, the method may be performed by a combination of hardware and software.
[0099] The present invention may be provided as a computer program product, or software, that may include a machine-readable medium having stored thereon instructions, which may be used to program a computer system (or other electronic devices) to perform a process according to the present invention. The machine-readable medium may include, but is not limited to, floppy diskettes, optical disks, CD-ROMs, and magneto-optical disks, ROMs, RAMs, EPROMs, EEPROMs, magnetic or optical cards, flash memory, or other type of media or machine-readable mediums suitable for storing electronic instructions.
[00100] In the foregoing specification, the invention has been described with reference to specific exemplary embodiments thereof. It will, however, be evident that
various modifications and changes may be made thereto without departing from the broader spirit and scope of the invention as set forth in the appended claims. The specification and drawings are, accordingly, to be regarded in an illustrative rather than a restrictive sense.

CLAIMS
What is claimed is:

1. A method of monitoring human activity using an inertial sensor, comprising: continuously determining an orientation of the inertial sensor; assigning a dominant axis;
updating the dominant axis as the orientation of the inertial sensor changes; and counting periodic human motions by monitoring accelerations relative to the dominant axis.
2. The method of claim 1, further comprising:
using acceleration measurements along only the dominant axis to count steps.
3. The method of claim 1, further comprising:
maintaining a cadence window, wherein the cadence window is continuously updated as an actual cadence changes; and counting a periodic human motion when an acceleration measurement that meets motion criteria is within the cadence window.
4. The method of claim 3, wherein at least one of the motion criteria is a dynamic motion criterion, the dynamic motion criterion being continuously updated to reflect current conditions.
5. The method of claim 4, wherein the dynamic motion criteria includes at least a lower threshold, wherein the lower threshold is adjusted based on at least one of a rolling average of accelerations and the orientation of the inertial sensor.
6. A method of monitoring human activity using an inertial sensor, comprising: running a device that includes the inertial sensor in a non-active mode, in which periodic human motions are buffered;
switching the device from the non-active mode to an active mode, after identifying a number of periodic human motions within appropriate cadence windows; and
during the active mode, counting each of the periodic human motions to enable the monitoring of human activity.
7. The method of claim 6, wherein running the device in a non-active mode comprises running the device in one of an exit mode and an entry mode.
8. The method of claim 7, wherein:
a requirement for switching the device from the exit mode to the active mode is lower than a requirement for switching the device from the entry mode to the active mode.
9. The method of claim 6, further comprising:
switching the device from the active mode to the non-active mode when a number of expected periodic human motions are not identified in the appropriate cadence windows.
10. The method of claim 6, further comprising:
switching from a sleep mode to the non-active mode of operation when an acceleration is detected.
11. An inertial sensor based device, comprising:
a dominant axis logic, to continuously determine an orientation of a device, to assign a dominant axis, and to update the dominant axis as the orientation of the device changes; and
a counting logic to count periodic human motions by monitoring accelerations relative to the dominant axis.
12. The device of claim 11, wherein:

The counting logic uses acceleration measurements along only the dominant axis to count steps.
13. The device of claim 11, further comprising:
a cadence logic to continuously update a dynamic cadence window; and the counting logic to count a periodic human motion when an acceleration measurement that meets motion criteria is taken within the cadence window.
14. The device of claim 11, further comprising:
a comparator, to compare measurements of acceleration to dynamic motion criteria, the dynamic motion criteria being continuously updated to reflect current conditions; and
the counting logic to count a periodic human motion when the measurements of acceleration satisfy the dynamic motion criteria.
15. A device including an inertial sensor, comprising:
a counting logic, to identify and count periodic human motions;
a mode logic, to switch the device from a non-active mode to an active mode after a number of periodic human motions are detected within appropriate cadence windows by the counting logic; and a buffer, to buffer periodic human motions when the device is in the non-active mode.
16. The device of claim 15, wherein the non-active mode comprises one an exit mode and an entry mode.
17. The device of claim 16, wherein:
a requirement for the mode logic to switch the device from the exit mode to the active mode is lower than a requirement for the mode logic to switch the device from the entry mode to the active mode.
18. The device of claim 15 , wherein:
the mode logic to switch the device from the active mode to the non-active mode when a number of expected periodic human motions are not identified in the appropriate cadence windows.
19. The device of claim 15 , further comprising:
a cadence logic, to set the appropriate cadence windows.
20. The device of claim 19 , wherein the cadence logic adjusts the cadence windows based on a measured cadence associated with the periodic human motion.

## ABSTRACT

A method for monitoring human activity using an inertial sensor includes continuously determining an orientation of the inertial sensor, assigning a dominant axis, updating the dominant axis as the orientation of the inertial sensor changes, and counting periodic human motions by monitoring accelerations relative to the dominant axis.

X Declaration Submitted with Initial Filing OR Declaration Submitted After Initial Filing (Surcharge under 37 C.F.R. § 1.16(e) Required).

Patent

## Complete If Known:

Application No.: Not yet assigned
Filing Date: Herewith
Art Unit: $\quad$ Not yet assigned
Examiner Name: Not yet assigned

## DECLARATION AND POWER OF ATTORNEY FOR UTILITY OR DESIGN PATENT APPLICATION

## I hereby declare that:

Each inventor's residence, mailing address, and citizenship are as stated below next to their name.
I believe the inventor(s) named below to be the original and first inventor(s) of the subject matter which is claimed and for which a patent is sought on the invention entitled:
$\frac{\text { HUMAN ACTIVITY MONITORING DEVICE }}{\text { (Title of the Invention) }}$
the specification of which
$\qquad$ is attached hereto OR was filed on (MM/DD/YYYY) Herewith as United States Application Number Not yet assigned or PCT International Application Number $\qquad$
and was amended on (MM/DD/YYYY) (if applicable)

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claim(s), as amended by any amendment specifically referred to above.

I do not know and do not believe that the claimed invention was ever known or used in the United States of America before my invention thereof, or patented or described in any printed publication in any country before my invention thereof or more than one year prior to this application. I do not know and do not believe that the claimed invention was in public use or on sale in the United States of America more than one year prior to this application, nor do I know or believe that the invention has been patented or made the subject of an inventor's certificate issued before the date of this application in any country foreign to the United States of America on an application filed by me or my legal representatives or assigns more than twelve months (for a utility patent application) or six months (for a design patent application) prior to this application.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 C.F.R. 1.56 , including for continuation-in-part applications, material information which became available between the filing date of the prior application and the national or PCT international filing date of the continuation-in-part application.

I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or (f), or 365(b) of any foreign application(s) for patent, inventor's or plant breeder's rights certificate(s), or 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below, by checking the box, any foreign application for patent, inventor's or plant breeder's rights certificate(s), or any PCT international application having a filing date before that of the application on which priority is claimed:

## Appointment of Patent Practitioners:

I hereby appoint the patent practitioners associated with the Customer Number 08791 as my respective patent attorneys and patent agents, with full power of substitution and revocation, to prosecute this application and to transact all business in the U.S. Patent and Trademark Office connected herewith.

If this patent application is assigned, then the undersigned hereby authorizes the patent attorneys and patent agents named herein to accept and follow instructions from the assignee(s) as to any action to be taken in the United States Patent and Trademark Office regarding this application without direct communication between the patent attorneys and patent agents and the undersigned. In the event of a change in the persons from whom instructions may be taken, at least one patent attorney or patent agent named herein will be so notified by the undersigned.
