➔ Specification intro

- Overview
- Core
- Profiles
- Order Specification

The Bluetooth Specification is a de facto standard containing the information required to ensure that diverse devices supporting the Bluetooth wireless technology can communicate with each other worldwide. The document is divided into two parts –; Volume 1, Core, and Volume 2, Profiles.

The Core part specifies components such as the radio, baseband, link manager, service discovery protocol, transport layer, and interoperability with different communication protocols.

The Profiles part specifies the protocols and procedures required for different types of Bluetooth applications.
